Mr. THOMAS. Excuse me, Mr. Controller. Put 5–37, 38 and 39 in the record at this point.

(The pages referred to follow:)

GENERAL ADMINISTRATION

Assistant Administrator for Management Services, $2,485,000—Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated	Increase (+) or decrease (−), 1964 over 1963
Average employment	106	120	120	
Personnel compensation	$948,218	$1,170,152	$1,256,600	+$86,448
Personnel benefits	70,615	90,013	93,900	+3,887
Subtotal	1,018,833	1,260,165	1,350,500	+90,335
Public Law 87-793 pay increase		(53,000)	(116,600)	(+63,600)
Travel and transportation of persons	35,229	65,680	68,200	+2,520
Transportation of things	4,481	6,821	3,900	−2,921
Rents, communications, and utilities	741,217	963,515	1,036,100	+72,585
Other services	3,816	10,024	19,800	+9,776
Supplies and materials	3,691	3,338	3,500	+162
Equipment	5,653	4,457	3,000	−1,457
Total cost	1,812,920	2,314,000	2,485,000	+171,000
Public Law 87-793 costs		(53,000)	(116,600)	(+63,600)

The Assistant Administrator for Management Services advises and assists the Administrator in Management Services policy matters agencywide. These services include agency manpower utilization, purchasing and supply, data processing systems, telecommunications, paperwork management, work analysis and improvement, mechanization of operations, civil defense, and disaster relief.

Develops agencywide policies, objectives, and guidelines in the above areas designed to improve the agency's performance in discharging its responsibilities wth a maximum of economy.

Distribution of average employment

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Office of Assistant Administrator	8	9	9
Supply Management Service	35	37	36
Management Analysis Service	38	37	37
Systems Engineering Service	25	29	29
Manpower Utilization Service		8	9
Total	106	120	120

The increase in average employment in 1963 and 1964 over 1962 is primarily attributable to (1) increased staff responsibility for improving manpower controls and utilization, and (2) additional workload requirements placed upon VA-wide communication system in connection with automatic data processing.

Supply Management Service details and justification are shown under Consolidated Supply Activities, volume 1, section 6.

Management Analysis Service formulates and recommends general policies and plans of VA-wide application for the management of paperwork from creation to final disposition, work analysis and improvement and mechanization of operations.

Systems Engineering Service has staff responsibility for the provision of technical leadership and services, VA-wide, pertaining to data processing and communications systems, including consultant, advisory, and engineering assistance.

Manpower Utilization Service has staff responsibility for improvement of VA-wide management at all levels through the best utilization of manpower and

application of progressive techniques in management standards and controls; quality standards and controls; production standards and controls; evaluation standards and controls; work measurement and productivity measurement; and manpower planning and forecasting.

OTHER OBJECTS—MANAGEMENT SERVICES

Mr. THOMAS. Employment has 120 for 1963 and 120 for 1964.

Travel and transportation goes up from $65,680 to $68,200. It goes up $2,520. Rents and utilities, $72,585 increase, giving a total of $1,036,100. Other services go up in round figures $10,000. Supplies and materials go up a small amount.

Mr. Cook, how long have you been with the agency?

Mr. COOK. The same time as Mr. O'Neil. Seventeen years.

Mr. THOMAS. This is a good long time. You ought to know the business from the top to the bottom.

Average employment, 120. Where are these people located?

Mr. MONK. These people are all located in Washington.

Mr. THOMAS. How about your rents and utilities? Why did this go up $72,500? What about your travel? It is up $2,500.

(Reading):

The increase is added field work that will be required in connection with data processing and transmission. This involves technical supervision over modernization of communications systems.

Mr. MONK. We have an extensive communications systems in the Veterans' Administration. We ride the Army network to the extent that we can but even so we have our own net control stations.

Mr. THOMAS. You don't work with General Services Administration?

Mr. MONK. We are working with General Services but they as yet have not developed a civilian communications system.

Mr. THOMAS. How many people do you have in travel status for $67.500, for the year 1964?

Mr. MONK. Where is that figure, Mr. Chairman?

Mr. THOMAS. It is on page 5–39 under Employee Travel.

Mr. MONK. There are 120 people in the division. They do not all travel. There would be 40 of them who are periodically—not continuously—making field trips.

MANAGEMENT SERVICES ACTIVITIES

Mr. THOMAS (reading):

The Assistant Administrator for Management Services advises and assists the Administrator in Management Services policy matters agencywide. These services include agency manpower utilization, purchasing and supply, data processing systems, telecommunications, paperwork management, work analysis and improvement, mechanization of operations, civil defense and disaster relief.

He overlaps everybody's jurisdiction. I thought he was a merchant prince. Now he has Civil Defense and Disaster Relief, communications, and paperwork management.

Mr. MONK. On page 5–38, Supply Management Service is Mr. Cook's service, which is 36 people of the 120.

Mr. THOMAS. Management Analysis Service, 37. What do they do?

Mr. MONK. These are people working on paperwork management, work measurement, mechanization in our hospitals.

Mr. THOMAS. When you say work on it, what do you mean? What do they do? Systems Engineering Service, 29.

Mr. MONK. These are the people who provide the staff guidance and assistance in the data processing and in the mechanization of the hospital conveyor systems and also in the communications service.

Mr. THOMAS. Where are the green sheets on these people? What is their classification? Are they engineers or what?

Mr. MONK. No, sir; they are strictly management people.

Mr. THOMAS. Where have they been heretofore?

Mr. MONK. They have been in this service. We did have, as I said yesterday, the housekeeping in this activity, which we split out and we will put the data processing in the new department that the Administrator mentioned yesterday.

Mr. THOMAS. This looks like sort of a catch-all tied to the merchant prince.

Mr. GLEASON. The merchant price was a part of this, Mr. Chairman.

Mr. THOMAS. He was a big part of it, wasn't he?

Mr. GLEASON. He was a good part of it.

Mr. THOMAS. The biggest part?

Mr. MONK. No. The Supply Management Service has been about this strength, 36 people.

Mr. THOMAS. What do these management analysis people do? Where are the green sheets on them?

Mr. MONK. We will have to go back to chart 1–1.

Mr. THOMAS. You have 2 16's, 5 15's, 78 GS–10 to 14, and 34 others but that is the Management Services total.

Mr. MONK. These people provide the staff guidance and assistance on paperwork management, work improvement, work analysis.

PAPERWORK MANAGEMENT

Mr. THOMAS. What do they do in paperwork improvement?

Mr. GLEASON. They eliminate a heck of a lot of forms and get the information correctly to us.

Mr. THOMAS. Do they work with the Archives?

Mr. MONK. They work very closely with the Archives.

Mr. THOMAS. What do they do, do they clean out these records or what? Do they put them in your warehouses?

Mr. MONK. They provide the way to get them out.

Mr. THOMAS. How do they do it?

(Reading):

Supply Management Service details and justifications are shown under consolidated supply activities, volume 1, section 6. Management Analysis Service formulates and recommends general policies and plans of VA-wide application for management of paperwork, from creation to final disposition. Systems Engineering Service has staff responsibility for the provision of technical leadership.

I thought that center was out in Chicago.

Mr. MONK. The computing center is out there.

Mr. THOMAS. You mean the top echelon is here and the work is done out there?

Mr. MONK. That is right.

Mr. GLEASON. Mr. Chairman, may I enter into the record a statement we have in our annual report?

Mr. THOMAS. Anything that will strengthen this justification.

Mr. GLEASON. On paperwork management it says:

Administration depends heavily on paperwork management. Systems, analysis, training, guidelines—these and other tools all apply their proper role in the tireless search for improvement. The Veterans' Administration efforts have been very successful in this area as evidenced by the following statement made on May 9, 1962, in a letter from the Assistant Archivist of the United States for the records management.

Mr. THOMAS. Do you mean you couldn't get a letter from Dr. Grover?

Mr. DRIVER. He was away at the time.

Mr. GLEASON (reading):

The Veterans' Administration has one of the best paperwork programs in the Federal Government * * *.

Mr. BOLAND. He says that about all agencies.

Mr. JONAS. Will the Chairman yield?

Mr. THOMAS. Yes, sir.

AGENCY EMPLOYMENT LEVELS

Mr. JONAS. All of these activities that you justify with such fervor and eloquence here before the committee as being calculated to bring about more efficient operations and conserve manpower, we bow to that because we are interested in it, but how do you reconcile this with the fact that your total employment has gone up every year since 1961?

Mr. GLEASON. It has gone down, I think——

Mr. JONAS. When?

Mr. GLEASON. In the last 2 years, as I mentioned in my statement yesterday.

Mr. JONAS. In 1961 you had 151,843. It went up the next year to 153,508. It went up in 1963 to 154,021, and now you want 154,060 for next year.

Mr. GLEASON. Mr. Jonas, if I might clarify it, sir, the employment has gone down as far as administration is concerned. When it comes to hospitalization, the employment has gone up.

Mr. JONAS. Don't these people work in the medical program too?

Mr. GLEASON. The Systems Engineering Service is going to formulate some programs so that we can use our data management in conjunction with hospitals.

Mr. DRIVER. The increase is in direct patient care, Mr. Jonas. In the areas of administration they have gone down.

Mr. GLEASON. All others have gone down.

Mr. JONAS. Your total has gone up. Am I correct in that?

Mr. DRIVER. Yes, sir.

Mr. GLEASON. Yes, sir; but this is strictly in hospital patient care.

MANPOWER UTILIZATION SERVICE

Mr. JONAS. You opened up a brandnew service here in 1963 and put on eight people and you want nine in it in 1964 and you didn't have anybody in 1962—Manpower Utilization Service—what is that, a new operation?

Mr. GLEASON. Not exactly, Mr. Jonas, no.

Mr. JONAS. Well, you show zero employees in it in 1962 and then eight in 1963.

Mr. DRIVER. These functions have been carried on in several places in the agency and this was a consolidation into one. The total number of people available did not increase. We pooled this effort, though, to get a little better result in terms of cutting down on numbers of people required.

Mr. GLEASON. Just like next year, Mr. Jonas, you will see zero by comparison in some of our other consolidations. The one that I announced just last Wednesday. The consolidation now into a data management department. So from the previous year, you won't see any.

MANAGEMENT ANALYSIS

Mr. THOMAS. Mr. Jonas, here is what troubles me: This activity that Dr. Grover's assistant is bragging on, the printing and binding goes up every year and pencils and paper go up every year, and ink and stationery, so where is the saving?

Give us an example of what they do.

Mr. GLEASON. I think the best explanation for management analysis, Mr. Chairman, is the second paragraph on the bottom on pages 5–38.

Mr. THOMAS. I have read that already.

(Reading):

> Management Analysis Service formulates and recommends general policies and plans of VA-wide application for the management of paperwork from creation to final disposition, work analysis, and improvement and mechanization of operations.

Everything is going up every year. It looks to me like the way to get these down is to eliminate these experts.

Mr. DRIVER. We retired 40,000 cubic feet of records last year out of active folders, removed them from space costing a lot of money and made available filing equipment they were housed in and this is one of the direct things the Assistant Archivist is referring to.

Mr. THOMAS. Dr. Grover takes credit for that, doesn't he?

Mr. DRIVER. He certainly gives encouragement and direction in an overall Government way, but I think you will find the degree to which they implement the archivist program varies from agency to agency.

Mr. THOMAS. How many people have you doing that kind of work, 37?

Mr. DRIVER. Thirty-seven people concerned with forms design, records management disposal programs which we group under the general heading of "Paperwork Management."

Let's say Congress passes a new law as it does every year it seems in the veterans programs. We had 31 last year. In order to implement any of these pieces of legislation we have to have at least one form and the standardization of this form putting it in the most useful condition, making it so that it is best readable to the claimant so that we get the best mileage out of it, so that it is a small as possible, comes under the general programs administered by this office.

Mr. THOMAS. All the 120 people in Management Services are domiciled here in the District?

Mr. DRIVER. Yes, sir.

Mr. THOMAS. Do you have a counterpart to it in each of your installations in the field?

Mr. DRIVER. No, sir.

Mr. THOMAS. So the people up here say: "Make an original and six copies" and it goes out to every installation; is that right?

Mr. DRIVER. Usually the forms are designed here and the same one is used by each office. They do not have different forms.

Mr. THOMAS. Does it take this many people to do that?

Mr. DRIVER. In many respects I would think Mr. Glover would hope we had 74 and would retire 80,000 cubic feet instead of 40,000.

Mr. THOMAS. Who heads this section?

Mr. MONK. Mr. Schmoll.

Mr. THOMAS. Is he here?

Mr. MONK. He is home sick today, Mr. Chairman.

Mr. THOMAS. You didn't do too good a job here in explaining this. (Reading):

The increase in average employment in 1963 and 1964 over 1962 is primarily attributable to (1) increased staff responsibility for improving manpower controls and utilization, and (2) additional workload requirements placed upon VA-wide communications system in connection with automatic data processing.

COMMUNICATIONS SYSTEM

What is the additional requirement placed upon the communications system?

Mr. MONK. It is the transmission of data from the field stations to the computer center.

Mr. THOMAS. How do you transmit it?

Mr. MONK. We do it in a variety of ways. We do some by teletype, we do some by eletronic devices called digitronics where we transmit from Denever to Philadephia, St. Paul to Philadelphia and back.

Mr. THOMAS. Is it on telephone lines?

Mr. MONK. It is on telephone lines; yes, sir. Part of it is on direct line, part of it is on shortwave.

Mr. GLEASON. We cannot use the digitronics though on the Army network.

Mr. MONK. We cannot send data over the Army network. They won't permit it.

Mr. THOMAS. Are these engineers?

Mr. MONK. Communications specialists; yes, sir. They are not professional engineers but they are engineers in the sense of communications engineering.

Mr. THOMAS. Could two or three of these activities in here be cut out?

Mr. GLEASON. Well, we do not think they would be cut down, Mr. Chairman——

WORK MEASUREMENTS AND WORK STANDARDS

Mr. THOMAS. You have a manpower utilization service. What about the Bureau of Personnel over here? Is that not their function?

Mr. DRIVER. This is in work standards, work measurement and that sort of thing. The personnel system does not specify work measurement requirements.

Mr. THOMAS. Do you say each man is supposed to do so much work a day or what?

Mr. DRIVER. In a general sense that is the idea, although with the different skills represented you have to have more precise standards to fit the particular job.

One of the most technical areas in which we have work standards is the Board of Veterans Appeals which has spent a considerable amount of time coming up with standards appropriate to this type of activity. For matters of justification and development.

Mr. THOMAS. How about the field of compensation and pensions?

Mr. DRIVER. We have separate standards for them, we have separate ones where the loan guaranty program and the education program——

Mr. THOMAS. What are the standards for compensation and pensions?

Mr. FARMER. I can give you the exact number of minutes and hours that we allow on an average for each type of claim. For example, an original disability claim is permitted on an average basis 3.4 hours. This is applied to the numbers which are adjudicated to determine how effectively an individual office is operating.

Now, those standards were created partly in collaboration with the program, C. & P., and partly with this organization we are speaking of now, as well as based on field testing where we took samples at seven stations last year. And we have had this program for a number of years. Last year we validated our findings. I can give you other examples of the man-hours allowed for each.

Mr. THOMAS. Under your work standards, suppose there is something that has been decided in 3½ hours that can be decided in 15 or 20 minutes? What happens?

Mr. GLEASON. There are many which take more than 3 hours, Mr. Chairman.

Mr. THOMAS. Then what does your work standard mean when you get through? It means nothing. If a man puts in a full honest 8 hours a day work, that ought to be the standard. How can you sit down and say you are going to give so many minutes to a certain case when you have never heard of the case and haven't the slightest idea what is involved?

Mr. GLEASON. We have to have some type of criteria in order to determine whether the man is performing his function properly.

Mr. DRIVER. And how many people we need to ask for in order to carry out the workload. This is a program with about 4,000 people in it.

Mr. THOMAS. Every month, every 2 weeks, or every night you know how many cases have been disposed of.

Mr. DRIVER. But we have to assign some element of time measurement to these cases in order to know whether we need 1 person, 10 people, or a thousand. And our experience over several years——

Mr. THOMAS. What is a beter timetable or a better guide than actual work performed?

Mr. DRIVER. We do have cases where one man is sitting beside another with exactly the same number of years experience in a professional field, such as the law, for example. One man does twice as many cases that are just as difficult as the man next to him.

Mr. THOMAS. What do you do with the slow worker?

Mr. DRIVER. We try to get him to improve or we try to replace him.

Mr. JONAS. Isn't this a better standard instead of having somebody figure out a mathematical formula?

Mr. GLEASON. This is on the average, Mr. Jonas.

We don't say to one person, "Now you have a case here. You have to take 3 hours and 4 minutes on it," or "You are only allowed 3 hours and 4 minutes." But on the average, sir, it would come out to approximately 3 hours and 4 minutes. And then if there is one individual who is very slow in his work and as Mr. Driver has pointed out, they have the same difficult cases to decide and one man can do better than the other——

Mr. JONAS. But you have a supervisor looking over this man's shoulder all the time.

Mr. GLEASON. Not all the time. The supervisor is going to have quite a job getting around to supervise all those under his jurisdiction, Mr. Jonas.

Mr. JONAS. How many do you have the supervisor supervise?

Mr. DRIVER. This depends on the type of supervisor.

In a program we are talking about, for example, we could have as many as 300 people or 400 people. They have had over the years as many as a thousand.

Take a rating board, for example, a three-man board deciding a case. The largest regional office we have has 13 rating boards. There would be one division chief, there might be three or four section chiefs who would also be in charge.

But to supervise properly among 67 offices we feel that it is most important there be some common guidelines for all of these people to follow. Our experience has indicated that these standards are proper; they allow for necessary development and judgment. We have to amend them from time to time as things become more or less complicated. If we get a new law, such as the pension law that was passed 3 years ago, we have to allow for this in the standard in letting people get used to it and that sort of thing.

Mr. THOMAS. Is it generally accepted throughout the agency and Government that these standards are quite valuable?

Mr. SHYTLE. Yes, sir.

Mr. THOMAS. Why?

Mr. MONK. Increases in productivity.

Mr. THOMAS. In routine cases that you have in any of your divisions—and you are bound to have some—do you say, "Well, we think a competent employee can do a half-dozen cases a day?" Is that what it amounts to?

Mr. MONK. Well, we try to steer away from any attempt to measure the individual's productivity.

Mr. THOMAS. What is the purpose of the measurement then?

Mr. MONK. We try to measure the group or the unit and not put a stopwatch or a production quota on an individual employee. We approach it from the standpoint of the unit or the group. The productivity of the unit or the group. We compare one with the other.

If they are low we try to bring them up and we have had remarkable success with our own work measurement program.

Supply Fund

Object classification

[In thousands of dollars]

	1962 actual	1963 estimate	1964 estimate
11 Personnel compensation:

For sale to others (expensed)	23,615	32,189	33,190
Total accrued expenditures	170,440	178,994	180,832
Change in unpaid undelivered orders	−555	−1,758	
Total obligations	169,885	177,236	180,832

Personnel summary

	1962 actual	1963 estimate	1964 estimate
Total number of permanent positions	618	621	624
Average number of all employees	586	606	611
Number of employees at end of year	611	615	618
Average GS grade	6.2	6.4	6.3
Average GS salary	$5,732	$6,134	$6,277

Mr. Thomas. Take a look at the supply program. You have no language under the Supply Fund this year but there are three more jobs and average employment is up 5 to 611. The Supply Fund finances the depots and the printing but there are about 3,200 other employees involved in supply operations.

Put pages 6–1, 6–2, and 6–3 in the record and we have an excellent table on 6–4.

(The pages referred to follow:)

Supply Program

General statement

The supply program is responsible for providing supply services to all organizations in the Veterans' Administration, and for the procurement and distribution of drugs, biologicals, official reagents, and nonperishable subsistence for all civilian agencies. The program provides a source of supply through VA supply depots and national VA contracts to hospitals of the Department of Health, Education, and Welfare and provides medical supplies and equipment to the Government of American Samoa. It provides for the stockpiling and distribution of civil defense material for DOD and HEW and for fire protection and guard services for GSA stockpiles located at Somerville Depot. Three supply depots, a publication depot and 171 field supply activities provide purchasing and warehousing facilities.

PROGRAM NOTES

The objective of the supply program is to provide quality support to all programs in the VA and to assure for the agency the greatest return for every dollar spent for the acquisition, maintenance, and utilization of supplies, equipment, and services.

The program provides:

1. A staff office for promoting more effective and economical operations, developing plans, policies, standards, cost controls, methods, overall management of the Supply Fund, and for the appraisal and evaluation of the supply program for the Administrator through the Assistant Administrator for Management Services.
2. An operations office which provides centralized direction of the supply activities.
3. A system for agency supply standardization and cataloging, personal property management, property utilization and disposal, and for financing and management of inventories.
4. Centralized direction of field supply operations.
5. A national buying system for the procurement of supplies, equipment, and services. National buying is designed to consolidate requirements and purchases of all items for which there is a price advantage in volume buying.
6. The management and operations of three VA supply depots for economical storage and distribution.
7. A service and reclamation program for the repair and reclamation of supplies and equipment nationwide, and for providing laboratory inspection and testing services for technical instruments, equipment, and supplies.
8. A national buying system for the procurement, printing and distribution of forms, form letters, publications (manuals, circulars, etc.) and other printed material as authorized by the Joint Committee on Printing.
9. Field station supply activities for the local purchase of all items for which there is no price advantage in volume buying and for the purchase of goods and services which are not made available from GSA or other mandatory sources. These activities also provide for storage and issue of supplies and equipment to field station users. They perform functions of supply accounting, utilization and disposal of property, equipment maintenance and supply fund administration. They furnish hospitals, outpatient clinics, regional offices, insurance centers, etc., with drugs, medical supplies, and equipment, orthopedic appliances, engineering supplies, and equipment, etc.; also contractual services such as equipment rental, maintenance and repair of office machines, laundry services, etc.

SUPPLY FUND FINANCING

The supply fund finances, on a reimbursable basis, the procurement of supplies and equipment consumed throughout the VA, the operating expenses of the three VA supply depots including acquisition cost and depreciation of operating equipment, the cost of the service and reclamation program, and the cost of production, procurement, and distribution of printed matter for the VA. Appropriations reimburse the fund for the cost of supplies and equipment provided and services rendered by the above specified activities, including related expense such as transportation, inspection and testing. The fund is expected to break even in fiscal year 1964. No additional appropriation by the Congress will be required for its operation during fiscal year 1963 and fiscal year 1964.

APPROPRIATIONS FINANCING

The following costs are direct charges to appropriations and are not financed by the supply fund:

1. Personal services of the supply program in central office and field stations.
2. Nonpersonal services such as contracts for laundry service, office machine repairs, research (medical and prosthetic), etc.

WORKLOAD

The total dollar volume of work produced in the supply program amounted to $214,671,011 actual in fiscal year 1962; $221,987,096 estimated in fiscal year 1963; and $225,380,145 estimated in fiscal year 1964.

COST TRENDS

Manpower and cost controls are used to insure operational effectiveness of the supply program. The following cost trends express the ratio of supply salary costs to each $100 of total workload produced for VA and other Government activities:

Fiscal year 1962, actual	$9.76
Fiscal year 1963, estimate	9.98
Fiscal year 1964, estimate	10.32

EXPLANATION OF INCREASES

Increase of five average employment financed by the supply fund at supply depots is required to sustain full employment of two additional employees at Hines Depot for the silver reclamation and the personal property maintenance program, and reinstating three average employment for book procurement temporarily suspended in fiscal year 1963.

Increase of four average employment at field supply activities is required for advanced staffing of the new VA hospital, Washington, D.C.

Supply Program

Distribution of cost, $26,695,630

	Fiscal year 1962, actual		Fiscal year 1963, estimate		Fiscal year 1964, estimate		Increase (+) or decrease (−) fiscal year 1964 over fiscal year 1963

[1] Departmental—General operating expense appropriation.
[2] Departmental—Medical, administrative, and miscellaneous operating expense appropriation.
[3] Field—Supply fund—Excludes cost of service rendered to DOD, HEW (OCDM) and GSA: $204,888, $349,284, and $391,881 for fiscal years 1962, 1963, and 1964, respectively.
[4] Field—Medical care appropriation—Includes employees located under departmental (GOE appropriation) but engaged in field-type operations: Average employment and salary cost (19) $111,640; (20) $117,834; (20) $123,495, for fiscal years 1962, 1963, and 1964, respectively.

Mr. THOMAS. Gentlemen, this almost tells the tale.

[Reading:]

The supply program is responsible for providing supply services to all organizations in the Veterans' Administration, and for the procurement and distribution of drugs, biologicals, official reagents, and nonperishable subsistance for all civilian agencies.

Is that word "agencies"?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Outside of the Veterans' Administration?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What do you buy, canned goods?

Mr. GLEASON. This is nonperishable subsistence.

Mr. THOMAS. Doesn't General Services Administration have flour and sugar? They handle the big staple items, and you handle the canned goods?

Mr. COOK. We are doing all of the centralized purchasing including that which GSA has in its——

Mr. THOMAS. All the foods?

Mr. COOK. All the nonperishable foods.

Mr. THOMAS. Well, you don't handle any perishable goods, do you?

Mr. COOK. No, sir.

Mr. THOMAS. [Reading:]

The program provides a source of supply through VA supply depots and national VA contracts to hospitals of the Department of Health. * * *

You furnish the foods for HEW, canned goods, not perishables.

[Reading:]

It provides for the stockpiling and distribution of Civil Defense material for Department of Defense and HEW and for fire protection and guard services for GSA stockpiles located at Somerville Depot.

Well, your 170 field installations do their own purchasing don't they, of perishable goods, meats, vegetables, butter and eggs, and so forth?

Mr. GLEASON. Yes.

CENTRAL PURCHASING

Mr. OSTERTAG. What basic reason is applied to making the Veterans' Administration the central supply agency?

Mr. GLEASON. So various Government agencies and departments won't be bidding against one another, Mr. Ostertag.

Mr. OSTERTAG. Why wouldn't this properly be a General Services Administration responsibility?

Mr. GLEASON. Well, I think really the reason why we get it is because of our large number of installations. We do so much of it ourselves, taking on the additional amount for the other civilian agencies is quite feasible.

Mr. OSTERTAG. Because you are the largest user, and, therefore, you are the key supplier for all the agencies?

Mr. GLEASON. That is approximately correct; yes, sir.

Mr. THOMAS. May I call your attention to page 6–2, to No. 8 (reading):

A national buying system for the procurement, printing, and distribution of forms, form letters, publications (manuals, circulars, etc.), and other printed material as authorized by the Joint Committee on Printing.

SUPPLY FUND FINANCING

Then here is this paragraph down there, and we will relate it to the table on employment. (Reading:)

Supply fund financing: The supply fund finances on a reimbursable basis the procurement of supplies and equipment consumed throughout the Veterans' Administration * * * appropriations reimburse the fund for the cost of supplies and equipment provided and services rendered * * *

The fund is expected to break even in fiscal year 1964. No additional appropriation by the Congress will be required for its operation during fiscal year 1963 and 1964.

What is the present inventory?

Now turn over to the next page. (Reading:)

Nonpersonal services such as contracts for laundry service, office machine repairs, research (medical and prosthetic), etc.

Workload: The total dollar volume of work produced in the supply program amounted to $214,671,011 actual in fiscal year 1962; $221,987,096 estimated in fiscal year 1963; and $225,380,145 estimated in fiscal year 1964.

Cost trends: Manpower and cost controls are used to insure operational effectiveness of the supply program. The following cost trends express the ratio of supply salary costs to each $100 of total workload produced for VA and other Government activities.

Now, you will notice is only supply salary costs. The other items are not included; rent and so forth. To each $100 of the total workload for the Veterans' Administration and other Government agencies.

We have for 1964, 10.32.

Now, if you will turn to 6–5, I think we use a different figure.

INVENTORY AND SALES DATA

Insert 6–5 in the record at this point.

(The page follows:)

Inventory and sales data, fiscal year 1962

Supplies and equipment	Average monthly inventory			Sale of goods	Ratio of sales to inventory
	Field stations	Supply depots	Total		
Provisions	$2,112,146	$4,753,627	$6,865,773	$46,810,214	6.8
General supplies	2,395,230	2,389,940	4,785,170	32,217,998	6.7
Drugs and medicines	4,281,175	2,145,812	6,426,987	28,322,607	4.4
Other medical supplies	2,876,923	4,906,702	7,783,625	23,894,177	3.1
Equipment	63,232	3,262,476	3,325,708	23,738,323	7.1
Fuel	1,088,946		1,088,946	5,913,982	5.4
Low sales and standby	1,720,144		1,720,144	2,267,962	1.3
Stocks withdrawn for shipment (unclassified)		156,611	156,611		
Repair services (S&R)				273,863	
Total	14,537,796	17,615,168	32,152,964	163,439,126	5.1
In transit between depots and stations			1,796,442		
S&R storeroom stocks			76,858		
S&R work in process			30,403		
Subtotal			34,056,667	163,439,126	4.8
Printing and reproduction: Forms, form letters			506,915	2,912,074	5.7
Work in process			11,287		
Total			34,574,869	166,351,200	4.8

NOTE.—Data provided in this table relates sales to average monthly inventory to reflect ratio of sales to inventory investment. Inventory figures differ slightly from closing inventories shown in financial statement of supply fund.

Mr. THOMAS. This is inventory and sales data. Supplies and equipment. Field stations. Supply depot. It is for provisions, general supplies, drugs and medicines, other medical supplies, equipment, fuel. I don't understand what you mean by "Low sales and standby."

Now, here are your activities. It gives the breakdown.

Field stations—I presume this is for 1962. It is $14.5 million.

Mr. MONK. That is the average monthly inventory in the field stations.

Mr. THOMAS. Supply depot, $17.6 million and this gives your total, here.

Now sale of goods, $163,439,000.

INVENTORY TURNOVER

Ratio of sales to inventory. What is this?

Mr. MONK. This is merely the turnover.

Mr. THOMAS. Dr. Monk, you anticipate me.

Mr. MONK. Excuse me, sir.

Mr. THOMAS. How often do you turn that stock?

Mr. MONK. On an average, 5.1 times a year.

Mr. THOMAS. How often is that?

Mr. MONK. That is about every 2 months, roughly.

Mr. THOMAS. That is pretty good.

Now, provisions is almost 7 percent.

Mr. MONK. That is a little better than once every 2 months.

Mr. THOMAS. General supplies, 6.7. Your slowest is what?

Mr. MONK. The slowest is the low sales items.

Mr. THOMAS. It is the medicine. Other medical supplies. Equipment, 7.1.

Now, it averages out 4.8. That is about every 2½ months you turn it over. Is that correct?

Mr. MONK. Yes, sir.

Mr. THOMAS. Is that what the table means?

Mr. MONK. Yes, sir.

Mr. THOMAS. Didn't he use a lower figure for this than 10 percent on the cost of the sales a few years ago? Didn't he use around 5½ or 5 percent?

Mr. COOK. That is the cost of the one program only. Not the total. This is for field stations and the hospital supply divisions and so forth.

Mr. THOMAS. How about the supply depots?

Mr. COOK. It isn't in the book, sir. The figure for fiscal year 1964 is 4.8.

Mr. THOMAS. Why should a supply depot turn twice as fast as a hospital where they don't have anything but perishable supplies? That doesn't make sense.

Mr. COOK. I thought we were speaking of the cost and not the turn.

Mr. THOMAS. I am sorry, I am mixed up. You are right. The cost is about half in the supply depot as it is in the hospital.

Mr. COOK. Yes.

COSTS OF SALES

Mr. THOMAS. What is that exact cost of sales figure? Do you have a figure there for fiscal year 1962 and fiscal year 1963?

Mr. COOK. The cost for sales on the dollar for the supply depots would be 4.7 in fiscal year 1962, 4.7½ in fiscal year 1963, and 4.8 in 1964.

Mr. THOMAS. Where are you reading that?

Mr. COOK. I do not have it in the books, sir. Those are papers I have.

Mr. THOMAS. What is it exactly in the hospitals?

Mr. COOK. I do not have that, sir. It should be about comparable, just a little higher. The cost for the total sales.

Mr. THOMAS. Cost of doing business, not the cost of getting the food on the table or the cost of getting the food in the storage room.

Mr. COOK. It should be around 8½ cents on the dollar in the hospital only.

Mr. THOMAS. It would be at least 60 percent higher, then.

Mr. COOK. Yes, sir.

LOCATION OF SUPPLY DEPOTS

Mr. THOMAS. Where are your three warehouses, Somerville, N.J., and where else?

Mr. COOK. Hines, Ill., and Wilmington, Calif.

Mr. THOMAS. You do not have any down in the Southeast now?

Mr. COOK. No, sir.

Mr. JONAS. Will you yield, Mr. Chairman?

Mr. THOMAS. Yes.

PROCUREMENT PRACTICES

Mr. JONAS. In procuring these supplies for civilian agencies, do they withdraw on requisition the supplies from your depots or do you purchase for them for direct shipment?

Mr. GLEASON. I believe it is on a reimbursable basis.

Mr. JONAS. I know that. How do they get the goods?

Mr. COOK. We do it both ways, sir, depending on which is the cheaper.

Mr. JONAS. If you are notified by HEW that the Department wants a certain amount of goods at a certain hospital, you can either furnish that out of your own supply depot or you can go out and buy it in the market and have it shipped direct. Which is the cheaper way of doing it?

Mr. COOK. It depends strictly on the item they are after. It would vary according to the practice of the particular trade that is selling the item.

Mr. JONAS. That amounts to a lot of shuffling of papers back and forth.

Mr. COOK. Yes, sir.

Mr. JONAS. There is quite a bit of paperwork involved in that kind of transaction.

Mr. GLEASON. Items such as the microscopes and so on, Mr. Jonas, sometimes it would not be worth our while to stock them because of their tremendous expense.

Mr. JONAS. I was thinking about foodstuffs.
Mr. GLEASON. And foodstuffs.
Mr. THOMAS. You buy all of the drugs for everybody except DOD?
Mr. COOK. Yes, sir.
Mr. THOMAS. At——
Mr. COOK. At Somerville, N.J.
Mr. THOMAS. What do you buy exclusively at Hines?
Mr. COOK. Food, certain laboratory equipment, dental, medical, surgical instruments.
Mr. THOMAS. Three big warehouses have a special field of procurement. Somerville buys the drugs. One time they paid $100 for pills. Two weeks later they went down to $15 for the same pill. Hines is all your equipment. What do you buy in California?
Mr. COOK. There is no purchasing in California, sir.
Mr. THOMAS. Where is the furniture, bed supplies, and so forth bought? Do you buy that at Hines now?
Mr. COOK. Beds and those items are bought at Hines, I believe.

WILMINGTON, CALIF., DEPOT

Mr. THOMAS. You do no procurement in California?
Mr. COOK. No, sir.
Mr. THOMAS. What do you have in the big warehouse?
Mr. COOK. Just the warehouse operation.
Mr. THOMAS. What is in it?
Mr. COOK. We have the same supplies in it, sir, we have in Hines and Somerville. The purchasing is done at one of the warehouses, but stocks go to all three.
Mr. GLEASON. It is Wilmington, Calif.
Mr. THOMAS. You are right up along the railroad. It is about 700 or 800 or about 1,000 feet long, is it not?
Mr. COOK. Almost 1,000 feet, I believe.
Mr. THOMAS. I have not been in it in 2 years. The last time I was in it it was just about half filled.
What kind of deal do you have with the rental of that building?
Mr. COOK. The General Services Administration operates it, sir, so far as the utilities are concerned and as far as ownership of the property.
Mr. THOMAS. Who has title to the building?
Mr. COOK. GSA.
Mr. THOMAS. Did they buy that from Wilmington? That was an old Army depot.
Mr. COOK. Yes, sir.
Mr. THOMAS. It was built on Wilmington's land.
Mr. COOK. The land is still owned by the Port of Los Angeles.
Mr. THOMAS. What is the arrangement? The city owns the land? What do you pay for ground rent, sir?
Mr. COOK. I do not know. We do not pay it. GSA pays for it.
Mr. THOMAS. It is for your benefit. You ought to know what rent they pay for it.
Mr. COOK. Strictly from memory, sir, it is about $40,000 a year, including guard service and utilities.

Mr. THOMAS. What was that square footage rent on the property out there? It was more than that, was it not? In addition you were paying all the utility costs.

You had in excess of a half million square feet in that building, did you not?

Mr. COOK. We are only using 200,000 feet out there, sir. There are 609,000 feet. We are using a third of it.

Mr. THOMAS. Who did you rent the other part of it to?

Mr. COOK. GSA themselves are in part of it, sir, for public buildings service shop operations in the Los Angeles area, I believe. I do not know who else.

Mr. THOMAS. There are repair shops there?

Mr. COOK. Yes, sir.

REPAIR SHOP AT HINES

Mr. THOMAS. What about your furniture repair shop and your instrument repair shop in Hines? How is it doing? How many employees do you have in it?

Mr. COOK. About 20, sir.

Mr. THOMAS. They have two or three people there who will work on almost any piece of equipment and when they get through with it it is practically new. They will work on an X-ray table or dental chair.

Mr. OSTERTAG. Before you leave this subject, I have a question.

Mr. THOMAS. Mr. Ostertag.

SUPPLY FUND GOVERNMENT EQUITY

Mr. OSTERTAG. I would like to get this whole picture of the supply fund in perspective so that one can see it.

Can you give us a figure as to what the fund is worth, including your inventory and cash on hand? What is the fund worth in the first place?

Mr. COOK. About $40 million.

Mr. GLEASON. On page 6–9, Mr. Ostertag.

Mr. THOMAS. Take your tables on page 6–6.

Mr. OSTERTAG. What I am leading up to, for fiscal year 1964 you anticipate sales and revenues to offset one another. Is that correct?

Mr. COOK. Yes, sir.

Mr. OSTERTAG. But there will be an inventory or cash on hand other than that. The point is that the fund ought to be worth in value, either in cash or in goods, the equivalent of your inventory.

Mr. THOMAS. In round figures, $39,980,000.

Mr. GLEASON. Take a look at 6–9, too. You see the unpaid, undelivered orders, unobligated balance and estimated capital on earnings. That totals $39,985,000.

Mr. OSTERTAG. During the course of the year you will have sales equal to about $180 million. That is turned over because you are receiving pay for the goods you sell to the tune of $180 million. Yet the total fund in inventory and cash is only worth about $40 million; is that correct?

Mr. COOK. Yes, sir.

Mr. OSTERTAG. That is what I wanted to determine.

Mr. THOMAS. All of which means they turn it over four and a half times a year in round figures.

RECEIVABLES

Mr. OSTERTAG. How much time do you have to wait for payment from the agencies as a rule?

Mr. GLEASON. A lot of it is bookkeeping entries.

Mr. OSTERTAG. They actually pay you for the goods you sell?

Mr. GLEASON. That is right.

Mr. OSTERTAG. It is not a bookkeeping transaction exactly. You replenish the fund with cash. It is a transfer of funds. How long does it take?

Mr. COOK. A maximum of 30 days, sir. Much of it is quicker. That is the maximum.

Mr. OSTERTAG. In other words, there is a 30-day interval, generally speaking.

Mr. THOMAS. Let us put these together, gentlemen: 6–6, 6–7, 6–8, and 6–9.

(The justification pages follow:)

SUPPLY FUND

Program and financing

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Program by activities:			
Operating costs, funded:			
1. Procurement, distribution and services program:			
Cost of goods sold	$159,391,843	$169,965,220	$171,678,639
Other expense	5,197,063	5,767,096	5,889,391
2. Publications and reproduction program:			
Cost of goods sold	1,713,924	1,788,480	1,825,674
Other expense	1,184,901	1,188,920	1,250,031
Total operating costs, funded	167,487,731	178,709,716	180,643,735
Change in selected resources [1]	2,297,211	−1,739,949	
Total operating costs (obligations)	169,784,942	176,969,767	180,643,735
Capital outlay:			
1. Procurement, distribution and services program:			
Purchase of equipment	63,154	174,960	168,570
2. Publications and reproduction program:			
Purchase of equipment	37,129	90,675	19,940
Total capital outlay	100,283	265,635	188,510
Total operating costs, funded and capital outlay (obligations)	169,885,225	177,235,402	180,832,245
Financing:			
Revenue and other receipts:			
Procurement, distribution and services program:			
Revenue	164,553,715	175,898,150	177,628,150
Publications and reproduction program: Revenue	2,912,074	3,016,469	3,109,000
Total revenue	167,465,789	178,914,619	180,737,150
Unobligated balance brought forward (negative)	−8,303,953	−10,723,389	−9,044,172
Unobligated balance carried forward (negative)	10,723,389	9,044,172	9,139,267
Financing applied to program	169,885,225	177,235,402	180,832,245

[1] Balances of selected resources are identified on the statement of financial condition.

Revenue, expense, and retained earnings

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Procurement distribution and services program:			
Revenue	$167,465,789	$178,914,619	$180,737,150
Expense	167,548,471	178,779,916	180,727,150
Net operating income or loss (−) procurement, distribution and services program	−82,682	134,703	10,000
Nonoperating loss (−):			
Proceeds from sale of equipment	3,432	2,600	2,600
Net book value of assets sold (−)	−16,692	−12,600	−12,600
Net loss (−) from sale of equipment	−13,260	−10,000	−10,000
Net income or loss (−) for the year	−95,942	124,703	
Analysis of retained earnings:			
Retained earnings or deficit (−) start of year	−28,761	−124,703	
Retained earnings or deficit (−) end of year	−124,703		

Financial condition

	Fiscal year 1961 actual	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Assets:				
Cash with Treasury	$9,673,491	$11,605,492	$11,055,828	$10,960,733
Accounts receivable, net	8,451,317	6,889,066	6,500,000	6,500,000
Selected assets:				
Commodities for sale	31,339,312	34,163,639	34,200,000	34,200,000
Prepaid expenses and other assets	90,425	118,013	100,000	100,000
Fixed assets, net	201,515	544,323	729,758	824,853
Total assets	49,756,060	53,320,533	52,585,586	52,585,586
Liabilities: Current	10,115,760	13,459,650	12,600,000	12,600,000
Government equity:				
Non-interest-bearing capital:				
Start of year	39,669,061	39,669,061	39,985,586	39,985,586
Donated assets, net		316,525		
End of year	39,669,061	39,985,586	39,985,586	39,985,586
Retained earnings or deficit (−)	−28,761	−124,703		
Total Government equity	39,640,300	39,860,883	39,985,586	39,985,586

Analysis of Government equity

	Fiscal year 1961 actual	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Unpaid undelivered orders	$16,313,001	$15,758,297	$14,000,000	$14,000,000
Unobligated balance (negative)	−8,303,953	−10,723,389	−9,044,172	−9,139,267
Invested capital and earnings	31,631,252	34,825,975	35,029,758	35,124,853
Total Government equity	39,640,300	39,860,883	39,985,586	39,985,586

Mr. THOMAS. Look at the table on 6–6. This is your financing: Operating costs, funded; procurement and distribution; cost of goods sold—that shows you will sell about $171.6 million in 1964.

This gives your financing. Let's take your assets on 6–8. Here are your liabilities. Accounts receivable are $6.5 million. When you get through on page 6–9, that shows total Government equity, round figures, $39,985,000. That is just about the same as your average inventory, is it not?

Mr. MONK. It would not be quite that much, sir. Some of that would be in cash. It would be slightly less for the inventory.

Mr. THOMAS. What is a good figure for the inventory?

Mr. GLEASON. $35,124,000.

Mr. THOMAS. That includes prepaid expenses and fixed assets. What is your total amount of business, $171.6 million?

Mr. MONK. $180 million.

Mr. GLEASON. $180,737,150.

Mr. THOMAS. You have $171.6 million for cost of goods sold. That is the best figure I see.

Mr. MONK. Yes, sir.

Mr. THOMAS. That is $171 million, then. Do you make a little profit on the HEW?

Mr. MONK. We make our expense on HEW.

MARKUP ON SALES

Mr. THOMAS. Tell us now what is your markup to all your customers?

Mr. COOK. On food, sir, it is 8 percent, including freight to the customer's location. On everything else it is 11 percent, including freight to the customer's location, the use point.

Mr. EVINS. That is good money.

Mr. THOMAS. That operates you on a break-even basis?

Mr. COOK. Yes, sir.

Mr. THOMAS. The only thing you make the customer pay for is the freight bill, not the operating cost?

Mr. COOK. The cost of all the people in our three warehouses and all of our buying people are in there, too.

Mr. THOMAS. Everything, including freight?

Mr. COOK. Including freight.

Mr. THOMAS. That is agencywide and to HEW and anybody else?

Mr. COOK. Yes, sir.

Mr. THOMAS. How does that vary from GSA?

Mr. COOK. They do not include their warehouse costs in their price.

Mr. THOMAS. It is just the freight?

Mr. COOK. Yes, sir.

SHIPPING COSTS AND CONTRACTS

Mr. THOMAS. What about your delivery from the warehouse to your customers?

Mr. COOK. That is included in the markup.

Mr. THOMAS. How do you get it delivered?

Mr. COOK. We ship it mostly by carload—truckload. Mostly by truck.

Mr. THOMAS. Who makes those contracts?

Mr. COOK. The people at the warehouse, sir.

Mr. THOMAS. What is your shipping bill a year from your three warehouses?

Mr. COOK. Roughly $900,000 per year.

Mr. THOMAS. From all three of your warehouses total?

Mr. COOK. Yes, sir.

Mr. THOMAS. Which one does the most business?
Mr. COOK. Hines.
Mr. THOMAS. Which is next?
Mr. COOK. Somerville.
Mr. THOMAS. How do you let the contracts?
Mr. COOK. Mostly by competitive advertising, sir.

ITEMS NOT FINANCED THROUGH THE FUND

Mr. OSTERTAG. Your workload is estimated at $225 million for fiscal year 1964?
Mr. COOK. Yes, sir.
Mr. OSTERTAG. And yet under revenues and expenses, the volume is listed at $180 million. What is the difference between the $225 million workload and the estimated revenue and expense of $180 million?
Mr. COOK. Only the hard commodities; virtually all the hard commodities go through the supply fund. Any contracts we make for services, such as repair of equipment do not. They are not processed through the supply fund.

PERSONNEL COSTS

Mr. THOMAS. Let us take a look at that table where you pulled it all together, 6–4. Look at the personnel.
Management and evaluation staff, 35 for 1962, 37 for 1963, and 36 for 1964 at a cost of $363,400. Where are these people located?
Mr. COOK. In Washington, sir.
Mr. THOMAS. Who finances them?
Mr. COOK. The general administration, general operating expense program.
Mr. THOMAS. General operating expense appropriation, and it is not charged to part of that 11 or 8 percent?
Mr. COOK. No, sir.
Mr. THOMAS. Your supply service; you have 104 in 1962 and 113 in 1963 and 1964. The cost in round figures of a million dollars. Where is that financed?
Mr. COOK. From the medical administration and miscellaneous operating expenses appropriation.
Mr. THOMAS. That still is not a part of that 8 or 11 percent, is it?
Mr. COOK. No, sir.
Mr. THOMAS. When we get through we will have to put those figures up a little higher.
Supply depots—your three big ones—in 1962 average employment is 423; in 1963 it is 447; and next year it is 452. You go up five this year, at a cost of $2,840,000. How is that financed?
Mr. COOK. From the supply fund.

SUPPLY DEPOT FINANCING

Mr. THOMAS. The supply depots exclude cost of services rendered to DOD, HEW, OSDM, and GSA. Those figures are set out respectively for those four agencies, $204,888, $349,000, $391,000, et cetera, for fiscal years 1962, 1963, and 1964, respectively. Are these transferred funds, the items in the footnote?
Mr. COOK. Yes, sir.

Mr. THOMAS. Are they in addition to the $2,840,000?

Mr. COOK. Yes, sir.

Mr. THOMAS. That 11 percent goes up again, does it not?

Mr. COOK. No, sir. These are not sale of goods. These are for custodial services furnished to these people at Somerville, N.J.

Mr. THOMAS. You just said a while ago you lumped it all in.

Mr. GLEASON. Those are on the supplies that are shipped out to these other agencies.

Mr. THOMAS. That is what this crowd does right here, your three big depots. They receive, warehouse, and ship.

Mr. GLEASON. This cost as I understand it, Mr. Chairman, is merely for the use of the space in the warehouse by the agencies.

Mr. THOMAS. No. This is your personnel cost.

Mr. MONK. What is this cost?

Mr. COOK. This is all costs in this case. This includes the utility the stockpiling uses.

Mr. THOMAS. Cost of running the installation?

Mr. COOK. Yes, sir.

Mr. THOMAS. Break the three supply depots down. How much of that space at Somerville are you using? How much do you charge to yourself, how much do you charge to GSA, and who else is in there?

Mr. COOK. OCDM.

Mr. THOMAS. That is HEW then.

Mr. COOK. Yes.

Mr. THOMAS. What do you pay for the warehouse? Did we finally buy that?

Mr. COOK. That was free to us. The Government built it.

Mr. THOMAS. That was an old military depot at Somerville. We do not charge any rent against it, do we? How much of that space are you using for VA?

Mr. COOK. Roughly 600,000 square feet, I believe.

Mr. THOMAS. What is HEW using?

Mr. COOK. They are using 425,000 feet.

Mr. THOMAS. How many square feet are there? There must be a million square feet.

Mr. COOK. A million square feet in the Veterans' Administration installation; yes, sir.

Mr. EVINS. That is a pretty good deal.

Mr. THOMAS. That is Government-owned. It was an old military installation. We took it over. It was built during the war.

What is your maintenance charge on that depot? You fixed up some reasonably nice offices there.

Mr. COOK. It runs a little over $300,000 per year, sir, for maintenance and plant operations.

Mr. THOMAS. Where is that charged?

Mr. COOK. That is in these figures on 6–4, sir. The salaries are in the $2.8 million and other costs are in the other objects below it.

Mr. THOMAS. It is charged where in your other objects?

Mr. COOK. It would appear in all of them. The biggest cost would be in utilities, in the supplies and materials, and the other services.

Mr. THOMAS. So your maintenance and operation, outside of salaries is covered in the other objects, in some half dozen classifications?

Mr. COOK. Yes, sir.

Mr. THOMAS. We have our maintenance crew there as well as I remember.

Mr. COOK. Yes, sir.

Mr. THOMAS. It is under force account.

Printing and reproduction, 163 employes for 1962, 159 employees for 1963, 159 for 1964, at a cost of $1,008,000. How is that financed?

Mr. COOK. Through the revolving supply fund, sir.

Mr. THOMAS. Again that is charged to the supply fund.

Field supply activities; 3,067, 3,044, 3,048 employees at a total cost of $18,055,000. Where is this financed?

Mr. MONK. Medical care.

Mr. THOMAS. Look at footnote 4 (reading):

Field medical care appropriation, includes employees located under Departmental general operating expense, but engaged in field type operations: Average employment and salary cost, $111,000, 19 employees, 20 employees, $117,000, et cetera, for the fiscal years 1962 and 1963, respectively.

It is spread all over the lot. How many employees do you have under your jurisdiction this year—3,800, and you want to increase that eight employees next year; is that correct.

Mr. COOK. Yes, sir.

Mr. THOMAS. How much more business are you going to do in 1964 than you did in 1963?

Mr. GLEASON. $3,400,000, sir.

Mr. THOMAS. That goes back to the first table over here, 6–3.

Mr. MONK. It is under workload.

TOTAL DOLLAR VOLUME OF WORK PRODUCED

Mr. THOMAS. This is already in the record, but it ought to be inserted here again because it fits in: "The total dollar volume of work produced in the supply program in 1962 was $214,671,011; $221,987,096 estimated in 1963."

That is an estimated figure. Is it turning out to be about right?

Mr. COOK. Yes, sir.

Mr. THOMAS. Then you estimate that you will increase that volume by $4 million for 1964, or $225,380,000.

Why the increase? Where will the increase go?

Mr. COOK. Additional supply requirements in the medical care program, mostly, sir.

Mr. THOMAS. That is your big customer, of course.

Mr. COOK. Yes, sir.

Mr. THOMAS. And to the hospitals?

Mr. COOK. Yes, sir.

NEW HOSPITALS

Mr. GLEASON. We are going to have a number of new hospitals in 1964, sir.

Mr. THOMAS. A number. What number?

Mr. GLEASON. We will have Cleveland opening up, Washington, D.C.

Mr. THOMAS. The Washington one, the Cleveland hospital has been opened about 6 months, has it not?

Mr. GLEASON. No, sir. That is still in construction. You are thinking of Brecksville, sir.

Mr. EVINS. A suburb of Cleveland.

Mr. THOMAS. Is there one in California?

Mr. GLEASON. Martinez will probably be opened in 1964, too.

Mr. THOMAS. The early part of next year?

Mr. GLEASON. Martinez is about 90 percent completed right now.

Mr. THOMAS. What are you going to do with this hospital here in the District of Columbia?

Mr. EVINS. That is Mount Alto.

Mr. GLEASON. We will probably declare that surplus.

Mr. THOMAS. You are keeping it up now. Is it fully occupied? These are replacement hospitals?

Mr. GLEASON. That is right.

Mr. THOMAS. Why is the cost going up then?

Mr. GLEASON. I will tell you one reason it is going up is that we are taking care of more patients per year. As we mentioned yesterday, the figure we estimate for 1964 will be taking care of about 10,000 more patients in 1964 than we will do in 1963.

Mr. THOMAS. So the replacement of the three hospitals is not the answer.

Mr. GLEASON. Not completely, Mr. Chairman.

Mr. THOMAS. The answer is you are taking care of more patients, 10,000 more for a cost of $5 million. How much is that per patient?

Dr. MIDDLETON. It was $27 per patient-day last year in general hospitals and will be $29.98 next year.

Mr. THOMAS. Per day?

Mr. MIDDLETON. Yes, sir.

Mr. GLEASON. We will have another hospital opening up soon.

SILVER RECLAMATION PROGRAM

Mr. OSTERTAG. I note in your justifications the estimated increase in the number of employees at Hines, for the purpose of silver reclamation. What does that mean?

Mr. GLEASON. We have a program, as you know, in taking X-rays there is a silver coating on the plates and so that we just do not throw this away we have a process out there where the X-ray plates themselves go through a process and the silver is reclaimed. The silver can be used again.

Mr. OSTERTAG. Will this take two additional employees?

Mr. GLEASON. Yes, sir; but the money we save in doing this is more than the cost of operation. We do the same thing with gold, too.

Mr. OSTERTAG. How many are involved in this operation?

Mr. GLEASON. I really cannot tell you. We can find out for you.

Mr. THOMAS. You only have 15 or 20 people, as I remember.

Mr. GLEASON. We do the same thing in gold also, Mr. Ostertag. When a dentist fills a tooth with gold and there are these little pieces of filing that come off, this is also reclaimed.

Mr. OSTERTAG. I can see perhaps where that would be a real saving of money rather than a waste.

Mr. GLEASON. Otherwise the plates go to waste.

Mr. THOMAS. How many people do you have in the shop at Hines?

Mr. MONK. Not the silver reclamation——

Mr. COOK. The last figure I have is 21.

Mr. EVINS. I am in favor of saving all the gold we can, Mr. Chairman.

Mr. GLEASON. Mr. Ostertag, I am told that the figure is a saving of about $100,000 a year on this reclamation program.

Mr. THOMAS. In the entire shop?

Mr. GLEASON. Silver.

Mr. THOMAS. Silver alone?

Mr. GLEASON. Yes.

COST AND SAVINGS ON HINES RECLAMATION SHOP

Mr. THOMAS. Give us a figure on your entire shop. What does it cost you? What do you think are the beneficial results? As well as I remember your management at one of the hospitals told me if they had an operating table, dental chair, or anything they wanted fixed, they would send it out there and fix it but they wanted cash in advance. Do you have any figures on that?

Mr. COOK. Total cost of the service and reclamation sir, is roughly $500,000 a year, of which $377,000 is salaries. What we return to the Government we do not know. We have estimated it may be as much as $5 million per year.

Mr. EVINS. That is pretty good, $500,000 and $5 million.

Mr. THOMAS. I will bet you it is not too far wrong.

TRAVEL COSTS—SUPPLY PROGRAM

Mr. THOMAS. Let us take a look at your other objects; travel and transportation of persons. You jump from $94,784 in 1962 to $147,820 in 1963 and in 1964 you go up to $161,000. Why do you have employee travel? You do a lot of travel in the trucks shipping that merchandise around but who is going to do any traveling besides those trucks and the delivery people?

Mr. COOK. Over one-third of this is for the same 49 service and reclamation people. They go to the hospitals as you know, to make repairs of equipment there in many cases where there is a breakdown.

Mr. THOMAS. Judge, I lost you in your beginning statement.

Mr. COOK. About one-third of that expense is for the service and reclamation people.

Mr. THOMAS. No. A man there told me:

"If they want me to do a job, I will be glad to do it, but I charge them in advance."

He is dealing at arm's length. I do not think I could dream that up now. Where does the travel come in?

Mr. COOK. We do pay those people's travel expenses from this fund, sir, in this particular account.

Mr. THOMAS. What people?

Mr. COOK. The service and reclamation people from the shops. They go to the hospitals in many cases.

Mr. THOMAS. And reinstall the equipment?

Mr. COOK. In many cases, yes, sir. Sometimes they repair it at the hospital itself rather than return it to the shop at Hines, Somerville, or Wilmington.

Mr. THOMAS. How many people do you have in travel status out of the 21 people out there? How do they do repair work in one of Dr. Middleton's operating rooms?

Mr. COOK. It could be any one of about 40 people of the 49.

Mr. THOMAS. Forty-nine? I thought you said you had 21.

Mr. COOK. In Hines, sir; 49 in the total program in all three places.

OTHER RECLAMATION SHOPS

Mr. THOMAS. Do you have a repair shop in all three of your depots?

Mr. COOK. Yes, sir. They are smaller than the one at Hines. We have them at Somerville and Wilmington, also.

Mr. THOMAS. You do not have a maintenance shop agencywide, do you?

Mr. COOK. Yes, sir.

Mr. THOMAS. I overlooked that. How long has it been there?

Mr. COOK. For some time, sir.

Mr. THOMAS. This travel covers the three installations?

Mr. COOK. Yes, sir; from those three installations.

NATURE OF EMPLOYEE TRAVEL

Mr. THOMAS. And there will be how many people in travel status?

Mr. COOK. Forty of the forty-nine people would travel, sir, roughly.

Mr. THOMAS. $147,000. How much of this travel money was expended at January 1 of this year?

Mr. COOK. I do not have that, sir. I could supply it.

Mr. MONK. Of course, this travel figure, Mr. Chairman, would also include the travel of the field people that are in the hospitals in the supply program. This is a composite total figure.

Mr. THOMAS. Where are they going to travel, downtown to the wholesale grocery house?

Mr. BAKER. There would not be very much of that.

Mr. THOMAS. That is what you call local travel, riding the bus or his own automobile.

Mr. BAKER. It might be to a technical meeting or something like that.

There would not be a whole lot of that.

Mr. JONAS. That is $4,000 a year per person to travel.

Mr. THOMAS. Gentlemen, the expenses of the Government are getting out of line. There has been a suggestion to this committee that we reduce all travel by 25 percent this year. So far it appears to me that the VA could stand at least 25 percent, outside of patient travel; that is over in the field of medicine. I refer to general operating expenses.

Mr. JONAS. You could hardly spend $4,000 a year per man without keeping him on the road all the time.

Mr. THOMAS. They will say they are not going to be able to repair the furniture, then.

PRINTING AND REPRODUCTION—SUPPLY PROGRAM

Let us take a look at printing and reproduction. You have your own printing plant. Where is that located?

Mr. Cook. At Shirlington, Va., sir.
Mr. Thomas. How many people do you have there?
Mr. Monk. 159.
Mr. Thomas. Is that where all your forms and letterheads are printed?
Mr. Monk. Yes, sir.
Mr. Thomas. You do not do any business with the Printing Office?
Mr. Monk. We do some with the Government Printing Office.
Mr. Thomas. What does this cover? There are no salaries in this at all.
Mr. Monk. Down below, no, sir; not in the other objects.
Mr. Thomas. What is the $126,892? It is an increase of about $5,000 over last year. What does it cover?
Mr. Cook. This figures, sir, is the cost of the printing that the supply program itself uses, mostly forms.
Mr. Thomas. Is there any salary cost charged to this item?
Mr. Cook. Not in the $126,000, sir.
Mr. Thomas. What are the items that make up the total?
Mr. Cook. These are the field supply activities. This is what the hospitals use in the way of forms, themselves, the paper forms we use for our paperwork.
Mr. Monk. Requisition forms, purchase orders, vouchers.
Mr. Thomas. Is it paper stock?
Mr. Monk. Paper stock.
Mr. Thomas. Is there anything else besides paper stock? Are there printing presses involved in it?
Mr. Cook. Not in that one, sir.
Mr. Thomas. No equipment charge?
Mr. Monk. No, sir.
Mr. Thomas. Where do you buy the paper from?
Mr. Cook. Government Printing Office.
Mr. Thomas. You do not get that from GSA?
Mr. Cook. Government Printing Office, sir.
Mr. Thomas. How much paper stock do you keep on hand?
Mr. Cook. I do not have that figure, sir.
Mr. Thomas. What is your best guess?
Mr. Cook. $50,000 worth at a time.

OTHER SERVICES—SUPPLY PROGRAM

Mr. Thomas. Your other services are $281,000 this year. It goes down to $208,000 for next year and for 1962 it was $157,000. What are those items in other services?
Mr. Cook. Contracts that the supply program itself makes for its own use, repair of equipment, upkeep of our warehouse equipment.
Mr. Thomas. Break it down for us.
Mr. Cook. I will have to supply that, sir. I do not have it with me.
Mr. Thomas. Who can do it? Why does it go off $73,000 in 1964 against this year?
Mr. Cook. Part of that, sir, is maintenance, building contract maintenance of the three warehouses we spoke about.
Mr. Thomas. Is that Government property out there?

Mr. COOK. Yes, sir; two warehouses, Hines and Somerville.

Mr. THOMAS. This covers all three of them, in other objects?

Mr. COOK. Yes, sir.

Mr. THOMAS. What did you do to it this year to the tune of $281,000 in the way of maintenance?

Mr. COOK. We did some work on the roof at Hines. I do not have the cost figures.

Mr. THOMAS. What are you going to do next year with this estimated figure of $208,000? What will be your unobligated balance for this item for 1963? Do you have a figure on that? What did you have obligated up to the 1st of January? Does this come in your shop, Mr. Comptroller?

Mr. HANSMAN. No, sir.

Mr. THOMAS. Aren't you the overall financial man? Don't you ride herd on the merchant prince and all the rest of these gentlemen?

Mr. HANSMAN. We try, sir.

Mr. THOMAS. He got away from you here.

Mr. JONAS. I think we ought to get a table to show what that expense was, for the record, Mr. Chairman.

Mr. GLEASON. We can supply that, Mr. Jonas.

Mr. JONAS. Show what you spent the $281,500 for for 1963.

Mr. GLEASON. These are the ones you would like to see?

Mr. JONAS. Yes, sir.

(The information supplied follows:)

Supply program—Distribution of object 25

	Fiscal year 1962		Fiscal year 1963		Fiscal year 1964

Total		157,829		281,478		208,270

Mr. OSTERTAG. I wanted to raise a question about the ratio of the cost of administering this program which I believe your justification shows as 10.32 percent. I figured it to be close to 11 percent, but it is 10.32. Is that not a rather high percentage of cost? For example, the GSA ratio is about 4 percent.

Mr. COOK. Sir, that is a wholesale operation. Our wholesale operation is at least as inexpensive as theirs. They do not have these local operations at 171 places as we do.

Mr. OSTERTAG. Do you think the 10.32 is a reasonable percentage, despite the comparative difference between the two?

Mr. COOK. Yes, sir.

Mr. JONAS. It appears to be going up.

Mr. OSTERTAG. Your ratio is going up, of course. How do you figure that?

Mr. COOK. The total increase is for pay raises.

Mr. OSTERTAG. The volume?

Mr. GLEASON. The pay increase caused this to go up.

Mr. OSTERTAG. I suppose the same thing would apply in GSA as well.

Mr. GLEASON. It would, sir.

Mr. OSTERTAG. It seemed to me that, in view of the General Services percentage of cost, down as low as 4 percent and yours up to 10.32, there is quite a spread and I wondered what the reasons might be. I wondered what you could apply as being the reasoning for it.

Mr. COOK. Our wholesale operation which is all that GSA has is only 4.81.

Mr. OSTERTAG. What do you mean wholesale operation?

Mr. COOK. National buying and major warehouses. They have nothing equivalent to our hospital supply program.

Mr. DRIVER. Doing business is just as cheap, but when you do it in 171 different locations it becomes more of a retail operation.

Mr. OSTERTAG. You are spread out more. That steps up the average cost?

Mr. COOK. Yes, sir.

Mr. DRIVER. We have the using as well as the supplying points.

Mr. JONAS. Are you sure that increase of 1964 over 1963 is attributable solely to the pay increase?

Mr. COOK. There are eight people additional, sir.

Mr. JONAS. Plus eight people?

Mr. COOK. Yes, sir.

Mr. JONAS. It is thirty-four one-hundredths of 1 percent increase.

Mr. EVINS (presiding). If you gentlemen have concluded, of the $26.6 million for the cost of distribution in your supply program for 1962, $538,176 was the amount required for supplies and materials. For 1963 it is $520,526 and for 1964 it is estimated to be $553,432. Why is the supply and material cost to be increased next year? It amounts to $33,000, Mr. Cook. Why will this increased cost be required?

Mr. COOK. These are the supplies and materials used by the supply program itself, sir. They are going up along with the total supply budget of the agency.

Mr. EVINS. Mr. Reporter, the statement in the annual report under "Supplies" is very interesting reading:

The objective of the supply program is to provide quality supply support to all programs of the Veterans' Administration and its Federal agency customers and to assure the greatest return for every dollar spent for acquisition, maintenance, and distribution of supplies, equipment, and service. The program renders supply support to the most extensive medical program in the Federal Government. The Veterans' Administration operates two-thirds of the hospital beds controlled by the Federal Government within the United States, including the military. In addition, supply service and support is furnished to the other programs in regional offices and insurance centers, area medical offices, outpatient clinics throughout the United States, the Republic of the Philippines, and the Commonwealth of Puerto Rico. The Veterans' Administration prepared the Federal supply schedule for drug items in connection with its responsibility for the procurement—

It lists a great deal of drugs. Then this goes on to say that:

During the year, 236 new standards covering mostly medical and surgical equipment were published and standards for quarters furniture were revised.

This is an interesting item here.

Through cooperation with the Commodity Credit Corporation, the Veterans' Administration continues to utilize surplus dairy products. The utilization of surplus whole milk increased from 4 million pounds in fiscal year 1961 to 4.1 million pounds in 1962.

Then in the supply program you point out:

Participation in the small business program continued. In fiscal year 1962, 51.4 percent of the dollar volume of supplies and equipment were purchased from small business firms. Construction awards, including site and design contracts, amounted to $58.4 million in fiscal year 1962; 51 percent of the total value of these awards went to small business.

You give some breakdown.

I recommend that this be included in the record, pages 153, 154, and 155.

Mr. GLEASON. And part of 156.

Mr. EVINS. The Administrator wishes to include 156 down to automatic data processing.

Mr. GLEASON. Right.

(The material referred to follows:)

SUPPLY

The objective of the supply program is to provide quality supply support to all programs in the Veterans' Administration and its Federal agency customers and to assure the greatest return for every dollar spent for the acquisition, maintenance, and distribution of supplies, equipment, and services.

This program renders supply support to the most extensive medical program in the Federal Government. The Veteran's Administration operates two-thirds of the hospital beds controlled by the Federal Government within the United States, including the military. In addition, supply service and support is furnished to the other programs in regional offices, insurance centers, area medical offices, and outpatient clinics throughout the United States, the Republic of the Philippines, and the Commonwealth of Puerto Rico.

The Veterans' Administration prepared the Federal supply schedule for drug items in connection with its responsibilities for the procurement and distribution of drugs, biologicals, official reagents, and certain chemicals required by Federal civilian agencies. This includes the establishment of contracts and the issuance of the contract schedule.

The discontinuance of the Denver, Colo., supply electric accounting machine (EAM) activities, October 1, 1961, completed the project of consolidating all former 22 central EAM stations into 3 data-processing divisions at VA supply depots. These divisions are now providing supply EAM service to stations in their respective depot distribution area, except for Los Angeles. Los Angeles was excluded from the consolidation to participate in a test of the 1401 computer application to all programs at that station.

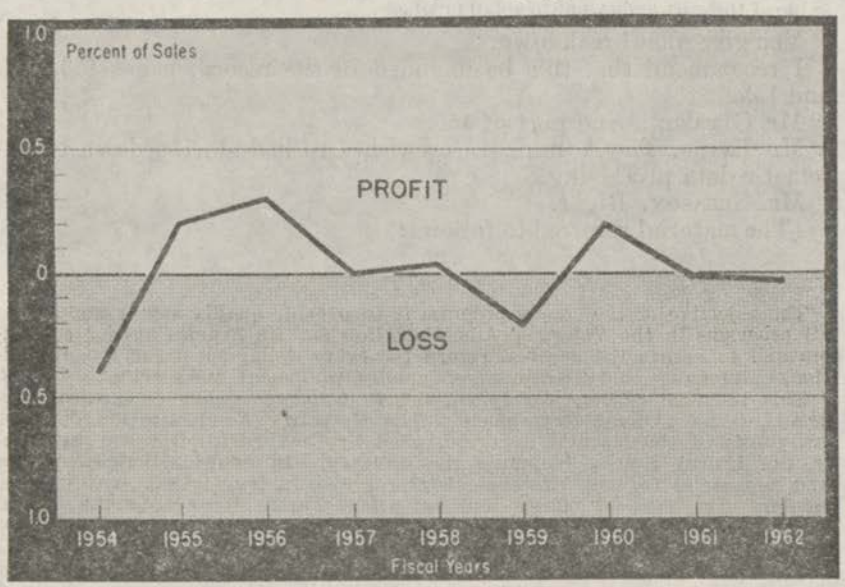
The equipment use standards program continued to receive emphasis. This program has as its goal the assurance that this agency's equipment investment is in balance with its needs. Standards for approximately 90 percent of the program have been completed. During the year, 236 new standards, covering mostly medical and surgical equipment, were published and standards for quarters furniture were revised. Additionally, 170 standards covering general classes of equipment have been developed and are being coordinated prior to publication.

In coordination with the Bureau of the Budget, the Veterans' Administration developed equipment replacement criteria based on replacement and use standards. Field installations replacement needs can more accurately be assessed through the application of common criteria. The criteria were approved by the Bureau of the Budget and used in support of the fiscal year 1963 equipment budget.

Efforts were continued during fiscal year 1962 toward achieving greater economies through redistribution and utilization of personal property. Of the total usable personal property determined to be excess by field stations, approximately $1.1 million, or 43 percent, was utilized within the Veterans' Administration through redistribution. Approximately $3.3 million of excess property was acquired from other Federal agencies.

Management of the agencywide supply fund continued throughout the ninth year on a break-even basis. The objective to operate the supply fund without profit or loss was achieved in fiscal year 1962 within six one-hundredths of 1 percent. The value of supplies and equipment provided using programs totaled $164.3 million, an increase of 8 percent over the previous year. Supply fund inventory investment on June 30, 1962, was $34.2 million.

SUPPLY FUND PROFIT OR LOSS



On July 1, 1961, the VA supply fund assumed the financing of supply depot operating expenses which were formerly charged to the appropriation, "Maintenance and Operations of Veteran's Administration Supply Depots." The three supply depots maintained a high quality of service during fiscal year 1962, as well

as making economical distribution of supply items to Veterans' Administration and other agency activities. Ninety-one percent of all outbound tonnage moved in full carload or truckload lots, assuring economy and speed in transportation. Depot sales amounted to $37.4 million, as compared to $36.3 million in fiscal year 1961. Total operating cost of the supply depot system, including administration and centralized procurement, amounted to 7.4 percent of sales for the year. Service and reclamation shops were operated at the supply depots as a part of the maintenance program to extend the useful life of hospital equipment and other personal property.

Through cooperation with the Commodity Credit Corporation, the Veterans' Administration continued to utilize surplus dairy products. The utilization of surplus whole milk increased from 4 million pounds in fiscal year 1961 to 4.1 million pounds in fiscal year 1962. Utilization of surplus butter increased from 2.9 million pounds in fiscal year 1961 to 3.1 million pounds in fiscal year 1962 due to an increase in available surplus.

Participation in the small business program continued. In fiscal year 1962, 51.4 percent of the dollar volume of supplies and equipment were purchased from small business firms. Construction awards, including site and design contracts, amounted to over $58.4 million in fiscal year 1962; 51 percent of the total value of these awards went to small business.

In the supply activities for new construction, major accomplishments during the year included the equipping of the 500-bed replacement hospital at Jackson, Miss., and substantially completing the equipment phase of the new 1,000-bed NP hospital at Brecksville, Ohio. Additional accomplishments include furnishing initial personal property required to activate 30 major modernization projects and 17 minor modernization, improvement, and repairs projects.

Continued attention was given toward improving the supply system in order to acquire needed supplies at lowest cost. For example, in fiscal year 1962, 36 drug items were added to depot stock. These items were previously on Federal supply schedule or local purchase. This action resulted in a net reduction of $568,839 in the costs of these items purchased during the year.

In June 1962, the Veterans' Administration published a policy to its field stations that no contracting officer for the Veterans' Administration shall enter into a contract for funeral and burial services under which the contractor does not provide service for all eligible beneficiaries regardless of race, creed, color, or national origin.

During the year, the Veterans' Administration assumed the General Services Administration's responsibilities for purchasing nonperishable subsistence for civilian agencies. The Veterans' Administration and GSA are jointly developing the nationwide usage pattern for the most economical distribution system for all nonperishable subsistence requirements of civilian agencies.

A program for the recovery of silver from exhausted hypo and X-ray film was developed for agencywide use. An eventual income of $100,000 per year, most of which was formerly lost to the Government, is anticipated.

The Veterans' Administration participated in the Western Space Age Industries Exhibition, San Francisco Cow Palace, April 1962. An exhibit developed by the Veterans' Administration, rated high by manufacturers and suppliers, illustrated the VA supply and equipment needs for its various programs. It achieved its objective of interesting potential suppliers, thereby expanding competition on VA requirements and broadening our own procurement horizons.

SUPPLY FUND PROFIT AND LOSS

Mr. EVINS. I am very much interested in the chart on page 155, showing the supply fund, showing a profit from about 1954 to 1957, and then you just about leveled off, and in 1958 and 1959 you lost. In 1960 you made a profit again. For 1962, you are going in the red.

Mr. GLEASON. About $100,000.

Mr. EVINS. Why are you going in the red again? That is like the President's tax program. You have to go down on the elevator before you can go up. Is that about right?

Mr. MONK. Actually, that is a very small dip in the red. We can come back in the program very easily. Our object here is to break even and have neither a loss nor a profit.

Mr. THOMAS. How much hard-to-sell stock do you have?

Mr. EVINS. Will you answer that, Mr. Cook?

Mr. THOMAS. What do you do with that type stock you accumulate?

Mr. COOK. $35 million in inventory.

Mr. THOMAS. What do you do with it? How do you get rid of it?

Mr. COOK. The using appropriations of the Veterans' Administration, the people who actually use it. We actually collect from them.

Mr. THOMAS. Do you have to go out on the open market to get rid of any of your hard stock?

Mr. COOK. We have not had to do that in years, sir.

Mr. THOMAS. How much inventory are you carrying on your hard stock? Have you any?

Mr. COOK. $35 million.

Mr. MONK. You mean by hard stock——

Mr. THOMAS. Slow moving, will not turn. The agencies do not want any more of it. Pills, for instance. The doctors say we have enough of these pills. We do not want any more. We have another one. What do you do with them? What do you get out of them?

Mr. COOK. We have less than $100,000 of that, Mr. Chairman.

Mr. THOMAS. Not bad. Is that on an annual basis?

Mr. COOK. At any one time, yes, sir.

EQUIPMENT COSTS—SUPPLY PROGRAM

Mr. EVINS. Equipment costs for 1962 were $79,880; for 1963, $140,-210; and for 1964, it is considerably down, $81,460.

Do you wish to comment on that, Mr. Cook?

Mr. COOK. Sir, we made a change in our financial structure. We included the cost of the supply depots in the supply fund. At that time we capitalized equipment into the fund. We wrote into the books the value of all the equipment on hand. That is why 1963 is higher.

Mr. THOMAS. What is that equipment?

Mr. COOK. Warehouse equipment.

Mr. THOMAS. What is it?

Mr. COOK. Fork lifts, tractors, some furniture, office machines in the depots.

Mr. EVINS. Automatic lifts?

Mr. COOK. Yes, sir.

SUPPLY FUND LOSSES

Mr. OSTERTAG. Getting back to the point of the chairman's inquiry about the supplies which are obsolete or for which you have no means of disposal, you tell us, that averages about $100,000 a year.

Mr. COOK. Those items, sir, which we find we no longer have need for because we do not require the item; yes, sir. Wornout equipment is also disposed of in the same way.

Mr. OSTERTAG. There must be some damage, spoilage, and all the necessary things that go with a supply operation. Does that average about $100,000 each year?

Mr. COOK. The damage you spoke of, sir, runs about $200,000 a year.

Mr. OSTERTAG. Over a period of years, your fund is depleted by virtue of that; is it not?

Mr. COOK. No, sir; because we include in this 11 percent we spoke of——

Mr. OSTERTAG. How do you refund your losses?

Mr. GLEASON. By charging this 11 percent or 8 percent.

Mr. OSTERTAG. To the other agencies?

Mr. GLEASON. Yes.

Mr. COOK. To ourselves primarily.

Mr. GLEASON. To ourselves, also. You will note on pages 6–7, Mr. Ostertag, for fiscal year 1964, we do not anticipate a loss on this at all. For the last 2 years we had a loss of $124,703. This year we think we will wind up with $124,703 profit, which will leave a perfect balance.

Mr. THOMAS. Where is your big loss?

Mr. COOK. I think our big loss would be in foodstuffs.

Mr. THOMAS. Have you any appreciable losses in drugs?

Mr. COOK. Some.

Mr. THOMAS. Did you get caught with any of that thalidomide?

Mr. COOK. Not so far as I know. I do not believe we had any.

DEPARTMENT OF VETERANS' BENEFITS

Mr. THOMAS. Gentlemen, let us take a look at the Department of Veterans' Benefits. This general statement is excellent. Let us put in the record the summary on pages 7–2, 3, and 4.

(The pages referred to follow:)

DEPARTMENT OF VETERANS' BENEFITS

ALL APPROPRIATIONS, $4,145,200,000

Summary

The total amount requested for 1964 is $4,145,200,000. This reflects an increase of $385.8 million from fiscal year 1962 and a decrease of $4.7 million from fiscal year 1963.

These requirements may be classified into three major categories: (1) Administrative expenses; (2) grants to the Republic of the Philippines; and (3) veterans direct benefits composed of the following (*a*) compensation, (*b*) pensions, (*c*) education and training, (*d*) special assistance to disabled veterans, and (*e*) other miscellaneous benefits.

The following table summarizes in millions of dollars the actual amounts appropriated for fiscal year 1962, the appropriations for fiscal year 1963 plus estimated supplemental amounts required, and the fiscal year 1964 requirements:

Summary of requirements

[In millions]

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
General operating expenses	$123.4	[1] $120.3	$123.1	+$2.8
Compensation and pensions	3,500.0	[2] 3,874.0	3,921.0	+47.0
Readjustment benefits	135.0	[3] 155.1	[4] 101.1	−54.0
Grants to the Republic of the Philippines	1.0	.5		−.5
Total appropriation estimates	3,759.4	4,149.9	4,145.2	−4.7

[1] Includes $4,500,000 proposed supplemental for Public Law 87–793 costs.
[2] Includes $42,000,000 proposed supplemental.
[3] Includes $63,600,000 proposed supplemental ($3,400,000 for education and training; $900,000 for special assistance to disabled veterans; and $59,300,000 for transfer to loan guarantee revolving fund).
[4] Includes $34,000,000 to be transferred to loan guarantee revolving fund.

The estimated requirements in each of the above appropriation categories are explained and justified in detail in subsequent sections of this submission. In addition, new legislation requirements included in this submission are summarized in the succeeding paragraph.

1. Public Law 87-509, June 28, 1962: Reservists involuntarily released from active duty—provides for payment of disability compensation after recoupment of 75 percent of readjustment pay.

2. Public Law 87-544, July 25, 1962: Limits classes of persons eligible to receive on death of competent veteran, amounts of pension, compensation and retirement pay withheld during hospitalization.

3. Public Law 87-546, July 25, 1962: To permit orphans to study abroad.

4. Public Law 87-556, July 24, 1962: No reduction of pension during hospitalization of veteran with dependents.

5. Public Law 87-591, August 16, 1962: V.R. & E. benefits continued for blind.

6. Public Law 87-610, August 28, 1962: Total rating—blindness of one eye, blindness of other eye after separation—amended to include bilateral kidney involvement.

7. Public Law 87-645, September 7, 1962: To provide increases in rates of disability compensation.

8. Public Law 87-666, September 18, 1962: "Statement of the case" legislation.

9. Public Law 87-674, September 19, 1962: Marriage bill under compensation and pension program.

10. Public Law 87-793, October 11, 1962: Postal Service and Federal Employees Salary Act of 1962.

11. Public Law 87-815, October 15, 1962: Amends section 1502(a) of title 38, United States Code, to provide readjustment benefits for veterans who are in need of vocational rehabilitation on account of a service-connected disability.

12. Public Law 87-825, October 15, 1962: Revises effective date provisions relating to awards.

Mr. THOMAS. For the Department of Veterans' Benefits, the total requested is $4,145,200,000. This reflects an increase of $385.8 million from fiscal year 1962, and a decrease of $4.7 million from fiscal year 1963 (reading):

These requirements may be classified into three major categories: (1) administrative expenses; (2) grants to the Republic of the Philippines; and (3) veterans' direct benefits, composed of the following. Then you have the breakdown of compensation, pensions, education and training, special assistance to disabled veterans, and other miscellaneous benefits.

The table on page 7-2 is quite good. The interesting thing is your footnotes. General operating expense goes up $2.8 million to $123.1 million. Yet the number of employees goes down a little bit. Compensation and pensions goes up $47 million to a total of $3,921 million. Readjustment benefits are down $54 million to $101.1 million. Grants to the Republic of the Philippines is minus $0.5 million. What did you do with the Philippines this year?

Mr. MONK. The law expires, Mr. Chairman, as of June 30. We are in for a 5-year extension, but we could not budget it.

Mr. THOMAS. There is no doubt the legislation will be continued. Then you will have to come in for a deficiency for 1964.

Mr. MONK. Yes, sir.

Mr. EVINS. I might observe that a few years ago they kept these items separately, and then consolidated them in the one Department of Veterans' Benefits. I notice the VA does not follow that same pattern in the content of its annual report.

Mr. GLEASON. That was for last year, Mr. Evins. This year we hope to have it different.

Mr. DRIVER. They are separated later in the budget.

Mr. EVINS. You are not consistent in your documents.
Mr. DRIVER. They are separated later on.

ANTICIPATED SUPPLEMENTALS

Mr. THOMAS. Let us look at the supplementals, gentlemen. Looking at the footnotes, under general operating expenses you are coming in for a $4.5 million supplemental. Under compensation and pensions, there is a proposed supplemental of $42 million. Footnote 3 is readjustment benefits; includes $63.6 million proposed supplemental—$3.4 million for education and training ,$900,000 for special assistance to disabled veterans, and $59.3 million for transfer to loan guarantee revolving fund. Is that all for the loan guarantee fund?

Footnote 4 includes $34 million to be transferred to loan guarantee revolving fund.

Mr. GLEASON. That is for fiscal 1964, Mr. Chairman. You read $63 million for the proposed supplemental for this fiscal year.

Mr. THOMAS. These two supplementals are all you will have in the revolving fund?

Mr. MONK. We would not guarantee that, sir.

Mr. GLEASON. This will be the great preponderance.

Mr. THOMAS. Are we not short another $50 million or $60 million?

Mr. MONK. It is possible.

SALE OF MORTGAGES

Mr. BROWNSTEIN. It depends on how successful we are in selling our mortgages. In our 1964 submission we have an estimate of $147 million in sales.

Mr. EVINS. You had better get on the ball.

Mr. THOMAS. If you do not sell them, then what?

Mr. BROWNSTEIN. We will have to come back to see you.

Mr. THOMAS. For how much?

Mr. BROWNSTEIN. Whatever the difference is between what we sell and the $147 million.

Mr. THOMAS. You have a big wide figure down at the bottom which is frightening.

Mr. GLEASON. This is a sort of unknown to us, Mr. Chairman.

Mr. THOMAS. Yes.

Mr. JONAS. Have you talked to Mr. Baughman over at the Housing and Home Finance Agency? He has been in this for a good many years.

Mr. BROWNSTEIN. Yes, sir. We have talked with him on this, Mr. Jonas. We have done pretty well. We are going to sell better than $150 million this year.

Mr. JONAS. At what? Par?

Mr. BROWNSTEIN. Actually, we are making about half a million dollars premium on the sales that we are selling this year.

Mr. JONAS. Are they all seasoned mortgages or current mortgages?

Mr. BROWNSTEIN. We will not sell any that are less than 6 months old. Most of them are seasoned. Now you are getting to the real heart of this thing. The problem is that we are selling them in the areas where there are investors who are interested in buying them and where the money is, and this brings up the question of how successful we will be in disposing of the additional ones.

Mr. JONAS. All of them are recourse paper, are they not?

Mr. BROWNSTEIN. Yes, sir.

Mr. JONAS. You do not know whether you have really sold anything or not.

Mr. BROWNSTEIN. Some of it will come home. There is no question about it.

Mr. DRIVER. It is for the year, anyway.

Mr. EVINS. This is the first of the year, the very beginning of the budget consideration. Why can we not consolidate some of the supplementals into the regular bill?

Mr. THOMAS. Perhaps we could.

Gentlemen, let us take a look at the new laws. You have looked over these on 7–3 and 4.

GENERAL OPERATING EXPENSES, DEPARTMENT OF VETERANS' BENEFITS

Now let us go to "General operating expenses," $123,120,000. This is up $2.8 million over 1963. Put 8–1 through 8–8 in the record.

(The pages referred to follow:)

DEPARTMENT OF VETERANS' BENEFITS

GENERAL OPERATING EXPENSES, $123,128,000

General statement

The Department of Veterans' Benefits is responsible for providing all of the direct benefits, except medical and insurance, to eligible veterans and their dependents as authorized by law. The basic functions are as follows:

1. The adjudication of veterans' and dependents' claims for compensation, pension, and guardianship and fiduciary service to helpless or incompetent veterans and minor dependents.

2. The administrative operations in connection with vocational rehabilitation of disabled veterans in training under Public Law 16, 78th Congress, as amended; the education and training of Korean veterans under the Veterans Readjustment Assistance Act, Public Law 550, 82d Congress, as amended; the education of war orphans under the provisions of Public Law 634, 84th Congress, as amended; and Public Law 87–815 (extension of vocational rehabilitation benefits to peacetime veterans).

3. The issuance of certificates of loan guaranty or insurance, servicing of loans reported in default, payment of claims of lenders on defaulted loans, acquisition, management, and disposal of property when necessary to protect the Government's interest, making of direct loans to veterans in certain areas, and providing assistance to specified paraplegic veterans in acquiring specially adapted housing.

4. The dissemination of information to veterans and/or their dependents and assistance in the preparation, development, submission, and presentation of claims for benefits under laws administered by the Veterans' Administration.

5. The related service activities of finance, administrative, and personnel activities are provided in support of the above functions. In many instances these activities also service other VA departments; in some cases the Department of Veterans' Benefits receives such services from other departments. The costs of such "common services" are distributed among the departments involved in accordance with established criteria, and are reflected in this submission as "common service adjustments."

The conversion of 4,500,000 compensation and pension accounts and related statistical records to an automatic data-processing system has been completed. Major refinements are now underway to develop a system of cyclical payments in which checks will be distributed evenly throughout the month. ADP system studies currently in process are (1) the refinement of management and statistical reporting to make the required information more timely, accurate, and meaningful; and (2) to improve loan-guaranty accounting techniques, thereby providing better service and management control, and achieve operating economies. Future ADP studies to be undertaken are in the area of income questionnaire processing and budget preparation and allotment control.

The actual cost in fiscal year 1962 was $123,407,630. Estimated requirements for fiscal year 1963 and fiscal year 1964 are $120,299,000 and $123,128,000, respectively, including $4,472,000 and $7,822,000 for Public Law 87–793 costs. Our requirements for fiscal year 1964 are premised only on legislation currently enacted. The cost of housekeeping and engineering services previously budgeted as a reimbursable item to D.M. and S. is deleted in fiscal years 1963 and 1964 and will be justified on a agencywide basis by the Department of Medicine and Surgery.

Summary of requirements by major category

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
Average employment	16,084	15,506	15,169	−337
Personnel compensation	$101,059,734	$102,760,361	$105,276,894	+$2,816,533

Representation allowance	433	500	500	
Official residence allowance	877	1,000	1,000	
Total	3,532,496	3,645,200	4,007,890	+362,690

Summary of employment requirements by activity—Continued

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated	Increase (+) or decrease (−), 1964 over 1963
Supplies and materials:				
Office supplies and materials	$796,020	$785,385	$755,385	−$30,000
Books	57,239	55,760	54,215	−1,545
Operating maintenance supplies	66,590	10,855	9,000	−1,855
Flags	602,014	625,000	650,000	+25,000
Total	1,521,863	1,477,000	1,468,600	−8,400
Equipment: Furniture, furnishings, and fixtures	3,357,519	715,100	338,000	−377,100
Grants to States (vocational rehabilitation and education)	1,086,303	1,000,000	900,000	−100,000
Total cost	125,966,137	124,738,800	127,645,400	+2,906,600
Common services adjustment	−2,558,507	−4,439,800	−4,517,400	−77,600
Net cost	123,407,630	120,299,000	123,128,000	+2,829,000
Public Law 87-793 costs		(4,472,000)	(7,822,000)	(+3,350,000)

Summary of major workloads

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
1. Chief Attorney:			
Total wards (end of year)	510,973	560,000	590,000
Accounts audited	394,798	405,000	339,000
Field examinations completed	173,452	165,000	189,600
2. Contact:			
Personal interviews	3,381,508	2,852,000	2,573,000
Telephone interviews	3,259,080	2,642,000	2,213,000
Applications and forms	2,026,842	1,657,000	1,477,000
Correspondence prepared	961,906	789,000	691,000
Counter interviews	491,941	295,000	247,000
3. Compensation and Pension:			
New claims, total	327,966	331,000	334,000
Disability	195,110	192,000	188,000
Death	132,856	139,000	146,000
Reopened claims, total	410,211	415,000	408,000
Disability	365,088	387,000	379,000
Death	45,123	28,000	29,000
Dependency and income claims, total	520,584	550,000	639,480
Disability	317,556	333,500	390,080
Death	203,028	216,500	249,400
Insurance claims	38,060	40,000	42,000
Burial claims	209,945	221,000	233,000
4. Vocational Rehabilitation and Education:			
Average number trainees:			
Vocational rehabilitation	4,958	5,200	8,000
Readjustment training	96,456	52,000	28,000
War orphans	12,863	15,000	13,000
Cases of counseling:			
Veterans' Administration	25,228	21,000	15,000
Fee basis	10,226	19,500	33,000
5. Loan Guarantee:			
Appraisal requests received (units)	335,788	335,000	300,000
GI loan applications received	196,440	215,000	198,000
GI loans closed	166,178	184,000	167,000
Direct loan applications received	21,470	26,300	25,000
Direct loans closed and disbursed	19,699	21,500	20,000
Average number of loans owned	223,290	235,200	250,000
Paraplegic grants disbursed	402	425	400
Defaults reported	107,192	105,000	101,500
Claims vouchered for payment	19,154	19,600	16,850
Property acquisitions	21,165	24,400	19,900
6. Finance: Portfolio accounts	2,605,454	2,810,600	2,940,000
7. Administrative:			
Incoming mail	52,161,000	50,231,000	49,880,000
Folder lookups	32,381,960	31,394,760	31,390,000

Mr. THOMAS. Let me read the paragraph at the bottom of 8–2:

The actual cost in fiscal year 1962 was $123,407,630. Estimated requirements for fiscal year 1963 and fiscal year 1964 are $120,299,000 and $123,128,000 * * *.

It is down just a little, is it not?

Our requirements for fiscal year 1964 are premised only on legislation currently enacted. The cost of housekeeping and engineering services previously budgeted as a reimbursable item to D.M. & S. is deleted in fiscal years 1963 and 1964 and will be justified on an agencywide basis by the Department of Medicine and Surgery.

Let us take a look at the figures on 8–3 and 4. This shows the personnel costs. Total personal services and benefits, $113,398,000 for 1964, an increase of $3,081,900. Miscellaneous operating cost, equipment, employee travel, vocational rehabilitation, and other objects, total about $14 million. You made an adjustment and it all adds to $2,829,000 over 1962.

Then you add the pay act costs.

Mr. GLEASON. I am sure that is included, Mr. Chairman. Is that not right, Mr. Shytle? The $3,350,000 is included in the net cost.

Mr. SHYTLE. Yes, sir.

Mr. THOMAS. What is the net cost?

Mr. GLEASON. $2,829,000.

Mr. THOMAS. You break it down by activities. Here is the central office with an increase of $483,600, a total of $8,358,500.

The personnel table is on the next page. In the central office you have 540, which is 10 less than you have this year, but the cost goes up $483,600. Is that correct?

Now we go to the field. What do you mean by "field"?

Mr. BROWNSTEIN. The 67 regional offices.

Mr. THOMAS. You show the manager, chief attorney, contact, compensation and pension, vocational rehabilitation, loan guarantee, office services, and data processing. We have quite a job, have we not?

EMPLOYMENT BY PROGRAM

Let us take a look at page 8–4. Total employment in the central office goes from 550 to 540, a reduction of 10. How many managers do you have?

Mr. BROWNSTEIN. One in each office—67. This is his immediate office.

Mr. THOMAS. I understand. The figure remains the same, 309, for 1963 and 1964 for your 67 managers.

Chief attorney, 1,570 in 1963 against 1,510 for next year, a reduction of 60. The chief counsel had only what? One hundred?

Mr. MONK. 104.

Mr. THOMAS. Contact goes down 110 to a figure of 937, against 1,047 in 1963. How many offices did you close this year?

Mr. BROWNSTEIN. Twenty-six.

Mr. GLEASON. Twenty-six this year.

Mr. THOMAS. Compensation and pension goes up 87, to 3,922 in 1964 against 3,835 now.

What about all that automatic processing equipment we have, Mr. Monk? We have a big installation out here at Hines, and yet personnel is going up.

Mr. GLEASON. More people are coming in for pensions now, Mr. Chairman.

Mr. THOMAS. I looked for that figure and never could find it for fresh, brandnew cases. Be digging it up for me. It may be in there, but I could not find it.

"STATEMENT OF CASE" REQUIREMENTS

Mr. BROWNSTEIN. The reason we are in here for an increase, Mr. Chairman, is because of the law that was passed at the last session which requires the preparation of the statement of the case in every instance where——

Mr. THOMAS. Mr. Brownstein, we went into that yesterday. We do not mind having you talk. We like you to talk. But did we not agree you put about 100 employees in there? Every time the rating board makes a decision, they send everybody a letter——

Mr. BROWNSTEIN. A form letter, Mr. Chairman.

Mr. THOMAS (continuing). With six copies. Nobody likes it, so they write back again. The point I am making is that you cannot possibly do any more work than you are already doing, so why do you need any more people?

Mr. BROWNSTEIN. Because it will result in the necessity of the preparation of a totally different type document here which will have to be——

Mr. THOMAS. The size of the paper may be different, but the information is the same, is it not?

Mr. BROWNSTEIN. No, sir. We now handle it by a form letter. Now when the man comes in and expresses dissatisfaction, before he can file an appeal with Mr. Stancil we will have to give him a statement of the case and prepare for him a statement of the facts, a recitation of the law, and the basis on which his rating was made. Then, in order for him to take an appeal to the Board of Veterans Appeals, he must take issue with either the facts or the law on which the initial rating action was based. But he must be specific. This is going to result in additional work in a substantial amount. We think, Mr. Chairman, this 87 is a conservative estimate.

Mr. THOMAS. I was afraid you were going to say that, Mr. Brownstein.

Mr. BROWNSTEIN. I would not want to disappoint you, sir.

Mr. JONAS. As a matter of fact, how can you handle that on a form?

Mr. BROWNSTEIN. It will not be on a form, Mr. Jonas.

Mr. JONAS. You will have to have some lawyer dictate a statement of the case to some stenographer.

Mr. BROWNSTEIN. Yes, sir; in every case this will have to be done, and we estimate there will be about 40,000 of these a year.

(Off the record.)

Mr. GLEASON. Mr. Chairman, I do not want to transfer anything else in the Veterans' Administration for a little while, if you do not mind.

Mr. JONAS. There is not any doubt about the fact that this will complicate your operation.

Mr. BROWNSTEIN. That is correct, sir.

Mr. THOMAS. In vocational rehabilitation, you go off 71—651 to 580. Loan guaranty, minus 69—from 2,719 to 2,650. Office services, minus 99—from 4,675 to 4,576.

REDUCTION IN NUMBER OF EMPLOYEES

That is a lot of people. The total is 15,169, which represents a reduction of 337 from last year, 15,506.

If you were to wrap up all these activities, what were they 6 or 7 years ago, personnelwise?

Mr. DRIVER. About 25,000.

Mr. SHYTLE. The Department of Veterans' Benefits in 1957 was 20,606, and in 1964 it is 14,518.

Mr. THOMAS. What was that figure?

Mr. SHYTLE. 14,518, the net employment.

Mr. THOMAS. What do you mean by "net"? I have in my book 15,169.

Mr. SHYTLE. We had interservice adjustments of 651, common services between the Departments of Veterans' Benefits and Insurance.

Mr. THOMAS. That is quite a record in itself, is it not? What unit in the group shows the greatest reduction?

Mr. BROWNSTEIN. Education.

Mr. THOMAS. How did that come about?

Mr. BROWNSTEIN. Of course, there has been a sharp contraction in the training load. World War II veterans are no longer eligible.

Mr. THOMAS. That is a matter of operation of law. We cannot take too much credit for that. Where can we take a little credit?

Mr. BROWNSTEIN. There is a large reduction in office services, and there we get the real benefit of the automation you mentioned, Mr. Chairman, and also in finance.

Mr. GLEASON. And our contact service, too. Closing those contact offices certainly cuts down.

OTHER OBJECT COSTS

Mr. THOMAS. This is a good table. Under "Travel and transportation of things," employee travel is off $89,715; $2,099,285 against $2,189,000 in 1963. Local transportation, $187,720 last year against $187,670 for 1964, minus $50. How did you arrive at that $50? You did a little hard figuring to get that. That is pretty close.

What do you mean by local transportation?

Mr. MONK. Streetcar fares and taxis within the metropolitan area where the office is located.

Mr. THOMAS. Does anybody ever ride the streetcar any more?

Mr. MONK. Yes, sir. This is for all of the offices.

Mr. GLEASON. This is for the entire country, Mr. Chairman.

Mr. THOMAS. What about private automobiles?

Mr. MONK. No, sir; that would be in the employee travel.

Mr. THOMAS. You show hire of GSA motor vehicles, $318,280 last year; $301,245 for 1964, a reduction of $17,035.

Transportation of things, $259,900 for 1964, a reduction of $21,200 from last year. Parcel post is part of that, $81,000 this year as against $81,000 this year. You have trucks from GSA, $7,400, the same as this year. That is a guess figure, is it not?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Your big item is shipment of household goods, $155,500 for 1964 against $175,100 this year. What does this average? Under the law, you pay an employee when he has a change in duty station. Is there any limitation on that amount, or is it the actual cost?

Mr. MONK. There is a limitation on the poundage, and then it is the commuted rate computed by the General Accounting Office.

Mr. THOMAS. What is the limitation on the poundage?

Mr. MONK. 7,000 pounds.

Mr. THOMAS. How does that stack up with the military?

Mr. GLEASON. General, have you any idea on that?

Mr. MCANSH. The Veterans' Administration allowance is lower.

Mr. THOMAS. Do you have any crating or packaging in here?

Mr. MONK. No, sir; the employee has to arrange for it and pay for it. But in the commuted rate there is an allowance for packing and crating.

Mr. THOMAS. When an employee moves, say an average family of five, what is the cost?

Mr. BROWNSTEIN. Mr. Chairman, we budgeted this year for 11 people who will rotate on the Manila assignment.

Mr. THOMAS. That is written all over, $4,000 apiece. Let us close that office over there.

Mr. GLEASON. We cannot close that office.

Mr. THOMAS. How many are you going to bring home this year?

Mr. BROWNSTEIN. Eleven.

Mr. THOMAS. How many will you send over?

Mr. BROWNSTEIN. The same number.

Mr. THOMAS. You have to pay freight over there for 22 people. What will it cost you?

Mr. BROWNSTEIN. That will probably run close to $90,000.

Mr. OSTERTAG. Is this on annual basis?

Mr. GLEASON. No, sir; every 4 years.

Mr. BROWNSTEIN. Two years, then home leave, and then 2 more years.

Mr. GLEASON. It is pretty hard to ask somebody to stay longer than 4 years, Mr. Ostertag, away from their own country.

Mr. JONAS. On the home leave, what do you do pay them a lump sum whether they come or not?

Mr. GLEASON. No, sir; only if they come home.

Mr. JONAS. If they elect not to come, you do not pay them the money?

Mr. GLEASON. No, sir.

Mr. JONAS. They do some of that in the military departments.

Mr. DRIVER. We urge them to come.

Mr. THOMAS. You go by the old general statute, American transportation and the nearest route?

Mr. GLEASON. Yes, sir. If they come by ship, it has to be an American ship or air. Most of them come by Northwest Airlines because that is more direct.

Mr. THOMAS. You have a lot of money here for rents, communications, and utilities. Rental of real property. What property do you rent?

Mr. MONK. We rent very little property in here. These would be offices for maybe a vocational counselor, maybe a contact office. We pay very little rent. Most of the rent is furnished.

RENTAL OF EQUIPMENT VERSUS PURCHASE

Mr. THOMAS. Under rental of equipment—I thought we were buying all the equipment. In 1963 you will spend $1,009,696, and $962,206 next year for rental. I thought we decided it was cheaper to buy it outright.

Mr. GLEASON. That is true, but we did not have all the money to do it.

Mr. THOMAS. How much do you figure you saved? You gave some figures in your general statement.

Mr. DRIVER. $1,600,000 a year.

Mr. BROWNSTEIN. We will pay for it in about 3½ years.

Mr. THOMAS. Would it not be better to go on and buy this equipment now that you need, that you are now paying a million dollars rent for? What would it cost you to buy it?

Mr. DRIVER. $5.5 million.

Mr. THOMAS. In 3 years it would not cost you too much more to go on and buy it.

Mr. BROWNSTEIN. As we get into automation, Mr. Chairman, we may find we will not be using this particular equipment.

Mr. MONK. This is basically electric accounting equipment, not big computers—punchcards.

Mr. GLEASON. National Cash Register, IBM.

Mr. THOMAS. That is standard equipment.

Mr. MONK. Yes, sir.

Mr. THOMAS. You are still renting it.

Mr. MONK. We are renting it.

Mr. THOMAS. Is it cheaper to buy it or rent it?

Mr. MONK. We have made a study of this, and we have concluded that it would be cheaper to buy about half of it.

Mr. THOMAS. How long would it require for it to pay for itself?

Mr. GLEASON. Three and a half years to five years.

Mr. OSTERTAG. But you are not doing that now; are you?

Mr. MONK. No, sir.

Mr. THOMAS. How much more money would it take to buy it? You have a million dollars for rent.

Mr. MONK. We figure that which it would be profitable to buy rather than rent, where we foresee continued use, would be about $8 million.

Mr. DRIVER. But before we get to deciding whether to purchase this equipment, Mr. Chairman, we want to consolidate all of it and see

whether we can run up the usage and how much we could turn back, rather than buy equipment that we would be using only part of the time.

Mr. THOMAS. When are you going to do just that?

Mr. DRIVER. We have just started that.

Mr. GLEASON. We have just started the new Data Management Department as of last Wednesday, Mr. Chairman.

Mr. DRIVER. All of this equipment will come under its jurisdiction. We know we can release a lot of it immediately by using it across departmental lines.

Mr. THOMAS. Who made the decision that you buy what you did last year rather than rent it? The same group?

Mr. DRIVER. No, sir. The operation that was on that equipment was so large that we knew we could support it.

Mr. THOMAS. If you decided on one group of equipment, why can you not decide on another?

Mr. DRIVER. The groups we decided on were very large pieces of high-speed electronic equipment.

Mr. GLEASON. We knew we could utilize it for the next 4 or 5 or 6 years. Some of this other equipment, the companies may have newer types out within the next year or two.

Mr. DRIVER. And this is scattered over a large number of installations, whereas the other is centralized.

Mr. OSTERTAG. This item is rental.

Mr. DRIVER. This is rental, yes, sir.

PURCHASE OF EQUIPMENT

Mr. OSTERTAG. Where is your purchase item?

Mr. GLEASON. I would like to refer to the statement I made yesterday, Mr. Ostertag, that we were able to purchase computer equipment costing $2.8 million from available fiscal year 1962 funds that we had left over.

Mr. THOMAS. There is no purchase money in this budget?

Mr. GLEASON. By tightening the belt even further, we have been able to purchase additional computer equipment costing $3 million in the present fiscal year.

Mr. OSTERTAG. In other words, the purchase does not show up here because you are purchasing out of 1962 funds.

Mr. MONK. Mr. Ostertag, on the next page, on the first line, the first column, is the computer purchase under equipment, in the $3,357,000.

Mr. DRIVER. That is one of them. In this fiscal year we bought another.

Mr. MONK. That will be in the Insurance Department.

Mr. EVINS. When you purchase this equipment, Mr. Administrator, I trust you do not have to enter into a contract to pay the people roy alties for repair and supervision—monthly, quarterly, or annual rental.

Mr. GLEASON. We have contracts with the companies, Mr. Evins.

Mr. EVINS. This is buying the equipment and then putting them on the payrolls to keep on paying them to come and look after it every now and then. I dislike that very much.

Mr. MONK. We are exploring with GSA the possibility of doing our own maintenance, but as of now we have a contract with the company for maintenance.

Mr. EVINS. If you buy my hammer, you have to buy my nails?

Mr. MONK. No, sir.

Mr. DRIVER. No one else really holds himself out as able to service this equipment.

Mr. EVINS. That is bad when you put machine manufacturers on your payroll. You might as well just rent.

Mr. BROWNSTEIN. Even paying the maintenance, Mr. Evins, there is a tremendous savings.

Mr. EVINS. This is a practice I personally do not like.

Mr. THOMAS. If you were to buy all the equipment you are using, could you come up with the figure of $8 million?

Mr. MONK. The figure of $8 million was that which we so far in our study believe we could justify buying rather than renting. We have a total of about $15 million worth of equipment, but the rest of it we are not sure that we will continue to use long enough that it would be profitable.

Mr. EVINS. How much did you say you purchased in the last year?

Mr. GLEASON. $5.8 million.

Mr. EVINS. How much did you have to contract for to maintain it and keep it in repair? How much will that cost you after you have brought it?

Mr. DRIVER. $46,000 for each computer. Twice times $46,000—$92,000.

Mr. GLEASON. $92,000.

Mr. EVINS. $92,000 a year to have them check ths machinery.

Mr. GLEASON. When it breaks down, Mr. Evins, we want that thing to roll just as fast as it can.

Mr. DRIVER. They take it over for 2 hours every day and check it.

Mr. BROWNSTEIN. There is a lot of preventive maintenance on these.

Mr. EVINS. It is entirely too costly.

Mr. GLEASON. We cannot get it any cheaper, Mr. Evins.

Mr. EVINS. I believe GSA——

Mr. GLEASON. We are working with GSA.

Mr. EVINS (continuing). Could train your mechanics. After you buy $5 million worth of equipment, you should not have to pay $92,000 for maintenance. It is too much.

Mr. THOMAS. Anyway, you cut down your rental. You and Mr. Evins had better get together and talk this thing over and see what you ought to do.

Mr. GLEASON. That is only a 2 percent rental, Mr. Evins.

COMMUNICATION COSTS

Mr. THOMAS. Telephone and telegraph, $1,138,990 for 1963, and you come up with the exact same figure for 1964. How did you figure that out?

You have a little increase in mail, $135,000. That is due to the rate increase, I guess.

Could this total rent and communications figure of $3,339,810 be reduced? What do you have committed for the first 6 months on your 1963 appropriation?

Mr. SHYTLE. $1,526,000 through December, against $3,252,300 in the 1963 column of the estimate here.

Mr. THOMAS. You have at least $252,000 carryover here.

Mr. MONK. Our mailing costs go up January 1.

Mr. THOMAS. That is a separate item, though, of $135,000.

Mr. SHYTLE. I was giving you a figure against the total, Mr. Chairman. The $3,252,000 is the sum of those items.

Mr. THOMAS. You will have a $252,000 unexpended balance at the end of this year?

Mr. MONK. The mail costs will go up about that much.

Mr. THOMAS. For the whole year, you have only $135,000.

Mr. DRIVER. That was without the increase.

Mr. BROWNSTEIN. That did not include the increase.

Mr. GLEASON. It is a surprising thing——

Mr. THOMAS. I am talking about 1964, which shows an increase of $135,000 for the whole fiscal year.

Mr. GLEASON. That is right, for mail, but getting back to 1963, we are not asking for a supplemental on this particular item.

Mr. THOMAS. It appears to me you have at least $200,000 more than you need in this.

Mr. SHYTLE. The postal rate increase for 1963 is $118,000 increase for the Department of Veterans' Benefits.

PRINTING AND REPRODUCTION—GENERAL OPERATING EXPENSES

Mr. THOMAS. Printing and reproduction, this year $1,031,000 against $985,000 for next year, a reduction of $46,000. What in printing is costing you all this money? It is to the point where you cannot get in your offices for the publications coming in from every Government agency. Nobody reads them. What are you putting out? You have the cost of printing and reproduction. You have handling costs. You have mailing costs.

Mr. BROWNSTEIN. There are forms, form letters, pamphlets——

Mr. THOMAS. The forms that you use. To whom do the form letters go, the veterans?

PUBLICATION OF PAMPHLETS

What about pamphlets?

Mr. BROWNSTEIN. We try to keep the veterans advised on their benefits, Mr. Chairman.

Mr. THOMAS. How many pamphlets do you print?

Mr. BROWNSTEIN. I could not give you an accurate estimate on this.

Mr. THOMAS. You do not mean there are so many you cannot remember them. Who gets them up?

Mr. BROWNSTEIN. We all have a hand in it. For example, a good many veterans could be drawing more benefits under the new pension law that was passed effective July 1, 1960. There has been a lot of discussion on why this has not occurred. We have tried to get the word to them. We have put out several notices to them to tell them that they might be eligible for increased benefits. In the last session, there was a law passed which authorized vocational rehabilitation for peacetime veterans. We got a notice out to all of them that we could identify.

Mr. THOMAS. How many pamphlets do you put out? You can turn out a million mimeographed form letters in an hour at very little cost.

Mr. GLEASON. Would you like to see the pamphlets that we put out?

Mr. THOMAS. Yes.

Mr. GLEASON. We will bring those over tomorrow morning, if it is all right.

Mr. THOMAS. How many are there?

Mr. MONK. Hundreds.

Mr. THOMAS. You have a lot here. You are spending a million dollars on it.

Mr. WYMAN. Suppose one of these fellows wants an increase, do they get it retroactively?

Mr. BROWNSTEIN. No.

Mr. GLEASON. From the time he files.

Mr. JONAS. That is not true of compensation, is it?

Mr. BROWNSTEIN. If he files his compensation claim anywhere within a year of the day he gets his discharge, then he would get it retroactive from the date of his discharge but I was talking about those who elected the new pension law, who had been drawing under the old pension law and might draw greater benefits under the new. They would draw those greater benefits only from the date of their election.

Mr. THOMAS. Who does this printing, the Government Printing Office?

Mr. BROWNSTEIN. Most of it.

Mr. THOMAS. Is this a multigraph operation that you do in your own shop?

Mr. GLEASON. Most would be done by the Government Printing Office.

Mr. THOMAS. You have other organizations; dozens of American Legion posts and Veterans of Foreign Wars and yet you are spending $1 million here——

Mr. GLEASON. If we don't get these people these pamphlets none of the people of whom we speak will know the benefit that they can advise the veteran about.

Mr. EVINS. I would rather see the veterans advised than pay the machine companies a royalty.

Mr. BROWNSTEIN. A lot of this too, Mr. Chairman, goes for changes in regulations that have to be published.

CONTRACTUAL SERVICES

Mr. THOMAS. You have repair of furniture and equipment, $369,000, a reduction of $21,000 this year, to $348,000.

Miscellaneous contract services, $1.3 million. It goes up $94,700 this year to $1,462,000. What is that item?

Mr. BROWNSTEIN. The major part of this contractual item, $900,000 is in the loan guarantee program. This is for fee appraisals, subdivision analyses, land planning.

Mr. THOMAS. Do you mean this is under the miscellaneous contract services?

Mr. BROWNSTEIN. Yes, sir; $900,000 of that is in the loan guarantee program.

Mr. THOMAS. What are your fee appraisals?

Mr. BROWNSTEIN. Fee appraisals are those made in connection with the origination of loans.

Mr. THOMAS. Who pays that?

Mr. BROWNSTEIN. The veteran pays that.

Mr. THOMAS. Why are you charging it in here if he pays it?

Mr. BROWNSTEIN. These are not those. These are liquidation appraisals. Before a foreclosure we have a property appraised.

Mr. THOMAS. That doesn't come out of the revolving fund?

Mr. BROWNSTEIN. No, sir.

Mr. JONAS. What accounts for the increase of $94,000?

Mr. BROWNSTEIN. There are two studies in there. One is a study of $150,000 which we are sharing the cost of with Social Security in connection with the fiduciary payees, and then this other study that we talked about on the validation of the rating schedule, that is $100,000.

Mr. THOMAS. Do you have this information with you?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. Break down this miscellaneous contract services, $1,462,190 which is an increase of $94,700 over last year.

Mr. BROWNSTEIN. $90,000 of that is to the State Department for support services in Manila.

Mr. THOMAS. Wait a minute. What is all that about? What does that mean?

Mr. BROWNSTEIN. That is what we pay the State Department for quarters there.

Mr. GLEASON. Heat, light, power, and so on.

Mr. THOMAS. Are you in their building?

Mr. BROWNSTEIN. We are in part of the Embassy building.

Mr. GLEASON. We have pretty close to 75 percent of the new building at the Embassy.

Mr. THOMAS. That is your part of the maintenance and upkeep of the building. Heat, light, and what else?

Mr. BROWNSTEIN. $100,000 is the study I mentioned on the validation of the rating schedule.

Mr. THOMAS. What is that?

QUESTIONNAIRES TO VETERANS

Mr. BROWNSTEIN. That is the reference Mr. Ostertag made to the questionnaires that are going out by the Census Bureau.

Mr. THOMAS. What is the nature of it?

Mr. BROWNSTEIN. This is to determine whether the amounts that are being paid to veterans for service-connected disabilities are fairly accurate and in keeping with what their disablement really amounts to.

Mr. THOMAS. You are spending $100,000 for the Bureau of the Census.

Mr. BROWNSTEIN. This is what it costs.

Mr. THOMAS. What information do you expect to get for that $100,000?

Mr. BROWNSTEIN. We will find out whether a certain disablement results in the impairment of the rating capacity of the veteran to the degree that we believe it does.

Mr. THOMAS. How are they going to get that information for you?

Mr. BROWNSTEIN. By finding out what his income is, how much lost time he has, why he has the lost time. There are questions dealing with this.

Mr. THOMAS. You mean you handle thousands upon thousands of these cases and you don't have that information?

Mr. DRIVER. The rating schedule is based on that but we haven't made a study of the rating schedule in about 20 years, Mr. Thomas. It is our feeling and the feeling of a lot of other people that we should find out what these disabilities actually mean in terms of today's economic conditions under the various disablements represented under the schedule.

Mr. OSTERTAG. The veteran isn't required to answer these questions?

Mr. DRIVER. No; he is not.

Mr. JONAS. Why couldn't you do that cheaper by sending out your own questionnaire?

Mr. DRIVER. There are a lot of reasons we feel we couldn't. We feel they are more skilled in enumerating it than we are. Also we have the reluctance of the veteran to furnish information about his economic status.

Mr. JONAS. You are getting out questionnaires that are on that same subject?

Mr. BROWNSTEIN. No, sir; we do not question the veteran on compensation cases. Pension cases we do every year, but on this we have never solicited the information about his income and it is also always resented when we do. We will not get the name of the veteran back, so we try to overcome his reluctance of furnishing the data to the Government by handling it through the Census Bureau.

Mr. THOMAS. How are you going to get any accurate information? Here is X who was injured 10 years ago. You can get his earning capacity at the time he was injured 10 years ago and what he is making now, and the answer is, "If I hadn't been injured I would be making five times what I make. I would be making six times." How do you combat that?

Mr. DRIVER. We don't consider the individual in that term. We consider the average impairment of everyone in the economy. We obviously are not compensating a number of people for the high-skilled jobs they might have, except for the disability individually, but we do try to compensate them on the average for the loss.

Mr. OSTERTAG. If I understand correctly, Mr. Chairman, the Veterans' Administration has delegated this job or this service to the Census Bureau——

Mr. DRIVER. We drew up a questionnaire with them.

Mr. OSTERTAG. However, you do that on the basis of the point that the veteran will be less reluctant to answer if it comes from the Bureau of the Census rather than the VA.

I disagree with you. I have the feeling that the veteran would be more responsive to the Veterans' Administration than the Bureau of the Census. That is a matter of opinion.

Mr. GLEASON. Most people have already had experience with the Bureau of the Census when they come around every 10 years, Mr. Ostertag, and if they are conducting a side census people, generally speaking, will give them the information rather than give it to us.

Mr. OSTERTAG. Don't forget the Census rubbed the people the wrong way in the first place. It is just more of the same.

Mr. GLEASON. Of course, there are a lot of things we can gain by the Census and, of course, the Congress——

CONTRACT SERVICES

Mr. THOMAS. Let's detail your $1.3 million.

Mr. BROWNSTEIN. The $900,000 that I mentioned——

Mr. THOMAS. What book are you reading from? Is that in my book?

Mr. BROWNSTEIN. No, it isn't in your book, Mr. Chairman.

Mr. THOMAS. Is it a secret?

Mr. BROWNSTEIN. No, sir. I am giving it to you right now. I thought you might be interested in this but we hadn't enumerated it.

I mentioned the $900,000 in loan guarantee appraisals and engineering costs.

Mr. THOMAS. What was that sum last year?

Mr. BROWNSTEIN. I don't have that figure. I would judge about the same.

Mr. THOMAS. I thought our activities were going to decrease in fiscal year 1964.

Mr. BROWNSTEIN. Well, in this area of fee appraisals, subdivision analyses and so forth, there won't be much difference.

Mr. GLEASON. We have approximately the same number of properties in 1964 as we do in 1963.

Mr. THOMAS. You are talking about foreclosed properties altogether, aren't you?

Mr. BROWNSTEIN. In large measure, yes.

We also may hire some engineers on subdivision analysis, initially, preliminarily.

Mr. THOMAS. You get it from the individuals.

Go ahead. That is $1.1 million. Where is the other two?

JOINT STUDY WITH BUREAU OF OASI ON GUARDIANSHIP

Mr. BROWNSTEIN. I mentioned the joint study we are conducting with the Bureau of Old-Age and Survivors Insurance in connection with the fiduciary payees and this is costing——

Mr. THOMAS. I didn't quite understand it. I read it there two or three times last night.

Mr. BROWNSTEIN. They have a guardianship program and we have a guardianship program, and the question is the extent to which either or both of us ought to modify the manner of conducting this program and they hired a consultant firm to conduct a study.

Mr. THOMAS. Who are you joining up with in this study?

Mr. BROWNSTEIN. Social Security. Health, Education, and Welfare. They are paying the major portion of it and we are riding along.

Mr. THOMAS. What do you expect to learn from it now?

Mr. BROWNSTEIN. The degree to which we may be overdoing or underdoing in the protection of the interests of our awards in the guardianship program.

Mr. THOMAS. Then in the final analysis the judge is going to be the judge of that and not you, isn't he?

Mr. BROWNSTEIN. In cases where there is a court appointed guardian, but we have a lot of fiduciaries who are not court appointed guardians.

Mr. THOMAS. What about our 1,500 judges back in these 67 offices, aren't they pretty competent to pass on that?

Mr. BROWNSTEIN. Well, we think that they have, on balance, done a good job but we also think that there is room for improvement in this program.

Mr. THOMAS. Who is going to make this study for you?

Mr. BROWNSTEIN. Greenleigh Associates.

This is one that had been contracted for and we are riding on it for a very small portion——

Mr. THOMAS. We have seen this Government spend money for reorganization studies and the like and when you get through in 2 years from now you will turn around and do the same thing again. It looks like that is a $100,000 wasted.

Why don't you go down here and appoint a good judicial panel, these hard-nosed judges who handle thousands of these cases and let them come up with it?

When you get a half dozen blue-ribbon judges all over the country, they will do this job for you and I doubt if it would cost you anything and it would be worth a thousand times more.

Mr. GLEASON. It might cost us about $100 a day for each one of them.

Mr. THOMAS. That is a lot less than you are going to spend here.

Mr. GLEASON. I don't know. Not with all of them. We have over half a million wards of the Government.

Mr. THOMAS. They will tell you what you are doing and what you ought not to do and how you can strengthen your operation. They are your real experts.

Mr. JONAS. May I ask a question right there?

How many of your guardians were in trouble last year?

Mr. BROWNSTEIN. Very, very few.

Mr. JONAS. About what number?

Mr. BROWNSTEIN. I do not recall of any cases, Mr. Jonas, in which—do you mean there was embezzlement or something of that kind?

Mr. JONAS. Then why don't you let well enough alone?

Mr. BROWNSTEIN. It is a question of maybe we shouldn't let the guardians handle more of the activity without so much VA supervision.

Mr. GLEASON. Which would cut down on our expense.

Mr. DRIVER. In the social security case we are doing very little.

Mr. JONAS. If you find a saving I hope you will let us know.

Mr. GLEASON. You will see it in our figures next year, Mr. Jonas.

Mr. BROWNSTEIN. That is why we are reducing our chief attorney by 60. It isn't because of a lessened ward load but because we think we can do a good job without quite as much supervision as we are now doing.

Mr. JONAS. They all have to file reports, don't they?

Mr. BROWNSTEIN. Yes, sir. And there is another area, we think we are getting too many reports too often.

Mr. THOMAS. We will return in the morning, gentlemen——

HIGHLIGHTS OF GUARDIANSHIP PROGRAM

Mr. GLEASON. Could I insert in the record the highlights of our guardianship program?

Mr. THOMAS. Yes.

Mr. GLEASON (reading):

Estates, 511,000, 51,000 more than the year previous. Assets of 395,000 beneficiaries accounted for during the year—a total of $757 million, with receipts of $279 million.

Unsatisfactory conditions affecting beneficiaries were found and corrected in 8,549 cases during the course of 56,000 investigations.

Mr. OSTERTAG. On the question of your study, has money been appropriated heretofore for this purpose?

Mr. BROWNSTEIN. No, sir.

Mr. OSTERTAG. This is a new item?

Mr. DRIVER. Yes, sir.

Mr. THOMAS. Gentlemen, we will return at 10 o'clock in the morning.

WEDNESDAY, FEBRUARY 6, 1963.

Mr. THOMAS. The subcommittee will come to order.

SAMPLES OF PUBLICATIONS

Did anyone bring samples of the publications that we were asking about late yesterday?

Mr. GLEASON. Mr. Gorman has them, Mr. Chairman.

Mr. GORMAN. We have several. Here is title 38. Volume of 12,000, at a cost of about $12,600. Yes, sir; it's a codification of laws in the field of veterans' affairs.

Mr. THOMAS. How often do you print that?

Mr. GORMAN. The last edition was issued in 1960.

Mr. THOMAS. You do it every other year?

Mr. GORMAN. Every other year. This issue revised the issue of 1960.

Mr. THOMAS. When was the time prior to 1960?

Mr. GORMAN. The first time was——

Mr. BRICKFIELD. Mr. Chairman, this was just enacted into positive law in 1958. Title 38 of the United States Code.

Mr. THOMAS. How many volumes of that?

Mr. GORMAN. 12,000 copies at a cost of $12,600.

Mr. THOMAS. That is for the printing bill?

Mr. GORMAN. That is our cost, sir.

Mr. THOMAS. What was your compilation bill?

Mr. DRIVER. This was mostly compiled in collaboration with the Veterans' Affairs Committee staff and the General Counsel's Office over a period of many, many months.

PAMPHLET FOR HOME BUYING VETERANS

Mr. GORMAN. We had 200,000 printed copies of this pamphlet, "To the Home Buying Veterans."

Mr. THOMAS. What is the nature of it?

Mr. GORMAN. It is a guide for the veterans to buy or build homes with a GI loan.

Mr. BROWNSTEIN. We tell them what to look for, that everything in homeownership is not sweetness and light, that there are some pitfalls, and to be careful.

Mr. THOMAS. How many copies did you print?

Mr. GORMAN. I think the figure there is 300,000, sir, for the 1962 edition.

Mr. THOMAS. What did this cost?

Mr. GORMAN. That cost appears on the front of the copy you have, sir.

Mr. THOMAS. How often do you print this?

Mr. GORMAN. As often as the changes in the law require it, sir.

Mr. BROWNSTEIN. There has been only one revision of it, Mr. Chairman.

Mr. THOMAS. It is an annual production then?

Mr. BROWNSTEIN. No, sir; it is only printed when we go out of stock.

The way we have handled changes in the law——

Mr. THOMAS. 200,000 in 1962; 300,000 in 1963. Do you plan to print any in 1964?

Mr. BROWNSTEIN. Only if our supply is depleted.

Mr. THOMAS. To whom do you send it?

Mr. BROWNSTEIN. Veterans. When they apply for a certificate of eligibility, which is the first clue we get that they are thinking about buying a house, we send them a copy.

Mr. OSTERTAG. Is that the only means of distribution?

Mr. BROWNSTEIN. Service officers get them and our contact offices get them.

Mr. THOMAS. How many do Veterans' Administration's central office distribute?

Mr. BROWNSTEIN. Very few, Mr. Chairman.

Mr. THOMAS. What does it cost to print this? This appears to contain good information.

Mr. GORMAN. $6,300 for 300,000 copies.

Mr. THOMAS. How much is that a copy?

Mr. GORMAN. A rapid calculation would make it 2 cents.

Mr. THOMAS. What does it cost to mail it out?

Mr. DRIVER. We do not mail it. It is usually picked up.

Mr. GORMAN. That goes to the regional offices for their distribution by bulk shipment.

Mr. THOMAS. It seems to be useful information. What does it say?

Mr. BROWNSTEIN. It tells the veterans the things you ought to look for, that there is more to buying a house than just making a mortgage payment. You have expenses for maintenance, you have taxes which may go up, there may be assessments, and the kind of a location they ought to look for.

Mr. THOMAS. What else do you have?

PAMPHLET, "POINTERS TO THE VETERAN HOME OWNER"

Mr. GORMAN. We have another sample, sir, "Pointers to the Veteran Home Owner" which is a guide for veterans whose home mortgage is guaranteed or insured under the GI bill.

Mr. BROWNSTEIN. That is a followup pamphlet to the one you have just seen. In the first one, he has not yet become a homeowner. This one explains to him the duties and responsibilities of being a homeowner. It tells them what he ought to do to maintain his house properly, that it can depreciate if he doesn't take care of it, and it emphasizes particularly the hazards of selling the house to somebody and not getting the other person's credit cleared.

Mr. THOMAS. How many of those are printed?

Mr. GORMAN. 200,000 sir. A cost in 1962 of $4,100.

Mr. THOMAS. That sounds like it is all right.

PAMPHLET "LENDERS HANDBOOK, GUARANTY OR INSURANCE OF LOANS"

Mr. GORMAN. We have another pamphlet, "Lenders Handbook, Guaranty or Insurance of Loans." It was printed in 1962, 35,000 copies at a cost of $13,491.

Mr. THOMAS. For whose use is that?

Mr. GORMAN. Principally banking institutions and lenders.

Mr. BROWNSTEIN. This contains a compilation of all the regulations, the basic statute, explanatory material on how to process the loans.

Mr. THOMAS. How many pages in that pamphlet?

Mr. GORMAN. This has approximately 200 pages.

Mr. BROWNSTEIN. This was put out initially, Mr. Chairman, in 1948 and this has been the first revision of it.

Mr. THOMAS. I cannot imagine a banker sitting down and reading 200 pages from you telling him how to loan his money.

Mr. BROWNSTEIN. His attorney is interested in this to be sure the guarantee is effective.

Mr. GLEASON. The mortgage departments of the banks use this somewhat as a bible.

Mr. THOMAS. Do you give it to them or sell it to them or what?

Mr. BROWNSTEIN. We give it to the program participants.

Mr. THOMAS. 35,000 copies at a cost of $2,344?

Mr. GORMAN. The figure is right on the cover there, sir. $13,000—$13,491 for 35,000 copies.

Mr. THOMAS. How often do you print this?

Mr. BROWNSTEIN. That is the first revision since 1948 and there have been many, many changes in the law since then.

Mr. THOMAS. How many is that, three or four?

Mr. BROWNSTEIN. Publications in total?

Mr. THOMAS. Yes.

Mr. BROWNSTEIN. That is four, Mr. Chairman.

Mr. THOMAS. How many more do you have to make up this total figure? You are not up to $100,000 yet and we are talking about $1 million.

Mr. GORMAN. We have many other samples of different publications here and out in the other room, sir.

TOTAL NUMBER OF PUBLICATIONS

Mr. THOMAS. What is the total number of publications?

Mr. GORMAN. The total number of publications is about 500 for Department of Veterans' Benefits.

Mr. THOMAS. What do they deal with?

Mr. GORMAN. All the various and complex programs we administer. Compensation, pension, education, loan guarantee——

Mr. BROWNSTEIN. Most of these are forms and form letters, Mr. Chairman.

PRINTING, REPRODUCTION, AND RELATED COSTS

Mr. THOMAS. What part of your $1 million printing and reproduction goes for salaries and compilation and putting this material together? Your printing bill is obviously the smallest part of it.

Mr. DRIVER. None of that item is for salaries of people who write them, Mr. Chairman.

Mr. GLEASON. That is for printing.

Mr. THOMAS. I understand. If you spend $1 million for your printing you are bound to spend at least $5 million for compilation.

Mr. DRIVER. Even more, I would think. The people who run the programs are the ones who compile it.

TOTAL VA PRINTING COST

Mr. THOMAS. What is your printing and reproduction total, approximately.

Mr. MONK. The total for the agency, Mr. Chairman, for printing and reproduction is $3 million. What you have here is Department of Veterans' Benefits.

Mr. THOMAS. Keep it to benefits now.

You have $1 million here for actual printing in Veterans' Benefits.

Mr. DRIVER. If you had a salary for compiling that material it would be many, many times that.

Mr. THOMAS. How many more? At least four or five?

Mr. DRIVER. At least; yes, sir.

Mr. THOMAS. Where is that salary cost now in the Department of Veterans' Affairs? Where does that show up?

Mr. DRIVER. The salary cost is in every program. It is under the chief attorney, the compensation and pension program, the loan guarantee program, the education program. It is in every element.

Mr. THOMAS. What is the total employment? What is the horseback opinion now?

Mr. DRIVER. Involved in this?

Mr. THOMAS. Yes.

Mr. DRIVER. It is difficult to say how many individuals, because from time to time it may be all of an office or it may be one person or it may be six or eight. In compiling the annual report, for example, the people involved in furnishing the information go down to the smallest element in the Veterans' Administration, in the farthest regional office we have, the farthest hospital or insurance office, and reach all the way up to and including the Administrator.

Mr. THOMAS. Isn't it a pretty good assumption here you could cut this down to half and do the job as well?

Mr. GLEASON. I don't think so, Mr. Chairman. I would like to read something if I may.

Mr. THOMAS. Tell us about it. Don't read it.

Mr. GLEASON. No, I want to read it.

Mr. THOMAS. It would be better if you just speak to it.

Here is a program that is not a first impression. Most of these programs have been going on for years and years.

When was your basic act passed, 1945?

Mr. MONK. 1944. The Servicemen's Readjustment Act.

Mr. DRIVER. December 1944.

Mr. THOMAS. How long ago has that been? Nineteen years ago? You have minor variations.

Mr. DRIVER. There were 33 major legislative changes in the last Congress involving the compensation and pension program in which there were 16; in loan guarantee there was one which was a major program extension. There were six in the educational program, three in insurance and in the medical department. Each one of these required many, many publications, forms, regulations, and informational material to put into effect. As you know, this is true almost invariably in every session of Congress.

DISTRIBUTION AND USE OF PRINTED MATERIAL

Mr. THOMAS. How is that so vital to a man who needs hospitalization? If he needs hospitalization regardless of the information you send him he is going out to that hospital and try to get in. It is up to the people there to let him in or to deny him.

Mr. DRIVER. But they will let him in or deny him under the instructions we publish and unless those are current we may not be treating him properly or we may be letting someone else in who no longer——

Mr. THOMAS. Your printing goes out to everybody. All veterans.

Mr. DRIVER. No, sir.

Mr. THOMAS. You do not confine it to your installations.

Mr. DRIVER. It goes to our own employees and members of the veterans organizations and the other groups who are organized to represent veterans on a day-to-day basis. We cannot and do not pretend to inform every single veteran of his entitlement.

Mr. THOMAS. You have just had top people from all over the country here to Washington, some 300 of them, and I think it is a good thing. What is the use of bringing them up here if you are going to spend $15 million or $20 million haranguing them by mail and sending them all these pamphlets and other publications?

Mr. DRIVER. You couldn't expect those men to be informed in 2 or 3 days on 33 items of legislation and all of the individual interpretations of that.

Mr. THOMAS. Why couldn't you?

Mr. DRIVER. I think probably there isn't a single individual who could convey that information in 3 days. Plus the fact that those men are not technicians in these programs.

Mr. THOMAS. Why bring your top staff here to Washington?

Mr. DRIVER. To instruct them in manpower utilization, office methods, and things of that sort. We do not rely on them to inform the veteran on whether he should elect pension under the new law, for example, or where he can admit a veteran to a hospital with such-and-such service or whether the administration of the peacetime rehabilitation program is——

Mr. THOMAS. It is just a rehash of your old laws, is it not?

Mr. DRIVER. I wish that were true, but it isn't.

Mr. THOMAS. How about your veterans under the home loan. What is new about that?

Mr. BROWNSTEIN. We have had many changes in there, Mr. Chairman. For example, in the last session, as Mr. Driver mentioned, the formula that was established for determining eligibility is a complicated one that you couldn't tell to the manager and have him go home and transmit it to the people who really do, because it is very complex.

Mr. THOMAS. Do you think the GI who is in the market for a home, that that means very much to him? He says, "I have a right." And the way he is going to find out whether he qualifies under this right is to go to the proper people.

Mr. BROWNSTEIN. It will mean a good deal to him, Mr. Chairman, because he may go to somebody and find out his entitlement expired the day before yesterday.

Mr. DRIVER. And he didn't realize it. Unless he read the Federal Register with a lot more intelligence than most of them have in these matters he couldn't possibly know it.

Mr. THOMAS. You are discounting their intelligence. They keep up with their rights better than you think they do.

Mr. GLEASON. I don't know whether this is true, Mr. Chairman, because when the cutoff date came on the national service life insurance 16 million of them were not aware of it.

Mr. JONAS. You don't really mean that, do you? You haven't heard from 16 million of them. About half of them elected not to continue with it, wouldn't you say? They were aware of it.

Mr. GLEASON. Yes, sir; but so far as the reopening is concerned, Mr. Jonas, after World War I the Congress permitted 15 years to go by before there was a cutoff date and which, when the act was passed, allowed a full year for them to reinstate. In 1951 when this same thing happened for World War II and Korean veterans they were given no advance knowledge at all. The law was effective as of the date of passage.

Mr. JONAS. I haven't had a single veteran tell me he wasn't aware of the cutoff date, but I have had scores and scores tell me that they didn't feel that they wanted to carry it then but now their economic situations have changed.

Mr. DRIVER. We have many, many letters from men who protest that they didn't know it. We have many who were in the insurance business who say they didn't realize it. We have doctors, lawyers, the whole gamut of our society and they protest they didn't know it.

We have this in every type of program. "I just didn't realize this. Someone should have told me."

MANAGERS CONFERENCE COSTS

Mr. JONAS. With respect to bringing people up here—in the first place, I think we ought to get the cost of that conference on the record.

What would you say the conference cost?

Mr. HANSMAN. $40,000 would be our best estimate, sir.

Mr. JONAS. Would that cover all of it?

Mr. DRIVER. Yes, sir.

Mr. JONAS. You have an attorney in every regional office and he is just as smart as the attorneys in Washington. Why can't he interpret these changes as well as your people here in Washington?

Mr. DRIVER. Because we only want one interpretation going, not 67 of them, sir. That is the main reason. I think in the law especially, it is reasonable to expect you would find varying interpretations if you left it to the individual initiative on the part of the chief attorney, regardless of his intelligence. That is the reason we try to assume leadership and make sure we are all going in the same direction.

Mr. JONAS. Are there substantial grounds for differences of opinion as to what the law means?

Mr. DRIVER. I think the fact the General Counsel finds himself involved in several hundred opinions each year, which is in effect assuming a leadership role, giving direction to all these attorneys all over the country, is absolute proof of the fact that you do have a great variety of different opinion as to what the law means.

Mr. JONAS. I don't think you have as much danger of having differences of opinion as to what the law is as is indicated with respect to interpreting the extent to which a man is disabled.

Mr. DRIVER. In those cases we have about 240 rating boards, each one with three members, and I admit this is a very difficult area to bring a semblance of uniformity to.

Mr. JONAS. It is impossible.

Mr. DRIVER. We do attempt to do it. However, underlying that and even more basic is the interpretation of the original statute and if we start off here with a variety of opinion from one office to another, one attorney to another, we just then complicate the rendering of judgment in the matter of adjudication, admission to hospitals and so on. Also entitlement to education, entitlement to housing, the question of who is responsible after something goes wrong in the matter of house ownership, for example.

All of these areas admit of a tremendous variety of opinion and it is because of this and because of an attempt to bring some uniformity and reasonableness that we do all of this.

We have meetings, we have conferences of our managers here mainly for administrative management reasons.

Well, we will have technical conferences of attorneys, of doctors, of all of the professions, engineers, to try to get down to the technical details of the program.

Mr. JONAS. In addition to your managers and lawyers who attended the conference?

Mr. DRIVER. Just the managers.

Mr. JONAS. The lawyers didn't come?

Mr. DRIVER. No, sir; just the managers. This was a business meeting.

Mr. JONAS. You have destroyed your own argument, Brother Driver.

Mr. DRIVER. How, sir?

Mr. JONAS. You said the purpose of this was to have the same interpretation or uniformity of interpretation of the law in all regional offices. You didn't even bring your lawyers in——

Mr. DRIVER. The purpose of this meeting was not in regard to the law, as I explained to the chairman earlier. The purpose of this was an administrative management meeting. We were in the position of not being involved in explaining to them what these various laws mean and that is why I said that it would take longer than 3 days or even a month to try to explain 33 new laws and what they mean.

This was not the purpose of the meeting. We did not discuss these. The purpose of this meeting was to attempt to bring out information in the areas of manpower utilization, office systems, to explain the changes that have been announced in the organization of the Veterans' Administration, to tell all of these managers who have a vital interest from a management standpoint in the business activities of our office why it is we are establishing a data management service; what we intend to do in the future in electronics and that sort of thing. It had nothing whatever to do with explaining changes in the law.

Mr. JONAS. That is all.

NUMBER OF ITEMS PRINTED

Mr. GLEASON. Mr. Chairman, before we get away from this printing I would like to mention that the Veterans' Administration prints and uses a total of 8,736 different forms or form letters, about half of which are used on a VA-wide basis and this same figure that we are talking about includes the salaries of those who do the printing. It does not include the salaries, however, of those who compile.

Mr. THOMAS. Well, I think the record as far as the printing for veterans benefits are concerned is clear. We use a round figure of $1 million for your printing bill and as it has been testified perhaps the complete bill for salaries and expenses for compiliation would be between $5 million and $6 million.

TOTAL VA PRINTING COSTS

Now what is your entire printing bill throughout the agency? I don't see a wrap-up figure on that. Did I overlook it in my perusal of these tables?

Mr. MONK. I do not believe there is a table in there, Mr. Chairman. The entire printing bill for the agency in fiscal year 1962, $3,065,655.

Mr. THOMAS. What is the estimated for fiscal year 1964?

Mr. SHYTLE. $3,213,864.

Mr. THOMAS. It goes up about 10 percent.

What would be the overall cost of your item when you adjust for salaries and expenses?

Mr. GLEASON. I think we also should mention the tabulating card forms for the IBM machines that are utilized here.

Mr. THOMAS. You have a $3 million printing bill, $3.21 million. Is this not a fair assumption overall you have at least $15 million expense total? That will not miss it far, will it?

Mr. MONK. $10 to $15 million to compile and print.

Mr. THOMAS. It would be more than that.

Mr. JONAS. That is every year, too, isn't it?

Mr. MONK. Yes, sir.

Mr. GLEASON. Yes, sir.

Mr. THOMAS. And going up every year.

Mr. GLEASON. And, Mr. Jonas, all the cards we use in our IBM equipment are purchased, stocked, and cut and printed under this also.

Mr. JONAS. Once you get these pamphlets you wouldn't have to revise them every year?

Mr. GLEASON. No, sir; but I tried to point out, the 8,736 various letter forms and individual forms that are used in the agency, all of this is purchased for stock and printed. The same thing with the IBM cards we use for the 22.5 million veterans.

Mr. MONK. Half of that total of $3 million is for forms. You must remember that we are primarily a mail order operation. Practically everything we do with the veteran is by mail.

REDUCTION IN NUMBER OF PUBLICATIONS

Mr. THOMAS. Well, gentlemen, let me say this—and I say this in all sincerity: John Public is getting irritated to a far greater degree than we all realize over this printing and reproduction item. This is true not only for your agency but throughout the Government. When you even go in your own offices, with your own staff, the first thing they will start complaining about in the morning is all of this trash coming from these Government agencies. They don't have wastebasket space enough to put it in every morning. That is not only true for you but it is true for the rest of the agencies.

I say that in all good humor. You ought to reduce these printing and binding expenditures no less than 25 percent and you can do it; and I think if you could line up just any 100 veterans in any part of the United States they will say, "I am tired of getting that stuff."

They don't look at it, it doesn't mean anything to them. They know they have some rights and when they get ready to exercise them they go to the proper place and they are not going to bother themselves with the technicalities here and here and here and beyond.

Mr. GLEASON. No; but we have to bother ourselves with them, Mr. Chairman.

Mr. THOMAS. Yes; but you don't have to bother your constituency with them by spending $15 million.

Mr. GLEASON. I would just like to point out once again what was brought out here yesterday, that the Assistant Archivist of the United States for Records Management mentioned that the Veterans' Administration has one of the best paperwork programs in the entire Federal Government.

Mr. THOMAS. Well, you know what one of the best paper work programs to the Archivist is? Just more and better. If you are talking about our friend the professor over there, he is a grand man.

Mr. GLEASON. We cut down over 200,000 cubic feet of space.

Mr. THOMAS. Dr. Grover is a fine man. Does he teach people how to write letters over there?

Mr. GLEASON. We teach our own——

Mr. THOMAS. We had a program to teach everybody to write letters.

Mr. GLEASON. We already went through that 2 years ago.

Mr. DRIVER. We are having a refresher course every now and then.

EMPLOYEE TRAVEL

Mr. THOMAS. What about your employee travel? It goes down $89,000 to $2,099,000. It is about $2.2 million for this year.

Can't this travel be reduced?

Mr. BROWNSTEIN. I can break that down for you, Mr. Chairman.

Mr. THOMAS. This is for veterans benefits alone. It is not agency-wide.

Mr. BROWNSTEIN. $400,000 of that is Central Office travel and this is for surveys, it is to make these audits and examinations that we were discussing here yesterday; $685,000 is——

Mr. THOMAS. What part of that is charged to the Office of the Administrator?

Mr. BROWNSTEIN. None. This is all the Department of Veterans' Benefits.

Mr. THOMAS. He has his eyes and ears staff there of about 100 men, you know.

Mr. BROWNSTEIN. These are programs surveys and audits, Mr. Chairman.

Mr. THOMAS. What are these people investigating when they travel? You have 5 stationed in the field and about 40 here. What information are they going to get that you don't get?

Mr. BROWNSTEIN. We are going to get from our surveys a total review of the technical efficiency, the technical accuracy of the particular program, the management of the program, see that all of these instructions are being followed properly——

Mr. THOMAS. You had better get an army then, if you are going to keep up with 500 publications.

Go ahead and break down the $2 million.

Mr. BROWNSTEIN. $685,000 is for chief attorney. This is for the field examinations principally in connection with either awards, social surveys, loan guarantee investigations, et cetera.

Mr. THOMAS. That is primarily local travel. It may cover what, three, four, five counties, a half dozen States or what?

Mr. DRIVER. Regional area.

Mr. BROWNSTEIN. It is not local, Mr. Chairman, except the $100,000.

Mr. THOMAS. Go ahead.

Mr. BROWNSTEIN. $585,000 is for loan guarantee. This is to service defaulted loans, to go out and make property inspections, check on appraisals, compliance inspections, and this sort of thing.

Mr. THOMAS. What was that item year before last for travel?

Mr. BROWNSTEIN. I would judge it is about the same, Mr. Chairman

Mr. DRIVER. The total is about the same.

Mr. BROWNSTEIN. $534,000.

Mr. THOMAS. You had an increase in travel allowance last year. Why didn't you go up over the preceding year?

Mr. BROWNSTEIN. Well, we also cut back on travel.

Mr. MONK. It did. It went up from $534,000 in 1962 to $585,000 in 1963.

Mr. THOMAS. Mr. Budget Officer, you are the best in the West, but next year you come in here and spell this out.

Mr. SHYTLE. Yes, sir.

Mr. BROWNSTEIN. $160,000 is contact service. We are providing itinerant contact service to a number of points.

VOCATIONAL REHABILITATION AND EDUCATION TRAVEL

Vocational rehabilitation and education is $616,000. This is for the purpose of visiting school and all of the related activity in the education program.

Mr. THOMAS. How has that item been fluctuating for the last 5 years?

Mr. BROWNSTEIN. 5 years ago my guess would be it was about triple that.

Mr. DRIVER. We now have 3,100 training establishments still in existence.

Mr. THOMAS. How many did you have 5 years ago?

Mr. BROWNSTEIN. There are 5,700 schools. Actually, there has not been a very marked reduction in the number of training establishments.

Mr. THOMAS. How many people do you have in travel status inspecting the schools for your training program? An inspector will handle 50 students as easily as he can 25. All he is going to do is spot check. After all, the number of students is not too much a matter of concern. He is not going to look over what the students are doing and interview each student.

Mr. BROWNSTEIN. We will probably find half of the total number for the benefits and facilities group travel, there are 235 there, and the vocational counselors we have 360——

Mr. THOMAS. Do they travel out of your regional offices?

Mr. BROWNSTEIN. Yes, sir. We have 365 vocational counselors and they would be in travel status part of the time.

Since we have consolidated our vocational rehabilitation and education activities, we now send counselors into areas periodically to counsel veterans, so this increase is——

Mr. THOMAS. Well, you don't show any reduction in your travel appreciable to your reduction in the various programs.

Mr. BROWNSTEIN. The reason for that, Mr. Chairman, is because of the law that was passed in the last session.

Mr. THOMAS. You have a reduction of $89,715 for 1964 over 1963, which still gives you $2.1 million. And the number of students has fallen off 10 or 15 or 20 percent. We have one little new program coming in.

Mr. BROWNSTEIN. That is right, but it is one that requires a good deal of counseling. The vocational rehabilitation program for peacetime veterans involves counseling in everyone of these cases.

Mr. THOMAS. How does that affect travel so substantially?

Mr. BROWNSTEIN. Well, we have our counselors who travel to many of these areas and the distances, of course, are increased because of the consolidations that we have effected.

AGENCYWIDE TRAVEL COSTS

Mr. THOMAS. Now, can you give us a wrap-up figure for employee travel throughout the Veterans' Administration? We will take it up by departments later.

Mr. MONK. $6,013,224. It is Object 21.

Mr. THOMAS. This is the table I was looking for. This breaks it down pretty well; $6,013,000. That is for everybody. This is for what year?

Mr. MONK. Fiscal year 1964. Now, fiscal year 1963 is right above there; $6,013,554.

Mr. THOMAS. 1962 is $5,323,000. That is a rise from fiscal year 1962 to fiscal year 1964.

Mr. MONK. Yes, sir.

Mr. SHYTLE. This is a rate increase. The information you are looking for, Mr. Chairman, appears on 8–3 and 8–4.

Mr. THOMAS. What is your total figure now for rental of all your properties and equipment throughout the whole VA? This doesn't bring it out as such.

Mr. MONK. No, sir.

Mr. GLEASON. It combines them.

Mr. THOMAS. Can you come up with a figure on that?

Mr. MONK. It would take us a couple minutes, sir. We would have to combine some figures.

COMMUNICATION COSTS

Mr. THOMAS. I notice you use round figures on telephone and telegraph; 1963 and 1964, $1,138,990 for both years.

Are you living up to your 1963 estimate for the first 6 months?

Mr. BROWNSTEIN. The first 6 months was $562,000, Mr. Chairman.

Mr. THOMAS. That is on the basis of $1.1 million then, isn't it?

Mr. BROWNSTEIN. Yes, but, of course, not having our——

Mr. THOMAS. What is your yardstick? Could your telephone and telegram be cut down any by more judicious use of your telephone calls? It is pretty easy to pick up a phone and call long distance. It is so much easier than sitting down and writing a letter.

Mr. BROWNSTEIN. Yes, of course; and we have cautioned our people on unnecessary use of this, Mr. Chairman, but actually with data management, it might increase costs.

Mr. THOMAS. How do you mean?

Mr. BROWNSTEIN. Well, you have a centralized data-processing center and if you get an inquiry on some veteran who hasn't got his check and you know that he needs it quickly, you are going to either telegraph or telephone the center to try to find out where it is.

Mr. THOMAS. Where will that inquiry normally originate?

Mr. BROWNSTEIN. The veteran may come to us direct or through some member——

Mr. THOMAS. Might he go to the regional office?

Mr. BROWNSTEIN. Yes; but that regional office will call the center.

Mr. GLEASON. A great many of them come to the Members of Congress, and the White House also, Mr. Chairman.

MISCELLANEOUS CONTRACTURAL SERVICES

Mr. THOMAS. What do you mean here by miscellaneous contractual services, $1,462,000? You have an increase of $94,000 over last year, which was $1,367,490.

Mr. BROWNSTEIN. That is the one I think I put into the record yesterday, Mr. Chairman.

Mr. THOMAS. What was it?

Mr. BROWNSTEIN. The $90,000 for the State Department support service in Manila. The two studies that we are having, one on the validation of the rating schedule and the other one on the Bureau of Old-Age and Survivors Insurance, on fiduciary payees. Nine hundred thousand dollars of that was in loan guaranty, $100,000 on credit reports and related matters, $30,000 for court costs for the chief attorney, and $5,000 for determinations and certifications required in connection with dependency and indemnity compensation, consultant fees, and independent medical fees.

Mr. THOMAS. Under the central office you have miscellaneous contractual services here, $391,500.

There is an increase of $104,000 over 1963. [reading:]

Funds for the maintenance and repair of DVB Central Office furniture and office machines on a contractual basis.

Reimbursement to other Federal agencies and for other contractual services such as (1) determinations and certificates required by 38 U.S.C. 422 (social security entitlement in combination with DIC paid by Veterans' Administration). * * *

What is that?

Mr. DRIVER. That pays additional amounts to a widow having children above two, the additional amount being paid up by social security.

Mr. THOMAS. How much do you transfer to social security for that service?

Mr. DRIVER. About $5,000.

Mr. THOMAS (reading):

Support services provided by U.S. embassies in Manila.

You went into that yesterday. What is that figure?

Mr. DRIVER. $90,000.

Mr. THOMAS. That is heat, light, and water, and janitorial services, I guess. [Reading:]

Consultant fees are required.

What do you spend for consultant fees?

Mr. BROWNSTEIN. The certifications Mr. Driver mentioned plus independent medical fees when we hire an independent medical expert to review a case. Those three items combined total about $50,000.

Mr. THOMAS. Did you actually spend, in 1962, $53,000 for independent medical fees for consultants?

Mr. BROWNSTEIN. Those fees in fiscal year 1962 were about $2,000, sir.

Mr. THOMAS. About $2,000 and not $50,000, then?

Mr. BROWNSTEIN. The combined three items total $50,000, Mr. Chairman.

Mr. THOMAS. What are the combined three?

Mr. BROWNSTEIN. The certifications Mr. Driver mentioned, consultant fees, the independent medical fees.

Mr. THOMAS. What is the occasion for having consultant medical fees outside the medical department?

Mr. BROWNSTEIN. The independent medical examiners?

Mr. THOMAS. Yes.

Mr. BROWNSTEIN. Or the consultant fees?

Mr. THOMAS. Either one or both.

Mr. BROWNSTEIN. In the consultant fees, we have an advisory committee in vocational rehabilitation and education that meets quarterly and they are paid consultant fees. The independent medical examiners, we have used them with the House Committee on Veterans' Affairs. They requested we submit a series of cases to independent medical examiners and this we have done.

Mr. THOMAS. And you say:

In addition to normal requirements, $140,000—

you refer to that every year—

is included in fiscal year 1963 and $100,000 in fiscal year 1964 for pilot study to develop procedures for use in subsequent economic validation of compensation rating schedule.

What you are going to spend is not $100,000 or $140,000 but $240,000?

Mr. BROWNSTEIN. We are spending $100,000 in fiscal year 1964.

Mr. THOMAS. What did you spend in fiscal year 1963?

Mr. BROWNSTEIN. $130,000 so far.

Mr. THOMAS. You say:

In addition to normal requirements, $140,000 is included in fiscal year 1963 and $100,000 in fiscal year 1964.

Well, what are normal requirements?

VALIDATION OF RATING SCHEDULE

Mr. BROWNSTEIN. We validate the rating schedule constantly. There is a constant review of the rating schedule to determine its validity.

Mr. THOMAS. You touched on that yesterday. Now repeat it again today. What do you hope to learn by this rating schedule? Who is going to make the study for you?

Mr. DRIVER. We are making it ourselves.

Mr. BROWNSTEIN. We are making it ourselves, but the Census Bureau is sending out the forms. We have had them include a series of questions that we believe will assist us in it. The Census Bureau will make the tabulation as well as get the forms back and furnish us with the consolidated material. On the basis of this we are hopeful of determining whether the amounts that are being paid for various disabilities are proper in relation to the reduced earning capacity of the veterans.

Mr. THOMAS. You have a limitation of X dollars on what he can have. What difference does it make?

Mr. BROWNSTEIN. The limitation is on the maximum, Mr. Chairman.

Mr. THOMAS. Yes, and this affects the maximum, so you haven't gained anything.

Mr. BROWNSTEIN. It could afford a basis for recommending to the Congress revisions in this area. And there is a good deal of administrative discretion in the revision of the rating schedule in determining what the rating ought to be for various disablements, and there of course we could act.

Mr. THOMAS. What about your supplies and materials, $1,468,600 for 1964? Office supplies and materials are $755,000, a reduction of $30,000 from this year.

CENTRAL OFFICE—DEPARTMENT OF VETERANS' BENEFITS

Gentlemen, let's take a look down by breakdown of the Central Office at page 8–10.

We touched on these in some degree yesterday. Put 8–10 in the record.

(The page referred to follows:)

DEPARTMENT OF VETERANS BENEFITS

Central Office, $8,358,500—Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
Average employment	554	550	540	−10
Personnel compensation	$4,972,648	$5,218,450	$5,484,790	+$266,340
Personnel benefits	373,762	402,350	421,010	+18,660
Total personal services and benefits	5,346,410	5,620,800	5,905,800	+285,000
Public Law 87–793 pay increase		(221,200)	(431,000)	(+209,800)
Travel and transportation of persons	441,775	410,300	400,200	−10,100
Transportation of things	87,141	93,000	93,000	
Rents, communications, and utilities	1,037,167	1,164,800	1,299,800	+135,000
Printing and reproduction	217,717	261,000	230,000	−31,000
Other services	147,627	288,100	392,800	+104,700
Supplies and materials	16,813	16,900	16,900	
Equipment	2,083,021	20,000	20,000	
Total cost	9,377,671	7,874,900	8,358,500	+483,600
Public Law 87–793 costs		(339,200)	(684,000)	(+344,800)

Mr. THOMAS. In Central Office you have a reduction of 10 average employment from last year. The total cost of $8,358,500 is shown. This year the total cost of the office is $7,874,900, and it increases $483,600, yet you have a reduction of 10 jobs.

IN-GRADE PROMOTION COSTS

Did we get a reasonably accurate figure in the record yesterday as to what the in-grade promotions cost a year?

Mr. BROWNSTEIN. I believe we did Monday.

Mr. THOMAS. What was that figure?

Mr. MONK. $10 million for the agency.

Mr. THOMAS. Percentagewise what would that be?

Mr. DRIVER. We did it by grade. The average grade in the agency was 6.6 at that point and at this point it was about $120, as I recall, sir.

Mr. THOMAS. That was the overall cost: $9 million to $10 million a year. That is the figure we used?

Mr. DRIVER. That is right.

Mr. MONK. It is 1-percent figure, isn't it?

Mr. THOMAS. We went into it more or less by grades and that was about the only accurate way we could do it. We got this in the record Monday; didn't we?

Mr. SHYTLE. Yes.

CENTRAL OFFICE EMPLOYMENT

Mr. THOMAS. Put page 8-11 in the record.
(The page referred to follows:)

DEPARTMENT OF VETERANS' BENEFITS

Central office—Average employment by program

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
Chief Benefits Director	20	22	22	----------
Field directors	25	22	22	----------
Compensation and Pension	120	119	119	----------
Vocational Rehabilitation and Education	34	30	27	−3
Loan Guaranty	72	72	72	----------
Guardianship Service	23	23	23	----------
Contact and Foreign Affairs	32	31	31	----------
Administration and Data Processing	92	94	94	----------
Controller	102	104	98	−6
Personnel Service	34	33	32	−1
Total	554	550	540	−10

GENERAL

This estimates provides for personal services and other administrative expenses required for the planning, direction, and supervision of the Department of Veterans' Benefits. A decrease of 10 in average employment is shown consistent with declining activities in some programs and better utilization of existing personnel.

The Chief Benefits Director is responsible to the Administrator for the operation of the Department and is assisted by:

1. The Deputy Chief Benefits Director who serves as his full assistant, acts for him in his absence, and participates fully in the direction of all activities of the Department.
2. The field directors who are directly responsible for operations of their assigned stations. Each director has assigned responsibility for a geographic area comprising approximately one-fourth of the field stations under the jurisdiction of the Department of Veterans' Benefits.
3. The service directors and their staffs who provide technical assistance for their respective programs.

The Chief Benefits Director is responsible for expenditures involving approximately $4 billion annually, the operation of 67 field offices, a data processing center and staff elements in central office, utilizing a total estimated average employment of 15,169 in fiscal year 1964.

Mr. THOMAS. This is the average employment by program.

Chief Benefits Director, 20, 22, 22; field directors, 25, 22, 22; compensation and Pensions, 120, 119, 119; Loan Guaranty—these are all employment in the District of Columbia?

Mr. MONK. That is right.

Mr. THOMAS (reading):

The Chief Benefits Director is responsible for expenditures involving approximately $4 billion annually. The operation of 67 field offices, a data processing center and staff elements in central office, utilizing a total estimated average employment of 15,169 in fiscal year 1964.

That is quite a job, Mr. Brownstein.

To provide personal service funds for the planning, direction and supervision of the Department of Veterans' Benefits.

That is the personal service total of $5,905,800 estimated for 1964 at an increased cost of $285,000.

Let's take a look at the field.

Mr. EVINS. Mr. Reporter, place in the record pages 8–16 and 8–17. (The pages referred to follow:)

DEPARTMENT OF VETERANS' BENEFITS

Office of Manager, Field, $3,022,100—Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
Average employment	310	309	309	
Personnel compensation	$2,885,560	$3,055,700	$3,172,247	+$116,547
Personnel benefits	215,637	232,800	244,153	+11,353
Total personal services and benefits	3,101,197	3,288,500	3,416,400	+127,900
Public Law 87-793 pay increase		(150,500)	(240,100)	(+89,600)
Travel and transportation of persons	115,360	114,300	112,300	−2,000
Transportation of things	30,396	16,000	30,000	+14,000
Other services	1,310	1,500	1,500	
Total cost	3,248,263	3,420,300	3,560,200	+139,900
Common service adjustment	−497,744	−519,500	−538.100	−18,600
Net cost	2,750.519	2,900,800	3,022,100	+121,300
Public Law 87-793 costs		(129,500)	(206,100)	(+76,600)
Personal services and benefits:				
Personnel compensation	2,885,560	3,055,700	3,172,247	+116,547
Personnel benefits	215,637	232,800	244,153	+11,353
Total	3,101,197	3,288,500	3,416,400	+127,900
These funds will provide adequate staffing for the Office of the Manager to effectively direct and coordinate the various departmental program activities and related functions of that office. The increase in budget year costs over fiscal year 1963 estimates provides for 2 additional workdays and nominal increases for with-in-grade salary advancements and the salary increases provided by Public Law 87-793.				
Travel and transportation of persons:				
Local travel	410	300	300	
Employee travel	114,950	114,000	112,000	−2,000
Total	115,360	114,300	112,300	−2,000
The estimated cost of travel of managers and staff members to central office and other locations for the purpose of attending conferences and meetings pertaining to the business of veterans' affairs. The estimate also includes funds to cover travel expenses incurred by the transfer of employees between stations.				
Transportation of things: Shipment of household goods	30,696	16,000	30,000	+14,000
The cost of shipping household goods and personal effects of employees transferring between stations. The increase in fiscal year 1964 over 1963 represents trans-Pacific shipment of household goods and personal effects incident to the scheduled rotation of 6 employees to and from the Manila regional office. The estimate for fiscal year 1963 includes transpacific shipment of household goods and personal effects for 1 scheduled transfer.				
Other services:				
Representation allowance	433	500	500	
Official residence allowance	877	1,000	1,000	
Total	1,310	1,500	1,500	
The estimate under this title is to cover the maximum official residence and representation allowances authorized for the incumbent of the position of manager (or acting manager), VA regional office, Manila, Philippines, as provided by Public Laws 86-116 and 86-707.				

Mr. EVINS. This is an appropriation of $3,022,100. Average employment is 309. No change.

The personnel benefits are increased by $11,353.

Travel and transportation of persons is decreased by $2,000.

Transportation of things is up $14,000.

The total increase on all of these is $139,900.

The common service adjustment. What is that, Mr. Administrator? It is down $18,600.

Mr. BROWNSTEIN. Those are services rendered by the Department of Medicine and Surgery and the Department of Veterans' Benefits.

Mr. EVINS. This brings it down $18,600.

The net cost of the manager in the field, $3,022,100.

These funds will provide adequate staffing for the office of the manager to effectively direct and coordinate the various departmental program activities that relate to the functions of that office. This provides for two additional workdays and nominal increases for within-grade salary promotions.

Shipment of household goods is shown to increase by $14,000.

I am sure all this is necessary to run the office of the field manager.

CHIEF ATTORNEY'S ACTIVITIES

The chief attorney in the field. Insert pages 8–18 and 8–19 in the record.

(The pages referred to follow:)

DEPARTMENT OF VETERANS' BENEFITS

Chief attorney, field, $12,899,000—Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
Average employment	1,555	1,570	1,510	−60
Personnel compensation	$10,609,421	$11,207,000	$11,229,000	+$22,000
Personnel benefits	810,488	864,000	882,000	+18,000
Total personal services and benefits	11,419,909	12,071,000	12,111,000	+40,000
Public Law 87-793 pay increase		(476,000)	(849,000)	(+373,000)
Travel and transportation of persons	654,508	670,000	685,000	+15,000

Summary of major workloads

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Total wards (end of year)	510,973	560,000	590,000
Accounts audited	394,798	405,000	339,000
Field examinations completed	173,452	165,000	189,600

Distribution of employment by activity

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Office of chief attorney	127	130	130
Fiduciary accounts analyst	291	298	255
Guardianship attorney	222	218	216
Field examination	368	368	368
Loan guaranty attorney	56	59	58
Administrative	491	497	483
Total	1,555	1,570	1,510

The workload functions performed by this program activity are related to guardianship, field examination, loan guarantee, and other legal activities. In this capacity the office of the chief attorney is responsible for: (1) administration of an efficient and economical guardianship program for the purpose of safeguarding the estates of minor and incompetent VA beneficiaries, (2) a program of field examination for the purpose of obtaining evidence relating to claims for VA benefits, such as, compensation, pension, insurance, retirement and servicemen's indemnity cases, vocational rehabilitation and education cases, loan guarantee cases, accident (tort) cases, and a variety of other matters; the development of medical, social, and economic information essential to the supervision of VA beneficiaries for whom fiduciaries have been appointed, and (3) furnishing legal advice and asistance (including litigation in State courts) to managers of field stations, directors of hospitals, and other VA field officials with respect to matters arising under governing State laws and Federal statutes and regulations administered by the VA.

The number of wards (minors, incompetent veterans, and other incompetent beneficiaries whose VA benefits must be paid to fiduciaries), as indicated in the foregoing summary, will continue to increase due to minor beneficiaries becoming eligible for pension.

Accountings to the VA by fiduciaries is a control mechanism used to assure that the payment of benefits are being judiciously administered for the care and maintenance of the ward. Accountings normally occur in the year after appointment. The decline in accounts audited for 1964 is attributable to extension of the accounting interval for all custodian accounts from 1 to 2 years with initial development thereof by correspondence.

Field examinations are conducted for purpose of obtaining evidence relating to claims for VA benefits; qualifications of proposed fiduciaries and guardians; the needs of minors; the income and expenditures on behalf of wards; the performance of social surveys conducted to develop social and economic information essential in the supervision of VA beneficiaries. The decrease in field examinations for 1963 is attributable to the decline in guardian-custodian investigations due to the substitution of initial development by correspondence in all cases in which the adjudication officer makes award to the parent custodian of record before referral to the chief attorney. The increase for 1964 is attributable to resumption of full interim social surveys for new cases not previously investigated.

Mr. EVINS. This includes all attorneys in the field?

Mr. BROWNSTEIN. Yes, sir.

Mr. EVINS. $12,899,000.

Your average employment in fiscal year 1963 was 1,570, and for fiscal year 1964 it is 1,510, or a decrease of 60. Will these all be attorneys?

Mr. BROWNSTEIN. No, sir; part will be clerical. Some may be nonlegal field examiners.

Here is a summary of the major workload of the attorneys in the field.

Mr. EVINS. Total wards at the end of 1962 were 510,973. In 1963 there are 560,000 and for 1964 it is estimated to be 590,000.

The accounts audited in 1962 were 394,798; the current year, 405,000; and next year 339,000 accounts audited.

Mr. BROWNSTEIN. May I point out, Mr. Evins, that despite these increased workloads we are still showing a reduction in average employment of 60. We are going to do that through increased efficiency and productivity.

Mr. EVINS. Field examinations completed in 1962 were 173,000; last year, 165,000; and in 1964 it is estimated to be 189,600.

What do these field examinations embrace?

GUARDIANSHIP ACTIVITIES

Mr. BROWNSTEIN. Most are in connection with guardianship activities.

Mr. EVINS. The chart at the top of page 8–19 gives you the distribution of employment by activities.

Guardianship work and examination of fiduciary accounts.

Aren't these pretty much controlled in the local banks, or are they distributed in the banks in the various regions? How are they handled?

Mr. BROWNSTEIN. There are a good many of these cases where there has not been a court-appointed guardian. The natural parent, for example, might be the custodian, fiduciary without a guardian having been appointed by the court.

But, even where there is a guardian appointed, we still get annual accountings and we audit the accounts.

Mr. EVINS. If a veteran has lost his life in the service, a serviceman, and his widow or his mother or some member of his family is entitled to benefits, where are these accounts kept? Say, there is one in the West and one in the South.

Mr. DRIVER. They are kept wherever the children are located.

Mr. EVINS. They are kept nearby?

Mr. BROWNSTEIN. Yes. It would be in the locality where they are living.

Mr. EVINS. Funds are deposited in the accounts named and the local attorney or the guardian is in charge of it to increase or decrease payments as he deems best?

Mr. DRIVER. And, if it is a natural parent who has the custodianship of the child, we would pay to the parent. They might or might not put it in the bank. They might buy Government bonds. We do insist on supervising how they spend the fund.

Mr. BROWNSTEIN. It may be necessary for the care and maintenance of the child.

Mr. EVINS. This constitutes rather a large amount in total throughout the VA, does it not?

Mr. BROWNSTEIN. Yes.

Mr. EVINS. How much?

Mr. DRIVER. About $750 million every year under guardianship.

Mr. EVINS. Number of minors, awards, and incompetent veterans as indicated in the summary will continue to increase due to minor beneficiaries becoming eligible for pensions.

Mr. GLEASON. Mr. Evins, we look after about three-quarters of a billion dollars in this guardianship program in the estates of our wards.

Mr. DRIVER. Assets under the program are $757 million, Mr. Evins.

SUPERVISION OF GUARDIANSHIPS

Mr. BOLAND. How closely do you supervise these guardianships?

Mr. BROWNSTEIN. Well, if it is the case of the natural parent, who is the guardian, Mr. Boland, and we determine that the funds are needed for the care and maintenance of the child, then we leave it pretty much up to the natural parent to make the disbursements as the parent sees fit. On the other hand, there are a good many cases where the widow has remarried, and if we believe that properly the fund ought to go to the maintenance of the child they do, but in many of these cases we try and have some of the fund conserved for the child's future education.

Mr. BOLAND. Do you find many discrepancies among guardians?

Mr. BROWNSTEIN. Relatively few.

Mr. GLEASON. Last year there were unsatisfactory conditions affecting beneficiaries in 8,549 cases. They were found and corrected during the course of over 56,000 investigations.

Mr. BOLAND. That is a pretty high number.

Mr. GLEASON. Yes, it is.

Mr. BOLAND. How often do you check the activities of these guardians and their handling of these accounts?

Mr. BROWNSTEIN. We get an annual report, an annual accounting.

Mr. BOLAND. How do you know whether or not the annual accounting is correct?

Mr. BROWNSTEIN. At least every 3 years we make a field examination.

Mr. THOMAS. Will the gentleman yield?

Mr. BOLAND. Yes, sir.

Mr. THOMAS. Off the record.

(Discussion off the record.)

FIELD EXAMINATIONS

Mr. EVINS (reading):

Field examinations are conducted for purpose of obtaining evidence relating to claims for VA benefits; qualifications of proposed fiduciaries and guardians; the needs of minors; the income and expenditures on behalf of wards; the performance of social surveys conducted to develop social and economic information essential in the supervision of VA beneficiaries. The decrease in field examinations for 1963 is attributable to the decline in guardian-custodian investigations due to the substitution of initial development by correspondence in all cases in which the adjudication officer makes award to the parent custodian of record before referral to the chief attorney. The increase for 1964 is attributable to resumption of full interim social surveys for new cases not previously investigated.

How often do you make these examinations?

Mr. BROWNSTEIN. There is an audit of the report annually, and at least every 3 years there is a field examination.

Mr. EVINS. Local travel for this work in the attorneys' office is $100,000. Employees' travel is $570,000, for a total of $670,000 in 1963.

One of these figures at the middle of page 8–20 represents personal compensation and personal benefits, $11, $12, and $12 million.

Mr. BROWNSTEIN. That is salary plus fringe benefits.

Mr. EVINS. In the chief attorney's activity?

Mr. BROWNSTEIN. Yes, sir.

Mr. EVINS. Here, again, your numbers of employees are down but the compensation is up by $40,000.

GUARDIANSHIP PROGRAM—TOTAL COSTS

Mr. THOMAS. Mr. Evins, could we get in the record at this point some reasonably substantial figure on what part of compensation and pensions goes to minors?

Mr. GLEASON. About $250 million a year go to the wards.

Mr. THOMAS. That is to the wards, one-quarter of a billion, divided into approximately how many cases?

Mr. BROWNSTEIN. 590,000 wards.

Mr. THOMAS. What is the average amount involved?

Mr. BROWNSTEIN. About $425.

Mr. EVINS. 590,000 beneficiaries at one-quarter of a billion annually?

Mr. GLEASON. Yes, sir; that is the amount that is paid out to them, Mr. Evins. This does not include the cost of administration.

Mr. EVINS. Most of this work is really done by the guardian, the bank or the local attorneys, and your chief attorney's staff is really sort of a supervisory agency to check on it?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What are the administrative expenses of handling that three-quarters of a billion dollars that is in estates for benefits; is it broken down under the chief attorney's office?

Mr. GLEASON. I do not find it broken down.

Mr. THOMAS. What does it cost?

Mr. EVINS. $12,111,000. That is the combined cost for salaries and benefits.

Mr. BROWNSTEIN. 8–18 has the total cost, the estimate for 1964 being $12,899,000.

Mr. GLEASON. That is not for the guardianship program.

Mr. BROWNSTEIN. This is the total estimate for chief attorneys.

Mr. GLEASON. What they are looking for is the guardianship.

Mr. DRIVER. About 75 percent of the total of the chief attorney's workload would be devoted to the guardianship program.

Mr. THOMAS. Is any other cost related to it besides the chief attorney's?

Mr. DRIVER. In the guardianship program?

Mr. THOMAS. Yes.

Mr. DRIVER. There would be other costs in this sense, costs in the adjudication division to decide the claims, costs at the computer center in Chicago to make the payments every month, there would be costs in the Post Office and Treasury Department. In that sense there would be costs all through.

Mr. THOMAS. There are at least four different segments touch this besides the chief attorney.

Mr. DRIVER. You start with the contact office where they come for information, go to the adjudication division, cost in settling the case, cost in the finance activity in making the payment.

Mr. THOMAS. There are at least five divisions, but about 75 percent of the cost goes to the chief attorney in the region?

Mr. DRIVER. Yes, sir.

Mr. THOMAS. What would you say that the wrap-up cost is to administer that $750 million out of how many thousand cases——

Mr. GLEASON. About 590,000.

Mr. THOMAS. What would you say?

Mr. DRIVER. About $9 or $10 million.

Mr. THOMAS. It is more than that. Your attorney's cost is practically that.

Mr. DRIVER. That is the only one I am counting there.

Mr. THOMAS. I mean the whole wrapup cost of the five segments that touch it.

Mr. DRIVER. I think the best thing you could do would be to take the overall administrative cost of the agency, 3 percent, and apply it against the total. That would include everybody.

Mr. THOMAS. Around $20 million?

Mr. DRIVER. Three percent of three-quarters of a billion is 22½.

Mr. THOMAS. Does that sound reasonable to you, Mr. Jonas?

Mr. JONAS. No, it does not sound reasonable.

Mr. THOMAS. Why?

Mr. JONAS. If you will let me put something in the record I think I will demonstrate it. Will you yield?

Mr. EVINS. Yes.

LOSSES AND RECOVERIES FOR BENEFICIARIES

Mr. JONAS. I think we ought to put page 97 of the annual report in the record right at this point, Mr. Chairman. It shows the losses and recoveries for beneficiaries.

Mr. THOMAS. Read it. Read it into the record.

Mr. JONAS. It shows they had total losses last year of $217,696, defalcations and embezzlements of guardians accounted for $149,861, defalcations and embezzlements of legal custodians accounted for $67,-880, but they recovered, through the office of chief attorneys in the field, total recoveries amounted to $204,934.

You are spending $9,600,000 for that part of the work of the chief attorney or the office of the chief attorneys attributable to this guardianship work. You have 1,500 people doing it. You recover $204,000.

Mr. DRIVER. The smallest part of the work would be in treating that that goes sour. The largest share of the work would be in keeping track of the cases so that they do not go sour.

Mr. JONAS. You think the mere fact you are policing this field holds down the number of embezzlements?

Mr. DRIVER. No doubt about it.

Mr. JONAS. That is a serious indictment you are making of fiduciaries. You are saying if you were not policing this activity you would have a lot of bankers engaged in embezzlement.

Mr. DRIVER. Not necessarily bankers. This runs through the whole field.

Mr. JONAS. Fiduciaries. Aren't they all under bond?

Mr. DRIVER. No, sir. Only about half are under bond. The other half are natural parents who are custodians.

Mr. JONAS. In the natural cases, defaults are much lower than the regular guardianship cases in total?

Mr. DRIVER. That is true. I think perhaps the temptation would be less where there is a matter of blood involved.

Mr. JONAS. I think these figures are interesting, Mr. Chairman.

Mr. THOMAS. Mr. Jonas, what was the large figure that went sour?

Mr. JONAS. $217,696 of losses.

Mr. GLEASON. Of which there were recoveries.

Mr. JONAS. Recoveries of $204,934.

Mr. DRIVER. That is no doubt due to the bond.

Mr. THOMAS. That represents 8,000 cases out of your 590,000.

Mr. DRIVER. That went sour; yes, sir.

Mr. THOMAS. What percentage is that?

Mr. GLEASON. Actually, there was a loss of only $13,000.

Mr. JONAS. What percentage is that?

Mr. DRIVER. 590,000 under guardians.

Mr. JONAS. What percentage of that 8,000?

Mr. GLEASON. 8,000 went sour.

Mr. BROWNSTEIN. About 1½ percent. That 8,000 does not mean they all went sour. That means that we found something questionable in those 8,000 cases. This does not mean defalcation necessarily.

GUARDIANSHIP PROGRAM STUDY

Mr. JONAS. You said yesterday, Mr. Brownstein, that you had a program of study underway right now to see if you could not streamline this activity.

Mr. BROWNSTEIN. Yes, sir.

Mr. JONAS. I would much rather have 10 policemen on a beat and not have any crime than have a lot of serious crimes without any policemen, but it strikes me that this is a pretty expensive operation. There ought to be some way to keep in closer touch with it, in view of the fine record that has been established, without spending this amount of money.

Mr. DRIVER. We hope to find guidelines in it. You will notice in the workload figures on 8-18 that there is a reduction in the number of accounts to be audited for 1964. This is an effort on the part of the Veterans' Administration to recognize this fact.

Mr. THOMAS. What will you spend for this study?

Mr. BROWNSTEIN. $150,000 in 1964.

NATURE OF EMBEZZLEMENT CASES

Mr. JONAS. Your defaults occur principally in the court-appointed guardianship cases and not in the natural-guardianship cases?

Mr. DRIVER. I would say the serious money embezzlements occur in the court-appointed guardianship cases, not in the natural ones.

Mr. JONAS. They are under bond.

Mr. DRIVER. That is why we recover.

Mr. GLEASON. We had recoveries of $204,000.

Mr. DRIVER. The difficulty we run into is where there is a natural parent and there is remarriage and other children and we find the mother or father is spending money for other members of the family. We do not permit this. We do not consider this embezzlement as we would in a case where the court-appointed guardian runs off with the money.

Mr. BROWNSTEIN. But they would be included in those 8,000 cases.

Mr. EVINS. You have 1,510 employees. How many of this number would be attorneys?

Mr. BROWNSTEIN. 667.

Mr. EVINS. 667 are attorneys. Would they be under the direction of the General Counsel here in Washington?

Mr. BROWNSTEIN. Their opinions are reviewed by the General Counsel.

Mr. THOMAS. Would you allow a slight interruption here?

Mr. EVINS. Mr. Chairman.

Mr. THOMAS. Just how serious are these 8,000 cases now that the Chief Attorney says are default cases? I have a feeling when you look into it, there won't be any substance in 75 percent of them but it makes a big workload. After all, it requires some looking into of some trivial amount. How serious do you find these things?

Mr. BROWNSTEIN. Most of them involve the question of conservation of funds for the future education of the child.

Mr. JONAS. We can pay up all these defaults and save about $10 million a year.

Mr. BROWNSTEIN. That is not included in there, Mr. Jonas. These are cases where we make an examination and we find that the funds are being used for purposes other than the care and maintenance of the child and we then say, "Here is what is going to have to be done. You are going to have to conserve a certain amount of this for the future education," and maybe we will then go in and have a court-appointed guardian.

Mr. WYMAN. What portion of the workload of the Chief Attorney's office is devoted to these cases?

Mr. BROWNSTEIN. About 75 percent.

Mr. THOMAS. That is the largest part of the workload.

Mr. EVINS. In the field.

Mr. DRIVER. Yes, sir.

Mr. THOMAS. The central office does not touch it. They are hardly on speaking terms.

That is the duty of the Chief Attorney's office and they do it.

Mr. DRIVER. That is right. Our principal effort is to conserve the money and see that it isn't spent. We feel there is where we make the biggest contribution for the future of the child.

Mr. EVINS. How many financial institutions besides natural parents are the legal guardians or custodians of these funds besides your 667 attorneys? How many others have control?

Mr. BROWNSTEIN. Probably half of our guardianship cases are covered by court-appointed guardians.

GUARDIANSHIP SUPERVISION

Mr. EVINS. You have a large supervisory group besides your own field attorneys.

Mr. DRIVER. In the court-appointed guardian.

Mr. EVINS. Yes.

Mr. DRIVER. That is true.

Mr. BROWNSTEIN. They have to make periodic reports to the court. That is correct.

Mr. THOMAS. Who is in any better position than those judges to give you some good, sound substantial advice?

Mr. DRIVER. We rely heavily upon them.

Mr. THOMAS. If you are going to do this thing, why not call in a blue-ribbon committee of judges? They would be glad to serve. As the Administrator suggested yesterday, suppose it costs $100 a day. It would not take them many days to sit down and write out a very comprehensive report and some good advice. It is not going to cost you $140,000 by a whole lot in my judgment.

You will get better advice. Think it over. I am not running your show. Just think it over.

Mr. DRIVER. The question we are trying to solve is whether we can diminish the amount of supervision and get the same general results that we have been getting and if we can diminish it how do we go about it; in other words, do we make spot checks every few years instead of having a regular recurring check on these accounts, and this is the reason the study is being made.

Mr. WYMAN. Mr. Chairman, will you yield?

Mr. EVINS. Mr Wyman?

AUTHORITY FOR GUARDIANSHIP PROGRAM

Mr. WYMAN. Is the decision as to whether to do this on a continuing basis as a matter of policy a decision that is made by the VA itself or are you implmenting something that Congress has told you you have to do?

Mr. DRIVER. About 25 years ago there was a severe scandal in this program. We found that there were a number of men who had secured the guardianship of many, many cases and they were milking the accounts dry and not saving any of the money, et cetera, paid a little attention to it or actually taken the money.

Mr. THOMAS. Mr. Driver, give him a quick answer to his question.

Mr. DRIVER. I would say we are operating this program at the specific direction of Congress as a result——

Mr. THOMAS. It is purely an administrative matter. You have been charged with doing this job right in your day-to-day rules and regulations, promulgated by the administration, carrying out the intent of Congress.

Mr. DRIVER. That is right. No question.

Mr. JONAS. There is not any specific statutory requirement for you to follow up this money once a legal guardian is appointed.

Mr. DRIVER. No.

Mr. JONAS. That is sort of empire building on your part, or assuming the responsibility of following the funds to the ultimate beneficiary, is it not?

Mr. DRIVER. No, sir. We administer this program in accordance with the Uniform Guardianship Act in every State. We do not do more than we are required to do, especially where there is a court-appointed guardian.

Mr. JONAS. You are doing more than you are required to do.

Mr. DRIVER. We are getting an annual accounting.

Mr. JONAS. Supervision is something you elect to do. I am not quarreling with your decision. I do not want you to say it is something you are required to do by law.

Mr. DRIVER. We are not required to do it by law. Most of the supervision is in those cases where we have a custodianship as distinguished from a guardianship. We do not have a court-appointed guardian. We have a natural parent who is custodian. Those are the cases where we exercise most of our supervision. In the other cases it is the court doing it.

Mr. JONAS. Is there no requirement on the part of the custodian to make annual reports to the local court?

Mr. DRIVER. No, there is not.

Mr. JONAS. He reports to you?

Mr. DRIVER. Yes, sir; in the guardianship cases the fund is charged 5 percent to pay the guardian. In the custodian cases there is no charge. We encourage custodians for this reason.

Mr. BOLAND. Yet the defalcations and embezzlements are much heavier in the guardians than legal custodians. You might expect the reverse to be true.

Mr. DRIVER. Not really; you have the natural parent involved. The thing that would go wrong would be as I indicated earlier; she might be spending some of the money for a new member of the family, a child as a result of remarriage. You would not find an actual embezzlement.

Mr. JONAS. Commingling of funds.

Mr. DRIVER. Yes, sir.

Mr. BROWNSTEIN. It would be harder to find a defalcation in that state.

Mr. DRIVER. Our effort is to get it spent on the son of the dead veteran.

Mr. EVINS. You would like to set up guidelines but it varies from area to area, based upon the court, et cetera.

Mr. DRIVER. We have a uniform statute that has been enacted in about 45 or 46 States and there we have uniformity where you have a court-appointed guardian.

Mr. JONAS. That does not take care of custodian cases.

Mr. DRIVER. No, sir.

Mr. EVINS. Some mother writes in and says: "I need more money. Can you have some more of this fund released?" and the guardian looks it over and says: "I think in this case we can increase it by $28 a month."

Mr. DRIVER. Yes, sir; but she has to give reasons for it.

Mr. WYMAN. You could not do this on a spot-check basis?

Mr. DRIVER. We are trying to find out if we can.

Mr. GLEASON. This is the study. We are trying to find out if we can or cannot.

Mr. BROWNSTEIN. We have already reduced the number of social surveys and the frequency of our social surveys in this area. We have found that a lesser degree of frequency is adequate to accomplish our purpose. We are looking into these other areas to see how far really we can go and still accomplish the purpose.

Mr. EVINS. This needs close supervision to avoid any further outbreaks of scandals or defaults.

If there are no further questions, we will turn to the regional contact offices.

FIELD CONTACT OFFICES

Put page 8-22 in the record.

(The page referred to follows:)

DEPARTMENT OF VETERANS' BENEFITS

Contact, field, $7,543,900—Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated	Increase (+) or decrease (−), 1964 over 1963
Average employment	1,244	1,047	937	−110
Personnel compensation	$8,157,119	$7,316,715	$6,844,870	−$471,845
Personnel benefits	626,987	556,085	520,030	−36,055
Total personal services and benefits	8,784,106	7,872,800	7,364,900	−507,900
Public Law 87-793 pay increase		(310,810)	(518,900)	(+208,090)
Travel and transportation of persons	192,140	216,000	160,000	−56,000
Transportation of things	29,365	31,000	19,000	−12,000
Total cost	9,005,611	8,119,800	7,543,900	−575,900
Public Law 87-793 costs		(310,810)	(518,900)	(+208,090)

Summary of major workloads

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Personal interviews	3,381,508	2,852,000	2,573,000
Telephone interviews	3,259,080	2,642,000	2,213,000
Applications and forms prepared	2,026,842	1,657,000	1,477,000
Correspondence prepared	961,906	789,000	691,000
Counter interviews	491,941	295,000	247,000

The contact program provides personalized service to veterans, their dependents, and beneficiaries by furnishing information, assistance, and advice relating to rights and benefits under laws administered by the Veterans' Administration.

Mr. EVINS. Contact in the field: $7,543,900 for this work. This is advisory and opinions and giving of information in various contact offices. The average employment in 1962 was 1,244; in 1963, 1,047; in 1964 it is reduced to 937, or a reduction of 110 personnel.

This is the result of closing of how many of your contact offices in the last year?

Mr. GLEASON. 161 a year ago, and 26 this year.

Mr. EVINS. How many are you maintaining open now?

Mr. BROWNSTEIN. Nine, sir.

Mr. GLEASON. All of those have some other aspect of the VA associated with it.

Mr. THOMAS. Do you find a comparable reduction in printing and binding?

Mr. EVINS. Personnel compensation is down $471,000; personnel benefits are down $36,000. Of course, your pay increase is in here.

This ups it $208,000. Then there is transportation of persons, down $56,000; transportation of things down $12,000. The total overall cost of this program is reduced from $8,119,000 to $7,543,000, or a reduction of a half million dollars—$575,900. It is correspondingly being phased out. Even the table below on summary workload shows that personal interviews are decreasing from 3.3 million to 2.8 million to 2.5 million; telephone interviews are down to 2.2 million; and application and forms prepared have been cut almost in half. Correspondence has decreased and counter interviews are down from 491,000 in 1962 to 247,000 in 1964.

Mr. GLEASON. Would you be good enough to insert that figure on correspondence prepared, Mr. Evins: from 962,000 down to 691,000?

Mr. THOMAS. Repeat that again, Mr. Administrator.

Mr. GLEASON. Correspondence prepared for fiscal year 1962 was 962,000, and in 1964 it is estimated at 691,000.

Mr. EVINS. You are still doing a lot of letterwriting.

Mr. GLEASON. Yes, sir; but we are cutting down.

Mr. THOMAS. Can you find that printing and binding item in there?

Mr. BROWNSTEIN. They distribute other people's Mr. Chairman.

Mr. DRIVER. They do not have any of their own, in this program, sir.

Mr. THOMAS. That is a big source of distribution, is it not?

Mr. DRIVER. Yes, sir.

Mr. THOMAS. In the offices you close down, do you take their share and put it in the wastepaper basket?

Mr. BROWNSTEIN. We bring it to the regional office. They distribute it.

Mr. EVINS. Are there further questions on the contact offices? If not, we will return to compensation and pensions in the field, $33,109,000.

COMPENSATION AND PENSION, FIELD

DEPARTMENT OF VETERANS BENEFITS

Compensation and pension, field, $33,109,000—Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
Average employment	3,926	3,835	3,922	+87
Personnel compensation	$27,247,492	$27,854,000	$30,083,000	+$2,229,000
Personnel benefits	2,058,651	2,136,000	2,317,000	+181,000
Total personnel services and benefits	29,306,143	29,990,000	32,400,000	+2,410,000
Public Law 87-793 pay increase		(1,191,000)	(2,286,000)	(+1,095,000)
Travel and transportation of persons	44,900	70,000	35,000	−35,000
Transportation of things	26,194	50,000	20,000	−30,000
Other services	3,668	4,000	4,000	
Flags	602,007	625,000	650,000	+25,000
Total cost	29,982,912	30,739,000	33,109,000	+2,370,000
Public Law 87-793 costs		(1,191,000)	(2,286,000)	(+1,095,000)

Summary of major workloads

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
New claims—total	327,966	331,000	334,000
Disability	195,110	192,000	188,000
Death	132,856	139,000	146,000
Reopened claims—total	410,211	415,000	408,000
Disability	365,088	387,000	379,000
Death	45,123	28,000	29,000
Dependency and income claims—total	520,584	550,000	639,480
Disability	317,556	333,500	390,080
Death	203,028	216,500	249,400
Insurance claims	38,060	40,000	42,000
Burial claims	209,945	221,000	233,000

Distribution of employment by activity

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Office of adjudication officer	534	525	534
Authorization	1,664	1,675	1,693
Rating board	742	690	710
Clerical and stenographic	986	945	985
Total	3,926	3,835	3,922

This program activity is responsible for the administration and adjudication of compensation, pension, and other related benefits and allowances that are payable to living veterans, and dependents and beneficiaries of deceased veterans.

Estimated future adjudicative work volumes are based on careful studies and projections of experience and trend data. These data relate to certain external factors, such as: (1) veterans and ex-servicemen in civil life, (2) running awards of compensation and pension, (3) new deaths, (4) members of the Armed Forces discharged, and (5) the number of insurance policies in force, all of which influence the workload to be processed by this program. The claims activity and the workload requirements resulting from these areas will be influenced by: (1) length of service of the veterans or ex-serviceman, (2) age groups and mortality rates, (3) type of benefit and allowance being received, and (4) veterans and dependents who have been denied claims or who have not filed claims.

Mr. EVINS. Average employment is up by 87; 1962, 3,926; 1963, 3,835; and for 1964, 3,922. This is increased by 87 to handle this work. Personnel compensation is up $2.2 million.

Personnel benefits is increased by $181,000. Iincluding travel and all other costs the increase is $2,370,000, including the pay increase of $1,095,000. This is an increase from $30.7 million to $33.1 million.

Does anybody want to comment upon the reason for these increases? The pay increase is a large item.

"STATEMENT OF CASE" REQUIREMENTS

Mr. BROWNSTEIN. The 87 people we discussed Monday; this is the preparation of the statement of the case.

This is going to be a very substantial workload, Mr. Chairman—the preparation.

Mr. THOMAS. Why?

Mr. EVINS. These are people in the field where your local board renders the decision and you have to prepare a statement of the case.

Mr. BROWNSTEIN. If the veteran expresses dissatisfaction with the decision of the determination of the local board.

Mr. EVINS. Ninety percent of them express dissatisfaction, do they not?

Mr. BROWNSTEIN. No, sir.

Mr. EVINS. How much?

Mr. BROWNSTEIN. We estimate there will be about 50,000 of them in 1964.

Mr. THOMAS. If I may interrup, Mr. Evins?

You have a good record. We are going down and down in personnel. We have this ADP center. We expect some big things from that. Why can't you absorb this little increase of 87? Every time you get a new activity, regardless of what it is, we have to go right to the budget and put it on the record and up it goes. Can you not absorb that and stand on one foot?

Mr. BROWNSTEIN. I think, Mr. Chairman, this is a very conservative estimate.

Mr. THOMAS. You are doing the same thing now and I expect it is far more expensive. I expect you have to write far more letters explaining why. You will write the veteran. He does not like it. You write the member. You write the central office here. You will get all of those letters back.

Mr. BROWNSTEIN. Even with the statement of the case we will continue to get letters of that kind, Mr. Chairman.

ADJUDICATION WORKLOADS AND COSTS

Mr. EVINS (reading):

Estimated future adjudicative work volumes are based on careful studies and projections of experience and trend data. These data relate to certain external factor, such as: (1) veterans and ex-servicemen in civil life, (2) running awards of compensation and pension, (3) new deaths, (4) members of the Armed Forces discharged, and (5) the number of insurance policies in force, all of which influence the workload to be processed by this program. The claims activity and the workload requirements resulting from these areas will be influenced by: (1) length of service of the veteran or ex-serviceman, (2) age groups and mortality rates, (3) type of benefit and allowance being received, and (4) veterans and dependents who have been denied claims or who have not filed claims.

Your chart at the bottom of 8-24 shows each category of work. New claims are up from 327,000 in 1962 to 334,000 in 1964. Reopened claims are down 7,000 to 408,000. The dependency and income claims go from 520,000 in 1962 to 639,000 in 1964; insurance claims are slightly up; and burial claims are also up.

Mr. THOMAS. Mr. Chairman, let me interrupt. Break down the new claims. I have looked all over the several pages now. On 8-24 you have new claims totaled and you break it down for disability and death, and disability for 1962 is 195,000. It goes down to 192,000 in 1963; it goes down to 188,000 in 1964. Can you break these new claims down between compensation and pensions and death?

Mr. FARMER. No, sir, not precisely; because, in the first place, the claim for compensation and disability pension is a claim for both; so when a man claims it he frequently claims both. Sometimes he is not too serious about his compensation claim. He is more interested, or we think so, in pension, based on what we think his entitlement is.

His actual claim is for both. The claim form includes both benefits. This is equally true of the death claim, although in the death claim we are able to detect more clearly whether or not the widow or child is seeking a service-connected death benefit or non-service-connected benefit.

NEW CLAIMS

Mr. THOMAS. Just what do you mean by "new claim"?

Mr. FARMER. A new claim is a claim from a man, or a claimant—we will stick to disability—from a veteran.

Mr. EVINS. For the first time.

Mr. FARMER. For the first time he has ever come to us and sought this benefit.

Mr. THOMAS. That means just what it says, then.

Mr. FARMER. Yes, sir.

Mr. THOMAS. There has not been any correspondence one way or the other heretofore.

Mr. FARMER. Not about this benefit. We do encounter a number of people, particularly World War II, who had a claim for training or maybe they had been hospitalized several years ago and they have a claim number but that does not mean they have had a claim for compensation or pension. I would agree with you this means exactly what it says. This is a new claim for compensation pension.

Mr. THOMAS. Where did these originate—World War I, World War II, or Korea?

Mr. FARMER. The source of them?

Mr. THOMAS. Yes.

Mr. FARMER. Across the board, actually. These figures here include claims from World War I, II, and Korea and peacetime. We get very few, virtually no new, claims from any earlier wars. When we do it is a claim from the Spanish-American War veterans.

COMPENSATION AND PENSION PAYMENTS

Mr. EVINS. The annual report shows that more than $3.6 billion annually is paid to veterans and their dependents for compensation and pension; 1.9 million veterans receive compensation; 1.1 million living veterans receive pensions; and dependents of 1,122,000 of deceased veterans receive compensation and pension.

They generally confuse pensions and compensations. They are not too much concerned just so they get a check, and it is increased.

Mr. FARMER. Well, sir, they frequently get pensions and then they will want compensation, or sometimes it is vice versa.

PROJECTED COST OF COMPENSATION AND PENSIONS

Mr. THOMAS. What does this figure look like projected into the future?

Mr. FARMER. I have some figures based on long-range planning.

Mr. DRIVER. In 1995 it will hit $5.9 billion.

Mr. THOMAS. Hit what?

Mr. DRIVER. $5.9 billion for compensation and pension.

Mr. THOMAS. What is the basis of that projection?

Mr. GLEASON. This is provided there is no additional increase in either compensation or pension.

Mr. THOMAS. Around $6 billion in 1995?

Mr. DRIVER. 1995. That will be about $1.28 billion for compensation and $4.69 billion for pension.

Mr. THOMAS. Under existing law?

Mr. DRIVER. Yes, sir.

Mr. JONAS. May I ask a question?

Mr. EVINS. Mr. Jonas.

NUMBER OF VETERANS AND DEPENDENTS ENTITLED TO COMPENSATION AND PENSIONS

Mr. JONAS. What is the total number of veterans and dependents who under certain conditions, would be entitled to compensation or pension; 70 million?

Mr. DRIVER. 68, I believe, at the moment.

Mr. JONAS. 68 million out of a population of 181 million. It is pretty nearly half the people in the United States.

Mr. DRIVER. Up above 45. It is 46.

Mr. GLEASON. About 47 percent of the population.

Mr. JONAS. Not that much. It is about 37 percent or 38 percent.

Mr. DRIVER. We have 22¼ million living veterans; 15.1 million World War II; 5.5 million Korean conflict; of which 4.5 had only service in Korea; 2.4 million World War I; 26,000 Spanish American; and 122,000 miscellaneous.

Mr. THOMAS. You have that in a table further over.

Mr. DRIVER. Yes, sir.

Mr. EVINS. Mr. Chairman, I think it would be appropriate to put some of this statement in the annual report in the record: Compensation and pension of veterans, page 51, and the charts on page 52 and 53, and then the tables on 215 and 216.

(The material referred to was subsequently placed in the record on pp. 838–842.)

Mr. EVINS. This information provides very important statistics.

Mr. THOMAS. He sets it out further in the justifications.

Mr. EVINS. This is required by statute, is it not, Mr. Administrator? And there is not too much Congress can do about this except talk about it.

Mr. GLEASON. That is correct, sir.

Mr. JONAS. Will you yield?

Mr. EVINS. Mr. Jonas.

Mr. JONAS. It might help a little if we would remember it when the next bill comes up on the floor.

Mr. GLEASON. This is something that the Congress will have to determine, Mr. Jonas.

SUPPLEMENTAL FUNDS FOR COMPENSATION AND PENSIONS

Mr. THOMAS. You might look into the appropriation for this year. You have a little deficiency around the corner.

Mr. EVINS. Where does that show, Mr. Chairman?

Mr. BROWNSTEIN. Page 9–1, I think.

Mr. THOMAS. For the record, what is the status of your 1963 funds in compensation and pensions, and what amount do you have pending in the way of a deficiency?

Mr. BROWNSTEIN. We are in for a supplemental of $42 million.

Mr. THOMAS. By virtue of what?

Mr. BROWNSTEIN. This was the compensation increase in the last session.

Mr. THOMAS. Last September.

Mr. BROWNSTEIN. It was effective October.

Mr. THOMAS. What did that do as a result of the new legislation?

Mr. BROWNSTEIN. It added $98 million a year to the service-connected disabled veteran.

Mr. JONAS. It applies only to service connected?

Mr. GLEASON. Yes, sir.

Mr. EVINS. The funds we have been talking about are, of course, for the payment of the personnel administering this program of $33 million. We get over to compensation and pensions later, which is the total amount of $3,921 million. In between, in the budget, is vocational rehabilitation personnel, $9,037,000. This is page 8–28. Do you want to go into this, Mr. Chairman?

OTHER OBJECT COSTS—COMPENSATION AND PENSION

Mr. THOMAS. Before you go to that, Mr. Evins, I believe it might be well to give these other objects a little attention. These are on 8–26, "Shipment of household goods, travel and transportation."

Mr. EVINS. Mr. Budget Officer, you required $50,000 for shipment of household goods in 1963 and you are going to ask for $20,000 for next year. Why did you decrease that by $30,000?

Mr. BROWNSTEIN. Well, in 1963 there were the transfers from Manila.

Mr. THOMAS. Let us get rid of that Manila business.

Mr. GLEASON. You cannot do that until 1970, Mr. Chairman.

Mr. EVINS. You explained that yesterday, I think. Are there further questions on "Transportation of things"?

VOCATIONAL REHABILITATION AND EDUCATION

Mr. EVINS. Insert 8–28, 29, and 30 in the record.

Veterans' Administration	25,228	21,000	15,000
Contract (fee basis)	10,226	19,500	33,000
Total	35,454	40,500	48,000

Distribution of employment by activity

Activity	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Office of the Chief	84	58	46
Benefits and facilities	312	211	171
Vocational counseling, training, and adjustment	406	382	363
Total	802	651	580

This program activity is responsible for counseling, enrolling, and supervising the rehabilitation or training of veterans and war orphans entitled to these benefits under the Servicemen's Readjustment Training Act, the War Orphans' Educational Assistance Act, and the extension of vocational rehabilitation benefits (Public Law 87-815, dated Oct. 15, 1962) to qualified ex-servicemen with service-connected disabilities resulting from service after World War II and before the Korean conflict or after the Korean conflict.

The employment requirements for fiscal years 1963 and 1964 are related to the workload items reflected in the foregoing table. The manpower requirements are affected by: (1) The distribution of trainees in readjustment, vocational rehabilitation, and war orphans program; (2) the number of potential veterans eligible to initiate training, or who will become eligible upon separation from the Armed Forces, and the probable rate at which they will enter training; and (3) the extent to which veterans are expected to remain in training in successive fiscal years.

Mr. EVINS. Vocational rehabilitation and education. Isn't this service declining somewhat, Mr. Brownstein?

Mr. BROWNSTEIN. Yes, sir, it is, very sharply, except for the legislation passed during the last session that authorized vocational rehabilitation for peacetime veterans.

Mr. EVINS. Average employment is down, personnel compensation is down, benefits are down, grants to States are down. There are three items substantially up: transportation, other services, and pay increases. The total is down from $9,085,000 to $9,037,000.

Monthly average in training—in higher learning you have 18,200; below college, 6,950; correspondence, estimated, 2,460; on the farm, 170. You are training enough of those boys on the farm.

Mr. THOMAS. I noticed that, too.

(Discussion off the record.)

Mr. JONAS. Will the gentleman yield?

Mr. EVINS. Yes.

INCREASE IN COUNSELING FEES

Mr. JONAS. Give us a little information on these other services. That is the only item in there that you have a substantial increase for.

Mr. BROWNSTEIN. That is principally counseling fees, Mr. Jonas. We are going more and more toward fee basis counseling by guidance centers instead of having our own staff counselors. On page 8–29 you will see that in 1962, the VA itself counseled 25,000 veterans and there were 10,000 counseled on a contract basis.

Mr. JONAS. What was the result of that counseling?

Mr. BROWNSTEIN. This then resulted either in the veteran entering training or in a relatively few of the cases he did not enter, based on the advice given to him by the counselor. In most cases, what the counselor does is advise him as to the course of training that he ought to pursue.

He sees that he does not get in over his head.

Mr. JONAS. Who are your fee counselors?

Mr. BROWNSTEIN. These are universities.

Mr. JONAS. What do you do, send the veteran to the university?

Mr. BROWNSTEIN. Yes, sir.

Mr. JONAS. You give him travel and subsistence?

Mr. BROWNSTEIN. Yes, sir.

Mr. JONAS. To go and consult the vocational training people?

Mr. BROWNSTEIN. The counselor at the guidance center at the university.

Mr. JONAS. Does every State university have such a center?

Mr. BROWNSTEIN. No, sir. We have contracted with a number of them. There are some that we would like to have that we have not been able to get because they do not have enough counselors to take care of their own students.

Mr. JONAS. What do you pay them for consultation?

Mr. BROWNSTEIN. It will vary. The maximum we pay is $75. It will average at about $45.

Mr. JONAS. How long does he spend with each veteran?

Mr. BROWNSTEIN. Generally it is at least an all day proposition. In many cases they come back.

Mr. JONAS. $75 a day is pretty good pay, is it not?

Mr. BROWNSTEIN. That is one university. It is the top. The average is $45.

Mr. JONAS. How long does he spend on an average with a veteran, an hour?

Mr. BROWNSTEIN. No, all day.

TRAVEL COSTS—VOCATIONAL REHABILITATION

Mr. JONAS. What does your travel cost in this field?

Mr. BROWNSTEIN. The total—I cannot break that down for you at the moment.

Mr. MONK. $360,000 for 1964.

Mr. JONAS. That is for veteran travel?

Mr. MONK. Beneficiary travel, yes, sir. This is where we pay roughly 5 cents a mile.

Mr. JONAS. Is that for travel from home to the counseling center?

Mr. MONK. And return.

Mr. JONAS. Have you not increased that? Is it still 5 cents a mile?

Mr. MONK. It is still 5 cents a mile.

Mr. EVINS. We passed a new law on that last session did we not? Wasn't there an amendment as to how much was authorized?

Mr. GLEASON. That was for Government employees.

Mr. MONK. This is set by Executive order.

Mr. JONAS. Who gets this $45 average, the university or the counselor?

Mr. BROWNSTEIN. We contract with the university.

VETERANS RECEIVING COUNSELING

Mr. JONAS. How many people do you have taking such counseling service now?

Mr. BROWNSTEIN. We estimate—on a fee basis?

Mr. JONAS. Yes.

Mr. BROWNSTEIN. We estimate in 1964 there will be 33,000.

Mr. JONAS. How many are you servicing with you own counselors?

Mr. BROWNSTEIN. 15,000 in 1964.

Mr. JONAS. Twice as many on a fee basis?

Mr. BROWNSTEIN. Yes.

Mr. EVINS. You have already brought out that the beneficiary travel cost next year will be $34,000 increase.

SCOPE AND BENEFITS OF VOCATIONAL REHABILITATION AND EDUCATION PROGRAM

Mr. Brownstein, give us a little wrap-up statement as to the number of veterans that have been trained under this program. We all know that it has been of great benefit in raising the educational level of the Nation and giving skills and job training at below college level and college level in various trades. We know it has been invaluable. There has been some loss and some waste, but it has been one of the great programs. Give us a statement for the record on the number that have taken it and a summary statement.

Mr. BROWNSTEIN. The total who have trained under the vocational rehabilitation program, World War II veterans, 616,000, Korean veterans, 69,000; readjustment training, 7,800,000 World War II veterans, 2,375,000 Korean veterans and war orphans totaling 43,000.

Mr. EVINS. Give us the total of all of these who have taken this training.

Mr. BROWNSTEIN. The total is about 11 million.

Mr. EVINS. As I understand more than 11 million have taken some type of training under this program?

Mr. BROWNSTEIN. Yes, sir.

Mr. GLEASON. Mr. Evins, you might be interested to know we believe we have the figures to substantiate what I am going to say, and that is that the U.S. Government has already recouped all of the money spent under the GI bill because of the training that they received under this program they are paying higher income taxes.

Mr. EVINS. More than that, it elevated their lives and education and has given them skills and job opportunities rather than just under the old formula, which paid a pension and to let them buy a car which they often wrecked. This has given them something for the future.

Mr. BROWNSTEIN. The total cost of this, Mr. Evins, in direct benefit and administrative cost is about $21,500 million.

Mr. EVINS. Tell us about your oversea war orphans education training program. We passed this law last year. How extensive is it? How many are participating, how much is it costing, and how is it broken down between this country and overseas?

Mr. GLEASON. There are only about 2,000 over there, I believe.

Mr. BROWNSTEIN. Those are the ones in Manila.

Mr. GLEASON. Could we give you a horseback opinion, Mr. Evins? It is about 2,000. About 98 percent of them are in Manila, sir.

Mr. BROWNSTEIN. Therefore very few war orphans are in training overseas.

Mr. EVINS. Are there further questions on this training program?

LOAN GUARANTEE

Insert pages 8–35, 36, and 37 in the record.

Appraisal request received (units)	335,788	335,000	300,000
GI loan applications received	196,440	215,000	198,000
GI loans closed	166,178	184,000	167,000
Direct loan applications received	21,470	26,300	25,000
Direct loans closed and fully disbursed	19,699	21,500	20,000
Average number of loans owned	223,290	235,200	250,000
Paraplegic grants disbursed	402	425	400
Defaults reported	107,192	105,000	101,500
Claims paid	19,154	19,600	16,850
Property acquisitions	21,165	24,400	19,900

Distribution of employment by activity

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Office of loan guarantee officer	221	210	210
Appraisal	575	556	507
Loan processing	562	565	517
Loan service and claims	825	858	854
Property management	376	530	562
Total	2,559	2,719	2,650

The principal aim of this program activity is to assist a veteran in obtaining credit on favorable terms which will permit him to shelter his family suitably or to begin or operate a business or farming venture. This objective is accomplished through the GI loan program. However, in the case where private capital has not been generally available for the purchase or construction of homes on GI loan terms, the Veterans' Administration is authorized to make direct loans to eligible veterans for the purchase or construction of homes or for the construction or improvement of farmhouses.

The assistance given veterans has been principally in the form of loans made by private lending institutions and guaranteed or insured by VA. These, as of June 30, 1962, had amounted to $53.2 billion, as to which the Government's initial contingent liability was $28.5 billion. Supplemental direct loans assistance had amounted to $1.8 billion.

As indicated by the foregoing, the program's operations in the main are directly related to, and, in fact, are derived from the levels of activity in the private real estate market and the availability of private capital for investment in mortgage loans. Equally important are economic conditions generally which exert strong influences on the ability of borrowers to repay loans, delinquent rates, foreclosure rates, and the liquidation of acquired properties.

The proportion of housing starts that will be submitted to VA for appraisal during fiscal year 1964 is expected to drop because of a smaller veterans' market due to the phasing-out of World War II eligibility. Appraisals made in connection with direct loans will be unchanged from fiscal year 1962.

New defaults are expected to decline moderately during fiscal year 1963 with a continuation of improvement in fiscal year 1964.

During fiscal year 1962, an unprecedented number of claims were filed and paid. Although fewer numbers of claims are projected in fiscal year 1964 than in fiscal year 1963, the management responsibility of the Government will be increased by reason of the larger inventory of properties stemming from claim payments in fiscal years 1962 and 1963 as well as the larger number of portfolio loans arising from the sale of these properties as well as the continuation of the direct loan program.

A substantial increase in property acquisitions occurred in fiscal year 1962. A further increase is projected in fiscal year 1963 because of economic dislocations which are particularly acute in certain areas. Improvement in economic conditions and the further aging of outstanding guaranteed or insured loans should have the effect of lessening acquisitions in fiscal year 1964. The larger number of property acquisitions in fiscal year 1963 is attributable to the fact that acquisition of a number of properties was pending at the close of fiscal year 1962.

Mr. EVINS. Department of Veterans' Benefits, loan and guarantee in the field. Cost of this program is $20,634,000 estimated for the next year. Average employment is down from 2,719 to 2,650, a decrease of 69 personnel. Here again there is the same pattern. Number of employees down, personnel benefits are up. The salary increase also brings an increase. Here is a summary of the workload. Under the loan guarantee program which we discussed quite at length, appraisal requests received, estimated to be 300,000; GI loan applications, 198,000; GI loans closed, estimated to be 167,000; direct loan applications received, estimated to be 25,000; direct loans closed and fully disbursed, 20,000. You mean you are going to receive 25,000. You are going to turn 5,000 down. You can tell that in advance based upon experience?

Mr. BROWNSTEIN. Yes, sir.

Mr. GLEASON. Some of them we would not necessarily have to turn down either, Mr. Evins. About half of the waiting list would not be interested by the time we reach them.

Mr. BROWNSTEIN. Another factor, too, Mr. Evins, a good many of the 25,000 applications we receive will not result in fully disbursed loans in the same year. This will be the case, for example, in the last quarter.

Mr. THOMAS. The only thing I do not like about your tables, you indicate that 1964 is going to be a smaller year than 1963, with the exception of foreclosures. That is one of the things that we watch.

Mr. BROWNSTEIN. We estimate a rather sharp decline in the number of property acquisitions, Mr. Chairman.

Mr. THOMAS. Four thousand.

Mr. EVINS. Defaults reported, 107,000, 105,000, 101,500. They are down. Property acquisitions in 1962 were 21,000; 1963, 24,400, and 1964, estimated to be 19,900.

You cut that down just a little.

Mr. THOMAS. Mr. Evins, will you yield just briefly?

Mr. EVINS. Yes, sir.

VOLUME OF WORK DONE IN LOAN GUARANTEE FIELD OFFICES

Mr. THOMAS. This work is done out of your 67 regional offices.

Mr. BROWNSTEIN. We have consolidated about 10, Mr. Chairman. We had 54 offices in fiscal year 1962.

Mr. THOMAS. Just for loan guarantee?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. Can you submit for the record without too much trouble these 54 offices, showing in some 2 or 3 columns the amount of business done in each with your employment figure and then your foreclosures?

Mr. BROWNSTEIN. You mean the total number of guaranteed loans, direct loans, and the current employment figure?

Mr. THOMAS. Yes.

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. And your foreclosures. You can do it.

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. How much trouble will it be? You already have the information.

Mr. BROWNSTEIN. We have the information. It won't be any trouble.

(The information supplied follows:)

Loans, claims and foreclosures, and employment by office as of Dec. 31, 1962

Station	Cumulative home loans as of Dec. 31, 1962			Cumulative claims and foreclosures as of Dec. 31, 1962			Claims and foreclosures as a percent of loans	Loan guaranty employees as of Dec. 31, 1962

Mr. THOMAS. Where are your large offices as far as the volume of work is concerned?

Mr. BROWNSTEIN. The largest are Los Angeles, Detroit, Boston; plus Chicago and New York, San Francisco and Newark.

Mr. THOMAS. What about Florida? How does it compare?

Mr. BROWNSTEIN. It is a large one, but it is not as large as the others I mentioned.

CONSOLIDATION OF OFFICES

Mr. THOMAS. Where were the offices located that you consolidated?

Mr. DERVAN. Providence into Boston; Albany and Syracuse into New York City; Wilmington, Del., into Philadelphia; Shreveport into New Orleans; Cheyenne into Denver; Sioux Falls and Fargo into St. Paul, Minn.; and Reno, Nev., into San Francisco.

Mr. THOMAS. It is a long way from Reno into San Francisco. What was the object of your consolidation? Was it purely an administrative effort to save money?

Mr. BROWNSTEIN. It was a combination thing, Mr. Chairman.

Mr. THOMAS. Was the workload in the offices you consolidated quite small?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. Even in one of those small offices you have to have a certain number of experts, regardless of the workload?

Mr. BROWNSTEIN. This is the problem. You have a minimum staffing that is absolutely essential if you are going to maintain the function.

Mr. THOMAS. When were these offices consolidated?

Mr. BROWNSTEIN. We started in 1959, and Wilmington and Providence were consolidated that year. We had five consolidations in 1960 and two in 1962.

Mr. EVINS. What is the status of your direct loan fund?

Mr. THOMAS. We go into that in detail a little further along.

Mr. EVINS. We will talk about that later.

TRAVEL COSTS—LOAN GUARANTY

The other objects—travel, transportation of persons—for the past 2 years this has been about $57,000 and you are asking for $60,000 local travel; employee travel is $525,000 and $525,000.

When these veterans come in to see about a loan, either direct or otherwise, are they paid travel into the office?

Mr. BROWNSTEIN. No, sir. There is no occasion for them to come to see us.

Mr. EVINS. The employee goes to see him. Do you pay him?

Mr. BROWNSTEIN. No, sir. The employee is not ordinarily going out to talk about a prospective loan. Most of this is used in servicing, on our delinquent loans. Also employees go out to check on appraisers, compliance inspectors, to check on construction complaints.

Mr. EVINS (reading):

Travel of employees is required to accomplish, (1) operational duties for properties, proposed to be sold or purchased; (2) administration of minimum construction, land planning, and general acceptability standards; (3) construction compliance inspection activities; (4) the making and guaranteeing or insuring of loans; (5) the servicing of defaulted guaranteed or insured loans; (6)

the management of loan portfolio owned by VA and the servicing of accounts that become delinquent; (7) the management and disposition of acquired properties; and (8) the giving of assistance to physically handicapped veterans who desire to purchase or construct specially adapted housing.

PROPERTY MANAGEMENT

Mr. THOMAS. May I interrupt, please?

Out of your total employment this year of 2,719 against 2,650 next year, you set aside 530 people this year and 562 next year for property management. In 1962 it was 376. Just how do they operate?

Mr. BROWNSTEIN. Well, their function, of course, is to see to it that we take in a property, then rehabilitate it, get it into good shape and see that it is sold as quickly as possible. What they do is, after a property is acquired, or as soon as we are notified that we are acquiring a property, they see to it that somebody, a management broker out in the area, takes custody of it, see that if the pipes need draining this is done, protected against——

Mr. THOMAS. In your 54 offices on an average basis you have about 12 people in the office?

Mr. BROWNSTEIN. No. This will vary greatly.

Mr. THOMAS. I understand. I said on an average basis. In your large office that you mentioned a while ago I imagine you have 40 or 50 people.

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. Just exactly what are they going to do?

Mr. BROWNSTEIN. They will get in touch with the management broker, tell him we are acquiring a property at a given address and to take custody over that property. Then they will see what repairs, what rehabilitation is necessary to it. After this is done the property will be priced and listed with sales brokers.

Mr. THOMAS. Where are your green sheets on this group? What are their backgrounds? Are they engineers, construction people, or what?

Mr. BROWNSTEIN. No; they are property management people.

Mr. THOMAS. They have to go in there and restore this property. The biggest part of their job is rehabilitation.

Mr. BROWNSTEIN. And sale.

GRADES AND TYPE POSITIONS—PROPERTY MANAGEMENT

Mr. THOMAS. Where is the green sheet on these people? Let us take a look at them.

Mr. BROWNSTEIN. The grades will range from grade 9 to grade 13 on these people, Mr. Chairman.

Mr. THOMAS. This is one of the most important functions in your office.

What information does your big chart show on it now?

Let us turn over here.

Mr. BROWNSTEIN. It won't show anything.

Mr. THOMAS. That is what I am concerned with.

Mr. BROWNSTEIN. This is the central office organization that we have on pages 1–2. We can give you a breakdown of their grades.

Mr. THOMAS. Give us a little information on it now.

Mr. BROWNSTEIN. Their background would have to be that of having managed and sold properties, real estate brokers. They have a background of this kind. Appraisers can be worked into property management representatives but the journeyman grade is grade 9 of the property management representative.

Mr. EVINS. It is not shown in the charts.

Mr. THOMAS. No. Here is the loan processing group, 565 in 1963 and 517 in 1964. Here is your appraisal group, 556 against 507 in 1964. Here is your Office of Loan Guarantee, 210 for 1963 and 1964.

Give us a general idea of the pay scale and your classification. It is fairly easy for anybody to go out to make a loan or issue insurance.

Mr. BROWNSTEIN. The loan guarantee officers will range in grade.

Mr. THOMAS. Are these two separate and distinct groups of personnel?

Mr. BROWNSTEIN. No, sir.

LOAN GUARANTEE FUNCTIONS

Mr. THOMAS. Do they overlap? Are they on speaking terms? Is the man who goes out and makes and processes the loan on speaking terms with the man who gets the loan and has to wrestle with it?

Mr. BROWNSTEIN. They dovetail. The man who makes the loan is the man who passes on the credit. If that man goes sour naturally you want to find out why.

Mr. THOMAS. You are jumping two or three very important steps in there. There is a little preliminary work before he passes on the credit.

Mr. BROWNSTEIN. Yes.

Mr. THOMAS. You have to value the property, the house and the land.

Mr. BROWNSTEIN. You start with raw land. Your first step, of course, is your subdivision analysis.

Mr. THOMAS. Who does that?

Mr. BROWNSTEIN. The appraisal section. You have to see that it is properly planned as to streets, sewer, water.

Mr. THOMAS. What is their classification?

Mr. BROWNSTEIN. First let me tell you the loan guarantee officers will range.

Mr. THOMAS. That is the crowd that makes or breaks you.

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. What is their classification?

Mr. BROWNSTEIN. We have a few at grade 15 and a few at grade 13 and the majority of them fall in grade 14. In appraisal, the chief of the construction and valuation section, we have some at grade 13, a very few at grade 11 and the majority of them fall into grade 12.

Under them, the journeyman appraiser, the journeyman construction analyst, is grade 9. We have some higher grade technicians in these two areas at grade 11.

Mr. THOMAS. Is the man who first gets the property a grade 9?

Mr. BROWNSTEIN. He is the man who makes the preliminary review of it.

Mr. THOMAS. When he gets these properties, what does he do with them? He inspects them. He says, "We will have to spend $500 on

this one, $1,000 on this one, $1,100 on this one. It will be spent in papering, painting, et cetera."

Mr. BROWNSTEIN. You are talking about reacquiring property.

Mr. THOMAS. Property management; yes.

Mr. BROWNSTEIN. They have specifications.

Mr. THOMAS. They are grade 9?

Mr. BROWNSTEIN. We get the recommendations of the management broker, to whom we have turned over the custody of the property, and he tells us what he thinks it needs.

PROPERTY MANAGEMENT FUNCTIONS

Mr. THOMAS. What does the property management crowd do?

Mr. BROWNSTEIN. They go out and look at the property, they see whether his recommendation is a sound one. They then get the specifications prepared. They police all of the costs that the management broker sends in. They talk to the sales brokers. They go around and see what the market is, find out what the sales prospects are.

Mr. THOMAS. How many of those management brokers or outside people do you have?

Mr. BROWNSTEIN. An unlimited number. We will appoint almost—I think the National Association of Real Estate Boards has 43,000 members and we will appoint any number of them, and probably have, as sales brokers, and some who do not belong to the association.

Mr. THOMAS. What about management brokers?

Mr. BROWNSTEIN. Management brokers we limit to the number we believe we need in the particular area.

Mr. THOMAS. How many of those do you have?

Mr. BROWNSTEIN. I cannot give you the precise figure on that, Mr. Chairman. My guess would be that around the country we would have perhaps a thousand.

Mr. THOMAS. What fee do you pay him?

Mr. BROWNSTEIN. He gets an initial inspection charge. The first time he goes out he makes his report. We will pay him, depending on the area, $7.50 to $10. Then we will pay a monthly management fee to him ranging from $2.50 to $7.50, and this will depend on the number of properties that he has, the number that there are in the particular area.

Mr. THOMAS. What does he do? He has a vacant house. What management service does he render?

Mr. BROWNSTEIN. He has to see to it that vandalism is not committed; that in the wintertime, if it is in the North, that the snow is removed; in the summer that the grass is cut. One other amount that we pay: We will pay him 10 percent of the amount of the cost of repairs or rehabilitating the property, but not to exceed $50.

Mr. THOMAS. What authority does he have? First, who appoints him?

Mr. BROWNSTEIN. The local office.

Mr. THOMAS. What yardstick do they use in appointing him?

Mr. BROWNSTEIN. They investigate him; get a credit report on him; see if he is a member of the local board; if he is properly licensed, et cetera; that he is financially responsible.

Mr. THOMAS. You have about a thousand of them?

Mr. BROWNSTEIN. This is a guess on my part, but yes.

Mr. THOMAS. Gentlemen, let us get some lunch and come back at 1 o'clock.

AFTERNOON SESSION

Mr. THOMAS. Gentlemen, will the committee please come to order? Let's finish our little discussion that we were engaged in during the lunch hour here on property management.

Take a look at your property and come to a conclusion on how much should be spent on it.

Mr. BROWNSTEIN. These are our property management representatives, Mr. Chairman.

Mr. THOMAS. They are grade 9?

Mr. BROWNSTEIN. Grade 9 is the journeyman level and there are some grade 11's.

Mr. THOMAS. Those people have a very important function now, because they have a lot of property on hand.

How much do you depend upon the property management?

Mr. BROWNSTEIN. We put a good deal of reliance upon our property management representatives, but they, of course, have to keep in close touch with the management brokers to see that they are doing the kind of job that is protecting the interests of the Government.

PROPERTY SALES

Mr. THOMAS. Then your broker turns it over to any of the brokers in the real estate fraternity who are qualified to go out and sell it?

Mr. BROWNSTEIN. No, sir; we do the actual listing and we send out the sales listing to all of the sales brokers in the area including probably the management broker. He probably is a sales broker as well.

Mr. THOMAS. Who does the actual selling?

Mr. BROWNSTEIN. Any real estate broker.

Mr. THOMAS. If anybody came into the office he could buy it right there, couldn't he?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. Is all your property sold by real estate agents?

Mr. BROWNSTEIN. Almost all of it.

Mr. THOMAS. What do you pay them?

Mr. BROWNSTEIN. The going commission, but not in excess of 5 percent.

Mr. THOMAS. That commission is 5 percent, then?

Mr. BROWNSTEIN. In many areas it is now 6 percent.

Mr. THOMAS. But you don't pay over 5 percent?

Mr. BROWNSTEIN. That is right.

Mr. THOMAS. Your actual fee then is 5 percent?

Mr. BROWNSTEIN. Yes. We may get a farm property or a property in a remote area or one that is hard to move and in order to create an incentive on the part of the brokers we may agree to pay a higher commission there.

Mr. THOMAS. Your 5 percent is on the actual amount he gets for the property?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. What do these figures usually run?

Mr. BROWNSTEIN. What our average sales price is?

Mr. THOMAS. Yes.

Mr. BROWNSTEIN. About $11,500.

Mr. THOMAS. What is your statutory ceiling for capital investment?

Mr. BROWNSTEIN. We do not have any.

Mr. THOMAS. You do not have a statutory ceiling?

Mr. BROWNSTEIN. No, sir. The statutory ceiling is on the amount of the guarantee.

Mr. THOMAS. What is that?

Mr. BROWNSTEIN. $7,500, not to exceed 60 percent of the loan.

Mr. THOMAS. You pay him on the basis, not the amount of the guarantee but on what the property sells for?

Mr. BROWNSTEIN. That is correct.

Mr. THOMAS. What equity are your properties bearing now?

Mr. BROWNSTEIN. Do you mean what our down payments are on what we are selling?

FORECLOSURE EXPERIENCE

Mr. THOMAS. How long have these properties been in the hands of the veteran and how much equity does he have in it? You will have to come to an average figure on an annual basis.

Mr. BROWNSTEIN. Our experience has shown that most of our foreclosures take place during the first year and a half to 3½ years. And actually the equity that is built up is very little because the properties that we take in will have added to them ordinarily a substantial amount of accrued interest, maybe some past-due taxes. These properties, too, are not maintained properly and so you have a higher rate of depreciation on them than you would on others.

NATURE OF VA GUARANTEE

Mr. THOMAS. Your top investment then including your guarantee then is about $7,500; is that correct?

Mr. BROWNSTEIN. No, sir; we have properties that we will pay considerably more for than $7,500. Our maximum loss on any particular property——

Mr. THOMAS. I say your maximum investment through your guarantee, that is $7,500?

Mr. BROWNSTEIN. That is the maximum guarantee.

Mr. THOMAS. Where does the remainder of the capital investment come from?

Mr. BROWNSTEIN. The guaranty stands the first loss. So far as the lending institution is concerned. Let us illustrate with a $15,000 loan, a $7,500 loan guarantee. Fifty percent of this loan has been guaranteed. As long as the property remains worth $7,500 plus liquidation expenses, the lender is in the clear but we have to worry about recapturing as much of the $7,500 as we can. As a consequence we will take in the property, pay the lender his $15,000.

Mr. THOMAS. The lender and the VA are in a 50–50 position, but in actual practice the loss comes from the VA and it works out very well, doesn't it?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. Where are the expenses charged for the salesmen's service? If the house is $12,000, and you have some back taxes then you have $700 or $800 for patching up and maintenance and so forth, you have your management broker's fee—where does that money come from?

Mr. BROWNSTEIN. The loan guaranty revolving fund.

Mr. THOMAS. Not out of this appropriation but out of the loan guarantee fund?

Mr. BROWNSTEIN. Yes, sir.

OFFICE SERVICES, FIELD

Mr. EVINS. Tell us about office services in the field. Rents, communications and utilities are down, printing and reproduction is down $15,000. Other services are down $31,000; supplies and materials dropped from $756,000 to $723,100, or $33,400; equipment is down $367,000, yet the total is up from $31,155,700 to $31,211,300.

Put pages 8–39 and 8–40 in the record.

(The pages referred to follow:)

DEPARTMENT OF VETERANS' BENEFITS

Office services, field, $27,199,000—Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated	Increase (+) or decrease (−), 1964 over 1963
Average employment	4,992	4,675	4,576	−99

Administrative	3,127	3,015	2,973	−42
Personnel	163	164	164	
Total office services	4,992	4,675	4,576	−99

GENERAL

Office services consists of employees who perform finance, administrative, and personnel work at each regional office under either separate divisions or one division (an administrative management or services division) depending upon the size of the office.

Personnel requirements for this activity are determined mainly by work measurement procedures and principles in conjunction with workloads anticipated by the substantive programs.

A substantial decrease in employment has been experienced during the past 3 years due mainly to the conversion of benefit payments to data processing and a continued decrease is projected for fiscal year 1964.

Mr. EVINS. Printing and reproduction is down, rents and utilities is down. Transportation of things is down. Here again the paid increase is up. This is a summary of requirements for other services in the field. The net cost is $27,199,000 for fiscal year 1964 as against $27,202,400 for fiscal year 1963, or a slight decrease of $3,400.

The next page shows the workload.

Mr. THOMAS. Would it not help the record a little bit if you would give the breakdown of an average office? This doesn't cover your 56 offices but it covers your 67.

Mr. BROWNSTEIN. Yes, sir.

Mr. EVINS. You have 99 less employees next year.

Mr. THOMAS. Take 2 or 3 minutes and take a look at the setup of the average office.

HOUSEKEEPING ACTIVITIES

Mr. EVINS. Tell us about the housekeeping activities of an average office, about how many people you have, what are their principal functions, what is the average grade of the employee in the office—give us a typical office picture.

Mr. BROWNSTEIN. Well this particular service covers our financial people, our administrative people, and those who handle the personnel work. They are either under a separate division, such as finance, administrative personnel, or in some of our smaller offices we have combined them into an administrative management or services division.

The personnel of course will vary from office to office. We have, on page 8–40, broken down the Office of the Chief of the Administrative Management or Service Division, the finance, the administrative, and personnel.

I can give you the grade structure in total of a pretty good sized regional office but this would cover all of the elements and would not break down specifically the number of people in this particular function.

Mr. EVINS. This is all of the personnel in all of your field offices?

Mr. BROWNSTEIN. Yes, sir; in this function. This is the housekeeping function. They are the supporting personnel, apart from those in the substantive programs.

Mr. THOMAS. Your biggest classification here is administrative. What do they cover and what do the green sheets show?

Mr. BROWNSTEIN. These are the messengers; many of our offices have typists and stenographic pools, file clerks. A good many of them too are in finance. They are finance clerks, accounting clerks.

NASHVILLE REGIONAL OFFICE

Mr. EVINS. In Nashville, Tenn., you have a very efficient man there, Kenneth Craft, who is the manager. How many people would he have in his office with him?

Mr. BROWNSTEIN. I would say that office has probably 265.

Mr. EVINS. You have two or three rating boards, a loan guarantee officer, and the administrative supporting services. Would that be a typical average field office?

Mr. BROWNSTEIN. Yes, sir. That does not have vocational rehabilitation and education. We have recently consolidated that.

Mr. EVINS. With Atlanta?

Mr. BROWNSTEIN. Yes, sir.

It had 362 employees on duty December 31, 1962. But this includes 97.4 in the outpatient clinic, so those in the Department of Veterans' Benefits total 265, roughly.

Mr. EVINS. What are the grades in this office?

Mr. BROWNSTEIN. The manager is a grade 15 and they will range on downward to grade 1. He has some of his division chiefs at grade 14, some at grade 13. Rating boards are 12.

Mr. EVINS. I notice there have been some consolidation efforts made here, Mr. Chairman. They transferred a whole division out of Nashville to Atlanta in their consolidation program.

Is that pretty general all over the country?

Mr. BROWNSTEIN. Yes, sir. In our Vocational Rehabilitation and Education Divisions we are now down to 29.

DISBURSEMENT

Mr. THOMAS. Does the administrative service group write checks for this area; where do the checks come from?

Mr. GLEASON. They come from Chicago.

Mr. THOMAS. They all come out of Chicago, all the benefit programs?

Mr. BROWNSTEIN. Compensation and pension and education. They are all issued out of Chicago.

Mr. THOMAS. What about your payroll checks for your own staff, where are they written?

Mr. BROWNSTEIN. That would be the Treasury Department. The nearest disbursing office.

Mr. THOMAS. Where are the rolls made up, though?

Mr. BROWNSTEIN. At the regional office.

Mr. THOMAS. And the rolls are made up for your ADP center in Chicago?

Mr. BROWNSTEIN. Incidentally, Mr. Chairman, we propose to put on the computer at Hines our payroll, too.

Mr. THOMAS. You are going to put what on the computer at Hines?

Mr. BROWNSTEIN. Our VA payroll.

Mr. THOMAS. Do you mean the whole payroll?

Mr. BROWNSTEIN. Yes, sir. All VA employees.

UTILIZATION OF TABULATING EQUIPMENT

Mr. GLEASON. This is where we can get greater utilization of our equipment, Mr. Chairman.

Mr. EVINS. Tabulating equipment comprises the major portion of the rentals from the fields. An effort is made to reduce the number of machines required by consolidating workloads of the stations. It is reduced each year.

Is that an accurate statement, or is it an increase in machine costs each year?

Mr. BROWNSTEIN. There has been a decrease. Well, of course, when we bought the equipment in the last 2 years there has been an increase, Mr. Evins.

Mr. EVINS. Two studies are presently underway to determine the feasibility of purchasing these machines as compared with continuing to rent.

This decision, this policy decision has pretty much been made, has it not?

Mr. MONK. This is what I was talking about on the $8 million yesterday.

OTHER OBJECT COSTS—OFFICE SERVICES

Mr. EVINS. Printing and reproduction costs, $715,000. Next year it will be $700,000 or $15,000 less. This is for all printing and reproduction in all your field offices?

Mr. DRIVER. Yes, sir.

Mr. EVINS. Repair of furniture is down $21,000 and miscellaneous contractual services—what does that include—$106,000?

Mr. BROWNSTEIN. These are for contracts negotiated for the purpose of obtaining credit reports, protective delivery service for transporting Government funds from regional offices to Federal Reserve banks, contractual service for repair, alteration, and maintenance of buildings not provided by GSA.

Mr. EVINS. Supplies and materials, $723,100 versus $756,000, a reduction of $33,400. Also you are going to require less furniture and fixtures.

Data processing center. This is located at Hines, Ill. This center will require next year $1,325,500. There were 150 employees last year; there will be 145 next year, a decrease of 5 employees in the center.

I see only a couple of increases recorded here: The pay raise and personnel benefits, which is about the same pattern, Mr. Chairman.

Do you want to comment further on the data processing center?

DATA PROCESSING CENTER

Put this table on page 8–40 in the record, Mr. Reporter.

(The page referred to follows:)

DEPARTMENT OF VETERANS' BENEFITS

Data Processing Center, $1,325,500.—Summary of requirements

Common service adjustment	+61,587	+33,000	+33,000	
Net cost	1,869,074	1,320,100	1,325,500	+5,400
Public Law 87-793 costs		(43,200)	(78,000)	(+34,800)

GENERAL

The Veteran's Administration completed its program to convert the benefit payment and statistical records of veterans and beneficiaries to the automatic data-processing system. Approximately 4,500,000 accounts have been absorbed into the system and are being centrally processed at the Data Processing Center, Hines, Ill. These accounts represent the records of all field stations except the Manila regional office. The conversion of Manila's accounts has not been scheduled.

Average employment is expected to decrease from 150 in fiscal year 1963 to 145 in fiscal year 1964 due to experience gained from fiscal year 1963 operations.

Mr. EVINS. The data processing is an important operation. Pages 8–46 shows personnel compensation up $30,167. Personal benefits is up $2,133. Travel is the same.

Other items are about the same level as last year.

COMPENSATION AND PENSIONS

Program and financing

Appropriation (adjusted)	3,497,500	3,832,000	3,921,000

[1] Selected resources as of June 30 are as follows: Accounts receivable (benefit overpayments collectible from beneficiaries), 1961, $9,043,000; 1962, $14,251,000; 1963, $14,251,000; 1964, $14,251,000.

Mr. EVINS. Compensation and pensions is the big item we discussed somewhat earlier. Place in the record pages 9–1 through 9–9.

(The pages referred to follow:)

DEPARTMENT OF VETERANS' BENEFITS

COMPENSATION AND PENSIONS APPROPRIATION, $3,921,000,000

The total requirements for the past, current, and budget years are summarized by major category as follows:

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Appropriation	$3,500,000,000	[1] $3,874,000,000	$3,921,000,000
Transfer out [2]	−2,500,000		
Unobligated balance brought forward	213,112,342	3,075,894	
Unobligated balance carried forward	−3,075,894		
Total obligations	3,707,536,448	[1] 3,877,075,894	3,921,000,000
Adjustment of obligation to cost (net)	[3] −5,207,879		
Total costs	3,702,328,569	[1] 3,877,075,894	3,921,000,000
Compensation	2,017,482,704	[1] 2,086,421,000	2,061,283,000
Pensions	1,632,387,762	1,736,363,000	1,799,840,000
Other	52,458,103	[1] 54,291,894	59,877,000

[1] Includes estimated supplemental of $42,000,000.
[2] Transferred to readjustment benefits appropriation.
[3] Change in selected resources.

The funds requested under this title are to cover the payments of all compensation, pensions, and allowances authorized by the Congress, including emergency officers' retirement pay and annuities, as well as the payment for subsistence allowance to veterans receiving vocational rehabilitation under title 38, United States Code, chapter 31, initial burial allowances, payments due under World War I Adjusted Compensation Act in cases where benefits are not covered by the issuance of adjusted service certificates, and special allowances under 72 Stat. 1128 (38 U.S.C. 412).

The caseloads and average payments used in preparation of these estimates are based on the experience obtained in fiscal year 1962 and prior years, with consideration given to various conditions which will affect the number of cases or amounts of payments to the separate classes of beneficiaries during fiscal years 1963 and 1964.

The increased cost in the total appropriation is attributable primarily to the continuing accretions to the rolls in certain categories caused by the advancing age of veterans (particularly of World War I) and to the enactment of Public Law 87–645, Sept. 7, 1962, which increased most rates of disability compensation payable to veterans. Public Law 87–815, approved Oct. 15, 1962, extended vocational rehabilitation benefits to peacetime veterans and costs of subsistence allowance payments were increased accordingly.

Cost effects of other new laws enacted during the second session, 87th Congress, have been considered but are not significant.

Another significant area of cost is in the death pension program, where the effects of equalizing requirements for World War II and Korean conflict widows and children with those of survivors of World War I veterans continue to reflect initial impact of Public Law 86–211.

The large group of veterans with World War II and Korean conflict service now in civil life, where increasing accidental deaths occur, can be expected to cause corresponding increases in the number of cases meeting entitlement requirements under the death pension program.

The total appropriation requested amounts to $3,921 million, which represents an increase of $43,924,106 over the estimated cost for the current fiscal year and an increase of $218,671,431 compared with the past fiscal year. Current year requirements necessitate a supplemental appropriation in an anticipated amount of $42 million. Actual and estimated costs and average caseloads are summarized respectively for each major entitlement category in the following two tables.

The actual and estimated costs are listed below in detail by activities for each of the major categories:

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Total costs	$3,702,328,569	$3,877,075,894	$3,921,000,000
Compensation, total	2,017,482,704	2,086,421,000	2,061,283,000
Living veterans, total	1,561,141,398	1,637,119,000	1,624,159,000
Spanish-American War	406,728	355,000	329,000
World War I	181,375,562	181,863,000	172,255,000
World War II	1,109,282,196	1,156,309,000	1,144,757,000
Korean conflict	184,020,789	198,585,000	199,857,000
Peacetime service	86,056,123	100,007,000	106,961,000
Deceased veterans, total	456,341,306	449,302,000	437,124,000
Spanish-American War	1,253,003	1,190,000	1,135,000
World War I	61,751,385	60,404,000	59,472,000

[2] Less than 50.

COMPENSATION

Compensation is payable to a veteran because of a disability connected with military service, or to a widow, child, or parent of a veteran, because of the service-connected death of the veteran occurring before January 1, 1957. Dependency and indemnity compensation is payable to a widow, child, or parent (a) because of a service-connected death occurring after December 31, 1956, or (b) pursuant to the election of a widow, child, or parent, in the case of such a death occurring before January 1, 1957.

Living veterans.—The basic rates of disability compensation provided in wartime cases range from $20 for 10-percent disability to $250 per month for total disability. Certain cases are compensated for specific disabilities, as prescribed by law, to a maximum of $725 a month per case. These rates include increases which were effective October 1, 1962, for veterans on rolls pursuant to Public Law 87-645. The basic rates were increased from 5.3 to 11.1 percent and special monthly compensation in amounts ranging from 8.6 to 20.8 percent. Veterans rated 50-percent or more disabled, with dependents, receive an additional allowance up to a maximum of $100 a month per case, plus $12 monthly for each

child in excess of three. Generally, all rates of peacetime disability compensation are 80 percent of wartime rates.

Living veterans—Service connected

	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Total costs	$1,561,141,398	$1,637,119,000	$1,624,159,000
Average payment per case per year	$783.55	$826.19	$824.94
AVERAGE NUMBER OF VETERANS			
Wars:			
Spanish-American War	157	135	125
World War I	151,450	141,400	132,300
World War II	1,512,731	1,500,000	1,485,000
Korean conflict	210,025	212,900	214,900
Peacetime service	118,045	127,100	136,500
Total	1,992,408	1,981,535	1,968,825

The average caseload of living veterans reflects a decreasing trend through 1964, with the exception of a steady normal increase in the peacetime roll, and minor increases to the Korean conflict roll. The losses to the rolls are attributable primarily to the deaths of veterans in the World War I and World War II categories and to veterans re-rated less than 10 percent or no percent disabled.

The increase in the average payment in 1963 reflects the increased rates provided under Public Law 87–645, effective October 1, 1962. A similar slightly lower average is projected for 1964.

Deceased veterans.—Death compensation or dependency and indemnity compensation, as previously stated, is paid to widows, children and dependent parents of veterans who died in service or as a result of a service-connected disease or injury.

Deceased veterans—Service connected

	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Total costs	$456,341,306	$449,302,000	$437,124,000
Average payment per case per year	$1,200.03	$1,204.56	$1,203.01
AVERAGE NUMBER OF CASES			
Wars:			
Spanish-American War	863	800	760
World War I	43,479	42,300	41,300
World War II	261,499	251,900	240,000
Korean conflict	38,618	39,200	39,800
Peacetime service	35,816	38,800	41,500
Total	380,275	373,000	363,360

The average caseload has reached a peakload and the rate of decrease experienced in 1962 is projected through the budget year. The World War II caseload governs this category and reflects the decrease maintained through the budget year. A steady increase in the peacetime roll continues but is not sufficient to offset the losses in the World War I and World War II categories.

PENSIONS

Pension is payable to a wartime veteran because of service, age, or non-service-connected disability and need, or to a widow or child of a wartime veteran because of non-service-connected death of the veteran.

Living veterans.—The rates and conditions of entitlement of World War I and subsequent periods of service are payable to wartime veterans who are unable to secure substantially gainful employment as a result of permanent and totally disabling non-service-connected disability. Effective July 1, 1960, a sliding scale of pensions was placed in effect, based on income limitation and family status.

KANSAS STATE UNIVERSITY LIBRARY
OCT 7 1963
MANHATTAN, KANSAS

payable in amounts ranging from a minimum of $40 monthly to a single veteran with $1,200–$1,800 annual income, to a maximum of $100 monthly to a veteran with three or more dependents whose income is $1,000 or less annually. These, and intermediate rates, are increased by $70 monthly when the veteran needs regular aid and attendance. Rates and conditions of entitlement applicable to prior periods vary somewhat and are on a more liberal basis.

Living veterans—Non-service-connected

	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Total costs	$1,123,963,022	$1,181,654,000	$1,211,231,000
Average payment per case per year	$987.28	$992.30	$988.19
AVERAGE NUMBER OF VETERANS			
Yellow-fever experiments	1	1	1
Wars:			
Indian wars	28	25	20
Spanish-American War	26,570	22,000	18,300
World War I	988,685	1,027,700	1,050,000
World War II	114,585	131,200	146,000
Korean conflict	8,354	9,700	11,200
Peacetime service	225	195	190
Total	1,138,448	1,190,821	1,225,711

The caseload continues to increase steadily with major gains projected in the World War I and World War II categories through 1964. The average annual payment increases in 1963 based on an assumption that more World War I veterans entitled to higher rates under the new pension program will elect such benefits in 1963. A further increasing factor is the higher payment paid to most new additions to the roll while their annual income is being offset during the time they recoup their own contribution to retirement plans.

Deceased veterans.—Effective July 1, 1960, pensions became payable to widows and children of World War II and Korean conflict veterans on the same basis as applicable to widows and children of World War I veterans. A sliding scale of pension based on income limitation and family status is payable in amounts ranging from $25 monthly to a widow alone with $1,200-$1,800 annual income to a maximum of $105 to a widow with three children (plus $15 for each additional child) whose income is $1,000 or less.

Deceased veterans—Non-service-connected

	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Total costs	$508,424,740	$554,709,000	$588,609,000
Average payment per case per year	$709.66	$714.44	$712.38
AVERAGE NUMBER OF CASES			
Wars:			
Mexican War	3	2	2
Indian wars	573	470	410
Civil War	3,177	2,700	2,500
Spanish-American War	73,415	70,000	68,300
World War I	455,173	475,000	495,000
World War II	172,029	211,900	240,000
Korean conflict	12,001	16,300	20,000
Peacetime service	62	55	49
Total	716,433	776,427	826,261

The estimated caseload in 1964 returns to a more normal increase than indicated in 1963. This is because the 1963 estimate reflects the continuing effect of the equalization feature of Public Law 86–211 for World War II and Korean conflict widows.

A minor decrease in the annual average payment is projected in 1964 reflecting the diminishing effect of equalization, particularly in the World War II category.

OTHER

Average number of cases

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Total costs	$52,458,103	$54,291,894	$59,877,000
Retired officers	1,268	1,170	1,110
Adjusted service and dependents pay	[1]	[1]	[1]
Subsistence allowance	4,958	5,200	8,000
Initial burial allowance [2]	168,703	175,400	181,200
Special allowance, dependents	176	220	265
Invalid lifts [2]	193	280	350

[1] Less than 50.
[2] Figures shown represent estimated fiscal year totals and not averages.

Retired officers.—Emergency officers (World War I) and certain officers (Regular Establishment) retired for service-connected disability are entitled to special retirement benefits at rates substantially higher than the normal compensation payments.

Adjusted service and dependents' pay.—Adjusted service credits earned by veterans of World War I are payable from this appropriation. Veterans' claims of $50 or less and dependents' claims of less than $50 are paid in cash. Dependents' claims of $50 or more are paid in 10 equal quarterly installments. A bonus payment of $60 is paid to the dependents of World War I veteran who died while in service and before July 1, 1919, if an adjusted service credit is certified to the Administrator.

Subsistence allowance.—Subsistence allowance payments to disabled veterans enrolled in vocational rehabilitation and education programs are made from this appropriation. Consideration has been given in 1963 and 1964 to the cost effects of Public Law 87-815, approved October 15, 1962.

Initial burial allowance.—Under present statutes the Administrator is authorized to provide an allowance of $250 (plus transportation charges where death occurs under VA care) for the funeral expenses of a deceased veteran. The estimated increases in obligations are directly related to the estimated increase in number of deaths of veterans in civil life.

Special allowance—dependents.—Under certain conditions a special allowance is payable to certain dependents of a veteran who dies after December 31, 1956, but who was not a fully and currently insured individual under the Social Security Act. The award is based upon a certification to VA by the Social Security Administration.

Invalid lifts.—The Administrator may furnish an invalid lift, if medically indicated, to any veteran in receipt of pension under chapter 15 of title 38, United States Code, based on the need of regular aid and attendance.

Mr. EVINS. For next year you estimate a need of $3,921 million against $3,874 million for last year.

You have an unobligated balance brought forward of nothing.

You used it all and then came back, Mr. Monk, for a supplemental?

Mr. MONK. Yes, sir; we expect to use all of this year's appropriation, including the $3 million unobligated balance brought forward and the $42 million supplemental.

Mr. EVINS. Compensation accounts for $2,086,421,000; pensions $1,736,363,000; and other, $54,291,894.

Mr. MONK. That is at the bottom of page 9-3, "Retired officers," "Adjusted service pay," "Subsistence allowance," "Initial burial allowance," "Special allowance. dependents," and "Invalid lifts."

Mr. EVINS. This table on 9–3 shows your total compensation for Spanish-American War veterans, World War I, World War II, Korean, and peacetime service and also a pension program for the same class of veterans.

Mr. MONK. That is the dollars on that page. The next page shows the number of beneficiaries broken down the same way.

Mr. EVINS. I think that is a wonderful table.

COMPENSATION PAYMENTS

In 1962 the total compensation was paid to 2,372,683 veterans and dependents of deceased veterans and for 1964 the compensation is estimated to be paid to 2,332,185. This is the number of veterans and deceased veterans cases in compensation. Then you come down to pensions——

Mr. THOMAS. Those figures confuse me a whole lot. You have listed up here "Living veterans, total." For 1962 you have 1,992,408. Is that correct?

Mr. GLEASON. Those are the ones receiving compensation.

Mr. DRIVER. Just those drawing compensation. It says, "Compensation total, living veterans."

Mr. THOMAS. What is your figure now for all of your veterans?

Mr. DRIVER. Drawing benefits or living? Living or drawing benefits?

Mr. THOMAS. All of them.

You have "Living veterans" here on 9–5.

Mr. GLEASON. We have about 22.2 million living veterans as of December 1962.

Mr. THOMAS. And out of that, how many of them are drawing compensation and pensions?

Mr. GLEASON. An average of 1,981,535 veterans will receive compensation in 1963.

Mr. THOMAS. This is your table here, then?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. This paragraph here, Mr. Evins, I think is worth reading.

Mr. EVINS (reading):

The basic rates of disability compensation provided in wartime cases range from $20 for 10 percent disability to $250 per month for total disability. Certain cases are compensated for specific disabilities as prescribed by law, to a maximum of $725 a month per case.

I suppose that would be the wheelchair patients?

Mr. GLEASON. Yes, sir; bed patients, but not hospitalized. If hospitalized the rate would be $525.

Mr. EVINS (reading):

These rates include increases which were effective October 1, 1962, for veterans on rolls pursuant to Public Law 87–645. The basic rates were increased from 5.3 to 11.1 percent and special monthly compensation in amounts ranging from 8.6 to 20.8 percent. Veterans rated 50 percent or more disabled, with dependents, receive an additional allowance up to a maximum of $100 a month per case, plus $12 monthly for each child in excess of three. Generally, all rates of peacetime disability compensation are 80 percent of wartime rates.

QUALIFICATION FOR BENEFITS

Mr. OSTERTAG. Mr. Administrator, what is the definition of a veteran for the purpose of benefits?

Mr. GLEASON. Anyone who has served with the Armed Forces of the United States in time of war. I mean including the Korean conflict. Or those who have been disabled in peacetime.

Mr. OSTERTAG. Those who have been disabled in peacetime?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Any time up to now?

Mr. GLEASON. At any time; yes, sir. If they were disabled. In service. They would have to be disabled in service.

Mr. OSTERTAG. The disability must be associated with the service?

Mr. GLEASON. Yes, sir.

Mr. EVINS. There is an interesting chart in the middle of page 9–5 entitled "Living veterans—service connected."

For the fiscal year 1962 the total cost for "Living veterans, service connected" was $1,561,141,398.

For fiscal year 1964 it is estimated to be $1,624,159,000.

AVERAGE AND MAXIMUM COMPENSATION PAYMENT

Average payment per case per year in fiscal year 1962—I suppose that includes the low and the high?

Mr. GLEASON. Yes, sir.

Mr. EVINS. $783.55. For fiscal year 1964 it is estimated to be $824.94.

The veteran with a family trying to live on that would find a rather low standard indeed.

Mr. GLEASON. Of course so many of them are only 10 percent disabled, Mr. Evins. This is why it is so low.

Mr. EVINS. What is the highest compensation that any one veteran—the maximum he may be drawing under present law?

Mr. GLEASON. $725 a month per case, plus additional amounts for dependents. There is no limit on the number of dependents.

Mr. THOMAS. Mr. Evins, I note here that for World War II, fiscal year 1964 will be 1,485,000 drawing compensation. What percentage is that of the total living from World War I?

Mr. DRIVER. 2,401,000 World War I veterans were living as of December 1962.

Mr. THOMAS. What was that big number after the war? How many of them served?

Mr. GLEASON. In World War I?

Mr. THOMAS. Yes.

Mr. DRIVER. 4.7 million.

Mr. THOMAS. Almost 5?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. How many are living now?

Mr. DRIVER. 2.4 million.

Mr. EVINS. Mr. Reporter, earlier this morning I suggested placing in the record pages 49, 50, 51, 52, and 53, and table 28 on page 215 on compensation and pensions and I believe it should be placed at this point rather than at the earlier place this morning.

(The material referred to follows:)

CHAPTER 4. COMPENSATION AND PENSION

MISSION

The mission of the compensation and pension programs is one of service to veterans and their dependents. The compensation and pension programs are administered so all veterans and their dependents are given like treatment under like circumstances without bias or prejudice. The programs compensate service-disabled veterans and their dependents and give financial assistance to needy veterans and their dependents.

HIGHLIGHTS

More than $3.6 billion annually paid to veterans and their dependents; 1.9 million veterans received compensation; 1.2 million veterans received disability pension; dependents of 1,600,000 deceased veterans received compensation and pension.

GENERAL

In grateful recognition of their dedication and sacrifice, the United States has provided its former service men and women with dynamic, progressive, but realistic, compensation and pension programs designed to assist disabled veterans and their dependents.

The disability compensation program provides financial assistance to veterans with service-connected disabilities to compensate them for the loss of or reduction in earning power resulting from such disabilities, based on average impairment of earning capacity resulting from comparable injuries and disease in civil life.

The disability pension program gives financial assistance to war veterans who are in need and who are permanently and totally disabled by virtue of disease or injuries without regard to service origin.

The service pension program gives financial assistance to persons who served during wartime periods prior to World War I, and to their widows and children, without regard to need.

The death compensation and dependency and indemnity compensation programs provide financial assistance to widows, children, and dependent parents of veterans whose deaths were related to service, to compensate for the resultant loss of family income.

The death pension program gives financial assistance to needy widows and children of veterans of wartime service whose deaths were not related to military service.

Disability compensation payments vary in amount depending on the impairment of earning capacity suffered by the veteran. The degree is assessed in multiples of 10, from 10 to 100 percent, with special statutory rates for such disabilities as blindness and loss of use of limbs. For wartime service-connected disability the rates range from $19 per month for a 10-percent loss to $225 for total disability. The statutory rates may increase this up to $450 per month, with additional allowances of up to $150 per month for veterans who are housebound or in need of regular aid and attendance. For veterans who are 50 percent or more disabled, further amounts may be paid for a wife, children, or dependent parents. In case of disability related to peacetime service, the rates are 80 percent of those for a wartime disability.

For deaths occurring in service or related to service, the benefit payable to surviving widows, dependent children, and dependent parents is dependency and indemnity compensation. The minimum rate payable to a surviving widow is $122 per month. For a child where there is no eligible widow, $70 is the minimum monthly amount, and for dependent parents the rates range from $10 to $75 per month.

The current disability pension program for needy wartime veterans provides assistance for permanently and totally disabled ex-servicemen with limited net worth and income. Payments vary from $40 to $85 per month, with additional amounts provided for dependents and $70 per month additional for veterans in need of regular aid and attendance. In this program the amount of basic pension is increased or decreased under a sliding scale according to need with the higher payments going to those veterans with lower income and more dependents.

In fiscal year 1962 the VA's compensation and pension program paid more than $3½ billion to veterans and their dependents. These monthly payments

of $300 million went to over 4,700,000 beneficiaries VA-wide. Since these were payments to compensate directly for economic loss or to provide assistance for needy veterans and their dependents, it is believed that almost the entire amount was immediately returned to the national economy in expenditures for goods and services. This tremendous economic force is not subject to rapid fluctuations, but will continue to increase at a steady and predictable rate for several years.

From a veteran population of about 22¼ million, the Veterans' Administration in fiscal year 1962 adjudicated more than 195,000 original claims for compensation and pension. In addition, there were adjudicated 410,000 reopened claims or claims for increased benefits and over 520,000 claims on account of changes of income and dependents, largely involving the new pension law.

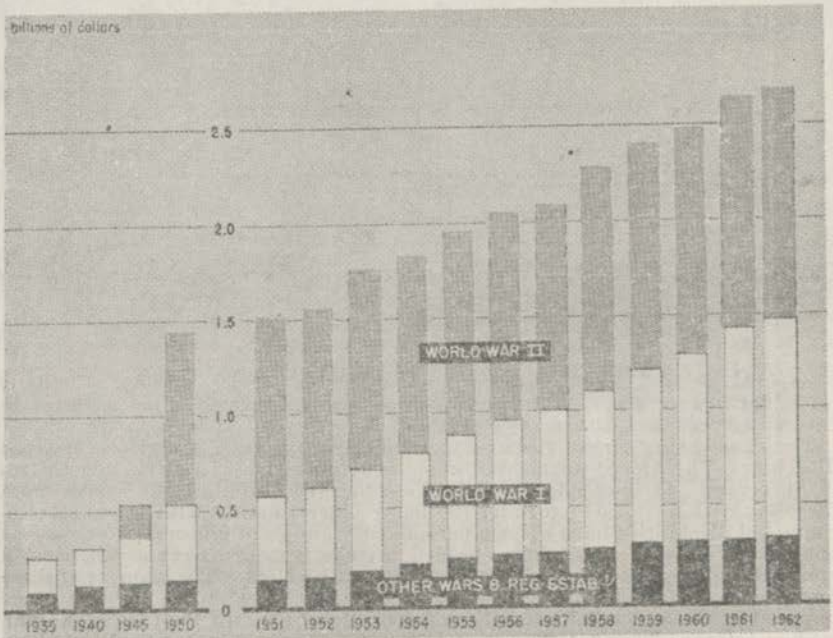
More than 132,000 initial applications for dependency and indemnity compensation, death compensation, and death pension were adjudicated. Insurance claims accounted for 38,000 adjudication actions and burial claims for over 200,000.

COMPENSATION AND PENSION—VETERANS

The number of veterans receiving compensation and pension benefits on June 30, 1962, increased 2 percent from the end of the prior fiscal year. The principal increase occurred in World War I non-service-connected pension cases. There was a slight reduction in the number in receipt of compensation. Detailed statistics will be found in the tables beginning on page 838. These tables show that in the 10-year-period from July 1, 1952, to June 30, 1962, the number of living World War I veterans receiving compensation dropped from 270,963 to 146,676, while those receiving pension increased from 321,097 to 1,006,533. For World War II veterans, those on the compensation rolls went from 1,632,963 to 1,506,465, and those on the pension rolls from 36,101 to 121,990 in the same period.

Table 28, page 838, reflects expenditures for compensation and pension and the number of veterans receiving these benefits. Available records show that the cumulative total of all veterans benefit payments for the Revolutionary War was $70 million. At the current payment rate, the Veterans' Administration releases this much to present beneficiaries about every 7 days.

EXPENDITURES FOR DISABILITY COMPENSATION AND PENSION DURING FISCAL YEAR

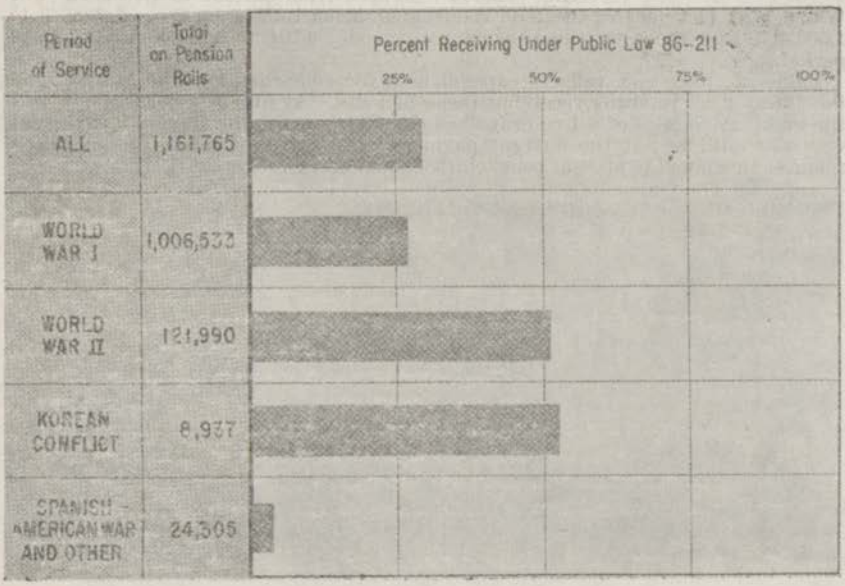


1/ Includes veterans of Korean conflict

Under a program discontinued July 1, 1960, a veteran who was entitled to disability pension on June 30, 1960, may continue to receive at the rate of $66.15 monthly, or $78.75 when he has been in receipt of pension for a continuous period of 10 years or is over 65 years old. He may receive $135.45 if helpless or blind or so nearly helpless or blind as to be in need of regular aid and attendance of another person. Those entitled under these earlier provisions may, if they wish, elect to receive pension under Public Law 86–211 which became effective July 1, 1960. A final election to receive under this law is irrevocable however. The rates under Public Law 86–211 vary from $40 to $85 monthly, with additional amounts provided for dependents, and $70 per month added if need for aid and attendance is shown. To be entitled there must be demonstrated need for assistance based on limited income and a limited amount of net worth. Annual income limitations of $1,800 for veterans without dependents and $3,000 for those with dependents provide a ceiling which precludes payment of pension under this law. For married veterans the spouse's annual income in excess of $1,200, which is reasonably available to the veteran, is considered in determining whether the annual income limitations are exceeded, if this would not work a hardship on him.

As of June 1962, 1,161,765 veterans were receiving pension for non-service-connected disabilities. Approximately 87 percent of these are World War I veterans. The following chart shows the percentage of living veterans where entitlement is under Public Law 86–211.

VETERANS RECEIVING PENSION



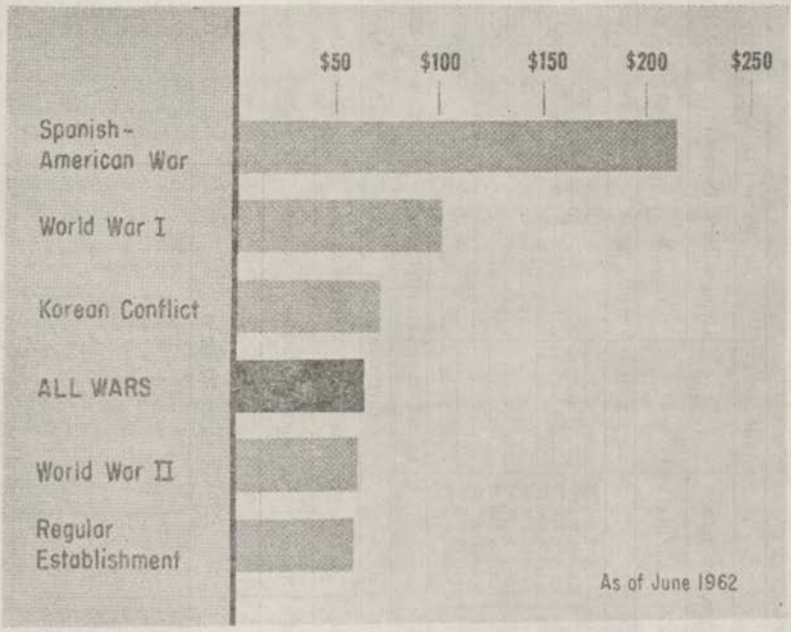
As of June 1962, 24,305 veterans were receiving service pension. Virtually all of these were Spanish-American War veterans. Income is not a factor in determining entitlement to service pension.

The chart below shows the average monthly payment for service-connected disability. The higher payments for older veterans may be attributed to two main factors: (1) the tendency of service-connected disabilities to become more disabling with advanced age; and (2) many older veterans with lesser service-connected disabilities have become permanently and totally disabled for reasons not related to service and have decided to take non-service-connected pension where the amount exceeds their compensation entitlement. The transfer of these lower compensated veterans to the pension rolls is reflected in the higher average payment of those remaining on the compensation rolls. In the case of Korean conflict veterans, however, the average rate ($71.57) exceeds that for World War II veterans ($60.36). This is probably due to a difference in casualty experience

and to the fact that many Korean conflict veterans have not yet reached their static level of disability.

The review of pension and compensation cases begun in 1954 was completed during the fiscal year. World War II and Regular Establishment compensation cases and all pension cases where the veteran was receiving payments and was less than 55 years of age on that date were included. About 1.7 million cases were involved. Adjustments have been made in about 174,000 cases. Payments were terminated in 83,000 cases either because the condition was no longer disabling or because the condition had erroneously been considered service connected. Less than 2 percent were in the latter category. In addition, payments were increased in 20,700 cases and decreased in 70,100 others, mostly following examinations to determine the current level of disability suffered by the veteran.

AVERAGE MONTHLY SERVICE-CONNECTED DISABILITY PAYMENT



In fiscal year 1962, a special review of certain disallowed compensation claims of veterans of World War II and the Regular Establishment was nearly completed. Over 272,000 claims disallowed prior to December 14, 1954, because the disability claimed was "not shown at the time of last examination," were identified for the review. About 21,000 review cases still await action. Service connection was established in over 14,000 cases under the review, with annual compensation payments of over $104,000 and retroactive (one-time) payments of $102,000.

COMPENSATION, DEPENDENCY AND INDEMNITY COMPENSATION AND PENSION FOR DEPENDENTS

The number of deceased veterans on whose account death compensation, dependency and indemnity compensation, or death pension was being paid on June 30, 1962, showed an increase of 5.2 percent over that for the prior fiscal year. The rate of increase is considerably lower than that for fiscal year 1961 when legislation granted pension entitlement to a large number of widows and children of World War II and Korean conflict veterans on the same basis as widows and children of World War I veterans.

Table 28.—*Living veterans who were receiving compensation, pension, disability allowance, or retirement pay and deceased veterans whose dependents were receiving compensation, dependency and indemnity compensation or pension benefits at the end of each fiscal year, the amounts expended for these benefits during the fiscal years 1953–62 and the total amounts expended to June 30, 1952, and 1962, for each war and for the Regular Establishment*

DEPARTMENT OF VETERANS' BENEFITS

READJUSTMENT BENEFITS, $101,100,000

The funds requested under this appropriation are to cover the cost of education and training, and special assistance benefits to disabled veterans, as authorized by chapters 21, 31, 33, 35, 37, and 39 of title 38, United States Code, as amended. Also this appropriation is to provide funds for transfer to the loan guarantee revolving fund to supplement income of the fund as required (74 Stat. 533).

Summary of requirements

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963

[1] Includes estimated supplemental of $63,575,000.

EDUCATION AND TRAINING

World War II

Expenditures for subsistence allowance, tuition, supplies, equipment, settlement of old claims, and miscellaneous adjustments, amounted to $19,004 in fiscal year 1962. The average number of trainees was seven in fiscal year 1962. Activity in fiscal years 1963 and 1964 will be negligible.

Korean conflict

The estimated requirements for Korean conflict trainees as authorized in title 38, United States Code, chapter 33 are based on the latest analyses and projections of the number of veterans who will be in training during fiscal years 1963 and 1964. Funds required for education and training benefit payments and unit cost per trainee are shown below:

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Average number trainees:			
Higher learning	60,332	33,300	18,200
Below college	25,655	13,400	6,950
Correspondence	7,371	4,300	2,460
Institutional-on-farm	1,641	500	170
Job training	1,450	500	220
Total	96,449	52,000	28,000
Average cost per trainee	$1,255.49	$1,233.89	$1,260.75
Total cost (Korean conflict)	$121,090,705	$64,162,324	$35,301,000

Orphans

An educational assistance allowance is provided for orphans in title 38, United States Code, chapter 35, as amended (74 Stat. 1023). Estimated requirements for this allowance in fiscal years 1963 and 1964 follow:

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Average number of trainees	12,863	15,000	13,000
Average cost per trainee	$1,661.05	$1,650.00	$1,650.00
Total cost (orphans)	$21,366,118	$24,750,000	$21,450,000
Total education and training	$142,475,827	$88,912,324	$56,751,000

LOAN GUARANTEE

In fiscal year 1962, $560 was paid from this appropriation representing 4 percent interest gratuity payments. Current legislation (74 Stat. 533), provides for transfer from this appropriation to supplement income of the loan guarantee revolving fund as required. It is estimated that $59,275,000 will be needed to supplement this fund in fiscal year 1963 and $34 million in fiscal year 1964.

SPECIAL ASSISTANCE TO DISABLED VETERANS

Vocational rehabilitation

The estimated requirements including Public Law 87-815 (extension of benefits to peacetime veterans) for tuition, books, supplies and equipment for vocational rehabilitation training, title 38, United States Code, chapter 31, as amended (74 Stat. 820), are shown as follows:

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Average number trainees—(Public Law 16 and Public Law 894 combined):			
Higher learning	1,370	1,875	3,400
Below college	2,560	2,450	3,500
Institutional-on-farm	252	185	200
Job training	776	690	900
Total	4,958	5,200	8,000
Tuition:			
Average number payments (excluding job training)	4,182	4,510	7,100
Average cost per trainee	$724.09	$711.09	$708.31
Total cost	$3,028,150	$3,207,000	$5,029,000
Supplies and equipment:			
Average number trainees	4,958	5,200	8,000
Average cost per trainee	$98.93	$100.00	$105.00
Total cost	$490,504	$520,000	$840,000
Total cost (vocational rehabilitation)	$3,518,654	$3,727,000	$5,869,000

Housing grants

Title 38, United States Code, chapter 21, authorizes the Administrator to approve grants up to $10,000 each, for specially adapted housing, to veterans having suffered the loss of, or loss of use of both feet, and to paraplegic veterans. Estimates for fiscal years 1963 and 1964 follow:

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Number	396	425	400
Average cost	$9,835.64	$9,800.00	$9,800.00
Total cost	$3,894,915	$4,165,000	$3,920,000

Automobiles or other conveyances for disabled veterans

Requirements for automobiles or other conveyances for disabled veterans as authorized in title 38, United States Code, chapter 39, are shown below:

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Number	419	375	350
Average cost	$1,596.27	$1,600.00	$1,600.00
Total cost	$668,838	$600,000	$560,000
Total special assistance to disabled veterans	$8,082,407	$8,492,000	$10,349,000

Mr. EVINS. $101,100,000 is requested for readjustment benefits. [Reading:]

The funds requested under this appropriation are to cover the cost of education and training, and special assistance benefits to disabled veterans, as authorized by chapters 21, 31, 33, 35, 37, and 39 of title 38, United States Code, as amended. Also this appropriation is to provide funds for transfer to the loan guarantee revolving fund to supplement income of the fund as required by public law.

You have education and training costs estimated to be down $32,161,324.

The loan guarantee is reduced from $59,275,000 to $34 million, showing a decrease of $25,275,000.

Special assistance to disabled veterans shows an increase of $1,857,000. The total cost comes down some $55 million.

The readjustment work is phasing out but is still substantial.

We discussed training this morning earlier. I think we have put enough in the record on this, Mr. Chairman.

Unless there is a question we will turn to the direct loan program.

DIRECT LOANS TO VETERANS AND RESERVES REVOLVING FUND

The direct loans to veterans. This fund permits the Veterans' Administration to make direct loans to eligible veterans.

Mr. Reporter, place pages 11–1, 11–2, 11–3, and the chart in the middle of 11–4 in the record.

(The pages referred to follow:)

DEPARTMENT OF VETERANS BENEFITS

DIRECT LOANS TO VETERANS AND RESERVES REVOLVING FUND

This fund permits the Veterans' Administration to make direct loans to eligible veterans in areas designated by VA where guaranteed loans are not generally available from private lending sources. Direct loans may be made to purchase, construct, or improve a home; to purchase a farm on which there is a farm residence to be occupied by the veteran as his home; or to construct, alter, repair, or improve a farm dwelling to be occupied by the veteran as his home.

The direct loan program was initiated under provisions of Public Law 475, 81st Congress, approved April 20, 1950, to run through June 30, 1951. Subsequent amending legislation has extended the program to July 25, 1967, for World War II veterans and to January 31, 1975, for Korean conflict veterans.

Funds available for making direct loans consist of periodic U.S. Treasury advances, the proceeds of principal repayments on loans made, and the proceeds from the sale of direct loans to private investors. From the beginning of the

direct loan program in 1950 through June 1962, a total of about $2 billion had become available for making direct loans from the following sources:

U.S. Treasury advances	$1,530,077,996
Principal repayments	360,856,239
Proceeds of sales to private investors	84,138,724
Total	1,975,072,959

As of June 30, 1962, direct loan funds expended amounted to over $1.7 billion. An additional $38.2 million had been reserved for loans in process, $7.4 million was outstanding in fund reservation commitments to builders or sponsors for direct loans on new houses they propose to construct for veteran purchasers, and transfer of $105.7 million to the loan guaranty revolving fund. This left a balance of $30.1 million in unreserved funds available for processing loan applications from veterans on waiting lists.

Expenses involving loan closings are paid by the veteran; foreclosure expenses, property management and sales expenses, and interest on borrowings from the Treasury are met from interest income. Administrative expenses are borne by the appropriation for general operating expenses, Veterans' Administration.

Statement of program and financing

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated

Financing applied to program	236,640,422	301,880,000	269,455,000

Direct loans to veterans.—The extension of veterans' eligibility to apply for direct loans permits the Veterans' Administration to make or enter into commitments to make loans through July 25, 1967, for World War II veterans, and through January 31, 1975, for Korean conflict veterans. The amount of loans outstanding will reach $1.6 billion in 1964. A summary of loan activities follows:

	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Number of loan commitments	18,159	23,500	19,676
Amount of loan commitments	$190,851,648	$249,105,000	$212,500,000
Number of loan disbursements and in process	19,699	21,500	20,000
Average cost per loan closed and in process	$10,510	$10,600	$10,800
Total disbursements on loans closed and in process	$207,038,233	$228,000,000	$216,000,000
Repayment of loans	$75,698,899	$81,825,000	$86,340,000
Sale of loans	$19,487,920	$18,000,000	$18,000,000
Losses on loans	$176,876	$175,000	$175,000
Net loan disbursements	$111,674,538	$128,000,000	$111,485,000
Loans outstanding, end of year:			
Number	175,909	190,609	203,609
Amount	$1,333,611,795	$1,461,612,000	$1,573,097,000

Vendee loans made.—These loans are the result of resales of real property acquired through foreclosure or voluntary conveyances, and normally involve a cash downpayment by the purchaser and the creation of a new mortgage loan to be held by the Veterans' Administration. The larger numbers of vendee accounts indicated for both 1963 and 1964 are anticipated by reason of the growing portfolio of loans owned, which increases the Government's exposure to delinquencies and foreclosures, as well as voluntary conveyances.

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Amount of properties sold	$3,879,275	$4,704,000	$4,773,000
Amount of vendee loans acquired	3,476,560	4,259,000	4,328,000
Amount of vendee loans repaid	594,280	674,000	697,000

Real property acquired.—Properties are acquired through foreclosures and voluntary conveyance in defaulted loans. The lesser numbers of properties acquired indicated in fiscal year 1963 and 1964 reflect the fact that a reduced volume of new loans were processed in fiscal year 1962.

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Amount of properties acquired	$5,506,296	$4,594,000	$4,622,000

Financing.—Loans are made primarily with funds borrowed from the U.S. Treasury. Borrowing authority in the amount of $1.8 billion was authorized through June 30, 1962. Authority has been granted to borrow an additional $200 million during the current year and $150 million in 1964. U.S. Treasury borrowings subsequent to June 30, 1962, will be reduced by the proceeds of loan sales in the preceding fiscal year. In addition, the proceeds of loan repayments and loan sales are available for making loans. Of the total funds to be made available from borrowings and program operations, it is expected that $228 million will be disbursed in the current year and $216 million in 1964.

Operating results and financial condition.—To date, interest and other earnings from the direct loan program have been sufficient to pay all interest due to the U.S. Treasury on advances, to cover all expenses which have been incurred, and to provide approximately $100 million for transfer to the loan guarantee revolving fund. In addition, a reserve for losses has been constituted with about

$10 million from earnings and future earnings will augment this reserve against future losses.

Statement of financial condition

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate

STATUS OF DIRECT LOAN REVOLVING FUND

Mr. EVINS (reading):

Funds available for making direct loans consist of periodic U.S. Treasury advances, the proceeds of principal repayments on loans made and the proceeds from the sale of direct loans to private investors.

Tell us what is the status of the direct loan fund.

Mr. BROWNSTEIN. As of December 31 accumulated Treasury advances had amounted to $1,640,078,000. We had sold direct loans totaling $90,289,000.

Principal collections amounted to $401,008,000.

The total available, $2,131,375,000.

Mr. EVINS. Do you mean this is the total amount of money that has been made available to this fund——

Mr. BROWNSTEIN. Since 1950, yes, sir. It is accumulative.

Mr. EVINS. How much do you have in the fund at the present time?

Mr. THOMAS. Unused authorization from the backlog of the Treasury. That is what he means.

Mr. BROWNSTEIN. I will give you a total breakdown on what we have used and what is unused, Mr. Chairman.

Last year you will recall in order to fund our loan guarantee revolving fund, the Congress directed a transfer of $115,247,000 from the direct loan revolving fund to the loan guarantee revolving fund. We have made loans totaling $1,876,882,000. We have commitments on loans outstanding but not disbursed totaling $37,269,000.

There are unallotted funds totaling $26,255,000. Our field stations had unreserved funds totaling $4,575,000 and reserved for loans in process $71,146,000.

Now, this totals $2,131,375,000.

In addition to this we have since that date allocated another $75 million to our field stations, which will be available for making loans in the future.

Mr. EVINS. You have about $26 million unallocated in your field stations at present?

Mr. BROWNSTEIN. Yes, sir. About $100 million in total that they are now working on on loans that were not yet committed plus $70 million reserve for loans that are in process.

Mr. EVINS. What is the total of applications on hand in your field stations?

Mr. BROWNSTEIN. We have the smallest waiting list that we have had in a long while, Mr. Evins.

STATUS OF TREASURY AUTHORIZATION

Mr. THOMAS. To keep the record straight, did he give you the figure of his unobligated authorization in the Treasury? How much is that?

Mr. BROWNSTEIN. In the Treasury?

Mr. THOMAS. Yes.

Mr. BROWNSTEIN. There is made available this year an additional $200 million. We have drawn $110 million of that.

Mr. THOMAS. You got a new authorization the year before last.

Mr. BROWNSTEIN. Yes, sir, for $1.2 billion in total.

Mr .THOMAS. How much remains in the Treasury unallocated?

Mr. EVINS. $125 million?

Mr. MONK. About $700 million.

Mr. GLEASON. If our waiting lists do continue, Mr. Evins, we will need every bit of it.

Mr. EVINS. I thought Mr. Brownstein said it was declining.

Mr. GLEASON. Well, it is declining from previous years.

Mr. EVINS. You mean you have $700 million authorization from the Treasury available?

Mr. GLEASON. Yes, sir.

Mr. BROWNSTEIN. This becomes available over a period of time and is available to us until 1967.

The total remaining in the Treasury authorization is about $725 million.

Mr. GLEASON. Korean veterans are eligible until about 1975.

Mr. EVINS. What is the average total number of commitments made under this program each year? How much do you actually require each year?

Mr. DRIVER. The direct loan program?

Mr. EVINS. Yes.

Mr. BROWNSTEIN. Well, last year we drew in new money about $200 million. In addition to that our repayments are added and these are running about—well, in total our repayments sales in new money about $300 million.

Mr. EVINS. You require about $300 million a year?

Mr. BROWNSTEIN. That is what we had last year.

Mr. EVINS. Over the years it is sometimes lower and sometimes higher, but on the average you require about $300 million a year?

Mr. BROWNSTEIN. Since 1950, which is 13 years, we have a total availability of $2,130 million. So that will average out at less than $200 million a year.

Mr. EVINS. If you have $700 million available credit in the Treasury——

Mr. GLEASON. We have $700 million.

Mr. BROWNSTEIN. There is about $700 million remaining.

Mr. EVINS. So this is 2½ years you could go before coming back to the bank?

Mr. BROWNSTEIN. Then after 1967 at which time the entitlement expires for World War II veterans, Korean veterans will remain eligible but the only money for funding this operation will be repayments.

Mr. EVINS. Do you estimate you will have enough from repayments and sales to carry on a limited direct loan program?

Mr. BROWNSTEIN. Beyond 1967 for Korean veterans; yes, sir.

Mr. THOMAS. Mr. Evins, your table here on 11–3 tells the tale. They are authorized to make direct loans not exceeding $10,000 in places where other financing is not available.

Mr. BROWNSTEIN. It is now $15,000.

LOAN COMMITMENTS

Mr. THOMAS. The number of loan commitments is 19,676 in 1964 against 23,500 in fiscal year 1963. What is the answer to the falloff?

Mr. BROWNSTEIN. We are having a higher than ever attrition rate, Mr. Chairman, on our waiting list. Our waiting list as I mentioned is down to the lowest point it has been in many, many years.

At the end of December we had only about 14,000 on our waiting list and in better than half of our offices there was no waiting list at all. The rate of washout on these is exceeding the rate that we have ever had in past years. It is now running well in excess of 50 percent.

REPOSSESSED PROPERTIES

Mr. THOMAS. What is the number of properties that you have repossessed in the last 5 years? You have set it out dollarwise but what about properties?

Mr. BROWNSTEIN. The total number we have repossessed since the beginning of the program is 2,651.

Mr. THOMAS. How many do you make loans for?

Mr. BROWNSTEIN. Fully closed and disbursed, 216,472.

Mr. THOMAS. You have foreclosed on how many?

Mr. BROWNSTEIN. 2,651. It is a percentage of 1.2.

Mr. THOMAS. How many do you have on hand now, direct loans?

Mr. BROWNSTEIN. How many loans are outstanding, Mr. Chairman?

Mr. THOMAS. How many foreclosed properties do you have on hand?

Mr. BROWNSTEIN. Under 600.

FORECLOSURES—DIRECT LOANS VERSUS GUARANTEED LOANS

Mr. THOMAS. How do your foreclosures compare in your loan guarantee program against your direct loan program?

Mr. BROWNSTEIN. Our direct loan program shows a better experience. Guaranteed loans, we have a fall-by-the-wayside rate of about 1.7 and direct loans 1.2, so it is a half percent better.

Mr. THOMAS. How many properties, direct loans, do you have on hand now?

Mr. BROWNSTEIN. Just under 600.

LOSSES ON ACQUIRED PROPERTIES

Mr. THOMAS. What is your average rehabilitation cost and what loss do you take on a direct loan house?

Mr. BROWNSTEIN. It is running a little less than on a guaranteed loan. We do not notice too much difference and the average loss we take is about $890. This is what it costs to rehabilitate, broker's commission, and so forth.

Mr. THOMAS. $890?

Mr. BROWNSTEIN. Yes, sir.

COMBINATION OF DIRECT LOAN AND LOAN GUARANTEE FUNDS

Mr. THOMAS. Why can't you combine these two funds, your direct loan and your general revolving fund?

Mr. BROWNSTEIN. Well I am afraid that the losses we pay in the guaranteed loan program would mean that we wouldn't get to make many direct loans.

Mr. THOMAS. What is that now?

Mr. BROWNSTEIN. If we had to pay our losses in the guaranteed loan program out of a combined fund it would take almost our total authorization and we would be making very few if any direct loans.

Now we do transfer to the loan guarantee revolving fund, retained earnings from the direct loan fund.

Mr. THOMAS. We understand that. Go ahead. You still haven't told me why you can't combine them. Is there any savings to be made from an administrative point of view? You have people doing each.

Mr. BROWNSTEIN. They operate combined.

Mr. DRIVER. We don't distinguish between the nature——

Mr. BROWNSTEIN. Our loan processors will handle a direct loan application and then a guaranteed loan.

Mr. THOMAS. Then I don't understand it from the point of view of financing.

Mr. DRIVER. We wipe out the money to make direct loans by the losses paid on the guarantee.

Mr. THOMAS. Go to the revolving fund.

Mr. BROWNSTEIN. Last year we took $115 million from the direct loan fund and paid off our losses.

Mr. THOMAS. Why not go on a little further and combine them? Is there anything to be saved in it? You do it anyway.

Mr. BROWNSTEIN. No, the Congress did it, Mr. Chairman.

Mr. DRIVER. We show them separately, that is all. If you made one fund responsible for the other's losses, and so forth, you would wipe out your direct loan fund.

Mr. BROWNSTEIN. We could make no direct loans because we wouldn't know what our losses were going to be in the guaranteed

loan program and we would have to maintain an adequate amount in the revolving fund.

Mr. THOMAS. After all, when either fund is depleted what do you do?

Mr. DRIVER. Come back and ask for more money.

Mr. THOMAS. What difference does it make, then?

Mr. BROWNSTEIN. We would have to shut off direct loan financing.

Mr. THOMAS. I don't follow it.

Mr. EVINS. Would you save any personnel if you did consolidate it?

Mr. BROWNSTEIN. None at all.

Mr. GLEASON. Because they are already consolidated as far as the personnel is concerned.

Mr. EVINS. The direct loan is intended for areas where capital funds are not available for veterans' loans?

Mr. BROWNSTEIN. That is right.

Mr. DRIVER. Congress has always shown a great interest in the difference between the two.

Mr. THOMAS. When was that hike made to $15,000, year before last?

Mr. BROWNSTEIN. Yes, sir.

DIRECT LOAN COSTS

Mr. EVINS. Suppose there is a farm veteran out here in the rural hill country who wants to get a $15,000 loan to build a house. How much discount does he have to pay? How much interest does he have to pay? How much does it cost him to get his $15,000 home?

Mr. BROWNSTEIN. Well, No. 1, he doesn't pay any discount at all. There is no discount on a direct loan. Secondly, we will charge him a fee of 1 percent which will cover his credit report, his appraisal, compliance inspections necessary during the course of construction, and that will be his total charge plus his usual loan closing costs of survey, title evidence, and so forth, and then he will pay interest at 5¼.

Mr. EVINS. What do these fees amount to dollarwise on a $15,000 loan?

Mr. BROWNSTEIN. They will vary a good deal depending on the title evidence, whether title insurance is obtained. But I would say they would average out to $300.

Mr. OSTERTAG. In the broad sense of the fiscal policy and the economic relationship in the country today as submitted to Congress by the President in his State of the Union Message, he made reference to the problem of the budget and the various programs and among other things he said:

> This requires the reduction or postponement of many desirable programs. The absorption of a large part of last year's Federal pay raise to personnel and other economies. The termination of certain installations and projects and—

this is my point—

> and the substitution in several programs of private for public credit.

COMPARISON OF LOAN GUARANTEE AND DIRECT LOAN PROGRAMS

Mr. GLEASON. You see, Mr. Ostertag, in the direct loan program you can't get the money from private investors. This is one of the require-

ments that you have to meet before you can get a direct loan. You can go to a bank or a savings and loan association and if they don't have the money available on their portfolio then you can come back to the Veterans' Administration and get a direct loan. Say it would be impossible for you to have a direct loan that hasn't already been turned down—not because of a credit risk, but unavailability of money.

Mr. OSTERTAG. On a guaranteed loan you could obtain your money.

Mr. GLEASON. That is exactly what we do.

Mr. BROWNSTEIN. He is ineligible for a direct loan if a guaranteed loan is available.

Mr. OSTERTAG. I am not so sure that I understand what the President had in mind when he made reference to the substitution in several programs of private for public credit. I don't know whether that has any bearing on this particular program. I mean, for example, the difference between direct as against guaranteed loans.

Mr. BROWNSTEIN. Unavailability of private financing is basic in the direct loan legislation.

Mr. OSTERTAG. In other words, in your direct loans the Government is in the loan business.

Mr. GLEASON. That is right, because he can't get it privately.

Mr. OSTERTAG. Normally you are not in the business except to guarantee.

Mr. DRIVER. The history of the direct loan program has been one coupled with an effort to stimulate private financing through the voluntary home mortgage credit program. You try to get the private financers to come in before you make direct loan money available.

Mr. OSTERTAG. My point is whether or not the President in presenting this policy to the Congress had in mind such programs as direct loans to veterans in the matter of substitution of private for public credit.

Mr. BROWNSTEIN. To the extent private funds are available, certainly I am sure everyone has in mind substituting those funds for direct Government financing. We continue to review our eligible direct loan areas to see if private money is available there and when it becomes available—and this we have been successful in doing in several places in the last year or so—we declare the area ineligible for further direct loans.

Mr. DRIVER. We withheld money available for direct loans a year ago because of the increased participation by private lenders.

FINANCING OF DIRECT LOAN REVOLVING FUND

Mr. EVINS. The financial condition of the fund is shown in the chart at the bottom of 11–4. It is estimated for 1964 you are going to have $1,774,063,000 in total Government equity in the fund.

Are there any further questions on the direct loans?

Mr. THOMAS. You will transfer that $37 million over to the loan guarantee fund this year?

Mr. BROWNSTEIN. The retained earnings?

Mr. THOMAS. Yes.

Mr. BROWNSTEIN. It could be that this will be necessary, Mr. Chairman.

Mr. THOMAS. Plus your supplemental?

Mr. MONK. Yes, sir.

Mr. THOMAS. Will that cover it all?

MORTGAGE LOAN SALES

Mr. BROWNSTEIN. It all depends on how we make out on selling mortgages.

Mr. GLEASON. If we can't sell the mortgages we will have to come back again.

Mr. THOMAS. Dollarwise, how many mortgages are you figuring on selling? What will it take to put the fund in good shape? Include your direct loans plus your supplementals? How many mortgages are you figuring on selling?

Mr. BROWNSTEIN. $147 million.

Mr. THOMAS. On top of that?

Mr. BROWNSTEIN. Yes, sir.

Mr. GLEASON. If we can.

Mr. THOMAS. For the fiscal year 1964 how much fresh money do you have to have?

Mr. MONK. $34 million we are asking for.

Mr. THOMAS. Plus another $150 million for mortgages sold plus $37 million you are going to transfer to direct loans. Will that give you $244 million?

Mr. BROWNSTEIN. $246 million—plus the repayments and other income that comes into our revolving fund.

EXPENDITURE LIMITATION—DIRECT LOANS

Mr. THOMAS. That is what you think it will require and the limitation is now $220 million and you want to increase that to what?

Mr. BROWNSTEIN. We are asking that it be removed. We are asking for fiscal year 1963 to go up to $311.6 million and in 1964 to be removed since these are uncontrolled obligations.

Mr. THOMAS. But as far as you can see now for fiscal year 1964 how much do you think you will have to have?

Mr. BROWNSTEIN. $246 million.

Mr. THOMAS. And it is now $220 million?

Mr. MONK. That is 1 year only.

Mr. BROWNSTEIN. We are asking that it go to $311 million for fiscal year 1963 and then $246 million for fiscal year 1964.

Mr. THOMAS. There is no need of having the supplemental unless the limitation is removed?

Mr. BROWNSTEIN. That is correct. We are going to run out of ceiling before we run out of money this year.

LOAN GUARANTEE REVOLVING FUND

Mr. EVINS. Mr. Reporter, on the loan guarantee revolving fund include in the record justification sheets 12–1 through 12–4.

(Pp. 12–1 through 12–4 follow:)

DEPARTMENT OF VETERANS' BENEFITS

LOAN GUARANTEE REVOLVING FUND

The loan guarantee revolving fund was established at the beginning of fiscal year 1962, in order that the revenues obtained from principal payments on vendee accounts and acquired loans, interest income from such assets, and miscellaneous income, such as, from the rental of properties, could be used to defray part of the expenses for paying claims, acquiring properties, managing properties and selling properties. Prior to fiscal year 1962, all expenditures relating to claims, property acquisitions, management expenses, and selling expenses were financed by direct appropriations under readjustment benefits. Receipts generated by program operations before fiscal year 1962 were paid into the general funds of the Treasury.

Statement of program and financing

	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Program by activities:			
Capital outlay:			
Real property acquired	$197,871,831	$245,833,000	$184,000,000
Claims paid	14,025,674	22,450,000	16,850,000
Loans acquired	1,223,147	1,545,000	1,500,000
Repurchase of loans sold		10,000,000	7,805,000
Total capital outlay	213,120,652	279,828,000	210,155,000
Operating costs, funded:			
Property management expense	14,601,611	22,150,000	26,460,000
Sales expense	6,829,803	9,625,000	9,625,000
Total operating cost, funded	21,431,414	31,775,000	36,085,000
Total program (costs—obligations)	234,552,066	311,603,000	246,240,000
Limitation under existing legislation		220,545,000	
Proposed increase in limitation		91,058,000	
Limitation		311,603,000	
Financing:			
Revenue and other receipts:			
Loan and other repayments	17,372,447	19,275,000	22,425,000
Sale of loans	29,351,561	150,000,000	147,000,000
Sale of properties	7,145,532	8,500,000	9,240,000
Collection of claims receivable (veterans indebtedness)	3,124,575	2,500,000	3,500,000
Interest, rental, and other revenue	24,683,940	23,840,000	28,800,000
Working capital absorbed at inception of fund	1,336,660		
Payment from "Readjustment benefits" appropriation		59,275,000	34,000,000
Total revenue and other receipts	83,014,715	263,390,000	244,965,000
Unobligated balance brought forward		55,333,649	7,120,649
Unobligated balance transferred from "Direct loans to veterans and reserves revolving fund":			
Capital (74 Stat. 532, 76 Stat. 8)	105,718,000		
Retained earnings (72 Stat. 1203)	101,153,000		
Unobligated balance carried forward	−55,333,649	−7,120,649	−5,845,649
Financing applied to program	234,552,066	311,603,000	246,240,000

Real property acquired.—Private lenders who have acquired properties through foreclosure proceedings on defaulted guaranteed or insured loans may, under terms specified by VA, elect to convey the properties to the Veterans' Administration. A substantial increase in property acquisitions occurred in fiscal year 1962, and a further increase has been experienced in fiscal year 1963. These increases occurred because of economic dislocations and unsettled conditions which have been particularly acute in certain areas. An improvement in economic conditions and a reduced number of outstanding loans, accompanied by

the further aging of remaining guaranteed or insured loans, should have the effect of lessening acquisitions in fiscal year 1964.

Properties acquired	Fiscal year 1962 actual	Fiscal year 1963 estimate	Fiscal year 1964 estimate
Number of properties acquired	17,735	22,350	16,425
Average cost per acquisition	$11,157	$11,000	$11,200
Total cost	$197,871,831	$245,833,000	$184,000,000

Claims paid.—When veteran borrowers or their transferees fail to meet their obligations under the terms of loans guaranteed or insured by the Veterans' Administration, the holders of such obligations submit claims pursuant to contracts of guaranty or insurance. During fiscal year 1962, a substantial number of claims were paid. The volume of claims in fiscal year 1963 has been influenced largely by the large number filed in fiscal year 1962, but not processed for payment until the current year; new claims filed in fiscal year 1963 should be less than in fiscal year 1962, and further improvement is also projected for fiscal year 1964. Fewer numbers of claims are projected in fiscal year 1964 than fiscal year 1963 by reason of anticipated improvements in economic conditions.

Claims paid	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Number of claims paid	16,403	22,450	16,850
Average cost per payment	$855	$1,000	$1,000
Total cost	$14,025,674	$22,450,000	$16,850,000

Loans acquired.—Guaranteed or insured loans in a default status may be purchased by the Administrator to avoid foreclosure when it is felt that temporary forbearance will allow the veteran borrowers to cure the default.

Loans acquired	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Number of loans acquired	119	150	145
Average cost per acquisition	$10,277	$10,300	$10,300
Total cost	$1,223,147	$1,545,000	$1,500,000

Repurchase of loans sold.—Pursuant to VA Regulation 4600, dated March 22, 1962, the Administrator may sell mortgage loans, which have been created incident to the sale of VA acquired properties, with full recourse. Allowances are made for the possible repurchase of loans sold as indicated below.

Repurchase of loans sold	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Number of loans repurchased	----------	1,000	780
Average cost per repurchased	----------	$10,000	$10,000
Total cost	----------	$10,000,000	$7,805,000

Property management expense.—The cost of ownership of the acquired properties is financed from this fund. These costs include local real estate taxes, services performed by management brokers, and the general maintenance required to keep the property in a salable condition. Increases in 1963 and 1964 reflect the larger inventory of acquired property.

Property management expenese	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Average number of properties	13,884	21,100	25,200
Cost per property	$1,052	$1,050	$1,050
Total cost	$14,601,611	$22,150,000	$26,460,000

Sales expense.—This item consists principally of brokers' fees and advertising costs incident to the sale of acquired properties. A comparative statement of sales volume and related expenses follows:

Sales expense	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
Number of sales	13,476	17,500	17,500
Cost per sale	$507	$550	$550
Total cost	$6,829,803	$9,625,000	$9,625,000

Financing.—Revenue and receipts consist principally of interest income and repayments on mortgage loans made incident to the sale of real property acquired as a result of foreclosure on guaranteed loans. It will be several years before this interest income and these principal repayments are sufficient to offset program costs, and make the funds self-sustaining. In the meantime, it will be necessary to obtain funds from other sources. In addition, anticipated sales of loans to private investors will produce $150 million and $147 million during fiscal years 1963 and 1964, respectively. An additional $59,275,000 in fiscal year 1963 and $34 million in fiscal year 1964 will be obtained by transfer from the readjustment benefits appropriation.

Proposed language change, 1963.—A language change will be proposed to remove the limitation of $220 million included in the Independent Offices Appropriation Act, 1963, for expenses involved in property acquisition and other loan guaranty expenses under chapter 37, title 38, United States Code.

Current estimates indicate that the number of guaranteed and insured claim payments and properties that private lenders will elect to convey to the Veterans' Administration, all uncontrollable, will exceed the total anticipated in the 1963 budget and the cost of these will exceed previous estimates by about $91 million. A request will be submitted to revise the limitation on expenses and provide supplemental financing for this fund under separate transmittal for 1963.

Statement of financial condition

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Assets:			
Treasury balance	$63,349,363	$14,667,000	$14,846,000

Retained earnings (72 Stat. 1203)	101,153,000		
Payment from "Readjustment benefits" appropriation		59,275,000	34,000,000
End of year	728,206,349	787,481,349	821,481,349
Deficit (−), end of year	−5,463,627	−9,121,349	−9,406,349
Total Government equity	722,742,722	778,360,000	812,075,000

Mr. Evins. That gives you the full picture of this fund. This fund was established in 1962. At the beginning of fiscal year 1962. I thought it was in operation before then. [Reading:]

The loan guarantee revolving fund was established at the beginning of fiscal year 1962, in order that the revenues obtained from principal payments on vendee accounts and acquired loans, interest income from such assets, and miscellaneous income, such as, from the rental of properties, could be used to defray part of the expenses for paying claims, acquiring properties, managing properties and selling properties.

Then there is a showing of the number of claims paid. The average cost per acquisition for fiscal year 1963 was $11,000 and estimated for fiscal year 1964, $11,200. In 1963 fiscal year there were 22,350 properties estimated to be acquired and it is estimated for 1964, 16,425; loans acquired, a reduction from 150 to 145 in 1964; repurchase of loans sold pursuant to VA Regulation 4600. The Administrator may sell mortgage loans which have been created incident to the sale of VA acquired properties, with full recourse.

Mr. Thomas. Mr. Evins, will you let me interrupt you on two small points?

Mr. Evins. Yes.

PROPERTY ACQUISITIONS

Mr. Thomas. With regard to the number of properties acquired for fiscal year 1963, 22,350, how old are they? You come up with a figure of 16,425 for fiscal year 1964. How long have you had them on hand? Give us a little history of them. Break it down. It indicates that you acquired about 5,000 more during the past 12 months.

Mr. BROWNSTEIN. We acquired more than that.

Mr. GLEASON. But above the 1962 figure.

Mr. THOMAS. You should give Mr. Evins the corrected figure. The number you have on hand and some breakdown as to what years you acquired them, how old they are. Your justifications clearly point out the number, but bring it up to date because it is 6 months behind. Your acquisition cost runs around $1,000. Does that mean you have a loss of that much in it?

Mr. BROWNSTEIN. No.

Mr. THOMAS. You had better give us a little picture of your selling price. What about the market?

Mr. BROWNSTEIN. The market——

Mr. THOMAS. It was pretty good 2½ or 3 years ago when you had an ascending market, but you have now a stabilized or descending market and this figure of $1,000 doesn't cover it, does it? It doesn't tell the whole story.

PROPERTIES ON HAND

Mr. BROWNSTEIN. Of course we have on hand 20,397 properties. Of these 17,000——

Mr. THOMAS. What is that figure, now?

Mr. BROWNSTEIN. 20,397.

Mr. THOMAS. As of what date?

Mr. BROWNSTEIN. December 31.

Mr. THOMAS. That figure 22,350 will take care of all the properties acquired during fiscal year 1963 of which you have another 5 months to go.

Mr. BROWNSTEIN. We believe so, Mr. Chairman.

Mr. THOMAS. Go ahead.

Mr. BROWNSTEIN. 17,154 of these properties we hold in absolute title; 3,243 of them are subject to redemption. Those subject to redemption are not available for sale until the redemption period expires. Of those in absolute title, we have had 8,936 more than 6 months.

Mr. THOMAS. It would be 20,000 in round figures?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS. Go ahead and break it down further.

Mr. BROWNSTEIN. I cannot give you those we have had for a year or more. I would have to supply that, Mr. Chairman.

Mr. THOMAS. Will you insert a table in the record at this point?

Mr. BROWNSTEIN. Yes, sir.

Mr. THOMAS (continuing). Showing for the last years how old those properties are. Can you do that?

Mr. BROWNSTEIN. We will give you the best we can on that.

Mr. THOMAS. Give us a horseback opinion of how long you carry one of these houses, from the time it is foreclosed until you finally sell it. What is your best guess?

Mr. BROWNSTEIN. Right now I would say it is running about 5 months on the average.

Mr. THOMAS. No more than 5?

Mr. BROWNSTEIN. No.

LOSSES ON PROPERTIES

Mr. THOMAS. What is a good figure on the average loss, your acquisition cost, your rehabilitation cost, your commissions paid and considering you may have a descending market?

Mr. BROWNSTEIN. A little better than $1,100 a property.

Mr. THOMAS. How much better?

Mr. BROWNSTEIN. $1,112 is our figure for fiscal year 1962.

Mr. OSTERTAG. That is average?

Mr. BROWNSTEIN. Yes.

ACQUISITION OF PROPERTIES

Mr. OSTERTAG. Let me see if I understand the situation as it applies to properties acquired.

At the end of fiscal year 1962 you had 17,735. You estimate there will be approximately 22,350 at the end of fiscal year 1963. That is an increase of nearly 5,000.

In the meantime you have disposed of a certain number, but actually you have acquired many more than 5,000 during the course of the year. But the point is the properties on hand will be about 5,000 higher at the end of 1963 than it was in 1962.

Mr. BROWNSTEIN. That is correct.

Mr. OSTERTAG. There is always a gradual turnover.

Mr. BROWNSTEIN. Yes.

We have so far in the program sold about 80 percent of our acquired property.

Mr. OSTERTAG. Right at that point, why do you estimate the low figure of 16,425 at the end of next year?

Mr. BROWNSTEIN. Well, we are hopeful that we are going to be in a better sales market next year and that we will be able to dispose of some of our inventory.

Mr. MONK. That 16,425 is properties acquired rather than properties on hand at the end of the year.

Mr. OSTERTAG. Do you mean you will acquire 16,425 during fiscal year 1964, added to what you would have on hand at the beginning of the year?

Mr. DRIVER. And then sell 80 percent of it.

Mr. OSTERTAG. In other words, that wouldn't be your net total on hand at the end of fiscal year 1964?

Mr. BROWNSTEIN. No.

Mr. OSTERTAG. The 22,350 is a total, is it not?

Mr. MONK. No, sir; that is acquisitions, too, in the fiscal year. But it does so happen that it is pretty close.

Mr. OSTERTAG. It is misleading then to show what you acquired during the year when you fail to show a balance of properties on hand.

Mr. BROWNSTEIN. We show on 12–3 that we estimate 17,500 sales for 1964.

Mr. OSTERTAG. That is the total you would sell out of whatever you have on hand?

Mr. BROWNSTEIN. Plus the inventory.

Mr. MONK. That would cut it down roughly a thousand, from the amount on hand as of June 30 this year, which would be around 25,000.

Mr. OSTERTAG. What was the net total of properties on hand at the end of each of these 3 years?

Mr. MONK. At the end of 1960 there were 6,160 properties on hand?

Mr. BROWNSTEIN. No, sir.

Mr. MONK. This is fiscal year 1960.

Mr. DERRON. At the end of fiscal year 1962 we had 17,484 properties on hand.

Mr. MONK. I said 1960, 6,160; at the end of 1961, 10,625. This is June of 1962, 17,484, and, as of December 31,1962, we had 20, 397 and we are anticipating 24,700 as of June 30, 1963.

Mr. EVINS. Everybody is correct.

CREDIT RATING OF BORROWERS

Mr. THOMAS. Mr. Evins, let me ask one more question. What part of these foreclosures do you attribute to errors in judgment made by your field offices in passing on credit?

Mr. BROWNSTEIN. I would not say that very much is due to that, Mr. Chairman. However, there is——

Mr. THOMAS. What is it due to?

Mr. BROWNSTEIN. There is an area that we have done a lot of tightening up in in the last year and that is poor credit reports. The basis on which these judgments were made, in other words. We have found that there were some mighty poor credit reports around the country and, of course, this is the key to your credit underwriting.

Mr. THOMAS. You and I are talking about the same thing. I asked you about credits. You call it credit reports. Go ahead.

Mr. BROWNSTEIN. I understood you to say poor judgment on the part of our people and this was not their judgment. They were basing it on information that they thought was reliable but it was not reliable.

Mr. THOMAS. You are responsible for the acts of your agents and, if your agents do not deliver, that is charged up to you. You are the agents of John Public, so he paid the bill, did he not? If you go out and ask X to furnish you a credit report, and he gives you bad information, we are going to charge that to you.

Mr. BROWNSTEIN. We are paying for it.

Mr. THOMAS. All right. What part of your loss do you credit to your poor judgment in the credit report?

Mr. BROWNSTEIN. This is a difficult thing to answer but I would say that maybe of those loans that have gone to foreclosure, possibly as high as 5 percent of them would not have been made had we had real good credit information.

Mr. THOMAS. One thousand, then, translated to terms of houses?
Mr. BROWNSTEIN. Fifty out of one thousand.
Mr. THOMAS. You have about 22,000 on hand, have you not?
Mr. BROWNSTEIN. About 21,000, yes, sir.
Mr. THOMAS. I will repeat then, about 1,000 houses.
Mr. BROWNSTEIN. Yes.
Mr. JONAS. Will you yield, Mr. Evins?
Mr. EVINS. Yes, Mr. Jonas.

REASONS FOR FORECLOSURES

Mr. JONAS. We can tie that down right quickly as to whether what you say is the primary reason for this high foreclosure rate by furnishing statistics showing what your rejection rate on applicants is now and how that has been increased.

Do you have figures which will show what your rejection rate was in fiscal year 1962 and 1963 for poor credit reporting only?

Mr. BROWNSTEIN. No, sir. We do not have those figures. Let me clarify one thing. I would not mean to imply that this is the principal reason for the foreclosures.

Mr. JONAS. What is the principal reason?

Mr. BROWNSTEIN. I think unquestionably the principal reason is economic dislocations. You can take the areas where we have our heavy concentration of property acquisitions and you can see that these are the ones.

Mr. JONAS. Have you put that in the record?

Mr. BROWNSTEIN. No, sir.

FORECLOSURES—GEOGRAPHIC LOCATIONS

Mr. JONAS. Where are those areas?

Mr. GLEASON. How many properties do we have in Wichita? The airplane industry moved from Wichita to the west coast.

Mr. BROWNSTEIN. I will give Mr. Jonas the areas of heavy concentration, including Wichita. Detroit—this is as of December 31—we have 4,666 properties.

Mr. JONAS. Is Detroit a depressed area?

Mr. BROWNSTEIN. Yes, sir.

Mr. JONAS. The automobile business is booming at the highest rate in history.

Mr. BROWNSTEIN. It also has a tremendously high unemployment rate, Mr. Jonas.

Mr. JONAS. In Detroit?

Mr. BROWNSTEIN. Yes, sir. When I say "Detroit," this is the regional office and it includes the State of Michigan.

Chicago: Again, this is the State of Illinois.

Mr. GLEASON. Actually, it is downstate more than near Chicago.

Mr. BROWNSTEIN. And Carpentersville, 1,896. Wichita, the one that the Administrator mentioned, and due almost totally to the fact that Boeing has curtailed very sharply the number of employees they have, 1,697; Los Angeles, which covers southern California, 1,624; St. Petersburg, the State of Florida, 1,351; Philadelphia, 873; Lubbock, 840.

Mr. JONAS. Texas?

Mr. BROWNSTEIN. Yes, sir; San Antonio, 758; Montgomery, Ala., 542; Houston, 538; San Francisco, 441; Cleveland, 430; Dallas, 340; Newark, 330; New Orleans, 299.

This comprises nearly 80 percent of the properties that we have on hand.

Mr. JONAS. When you list those cities you do not mean the foreclosures occurred in the city, but in the area served?

Mr. BROWNSTEIN. Yes, sir.

Mr. GLEASON. In the regional area.

Mr. JONAS. Do you have any records on North Carolina?

Mr. BROWNSTEIN. No, but it is quite low.

To show you this, I mention that this is 80 percent of our property holdings. In that same area the guaranteed loan percentage is 43 percent. It is a little shy of 2 to 1, the total number of business done.

Mr. EVINS. Veterans in North Carolina and Tennessee are pretty good credit risks.

DIRECT LOAN FORECLOSURES

Mr. THOMAS. Give Mr. Jonas the figure of the number of foreclosures or foreclosed properties you have on hand now for direct loans.

Mr. BROWNSTEIN. Under 600.

Mr. THOMAS. That is remarkable.

Mr. GLEASON. That is on direct loans.

Mr. DRIVER. Out of 200,000, how many?

Mr. GLEASON. Only 600 out of 216,000.

ANNUAL REPORT ON GUARANTEED AND INSURED LOANS

Mr. EVINS. This is a vital program, a very important program, and to round out the picture I am going to ask the reporter to include in the record pages 67 to 80 of the annual report, which gives a very concise picture with interesting graphs on this program.

(The material referred to follows:)

GUARANTEED AND INSURED LOANS

MISSION

The principal aim of the loan guarantee program is to provide the means whereby a veteran may obtain credit on favorable terms which will permit him to shelter his family suitably or to begin or operate a business or farming venture. The Veterans' Administration accomplishes this through the guarantee or insurance of home, farm, and business loans made by private lenders to veterans of World War II and the Korean conflict.

The program also aids worthy veterans to retain the homes, farms, or businesses they acquired with GI loans. This is achieved by encouraging lenders in all proper cases to grant indulgence, or to extend or reamortize loans where veterans are in temporary financial straits.

HIGHLIGHTS

Nearly 166,200 home, farm, and business loans were guaranteed during the year.

Loan applications were up 45 percent over the preceding year.

GI home loan activity continued to trend upward, owing to further easing in the general supply of mortgage money.

Almost 217,000 guaranteed home loans were repaid during the year.

THE GI LOAN

Loans guaranteed or insured for veterans (GI loans) are made for a variety of purposes, such as to buy or build a home; to provide a fallout shelter in a residential property; to conduct a business or farming enterprise; to buy livestock, machinery, tools, and other equipment; and for working capital. The maximum dollar amount or percentage of the loan which may be guaranteed varies with the purpose of the loan. Loans to purchase, construct, alter, repair, or improve a home; loans to purchase a farm on which there is a dwelling to be occupied by the veteran as his home; and loans to construct, alter, repair, or improve a farm dwelling to be occupied by the veteran as his home may be guaranteed up to 60 percent of the loan amount, but the guaranteed portion may not exceed $7,500. Loans for other farm purposes and for business purposes can be guaranteed up to 50 percent of the loan amount, with a guarantee limitation of $4,000 on real-estate loans and of $2,000 on non-real-estate loans.

As an alternative to the guarantee of loans, qualified lenders may have loans insured. For each loan insured, the lender receivers a credit to his insurance account of 15 percent of the loan amount, but not in excess of $4,000 for real-estate loans or of $2,000 for non-real-estate loans. Lenders are insured for losses on such loans up to the aggregate outstanding amount of insurance credits derived from all insured loans made.

VETERANS' ELIGIBILITY PERIOD

The terminal date of each veteran's entitlement for loan benefits is determined by the Veterans' Administration according to a formula prescribed by Public Law 87–84, approved July 6, 1961. Under the formula each veteran had 10 years of leigibility from date of discharge or release from his last period of wartime service, any part of which occurred during either World War II or the Korean conflict, plus 1 year of eligibility for each 3 months of active wartime service. The law specified that no World War II veteran's entitlement would expire prior to July 25, 1962, nor extend beyond July 25, 1967. Similarly, no Korean conflict veteran's entitlement would expire prior to January 31, 1965, nor extend beyond January 31, 1975. A veteran discharged or released for a service-connected disability from a period of active duty, any part of which occurred during World War II or the Korean conflict, is eligible for loan benefits until the terminal date specified for the wartime period from which he was discharged or released.

ROLE OF THE GI LOAN

Since the beginning of the program in 1944, the Veterans' Administration has guaranteed or insured over 6.1 million home, farm, and business loans to veterans of World War II and the Korean conflict. Nearly 5.8 million of these were home loans, totaling almost $52¼ billion.

These loans have contributed materially to the enormous increase in home-ownership during this period. There are some 30 million householders throughout the nonfarm areas of the Nation who own their homes—the greatest number in our country's history. More than 60 percent of all nonfarm dwelling units are owned by the occupant families, compared with 53 percent in 1950 and only 45 percent in 1930. Nearly 16 million of the homeowner properties in the United States today are mortgaged, and 22 percent of the mortgaged homes are financed with a VA-guaranteed loan.

GI loans have also played an important role in the homebuilding industry. Since the end of World War II there have been about 15½ million private nonfarm single-family dwelling units started in the United States, and approximately one out of every five was financed by a GI loan.

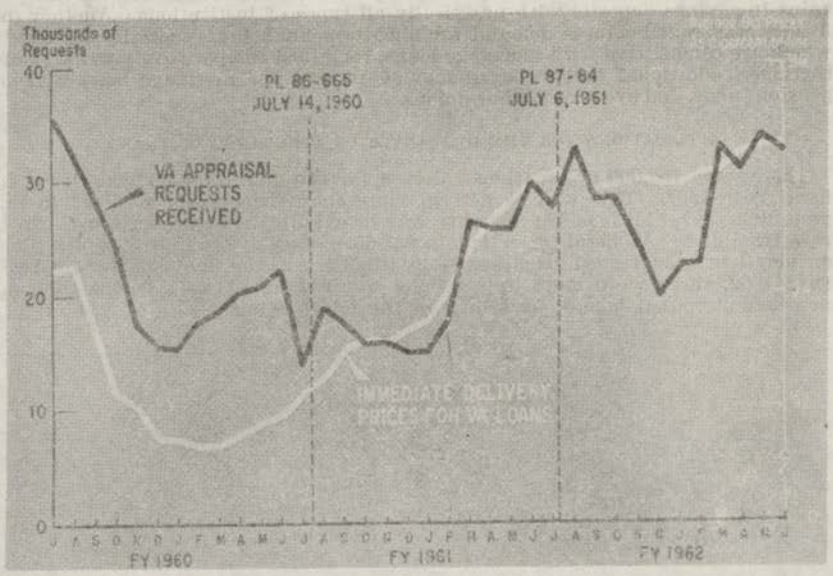
TRENDS IN LOAN GUARANTY APPRAISAL ACTIVITY

As shown in the chart below, the trend of loan guarantee appraisal activity is influenced very strongly by changes in VA loan prices in the private secondary market. These prices, in turn, reflect changes in the interest rate on GI loans as well as easing or tightening money market conditions.

For example, during the first half of fiscal year 1960 there was increasing competition for investment funds from virtually all segments of the economy

which pushed the general interest rate structure to higher levels. As a result, the new 5¼ percent GI loan interest rate which had been put into effect at the beginning of the year soon became less attractive to private investors. Discounts in the secondary market on GI loans rose markedly and the number of VA appraisals fell sharply.

APPRAISAL REQUESTS AND SECONDARY MARKET AVERAGE BID PRICES FOR VA LOANS



Appraisal activity and average bid prices for GI loans both recovered somewhat during the last half of fiscal year 1960. This was owing partly to seasonal influences, but also reflected a moderate decrease in the cost of money and some easing in mortgage terms as the growth rate of the total economy slackened.

In the opening month of fiscal year 1961, VA appraisal activity dropped sharply since there was much uncertainty among builders and sellers as to whether or not the entitlement of World War II veterans would be extended. This was not determined until mid-July when Public Law 86–665 was enacted. Among other things, that law extended the loan guaranty program until July 25, 1962, for World War II veterans. Appraisal activity recovered somewhat in August but showed the usual seasonal decline during the subsequent fall and winter months.

During the last half of fiscal year 1961, secondary market prices for GI loans continued to climb and the level of VA appraisal activity rose steadily, reaching an 18-month high in June. These trends reflected continuation of an easing in the general supply of mortgage money which started during the 1960–61 business recession, as well as various actions by the Government and Federal Reserve Board designed to depress long-term yields and reduce borrowing costs for home purchasers. Among these were renewed purchasing by the Federal Reserve System of Government securities maturing in more than 5 years; reductions in the maximum interest rate on FHA-insured loans (the first time in February 1961, from 5¾ to 5½ percent, and again in May 1961, from 5½ to 5¼ percent); adjustment by the Federal National Mortgage Association of its schedule of prices on the secondary market for Government-backed mortgages to exert a downward influence on mortgage yields generally; and a series of measures by the Federal Home Loan Bank Board to increase the supply of mortgage funds and lower the cost of housing credit available through Federal savings and loan associations.

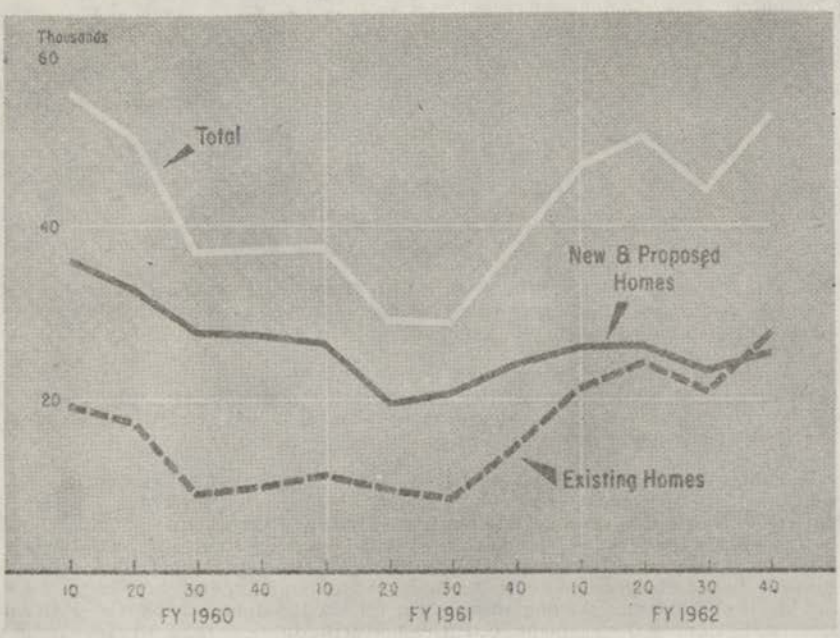
Fiscal year 1962 was characterized by a continued uptrend in GI home loan activity, except for seasonal fluctuations, and further gradual reductions in discounts for VA commitments. The supply of mortgage credit was as generous as it had been for some years, and the competition for good loans was intense.

On the supply side, several influences affected the lender's attitude toward mortgage investments. One was a dramatic rise in new savings in thrift institutions. The primary reason for this was the change by the Federal Reserve in Regulation Q which permitted commercial banks, beginning January 1, 1962, to pay 3½ percent for savings left with the banks for up to 1 year, and 4 percent if left with the banks for a year or longer. All other lenders, such as savings banks and savings and loan associations, also increased their interest rates in order to compete with the commercial banks. The result was substantial gains in savings deposits with practically all types of institutions. Another influence was that business demand for long-term financing, especially for bonds which are competitive with mortgage loans, remained comparatively weak. Furthermore, additional money began moving toward the mortgage market from pension funds, and even from labor unions.

APPLICATIONS FOR THE GUARANTEE OR INSURANCE OF LOANS

There were 195,000 applications received for the guarantee of home loans in fiscal year 1962. This was 45 percent more than the number received in the preceding year. Most of the increase was in existing-home applications, which rose from 43,469 in fiscal year 1961 to 93,865 in fiscal year 1962. Applications on new homes increased from 91,057 to 101,501. In the final quarter of fiscal year 1962, there were more applications received on existing homes than on new and proposed homes, as shown in the chart below.

VA HOME LOAN APPLICATIONS RECEIVED



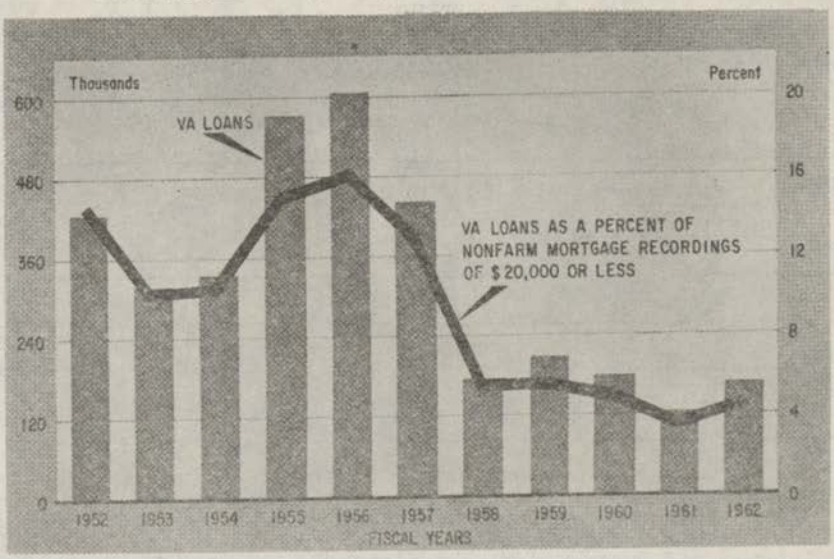
Applications for the guarantee or insurance of farm and business loans declined in fiscal year 1962. During the year, there were only 45 applications received for farm loans and 1,029 applications for business loans. Farm loan applications were down 45 percent from fiscal year 1961, and business loan applications were off by 13 percent.

LOANS GUARANTEED OR INSURED

During fiscal year 1962, a total of nearly 166,200 home, farm, and business loans, amounting to $2,286 million, were guaranteed or insured. This represented a considerable improvement over the preceding year with respect to both

the level of GI loan activity and the relationship of VA-guaranteed loans to nonfarm mortgage recordings of $20,000 or less, as shown in the chart below.

VA-GUARANTEED HOME, FARM, AND BUSINESS LOANS



There were 84,740 veterans who purchased newly constructed homes during fiscal year 1962, for which they paid $1,313 million and on which they obtained VA-guaranteed mortgages amounting to $1,285 million. This meant an average purchase price of $15,495, with an average downpayment of $330, leaving an average loan of about $15,165.

During the year, 78,700 veterans bought existing homes, for which the purchase price totaled $1,049 million and the loans amounted to about $989 million. The average purchase price was $13,330 with an average downpayment of about $765, leaving an average loan of about $12,565. In addition, 1,500 home improvement loans, amounting to well over $3 million, were guaranteed during the year.

During fiscal year 1962, mutual savings banks accounted for 13 percent of the GI home loan originations; savings and loan associations, 17 percent; life insurance companies, only 3 percent; commercial banks, 7 percent; while real estate and mortgage companies and others originated 60 percent of the total. However, many of the loans in the portfolios of permanent investors are obtained after origination, as is apparent from the table below:

Type of lender or holder	Original principal amount of GI home loans made, cumulative through June 1962		Outstanding amount of GI home loans held at end of June 1962 [1]	
	Amount (in millions)	Percent of total	Amount (in millions)	Percent of total
All types	$52,229	100.0	$29,500	100.0
Mortgage and real estate companies	21,200	40.6	[2]	[2]
Savings and loan associations	12,396	23.7	7,126	24.2
Commercial banks	9,385	18.0	2,547	8.6
Mutual savings banks	6,138	11.7	9,384	31.8
Life insurance companies	2,697	5.2	6,444	21.8
Federal National Mortgage Association			2,464	8.4
Individuals and others	413	.8	1,535	5.2

[1] Preliminary.
[2] Included with "Individuals and others."

HOME LOAN MATURITIES AND DOWNPAYMENTS

The trend of the past few years toward more liberal GI loan terms continued during fiscal year 1962, as will be noted in the table below:

NEW HOMES

Fiscal year	Percent of primary home loans made with maturities of—			Percent of primary home loans made with—	
	20 years or less	21 to 25 years	26 to 30 years	Downpayments	No downpayments
1958	5.2	25.5	69.3	95.2	4.8
1959	2.6	6.7	90.7	41.9	58.1
1960	1.3	4.9	93.8	32.1	67.9
1961	1.1	3.6	95.3	27.6	72.4
1962	.7	2.7	96.6	23.8	76.2

EXISTING HOMES

1958	63.7	25.7	10.6	98.8	1.2
1959	45.2	30.5	24.3	81.5	18.5
1960	42.5	31.1	26.4	72.6	27.4
1961	37.1	32.4	30.5	62.1	37.9
1962	20.0	28.5	51.5	47.3	52.7

The proportion of loans on new homes with long-term maturities of 26 to 30 years increased from 69.3 percent in fiscal year 1958 to 96.6 percent in fiscal year 1962, and on existing dwellings the ratio rose from 10.6 percent to 51.5 percent. Similarly, the proportion of loans made with no downpayment—on both new and existing homes—increased markedly over the years. The reason for the relatively few 100-percent loans made in 1958 is that there was a 2-percent downpayment requirement in effect during part of the fiscal year. However, a maximum maturity limitation of 30 years was in effect during the entire 5-year period.

LOANS REPAID IN FULL

During fiscal year 1962, there were almost 217,000 guaranteed home loans repaid in full. This was more than equal to the number of home loans guaranteed during the year.

From the beginning of the loan guaranty program through June 1962, about 91 percent of the business loans, 79 percent of the farm loans, and 34 percent of the home loans have been repaid in full. The smaller percentage of repaid home loans is due mainly to longer maturities on this type of loan.

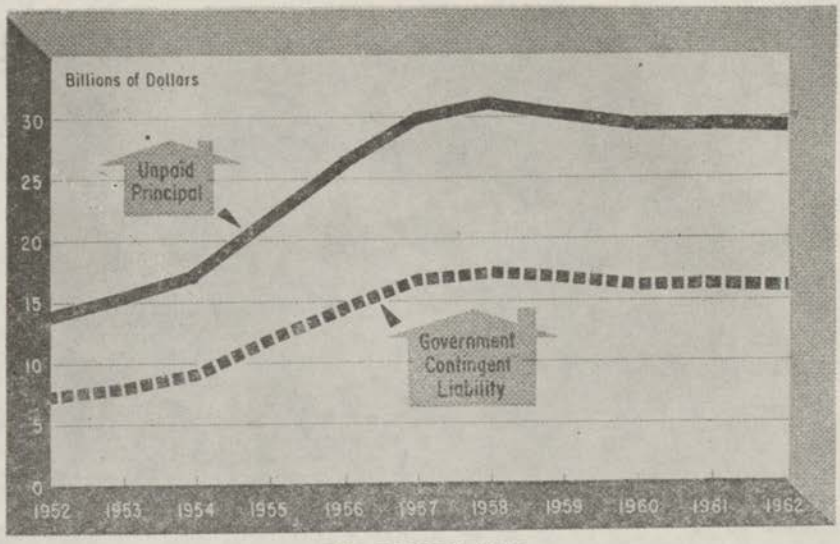
CONTINGENT LIABILITY

The VA's liability, as a guarantor of a loan, is limited to that amount which has the same percentage relationship to the unpaid indebtedness that the original amount of guaranty bore to the original amount of the loan. In other words, as payments are received and credited to reduce the balance of the loan, a proportionate reduction takes place in the amount of the guaranty. For example, an $8,000 home loan guaranteed for 60 percent, or $4,800, when reduced by payments to $6,000 is protected by a guaranty amounting to $3,600, or 60 percent, the same percentage of the loan which was originally guaranteed.

The VA's liability on insured loans extends to the accumulated credit balance in lenders' insurance reserve accounts, but not in excess of the unpaid principal balance of insured loans in force.

The estimated outstanding principal balance and Government contingent liability on guaranteed home loans in force during the past 10 years are shown in the chart below.

VA HOME LOANS OUTSTANDING



DEFAULTS AND CLAIMS

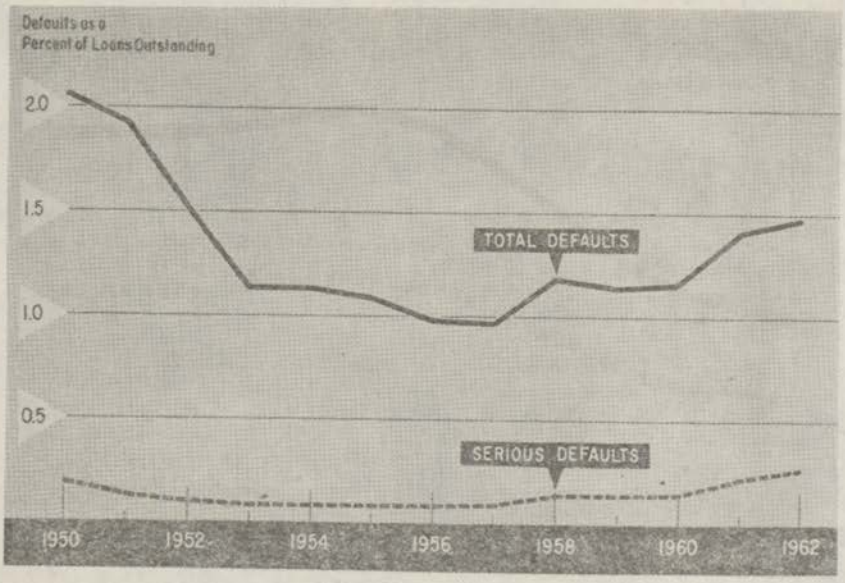
Lenders may report defaults on GI loans at any time up to 105 days after default occurs. In most cases defaults are cured and claims averted by arranging with veterans to pay the delinquencies, by modifying the terms of repayment, or by arranging for the disposition of the property without a claim payment.

From the beginning of the loan guaranty program through June 1962, about 85 percent of the home loans reported in default had been cured, and 84 percent of the farm loan defaults were settled without a claim. The record on business loans in default has been less favorable, with cures having been effected on about 62 percent of the defaults reported.

Cumulatively as of the end of fiscal year 1962, claims had been paid on 1.6 percent of the number of home loans guaranteed, on 3.2 percent of the farm loans, and on 6.4 percent of the business loans. As of the end of June 1962, the VA's loss on the operation of the home, farm, and business loan programs amounted to about $5.5 million. This takes into account interest income derived from mortgages taken by VA incident to the sale of acquired properties, rental, and miscellaneous revenues, but not salaries and administrative expenses of the programs. The $5.5 million represents about one one-hundredth of 1 percent of the original principal amount of the loans guaranteed or insured through June 30, 1962.

The ratio of home loans reported in default to the number of loans outstanding rose to 1.47 percent at the end of fiscal year 1962, from 1.40 percent at the end of the preceding year, but was still well below the 2.06 percent recorded at the end of fiscal year 1950. The number of loans in serious default (i.e., those which are considered to be insoluble and those on which claims are pending), as well as the number of claims paid, continued the rising trend. Indications are that the primary reason for the increase was the relative stability of housing prices during this period. Earlier there had been a rising housing market for a number of years, and a veteran in financial difficulties in the early years in the life of the loan usually was able to sell his home readily for an amount at least equal to the loan balance plus selling expenses. This has become more difficult to do in recent years. In addition, there are a number of areas where local economic conditions have been a contributing factor to the volume of defaults, foreclosures, and claim payments. Recent trends in defaults and claims are shown in the following table and chart.

GUARANTEED HOME LOANS IN DEFAULT



END OF FISCAL YEAR

Period	New defaults reported during quarter	Defaults pending at end of quarter		Claims paid during quarter
		Total	Serious	
Fiscal year 1961:				
1st quarter	24,230	46,834	5,600	2,714
2d quarter	25,689	48,984	6,025	3,006
3d quarter	31,337	53,439	7,375	3,217
4th quarter	28,496	53,222	8,448	4,078
Fiscal year 1962:				
1st quarter	26,165	54,315	8,360	4,429
2d quarter	26,834	56,278	8,936	4,336
3d quarter	29,826	58,224	9,887	5,034
4th quarter	23,988	54,893	10,114	5,308

PROPERTY ACQUISITION AND MANAGEMENT

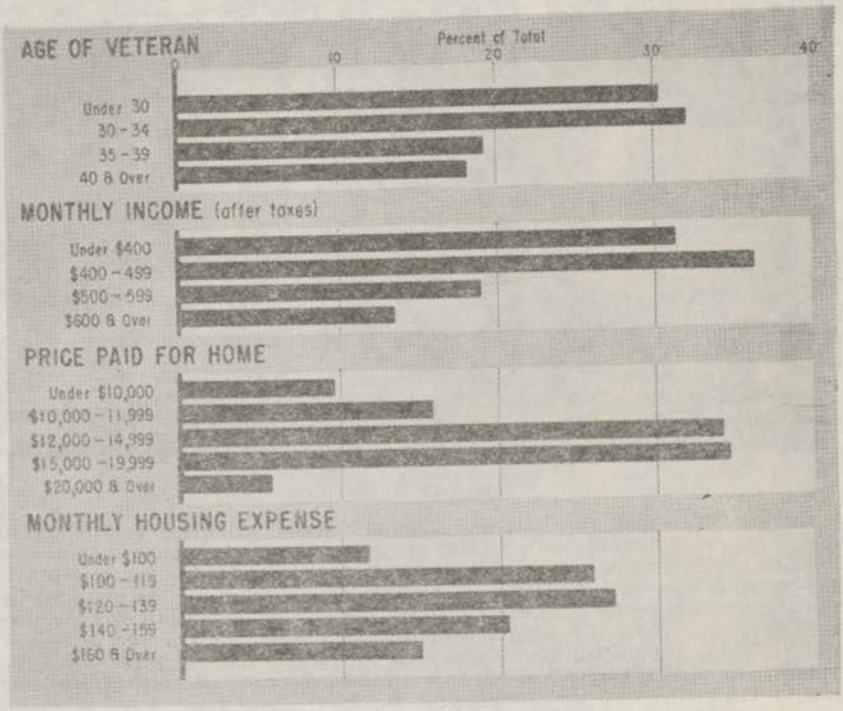
During fiscal year 1962, there were 20,442 properties acquired as a result of foreclosed loans which had been guaranteed or insured. This was an increase of 6,305 acquisitions over fiscal year 1961. On the other hand, sales of acquired properties rose during the year, by 3,861, to 13,470. Recent trends in property management are as follows:

Fiscal year	Properties on hand, beginning of year	Acquired during year	Sold during year	Redeemed during year	On hand, end of year
1960	5,559	10,617	9,950	66	6,160
1961	6,160	14,137	9,609	63	10,625
1962	10,625	20,442	13,470	113	17,484

CHARACTERISTICS OF VETERAN HOME BUYERS

The following table and chart give some idea of the typical veteran who obtained a guaranteed home loan in 1961. The data are based on a sample of primary home loans submitted to Veterans' Adminstration for prior approval.

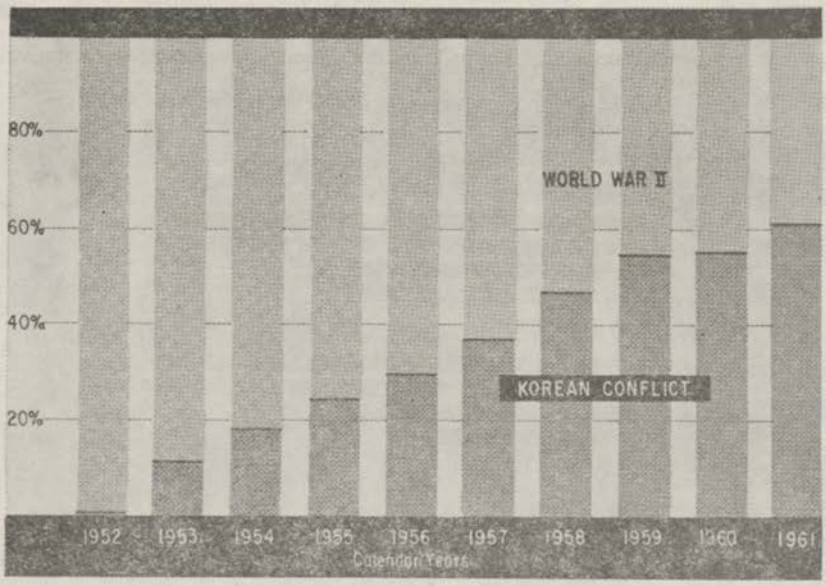
CHARACTERISTICS OF VETERAN HOME BUYERS IN 1961



Characteristics	Calendar years				
	1957	1958	1959	1960	1961
Median age, in years	32.3	31.6	31.5	32.2	32.2
Average annual income (after taxes)	$5,810	$5,800	$5,725	$6,050	$5,660
Average annual housing expense	$1,415	$1,460	$1,465	$1,565	$1,575
Expense as a percent of net income	24.4	24.8	25.6	25.8	27.9
Average price paid for home	$13,790	$14,095	$13,930	$14,465	$14,315
Average downpayment made	$1,050	$725	$450	$395	$330
Average amount borrowed	$12,740	$13,370	$13,480	$14,070	$13,985

It will be noted that the median age of veteran home buyers has remained relatively stable over the years. This reflects the fact that although all veterans naturally are growing older with the passing years, a greater proportion of GI home loans are being obtained by Korean-conflict veterans, who are generally younger than their World War II counterparts. In 1961, for example, Korean-conflict veterans bought almost 61 percent of the homes on which GI loans were closed, compared with 37 percent in 1957. (See chart below.) The average age of veterans who served solely in the Korean conflict was estimated to be 30.4 years at the end of 1961, as against 42.6 years for World War II veterans.

VA-GUARANTEED HOME LOANS, BY USE OF ENTITLEMENT



LOW-COST HOUSING

In September 1961, the Veterans' Administration authorized field offices to accept appraisal requests and to value properties constructed under the low-cost housing program of the Federal Housing Administration. The low-cost housing program was authorized under the National Housing Act, as amended by the Housing Act of 1961. Special low-cost housing minimum property requirements which conformed to similar standards published by FHA were issued by the Veterans' Administration. Essentially this action made it possible for the veterans to buy FHA-approved low-cost housing with the assistance of financing guaranteed by the Veterans' Administration.

LOAN GUARANTEE REVOLVING FUND

The loan guarantee revolving fund was established at the beginning of fiscal year 1962 in order that the revenues obtained from principal repayments on certain mortgage loans owned by the Veterans' Administration, income from interests payments on such assets, and miscellaneous income, such as from the rental of properties, could be used to defray part of the expenses for paying claims, acquiring properties, managing properties, and selling properties. Prior to fiscal year 1962, all expenditures relating to claims, property acquisitions, management expenses, and selling expenses were financed by direct appropriations, and receipts generated by program operations were paid into the general fund of the Treasury.

During fiscal year 1962, expenditures from the loan guarantee revolving fund amounted to $234.9 million. Revenues of the fund, which totaled $275.3 million, consisted of $206.9 million transferred from the direct loan revolving fund ($115,247,000 from capital and $91,624,000 from earnings), and $68.4 million received from program operations. Receipts from operations included $15.4 million from the sale to private investors of mortgage loans made by the Veterans' Administration incident to the sale of properties acquired following the termination of guaranteed or insured home loans. The loans were sold subject to the guarantee agreements contained in VA Regulation 4600, effective March 22, 1962. Basically, that agreement provides that, under the terms and conditions set forth therein, the Veterans' Administration will repurchase any loan in which a serious default occurs.

Vocational Rehabilitation Revolving Fund

Department of Veterans' Benefits

VOCATIONAL REHABILITATION REVOLVING FUND

This fund is used to make loans ups to $100 to disabled veterans eligible for vocational rehabilitation who are without sufficient funds to meet their expenses (sec. 1507, title 38, U.S.C.). Repayments are used to make new loans.

Administrative expenses are borne by the appropriation "General operating expenses."

Workload, amounts loaned and repaid

ADJUSTED SERVICE CERTIFICATE FUND

Mr. EVINS. Insert page 14–1 in the record.
(The page referred to follows:)

DEPARTMENT OF VETERANS BENEFITS

ADJUSTED SERVICE CERTIFICATE FUND

The World War Adjusted Compensation Act of 1924 (43 Stat. 121, 128) created this trust fund to receive appropriations for ultimate payment of the face value of adjusted service certificates issued to qualified World War I veterans pursuant to this act. Only a small portion of the certificates issued remain unpaid. Administrative expenses are charged to the appropriation general operating expenses, Veterans Administration.

The principal of the fund, except for a small cash balance, was invested in U.S. securities, and interest income therefrom was also available to pay matured certificates. As of December 31, 1956, all U.S. securities held in the fund were paid off in full along with accrued interest. None of the fund will be reinvested and all payments will henceforth be made from the cash principal.

Payments of certificates amounted to $111,373 during fiscal year 1962. It is expected that such payments will decrease to $100,000 in 1963 and to $90,000 in 1964. The expenditures and balances of the fund for the past, current, and budget years are reflected in the following schedule:

Program and financing

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Program by activities:			
Operating costs: Adjusted service payment program: Payment of World War I adjusted service certificates (total obligations)	$111,373	$100,000	$90,000

Unobligated balance carried forward: Cash	−2,866,649	−2,766,649	−2,676,649
Total financing	111,373	100,000	90,000

DEPARTMENT OF INSURANCE

Mr. EVINS. Mr. Reporter, let us turn to the Department of Insurance.

For all appropriations for the Department of Insurance you are requesting $50,251,000. This amount represents a decrease of $7 million in 1963, and $12 million in 1962. The cost of your insurance programs is showing a substantially less amount of money.

Mr. GLEASON. This is a field, Mr. Evins, which our automatic data processing has helped reduce the cost. About 10 years ago we had approximately 11,000 employees in this program and this year approximately 2,600.

Mr. EVINS. $7 million savings from last year and $12 million from the preceding year.

Can you give us a little table showing us what the appropriation has been over the past 6 or 8 years?

(The information supplied follows:)

DEPARTMENT OF INSURANCE

General operating expenses—Obligations (not a separate appropriation)

Fiscal year:	*Obligations*	Fiscal year—Con.	*Obligations*
1955	$30,160,324	1959	$24,536,507
1956	26,595,960	1960	25,765,900
1957	24,634,858	1961	25,939,139
1958	24,894,583	1962	23,458,173

SUMMARY OF INSURANCE PROGRAMS

Mr. EVINS. I think this chart on page 15–3 could be included. I wish someone would explain it to us right hurriedly. Also insert 15–2.

(The pages referred to follow:)

DEPARTMENT OF INSURANCE

ALL APPROPRIATIONS, $50,251,000

Summary

For fiscal year 1964 $50,251,000 is requested. This amount represents a decrease of $7 million from fiscal year 1963 and $12 million from fiscal year 1962.

The requirements are classified into two categories: Viz, "General operating expenses" and "Veterans' insurance and indemnities." The tabular statement that follows is a summary of actual amounts appropriated in fiscal year 1962, the requirements for fiscal year 1963, and the requested appropriations for fiscal year 1964:

Summary of requirements

Appropriation title	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate
General operating expenses: Funds required—Total	$23,458,173	[1] $25,082,000	$20,091,000
Transfer from veterans special term insurance fund (Public Law 87-223)	−220,512	−40,000	−40,000
General operating expenses requirements	23,237,661	25,042,000	20,051,000
Veterans insurance and indemnities appropriation	39,200,000	32,000,000	30,200,000
Total, appropriations	62,437,661	57,042,000	50,251,000

[1] Includes proposed supplemental request of $713,000 covering pay increases and postal rate increases (Public Law 87-793).

The amounts requested under the general operating expenses appropriation provide for costs of administering and operating the insurance programs authorized by law (title 38, United States Code). In addition to the insurance programs, the Department is responsible for the servicemen's indemnities program (budgeting, accounting for, and paying running awards). Administering article IV of the Soldiers' and Sailors' Civil Relief Act of 1950 (guaranteeing premium payments to insurance companies on private life insurance policies carried by servicemen during active military service) is another responsibility of the Department.

The amounts under the veterans insurance and indemnities program provide for statutory payments to the U.S. Government life insurance fund, the national service life insurance fund, and the service-disabled insurance fund, and for direct payments to veterans and their beneficiaries under military and naval insurance, national service life insurance, and indemnities installments on death claims.

The insurance programs include: U.S. Government life insurance that originated during World War I (USGLI), national service life insurance that had its inception during World War II (NSLI), and the two programs created during the Korean conflict by amendments to the basic National Service Life Insurance Act (veterans' special term insurance and service-disabled veterans insurance).

The following statistical data shows the number of policies in force, the total face value of such policies, and the income, disbursements, and total assets for the various funds of the insurance programs.

[In millions]

Program	Policy data, June 30, 1962		Revolving and trust fund data		
	Policies in force	Face value	Fiscal year 1962 income	Fiscal year 1962 disbursements	June 30, 1962, fund assets
U.S. Government life insurance	0.29	$1,287	$80	$129	$1,137
National service life insurance	5.01	32,573	749	672	6,240
Veterans special term insurance	.65	5,758	30	44	89
Service-disabled veterans insurance	.05	433	5	7	2
Total	6.00	40,051	864	852	7,468

Mr. EVINS. Who is the Chief of Insurance? Tell us about the number of policies in effect, national service life insurance, various other insurance programs.

Mr. BUDD. From World War I we had less than 300,000 policies in force now with a face value of $1,287 million national service life we have 5 million policies in force of over $32,500 million. We had the veterans' special term—essentially the Korean insurance—we have 650,000 policyholders with $5.7 billion, and the service disabled we have 50,000 policyholders with $433 million.

Mr. EVINS. You have a whole lot of figures there that are not shown in this.

Mr. GLEASON. In 15–3, Mr. Evins.

TOTAL POLICIES IN FORCE

Mr. EVINS. Number of policies in force?

Mr. BUDD. 290,000, sir.

Mr. EVINS. For a face value of $1,287 million. National service life is 5 million, at a face value of $32,573 million.

Mr. GLEASON. For the Korean veteran, there were 650,000 policies.

Mr. EVINS. This is special term insurance.

Mr. GLEASON. Yes, sir, for a total of $5,758 million.

Mr. EVINS. Making a grand total of——

Mr. BUDD. Six million policies and over $40 billion.

Mr. GLEASON. That is the face value of the insurance.

Mr. EVINS. That is the largest insurance company in the world; is it not?

Mr. GLEASON. No, sir, the third largest.

SOURCES OF INCOME—DISBURSEMENTS

Mr. EVINS. $864 million is the income per year, premium payments on these policies?

Mr. BUDD. And interest earnings, sir. There are two sources of income, premium payments and interest earnings.

Mr. EVINS. Disbursements are $852 million.

Mr. BUDD. Yes, sir, for 1962.

Mr. EVINS. Why can't you make those disbursements level out with the income? That does not balance.

Mr. BUDD. Yes, sir. The disbursements are heavier than normal in 1962. This is the year we had a special dividend also.

ANNUAL REPORT—INSURANCE

Mr. EVINS. Are there any questions on the insurance? I will ask that the tabulation in the annual report be included on insurance at this point.

Mr. GLEASON. Pages 90 and 91 and 92?

Mr. EVINS. Put in pages 87 through 92.

(The pages referred to follow:)

INSURANCE

MISSION

The Veterans' Administration administers four distinct life insurance programs for the benefit of veterans, servicemen, and their beneficiaries. These are:

(1) U.S. Government life insurance.
(2) National service life insurance.
(3) Veterans special life insurance.
(4) Service disabled veterans insurance.

The first two programs (USGLI–NSLI) are generally associated with veterans of World Wars I and II, respectively. The latter two programs (VSLI–SDVI) are generally identified with veterans of the Korean conflict.

HIGHLIGHTS

Productivity reached a new high of 1,760 policies serviced per employee.

Preparations were made to convert the balance of the insurance accounts to a magnetic tape operation.

A special dividend amounting to over $36 million was paid to about 470,000 VSLI policyholders who had converted or exchanged their original policies.

Beneficiaries of deceased policyholders were paid more than $369 million.

Total assets of all the insurance funds as of June 30, 1962, amounted to about $7½ billion.

GENERAL

The first Government life insurance program was authorized 45 years ago. War-risk insurance—yearly renewable term—was established in October 1917. The U.S. Government life insurance program was initiated in May 1919. This program permitted policyholders of yearly renewable term to convert their policies to permanent plans of insurance. In June 1926, term insurance was added to the USGLI program. Policyholders of USGLI participate in dividends (gains and savings derived from favorable mortality experience and excess interest earnings over and above the reserve requirements).

National service life insurance was authorized on October 8, 1940. This insurance is also participating and provides both term and permanent plans. NSLI was available to servicemen who served in the Armed Forces between October 8, 1940, and April 25, 1951, and to veterans from August 1, 1946, through April 25, 1951.

In April 1951 two more programs were authorized. These were VSLI (veterans special life insurance), available until December 31, 1956, and SDVI (service disabled veterans insurance) which is still available. Both of these programs are normally nonparticipating although a special dividend was authorized by legislation for the VSLI program during fiscal year 1962. VSLI was

generally provided for veterans without service-connected disabilities, while SDVI is available only to those with service-connected disabilities.

A separate fund has been established in the U.S. Trasury for each of these programs. Each fund is credited with its own premium and interest payments as well as other income, and each is similarly debited with its own disbursements.

The administrative cost of these programs is borne by the Government. Claims against USGLI and NSLI policies which are traceable to the extra hazards of military service are also paid by the Government.

EMPLOYMENT AND WORKLOAD

The magnitude of the VA's insurance operating workload is directly related to the number of policies maintained by field stations. Policies in force reached a peak of 16 million in 1945. However, with the start of demobilization in that year and during the next 5 years, many veterans allowed their insurance to lapse. In 1950 insurance in force had declined to about 6.1 million policies. From fiscal year 1950 through fiscal year 1962, except for the period of the Korean conflict when a large number of new issues were recorded, the number of policies in force from year to year was relatively stable. The average number of policies maintained for this 12-year period was over 6 million with a face value of $40 billion.

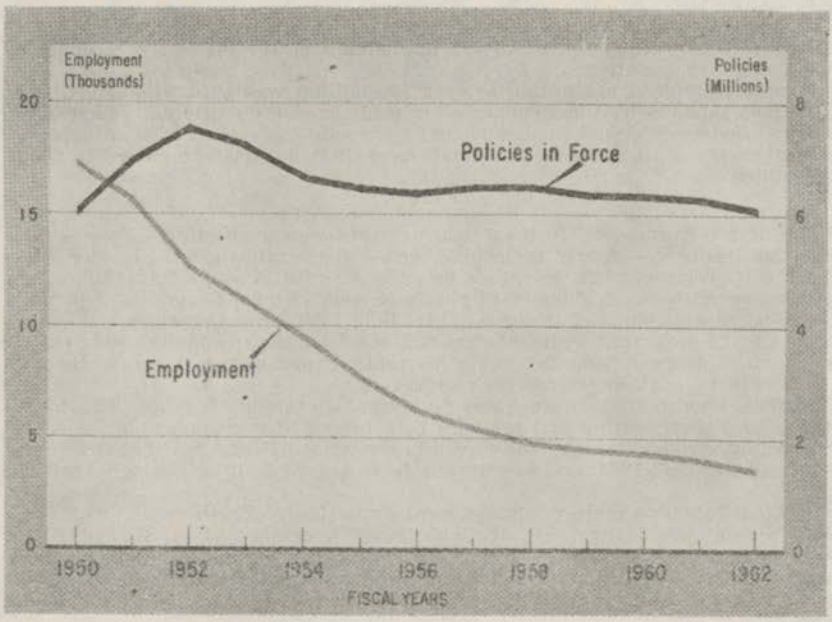
During the same period, 1950–62, total insurance employment declined from an average of 17,432 in fiscal year 1950 to an average of 3,439 for fiscal year 1962. Thus, in 1950, 1 employee was needed to service about 350 insurance accounts. Today, 1 employee services about 1,760 accounts—5 times the number service only 12 years ago. Several major factors contributed to this accomplishment:

(1) Reorganizations combined with the consolidation of field stations.

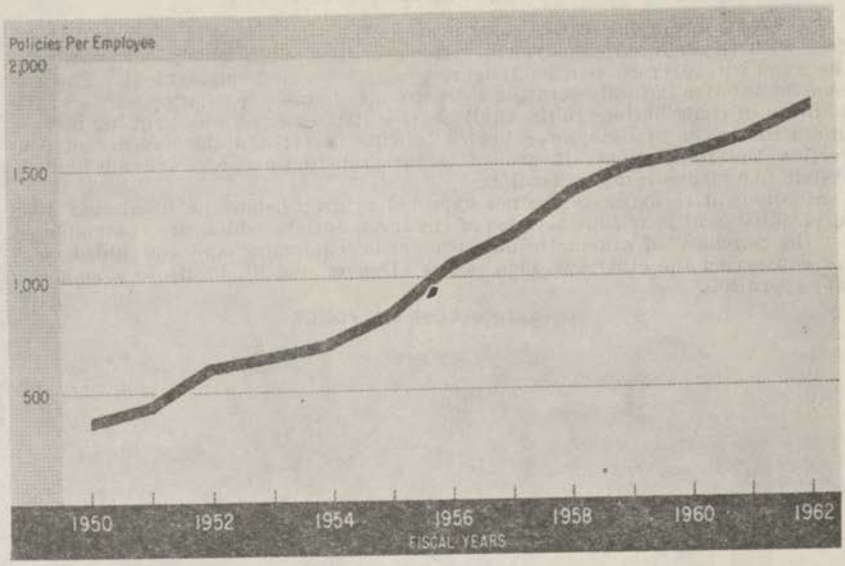
(2) The many improvements and refinements to operating procedures, systems, and methods, including the use of the latest mechanical and electronic equipment. The manual system gradually gave way to a combined manual-punched card mechanized system. This, in turn, was succeeded by a magnetic tape operation which services about 3.7 million accounts.

(3) Increased employee productivity attained through training and experience.

EMPLOYMENT AND WORKLOAD TRENDS

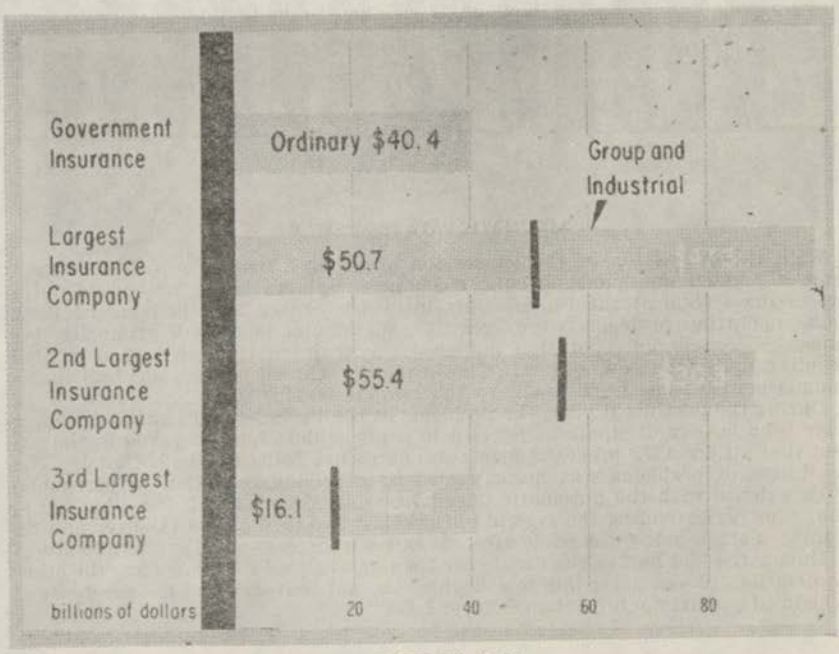


POLICIES SERVICED PER EMPLOYEE



Based on total amounts of insurance in force, the Department of Insurance is the fourth largest insurance operation in the United States. With group and industrial insurance excluded from commercial company totals, the Department of Insurance ranks third.

COMPARISON OF INSURANCE IN FORCE



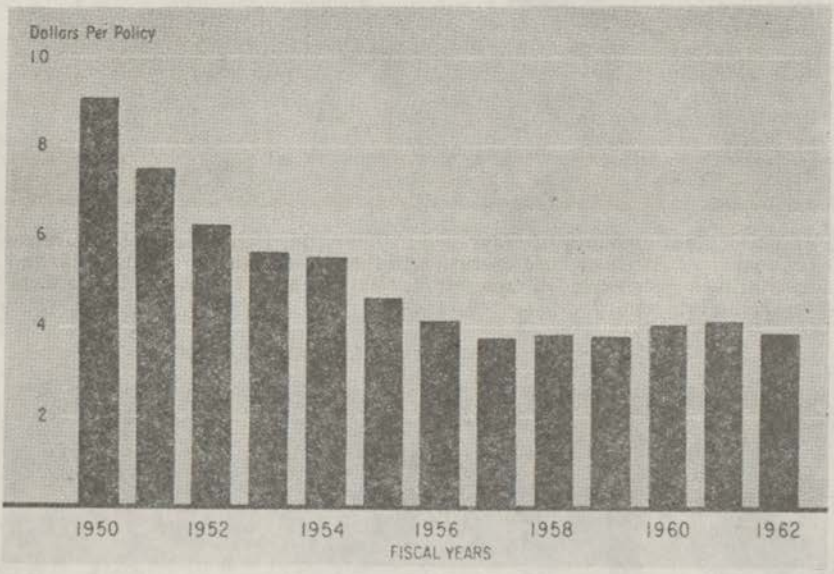
DECEMBER 31, 1961

ADMINISTRATIVE COSTS

The trend in administrative costs over the 1950–62 period has generally kept pace with the reduced employment. However, beginning with fiscal year 1958, the trend was reversed, to a small degree, despite lowered employment. The reasons for the rise in total operating costs are attributable to salary increases; the addition of contributions to the Civil Service Retirement Fund, printing and reproduction costs and employee health benefits costs; and the expense of converting the Philadelphia insurance center from a punched card mechanized system to a magnetic tape operation.

Administrative expenses are not expected to drop below the fiscal year 1958 level until fiscal year 1964 because of the large outlays which are contemplated for the purchase of automatic data-processing equipment and the added costs for converting the other two field offices (Denver and St. Paul) to a magnetic tape operation.

OPERATING COST PER POLICY



AUTOMATIC DATA PROCESSING

With the completion of the conversion of about 3.7 million NSLI accounts from a manual and punched card mechanized system to an automatic data-processing system at the Philadelphia insurance center in September of 1960, many operating problems were created. Workloads increased, primarily, because the conversion operation outpaced the training that clerical personnel required under the new system. The heavier workload caused backlogs to accumulate with some impairment to the normal service to policyholders.

During the past fiscal year, the problems at the Philadelphia insurance center have been largely dissipated. Service to policyholders has improved to the extent that all pre-ADP processing-time standards are being met or bettered. The resolution of problems was accompanied by a steady reduction in personnel.

Experience with the automatic data-processing system at Philadelphia led to the plans for extending the system to the other two field offices (Denver and St. Paul). This decision was made after an extensive agency ADP evaluation study.

During the last half of the fiscal year the preparations for converting the other two stations moved according to schedule. Actual conversion of the records was scheduled to start not later than October 1, 1962.

The plans involved the establishment of a data-processing center at Philadelphia equipped with a single large-scale computer to operate in conjunction with small-scale computers in the insurance offices at Philadelphia, Denver, and St. Paul. The latter two office systems will be linked with the data-processing center by high-speed magnetic tape-to-tape data transmission.

The full conversion operation is scheduled for completion by June 30, 1963. Following conversion, the three insurance offices will have compatible systems of operation with similar functional responsibilities.

PAYMENTS OF INSURANCE BENEFITS

Payments in the form of policy dividends, matured endowments, cash surrenders, and disability benefits are made to policyholders of Government life insurance. Other payments are made to beneficiaries of deceased policyholders. These payments are substantial and, spread throughout each of the Nation's 50 States, have a significant effect on the national economy.

From the inception of the insurance programs through fiscal year 1962, payments in excess of $17 billion have been made to living policyholders and beneficiaries.

During fiscal year 1962, $369 million was paid to beneficiaries, $337 million in dividends to policyholders (including the $36 million special dividend payment on VSLI), $30 million in benefits to disabled policyholders, $25 million in surrendered policies, and $20 million in matured endowments.

Mr. JONAS. Will the gentleman yield?

Mr. EVINS. Mr. Jonas is recognized.

Mr. JONAS. You operate this insurance business at a cost of $50 million a year?

Mr. BUDD. No, sir, the budget for the general operating cost is $20 million. The $30 million is for appropriations provided by law, direct payments, extra hazards and such.

ADMINISTRATIVE EXPENSES FOR LIFE INSURANCE PROGRAMS

Mr. JONAS. The general operating expense is $20 million?

Mr. BUDD. Yes, sir.

Mr. JONAS. Is that out of appropriated funds?

Mr. BUDD. Yes, sir.

Mr. JONAS. No part of that is paid by the policyholders?

Mr. BUDD. No, sir, by law the Congress has provided the administrative cost be paid by appropriation.

Mr. GLEASON. Mr. Jonas, this is the lowest operating cost per policy of any insurance company.

Mr. JONAS. Have you given any consideration to recommending a change in the law, to let these expenses come out of the insurance?

Mr. GLEASON. Yes, we have, if the House and the Senate pass the reopening of the national service life insurance bill. Anyone who would then take out their insurance would have to pay the administrative cost.

Mr. DRIVER. On existing policies it has been decided that it would not be possible because of the contractual nature. It was considered several times by the committee in the House. They have always withdrawn from doing it because of those reasons.

Mr. BUDD. GAO even went to the Department of Justice.

Mr. GLEASON. If it were to be reopened, Mr. Jonas, then the veteran would pay the administrative cost.

Mr. JONAS. That would apply only to the veterans who take out the new policy?

Mr. GLEASON. Yes. The Administrator would have the authority either to increase that or decrease it depending upon the actual cost.

GENERAL OPERATING EXPENSES, DEPARTMENT OF INSURANCE

Mr. EVINS. Place in the record pages 16–1 through 16–10.

(The pages referred to follow:)

DEPARTMENT OF INSURANCE

GENERAL OPERATING EXPENSES, $20,091,000

General statement

The Department of Insurance is responsible for providing services and insurance benefits to policyholders and their beneficiaries under the existing insurance programs authorized by law. The basic functions are:

1. The operations in connection with maintaining insurance accounts including:
   (*a*) Receipting and accounting for all monies received for credit to funds and appropriations.
   (*b*) Authorizing and certifying for payment applications for loans, surrender of policies for cash and matured endowments.
   (*c*) Authorizing reinstatements, refunds, dividend payments, and renewals under certain prescribed conditions.
   (*d*) Examining and certifying insurance death and disability vouchers for payment from funds and appropriations.

(2) Approving, rejecting, or disapproving applications for life insurance and total disability income riders and contract changes.

(3) Adjudicating, granting, or denying claims for insurance disability benefits.

(4) Determining liability of the national service life insurance and U.S. Government life insurance funds under the extra hazards provisions of law.

All of the insurance accounts in the Philadelphia insurance center, except USGLI accounts, were maintained under the automatic data processing system during fiscal year 1962. Conversion of the western offices' insurance accounts to automatic data processing will be completed in fiscal year 1963. The Denver office conversion began September 10, 1962, and will be completed by April 10, 1963. The St. Paul office began conversion November 1, 1962, and will be completed by about May 31, 1963. The conversion cleanup operations are scheduled to be completed by October 10, 1963, at Denver, and November 30, 1963, at St. Paul. Reorganization of the two western offices (in line with automatic data processing operations) will be completed in fiscal year 1964 after completion of conversion.

Loans, cash surrenders, and insurance notice of death claims will be primarily processed on computers during 1964. A minor portion of these items will be processed manually.

Insurance awards and actuarial data are planned to be converted to magnetic tape in the budget year.

The estimated budget requirements show reductions in average employment of 11.5 percent in fiscal year 1963 (from fiscal year 1962) and 13.2 percent in fiscal year 1964 (from fiscal year 1963). These man-year savings result from the changeover to automatic data processing, continued improvements in systems and procedures, and increases in employee productivity and workload decreases.

The estimated requirement of $20,091,000 in fiscal year 1964 is $4,991,000 less than the fiscal year 1963 requirement of $25,082,000. Fiscal years 1963 and 1964 cost estimates include, respectively: $627,000 and $1,035,000 for pay increases and $86,000 and $173,000 for postal rate increases under recently enacted legis-

lation (Public Law 87-793). The 1964 estimated costs are considerably lower than the 1963 estimated costs because of: (1) projected personnel reductions and increased productivity in all offices in fiscal year 1964, (2) the conversion of the western offices' insurance accounts to automatic data processing in 1963 at an additional cost of $870,000, and (3) the purchase of automatic data processing equipment in 1963 at a net cost of $2.8 million. The automatic data processing equipment purchase in 1963 includes one large digital computer and one small computer for the Philadelphia offices, one small computer for the Denver office, and a small computer system printer for the St. Paul office. The estimated rental of equipment requirements in 1964 (after conversion of the western offices and the purchase of the automatic data processing equipment) is slightly under $0.6 million compared to about $1.5 million in 1962. The rental decrease of slightly over $0.9 million with increased maintenance of equipment costs of less than $0.1 million gives a net savings in excess of $0.8 million in the budget year.

The actual and estimated average employment and costs for fiscal years 1962, 1963, and 1964 are as follows:

Average employment	Fiscal year 1962, actual	Fiscal year 1963, estimate	Fiscal year 1964, estimate	Increase (+) or decrease (−), 1964 over 1963
Conversion of western offices accounts to automatic data processing		55		−55
Regular operations	3,439	2,988	2,641	−347
Total employment	3,439	3,043	2,641	−402
Costs:				
Conversion of western offices accounts to automatic data processing		$870,000		−$870,000
Regular operations	$23,458,173	24,212,000	$20,091,000	−4,121,000
Total costs [1]	23,458,173	25,082,000	20,091,000	−4,991,000

[1] Includes requirements for fiscal year 1963 and fiscal year 1964 pay increases and postal rate increases: fiscal year 1963, $627,000 for pay increases and $86,000 for postal rate increases; fiscal year 1964, $1,035,000 for pay increases and $173,000 for postal rate increases (Public Law 87-793).

Comparative summary of requirements by detailed object and subobject of expenditure

	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated	Increase (+) or decrease (−), 1964 over 1963

Plus common services	100	79	79	
Net average employment	3,439	3,043	2,641	−402

Personal services requirements for all measureable activities, including those under the ADP system, are determined by applying work performance standards to anticipated workloads. The standards have been validated to insure consistency with required quality as well as with effective production. Operations are retested and new standards developed throughout each year to keep them in line with improvements from procedural and computer programing changes and increased employee effectiveness. Other work measurement techniques are used for developing staffing consistent with overall requirements in nonmeasurable areas.

See summaries of major workloads on pages 16–18 and 16–20.

Man-year requirements for work volumes which increase are more than offset by reductions in clerical work because of ADP. For example, clerical and mechanical operations in connection with billing, premium posting, dividend payments, renewals, and lapses will be processed by the computer. The processing of many other actions is greatly simplified by the use of the computer.

EMPLOYMENT LEVELS—INSURANCE

Mr. EVINS. In 1962 you had 2,449 employees, in 1963, 2,080, and in 1964 it is estimated to have 1,707, or a decrease of 373 employees in the Insurance Department.

Mr. GLEASON. What page was that on?

Mr. EVINS. 16–17. That is an impressive table.

Mr. GLEASON. We have more than that in the whole Department.

Mr. DRIVER. That is the field operation.

Mr. GLEASON. We have more than 373 that are going to be dropped.

Mr. DRIVER. In those functions, that is all there is.

Mr. GLEASON. I want to be sure it is understood.

Mr. DRIVER. At the beginning it is more.

Mr. GLEASON. Just so the record will be clear, Mr. Evins, I would like to point out that on page 16–3, the total employment will be reduced by 402 in the Department of Insurance.

Mr. EVINS. That is in the record.

Mr. THOMAS. What the Administrator is telling you is he wants it repeated.

Mr. GLEASON. Yes, sir. I would like to have that underlined.

Mr. EVINS. We think you are doing a good job in the Insurance Department.

VETERANS INSURANCE AND INDEMNITIES

Mr. EVINS. Place pages 17–1, 2, and 3 in the record on veterans insurance and indemnities.

(The pages referred to follow:)

DEPARTMENT OF INSURANCE

VETERANS INSURANCE AND INDEMNITIES, $30,200,000

The "Veterans Insurance and Indemnities" appropriation provides funds for military and naval insurance, national service life insurance, Servicemen's Indemnity Act of 1951, and service-disabled veterans insurance fund.

A comparison of actual and estimated requirements for each of the program activities for fiscal years 1962, 1963, and 1964 is shown in the following tabular statement:

Comparison of program costs

	1962 actual	1963 estimate	1964 estimate
1. Military and naval insurance:			
(a) Payment to U.S. Government life insurance fund	$166,114	$195,000	$195,000
(b) Direct payments to policyholders and beneficiaries	2,890,251	2,720,000	2,590,000
2. National service life insurance:			
(a) Payments to national service life insurance fund	6,885,153	9,725,000	8,555,000
(b) Direct payments to insured and beneficiaries	852,060	845,000	864,000
3. Service-disabled veterans insurance: Payment to service-disabled veterans insurance fund	1,300,000	2,000,000	2,700,000
4. Servicemen's indemnities: Payments to beneficiaries	29,141,207	23,177,310	16,115,724
5. Other expense	17,810		
6. Acquisition of loans and liens, net	47,885	85,000	95,000
7. Less payments effected by income offset	−7,694		
Total program (obligations)	41,292,786	38,747,310	31,114,724
Unobligated balance brought forward	−7,480,231	−6,102,034	−114,724
Change in unappropriated receipts	3,196		
Unobligated balance carried forward	6,102,034	114,724	
Required new obligational authority	39,917,785	32,760,000	31,000,000
APPROPRIATIONS			
Annual definite: Veterans insurance and indemnities	39,200,000	32,000,000	30,200,000
Permanent indefinite: Veterans insurance and indemnities	717,785	760,000	800,000
Total appropriation	39,917,785	32,760,000	31,000,000

The expenditures under military and naval insurance are expected to decrease in excess of $100,000 in fiscal year 1964 over fiscal year 1963.

There will be an increase in the requirements for national service life insurance in 1963 and 1964 over the 1962 expenditures. The estimated transfers for gratuitous death claims are much higher in fiscal years 1963 and 1964 due to recent court decisions resulting in payment of gratuitous insurance to otherwise qualified illegitimate children. There are no firm figures on which to base an estimate of the increased requirements. The costs have been estimated, however, in excess of $5 million. Accordingly $3 million and $2 million, respectively, have been added to the fiscal year 1963 and 1964 normal estimates for transfers on gratuitous insurance.

The servicemen's indemnities running award cases averaged 27,644 for fiscal 1962. The number of award cases are decreasing annually as installment payments are completed. The fiscal year 1963 expenditures are expected to be $23.2 million. The estimated requirements for fiscal year 1964 are $16.1 million.

There is an increase in the number of policies and claims each year in the service-disabled veterans insurance program. Death claims and refunds exceed premium payments each year due to medically substandard insureds. The need will continue for appropriated funds to supplement premium income. The estimated appropriation for fiscal year 1964 is $2.7 million.

Insurance Funds

Mr. Evins. Insert the material in the record pertaining to the various insurance funds.

(The material referred to follows:)

Service-Disabled Veterans Insurance Fund

This revolving fund was established to record financial data pertaining to nonparticipating insurance issued under section 620 of the National Service Life Insurance Act of 1940, as amended (38 U.S.C. 722). This insurance is available to veterans with a service-connected disability which makes them ineligible for

commercial insurance. It is estimated that the number of policies in force will increase from 49,577 at June 30, 1962 to 55,800 at June 30, 1964.

Fund requirements are completely uncontrollable administratively due to the medically substandard lives insured. Fund payments have exceeded the income, resulting in capital impairment. Restoration thereof is made by payments from veterans insurance and indemnities appropriation.

Administrative expenses are paid from the general operating expenses appropriation.

Statements of income and expense, and of financial condition for past, present, and budget year follow.

Revenue, expense and retained earnings

	1962 actual	1963 estimate	1964 estimate
Insurance program:			
Revenue	$5,470,999	$5,857,681	$6,228,410

Soldiers' and Sailors' Civil Relief Fund

This revolving fund was established to record financial data pertaining to Government guarantees to commercial life insurance companies under article IV of the Soldiers' and Sailors' Civil Relief Act of 1940, as amended. Servicemen may defer payment of premiums while they are in service and for 2 years after discharge. The Government guarantees the payment thereof to the commercial insurance companies if the serviceman defaults.

Any payment by the Government, on cases approved subsequent to the October 6, 1942, amendment of the act, becomes a debt owed to the Government by the insured.

In fiscal year 1962, 20 settlements (payments to commercial insurance companies under guaranteed policies) were made in the total amount of $20,535; 70 settlements totaling $52,500 are estimated for fiscal year 1963; and 30 settlements totaling $22,500 are estimated for 1964. Repayments are estimated at $3,000 for 1963 and for 1964.

Statements of income and expense, and of financial condition for the past, current, and budget years follow.

Veterans' Special Term Insurance Fund

This revolving fund was established to record financial data pertaining to the nonparticipating term insurance issued under section 621 of the National Service Life Insurance Act of 1940, as amended (38 U.S.C. 723). This insurance was available to veterans who served in the Armed Forces subsequent to April 1951 and who applied for coverage within 120 days after separation from service.

Under Public Law 85-896 (72 Stat. 1716) two additional basic plans were authorized:

(*a*) Permanent plan insurance.

(*b*) Term insurance unrenewable beyond age 50.

Policyholders were given the right to convert their present insurance to a permanent plan or to exchange for the new form of term insurance. Those who converted to a permanent plan also acquired the right to purchase total disability income coverage with an additional premium of $10 per month per $1,000 of insurance (38 U.S.C. sec. 715). The premium rates under the new form of term insurance were less than for the unlimited term insurance.

The fund has an accumulated surplus in excess of its anticipated liabilities. Provision was made (75 Stat. 495) for a onetime distribution of this surplus by payment of a special dividend to policyholders whose insurance was in force during November or December 1960 to January 1961 if they have a permanent or limited term plan or convert from unlimited term to permanent or limited term before September 14, 1963. The dividend will also be paid on unlimited term policies which mature by death on or after the November 1960 premium due date and before September 1963.

Administrative expenses of the program are charged to the "General operating expenses appropriation," Veterans' Administration.

Statements of income and expense, and financial condition for the past, current and budget years are included below.

National Service Life Insurance Fund

This trust fund was established in 1940 as the financing mechanism for the World War II servicemen's and veterans' insurance program authorized by the National Service Life Insurance Act of 1940. Over 22 million policies have been issued under this program. Of these, 5 million, totaling $33 billion, remain in force. In 1951 the fund was closed to new issues.

Fund assets total $6,240 million as of June 30, 1962. These consist almost entirely of interest-bearing U.S. securities and policy loans. Policy obligations of $5,721 million and current liabilities of $319 million, total $6,040 million in liabilities. Earnings of $200 million are retained as a reserve for contingencies; $90 million of this is being applied to a special dividend in 1963. An estimated income excess over payments will increase the fund assets to $6,420 million as of June 30, 1964.

Income of the fund is derived from premium receipts, interest on investments, amounts left under optional income settlements, and transfers from the veterans' insurance and indemnities appropriation.

The fund is operated on a commercial basis to the greatest extent possible consistent with law. Administrative expenses are charged to the general operating expenses appropriation.

Statements of financial condition for the past, current, and budget years are included below. Fund operating reserves are presented as liabilities on the statements.

U. S. GOVERNMENT LIFE INSURANCE FUND

This trust fund was established in 1919 to record financial data pertaining to converted insurance issued under the War Risk Insurance Act of September 2, 1914, as amended. The fund was closed to new issues in April 1951. Of the approximate 1,150,000 USGLI policies issued, 291,200 remain in force at June 30, 1962.

Fund assets of $1,137 million as of June 30, 1962, primarily represent investment in interest-bearing securities and policy loans. Actuarially computed policy obligations of $1,076 million and current liabilities of $24 million total $1,100 million. Earnings of $36 million are retained as a reserve for contingencies. A $43-million decrease in assets by June 30, 1964, is estimated due to an anticipated increase in policy maturements.

Income of the fund is derived from premium receipts, interest on investments, amounts left under optional income settlements and transfers from the "Veterans insurance and indemnities" appropriation, for claims (*a*) resulting from the extra hazards of the insured veteran's service, and (*b*) arising on policies held by personnel on active military duty.

The fund is operated on a commercial basis consistent with law. Administrative expenses are charged to the "General operating expenses" appropriation.

Statements of financial condition for the past, current, and budget years are included below. Fund operating reserves are presented as liabilities on the statements.

Mr. EVINS. That is all, gentlemen.

Mr. THOMAS. Are there any questions?

(No response.)

Gentlemen, we will do our best to complete the veterans medical program and the construction program tomorrow. We want to thank all of you for being so very helpful to us. We will meet in the morning at 10.

THURSDAY, FEBRUARY 7, 1963.

DEPARTMENT OF MEDICINE AND SURGERY

Mr. THOMAS. Gentlemen, will the committee please come to order.

We have with us this morning our very able, distinguished, genial friend, Dr. Middleton. He will tell us about his medical program, and then we will go into the construction program later.

Doctor, we are delighted to have you.

GENERAL STATEMENT

Dr. MIDDLETON. Mr. Chairman and gentlemen, thank you for the opportunity to discuss with you the changes in financial needs affecting Veterans' Administration medical programs. The estimate which you now are considering requests appropriation of $1,136,412,000 in the 1964 fiscal year for financing all activities of the Department of Medicine and Surgery, and certain administrative expenses of the Office of the Assistant Administrator for Construction.

This sum is the aggregate amount requested under three separate appropriations, all directly related to medical treatment and care of America's veterans. Of the total, 95.7 percent, or $1,087,688,000 is requested under the "Medical care" appropriation head for maintenance and operation of Veterans' Administration hospitals, domiciliaries, and outpatient clinics; care of eligible beneficiaries in contract hospital facilities; and aid to State or territorial homes for support of veterans eligible for care by the Veterans' Administration.

Less than 3 percent of the total, or $33,742,000 is requested for programs of medical research and prosthetic testing and development. For these activities, the appropriation again is requested under the "no year" funding arrangement.

Slightly more than 1.3 percent of the total, or $14,982,000 is requested under the "Medical administration and miscellaneous operating expenses" appropriation for the administration by central office and area medical offices of all medical programs of the Veterans' Administration; a program of education and training to support the medical care programs; and technical staff and services required for the agency's construction program.

For all medical programs, this budget request provides an increase of $42,153,000 over our current estimate of fiscal year 1963 needs. Of the $42,153,000 increase, $35,814,000, or 85 percent, will be required for continuance of operations at fiscal year 1963 levels. This sum of $35,814,000 will merely meet the costs of the additional 2 paid workdays and 1 calendar day occurring in fiscal year 1964, the higher salary and postal rates authorized by Public Law 87-793, and within grade salary increases. Only $6,339,000, or 15 percent of the total increase, relates to workload or other program changes, including the planned activation of new medical facilities.

Mr. THOMAS. That is a significant figure.

Dr. MIDDLETON. The Administrator has summarized most ably the needs for increased medical program appropriations in fiscal year 1964. These needs are presented in extensive detail in the narrative justifications now before you. Therefore, I shall confine my remarks to items of the medical requirements which are believed to be of special significance to this committee. The highlights of planned changes in the scope and cost of individual medical programs are as follows:

MEDICAL CARE

Appropriation requirements of $1,087,688,000, plus $5,200,000 estimated reimbursements, are forecast for the medical care programs in fiscal year 1964. This sum consists of $100,149,000 for outpatient activities, including hometown care—actually, some 37,000 physicians

in this country participating in this hometown program and that is added to by 2,000 of our friends in the other fields.

Mr. THOMAS. I notice your fees went up.

Dr. MIDDLETON. Yes, sir. Osteopaths, 2,000, and then 37,000 regular physicians.

For transfer to the General Services Administration for space rentals, $24,000; and $992,715,000 for inpatient activities. The latter item, in addition to providing for requirements of Veterans' Administration hospitals and domiciliaries, includes reimbursable payments to civil, municipal, State, and other Federal contract hospitals and State homes.

The estimate provides an increase of $38,323,000 over presently anticipated fiscal year 1963 net operating costs. The increased costs of the medical care programs are comprised broadly of (*a*) $7.1 million for the additional 2 paid workdays and 1 calendar day occurring in fiscal year 1964; (*b*) $27 million for Public Law 87-793 and within grade salary increases, and (*c*) $4.2 million for equipping and activating new medical facilities. There are a number of other program requirements detailed in the estimate involving Bureau of Employees Compensation payments, increased usage of utilities, drugs, and equipment, and changes in contract hospitalization and medical and dental fee rates which produce increased appropriation requirements of $9,000 net, after considering changes in anticipated reimbursement collections and wage board adjustments.

The outpatient workloads for fiscal year 1964 contemplate 3,728,000 medical visits and completion of 39,300 dental examination and 31,750 dental treatment cases. The average daily beneficiary load to be furnished care and treatment on an inpatient basis is estimated at 139,055, comprised of 111,025 in Veterans' Administration hospitals; 16,111 in Veterans' Administration domiciliaries; 2,819 in contract hospitals; and 9,100 in State soldiers' homes.

During the 1964 fiscal year, the agency will occupy new hospital facilities at Cleveland, Ohio; Martinez, Calif., and Washington, D.C., in addition to completing the activation of the new 1,000 bed neuropsychiatric hospital at Brecksville, Ohio. Test of the Restoration Center program will be expanded to include a new 200 bed facility at East Orange, N.J. In this program, special restorative training will be afforded certain beneficiaries who have received maximum hospitalization benefits to fit them for more purposeful and independent living. The Restoration Center program will emphasize restoration and outplacement of disabled veterans, and serve to make more hospital beds available for those in need of hospitalization.

For the outpatient program, activation of a new audiology clinic at the Veterans' Administration hospital, Oklahoma City, Okla., is scheduled for fiscal year 1964. Five additional psychiatric day care centers also planned for activation in fiscal year 1964 will be located at the VA Center, San Juan, P.R., VA Center, Des Moines, Iowa; VA hospital, Palo Alto, Calif.; VA hospital, Waco, Tex., and the VA regional office, Louisville, Ky. Consolidation of outpatient clinics into hospital settings also are planned at Syracuse, N.Y.; Cleveland, Ohio, and Washington, D.C. This will provide a broader range of medical services to the service-connected outpatients served by these clinics.

The prebed and postbed care programs authorized under Public Law 86–639, together with improvements in hospital staffing, made possible substantial increases in the numbers of patients admitted, treated, and discharged at VA hospitals in fiscal year 1962. There were over 24,000 more patients treated in agency hospitals that year than in 1961. We predict that the number of patients treated will continue to increase by about 10,000 in each of the fiscal years 1963 and 1964. This is particularly significant since with the aging population the proportion of veteran patients requiring treatment for long-term illnesses and disabilities continues to grow.

After providing for the continuance of basic fiscal year 1963 operating levels at existing medical facilities, virtually all of the additional average employment and funds provided in the 1964 fiscal year estimate must be committed to activate the newly constructed facilities that I have mentioned. The fiscal year 1964 medical care appropriation estimate, in my opinion, represents the most conservative allowance with which agency medical facilities can be operated. We are mindful of the tremendous drain that defense and space requirements and new pay legislation have placed on the national resources. Our fiscal year 1964 estimate recognizes this situation, and provides only for minimal additional treatment staff. I mention this only to emphasize to the committee that requirements will increase in future years if VA medicine is to keep pace with worldwide developments and America's veterans are to receive the treatment to which they are entitled.

MEDICAL AND PROSTHETICS RESEARCH

For fiscal year 1964, the request under the "Medical and prosthetic research" appropriation head totals $33,742,000, comprised of $32,467,000 for medical research and $1,275,000 for "Prosthetic testing and development." In addition, the construction of hospital and domiciliary facilities estimate for fiscal year 1964 includes $3 million for construction of research facilities, not otherwise provided in complete hospital replacement or modernization projects.

The $32,467,000 requested for medical research activities in fiscal year 1964 provides an increase of $2,967,000 more than appropriated for this program in the current year. Of this increase, $1,015,000 will be required to continue operations at fiscal year 1963 levels at the higher salary rates provided by Public Law 87–793 and to pay salaries for the two additional paid workdays. The $1,952,000 remainder of the increase will provide 176 additional employees to undertake new research studies and provide for initial equipment in new research space made available as part of the agency's construction effort.

Mr. THOMAS. Why did you include a construction item here rather than in the construction program for the enlargement of the research facilities?

Mr. MONK. The equipment is in here.

Mr. THOMAS. Construction money is in here too, is it not?

Mr. MONK. It is just for minor alterations. The major construction cost for research is in hospital and domiciliary facilities.

Mr. THOMAS. It is just $3.2 million.

Dr. MIDDLETON. That was authorized last year.

Mr. GLEASON. Mr. Chairman, at least I am under the impression that the Congress gave us permission to include our research costs under this heading.

Mr. THOMAS. I don't recall it.

Dr. MIDDLETON. We were instructed to keep research construction as a separate item.

Mr. THOMAS. Go ahead.

Dr. MIDDLETON. Since enactment of Public Law 729 by the 80th Congress in June 1948, the appropriation for prosthetic research has remained at $1 million each year. Costs of all types have increased markedly since that time, including percentages of overhead charged by contractors. During this period, many research functions formerly supported from other appropriations have been transferred to the prosthetic research program, and costs of new employee fringe benefits have been absorbed within available funds. Thus the scope of work that could be accomplished within the VA prosthetic research program has dwindled steadily.

Approval on August 2, 1962, of Public Law 87–572 removed the annual appropriation authorization of $1 million for prosthetic research. Appropriation of funds for prosthetic research is now authorized as necessary to carry out the program.

Accordingly, an appropriation increase of $275,000 is reflected in this estimate, to provide for total prosthetic research expenditures of $1,275,000 in the 1964 fiscal year. This increase, extremely modest compared to the extent of inflation in research costs, is essential for the Veterans' Administration to continue its major role in this field. The increase specifically is required for average salary increases resulting from Public Law 87–793 and within grade salary advances; increased activity in clinical studies on major devices; intensified studies of aids for the blind; new developments in bracing; further correlation of physical tests of hearing aids with clinical value; and generally, to bring about greater consistency between the level of prosthetic research conducted within the agency and the needs of disabled veteran beneficiaries.

MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES

Appropriation of $14,982,000 under the "Medical administration and miscellaneous operating expenses" appropriation head is requested for fiscal year 1964, consisting of $11,528,000 for Medical Administration; $1,829,000 for the Office of the Assistant Administrator for Construction; and $1,625,000 for a program of education and training to support the medical care programs. This provides an increase of $989,000 over anticipated current year obligations.

The increase is comprised of $82,000 required for the additional two paid workdays occurring in the 1964 fiscal year; $596,000 for Public Law 87–793 and within grade salary increases; and a net increase of $311,000 for specific program changes.

For Medical Administration in fiscal year 1964, an increase of 38 average employment is requested, of which 23 will be required to carry for a full year the 922 employees expected to be on duty in Central Office (617) and area medical offices (305) at the close of the 1963 fiscal year. These are the staffing levels approved by the Independent Offices Appropriation Act for fiscal year 1963. The 15 addi-

tional average employment representing the remainder of the increase is to undertake a study of potentials for outplacement of increased numbers of eligible beneficiaries in nursing homes. The agency proposes to undertake this study at the request of the chairman, Veterans' Affairs Committee, House of Representatives, as endorsed by the Bureau of the Budget.

For education and training activities, a decrease of $125,000 from $1,750,000 in fiscal year 1963 to $1,625,000 in fiscal year 1964 is projected. This is the net result of transferring $225,000 to the medical care appropriation for financing costs of medical illustration laboratories and providing a $100,000 increase for basic education and training activities. The type of staff needed in Veterans' Administration hospitals and clinics can be recruited and retained only if the opportunity for continuing education is made possible. The experience of the agency over the last decade and a half has demonstrated that medical education and training afford the most direct route to improved patient care.

Thank you very much.

Mr. THOMAS. A very nice statement. A very concise statement, and is to the point.

DEVELOPMENT OF MEDICAL RESEARCH PROGRAMS

How long has your research program been in effect?

Dr. MIDDLETON. The year 1946 was the first allotment of funds for this purpose but it was not in a separate sum and was directed toward followup studies.

Mr. THOMAS. Between 6 and 7 years.

Dr. MIDDLETON. Actually, the first moneys applied go back to about 1953.

Mr. THOMAS. The program has certainly grown and I recall vividly the reason for getting in the research business was we took the old original act and put a magnifying glass on it and I think somewhere it mentioned the word "research" once.

I remember the basis for getting into the research field was two very big outstanding things. One, you had the patients. You had a captive audience. The patients were there. Two, you had the records. Of things not needed in research, one is records and the other is patients.

What you really need is biochemists, physicists, chemists, molecular biologists.

What became of this original argument that you had the captive patients there and the records?

I go into a good many research institutions and they even have engineers.

I know of one of the outstanding cancer research institutions of the world, the Children's Hospital of Boston, headed by the eminent cancer research specialist, Dr. Farber. I think out of his very excellent and high-powered staff he has 12, 15, or 18 doctors and maybe 8 or 10 physicists, 8 or 10 engineers, and the rest of them are molecular biologists, biochemists and organic chemists.

Dr. MIDDLETON. Mr. Chairman, your case is well stated. As a matter of fact, the contribution that has come out of the Children's

Hospital, however, has been in the treatment of leukemia in children and the doctor's claim to fame is entirely in that area.

Mr. THOMAS. I want to be the first to say the two best advocates of your program are Dr. Debohke and Dr. Farber.

Dr. MIDDLETON. The international program gave six prizes to the men who made the greatest contributions in the field of cancer research and one was to Dr. Ludwik Gross, of the Bronx Veterans' Administration Hospital, for his work on the isolation of a virus in mouse leukemia.

PREVIOUS OBLIGATIONS FOR RESEARCH

Mr. THOMAS. I wonder how much money you have spent since the installation of this program for laboratory equipment used in research work which has never been set out as a separate item in the budget and how much is spent in the way of construction that hasn't been set out as a separate item for laboratories at the various hospitals. Now, you have set out four or five items this year for the first time.

Mr. BAKER. We would be glad to supply that for the record.

Mr. THOMAS. What is the amount of money involved (1) for construction and (2) for equipment.

Mr. BAKER. So often the construction is intermingled with the construction of other hospital facilities. From 1957 to 1962 we obligated $23,212,000 from the "research and construction" appropriations for projects, including initial equipment, specifically related to research. This does not include costs for research facilities provided as a part of a major modernization or replacement project.

Mr. THOMAS. Most of it has been alteration of existing space, but I gather from this year's justification there will be some additional space. You have 20,000 square feet at New York Hospital at a cost which is a little bit on the high side, and one or two others of about 19,000 square feet and two more at 18,000 square feet.

Dr. MIDDLETON. I direct your attention to the fact that about 85 percent of all the research that is done under the Veterans' Administration is responsive to the diagnostic load. In other words, we are driving hard in many areas as we drive against tuberculosis.

NEUROPSYCHIATRIC RESEARCH

Mr. THOMAS. One of your biggest items of patient load is neuropsychiatric cases. You have the patients right there. What is wrong with that field? We don't know of any field that is further behind in this basic research than mental diseases.

Dr. MIDDLETON. There are 21 added personnel out of our total group to go into that program this next year, and it is supported in the proposed budget to the extent of $3.4 million.

Mr. THOMAS. But the least effort in the Veterans' Administration research program has been applied to neuropsychiatric cases. How about your diagnostic treatment?

Dr. MIDDLETON. Last year you will recall I reported to the committee that we were confronted with the difficulty of recruitment and the difficulty of enlisting interest in this field. That we actually had made very concrete efforts to recruit.

Mr. THOMAS. I remember that distinctly, but I still go back to 7 years ago and the basic argument for getting into the field of research was that you had these patients right there.

Dr. MIDDLETON. We have at the present time four clinical investigators and we have one senior medical investigator in this field. We are training other men to come into the research area but it has not been a favored one among clinicians and research men in general for study. I think because of the difficulties concerned in certain of the problems.

Mr. THOMAS. You are going to have to go back to the field of molecular biology, biochemistry, and the patient being right there doesn't add much in the way of research, does it?

Dr. MIDDLETON. It is very hard to determine mental illness in guinea pigs and hamsters, and I think we have in this study——

Mr. THOMAS. Wait a minute. I didn't quite get the connection between guinea pigs and patients.

Dr. MIDDLETON. These were the instruments of Dr. Farber in Childrens' Hospital in cancer, but in mental disease it is hard to draw an analogy between the lower mammals and the human being so far as research is concerned.

The neuropsychiatric research of which you speak in getting into the molecular area—at the Veterans' Administration hospital in Pittsburgh there is a very important study in this area and then in Sepulveda, Calif., so that we have two laboratories working entirely in this area in the field of psychotherapeutics which has to do with the basic or fundamental disturbances in biochemistry.

INCREASING COST OF HOSPITAL CARE

Mr. THOMAS. What can be done, if anything, about the cost of hospital care? In the last 5 years your medical program has gone up—I am using round figures—about $400 million. For this coming year it is up to $1.1 billion—again round figures. In all that time you have had a limitation of 125,000 beds and at no time has the ADPL been more than 111,000. As a matter of fact you only have 122,000 beds that are available.

What is the answer to it? In round figures you are up to $30 a day now, per bed cost. Five years ago it was around, in your most expensive beds, around $21.50 or $22. That didn't include tuberculosis or mental disease.

I notice in this year's budget you combine tuberculosis under the classification "General."

Dr. MIDDLETON. The picture, as you know, is not peculiar to the Veterans' Administration, Mr. Chairman.

The Army for its general hospitals—we are in Federal general hospitals now—1960, $25.68. And in 1962 fiscal year it was $29.21. The Veterans' Administration in 1960 was $23.97 and this past year $27.08. As you have stated, our costs have gone up and gone up rather generally. They reflect, of course, the increased cost of medical care——

Mr. THOMAS. Your cost and the costs of the armed services are in comparable range. Yours are a little higher and we will not quibble too much about that.

Mr. GLEASON. Ours are lower.

Dr. MIDDLETON. Ours are lower in each case except the Navy.

Mr. THOMAS. What is the general answer to this problem? Is there one?

Dr. MIDDLETON. Presently, of course, the demands have gone up throughout the medical care field. It is not peculiar to the Government. As you know, in voluntary hospitals and municipal State hospitals the costs are going up.

Mr. THOMAS. Is there any answer to this spiral in cost, regardless of whose hospital it is?

Dr. MIDDLETON. Presently they have not found the limitation. We are attempting to contain the costs within our own resources.

Mr. THOMAS. I notice under your research program one of your distinguished investigators came up and was going to take temperatures and blood pressure 30 at a time. I don't want any part of that. He can just keep that saving.

Dr. MIDDLETON. That could be a source of saving. I am speaking from a monetary standpoint.

Mr. THOMAS. Who wants that type of saving?

Has anybody any ideas on it, what the answer is? Is the cost going to keep on going up for the next 10 years, is it going to increase another 50 percent?

Mr. WISE. Mr. Chairman, I believe that relates largely to salary costs. In our hospital system well over 80 percent of our total cost is for salaries. For example in our wage board program since 1955, the date you mentioned, salary costs have risen by about a 35-percent increase. This has held true in the classified and other services as well, and it is certainly common to the medical industry as a whole.

Mr. THOMAS. Of course all of your cost is broken down into two main classifications, "Salaries expenses" and then "Other objects." You are not in the position of making loans or anything else and it is purely operating costs.

PATIENT LOADS

What about your patient load? What is your picture as far as patient load is concerned? You alluded to that two or three times in your statement.

Mr. BAKER. In our own hospitals, Mr. Chairman, in the current year we expect to have about 111,300 average daily patients and next year it will be 111,025, I believe.

In contract hospitalization there will be about 2,900 in 1963 and 2,819 in the 1964 fiscal year; domiciliaries, around 16,500 in 1963 and 16,111 in 1964 in that general area; and State homes, around 9,100. We expect the load to remain fairly stable throughout this year and next with some slight falling off in our own hospitals.

In the meantime, however, we have been taking care of a greater number of patients passing through the system. Our increase in 1962 over 1961 is 24,000 greater than the year before and we expect about 10,000——

OUTPATIENT CARE COSTS

Mr. THOMAS. I know you set that out in tables, but the more I studied the tables the more confused I became.

The outpatient cost is going up, the outpatient clinic cost. How many clinics do you have?

Mr. BAKER. Ninety-three.

Mr. THOMAS. What about your consolidation program? Are you going to consolidate four of your big ones?

Mr. BAKER. Yes, sir.

Mr. THOMAS. We anticipated better service, better medicine, and reduction in cost. What happened to those points?

Dr. MIDDLETON. We realize the first, but on the question of cost obviously we are getting better service because we are able to utilize the facilities of the hospital, the laboratories and X-ray, but then there is increased staffing to take care of the increased load so the personnel factor that has been brought in has obviously outweighed the saving through the better utilization of facilities.

Mr. THOMAS. So practically, then, the consolidation instead of saving money has cost money?

Dr. MIDDLETON. They would have the costs outside and they would have the facilities duplicated as far as physical cost is concerned.

Mr. THOMAS. Well, the overall bill has gone up so it shows that the consolidation cost money rather than saved money, any way you look at it.

Mr. BAKER. It is not directly due to the consolidation, Mr. Chairman. It is due to other factors. The cost has gone up and would have gone up regardless of the consolidation. The salary increases would have applied regardless of that factor. Likewise, the usage of drugs and medicines increases regardless of whether the clinic is consolidated with a hospital or not. It is hard to make a direct comparison there, one versus the other.

Mr. WISE. We have found an average of $50,000 a year savings in the administrative cost where these consolidations take place, but because of the obvious spiraling cost of drugs and additional medical services available in the hospital setting, they certainly don't diminish the direct medical care cost, but we gain much in quality.

Mr. THOMAS. Mr. Administrator, I see you and the doctor removed from the field the seven area offices to the District of Columbia. I think that is good but you just made one mistake. You should have put them back in the hospitals and not here in Washington. Then wrap up your medical area offices and get rid of them.

REMOVAL OF TRAVEL LIMITATION

I noticed in the justification—I am going to read it in the record at the proper point—and it was a very strong statement on travel—to take the limitation off of travel. They pointed out when they need a few dollars for travel at X hospital before X hospital could get it he had to spend more money on a long-distance call to the area office for the permission, and then maybe the area office would in turn come to Washington.

I thought it was a very cogent reason why, if a hospital manager didn't know how to spend a few dollars for travel, that he certaintly ought not to be running the hospital. That is just one little item that struck me rather forcefully when I was reading it.

DELEGATION OF AUTHORITY TO HOSPITAL MANAGERS

We will get into your area medical officers. You have quite a large personnel load there. It appears to me that saving would be of at least a half of the cost of it could be made, at least a half of it, by giving to your local hospital managers under certain guidelines and limitations, authority to run their hospital on a day-to-day basis. How in the world can one man tell another one how to run his hospital sitting up here in Washington or sitting in some other place from 300 to 500 miles from the hospital? The hospital manager has to know how to run his hospital with the amount of money that you give him. If he can't, the thing to do is to get rid of the hospital manager and get another one. There is no shortage of hospital managers.

Well, gentlemen, are there any general questions? If not we will take a look at the specific items.

DIFFERENCE BETWEEN NUMBER OF BEDS AND DAILY PATIENT LOAD

Mr. GLEASON. Mr. Chairman, may I have a moment to go back over a subject that you touched on?

Mr. THOMAS. Mr. Administrator, you may take all the time you want.

Mr. GLEASON. Thank you, sir.

I would like to point out, as the chairman has mentioned, we have a 125,000-bed ceiling but at no time have we utilized more than approximately 122,000 beds. Now, I am sure that the chairman and the members of the committee realize that this unused portion between 122,000 and 125,000 is set aside for the construction and operation of new hospitals as they come into the program, and as far as an average daily patient load of 111,000 is concerned, this is approximately 90-percent occupancy, which is a much higher rate than the occupancy, Mr. Chairman, in civilian hospitals.

One of the reasons why there is this difference between 111,000 and 122,000 also is because of renovations and improvements at hospitals, as well as the fact that we are now forced to operate, and continue to operate, hospitals in various sections of the country where they are no longer economically needed—either for the veteran patient, or for our own system. Because as there have been population changes made throughout the United States, as the Congress knows——

Mr. THOMAS. Why do they do that?

Mr. GLEASON. There may be a hospital in a certain location that may have 400 or 500 beds where there are no waiting lists and relatively low demand.

Mr. THOMAS. How many of those do we have?

Mr. GLEASON. Approximately 11 of them.

Mr. THOMAS. Where are they located?

Mr. GLEASON. I cannot give them offhand, but I can supply them.

Mr. THOMAS. Maybe Mr. Wise can.

Mr. GLEASON. If I could give them to you off the record, I would appreciate it, Mr. Chairman.

Mr. THOMAS. All right.

(Discussion off the record.)

Mr. OSTERTAG. You point out, Mr. Administrator, that you have 111,000 beds occupied.

Mr. GLEASON. This is the average daily patient load.

Mr. OSTERTAG. You do have 122,000 beds operational today?

Mr. GLEASON. Yes, sir; usable.

Mr. OSTERTAG. That is the difference, they are operational but not occupied.

Mr. GLEASON. That is right. Only slightly over 90 percent are occupied.

Mr. OSTERTAG. Which is a good ratio, is it not, from the standpoint of the load as compared to the operation because that is only a 10-percent leeway.

Mr. GLEASON. That is right. This is much higher than civilian hospitals have. My point is that in view of the fact that we are limited to 125,000 beds, if we could relocate some of these beds that are not being used to places where they are really needed we could cut down on our waiting list.

NUMBER OF DOMICILIARY BEDS IN USE

Mr. OSTERTAG. There is a relationship between domiciliary facilities and hospital facilities, is there not?

I do not mean to go into this whole question of domiciliary care but I was wondering about the information that seems to be at hand as to the total domiciliary facilities available for this type of care. I believe you have about 18,000 beds for this purpose.

Mr. GLEASON. Approximately; 16,500 in use, with an authorized ceiling of about 18,000. It is in that area.

Mr. OSTERTAG. Is it fair to state that your requirements are diminishing to a certain extent?

Mr. GLEASON. Yes, sir. We have approximately maybe 15,000 to 16,000 in our domiciliaries at this time.

Mr. OSTERTAG. In other words, you have upward of from 1,500 to 2,000 more domiciliary beds than you currently require?

Mr. GLEASON. That is right.

CONVERTING DOMICILIARY BEDS TO HOSPITAL USE

Mr. OSTERTAG. What about the conversion? Is it not possible to convert them into hospital beds?

Mr. GLEASON. No, sir.

Mr. MONK. They are not in the 125,000 hospital bed ceiling.

Mr. GLEASON. This is in addition to the 125,000 limitation.

Mr. OSTERTAG. Your authorization?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. I am talking about utilization rather than authorization.

Mr. GLEASON. Of course, although most of our domiciliaries are located in close proximity to hospitals; 15 are located at hospital sites. This still is not going to help us a great deal, Mr. Ostertag, I believe.

Mr. OSTERTAG. It would enlarge your capacity at those particular sites; would it not?

Mr. GLEASON. No. We cannot convert domiciliary beds without considerable expense.

Mr. DRIVER. We have done that in Florida. Where the demand is high we have converted them.

Mr. GLEASON. In Florida at Bay Pines we took away domiciliary beds, moved the members to other domiciliary homes and converted those beds to hospital beds, but this came out of our unused portion between the 122,000 and 125,000.

Dr. MIDDLETON. The extent of that action was 250 domiciliary beds were changed to 160 hospital beds.

Mr. THOMAS. At Bay Pines?

Dr. MIDDLETON. Yes, sir.

Mr. OSTERTAG. I visited Bay Pines a month ago. I inspected that conversion and I am of the opinion that it is working out very nicely from that standpoint.

Mr. GLEASON. Because we need them there, Mr. Ostertag, at least until we can get the new Miami Hospital and the Gainesville Hospital erected. When we do that, we may have a different picture.

MODERNIZATION OF BAY PINES HOSPITAL

Mr. OSTERTAG. How about the modernization of Bay Pines?

Mr. GLEASON. As we discussed that the other day with Mr. Jonas, I would like to just refer back to the record on the first day and repeat that if I were positive that a medical school was not going to be located in the Tampa-St. Petersburg area, I think we would then go ahead with Bay Pines. But not knowing this I prefer to wait. From our conversation with Mr. Jonas on the first day, there seems to be some question as to the future with respect to a new medical school in central Florida.

Mr. OSTERTAG. I read a recent news report of the action taken by the State board which indicates that the board did determine in effect that no consideration would be given to a medical school in that region. May I quote from the St. Petersburg Times of January 19, 1963, which reads in part as follows:

> The State board of control yesterday agreed to concentrate on building up the medical school at the University of Florida before giving thought to establishing a second State-owned medical college.
>
> It voted to postpone consideration of a proposal that planning be started toward opening a medical school at the University of South Florida in 1972.
>
> The board acted after University of South Florida president, Dr. John Allen, made a pitch to have a dental college established at the Tampa school. Allen said he thought a second State medical school will be needed and that it should be located at South Florida. The dental college could be established in connection with this new facility, he said.

Mr. GLEASON. This, I think, is an accurate statement that you have made. However, some people have told me that they are sure that the decision of the State board of education applied to the present and that there may well be a difference of opinion and a change as to the future. If this occurs, naturally we would like to be located near the medical school wherever it is.

Mr. JONAS. What is the investment at Bay Pines? What is that hospital worth, including the grounds?

Mr. GLEASON. I would not know. Of course, the grounds, Mr. Jonas, from a real estate viewpoint, are probably worth, I don't know, $20 to $30 million. This is one of the most beautiful sites you would ever find in the United States.

Mr. JONAS. We hear much about environmental therapy. Isn't that good for veterans?

Mr. GLEASON. That is why veterans in our domiciliary program go down to Florida for the winter months.

Mr. OSTERTAG. What I am unable to understand and you may have the answer. In connection with this whole domiciliary picture, you have a situation at Bay Pines where you have found it possible to convert domiciliary facilities into hospital facilities.

Mr. GLEASON. But the beds, if I might interrupt, are hospital beds that come out of our 125,000 ceiling.

Mr. OSTERTAG. But you have reduced the total number of domiciliary beds at Bay Pines.

Mr. GLEASON. That is correct.

Mr. OSTERTAG. What I cannot understand is why there is not a greater demand and need for domiciliary beds in Bay Pines by virtue of the climate and other factors such as increased veteran population in that area of the country.

I do not understand the reason for the decline.

Mr. GLEASON. This would necessitate a construction, Mr. Ostertag, which is what we are trying to avoid, until such time as we find out what the program for Bay Pines will be.

Mr. DRIVER. We had to shift domiciliary members north of Bay Pines to give priority to hospital care.

Mr. OSTERTAG. Then there is a need or demand for domiciliary care that you are not providing at Bay Pines?

Mr. GLEASON. At Bay Pines, yes, sir.

Mr. OSTERTAG. I thought this conversion was brought about by virtue of the decline in demand.

Mr. GLEASON. No, sir, not at Bay Pines. Out of the 18,000 beds we are authorized for domiciliary care, only approximately 15,000 to 16,000 are being used throughout the entire country.

Mr. OSTERTAG. Then that is all the more reason why we should move ahead with this program to bring about the completion of this facility.

RESTORATION CENTER PROGRAM

Mr. GLEASON. It is all the more reason, Mr. Ostertag, why our restoration center program should go forward. We actually believe, and the doctor can correct me if I am wrong on this, that if this restoration program which the Department of Medicine and Surgery has begun on an experimental basis at Hines, Ill., and now at East Orange, N.J., works successfully we can cut the domiciliary program almost in half, or less than in half.

Mr. JONAS. Can you operate that program cheaper than the hospital program?

Mr. GLEASON. We can operate it much cheaper than the hospital program but not as cheap as the domiciliary, Mr. Jonas, because this

is going to be more or less of a rehabilitation program for people out of the hospitals as well as out of the domiciliary program.

Mr. OSTERTAG. If I understand correctly, you now have a restoration center at Hines?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. And too, you have the East Orange facility?

Mr. GLEASON. We will have, sir, on June 30.

Mr. OSTERTAG. Which will be open this year?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. But that is the end of your program so far as planning is concerned.

Mr. GLEASON. Not as far as planning, Mr. Ostertag. I just do not want to go any further in the restoration program until we have more experience. We have plans for approximately 42 restoration centers but I do not want to go ahead with any more at this particular time, other than Hines, outside Chicago and East Orange, which is just across from New York City, until we get the facts as they present them, the facts as they are presented to us from these 2 pilot projects. Maybe we won't get the results that we anticipate. I just don't want to spend any more money on it until we prove the point.

This to me is somewhat like a research project that the Department of Medicine has.

Mr. OSTERTAG. I understood you were pioneering in this field, that this was purely experimental and that from that point on it was a wait-and-see proposition.

Mr. GLEASON. Right.

Mr. OSTERTAG. However, I did not realize that you might envision going as far as some 40-odd facilities which would in a sense wipe out all domiciliary care.

Mr. GLEASON. No, sir, it won't wipe out all domiciliary care. I said that it would cut it at least in half or more than in half. We might envisage so much as 6,000 to 7,000 domiciliary members at the very end, that we just cannot restore.

Mr. OSTERTAG. As we previously discussed and I repeat again that I heartily endorse and favor the idea of rehabilitation and I think it is possible that a few of these particular veterans might be rehabilitated and ultimately returned to their community. But across the board, I am of the opinion that the amount of rehabilitation that can be applied here is very limited and I would dislike very much to see you go beyond reason with view of reverting the whole domiciliary care program to that of a rehabilitation program because I do not think it will work.

Mr. GLEASON. We do not know whether it will work either, Mr. Ostertag, but we do want to have the opportunity of trying this because Dr. Middleton and his staff are confident that this will be workable and that it will be successful. As we mentioned yesterday, there is a study that we are going to make for the chairman of the House Veterans' Affairs Committee with reference to nursing home care so that we may wind up at some future date with not only hospitals and domiciliary and restoration centers but we may even be forced into nursing home care, which we hope we won't be.

HOSPITAL PATIENTS THAT COULD BE MOVED TO DOMS OR NURSING HOMES

Mr. JONAS. Doctor, how many of your 111,000 hospital population could be adequately taken care of in doms or nursing homes?

Dr. MIDDLETON. In nursing homes, I can only speak to that, sir, about 9,500.

Mr. JONAS. With adequate facilities for nursing home care you could make available nearly 10,000 beds that are now occupied by people who do not really have to be in hospitals?

Dr. MIDDLETON. These are individuals who require attention and require the nursing attendant and it can be of a level of nursing rather than on a medical basis.

Mr. JONAS. One other statement I would like to get in the record: Out of your hospital population, what percentage is service connected?

Mr. THOMAS. Excuse me just a moment before he answers that question. Let's keep the record straight.

(Discusion off the record.)

Mr. JONAS. What the chairman wants to get clear and so do I, if you relate this 9,500 to patients you are talking about 111,000.

Dr. MIDDLETON. That is right.

Mr. JONAS. But if you relate it to beds, you have to relate it to 122,000, so which is the true situation?

Dr. MIDDLETON. It is the actual number of patients on a given day. I would take the 7th of February and say that day, if we had the ability to move these patients according to need into nursing homes, we would have freed 9,500 beds. Now you take these long-term patients will have gone over months and years, whereas you will have a turnover of the other beds.

Mr. JONAS. That is about 10 percent.

Dr. MIDDLETON. That is 10 percent so far as it relates to the day; but what the chairman is driving at is the point that I cannot quite fix in my own mind because these other beds are turning over constantly. You have no turnover in these 9,500.

Mr. THOMAS. The figure you gave Mr. Jonas is on a daily bed occupancy. I guess that is the final test.

Mr. JONAS. You mean you could move out 9,500 tomorrow if you had a place to put them?

Dr. MIDDLETON. Yes, and we would have these remaining 102,000 beds which are constantly changing, changing at a very rapid rate in the case of general medical and surgical patients.

Mr. JONAS. What is the situation in the doms with respect to service connection? You do not have any service-connected people in doms?

Mr. GLEASON. There may be some, Mr. Jonas. It isn't a significant figure, sir.

Mr. JONAS. The majority of the people in the domiciliaries are non-service-connected cases.

Mr. GLEASON. That is right.

Mr. JONAS. People who do not require actual day-to-day medical attention but need care?

Mr. GLEASON. Nursing care, right.

Mr. THOMAS. To pursue that further, how can the restoration centers, whether they be 2 or 40, ever be effective as far as the doms are concerned because your average population in the doms are in excess of 60 years of age right now?

Dr. MIDDLETON. Sixty-four.

Mr. THOMAS. The only thing that will happen to them is they will get older and older and instead of requiring less attention they will require more. What do you mean by your restoration centers?

Mr. JONAS. You cannot restore or rehabilitate them on account of age.

Mr. THOMAS. There is nothing there. Physical limitations prevent you.

Mr. GLEASON. Mr. Chairman, I do not like to disagree but I think you can restore a great many people.

Mr. THOMAS. That is what makes business good in here. You can say whatever you desire.

Mr. OSTERTAG. How many of these 16,500 members now under domiciliary care do you figure could or should be rehabilitated?

Mr. GLEASON. We think more than 50 percent could be rehabilitated, Mr. Ostertag.

Mr. OSTERTAG. Despite their age and other infirmities?

Mr. GLEASON. Yes. The closer I get to 64 the younger it seems.

Mr. OSTERTAG. As the chairman pointed out, and I believe this is the point that bothers most of us about this whole issue is that they are aged veterans. They are not young fellows as the story goes but what rehabilitation can be applied? I mean what form of rehabilitation?

Dr. MIDDLETON. This, of course, is a very involved question, Mr. Ostertag. The veteran member in a domiciliary is a defeated member of society.

Mr. OSTERTAG. Did I understand you to say "defeated member of society"?

Dr. MIDDLETON. Yes, sir.

Mr. GLEASON. He has given up completely.

Dr. MIDDLETON. I have studied him very, very carefully and I have wondered at the success in motivation we have had to this point. There are two programs that are being very substantially supported by the agency, one at Wood, Wis., and the other at Los Angeles Center. Here they are bringing the member in and subjecting him to a very careful psychologic, physical, sociologic, and economic study. The social and economic phase is one important detail; but when I approached a staff man at Wood and said, "Here is a member that obviously has almost reached a stalemate in certain areas. We can move very few of these individuals." I used the phrase "defeated men" and he asked, "But who defeated them? Here we have a skilled mechanic. He happens to be 54 years old. Is there any firm in the city of Milwaukee who will engage this skilled mechanic at 54?" We have tried our best. We cannot. The defeat may be at the hands of society and not at the hands of the individual member. This, then, is a subject of very detailed study of these two groups and from a psychological standpoint they are attempting to motivate them; from

a physical standpoint they are attempting to rehabilitate them and from a socioeconomic standpoint, trying through the social agencies to get someone to pick up this individual who in the last analysis could be a useful member of society but he has just been discarded.

Mr. OSTERTAG. Dr. Middleton, let us take the case that you mentioned. We have a man well along in his middle fifties or older and you say that he cannot find employment because of his age.

Dr. MIDDLETON. Yes.

Mr. OSTERTAG. What can you do about that in restoration?

Dr. MIDDLETON. Here is the important detail of the socioeconomic phase that is being related to the community and working with the various industrialists in Milwaukee. They have been able to get a certain group of these individuals into gainful employment and to regain their self-respect, which is, after all, the most important detail.

Mr. OSTERTAG. Is it an employment service we seek?

Dr. MIDDLETON. That is part of the duties of the social service worker and they are working through the agencies of the community to implement this end .

Mr. JONAS. Will you yield?

Dr. MIDDLETON. Yes, sir.

RELATION OF NURSING HOMES TO OTHER PATIENT CARE FACILITIES

Mr. JONAS. I can understand that about people in their fifties but when you get beyond 64, what practical rehabilitation can you do? I would have thought that the next stage from the domiciliary would be a nursing home instead of rehabilitation center.

Dr. MIDDLETON. No, sir. The nursing home occupies an entirely different position as Mr. Gleason indicated. A nursing home is a proper residence for an individual who has ills, who cannot take care of himself, who does need continued attention but he is past the point where there can be medical gain in his care. Mr. Gleason has made a perfectly clear issue that we have these four different categories. First is the medical and the medical responsibility, which we are attempting to discharge, second is the restoration center that has obviously for its objective the rehabilitation of an individual who has come to a certain plateau of improvement and yet not quite able to get over the hump and take over and third, of course, the nursing home, where there is no prospect for this individual by and large. He is going to be an invalid, perhaps confined to his bed or wheelchair the rest of his days. The fourth is the domiciliary, the old soldiers home that provides for the care of the individual dislocated from society.

Mr. GLEASON. May I correct something that I said earlier? In the domiciliary care, Mr. Ostertag, the person must be ambulatory and he does not need nursing care itself. I just wanted to straighten that out. The nursing care is needed in the nursing home plan, not in the domiciliary.

Mr. OSTERTAG. Assuming that there is a need or an area of care that falls into the category of nursing care, why would it not be practical and wise to consider and study the problem to the extent of a reasonable conversion of domiciliary to nursing home care?

Mr. GLEASON. This is one of the things that Chairman Teague has asked us to make a study on. This would certainly be included in that.

AUTHORIZED HOSPITAL AND DOMICILIARY BEDS

Mr. OSTERTAG. It is not clear in my mind as to your overall authorization and the relationship of domiciliary care to the hospital bed authorization. In other words, you have a blanket authorization of 125,000, which, if I understood you correctly, excludes the domiciliary care.

Mr. GLEASON. That is correct.

Mr. OSTERTAG. Is there any limitation of domiciliary beds?

Mr. MONK. Yes, sir.

Mr. OSTERTAG. What is that?

Mr. MONK. It is 18,000.

Mr. OSTERTAG. And you actually have 18,000?

Mr. MONK. We do not have 18,000 in actual operation.

Mr. GLEASON. We do not need them.

Mr. OSTERTAG. In other words, you have total authorization of 125,000 hospital beds plus 18,000 domiciliary beds, making a total of 143,000 beds?

Mr. MONK. Except you should not, I think, Mr. Ostertag, speak of the domiciliary spaces as a bed in the sense that you use it in connection with the hospital bed because they are not set up as hospitals.

Mr. OSTERTAG. Whatever term you want to apply to it—spaces for people or members.

Mr. MONK. Yes.

Mr. GLEASON. The reason why we do not want you to confuse this is that it is so much more expensive, as you realize, to operate a hospital bed rather than a domiciliary bed.

Mr. OSTERTAG. I understand that.

Mr. GLEASON. We do not like to confuse the two and add them together.

Mr. OSTERTAG. What do you call the domiciliary allocation by numbers?

Mr. GLEASON. They are members.

Mr. OSTERTAG. In other words, you have authorization for 18,000 members?

Mr. GLEASON. Yes.

Mr. OSTERTAG. Then you are presently providing care for 16,500 or in that general neighborhod in domiciliary facilities.

Mr. GLEASON. Yes.

Mr. OSTERTAG. And 111,000 hospital bed care.

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. That is the general picture today?

Mr. GLEASON. Yes, sir.

Mr. MONK. Plus what we have in the contract hospitals and State homes.

Mr. OSTERTAG. Where do your restoration centers come in on this question of authorization? Are they a part of your domiciliary authorization?

Mr. MONK. Yes, sir, and not the hospital.

Mr. OSTERTAG. How many members or spaces do you have in each of these restoration centers?

Mr. GLEASON. At Hines, Ill., we have 120.

Mr. GLEASON. At East Orange it will be 200. These are pilot studies.

Mr. OSTERTAG. I understand. But that is a part of your domiciliary picture?

Mr. GLEASON. Yes, sir.

Mr. OSTERTAG. Consequently, the construction of these two facilities falls into place with your general picture or authorization of domiciliary members?

Mr. GLEASON. At this point, that is correct.

Mr. OSTERTAG. Will it remain that way?

Mr. GLEASON. It may not. It depends on what answers we find from these two pilot studies, Mr. Ostertag, whether this will reduce the domiciliary program, whether it will reduce our neuropsychiatric hospital care, whatever it does.

We do not know, yet. We just cannot answer that.

Mr. OSTERTAG. Is Hines fully operational today?

Mr. GLEASON. I believe it is.

Dr. MIDDLETON. Yes.

Mr. GLEASON. Around November it became fully operational although it opened last year and kept building up.

Mr. OSTERTAG. It is too early to determine just how this program is going to work?

Mr. GLEASON. Or how successful it will be because there may be some that are discharged from the restoration center that go back out into the community and maybe it will take a year or a year and a half and we will have them right back again. At this particular point we cannot say.

Mr. OSTERTAG. For example, if a veteran goes to Hines, has he been transferred there from domiciliary?

Mr. GLEASON. He may come from the Hines Hospital, itself, or from a domiciliary through the hospital.

Dr. MIDDLETON. He must come from a hospital.

Mr. OSTERTAG. A medical hospital?

Dr. MIDDLETON. Medical, neuropsychiatric hospital and determine that he has reached a point of maximum improvement but that a stay of a few weeks, months, may bring him back to as normal as possible. He can go out on his own. Then he is discharged. He may, however, go back to the hospital if he has not made a gain and has really lost ground. So far as domiciliary is concerned, he must be admitted through the hospital to the restoration center.

Mr. GLEASON. Which is a paper transfer.

Dr. MIDDLETON. Yes, sir.

Mr. GLEASON. I was trying to cut it short.

Mr. OSTERTAG. It is not clear to me.

Dr. MIDDLETON. In other words, if he is eligible for hospitalization he moves from the domiciliary to the hospital and there they say he can go into the restoration center because he has reached a certain level of improvement and a few months of these types of treatment, let's say, rehabilitation, may restore him to home or society at large.

Mr. OSTERTAG. Is this restoration program one which would fall into the category of medical or mental care?

Dr. MIDDLETON. It is medical care and it presently is charged against the bed allotment for the domiciliaries.

Mr. OSTERTAG. Then there would be a very limited number involved in domiciliary care that would be classified as being eligible for restoration care?

Dr. MIDDLETON. That is the occasion for these two studies that I outlined at the Wood Veterans Administration Center and out at Los Angeles Center.

Mr. OSTERTAG. On the other hand, you are not planning or the program does not call for moving men from domiciliary facilities into the restoration facilities?

Dr. MIDDLETON. Not primarily.

Mr. GLEASON. Not directly.

Mr. OSTERTAG. As a result, the needs or the applications or the general load in domiciliary care would not be affected by this in any way?

Dr. MIDDLETON. Very much so.

Mr. OSTERTAG. Why would it be under the circumstances you describe?

REHABILITATION OF DOMICILIARY PATIENTS

Mr. THOMAS. It is the same body who transfers from the "dom" over to the hospital and then into the restoration center. I agree with Mr. Ostertag. There cannot be more than 2 or 3 or 5 percent at best and what your result will be is anybody's guess. I do not know how you will restore a man 64 years of age to any useful purpose. He has had it, has he not?

Mr. GLEASON. We hope not.

Mr. MONK. One of the things on this 64- or 65-year-old man——

Mr. THOMAS. You will find more of them in your "doms" nearer 70 than 64.

Mr. MONK. That is right. Many of the men in the domiciliary today are there because they have withdrawn from society. We have found in going in and analyzing the member load that a man had been next bed to his fellow member for 10 or 15 years. He did not even know him.

Mr. GLEASON. He would not even talk to him.

Mr. MONK. He has completely withdrawn.

The restoration here, if it is possible, is to get this man——

Mr. THOMAS. We understand those details.

Mr. MONK (continuing). So he can be acceptable in society and live outside the institutional environments.

Mr. GLEASON. In other words, this type of man would then be able to be transferred into a hospital for psychiatric care and when he improves, rather than keep the occupancy of that bed, then we can send him over to the restoration center to put the finishing touches on and give him a graduate degree.

Mr. OSTERTAG. Psychiatry deals with the state of mind and mental condition. You mean that it is only physical and mental types of rehabilitation that will be applicable to your restoration centers?

Dr. MIDDLETON. Sir, I thought we covered in the question first of the psychologic, then the physiologic, then the social, economic viewpoint

of this situation, the needs of the patient who could perchance have benefit from restoration center functions.

Mr. OSTERTAG. I agree with the chairman, that if that is the limitation or that is the general application, it is difficult to conceive anything but a small percentage of the total veteran population that needs and requests domiciliary care would be applicable under such circumstances.

Mr. GLEASON. Mr. Ostertag, with 18,000 beds authorized or member spaces authorized under the domiciliary program, we have only got 16,500 members so there is 1,500 throughout the United States that could go there that are not. I think one of the reasons is that as we get along further we will have less demand for domiciliaries because there will be more people coming under social security benefits that they will be able to take care of them somewhere else.

Mr. THOMAS. Gentlemen, let us take a look at some of the details. This has been very helpful and very instructive. It accomplishes much.

SUMMARY OF MEDICAL PROGRAMS

Mr. Reporter, put in the record pages 19–1, 19–2, 19–3, 19–4, and 19–5. This is a preliminary statement. You have a lot of good material on incentive awards. This is contained on page 19–6. Let me suggest the committee review that again. There is a good page on 19–6. You have seven TB hospitals——

Dr. MIDDLETON. It is now six, if we may correct the record.

Mr. THOMAS. There are 7 left with only 1,734 patients, I notice there. This is very valuable information.

Mr. Reporter, include this entire summary through page 10.

Let us return to page 19–1 and take a look at it. This is the summary of appropriations.

(The pages referred to follow:)

DEPARTMENT OF MEDICINE AND SURGERY

Summary of appropriations

Appropriation title	Fiscal year 1962 actual	Fiscal year 1963 estimated	Fiscal year 1964 estimated	Increase (+) or decrease (−) 1964 over 1963
Medical administration and miscellaneous operating expenses appropriation or estimate	$13,376,500	$13,993,000	$14,982,000	+$989,000
Medical and prosthetic research appropriation or estimate	30,500,000	30,500,000	33,742,000	+3,242,000
(Medical research)	(29,500,000)	(29,500,000)	(32,467,000)	(+2,967,000)
(Prosthetic research)	(1,000,000)	(1,000,000)	(1,275,000)	(+275,000)
Medical care appropriation or estimate	989,371,000	1,049,766,000	1,087,688,000	+37,922,000
Department of Medicine and Surgery appropriations or estimates	1,033,247,500	1,094,259,000	1,136,412,000	+42,153,000

NOTE.—The above table reflects comparative appropriation amounts in accordance with the appropriation structure requested for fiscal year 1964.

Amounts appropriated under the head "Medical administration and miscellaneous operating expenses" were $43,876,500 in fiscal year 1962, which included allowances for "Medical and prosthetic research" activities. Financing of medi-

cal and prosthetic research activities was consolidated under a new "no year" appropriation structure again requested for fiscal year 1964. Therefore, the comparative year amounts shown for the "Medical administration and miscellaneous operating expenses" appropriation in the above table include only the amounts appropriated or required for "Medical administration" activities of the central office and area medical offices of the Department of Medicine and Surgery, Office of the Assistant Administrator for Construction, and "Education and training" activities of the Department of Medicine and Surgery.

Amounts shown in the fiscal year 1963 columns on the preceding page include all known supplemental appropriation requirements for the current fiscal year. These are comprised of presently unfunded costs of Public Law 87–793 salary and postal rate increases and Public Law 83–763 wage board increases that must be paid in the current fiscal year. Since appropriations were not available in the early months of the 1963 fiscal year, expenditures were controlled by the agency in accordance with provisions of the joint resolution of the Congress (Public Law 87–513), thus creating savings that will be applied against the agency's fiscal year 1963 supplemental appropriation requirements.

The following table reflects the total fiscal year 1963 unfunded costs, anticipated savings, and net supplemental appropriation requirements contemplated by this estimate for VA medical programs:

Appropriation title	Fiscal year 1963 unfunded costs	Fiscal year 1963 anticipated savings	Fiscal year 1963 net supplemental appropriation requirements
Medical administration and miscellaneous operating expenses	$512,000	$291,000	$221,000
Medical and prosthetic research	650,000	650,000	
Medical care	34,365,000	2,491,000	31,874,000
Department of Medicine and Surgery, total	[1] 35,527,000	3,432,000	32,095,000

[1] All amounts are attributable to Public Law 87-793 salary and postal rate increases except $9,000,000 required under the medical care appropriation to pay fiscal year 1963 costs of Public Law 83-763 wage board increases approved during the period July 1, 1961, through June 30, 1963.

Of the $42,153,000 increase requested for agency medical programs in fiscal year 1964, $35,814,000 or 85 percent will be required for continuance of operations at fiscal year 1963 levels. The $35,814,000 will be required to pay costs of the additional 2 paid workdays and 1 calendar day occurring in fiscal year 1964, and the higher salary rates resulting from Public Law 87–793 and within-grade step increases. Only $6,339,000 or 15 percent of the total increase relates to workload or other program changes including the planned activation of new medical facilities, after considering changes in anticipated reimbursement collections and adjustments in wage board costs. An analysis of the increases required for fiscal year 1964 appears in the following table:

	Medical, administration and miscellaneous operating expenses		Medical and prosthetic research		Medical care		Total	
	Dollar	*Percent*	*Dollar*	*Percent*	*Dollar*	*Percent*	*Dollar*	*Percent*
Additional 2 paid workdays and 1 calendar day	82,000	8.3	188,000	5.8	7,090,000	18.7	7,360,000	17.5
Within-grade step increases	80,000	8.1	148,000	4.6	5,344,000	14.1	5,572,000	13.2
Public Law 87-793 salary and postal rate increases	516,000	52.2	696,000	21.5	21,670,000	57.1	22,882,000	54.3
Workload and other program changes	311,000	31.4	2,210,000	68.1	3,818,000	10.1	6,339,000	15.0
Total	989,000	100	3,242,000	100	37,922,000	100	42,153,000	100

The fiscal year 1964 amount of $1,087,688,000 for the "Medical care" appropriation shown on page 19–1 excludes the cost of wage rate increases that will accrue between July 1, 1962, and June 30, 1964. Supplemental appropriation requirements therefor will be transmitted separately later in the 1964 fiscal year.

APPROPRIATION ESTIMATE—FISCAL YEAR 1964

The Veterans' Administration is responsible for providing medical care and treatment to eligible veterans as authoritzed by law (title 38—United States Code). Medical program financial requirements for fiscal year 1964 are budgeted under three operating appropriations as follows:

1. *Medical administration and miscellaneous operating expenses.*—Provides for the administration by central office and area medical offices of all medical programs of the VA; a program of education and training to support the medical care programs; and technical staff and services required for the agency construction program.

2. *Medical and prosthetic research.*—Provides for a program of medical research and a program of prosthetic testing and development.

3. *Medical care.*—Provides for maintenance and operation of Veterans' Administration hospitals, domiciliaries, and outpatient clinics; care of beneficiaries in contract hospital facilities not under jurisdiction of the VA; and aid to State or territorial homes for support of veterans eligible for care by the Veterans' Administration.

Effective with the fiscal year 1963, financing for the Veterans' Administration medical and prosthetic research activities was consolidated under a no-year appropriation head titled "Medical and prosthetic research." This sets forth more clearly the financial requirements for research activities previously funded under the "Medical administration and miscellaneous operating expenses" appropriation.

Program objectives

In accordance with the intent of the Congress as expressed by the enactment of medical benefit legislation for veterans, the following are the operating objectives upon which this budget is predicated:

1. Medical care shall be rendered to all eligible veterans who request and require such care, either in Veterans' Administration facilities or by contractual arrangements, when necessary.

2. The quality of medical care provided by the Veterans' Administration shall be maintained at a level comparable with the best civilian institutions treating similar types of illnesses.

3. Current and proposed operating standards shall be studied and reduction made of the unit cost of medical care by amending or eliminating standards and practices which do not meet the criterion of essentiality.

Economy measures and management improvements

Optimum economy and effectiveness are continuing objectives in the agency's medical programs. A number of management improvement actions either accomplished or in process are outlined below as examples of efforts at all levels of operation.

(*a*) *Increased numbers of patients admitted, treated, and discharged at Veterans' Administration hospitals*—The programs of prebed and postbed care authorized under provisions of Public Law 86-639 enabled certain VA patients to receive outpatient treatment adjunct to their hospital stay. These programs permitted the Veterans' Administration to follow preadmission and postdischarge medical practices similar to those employed generally in the practice of medicine.

During fiscal year 1962, the first full year of operation under the Public Law 86-639 authorization, 9,789 patients were admitted to agency hospitals through the prebed care program, making 14,992 visits to the hospitals during the 7 days prior to admission. Follow-up care through the postbed program provided 302,537 patients the opportunity to shorten their hospital stay and return earlier to their homes and families. These patients made over 628,000 visits to VA hospitals for postbed care.

The pre- and post-bed care programs, together with improvements in hospital staffing, made possible substantial increases in the numbers of patients admitted, treated, and discharged at VA hospitals in the 1962 fiscal year. These increases

are particularly significant since the proportion of veteran patients requiring treatment for long-term illnesses and disabilities continues to grow.

	Fiscal year 1961	Fiscal year 1962	Increase	Percent of increase
Patients admitted to VA hospitals	537,022	561,808	+24,786	+4.6
Patients treated in VA hospitals	664,400	688,507	+24,107	+3.6
Patients discharged from VA hospitals	540,068	563,417	+23,349	+4.3

(*b*) *Consolidation of reporting for agency general medical and surgical and tuberculosis hospitals.*—Effective July 1, 1962, with approval of the Bureau of the Budget, all financial and statistical data reported under the separate "General medical and surgical hospitals" and "Tuberculosis hospitals" categories were consolidated under a single reporting category titled "General hospitals."

The scope of the agency's tuberculosis program has dwindled steadily over the past several years. Since fiscal year 1959, 11 hospitals formerly classified as TB hospitals were redesignated as general medical and surgical hospitals. By the close of the 1962 fiscal year, the aggregate patient load in the 7 remaining TB hospitals numbered 1,734 patients (comprised of 381 medical and surgical patients and 1,353 tuberculosis patients) or about 1½ percent of the patient load in all VA hospitals. The 1,353 tuberculosis patients in TB hospitals constituted less than 20 percent of the 6,907 total TB patient load remaining in the VA system. Thus, continuance of the separate reporting category for the seven TB hospitals was not warranted.

This change is confined to the merger of data reporting for general medical and surgical hospitals and tuberculosis hospitals only. It does not transcend present policy for retaining the TB designation at each existing TB hospital until such time as (*a*) beds are used predominantly for care of other type illnesses, or (*b*) beds are transferred within the framework of the approved 125,000 bed ceiling as part of the long-range hospital replacement and modernization program.

The extent of man-hour or dollar savings that will result from the merger of these reports cannot be projected accurately. However, inclusion of TB hospital data under the single "General hospitals" category will still permit accumulation of all meaningful data while eliminating separate TB sections of departmental and agency budget estimates, cost statements, statistical summaries, and related reports.

(*c*) *Incentive awards program.*—The interest and endeavor of Department of Medicine and Surgery employees in bringing about increased efficiency and reductions in cost of operations are demonstrated by the Department's incentive award program. In fiscal year 1962, there were 22,800 suggestions submitted, of which 47.9 percent were adopted. Tangible savings of approximately $911,000 were realized from these suggestions and applied to the steadily increasing cost of medical program operation. Awards of $123,000 were paid for the adopted suggestions which consisted primarily of work improvement ideas, accident-prevention measures, and ideas for improvement of patient care. Awards of $408,000 also were paid 4,607 employees for improved work performance.

(*d*) *Scheduled functional review and appraisal of field station programs.*—Under a system of scheduled functional review and appraisal, planned management audits were completed in calendar year 1961 and 22 Department of Medicine and Surgery field station programs. Total benefits reported included 1,110,000 man-hours, a monetary value of $3,900,000 and 2,200 improvement actions. The resources which became available were applied to the steadily increasing medical program costs in accordance with demonstrated need.

Significant improvement actions which have potential application at other locations are published in "Department of Medicine and Surgery Evaluation Digests" to encourage their adoption.

Prompt action is taken to insure that the adopted improvements receive the broadest application throughout the Veterans' Administration, and to exchange ideas for improvements with other Federal agencies.

(*e*) *Automatic data processing.*—The Department's endeavors in this field are directed to the development of integrated automatic data processing systems on

an agencywide basis in the areas of fiscal management, supply management, pay administration, medical administrative operations, clinical medicine, and medical and dental research.

Emphasis is being placed on introducing and extending the use of automatic data processing equipment at local, regional, and central locations, consistent with the specific needs of each location. Installations of such equipment now have been accomplished at 66 locations. This equipment primarily has been used in the automation of fiscal and payroll applications and production of financial reports for all levels of management.

The development of automated systems in patient control and outpatient reporting areas has been completed and these systems now are being tested. Potentials of increased automation in engineering, medical research, patient data, and supply fields and the integration of related systems also are being studied.

Additional computers are being installed at agency hospitals to aid in the conduct of medical research activities, and with other computers which will be available at medical research support centers will provide service and training for individual hospital research personnel.

The medium size computer recently installed at the Los Angeles VA Center presently provides many services to the administrative elements of that station and to other stations in the area.

Continued efforts will be made by the Department's data processing staff during fiscal years 1963 and 1964 to expand the automation and integration of departmental areas of responsibility to assure more valid and current information for management.

(*f*) *Design of new hospital facilities.*—A study of building code fire protection requirements resulted in revision of the VA standards for the design of hospitals and auxiliary buildings. The application of these new standards should make possible significant cost reduction in future VA hospital construction projects consistent with built-in fire safety.

Automated conveyor systems for food service and for distribution of hospital supplies are being recommended for hospital construction projects to procure maximum efficiency and economy. Such systems are included in the designs for the new VA hospitals in Washington, D.C., and Wood, Wis.

(*g*) *Veterans Administration voluntary service program.*—Since inception of the Veterans Administration voluntary service plan in 1946 for community participation in the care and treatment of veteran patients, the number of hours served by volunteers has increased steadily from 3 million in the first fiscal year of operation to over 7 million for the fiscal year 1962.

Volunteers serve in approximately 30 medical programs where they supplement the work of the professional staff on behalf of the patients and domiciliary members. Volunteer assistance has been extended beyond the hospital and domiciliary and now includes outpatient clinics, day care centers, and the restoration center. Volunteers also provide community services in nursing homes, sheltered workshops, half-way houses, and even in the homes of patients. Increasingly, they are participating in programs geared to helping patients who have left the hospital in adjusting to home and community life.

The National Veterans Administration Voluntary Service Advisory Committee, composed of representatives of 41 national organizations, plays a continuing dynamic role in the overall planning and direction of the volunteer program.

(*h*) *Employee travel performed directly in connection with care and treatment of VA medical beneficiaries.*—The Veterans' Administration believes that the Congress does not intend to penalize medical care programs by restricting employee travel which is necessary to the care and treatment of medical beneficiaries. Accordingly, the agency requests with approval of the Bureau of the Budget that the general provisions of the Independent Offices Appropriation Act, 1964 exempt "travel performed directly in connection with care and treatment of medical beneficiaries of the Veterans Administration" from the application of employee travel limitations.

Approximately 28 percent of the travel expenditures incurred by agency hospitals and clinics is for employee travel performed directly in connection with the care and treatment of VA medical beneficiaries. Included in this category is employee attendant travel and travel of treatment staff concerned with increasing hospital turnover and clinic productivity rates.

Under present arrangement this type of travel is restricted by limitation with the result that delays are encountered and full potentials are not realized in

rendering required medical services to eligible beneficiaries. The areas primarily affected are:

(1) Employee attendants: Attendants normally must accompany patients transferred within the VA hospital system, or upon the removal from civil, State, or private hospitals of patients found eligible for VA care. To conserve the employee travel limitation, employment of contract attendants frequently has been necessary. This arrangement has not proved satisfactory because hospitals have great difficulty in securing the services of qualified contract attendants, and the cost of contract attendant services generally is greater than if employees were used in this capacity.

(2) Medical care of patients in their homes: As part of the effort to meet mounting pressures on the agency's medical system, there are many programs extending medical care to the veteran outside the hospital which are designed to avoid the high cost of protracted hospitalization. There are programs for the blind, the foster home and trial visit porgrams, visits by social workers, visits by physicians and nurses to terminal cases and paraplegic patients, to name but a few. Applicability of the employee travel limitation to these activities produces sizable backlogs of required medical visits, and staff employed specifically for these purposes cannot be authorized to perform fully the duties for which they were employed.

(3) Additional administrative expense: Total medical care appropriation amounts authorized for employee travel constitute less than one-tenth of 1 percent of hospital, domiciliary, and clinic budgets. Inability to predict precise locations where emergency patient transfers and home care program backlogs may arise requires that a large portion of available employee travel funds be held in reserve in the central office or area medical offices. Release of these funds for individual emergencies, often involving allotment of only a few dollars, generally necessitate a long-distance telephone request from the hospital to the area medical office, dispatch to the hospital of a confirmatory teletype citing allotment amount, allotment serial number, and appropriation symbols; formal issuance of an allotment document; and processing and recording of the individual document at both the hospital and the area medical office. These actions and the undue administrative expenses cited can be eliminated with adoption of the proposed amendment to the general provisions of the fiscal year 1964 Independent Offices Appropriation Act.

(*i*) *Determination of equipment replacement needs.*—During the 1962 fiscal year, a special study was completed to determine more accurately VA's current and long-range financial needs for replacing worn and obsolete equipment. This study was undertaken by the agency with full participation and assistance of the Bureau of the Budget.

A new system was developed to determine by fiscal year, those equipment items which should be replaced in accordance with prescribed equipment-replacement standards (equipment life-expectancy tables) and equipment-use standards. Annual financing needs then were computed by repricing items to reflect current replacement costs. These data provided the basis for the agency's budget estimate for equipment replacement. Individual field station data are utilized to equitably distribute all amounts appropriated for equipment replacement. Thus, the system developed is designed to establish a sound equipment replacement program for each future year; eliminate the current replacement backlog; and assure accuracy of the estimate of funds necessary to carry out the replacement program.

The table on the following page reflects for each of the fiscal years 1963 through 1966 (1) the dollar value of medical care appropriation equipment items which will exceed established replacement criteria and should be replaced; (2) planned expenditures of previously appropriation construction of hospital and domiciliary facility equipment amounts and estimated acquisitions of excess property from other agencies that will be applied against each annual requirement; and (3) planned expenditures and estimates of future medical care appropriation amounts necessary to elimate backlogs and place the continuing replacement program on a sound basis.

Mr. THOMAS. You have four or five titles, medical administration and miscellaneous operating expenses, medical and prosthetic research. That is broken down into medical research and prosthetic research, and then you have your big medical care estimate. Then I believe it really breaks itself down into only three heads, with two subdivisions. Medi-

cal administration has been changed around physically but not necessarily dollarwise by your recent reorganization; is that correct?

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. We will break down "Medical administration and miscellaneous operating expenses." For 1962 it was $13,376,500. It shows an increase in 1963 to almost $14 million, and then for 1964 in round figures again it is $15 million.

Medical and prosthetic research goes up $3,242,000 this year as against last year, making it a total of $33,742,000.

That is broken down into medical research, $32,467,000, an increase in round figures of $3 million, and your prosthetic research goes from $1 million up to $1,275,000. That is the appliances and the research, and you go into that with quite a bit of justification. You have two big centers, one in New York and one in California. Where is the center in California, at Mare Island? I refer to the prosthetic center. It is still in Mare Island. The other is located in the Veterans' office, about the 20th floor, in New York City.

For this year you have an overall cost for medicine in the VA of $1,136,412,000, an increase of $42,153,000. We will look into that in a minute. About 85 percent of that increase, or $35.8 million, goes for salary increases, and about 15 percent, if I am correct, $6.3 million going for new activities.

Let us analyze on 19–2, "Medical administration and miscellaneous operating expenses" [reading]:

The following table reflects the total fiscal year 1963 unfunded costs, anticipated savings, and net supplemental appropriation requirements contemplated by this estimate for VA medical programs.

SUPPLEMENTALS—FISCAL YEAR 1963

You set out your supplementals here. You list medical administration and miscellaneous operating expenses. You are seeking $221,000. That is part of your supplemental. There is none for medical and prosthetic research; medical care is $31,874,000. That makes a total of $32,095,000.

The footnote reads:

All amounts are attributable to Public Law 87–793 salary and postal rate increases, except $9 million required under the medical care appropriation to pay fiscal year 1963 wage board costs.

Of the $42,153,000 increase requested for Agency medical programs in fiscal year 1964, $35,814,000, or 85 percent, will be required for continuance of operations at fiscal year 1963 levels.

You have $6,339,000, or 15 percent new money.

This table here is very excellent. Whose brainchild is that? Is this Professor Wise?

Mr. BAKER. Yes, sir.

INCREASE IN MEDICAL PROGRAMS FOR 1964

Mr. THOMAS. Look at this table, gentlemen, dollars and percent and the more I study it the more I become confused. For that reason I think I must have spent 15 or 20 minutes on it. It does make sense if you can get it all in perspective. It is the first time I have seen it done this way. You have done it in two or three spots in here. It is all

right. You take your additional 2 paid workdays and 1 calendar day. This is for the fiscal year 1964.

Mr. BAKER. That is right, sir.

Mr. THOMAS. The total cost is what?

Mr. WISE. $7,360,000 for the Department of Medicine and Surgery.

Mr. THOMAS. $7,360,000.

Mr. GLEASON. You mean just for the Department of Medicine and Surgery.

Mr. THOMAS. You have medical administration, medical research, and medical care. This total means the total for your three divisions, does it not?

Mr. BAKER. Within the Department of Medicine and Surgery.

Mr. THOMAS. That is what I refer to, within D.M. & S.

Mr. BAKER. That is right, sir.

Mr. THOMAS. So your cost for your extra workdays in this one division, "Medical administration," amounts to $82,000 and of your total cost what is it, 8.3 percent?

Mr. MONK. 8.3 percent of the total cost, additional cost in "Medical administration" and "Miscellaneous operating expenses," a total of $989,000.

Mr. THOMAS. For "Medical and prosthetic research" it is $188,000 and of the total cost it is 5.8 percent; in "Medical care," $7,090,000 it is 18.7 percent and the total increased cost is $7,360,000, but your next column was very confusing.

Mr. MONK. That $7,360,000 is 17½ percent of the total cost of the $42 million.

Mr. THOMAS. I understand. I figured it out on my own after spending 30 minutes on it; I should have done it in 3.

WITHIN-GRADE INCREASES

Within-grade is $80,000 for medical administration, $148,000 for medical research, which is 4.6 percent of the cost and for medical care it is $5.3 million. The entire cost to the Department of M. & S. is $5.6 million. What does it average out for your D.M. & S. for in-grade promotions?

Mr. BAKER. $40.80 per employee.

Mr. THOMAS. I am talking about the total appropriation for salaries.

Mr. WISE. Thirteen percent of the total increase for all medical activities is attributable to within-grade increases. It is slightly less than 1 percent of the total payroll.

Mr. THOMAS. For salaries alone?

Mr. WISE. That is right.

Mr. BAKER. Six-tenths of 1 percent of salaries.

Mr. THOMAS. Those tables are quite interesting but I had a hard time understanding them at first.

Mr. GLEASON. They are worth the money, Mr. Chairman.

ELIGIBILITY REQUIREMENTS FOR VA MEDICAL CARE

Mr. THOMAS. This is interesting. You list your objectives and your estimates on page 19–4:

(Reading:)

The Veterans' Administration is responsible for providing medical care and treatment to eligible veterans as authorized by law (title 38, United States Code). Medical program financial requirements for fiscal year 1964 are budgeted under three operating appropriations as follows.

Who is eligible? "Medical program financial requirements" are broken down into three classifications, "Medical administration and miscellaneous operating expenses," "Medical and prothetic research," and "Medical care." Of course, under "Medical care" now you have consolidated outpatient clinics, which is a little better than $100 million. You have included doms and inpatient care plus your outside institutions.

Mr. BAKER. State homes.

Mr. THOMAS. State homes, yes.

What is your yardstick under title 38, United States Code, as to who is eligible?

Dr. MIDDLETON. First of all service connected and then service connected with non-service-connected complaint, and then nonservice connected. That is the general classification that is used.

Mr. THOMAS. How does the statute read exactly? Does it require an honorable discharge?

Mr. DRIVER. Other than dishonorable.

Mr. THOMAS. What is your yardstick? You have more discharges than Carter has pills. What is your yardstick?

Dr. MIDDLETON. VA has responsibility for providing hospital care to veterans with service-connected disabilities and within the limits of existing VA facilities to veterans with non-service-connected disabilities who cannot defray the cost of hospitalization.

VETERAN'S ABILITY TO PAY HOSPITALIZATION COSTS

Mr. THOMAS. What is the yardstick on that last clause, who cannot defray the cost of hospitalization?

Dr. MIDDLETON. We have developed a very strong counseling program within the past year, Mr. Chairman, and this means that individuals in the registrar's division of the hospitals have been carefully indoctrinated in the terms of veteran eligibility.

Mr. THOMAS. Before you go to your counseling what does the law say?

Mr. MONK. The law says that the statement of the veterans as to his inability to pay shall be accepted by the Administrator, period.

Mr. THOMAS. You cannot go behind that statement?

Mr. MONK. That is what the law says.

Mr. BRICKFIELD. As to admission into the hospital.

Mr. GLEASON. If we later find that he did have the ability to pay, then we can civilly prosecute.

Mr. THOMAS. Do you really go into that statement, that he is not able to pay in any case?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. What do you do?

Mr. GLEASON. Ask him for a financial statement.

Mr. THOMAS. What do you mean? What distinction is there? The law says his statement shall be final. Do you limit that to admission?

Mr. BRICKFIELD. Yes. We can investigate later so that the Justice Department can determine whether to sue for fraud.

Mr. THOMAS. When he is ready to go out the statement does not apply. Then you talk about payment?

Mr. BRICKFIELD. No. The law says that he shall be admitted and if he signs an affidavit of his inability to pay, that means we cannot delay his admission. The law also says, and this has been handed down by court decision, that where he can pay, he had the ability to pay, that he should pay. If we find that he is able to pay——

Mr. THOMAS. And the court decision goes behind his statement then?

Mr. BRICKFIELD. Yes, sir, if the statement was fraudulent.

Mr. DRIVER. The judgment on his statement.

Mr. THOMAS. When was that decision handed down?

Mr. BRICKFIELD. It was handed down, I think, in Kansas, Mr. Thomas, about 1956 and it was followed in another decision in Florida some time later. There have been decisions the other way but we are confident that our position under the Civil Frauds Act will gain further judicial acceptance.

Mr. THOMAS. Go ahead.

Mr. BRICKFIELD. There have been 68 other cases out of those submitted to Justice for civil fraud action in which there were recoveries through settlements or compromises by the Department of Justice.

Mr. THOMAS. Who has the burden of showing deliberate or willful fraud?

Mr. BRICKFIELD. The Government does.

SERVICE-CONNECTED DISABLED VETERANS

Mr. THOMAS. What percentage of the patients are nonservice connected in the various hospitals?

Dr. MIDDLETON. On October 31, 1961, 40.6 percent were service-connected disabled veterans.

Mr. THOMAS. That is too high, is it not? You usually use a figure of about 20 percent, do you not?

Dr. MIDDLETON. No, sir. This includes those admitted for service-connected conditions (30.8 percent) or those with compensable service-connected conditions (9.8 percent) who were admitted for other causes.

Mr. THOMAS. When a fellow gets to be a certain age he will have ailments common to everybody. He is a veteran and he is eligible.

Mr. GLEASON. He is eligible if he meets the admission requirements and we have a bed available.

Mr. THOMAS. That is what we are talking about now, Mr. Administrator. Tell us what they are.

Mr. GLEASON. As we mentioned, the financial ability to pay.

Dr. MIDDLETON. Those figures were compiled from a census taken on 1 day, October 31, 1961. It is 30.8 percent service connected, 9.8 percent service connected with compensable disability receiving care for non-service-connected disabilities and then 59.2 percent non-service-connected.

Mr. THOMAS. With this medical cost going up and up every year, I do not know who is able to pay a State hospital bill for protracted illness.

Mr. Ostertag?

Mr. OSTERTAG. Dr. Middleton, along the line of inquiry of the chairman relative to the issue of ability to pay, does that apply to a service-connected case?

Dr. MIDDLETON. No, sir. Service connected does not apply.

Mr. OSTERTAG. Does it apply to a service-connected veteran whose disability or hospitalization relates to a disability other than that which is service-connected?

Dr. MIDDLETON. No, sir.

Mr. OSTERTAG. In other words, a service-connected case is entitled, regardless of his income or his resources, to complete, free medical and hospital care?

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. Gentlemen, we will go to lunch now and come back at 1 o'clock.

AFTERNOON SESSION

Mr. THOMAS. Gentlemen, the committee will please come to order.

May I invite the committee's attention to page 19–5. Here is the justification for your rise in cost, if there be one.

NUMBER OF PATIENTS TREATED

May I read these paragraphs:

The programs of prebed and postbed care authorized under provisions of Public Law 86–639 enabled certain VA patients to receive outpatient treatment adjunct to their hospital stay. These programs permitted the Veterans' Administration to follow preadmission and postdischarge medical practices similar to those employed generally in the practice of medicine.

During fiscal year 1962, the first full year of operation under the Public Law 86–639 authorization, 9,789 patients were admitted to agency hospitals through the pre-bed-care program, making 14,992 visits to the hospitals during the 7 days prior to admission. Followup care through the postbed program provided 302,537 patients the opportunity to shorten their hospital stay and return earlier to their homes and families. These patients made over 628,000 visits to VA hospitals for postbed care.

Mr. JONAS. I would like to invite your attention to that strange language that you just read. They made every possible effort to tell you how few took advantage of this opportunity.

"Provided 302,000 patients the opportunity to shorten their hospital stay."

Why don't you tell us how many shortened it?

Mr. BAKER. I think all of them did, sir.

Mr. JONAS. You didn't say that, though.

Mr. THOMAS. It says, "Patients admitted to the Veterans' Administration hospitals in 1961, 537,000 in round figures, 561,000 in fiscal year 1962." An increase in round figures of 25,000.

Patients treated in hospitals, 664,400 in 1961; 688,000 in fiscal year 1962.

Patients discharged in 1961, 540,000; and 1962, an increase to 563,000.

Patients admitted is one figure and patients treated is another. When you admit a man, don't you treat him? What do those figures mean, anyway? What are you admitting him for if you are not going to treat him? Does this include your outpatient clinic? Are you commingling them?

Mr. BAKER. These are all inpatients.

Mr. THOMAS. What does that mean? Five hundred and thirty-seven thousand admitted to a hospital and then patients treated in the same hospitals, 664,000. There is about a 20-percent difference.

Mr. BAKER. At the beginning of the 1961 fiscal year, sir, we had 112,271 patients in bed and on leave of absence. We admitted 537,000 additional. We treated the ones already there plus the ones admitted.

Mr. THOMAS. Is that the answer?

Mr. BAKER. That is right.

Mr. THOMAS. It would save us a lot of time if you would just put that in.

Let's see if that figures out just exactly right.

You couldn't have any more patients than you have beds, so if you had them at the beginning of the year why didn't you put them in there, Doctor?

The 112,000 on top of your 537,000 gives you 649,000 and you took credit here for 664,000, so you are still short 15,000.

Dr. MIDDLETON. Trial visits are still counted as patients.

PATIENTS OUT OF HOSPITAL ON TRIAL VISIT

Mr. THOMAS. What is a trial visit?

Dr. MIDDLETON. You have a patient who has psychotic condition and he has come to the point of improvement so you may see if he is fit to go back to his home environment. He is on trial but is still a patient.

Mr. BOLAND. You have a number of those and it is a good program.

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. Before you could send him home on a "trial run" you had to admit him. You are still short 15,000 patients. What are you going to do with those trial visits, or what are you going to do with the 15,000?

Mr. BAKER. We have over 11,000 trial visits. We have the ones already in the hospital——

Mr. THOMAS. How long will he stay there for a trial visit?

Mr. BAKER. It will vary from several weeks to several months and perhaps longer.

Mr. THOMAS. He is admitted to the hospital, isn't he?

Mr. BAKER. Before he goes on the trial visit; yes, sir. But at the beginning of the year we had 11,000 of them also on trial visits plus those already in the hospital.

Mr. THOMAS. Weren't they counted in there as on hand? You had 112,000 patients.

Mr. BAKER. They are not counted in the beginning inventory of 112,000 patients. They are out of a hospital on a trial basis.

Mr. THOMAS. Every day?

Mr. BAKER. Yes, sir.

Mr. THOMAS. Do they just come in and register in the morning?

Mr. BAKER. No, sir. They have been in the hospital and have been put out into another location to see if they can adjust to the local community. They are not occupying a hospital bed, but they are still considered a patient of the hospital. You have to add those.

Mr. THOMAS. Have you 11,000 of those?

Mr. BAKER. During the year there was something over 45,000.

Mr. THOMAS. Let's get these figures a little bit more accurate and clear.

Mr. BAKER. We try to be factual, sir. We will add those in.

Mr. THOMAS. You don't include a lot of visitors when they come out there to see your patients, do you?

Mr. BAKER. No, sir.

Mr. THOMAS. You don't have 11,000 of those listed there?

Mr. BAKER. No, sir.

Mr. THOMAS. You have a nice program where people of the community come out there, your voluntary organizations, do you count those in?

Mr. BAKER. No, sir.

Mr. THOMAS. You have lost 15,000 and I hope you find them in your tables here. You say 11,000 are on trial visits. Where are the other 4,000?

Mr. GLEASON. Next year would you like to see the figures on those who are on trial visits as of the end of the year?

Couldn't we supply that?

Mr. BAKER. Yes, sir.

Mr. THOMAS. Straighten it out at this point. Put a table in the record that shows those on trial visits.

(The information supplied follows:)

VA hospitals—Summary of patients treated during fiscal year

Fiscal year	Fiscal year 1961	Fiscal year 1962
Patients remaining end of fiscal year:		
In bed	105,460	105,350
On leave of absence	6,811	6,536
On elopement	648	679
On trial visit	11,413	12,525
Total remaining	124,332	125,090
Patients discharged during fiscal year	540,068	563,417
Patients treated during year	664,400	688,507

CONVERSION OF TB HOSPITALS

Mr. THOMAS. I might read the top of 19–6, gentlemen. This is quite interesting.

Since fiscal year 1959, 11 hospitals formerly classified as TB hospitals were redesignated as general medical and surgical hospitals. By the close of the 1962 fiscal year, the aggregate patient load in the 7 remaining TB hospitals numbered 1,734 patients (comprised of 381 medical and surgical patients and 1,353 tuberculosis patients) or about 1.5 percent of the patient load in all VA hospitals.

How many purely TB hospitals do you have or did you have to begin with?

Dr. MIDDLETON. We had 21 prior to 1958.

INCENTIVE AWARDS

Mr. THOMAS. You speak to incentive awards. I hope it is worth the money.

In fiscal year 1962 there were 22,800 suggestions submitted, of which 48 percent were adopted. I cannot imagine any such figure. What was wrong? You adopted here in 1 year 11,000 suggestions on how to run your hospital. Now, that doesn't make sense, does it? And you turn around and paid $991,000 for that?

Mr. GLEASON. No, sir, that is the savings that we effected.

Mr. THOMAS. "Awards of $123,000 were paid." I don't know how you arrived at that figure of $900,000. You might be figuring that out, Dr. Wise.

"Awards of $408,000 were also paid to 4,607 employees for the improved work performance."

Now you have an in-step promotion program and now you are going to have to have a half a million dollars for awards.

Mr. BAKER. An incentive program.

Mr. THOMAS. $407,000. Does one person get more than one award?

Mr. BAKER. Generally not, sir. I think it would be very rare if one ever did.

Mr. THOMAS. "Awards of $408,000 were paid to 4,607 people."

Dr. MIDDLETON. That is out of 135,000 employees.

Mr. THOMAS. And 11,000 of them made beneficial suggestions.

AUTOMATIC DATA PROCESSING

There is a good paragraph on automatic data processing on page 19–7. (Reading.)

Emphasis is being placed on introducing and extending the use of automatic data processing equipment.

This has been accomplished at 66 locations.

The equipment has been used for automatic payroll applications. Is there anything else you can use it for in the Bureau of Medicine and Surgery?

Dr. MIDDLETON. Supply and personnel.

Mr. GLEASON. I would like to refer back to the first day if I might, when we advised the committee we have now designated a new department, the Department of Data Management. All of the automatic data processing equipment, both in the Department of Medicine and Veterans Benefits and Insurance, will be combined into one department to do all the work so it won't be segregated. It was too late for us to get the facts for the preparation of this budget.

Mr. THOMAS. What does this equipment cost you on an annual basis?

Mr. BAKER. I don't know that I can separate the figures specifically for automatic data processing, but we pay about $1.2 million rental for all leased equipment.

Mr. THOMAS. You are going to be able to do it next year because it is all sent to Hines, isn't it?

Mr. GLEASON. Hines will be under the new department also. Next year we will be able to give all of the facts if the budget is passed as we present it here, and there will be an apportionment made from the Department of Medicine and Surgery to the Department——

Mr. THOMAS. What will it be for the Department?

Mr. BAKER. It will be $1,210,000 for fiscal year 1964. That is for the rental of all equipment. That includes other equipment in addition to the automatic data processing, but ADP is perhaps 90–95 percent of the total.

Mr. THOMAS. You have just standard equipment which you won't separate. This is just automatic data processing equipment?

Mr. BAKER. Yes, sir.

Mr. THOMAS. Your adding machines and normal office equipment——

Mr. BAKER. We do not rent that either.

Mr. EVINS. How much is the figure for the Medical Department alone for payments——

Mr. BAKER. Of all the equipment we rent, which is mostly automatic data processing equipment, it is $1,210,000 estimated for fiscal year 1964.

Mr. EVINS. How much, Mr. Administrator, is the payment for the equipment for the departments other than medicine?

Mr. GLEASON. Mr Evins, this is why we decided to buy the equipment last year as well as this year. I mentioned in the opening statement this came to a total of about $5.8 million. We propose that this will save the Government and return to the Government full payment within 3 years, on the savings we effect.

CONTRACTS FOR MAINTENANCE OF ADP EQUIPMENT

Mr. EVINS. After you have bought it how much do you have to pay for them to check it, inspect it, grease it, oil it and so forth every year?

Mr. GLEASON. This is a contract that we are working out through General Services, or I should say in conjunction with General Services for repair and maintenance of equipment.

Mr. EVINS. Do you have a figure on how much that is outside of medicine?

Mr. GLEASON. I believe it runs $40,000 or $50,000 a year.

Mr. SHYTLE. That would be on one large computer.

Mr. EVINS. How many do you have?

Mr. MONK. Two.

Mr. EVINS. That is $80,000.

Mr. MONK. On the other equipment the servicing is included in the rental.

Mr. EVINS. Can you tell me how much you pay for servicing after you buy the equipment?

Mr. MONK. $85,000.

Mr. EVINS. And Dr. Middleton pays $1,210,000——

Mr. BAKER. That is $1,210,000 for all medical programs.

Mr. EVINS. That is $1,295,000 you are paying these machinery companies on your payroll every year.

Mr. HANSMAN. The $1,210,000 is rental.

Mr. EVINS. I didn't want that figure. I wanted the figure you pay after you bought the equipment.

You are paying $85,000 for purchasing in the other department. How much are you paying in the Medical Department after you have bought the equipment?

Mr. DRIVER. They haven't bought any.

Mr. HANSMAN. The only computer—and it is a small computer owned by the Department of Medicine and Surgery at the present time—one IBM 1620 located in our research program in Omaha.

Mr. EVINS. It is wonderful to have it, but how much does it cost you after you have bought it?

Mr. HANSMAN. About $1,000 a year for maintenance service.

Mr. EVINS. I am for your program but this is the one that I don't like. This payment after you have bought it.

Mr. GLEASON. I will tell you why it is advantageous to us if I might, Mr. Evins. Once you have purchased it and entered into a contract with these companies, when you stop to realize the intricacies of one of these machines—if you have seen them, and I am sure you have—this is a brain child of men and 2 hours a day we receive maintenance on all of our equipment, in order to assure us of continuous running time from there on. We hope to effect great savings by putting all of these together into one data management department. If we were to try to take one of our personnel or two of them to learn the intricacies of these machines, it would take years, Mr. Evins.

Mr. EVINS. There are only one or two manufacturers of these computors in the country and when all of the Government agencies buy them you can soon see how much they are on the Government payroll for.

Mr. DRIVER. These contracts are not negotiated by the individual agencies. These contracts are and will be negotiated by the General Services Administration.

Mr. EVINS. We talk to them, then?

Mr. GLEASON. That is why we are working in conjunction with them. If we require 2 hours maintenance time a day then there must be other departments that are using the same type of equipment.

REMOVAL OF LIMITATION ON EMPLOYEE TRAVEL

Mr. THOMAS. Gentlemen, may I call your attention to page 19–10 and the question of employee travel. This is not patient travel, but employee travel. It is suggested it be removed. I quote this language and this is what I referred to this morning.

> Release of these funds for individual emergencies, often involving allotment of only a few dollars, generally necessitate a long-distance telephone request from the hospital to the area medical office, dispatch to the hospital of a confirmatory teletype citing allotment amount, allotment serial number and appropriation symbol * * *.

DETERMINATION OF EQUIPMENT NEEDS

You are adopting a new rule here which doesn't exactly ring any bell as far as I am concerned on determination of replacement needs of equipment. (Reading:)

> A new system was developed to determine by fiscal year, those equipment items which should be replaced in accordance with prescribed equipment-replacement standards (equipment life expectancy tables) and equipment-use standards. Annual financing needs then were computed by repricing items to reflect current replacement costs. These data provided the basis for the agency's budget estimate for equipment replacement.

Do you work these out with the Bureau of the Budget?

Mr. GLEASON. That is right.

Mr. THOMAS. Isn't each hospital manager a far better judge of the quality and condition of a piece of equipment, and doesn't he know its needs best?

Mr. BAKER. We rely upon the manager to make final determination. The time factor alone is not sufficient to justify the replacement. He

has to evaluate each piece of equipment when the standard life expectancy time arrives to determine whether or not it can still continue to be used and if it can he should not replace it.

Mr. THOMAS. You are placing a terrible burden on him to do that. He can stand on one foot and do that in 3 minutes every day in the week. He is in touch with his staff people and they can talk about these items. "This machine is getting old, it is 7 or 10 years of age. I think I can repair it for another 6 months." But he has to go through an area medical officer and that slows him down 6 or 7 months and then he has to come up to Washington.

Mr. BAKER. We need that to prove to the Bureau of the Budget how much we require in the way of financial support.

Mr. THOMAS. Never let it be said that the old human mind ever stands still. It is always figuring something out. Next year we will have a little item for increase in employment and that is it. We have to have a group over here to work out these standards.

Excuse me. Go ahead, Mr. Wise.

Mr. WISE. Mr. Chairman, before we went into this system——

Mr. THOMAS. You don't mean to say you are into it already? We are talking about 1964. Are you in here now?

Mr. BAKER. Yes, sir. You gave us $9 million for this year, sir, to apply to the equipment replacement backlog.

Mr. THOMAS. You must have given us a little chloroform.

Mr. WISE. This has enabled us to better assess what is needed and be able to replace equipment——

Mr. THOMAS. Who is "us" now, who is going to do all this? Is it the standards you are laying down or the individual hospital manager who is responsible for the day-to-day operation of that loss from equipment right on up to the top roof?

Mr. WISE. Yes, sir; and he plays the most important part in the picture, but this enables us to get the right money to the hospital at the right time.

Mr. GLEASON. I might recall the original statement, Mr. Chairman. If the committee and the Congress grants us the $9 million we are requesting this year, it will reduce our backlog on equipment to less than $1 million for next year.

Mr. THOMAS. Where is that figure of $9 million?

Mr. BAKER. It is a part of our total equipment figure of roughly $18 million, sir.

Mr. THOMAS. Where is the $9 million? That is under "Other objects"?

Well, we will get around to that in due time, but I don't recognize that figure of $9 million.

Mr. BAKER. It is part of the total equipment cost.

Mr. THOMAS. Eighteen is twice as big as nine and therefore nine is in there?

Mr. GLEASON. You gave it to us last year and if we get the $9 million this year, then the total backlog equipment needs will be reduced to less than $1 million.

Mr. THOMAS. This is medical administration, gentlemen. Medical administration for last year, 854 jobs. It goes up this year 45, which makes it 899, and 38 for next year to 937.

That is medical administration.

Let's go to the Assistant Administrator for Construction. Is this the 1,700 or 9,000?

Mr. BAKER. 1,700.

Mr. THOMAS. We also have education and training. Where is the figure for that?

Mr. BAKER. We have no employees in there, sir. That is for payment of tuition and travel.

Mr. THOMAS. This is purely education and there are no employees there.

We will have to turn over to the next sheet to get the dollars.

Mr. BAKER. Down below.

MEDICAL EDUCATION AND TRAINING

Mr. THOMAS. Education and training is $1,683,000 in 1962 against $1,750,000 in 1963, and $1,625,000 in 1964.

Your total for travel and transportation of persons is $1,315,000 last year and $1,554,000 for this year. It goes up $106,000 in 1964. That is mostly education and training?

Mr. BAKER. Principally the increased rates that were put into effect.

Mr. THOMAS. No, they put those in effect last year. That will reflect in your fiscal year 1963 budget and this is a $106,000 increase 1964 over 1963. You have already accounted for that increase.

Mr. BAKER. That is due to the increase in education and training travel from 1963 to 1964, principally.

Mr. THOMAS. How many are we going to educate and travel this year? These are all doctors, nurses, technicians, and employees of the Veterans' Administration Medical Department?

Mr. BAKER. That is right.

We plan to pay tuition for medical and dental residents in 1964, 218, which is an increase of 11 over the current year.

We plan to furnish lectures for medical and dental residents, 1,211, which is an increase of 28 over the current year. That is in residency training. That is the tuition for employees and fees for the lecturers.

Mr. THOMAS. What is the purpose of the travel? Are these interns or what?

Mr. BAKER. Residents.

RESIDENTS AND INTERNS

Mr. THOMAS. Let's get over to the terminology and get that straight. A resident is a doctor who has already been licensed to practice?

Dr. MIDDLETON. And has his internship.

Mr. THOMAS. And he is going to spend 1 or 2 years with you?

Dr. MIDDLETON. Three to five years for specialization.

Mr. THOMAS. How long he stays is entirely voluntary as far as he is concerned?

Dr. MIDDLETON. It is a requirement of the specialty board that determines the length of the residency. For general purposes, 3 years is the rule. There are some that extend beyond that.

Mr. THOMAS. What do you pay these residents?

Mr. BAKER. About half of the yearly rate for a full time.

Mr. WISE. The average now, Mr. Thomas, the rate depends on the year of training, but the average of roughly 3,100 medical residents in the system is $5,052 a year.

Mr. THOMAS. Is that for the first, second, or third year?

Mr. WISE. That is the average for all of them, sir.

Mr. THOMAS. What does it figure for the first year?

Mr. UNDERWOOD. The first year is $4,020 for junior grade. Intermediate grade is $4,735. Senior grade, first year, is $5,575. Second is $6,120. Third is $7,035.

Mr. THOMAS. What do you pay your interns?

Mr. UNDERWOOD. $3,650.

Mr. THOMAS. How many of those do you have and how many residents do you have?

Dr. MIDDLETON. We have 120 interns and we have just about 3,100 residents.

Mr. THOMAS. How long do your residents stay?

Dr. MIDDLETON. Three years.

Mr. THOMAS. Then they are gone from you?

Dr. MIDDLETON. Those we do not recruit.

Mr. THOMAS. I am trying to figure out how many of them stay with you after you help them finish their education.

Dr. MIDDLETON. It varies with the subject, but overall——

Mr. THOMAS. Overall it doesn't amount to 10 percent, does it?

Dr. MIDDLETON. It is about 12 to 15 percent for a given year.

Mr. THOMAS. How about your interns?

Dr. MIDDLETON. Interns may or may not stay on for residency, or may come into staff positions.

Mr. THOMAS. You have how many interns for the fiscal years 1964?

Dr. MIDDLETON. 120.

Mr. THOMAS. How many did you have for fiscal year 1963? My heart goes out to those boys who are working for $250 a month and you have somebody down in the laundry room who you pay $300 a month. It doesn't make sense. They work long, hard hours, and they have already had a hard enough time.

Mr. GLEASON. Doctor, wouldn't it be a small percentage of interns we would ask to stay on for residency?

Dr. MIDDLETON. It is entirely at their own selection. It would vary from year to year.

Mr. THOMAS. I am just wondering how effective is your education program for the simple reason you don't keep them.

What part of your older staff participates in this?

Mr. GLEASON. If we don't keep them, Mr. Thomas, the medical profession in the country gains.

PERCENT OF RESIDENTS TRAINED

Mr. THOMAS. You are not in the business of educating the medical profession. That is not your job.

Mr. GLEASON. It is our job though, Mr. Chairman, to assist in the medical education of the country with our large hospital system. It is the largest system in the country. One out of every three new physicians each year are trained by the Veterans' Administration through the residency program.

Dr. MIDDLETON. Eleven percent of all residents in training in this country today, sir, are in Veterans' Administration.

Mr. WISE. And the real value is we have them for those 3 years there with us.

Mr. THOMAS. And at the end of this residency they go to private practice?

Dr. MIDDLETON. Twelve to fifteen percent stay with us.

Mr. THOMAS. Didn't we use a figure in here a couple years ago of 10 percent rather than 12 or 15 percent?

Dr. MIDDLETON. I did not, sir. It has been higher than that in the past.

Mr. JONAS. Would you yield there?

Mr. THOMAS. Yes.

TURNOVER IN PHYSICIAN POSITIONS

Mr. JONAS. You can't do that ad infinitum. You have to replace people. You are losing some.

Dr. MIDDLETON. We do have an attrition in our staff.

Mr. JONAS. What is that rate?

Mr. UNDERWOOD. The turnover rate for physicians is 11.8. That is title 38.

Mr. GLEASON. That is about 12 percent.

Mr. UNDERWOOD. 11.8.

Mr. THOMAS. That is your older doctors or everybody?

Dr. MIDDLETON. Everyone.

Mr. UNDERWOOD. Physicians under title 38. Regular physicians.

Mr. THOMAS. You lose 85 to 90 percent of your residents.

Mr. UNDERWOOD. Most of the residents graduate and go out and practice or do whatever they plan to do—the figure I gave is for full-time regular physicians.

Mr. THOMAS. What was the turnover, again?

Mr. UNDERWOOD. 11.8 for this last year.

Mr. GLEASON. That is about 1 percent a month.

Mr. THOMAS. That is not bad.

Mr. UNDERWOOD. Considerably below our general average.

Mr. JONAS. How do you hold these doctors?

Dr. MIDDLETON. We hold them because of the quality of medicine they can practice. They are practicing medicine as they prefer to practice it. The research and education outlets of course are a tremendous incentive for them to continue in this relationship.

Mr. GLEASON. And also because of the close association we have with the medical schools, Mr. Jonas.

Mr. JONAS. You don't have these waiting rooms full of patients clamoring and crying for medical service, though, and night calls and all of the other things.

Dr. MIDDLETON. They are on duty 24 hours a day, but they do not have these deterrents that you mentioned.

Mr. JONAS. Conditions are better.

Dr. MIDDLETON. Their professional associations, their ability to exchange with their fellows and to participate in scientific and educational activities and professional meetings.

Mr. THOMAS. Your travel costs show a considerable increase.

EDUCATIONAL ASSIGNMENTS

Mr. JONAS. How long do these fellowships last?

Dr. MIDDLETON. You are speaking of the residences?

Mr. JONAS. Yes.

Dr. MIDDLETON. They are ordinarily 3 years.

Mr. JONAS. No; I don't mean that. I mean when you send them over to take a refresher course.

Dr. MIDDLETON. Refresher courses are very infrequently selected outside of the Veterans' Administration and usually for a period of weeks.

Mr. JONAS. I assumed this big item for travel was to pay travel expenses for your people in residence who go off and take courses.

Dr. MIDDLETON. That is right.

Mr. JONAS. How long is the average course?

Dr. MIDDLETON. Up to 6 months and the limitation is 1 year. For example, a person specializing in ophthalmology may be required to have a year's course in physiology and anatomy of the eye.

Mr. JONAS. You do not send his family too?

Dr. MIDDLETON. No, sir.

Mr. JONAS. Only the individual?

Dr. MIDDLETON. That is right.

Mr. THOMAS. How many doctors, interns, and residents do you have throughout the system?

Dr. MIDDLETON. We have 4,992 full-time physicians. We have about 3,100 residents. We have just over 1—120 I said—interns.

Mr. THOMAS. The number going out of the particular installation to study is a nominal figure?

Dr. MIDDLETON. Yes; compared to the total figure.

Mr. THOMAS. Why is the travel so much then?

Dr. MIDDLETON. The meetings, conferences within the Veterans' Administration and outside the Veterans' Administration. As a matter of fact, there is a standing rule——

Mr. THOMAS. Is it mostly local traveling?

Dr. MIDDLETON. It may be to a national meeting, sir, but there is a standing rule we do not send our staff to meetings outside the agency in which they are not actually participants. Now, this is a handicap in that the younger men without financial resources cannot have the advantage.

Mr. THOMAS. Give us some idea of how you spend your travel money. If only a nominal number of your staff of 8,000 doctors ever get out of their installation, why is your travel so high?

Mr. BAKER. Page 20–17 shows the number of staff making these trips which would be 8,664 trips at $113 average cost per trip.

Mr. THOMAS. Then they are evidently out of the installation.

Mr. BAKER. But within the VA. Seminars, conferences, and so forth within the Veterans' Administration for purposes of group study, lectures, and discussions.

Mr. THOMAS. Do you go from one town to another to the Veterans' Administration installations?

Mr. MIDDLETON. Yes, sir. At the present time we have just completed one on pulmonary diseases in Cincinnati, for example, and we bring men from all over the country.

Mr. JONAS. How often do you have these conferences and seminars? How many will a given resident in one of your hospital's attend in a year?

Dr. MIDDLETON. Unless he is actively participating, Mr. Jonas, he is not entitled to go to a non-VA meeting, which as I say is a handicap.

Mr. JONAS. I am talking about the meetings within the Veterans' Administration itself.

Dr. MIDDLETON. In these meetings within the Veterans' Administration we will have the various departments represented by chiefs of staff meetings, chiefs of various services, and on an average a resident would not go more than three times a year or occasionally four times a year, locally or removed, in the interest of a special program.

Mr. GLEASON. At page 20–18 the third and fourth paragraphs there may give you some insight into it.

Mr. JONAS. I was trying to find some justification for $1.6 million worth of travel.

MEDICAL ADMINISTRATION PROGRAM HIGHLIGHTS

Mr. THOMAS. Let us put page 20–5 in the record.

(The page referred to follows:)

MEDICAL ADMINISTRATION

PROGRAM NOTES

This program includes those central office services responsible for the development of objectives and the administration of policies and plans to insure complete medical, dental, and hospital services for the care and treatment of veterans as prescribed by the Administrator pursuant to statutory authority and regulations. Also included under this heading are the seven area medical offices, each having an assigned geographic area and concerned with day-to-day supervision and operation of the medical program as carried out by the hospitals, domiciliaries, and clinics.

The mission of the agency's medical program is to provide hospital, outpatient, and domiciliary care to eligible veterans; a research program to improve methods of diagnosis and treatment; and an education and training program to improve the professional competence of its staff.

The medical care and treatment programs were conducted during fiscal year 1962 in 170 Veterans' Administration hospitals and in 18 Veterans' Administration domiciliaries, with average operating beds of 120,976 and 16,866, and average daily patient or member loads of 110,884 and 16,400, respectively. Outpatient medical and dental services for veterans with service-connected disabilities were provided by 93 clinics and 16 subclinics during fiscal year 1962 and by physicians and dentists participating in the hometown care plan. Outpatient services for fiscal year 1962 consisted of more than 3,656,000 medical visits, 36,000 dental examinations and 28,000 dental treatments.

More than 135,000 employees will be engaged in the conduct of agency medical programs in the current 1963 fiscal year. The combined administrative staff of the Department of Medicine and Surgery that will be on duty in the central office and area medical offices at the close of the current fiscal year totals 922 employees or less than two-thirds of 1 percent of the total employment in medical programs. This represents one of the lowest ratios of administrative employment to total program employment found in the Federal Government.

In addition to providing for needed administrative staff, this estimate includes consultants to the Administrator and the Chief Medical Director as well as the Special Medical Advisory Group. The members of this Special Medical Advisory Group meet four times a year with the Department of Medicine and Surgery to advise on medical and policy matters. They serve as liaison between the Veterans' Administration and major segments of American medicine, such as the medical schools and the various professional associations of medical specialists. Central office use of consultants is in connection with neuropsychiatry, social service, tuberculosis, and dentistry to advise and assist on policies and procedures. Consultants and attendings in area medical offices are also utilized to supplement the professional staff in those offices. They supervise specialty activities and submit reports on each hospital appraising the capabilities of the head of the particular specialty, the psysical layout, the type of service being rendered, as well as criticisms and recommendations.

During the fiscal year 1963, staffing of area medical offices will be brought to levels commensurate with their delegated responsibilities of exercising direct line of authority over hospitals, domiciliaries, and clinics within their respective geographic areas. These changes are necessary to achieve better balance in the administration of agency medical programs and to resolve operating problems of individual installations more quickly.

Mr. THOMAS. Gentlemen, let me refer you to this paragraph. (Reading:)

The medical care and treatment programs were conducted during fiscal year 1962 in 170 Veterans' Administration hospitals and in 18 Veterans' Administration domiciliaries, with average operating beds of 120,976 and 16,866, and average daily patient or member loads of 110,884 and 16,400, respectively. Outpatient medical and dental services for veterans with service-connected disabilities were provided by 93 clinics and 16 subclinics during fiscal year 1962 and by physicians and dentists participating in the hometown care plan. Outpatient services for fiscal year 1962 consisted of more than 3,656,000 medical visits, 36,000 dental examinations and 28,000 dental treatment.

MEDICAL ADMINISTRATION COSTS

Let me refer you to this table at 20–4. The sum and substance of it is that there is an increase over last year of $968,000. Salary increases and within grades account for $526,000, two extra work days cost $71,000, and so forth. The table speaks for itself.

We really get a breakdown of the other objects at page 20–11.

Travel and transportation of persons shows a $27,000 increase.

Transportation of things, $22,000 in 1962, $40,000 in 1963, and $38,000 in 1964.

Rents and utilities go up $1,000. There is no change in printing and reproducing, $196,000. Why is that figure so large? This is separate now from the training program. That is where your big money in travel is.

Medical administration, $647,000 for travel itself.

Supplies and materials go up $3,000.

NUMBER OF PAMPHLETS, DOCUMENTS, FORMS, ETC., PRINTED

Why so much on printing and reproduction? How many pamphlets do you print?

Mr. GORMAN. In 1962 the number of publications printed for DMS was as follows: 225 circulars, 145 operational letters and 215 changes to manuals.

Mr. THOMAS. What is the total?

Mr. GORMAN. 585.

Mr. THOMAS. What is the circulation?

Mr. GORMAN. The circulation is to all hospitals and domiciliaries to the point they know what is expected of them in order to carry out the wishes of the Congress. These are primarily for internal use in VA.

Mr. THOMAS. 585 documents.

Mr. GORMAN. That is right, sir.

Mr. THOMAS. How many copies altogether?

Mr. GORMAN. If we add in the forms and form letters we have in that Department, we have quite a few. A total of 2,856 different forms and form letters in the Department of Medicine and Surgery.

Mr. THOMAS. You don't have a very broad circulation. How many copies of these 585 documents do you print?

Mr. GORMAN. The 585 documents are basically directive material from central office to elements in our field installations so that they can carry out the intent of the Congress.

Mr. THOMAS. I thought we had the area medical office doing that. How many do you send out to the area medical people?

Mr. GORMAN. I would say we send out at least 260 copies of pertinent materials.

Mr. THOMAS. What is the total number of documents printed throughout all departments of the Veterans' Administration? If you have 585 in Medicine, how many do we have in Veterans' Benefits?

Mr. GORMAN. We break down Department of Veterans' Benefits issues into forms, form letters, and publications. Now on publications, we break them into manuals, circulars, bulletins, and so forth, which I will give you if you want, sir.

Mr. GLEASON. How many different forms are printed throughout the Department of Medicine and Surgery or for the agency, whichever the chairman wants—there must be 50,000 to 60,000 of form A, 30,000 of some other form.

How many pieces do we actually print and distribute?

Mr. GORMAN. Take this basic application for hospitalization, 10–P–10. In 1962 we printed 1,715,000 sheets of 10–P–10.

Then we also had to print out a medication form in a volume of 23,761,000 sheets. Then we printed 12 million prescription forms, over 2 million locater cards, and almost 3 million records of hospitalization.

We had identification tags printed to the extent of 1,248,500.

Social service cards printed amounted to 1,652,000.

Mr. THOMAS. What does it all total?

Mr. GORMAN. I do not have that for the agency.

Mr. THOMAS. For Medicine and Surgery you print 585 different documents.

Mr. GORMAN. Publications; yes, sir—directive material.

Mr. THOMAS. What was it for the Veterans Benefits?

Mr. GORMAN. For Veterans Benefits, sir, it was roughly about—well, we can get the accurate figure if we add in the technical bulletins, manuals——

Mr. THOMAS. All of them. Wrap it up in one figure.

Mr. GORMAN. 300.

Mr. THOMAS. Is that the figure we used yesterday?

Mr. GORMAN. We used about 400 publications yesterday, I believe.

Mr. THOMAS. Now you are cutting it down to 300?

Mr. GORMAN. I will clarify it later, sir.

Mr. THOMAS. Which is the best guess?

Mr. GORMAN. 300, sir.

Mr. THOMAS. How many more? How about Insurance?

Mr. GORMAN. Under Insurance we——

Mr. THOMAS. You used the figure of 500 yesterday, I am told, rather than 400. Do you recall what you used?

Mr. GORMAN. Well, sir, when we talk about publications we refer to many different issues. Specifically, what we refer to publications in our index to publications we consider all administrative issues, including Administrator's decisions——

Mr. THOMAS. Call it what you want to, it is printing and binding?

Mr. GORMAN. Yes, sir.

Mr. THOMAS. You used 500 yesterday. Five hundred for Veterans Benefits. Five hundred eighty-five for Medicine and Surgery. What do you have for Insurance?

Mr. GORMAN. About 300.

Mr. THOMAS. About 300?

Mr. GORMAN. That is right, sir.

Mr. THOMAS. Are any other departments doing any printing and binding?

Mr. DRIVER. On top of that there are 8,736 forms and form letters, Mr. Thomas.

Mr. THOMAS. At this point in the record insert a statement that breaks out your publications. Can you do that?

Mr. GORMAN. Yes, sir.

(The information supplied follows:)

Our Index to VA Publications list the following administrative issues:

Administrator's decisions	Instructions regarding public laws
Bulletins	Manuals
Catalogs	Operating instructions
Circulars	Pamphlets
Interim issues	Regulations

These publications consist of 1,508 basic issues.

Issued as agencywide use publications	371
Issued by the Department of Veterans' Benefits to implement its programs	488
Issued by the Department of Insurance to implement its programs	388
Issued by the Department of Medicine and Surgery to implement its programs	261
Total	1,508

In addition to the publications listed in the index, the Department of Medicine and Surgery issued the following:

Circulars	225
Operating letters	140
Total	365

The total Department of Medicine and Surgery issues were 261 indexed and 365 unindexed items or a total of 626.

TOTAL VA PRINTING COST

Mr. THOMAS. Can you give us a wrap-up figure now for your total cost of printing and binding throughout the agency? We used that figure yesterday. What was it?

Mr. MONK. $3,213,864 for fiscal year 1964.

Mr. THOMAS. That is for all agencies and departments of the Veterans' Administration?

Mr. MONK. Yes, sir.

Mr. GLEASON. Mr. Chairman, many of those forms are printed in quantities in excess of 1 million copies a year.

Mr. THOMAS. Is it mandatory, Mr. Administrator, that you have all those?

Mr. GLEASON. Yes, it is. Just like the identification tags. We have to have one affixed to each bed while the patient is in our hospital.

Mr. THOMAS. Did you have a cost analysis made of the wastepaper baskets in all your installations?

Mr. GLEASON. Mr. Chairman, yesterday we mentioned that we revised about 328 of the forms and then it was necessary for us to put about 221 new forms into operation.

Mr. GORMAN. May I add we print about 50 million premium notices a year.

Mr. GLEASON. This is the sort of thing the chairman wants to know. For example, 50 million forms for insurance premiums alone.

EDUCATION AND TRAINING

Mr. THOMAS. Gentlemen, look at page 20–13. This is education and training which we have touched on before. Put this page in the record.

(The page referred to follows:)

Education and Training

Activity and object summary

	Fiscal year 1962 actual	Fiscal year 1963 estimate	Program changes			Fiscal year 1964 estimate	Increase (+) or decrease (−), 1964 over 1963
			Residency training	Postgraduate and inservice training	Medical illustration		
Costs by activity:							
Residency training	$121,022	$164,000	+$6,000			$170,000	+$6,000
Postgraduate and inservice training	1,112,794	1,361,000		+$94,000		1,455,000	+94,000
Medical illustration	450,183	225,000			−$225,000		−225,000
Total	1,683,999	1,750,000	+6,000	+94,000	−225,000	1,625,000	−125,000
Costs by object:							
21 Travel and transportation of persons	784,510	900,000		+79,000		979,000	+79,000
22 Transportation of things	12,084	17,000			−17,000		−17,000
23 Rents, communications, and utilities	5,550	4,000			−4,000		−4,000
24 Printing and reproduction	410	1,000			−1,000		−1,000
25 Other services	508,405	585,000	+6,000	+15,000	−60,000	546,000	−39,000
26 Supplies and materials	221,624	243,000			−143,000	100,000	−143,000
31 Equipment	151,416						
Total, gross costs	1,683,999	1,750,000	+6,000	+94,000	−225,000	1,625,000	−125,000

Mr. THOMAS. Residency training is $170,000; your postgraduate and service training, $1,455,000. Your travel cost in 1964 and 1963 will be about $979,000 against $784,000 for last year. That is a pretty good table.

Can't we save about half of this money here and still have a good, effective program?

Mr. GLEASON. Mr. Chairman, if we can save it we will be glad to let you have it back if we don't use it.

MEDICAL ADMINISTRATION

Mr. EVINS. Gentlemen, our role on this side of the table is to bring about economy and cut down costs. I think we should be able to point out a few of the good things here.

I have been impressed with this statement. Of the 135,000 employees in the Medical Department, only 922 or less than two-thirds of 1 percent are employed in the medical administrative programs. This represents one of the lowest ratios of the administrative cost to the total program in the Federal Government.

Then on another page they say here the administrative staff of 937 requested for 1964 is 9 percent less than the number of staff, 1,032 for fiscal year 1955.

The number is down to two-thirds of 1 percent of the total employment in medical programs.

Mr. THOMAS. There are 9,000 doctors and at no time do you have more than 111,000 patients, so that means 1 doctor takes care of 12 patients on a daily basis. If you go to any private practitioner and get there at 4 o'clock he only has 30 patients waiting. He has already seen 20. They tell me a private practitioner will see 50 or 60 patients a day.

Dr. MIDDLETON. He will just see them, sir.

Mr. DRIVER. Not in a hospital.

Mr. THOMAS. My doctor sees me and about 40 more.

Mr. DRIVER. He is just taking character references.

MEDICAL AND PROSTHETIC RESEARCH

Mr. THOMAS. This is medical and prosthetic research. Here is a good breakdown. This is average employment in medical research; 2,477 people in 1962. This year it goes up to 2,800 and in 1964 it will be 2,976. Where are these people located?

Dr. MIDDLETON. In 140 hospitals doing research, sir.

Mr. THOMAS. Now, I notice a little further over here you talk about hiring some private researchers. Do you mean by that you are going to get some Ph. D.'s in physics and Ph. D.'s in organic chemistry, some Ph. D.'s in engineering and mathematics?

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. How many are you getting this year? How many biologists are you getting?

Dr. MIDDLETON. Sir, I do not have a breakdown of their skills.

Mr. THOMAS. You gave a figure a little earlier. Somebody put their hand on it right quick. Where is Mr. Wise? How many of those people are you getting this year?

Mr. WISE. We have the breakout of personnel, Mr. Chairman. Of course, the green sheets give it in broader detail. It is at page 21–16. We give the breakdown between consultants, clinical, and senior medical investigators——

Mr. THOMAS. Just a minute. That is not what I have in mind.

You set them out some place, but I can't put my finger on it, but I remember seeing it.

What about table 21–2? That is not what I was looking for.

Mr. GLEASON. 21–4 may be of interest, Mr. Chairman.

Mr. THOMAS. Let's put this table in the record at 21–2.

(The page referred to follows:)

Employment and object summary

	Fiscal year 1962 actual	Fiscal year 1963 estimate	2 additional workdays	Public Law 87-793 and within-grade increases	Program changes	Fiscal year 1964 estimate	Increase (+) or decrease (−), 1964 over 1963

Mr. THOMAS. You don't pay these people as research men. He is a doctor practicing medicine inside the Veterans' Administration installation, isn't he?

Dr. MIDDLETON. No, sir. There are only those physicians who are the clinical investigators, approximately 50, and then there are 5 senior medical investigators, so that these folks are the specialists in the area to which you are referring.

Mr. THOMAS. I want to know where these installations are. They are over here close to your hospitals. Here we are.

Mr. Reporter, put 21–4, 21–5, and 21–6 in the record.

(The pages referred to follow:)

MEDICAL RESEARCH

PROGRAM NOTES

The Veterans' Administration concept of medicine clearly establishes an inseparable relationship among patient care, research, and education. The VA medical research program operates in conjunction with the education and training program in support of the agency's mission of providing the eligible veteran with high quality medical care. Thoroughly competent physicians must be proficient in each of the three related components and those who are so qualified will seek association only with those institutions which provide and encourage adequate outlets for their capabilities. The research program thus aids in recruiting and retaining the most competent physicians.

Although still a young program, VA medical research has paid big dividends in its contributions to scientific knowledge. In addition, the program is a major factor in maintaining the close relationships existent between the VA and the medical schools. Research, however, is not limited to these hospitals and many nonaffiliated hospitals have vigorous programs. In these, too, research is instrumental in attracting physicians of the highest grade and comparably trained bioscientists. The excellence of patient care throughout the VA hospital system is largely an indirect result of the research program.

An impression of the scope of the research program may be given by the following fiscal year 1962 information:

1. Research programs existed in 136 hospitals, 7 regional offices, 3 outpatient clinics, and the Veterans Benefits Office, Washington, D.C. Only 86 of the hospitals were affiliated with medical schools.
2. A total of 7,504 individual research projects were conducted by 5,451 research investigators.
3. Professional and scientific journals published 2,166 articles by VA research investigators.
4. Papers resulting from research which were presented before professional and scientific audiences numbered 3,175.

The high caliber of VA medical research may be illustrated by the following few examples of recent accomplishments:

1. A new operation to increase the blood supply to the heart when a coronary thrombosis has reduced the amount it normally receives has been devised by a VA surgeon at Oteen, N.C. Significant is the fact that this major research accomplishment was achieved by a young VA clinical investigator in the second year of his research training.
2. The existence of an immune reaction to an individual's own tumor has been demonstrated at the VAH, Dallas, Tex., opening the possibility of vaccinating against cancer. This possibility is being explored there and in the VAH, Coral Gables, Fla.
3. A radioisotopic method for measuring blood flow through the brain has been devised at VAC, Los Angeles, Calif. This simplifies the localization of blood vessels which have been blocked and may be amenable to surgical repair.
4. A bedside robot capable of watching 20 to 25 patients simultaneously for changes in any of 8 body functions including blood pressure, pulse, and breathing rate and temperature has been produced through the collaboration of a few physicians at the VAC, Los Angeles, Calif.
5. A blood test for detection of certain types of cancer has been developed at the VAH, Indianapolis, Ind.

6. Tetracyclines and other compounds are being tagged with radioisotopes for therapeutic use in malignancies at the VAH, Omaha, Nebr.

7. A fat which exists in tumor tissues in tenfold the normal amount has been synthesized at VAH, Dallas, Tex. This will permit detailed study of the importance of fats in cancer.

8. The association of pulmonary tumors with scars in the lungs left by previous diseases has been demonstrated at the VAH, West Haven, Conn.

9. The sensory-deprivation studies at Oklahoma City have been utilized in testing aspiring astronauts. These studies of the effects of complete isolation are giving deep insight into the cause and nature of mental disorders and are leading to new approaches to the treatment of schizophrenia.

10. A special spongelike plastic has been successfully substituted for skin in the VAH, Buffalo, N.Y., which is a lifesaving measure in the treatment of burns covering a large portion of the body.

11. In some instances, paralyzed limbs may be activated by properly timed electrical impulses (VAH Hines, Ill.).

12. A new method for replacing human tissues damaged by radiation has been described at VAH, Long Beach, Calif.

13. A portable device for applying heart massage externally as a lifesaving aid has been developed at the VAH, Coral Gables, Fla.

14. Lung cancers are being identified by means of enzyme reactions in 80 percent of previously unclassifiable types as a result of studies in the VAH, Oakland, Calif.

15. A technique for measuring accurately the volume of blood lost into the bowel or during surgery has been developed in VAH, Omaha, Nebr., using radioactively tagged red cells.

16. The relationship between certain malignancies, notably leukemia and a transmissible virus, has been established at VAH, Bronx, N.Y. For this work Dr. Ludwik Gross has received one of six World Health Organization awards for scientific achievement.

17. Elderly individuals have been shown to have much higher protein requirements for the maintenance of good health than young people. (VAC, Los Angeles, Calif.).

18. Insulin has been shown to induce an immunological response in injected individuals and the degree of the response can be determined. (VAH, Bronx, N.Y.)

19. The amount of circulating cholesterol has been substantially reduced and kept low for at least a year and a half by substituting unsaturated fats for solid fats in an appetizing diet (VAC, Los Angeles, Calif.). This work was the subject of a highly complimentary editorial in the New England Journal of Medicine in June 1962.

20. Changes in the lung and bronchial passages due to smoking can revert to normal if smoking is discontinued for 5 or more years (VAH, East Orange, N.J.). This reversal which apparently begins promptly was thought previously not to occur at all.

21. The implantable pacemaker developed to stimulate hearts in which the normal impulse is deficient or absent has been used in the treatment of 40 patients during the past 2 years. Thirty-four of these have been successfully rehabilitated. Followup studies extend to 23 months (VAH, Buffalo, N.Y.). A surgeon from the VAH, Oteen, N.C., was invited to spend 3 months in Moscow demonstrating newer cardiac surgery techniques.

Mr. THOMAS. Personnel is going to go up 176 in 1964. Employment was 2,477 last year and next year you want to go up to 2,976.

Let's see where these people are located. Refer to 21–4, gentlemen.

Are these people usually professors in an adjacent medical college?

Dr. MIDDLETON. No, sir. These are people with technical skills. The biochemists, the physicists of whom you have been speaking.

Mr. THOMAS. There are around 3,000 of them now. They do not practice medicine.

Dr. MIDDLETON. They do not, sir.

Mr. THOMAS. Are there any Ph. D.'s in the crowd?

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. How do you compensate this distinguished and dedicated crowd that comes from the various medical colleges? How many of your 170 hospitals are adjacent to and in the same neighborhood as the colleges?

Dr. MIDDLETON. Ninety-four or ninety-five.

Mr. THOMAS. How many of these people come from these 90 medical colleges?

Dr. MIDDLETON. The vast majority are associated with hospitals that are in the affiliated program but they are not, sir, members of the staff except by courtesy of the medical school.

Mr. THOMAS. Are these people full-time employees?

Dr. MIDDLETON. The vast majority are full-time employees of the Veterans' Administration. In the basic sciences and sciences related to medicine.

Mr. THOMAS. I have been in a good many of your excellent hospitals adjoining a medical college. The first place I want to go when I am there is to some of the research installations and invariably there are four or five college professors conducting an investigation.

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. How do you compensate those people?

Dr. MIDDLETON. They are consultants but they are not the kernel or the core of this particular program. They lend an impetus to it.

Mr. THOMAS. They are the brains of your program. Nobody knows that half as well as you do. It is the ones in the medical colleges and not in your hospitals.

Dr. MIDDLETON. We have strong staffs in our own hospitals. I would not demean the medical schools. It is a two-way street.

Mr. THOMAS. This is excellent reading.

Research programs exist in 136 hospitals, gentlemen, 7 regional offices, 3 outpatient clinics, and Veterans' Benefit offices in Washington, D.C. Only 86 of the hospitals were affiliated with medical schools.

Dr. MIDDLETON. I said 94.

Mr. THOMAS. We did not miss it far.

A total of 7,504 individual research projects were conducted by 5,451 research investigators.

You set out a lot of accomplishments on pages 21–5 and 21–6. This is in the record. I have tried to read the foregoing over carefully. Not being a scientist, I didn't know, but in reading that over I thought maybe the group had displaced Children's Hospital in Boston.

Dr. MIDDLETON. Sir, if I may cite an example——

Mr. THOMAS. And the Rockefeller Foundation in the field of cancer, several medical colleges in heart surgery and heart research.

By the way, Doctor, did you see that whole page dedicated to Dr. Debohke the other day? I do not know whether they printed it all over the United States.

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. Wasn't it wonderful?

Dr. MIDDLETON. Yes, sir. He is a very fine man.

Mr. THOMAS. He certainly is.

PACEMAKER TO STIMULATE HEARTS

Mr. MIDDLETON. Mr. Chairman, there is just one detail for human interest that you might like to have in the record, on this item 21 on page 21–6, at our hospital at Buffalo, N.Y. Dr. Chardack has devised this pacemaker.

Mr. THOMAS. That is item 21, gentlemen.

Dr. MIDDLETON. Yes, sir. It so happened that Dr. Tokara, of the Oteen Veterans' Administration Hospital, was in Moscow on a student exchange and there was word that there was an individual physician in Czechoslovakia with heart block and heart failure who wanted to obtain this pacemaker made in Buffalo. Dr. Tokara from Oteen went to Prague and implanted this pacemaker in the heart of this physician, with physicians from behind the Iron Curtain watching him carefully, I think hoping for the worst, but the patient did very well.

Mr. THOMAS. The instrument is set inside the heart?

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. What is its function?

Dr. MIDDLETON. It is a small transistor that gives an electrical discharge at the rate of about 60 beats a minute.

Mr. THOMAS. It supplements the heart power?

Dr. MIDDLETON. Yes, sir.

Mr. THOMAS. It works?

Dr. MIDDLETON. It works.

Mr. THOMAS. That is marvelous. You can't tell where genius is going to show its head.

Mr. JONAS. The Russians have not yet advanced the claim that they perfected this?

Dr. MIDDLETON. They just looked on.

Mr. THOMAS. You just give them time.

Mr. GLEASON. Mr. Jonas, this physician from Oteen spent 3 months in Moscow teaching them how to use the pacemaker.

Dr. MIDDLETON. There is a stapling device he has made for blood vessel surgery.

MEDICAL RESEARCH FUNDS FROM OTHER SOURCES

Mr. JONAS. Mr. Chairman, I wanted to ask a question on 21–10. They have not told us much about $7 million they are getting from NIH.

Mr. THOMAS. That is not all. If you look down further they have a little bit more coming from another source.

Mr. JONAS. What is the total you are getting from sources outside of direct appropriations?

Dr. MIDDLETON. This is the total from the NIH and from other organizations.

Mr. JONAS. You do get some grants from NSF too, do you not?

Dr. MIDDLETON. Not from National Science. We are in the medical field. They do not deal with medicine.

Mr. JONAS. What do you do with that money?

Dr. MIDDLETON. This is part of our total program, the largest element of which has to do with our cooperative studies in the chemotherapy of cancer.

Mr. JONAS. Do you use it to supplement appropriated funds at any place in the program?

Dr. MIDDLETON. Not at any place, sir. In this specific instance there is obviously the ability on the part of the National Institutes of Health to develop the fundamental research and availability of certain chemicals and drugs for the treatment of cancer. We have the patients and make the study.

Mr. JONAS. Your program is a $40 million program instead of $33 million?

Dr. MIDDLETON. It will be with this supplement from outside sources.

Mr. JONAS. You had that last year.

Dr. MIDDLETON. We had $29 million last year.

Mr. JONAS. You had $7 million from the outside funds.

Dr. MIDDLETON. You are right, sir.

Mr. JONAS. What you had last year was the $7 million and you hope to get the same amount in 1964?

Dr. MIDDLETON. That is right. We had from the NIH for the chemotherapy just under a million—$982,700—and then we had through the various medical schools with which we are affiliated and other sources, $6,054,100 in grants to these institutions for use in our particular studies in the hospitals.

Mr. JONAS. You made the grants with NIH money?

Dr. MIDDLETON. That is right. They made the grants. NIH made the grants through the medical schools to our men working in hospitals.

COST CHANGES—MEDICAL RESEARCH

Mr. EVINS. Mr. Reporter, place in the record the program changes in medical research on 21–10.

(The page referred to follows:)

MEDICAL RESEARCH

COST CHANGES

The estimate of $32,467,000 for fiscal year 1964 contemplates an increase of $2,967,000 over the $29,500,000 appropriated for the medical research program in fiscal year 1963. Total expenditures planned for fiscal year 1964 are comprised of $31,021,000 for operational research and $1,446,000 to provide object class 31 equipment for newly constructed research facilities. The latter item formerly (until fiscal year 1963) was financed from amounts appropriated under the "Construction of hospital and domiciliary facilities" appropriation.

In addition to amounts provided for the medical research program by direct appropriation, an amount of $7,037,000 was available in fiscal year 1962 in grants from the National Institutes of Health and from other organizations sponsoring research. It is anticipated that the same level of funding from these outside sources will be available in fiscal years 1963 and 1964. An indeterminate amount of support is also furnished from funds budgeted for hospital operations for other services including housekeeping, personnel, supply, fiscal, and engineering at the hospital level. This estimate does not include funding of research construction projects which are a part of the "Construction of hospitals and domiciliaries fund" appropriation.

Operational research expenditures of $31,021,000 will increase moderately over fiscal year 1963 expenditures to permit the addition of 176 new research employees; to cover the personal service costs of two additional paid workdays, Public Law 87–793 and within-grade salary increases for existing staff; to provide additional supplies, equipment and other services to augment existing research studies; and to implement new studies. Efforts will be directed toward consolidating the gains of previous years and assuring that proper balance and normal growth continue in the program.

Beginning in the 1963 fiscal year, the "Medical and prosthetic research" appropriation is assuming payments for object class 31 equipment required in connection with research space construction projects programed in the fiscal year 1963 and subsequent year budget submission. These include projects for major construction and alterations, hospital modernization and replacement, and additional hospitals. Subject to the availability of total fiscal year 1963 and 1964 medical research amounts reflected in this estimate, the agency proposes to earmark $765,000 of fiscal year 1963 funds and $1,446,000 of fiscal year 1964 funds specifically for object class 31 equipment required for new research space provided under the construction program. If construction delays, changes in scope, or substitution of research projects occur, the earmarked operating appropriation "no year" funds will be retained exclusively for the above-stated purpose with any savings applied to equipment requirements of future projects.

COMPARATIVE EXTRA-VA RESEARCH COSTS

Mr. EVINS. We will also insert the comparative research costs on 21–14.

(The pages referred to follow:)

MEDICAL RESEARCH

Comparative extra-VA research costs

Category	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated	Increase (+) or decrease (−), 1964 over 1963
Georgetown University [1]	$6,000	$6,000	$6,000	
National Bureau of Standards [2]	5,000	5,000	5,000	
National Research Council (National Academy of Sciences) [3]	201,800	213,000	213,000	
Sciences Information Exchange (Smithsonian Institution) [4]	50,000	65,000	65,000	
System Development Corp.[3]	246,000	120,000		−$120,000
University of North Carolina [6]	9,315	12,000	12,000	
University of Oklahoma [7]	2,000	2,800	2,800	
Woman's Medical College of Pennsylvania [8]	2,085			
Digitronics Corp.[3]		22,000	22,000	
American Foundation for the Blind [10]	25,000	43,000	43,000	
Total	547,200	488,800	368,800	−120,000

[1] Space and facilities for research in pulmonary diseases.
[2] Testing of dental prosthetic materials.
[3] Basic statistical analysis in connection with followup studies of specific diseases; preparation of the "Atlas of Tumor Pathology;" and statistical analysis and presentation of research in oncology by the Armed Forces Institute of Pathology.
[4] Support of a central file of research papers jointly with other Government agencies.

USE OF NIH RESEARCH FUNDS

Mr. EVINS. I think we have discussed this somewhat.

Doctor, it is not really true that the NIH has really more appropriated funds than they can use and fortunately because of that they are able to make allocations supplement to VA?

Dr. MIDDLETON. Sir, I am not in position to state.

Mr. EVINS. I saw a news story one time that the NIH had more money than they could use. They have a tremendous carryover.

Mr. JONAS. The President froze a lot of it.

Mr. EVINS. Yes. It is an area where great research is going on. I know each complement the other. You have outlined some of the accomplishments. If there was a reduction in research, don't you think you could ask them to give you a little bit more?

Dr. MIDDLETON. I am sorry, we could not.

Mr. EVINS. You feel you are receiving the maximum at this time that you can prevail upon them to allocate to you?

Dr. MIDDLETON. Most of these sums, as you realize, are independent grants and the major item—single item—is in the area of chemotherapy of cancer, which is obviously a very important one, in which we are supplementing their effort.

I think the Bureau of the Budget and the committees of Congress have complimented these two agencies on working together and teaming in this respect.

PROSTHETIC RESEARCH

Mr. EVINS. Gentlemen, let us look at prosthetic research. Put the table on page 21–33 in the record.

(The table referred to follows:)

PROSTHETIC RESEARCH

Comparative analysis by object

Costs by object	Fiscal year 1962, actual		Fiscal year 1963, estimated		Fiscal year 1964, estimated		Increase (+) or decrease (−) 1964 over 1963

[1] Includes $142,000 in costs financed from obligations incurred in fiscal year 1962, and $15,863 fiscal year 1962 unobligated balance planned for expenditure in fiscal year 1963.

Mr. EVINS. This table on 21–17 shows employment and object summary. In the righthand column, most of them show increases: Contract research is up from $1.15 million to $1,275,000, up $117,000.

Mr. MONK. This is for the prosthetics.

Dr. MIDDLETON. Except for our two laboratories this is an area in which we are entirely dependent on contracts with the various firms that produce these prosthetics.

Mr. EVINS. Our chairman pointed out that you had been getting about a million dollars for this each year. Haven't you just about perfected these prosthetic appliances? Are there really more new things to be discovered and adapted and developed?

Dr. MIDDLETON. Yes, sir. I think last year the two greatest developments were in the area of a new hydraulic knee, which as a prosthetic device has been made more acceptable to the amputee above the knee joint. The other area to which I had called attention previously was that of the determination of the obstacle by the use of the transistor device with the electronic eye, that detected obstacles in front of an individual and made possible for the blind a very much better contact with reality.

Mr. EVINS. Your personnel compensation is up $47,000. Is that due to the pay raise legislation passed by Congress?

Dr. MIDDLETON. Yes, sir.

Mr. EVINS. Mr. Reporter, place in the record the three pages, 21–18 through 21–20 on prosthetic research.

(The pages referred to follow:)

PROSTHETIC RESEARCH

PROGRAM NOTES

The Veterans' Administration is authorized by section 216, title 38, United States Code, to conduct a prosthetics research program and to make the results available so all disabled may benefit. This program has markedly improved the lives of severely disabled persons by developing both better devices and improved methods of treatment.

Prosthetics education and information programs have disseminated results widely. The intra-VA program for specification development and compliance checking not only protects eligible veterans and saves operating cost for VA but indirectly offers similar protection to the much greater numbers of nonveterans with comparable disabilities.

Approval on August 2, 1962, of Public Law 87–572 removed the appropriation authorization ceiling of $1 million for prosthetics research, the amount authorized by Public Law 729, 80th Congress, 1948, and retained through interim codifications. Appropriation of funds for prosthetics research is now authorized as necessary to carry out the program.

Accordingly, an appropriation increase of $275,000 is reflected in this estimate, to provide for total prosthetic research expenditures of $1,275,000 in the 1964 fiscal year. This increase, extremely modest compared to the extent of inflation in research costs, is essential for the Veterans' Administration to continue its major role in this field. The increase specifically is required for average salary increases resulting from Public Law 87–793 and within-grade salary advances; increased activity in clinical studies on major devices; intensified studies of aids for the blind; new developments in bracing; further correlation of physical tests of hearing aids with clinical value; and generally to bring about greater consistency between the level of prosthetic research conducted within the agency and the needs of disabled veteran beneficiaries.

Because of the complicated nature of research in prosthetic and sensory aids, and the difficulty of predicting stages of completion of various projects, it is essential that funds remain available until expended.

Clinical evaluation studies of major prosthetic devices will continue in fiscal year 1964. Pilot studies will be made by the VA and private clinics on the special needs of geriatric amputees and on bracing problems. Followup studies also will be conducted on devices developed within the agency's prosthetic research program. Correlation of clinical results with physical tests of prosthetic and orthopedic appliances and hearing aids will continue to strengthen specifications and compliance testing with resulting economies in procurement and repair of appliances. Research on training of amputees in the use of devices, begun as a pilot project in fiscal year 1963, will be expanded.

Contractual research generally will be expanded at several additional laboratories and private clinics in fiscal year 1964 and emphasis will be applied to increasing intra-VA research activities.

INTRA-VA PROSTHETICS RESEARCH PROGRAM

In addition to administering the broad program, the prosthetic and sensory aids research staff will continue to carry out a variety of highly technical duties. Technical visits to contractors, review of reports and other literature, and working conferences will continue to correlate projects. A nationwide clinical application study of at least one additional hydraulic knee in fiscal years 1963 and 1964 will provide additional information on durability, prescription criteria, and other aspects. Other clinical studies also are planned where participation of selected clinic teams will be supported by prosthetics research funds.

In addition to regularly scheduled intra-VA training courses on numerous aspects of prosthetics, special seminars will continue to be offered as appropriate. Prescription and checkout of the total-contact socket, for example, will be taught to physicians.

In fiscal years 1963 and 1964 continued research, development, evaluation, and educational activities will be performed by the VA Prosthetics Center.

A nominal increase in employee travel limitation is required for the proper correlation of VA Prosthetics Center research efforts and participation in increasing numbers of educational programs.

An intra-VA project on hearing aids will continue to study specific physical properties of aids such as distortion and transient response in relation to speech discrimination and other indications of clinical value. Closer coordination with the contractual projects will be fostered to supplement existing arrangements with the National Bureau of Standards.

CONTRACTUAL RESEARCH IN PROSTHETICS

The major portion of research, development, and evaluation will continue at universities and nonprofit research institutions. A smaller amount of work, particularly in design and development, will be done at industrial laboratories.

Contractual work in artificial limbs is expected to decrease somewhat in fiscal year 1964. The decrease in new obligations is offset by increased intra-VA activity. Contractual work on braces, likewise, will decrease slightly, though there will be increased intra-VA activity.

Fundamental studies at University of California at San Francisco will continue to study the role of the trunk in locomotion and the action of the human knee and hip joints to improve both limbs and braces. UCLA will continue to study control of auxiliary power for artificial limbs as well as extend such work to control of braces. A number of development projects will design new components for artificial limbs, emphasizing needs of geriatric and other problem cases plus replacing interim devices in the upper-extremity armamentarium.

Considerable work on braces will be accomplished in fiscal year 1963 and fiscal year 1964. Special attention will be given to braces for hemiplegia and paraplegia. As for artificial limbs, there will be a coordinated program of research, development, and evaluation of devices and techniques plus development of prescription criteria and checkout methods.

Research and development on several devices for the blind has progressed so satisfactorily that independent evaluation through use by blind subjects in

everyday activities will be possible in fiscal year 1963 and fiscal year 1964. More powerful lamps and other advances make feasible emphasis on miniaturized detectors of obstacles presently missed by a long cane but dangerous to the torso or head of the blind person. Renewed study of electronic curb detectors will also be undertaken.

An intensive program started in 1957 on development of reading machines for the blind has resulted in completion of one device, including a group training program, which appears ready for clinical application. Two more sophisticated devices are nearly ready as laboratory demonstration models. Concentrated effort with increasing opportunity for evaluation should greatly improve the lot of blinded individuals by giving them independent access to typed and printed materials.

Provision of a tactile output in place of the audible output for the Battelle device has frequently been suggested by blinded individuals, in spite of the long history of slow reading rates on embossed letters, bas-relief inscriptions and the like. To meet such preferences and especially the needs of the deaf-blind, the relatively simple conversion of the Battelle device to one or more forms of tactile output should be made in fiscal year 1963, and the resulting output should be evaluated in fiscal year 1964 at New York Medical College, where experiments have already been made on slit type tactile scanning.

Research on hearing aids will continue at the same level, emphasizing correlation of physical properties with clinical value and studying improved tests for selecting and prescribing specific binaural or monaural aids. The possibility of hi-fi aids to help hard-of-hearing blind individuals to detect and localize obstacles by echoes will be investigated.

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders 1961, $2,228,000; (1962 adjustments, −$162,000); 1962, $1,561,000; 1963, $1,561,000; 1964, $1,561,000.

[2] Reimbursements from non-Federal sources are derived from charges for medical services rendered non-beneficiaries in emergency cases (38 U.S.C. 611).

Mr. EVINS. If there are no further questions on research we will turn to medical care.

Here is a good table on 22–1. This shows your employment, workload, and other objects. Your activities are shown on page 22–3. Mr. Reporter, put this material in the record.

MEDICAL CARE PROGRAM

This appropriation provides for expenses necessary for maintenance and operation of VA hospitals, domiciliaries, and clinics, and care and treatment of eligible beneficiaries in contract hospitals and State homes.

Comparative fiscal year monetary distributions for the medical care appropriation are as follows:

Net costs by major program	Fiscal year 1962, actual	Fiscal year 1963, esti-	Fiscal year 1964, esti-	Increase (+) or decrease (−) 1964 over 1963
VA hospitals	$849,699,028	$902,318,000	$936,355,000	+$34,037,000
VA domiciliaries	29,254,989	31,330,000	32,413,000	+1,083,000
Contract hospitals	15,659,690	16,672,000	16,466,000	−206,000
State homes	7,365,937	7,460,000	7,481,000	+21,000
Inpatient activities	901,979,644	957,780,000	992,715,000	+34,935,000

Net total costs	994,491,169	1,054,541,000	1,092,864,000	+38,323,000
Obligation for other years, net	−505,487			
Less:				
Reimbursable received	−4,677,602	−4,850,000	−5,200,000	−350,000
Proposed supplemental		−31,874,000		+31,874,000
Add:				
Unobligated balance or savings	46,037			
Transfers to other agencies	16,883	75,000	24,000	−51,000
Appropriation or estimate	989,371,000	1,017,892,000	1,087,688,000	+69,796,000

Note. Transfers to other agencies are comprised of $16,883 transferred to the General Services Administration for rental of outpatient clinic space in fiscal year 1962; $75,000 in fiscal year 1963; and $24,000 in fiscal year 1964.

This estimate reflects an appropriation increase of $69,796,000 for fiscal year 1964 over the presently enacted fiscal year 1963 appropriation, or a net increase of $37,922,000 after considering the net fiscal year 1963 supplemental appropriation requirements of $31,874,000 for Public Law 87–793 postal and salary rate increases and Public Law 83–763 wage board increases. The fiscal year 1963 column of this estimate includes all known supplemental appropriation requirements for the current fiscal year. The fiscal year 1964 column of this estimate excludes amounts required to pay Public Law 83–763 wage board increases that will be approved between July 1, 1962, and June 30, 1964. A supplemental appropriation request covering these requirements will be transmitted in the 1964 fiscal year.

Mr. EVINS. This has been discussed earlier by the Administrator and by the Chief Medical Officer.

There is one item that I see which shows a tremendous increase in this chart on 22–1, Personnel Compensation.

In 1963 it is $766 million. Now it is going to $797,430,000, or an increase of $30 million. That is a pretty big jump.

Mr. BAKER. $25 million of that is due to Public Law 87–793, and the increased pay rates that go into effect in January 1964.

Mr. EVINS. In other words, $25 million of the pay raise increase as a result of an act of Congress?

Dr. MIDDLETON. Yes, sir.

Mr. EVINS. What about the other $5 million?

Mr. WISE. It is the cost of the extra work days.

Mr. GLEASON. Plus one day for leap year.

Mr. EVINS. How much were the fringe benefits? Were they $40 million?

Mr. BAKER. $60,912,000 in total for personnel benefits in 1964, an increase of almost $3 million over the current year.

Mr. EVINS. Are there any questions on this summary?

Mr. JONAS. I want to ask a question off the record.

(Discussion off the record.)

Mr. EVINS. Have you already explained this $38.3 million increase in your net cost of in-patient activities?

Dr. MIDDLETON. Yes, sir.

Mr. BAKER. The greater part of that, of course, is the $30 million plus in personnel cost and $3 million personnel benefits. Of the increase in supplies $463,000 is due to the extra day in the year, $127,000 is due to workload changes, and $1,976,000 is due to actual increase in unit cost or quantity used.

Mr. JONAS. How could the leap year affect your supplies?

Dr. MIDDLETON. Because we have 1 more day to take care of patients, medicines, supplies of all kinds that are used. We are open every day of the year.

Mr. EVINS. There is a chart on page 22–2, 22–3, 22–4, and 22–5.

Wage board salary increases and the act of Congress are the contributing factor to most of these pluses that we see through your justifications.

Mr. BAKER. Yes, sir.

Mr. EVINS. The explanation for these increases is shown on pages 22–7 and 22–8.

Are there any questions?

INPATIENT ACTIVITIES

Gentlemen, turn to inpatient activities on 22–18. We have discussed this to some extent. Mr. Reporter, put the summary table on 22–18 in the record. Also insert 22–22 through 22–25.

Inpatient Activities

PROGRAM NOTES

During fiscal year 1962 the Veterans' Administration operated 170 hospitals (counting separate divisions of consolidated hospitals) and 18 domiciliaries. A 120-bed restoration center at Hines, Ill., also was operated which is reported statistically and financially as part of the domiciliary program. Operating bed averages of 120,976 in hospitals and 16,866 in domiciliaries were maintained, in which care and treatment were provided to average daily beneficiary loads of 110,884 patients and 16,400 members. In addition, care and treatment were provided to average daily beneficiary loads of 2,880 patients in civil, State, and other Federal hospitals, and 9,062 members in State homes on a contract reimbursable basis. The total average daily beneficiary load receiving care and treatment under the inpatient care program in fiscal year 1962 was 139,226.

The average daily beneficiary load receiving care and treatment on an inpatient basis will increase in fiscal year 1963 with the continued activation of the new Brecksville, Ohio, 1,000-bed NP hospital and decrease slightly in fiscal year 1964 due to major modernization and other construction work scheduled for other hospitals in that fiscal year. Comparative average daily beneficiary loads are as follows:

	Fiscal year 1962	Fiscal year 1963	Fiscal year 1964	Increase (+) or decrease (−) 1964 over 1963
VA hospitals	110,884	111,304	111,025	−279
VA domiciliaries	16,400	16,542	16,111	−431
Contract hospitals	2,880	2,900	2,819	−81
State homes	9,062	9,100	9,100	
Total	139,226	139,846	139,055	−791

With enactment of Public Law 86–639, approved July 12, 1960, the average daily beneficiary load has assumed a lesser role in measuring the effectiveness of the agency's medical system. This legislation authorized the Administrator of Veterans' Affairs to furnish medical services for non-service-connected disability in preparation for admission of a veteran who has been determined to need hospital care and who has been scheduled for admission, as well as posthospital medical services where it is found necessary to complete hospital care. Profound impact already is being demonstrated in the VA hospital system, resulting in—

(1) An improvement of the agency's capacity to meet the ever-increasing demand for hospitalization within the presently approved hospital-bed ceiling;

(2) A reduction in the length of patient stay in the hospital with the resulting effect of an increased turnover of veterans hospitalized for treatment;

(3) A decrease in the cost per patient treated; and

(4) A partial check on the development of longer waiting lists as the veteran population ages.

Steady increases in the numbers of patients treated, pre-, post-, and trial visits, admissions, and discharges in VA hospitals are expected each year, although the increases will be of lesser proportion than experienced in fiscal years 1961 and 1962—the first years that agency hospitals operated under the Public Law 86–639 authorization.

Activity in VA hospitals	Fiscal year 1961, actual	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated	Increase (+) or decrease (−) 1964 over 1963
Number of patients treated	664,400	688,507	698,507	708,507	+10,000
Pre-, post-, and trial visits	563,484	689,612	708,644	726,641	+17,997
Admissions	537,022	561,808	573,400	583,250	+9,850
Discharges	500,837	521,396	529,250	536,000	+6,750

In a hospital system as vast as that operated by the VA, it is inevitable that many of the hospitals will experience a decrease in their average daily patient loads as patient turnover rates increase. It is the policy of the VA, however, that decreases in average patient loads at any hospital will be compensated by demonstrated increases in patient turnover.

The VA is presently operating under an overall hospital bed ceiling of 125,000 established by the President of the United States on February 26, 1959. Within this policy, the VA has the authority to change the designation of hospitals and to relocate beds on the basis of geographic demand. The flexibility thus granted enables the agency to meet changes in hospitalization demand more quickly.

Changes in operating bed levels at VA facilities for the comparative fiscal years are shown below. The changes in hospital beds planned for fiscal year 1964 result principally from the new construction at Brecksville, Ohio, Martinez, Calif., Nashville, Tenn., and Washington, D.C. The decrease in domiciliary beds is associated with reduced demands and the planned reduction of 291 beds at the Bath, N.Y., facility in conjunction with establishment of a new restoration center at East Orange, N.J.

Operating bed changes

	Fiscal year 1962	Fiscal year 1963	Fiscal year 1964	Increase (+) or decrease (−) 1964 over 1963
NP hospitals	56,171	57,884	57,959	+75
General hospitals	64,805	63,480	63,527	+47
Subtotal, hospitals	120,976	121,364	121,486	+122
Domiciliaries	16,866	16,846	16,431	−415
Total, VA facilities	137,842	138,210	137,917	−293

The total VA hospital-bed authorization is based on the present structural capacity of each of the hospitals with adjustments for approved future hospital replacement and modernization projects. As of June 30, 1962, the total bed capacity of the VA hospitals was 122,777, of which 2,046 beds were unavailable on that date for the following reasons:

In process of activation	537
Type of bed not required—no patient demand	572
Space for beds undergoing construction or maintenance activity	615
Other reasons, such as space to quarter member employees	322
Total	2,046

A substantial number of the beds reported on June 36, 1962, as unavailable will be placed in operation during the current fiscal year. December 31, 1962, data on the number of beds in operation and beds unavailable for patient use will be provided in complete detail at hearings on the agency's fiscal year 1964 appropriation request.

Comparative fiscal year 1961 and fiscal year 1962 month-end waiting list numbers of beneficiaries eligible, but not yet scheduled for hospital admission, are shown in the following:

Waiting list

At end of the month	Psychiatric patients		Tuberculous patients		Medical, surgical, and neurological patients		Total		Increase (+) or decrease (−) 1962 over 1961
	Fiscal year 1961	Fiscal year 1962	Fiscal year 1961	Fiscal year 1962	Fiscal year 1961	Fiscal year 1962	Fiscal year 1961	Fiscal year 1962	
July	13,514	11,930	244	40	6,296	4,856	20,054	16,826	−3,228
August	13,303	11,837	191	22	5,524	4,395	19,018	16,254	−2,764
September	13,109	12,049	122	3	5,048	4,485	18,279	16,537	−1,742
October	13,181	11,917	165	9	4,863	3,827	18,209	15,753	−2,456
November	13,044	11,835	128	31	4,466	3,571	17,638	15,437	−2,201
December	12,950	11,709	77	30	4,387	3,312	17,414	15,051	−2,363
January	13,083	11,932	109	63	6,786	5,511	19,978	17,506	−2,472
February	13,213	12,102	102	53	7,411	7,210	20,726	19,365	−1,361
March	13,287	12,544	83	39	7,547	7,933	20,917	20,516	−401
April	13,200	12,484	67	37	7,409	7,278	20,676	19,799	−877
May	12,726	12,205	56	31	6,142	6,346	18,924	18,582	−342
June	12,636	12,101	31	45	6,105	6,282	18,772	18,428	−344
Monthly average	13,104	12,054	115	36	5,999	5,417	19,218	17,507	−1,711

NOTE.—Non-service-connected applicants constitute practically 100 percent of the waiting list. Service-connected applicants are admitted immediately upon determination that hospitalization is necessary and are not included in waiting lists unless the applicant elects to postpone his admission until a later date.

Mr. EVINS. These charts on 22–18, 19, 20, and 21 show pretty much the picture. There is a table on 22–22. In the VA hospitals in 1962 you had 110,884 patients; 1963, 111,304; and in 1964, you estimate 111,025; which represents a decrease of 279. Do you think you are about leveling off on your demands, sir?

Dr. MIDDLETON. No, sir, the better utilization of beds and the assurance we will have treated 10,000 more patients this year.

WAITING LISTS

Mr. EVINS. But speaking for the record, there are no service-connected cases awaiting admission?

Dr. MIDDLETON. None awaiting admission who will accept the available bed. That I say in qualification because some patients wish to go to other hospitals or at their local site and must wait.

Mr. EVINS. How much do you have on the waiting list of nonservice connected?

Dr. MIDDLETON. Seventeen thousand.

Mr. JONAS. Will the gentleman yield?

Mr. EVINS. Yes.

Mr. JONAS. The Administrator said this morning that any veteran who could otherwise qualify, even if he suffers from a non-service-connected case, will be hospitalized if he is willing to go where the beds are available.

Mr. GLEASON. That is right.

Mr. JONAS. From that standpoint, you can say there is really no waiting list for even non-service-connected cases, if they are willing to go where the beds are available?

Mr. GLEASON. Not quite, Mr. Jonas. It is pretty close to it. We have an average load of 111,000 we will say out of 122,000 operating beds. There is a waiting list of 17,000. This at least would reduce it to approximately five to six thousand.

Generally speaking, in a place like Philadelphia, which I mentioned, there is no problem in getting the veteran hospitalization if he wants to take the 45-minute ride to Wilmington, Del. This is true in the New England States. If a person in Boston is on a waiting list, if he really wants the medical care, he can get in at Manchester without any problem.

LENGTH OF STAY IN HOSPITALS

Mr. EVINS. What was the average time per patient in hospitals 2 years ago as compared to now?

Dr. MIDDLETON. I have the categories that I think are purely demonstrable. The first in the G.M. & S. hospital, the average length of time, 1959—I have 1959 and 1960 by ages: For all ages, 1959, 33.1 days; and 1961, 30.8 days. If you go to the 65 years and older, in 1959, 41.4 days; and 1961, 36.5 days. The length of stay by the types of hospitals—I have just been speaking of G.M. & S. at that point—I have these figures from 1952 through 1961. I should like to introduce it into the record.

Mr. EVINS. It may be included in the record if you will give it to the reporter.

(The information referred to follows:)

Trend in length of stay in VA hospitals

Calendar year	Type of patient					
	All patients	Pulmonary tuberculosis	Psychotic	Other psychiatric	Neurological	General medical and surgical
1952	62.6	303.1	553.6	39.1	91.9	31.0
1953	66.8	315.0	552.3	43.6	88.2	31.0
1954	64.8	286.3	471.3	43.3	81.8	31.9
1955	63.0	275.4	471.0	42.0	74.3	31.0
1956	64.9	258.0	526.0	42.8	78.3	31.4
1957	70.2	278.1	583.8	46.4	80.8	33.0
1958	76.8	281.7	671.9	51.9	86.4	33.2
1959	73.1	263.6	643.5	52.1	90.0	33.1
1960	76.0	250.9	647.3	60.6	87.9	33.3
1961	74.8	235.5	662.8	55.7	84.5	30.8

HOSPITAL PER DIEM COSTS

Mr. EVINS. I note you state a decrease in the cost per patient treated. How much has that decrease amounted to over the past couple of years? What was it formerly and what is it now?

Dr. MIDDLETON. This is an interesting circumstance because it has to do with the reduced episode of treatment. In other words, an individual with the same condition would cost more if he were on the extended period of, say, 2 years ago or even 10 years ago.

We will come down to the particulars of your question.

Mr. THOMAS. May I suggest that someplace in your examination put that chart in the record that gives for the last 3 years the bed cost per day for G.M. & S. and N.P. hospitals. For 1964 it is about $30 a day for the G.M. & S. I believe that will be the best breakdown you can get per bed.

Mr. EVINS. In the table on 22–5, it shows the type patients: psychiatric, TB, and total. It shows the decreases. This shows the type

but not the cost. If you could supply us with a table on the decreasing cost per patient it would be helpful.

Dr. MIDDLETON. Yes, sir.

Mr. JONAS. Will you yield?

Mr. EVINS. Yes.

Mr. JONAS. Where is the table which shows the increase in daily cost per bed?

Mr. BAKER. Page 22–56 for general hospitals shows the detail of cost.

Mr. THOMAS. One cover sheet covers your different type hospitals.

Mr. JONAS. I think it should go in the record at this point.

Mr. EVINS. Yes.

Mr. BAKER. 22–40 shows all of them.

(The page referred to follows:)

VETERANS' ADMINISTRATION HOSPITALS

The amount requested provides for expenses necessary for the maintenance and operation of Veterans' Administration hospital facilities and for the care and treatment of eligible beneficiaries admitted therein as authorized by law.

Total costs and cost per day by type of hospital

	Fiscal year 1962 actual		Fiscal year 1963 estimated		Fiscal year 1964 estimated		Increase (+) or decrease (−) 1964 over 1963	
	Costs	Cost per patient-day	Costs	Cost per patient-day	Costs	Cost per patient-day	Costs	Cost per patient-day
NP hospitals	$274,921,244	$14.082	$298,300,000	$14.893	$310,534,000	$15.498	+$12,234,000	+$0.605
General hospitals	583,342,768	27.089	612,560,000	28.935	634,376,000	29.980	+21,816,000	+1.045
Total gross costs	858,264,012		910,860,000		944,910,000		+34,050,000	
Less QS&L	8,564,984		8,542,000		8,555,000		−13,000	
Net total costs	849,699,028		902,318,000		936,355,000		+34,037,000	

NOTE.—Costs per patient-day include direct costs of patient and exclude costs such as maintenance of quarters, care of dead, etc., which are included in the total gross costs.

Comparative full-time equivalent employment summary by type of hospital

	Fiscal year 1962, actual		Fiscal year 1963, estimated		Fiscal year 1964, estimated		Increase (+) or decrease (−), 1964 over 1963	
	VA employment	Consultants	VA employment	Consultants	VA employment	Consultants	VA employment	Consultants
NP hospitals	39,901	155	41,349	162	41,696	163	+347	+1
General hospitals	78,044	745	77,585	745	77,804	745	+219	
Total	117,945	900	118,934	907	119,500	908	+566	+1

NOTE.—Consultant employment computed at rate of each visit being 1/20 of a man month or 240 visiting days per man year.

Mr. EVINS. The table on 22–40 shows the cost. The table on 22–25 shows the type of patient, and the chart on 22–23 shows the type of treatment and numbers.

Mr. JONAS. Would you yield?

Mr. EVINS. Yes, sir.

Mr. JONAS. It shows substantial increases each year in total cost and cost per day.

Mr. GLEASON. I think you will find, Mr. Jonas, that is brought about principally through the increase in pay Congress authorized.

Mr. JONAS. Other costs are up, too. Is it true?

Dr. MIDDLETON. Yes, sir. The point was made earlier this morning by the Administrator that 80 to 82, even some as high as 84, percent of costs are in personnel. This is the big item of hospital costs.

COST OF MEALS PROVIDED EMPLOYEES

Mr. EVINS. Doctor, explain the two charts on 22–36 and 22–37. Give us a wrap-up as to what they show.

Mr. BAKER. That gives the amounts for food costs and quarters that are deducted from employees' salaries where they elect to take meals and/or quarters at the hospital by the type of hospital and domiciliary. In other words, these amounts are deducted from the salaries which the employee would otherwise get for services that are provided by the station.

Mr. EVINS. That is not included in your fringe benefit?

Mr. BAKER. No, sir. He pays for that.

Mr. JONAS. At cost?

Mr. BAKER. It is supposed to be at the cost to the Government, including all services and depreciation on the kitchen and dining room equipment.

Mr. JONAS. What do you charge him for a meal, breakfast, lunch, and dinner?

Mr. BAKER. It is about $1 a meal.

Dr. MIDDLETON. Eighty-five cents for breakfast and $1 for lunch and dinner.

Mr. THOMAS. It is about like the cafeteria. It is on a break-even basis. You get a good meal for $1.

Mr. BAKER. Our raw-food cost would be about $1 per day. If he takes three meals he pays $2.75 to $2.90 a day.

Mr. JONAS. I do not understand that. If it is $1 a meal——

Mr. BAKER. $1 per meal, plus the cost of preparing and serving which is included in there.

Mr. MONK. $1 per meal, $3 per day is what he pays.

Mr. EVINS. Give us a rundown on 22–41.

Mr. BAKER. This chart on 22–41 breaks down the type of employment by the various activities under direct care or care of patients, administration and maintenance and operation of the plant and the facilities. It shows the number of employees in each category for each of the 3 years and the changes in 1964 over 1963. There is a total increase of 567 full-time equivalent employment in 1964 over what we expect to have during the current year.

Mr. EVINS. Could you get along next year at the same level?

Mr. BAKER. A great majority of that is for activation of the new hospitals.

We are beginning activation of Washington, D.C., Cleveland, Ohio, and continued activation, I think, at Brecksville, Ohio.

Dr. MIDDLETON. May I ask you to look at chart 22–42 and see with what concern I view any flattening off of that level.

PATIENT-EMPLOYEE RATIO

Mr. EVINS. Relationship of employees to ADPL in VA hospitals.

Mr. GLEASON. For 1,000 average daily patient load.

Mr. EVINS. In 1954 you had 1,090 per 1,000 average daily patient load. It dropped down in 1959 to 1,032, now it has gone up in 1961 to 1,085. Why these peaks and valleys, Doctor?

Dr. MIDDLETON. We have not had the personnel really that was required to do the job that we think should be done under the restrictions of the increased pay.

Mr. EVINS. You gave better treatment and care in 1954 then you did in 1960 and 1959?

Dr. MIDDLETON. I think we had the better tools in 1960 than in 1954 but certainly we could do a better job if we had more personnel.

Mr. MONK. One basic reason for that decrease until 1960 was that when we came up here we could never project an average increase in salary in our budget and this meant that we could never buy the number of people that we were budgeting for. We are now permitted to project an average increase in the salary which makes it possible for us to more nearly approach the budgeted employment figure.

Dr. MIDDLETON. We can account for 60 percent of that.

Mr. JONAS. Will the gentleman yield?

Mr. EVINS. Mr. Jonas.

Mr. JONAS. Actually if you look at this chart it would seem to be alarming, this wide fluctuation, but when you analyze it, it is not very alarming after all. The lowest point which was 1959 you were only 58 people under the highest point, which was 1954 and you spread 59 people out among all of your——

Mr. GLEASON. That is per thousand.

Mr. JONAS. Relate that to your total.

Dr. MIDDLETON. If you took that out of a thousand-bed hospital it would be a great deal.

Mr. JONAS. What does that amount to throughout?

Mr. MONK. We have 120,000 full-time employees.

Mr. JONAS. 120 times 58.

Mr. THOMAS. For every 1,000 patients you have about 1,080 employees. Put it on that basis. You have your ADPL of 110,000 or 111,000. The variation is in truth and in fact very, very minor. I think you can get a better idea of it when you compare it with private hospitals. What do the armed services and private hospitals do?

Dr. MIDDLETON. The private hospitals range above 2 to 1 so there would be 2,000 to 1,000 patients.

Mr. JONAS. What do the armed services use?

As I remember, they were right in your classification.

Mr. WISE. They are considerably higher.

Mr. JONAS. What do you mean considerably higher?

Mr. WISE. The customs of the service, for example in the Navy, when a man is about ready for retirement but no longer can serve a full tour of duty at sea, he goes to the Medical Corps and that supplements the staff with those personnel budgeted under "Pay of the Army or Navy."

Mr. THOMAS. It is not that bad. Give us the figures.

Mr. WISE. We would have to supply them.

Mr. THOMAS. What is your best guess? You keep up with this. That is your job. You know it better than anybody. What is the figure? You know what the Navy, Army, and Air Force rate today is in the hospitals. What about that employment?

Mr. WISE. It would run about 1½ to 1, sir.

Mr. THOMAS. Is it that high?

Mr. WISE. Yes, sir. Compared to ours of about 1.3 to 1.

Mr. JONAS. Are you counting service personnel assigned?

Mr. WISE. Yes, sir.

Mr. JONAS. Break this down between G.M. & S. and NP hospitals. Which is the highest ratio?

Mr. GLEASON. G.M. & S.

Mr. JONAS. It is higher if you take it alone. It is more nearly comparable to civilian hospitals; is it not?

Mr. BAKER. No, sir. It is not close. It is closer than the NP certainly; 1,384 employees per thousand patients is our request for 1964 in the general hospitals.

Mr. WISE. 772 employees per thousand patients in neuropsychiatric hospitals.

NEUROPSYCHIATRIC HOSPITALS

Mr. EVANS. Let's take a look at NP hospitals. Mr. Reporter, place 22–46 and 47 in the record.

(The pages referred to follow:)

NEUROPSYCHIATRIC HOSPITALS

INPATIENT ACTIVITIES

The estimate provides average of 57,959 operating beds and 54,253 patient load in neuropsychiatric hospitals in fiscal year 1964, or an increase of 75 operating beds and decrease of 120 patient load averages from levels anticipated for fiscal year 1963.

A new 1,000-bed hospital at Brecksville, Ohio, was initially activated during the first half of the 1962 fiscal year, which was the ninth "advanced-type" NP hospital constructed since World War II. The buildup of this hospital will continue in fiscal year 1963 with complete activation scheduled at the end of the current fiscal year.

The estimate contemplates additional treatment staff for (1) establishment or expansion of medical and surgical bed sections at certain hospitals for treatment of psychiatric patients that have medical, surgical, or neurological conditions, and (2) increasing the number of patients treated and the number of pre-, post, and trial visits.

Workload and object summary

	Fiscal year 1962 actual	Fiscal year 1963 estimate	Additional 2 workdays and 1 calendar day	Public Law 87-793 and within grade increases	Workload changes	Other program changes	Fiscal year 1964 estimate	Increase (+) or decrease (−), 1964 over 1963
Number of hospitals	41	41					41

Mr. EVINS. You had 41 NP hospitals for the last year, 41 next year, 41 in 1964. There is no change. The average employment is increasing from 40,000 to 41,500, and a further 348 personnel increase to 1964. We do not have any more NP hospitals but you have to have 348 more people to run them.

Mr. WISE. That is for the completion of activation at the thousand bed neuropsychiatric hospital at Brecksville, Ohio.

Mr. EVINS. You outlined that earlier.

Mr. WISE. Yes, sir.

GENERAL MEDICAL HOSPITALS

Mr. EVINS. Let us take a look at your general medical hospitals. There is a statement on 22–53 and a chart on 22–54. Insert those pages in the record at this point.

(The pages referred to follow:)

GENERAL HOSPITALS

INPATIENT ACTIVITIES

The estimate provides averages of 63,527 operating beds and 56,772 patient load in general hospitals in fiscal year 1964, or an increase of 47 operating beds and a decrease of 159 patient load averages from the levels anticipated for fiscal year 1963. These adjustments are the net result of major modernization work scheduled for fiscal year 1964, and limited shifts in patient loads to alleviate overcrowding and/or meet changing patient demands in specific geographic areas.

The estimate contemplates 219 additional treatment staff in the general hospital to (1) increase patient turnover rates, (2) convert TB beds at certain hospitals for treatment of 279 additional patients with medical and surgical conditions, and (3) activate the new hospital facilities at Cleveland, Ohio, and Washington, D.C.

Workload and object summary

	Fiscal year 1962 actual	Fiscal year 1963 estimated	Additional 2 workdays and 1 calendar day	Public Law 87-793 and within grade increases	Workload changes	Other program changes	Fiscal year 1964 estimated	Increase (+) or decrease (−) 1964 over 1963

Mr. EVINS. In 1962 you had 129 G.M. & S. hospitals, in 1963 you had 128. You lost one.

Mr. BAKER. We closed out Outwood, Ky., sir.

Mr. GLEASON. That was Outwood, Ky., I mentioned earlier this morning.

Mr. EVINS. Personnel, average employment——

Mr. THOMAS. Will you yield, Mr. Evins?

Mr. EVINS. Yes, sir.

COMPARISON OF HOSPITAL PER DIEM COSTS

Mr. THOMAS. In your employee-patient ratio of 2 to 1 in the civilian hospitals, are you exactly accurate there? Here is the reason I suggest you look at the figures. We contend in here that 85 percent of your expense is your salary cost. A civilian hospital is on the same proportion. It is 2 to 1 against yours. Check out the fee against the bed cost. Your bed cost in the G.M. & S. hospital is about $30 a day and you can go to most any civilian hospital for $30 a day.

Mr. DRIVER. Not and pay the doctor.

Mr. THOMAS. I am not talking about that. You pay extra for the doctor, your medicines, labs, and so forth. I am talking about an employment basis. You get in deep water there with your figures.

Mr. GLEASON. Mr. Thomas, in a private hospital the patient is paying in addition to his hospitalization, he is also paying for his medicines, he is paying for his doctor.

Dr. MIDDLETON. His laboratories, drugs, et cetera.

Mr. THOMAS. Eighty-five percent, on your basis of $30 a day, would cost him about $50 or $55 a day. That is not a comparable cost. Assuming he has to get an X-ray and assume he has to get this and that.

Mr. GLEASON. When we include all of this within our cost per day, Mr. Thomas, this is a real low figure.

Mr. JONAS. This is the average daily patient cost.

Mr. GLEASON. That is right, sir.

Mr. THOMAS. Medicine, X-rays, and everything goes in.

Mr. GLEASON. Your doctor is included in this, your medicines, X-rays, food.

Mr. JONAS. The point the Chairman makes is that the reason the costs are not comparable with civilian hospitals is because the services rendered are not comparable. You throw in a lot of fringe benefits. If you would relate this——

Mr. GLEASON. I follow you.

Mr. THOMAS. You have it tax free. There is no interest charge against the building.

Mr. JONAS. If you threw in the costs involved in services you would be above civilian hospitals.

Mr. WISE. Mr. Jonas, I believe, sir, in practically all civilian hospitals you will find that their physician's services are excluded from the per diem.

That is a separate billing, so if you were to include that you would find VA I think much more comparable in that sense.

Mr. THOMAS. That is the only item excluded, though. Your X-rays, medicine——

Mr. WISE. Newspapers, X-rays, medicines, they are all excluded.

Mr. DRIVER. X-rays would be excluded just like the physician's fees.

Mr. THOMAS. That is part of your hospital cost. You mean separate from the room charge itself?

Mr. DRIVER. Yes, sir.

Mr. THOMAS. I think you are right.

Mr. GLEASON. That is why the civilian would be so much higher.

Mr. THOMAS. I am not so sure. That is what we are talking about now. Your total cost is wrapped up in 85 percent in just one item. That is pay and benefits, is it not?

Dr. MIDDLETON. Yes, sir. That is 85 percent.

Mr. THOMAS. Suppose you had interest, construction cost, and everything else included. Your bed cost would be what? It is $30 now. What would it be, $34 or $35?

On a comparable basis a civilian hospital would be what, $60 or $65?

Dr. MIDDLETON. At least.

Mr. THOMAS. Going to a ward in a good civilian hospital costs $20 or $21, does it not? Most of your beds are wards.

Mr. GLEASON. You can go into them, Mr. Chairman, but in addition to the cost of $21 or $22 a day in a ward, you have to still pay your physician and extra costs.

Mr. THOMAS. That is right, X-rays, medicine, and everything; but when you stick to cost accounting I doubt if your hospital is any cheaper than a civilian hospital. When you say they have two employees to your one it does not help your case very much.

Mr. MONK. It is very difficult to make a comparison of the two that is valid.

Mr. EVINS. Doctor, while you need 219 more employees for your G.M. & S. hospitals, you have a decrease of 1 hospital. That is on page 22–34.

Mr. BAKER. That is due to the initial activation of the Washington, D.C., hospital and the Cleveland hospital. We are beginning to activate those during 1964.

Mr. EVINS. If you showed two more hospitals, that would be more understandable.

Mr. BAKER. Those are replacement hospitals.

Mr. EVINS. Operating beds are from 64,805 in 1962 to 63,480 in 1963.

Mr. BAKER. And then an increase again of 47 for 1964.

Mr. EVINS. That is an increase of 47 beds for 1964.

CONTRACT HOSPITALIZATION

Mr. EVINS. We will place in the record pages 22–61 and 22–62.

(The pages referred to follow:)

CONTRACT HOSPITALIZATION

Cost summary by object

Costs	Fiscal year 1962 actual	Fiscal year 1963 estimated	Fiscal year 1964 estimated	Increase (+) or decrease (−), 1964 over 1963
25 Other contractual services	$15,659,690	$16,672,000	$16,466,000	−$206,000
Average daily patient load				
Federal (total)	1,274	1,300	1,257	−43
Non-Federal (total)	1,606	1,600	1,562	−38
Civil	(949)	(960)	(947)	−(13)
Municipal and State	(657)	(640)	(615)	−(25)
Total contract hospitalization	2,880	2,900	2,819	−81

PROGRAM NOTES

Hospitalization of VA beneficiaries in other Federal hospitals is provided for either service-connected or non-service-connected conditions to insure coverage in areas where there is a critical shortage of VA facilities.

Hospitalization of VA beneficiaries in non-Federal hospitals in the United States (including Alaska and Hawaii) is restricted to male veterans requiring hospitalization for service-connected conditions, female veterans in need of hospitalization for treatment of either service- or non-service-connected conditions, and those veterans requiring hospitalization to prevent interruption of training authorized under provisions of 38 U.S.C. 1506. Non-Federal hospitals may be utilized for the care and treatment of the aforementioned persons when suitable facilities are not feasibly available in VA hospitals, e.g.:

(*a*) When beds in VA hospitals are insufficient to meet the demand for hospitalization of certain types of patients, i.e., primarily those suffering from mental disorders, or where Federal hospital facilities are extremely limited or nonexistent.

(*b*) To provide hospitalization in medically emergent cases when immediate transfer to a VA hospital would be hazardous.

(*c*) To provide hospitalization for female beneficiaries for whom appropriate facilities are not available in Federal hospitals.

Per diem reimbursement rates for care rendered by other Federal hospitals are established and/or approved annually by the Bureau of the Budget. The cost of hospitalization in non-Federal hospitals is based on per diem rates established under contracts between the VA and the various hospitals concerned. Additional charges for professional services such as surgeons' fees, special-duty nursing care, anesthesia, and consultants are provided in the contracts and are included in the estimates for both Federal and non-Federal contract hospitalization.

The agency's objective over the years has been to reduce the contract hospitalization bed utilization to the extent feasible. A slight increase in Federal contract hospital patient load is being experienced in fiscal year 1963 because of heavier demands in the State of Alaska. Both Federal and non-Federal contract hospital patient loads will decline slightly in fiscal year 1964, however, in view of additional VA beds becoming available as a result of the VA hospital replacement and modernization program.

Patient load and cost estimates for Federal hospitals are based on actual utilization rather than contract bed allocation agreements with the agencies concerned. The VA, however, will provide reimbursable support for patient loads up to the full number of beds allocated, where demand exists.

Of the total contract hospitalization load of 2,900 and 2,819 estimated for fiscal years 1963 and 1964, respectively, it is estimated that approximately 63 percent will be hospitalized in the 50 States and 37 percent in Manila and Puerto Rico.

COST CHANGES

The net decrease of $206,000 for fiscal year 1964 is comprised of (1) a decrease of $328,000 for the reduction of 81 average daily patient load; (2) an increase of $46,000 for payment of costs related to the extra calendar day; and (3) an increase of $76,000 in non-Federal hospital contract rates and minor changes in composition of patient loads.

Non-Federal contract hospitalization costs for fiscal year 1963 and 1964 have been computed at per diem rates established under current contracts between the agency and the various hospitals concerned.

Mr. EVINS (reading):

Hospitalization of VA beneficiaries in non-Federal hospitals in the United States (including Alaska and Hawaii) is restricted to male veterans requiring hospitalization for treatment of either service or non-service-connected conditions, and those veterans requiring hospitalization to prevent interruption of training authorized under provisions of 38 U.S.C. 1506. Non-Federal hospitals may be utilized for the care and treatment of the aforementioned persons when suitable facilities are not feasibly available in VA hospitals, e.g.,:

a. When beds in VA hospitals are insufficient to meet the demand for hospitalization of certain types of patients, i.e., primarily those suffering from mental disorders, or where Federal hospital facilities are extremely limited or nonexistent.

b. To provide hospitalization in medically emergent cases when immediate transfer to a VA hospital would be hazardous.

Of the total contract hospitalization load of 2,900 and 2,819 estimated for fiscal year 1963 and 1964, respectively, it is estimated that approximately 63 percent will be hospitalized in the 50 States and 37 percent in Manila and Puerto Rico.

Dr. MIDDLETON. There are 810 in Puerto Rico and 250 ADPL in Manila.

Mr. EVINS. 810 patients in contract hospitals?

Dr. MIDDLETON. Yes, sir; 810 in Puerto Rico and 250 in Manila.

Mr. EVINS. What is the total cost of payments to contract hospitals?

Mr. BAKER. The total for all contract patients is $16,466,000 in 1964 and the rates vary by type of hospital.

Mr. EVINS. Where is that set out?

Mr. BAKER. Page 22–64 will give you the rates per day for each of the various categories of patients that we have in the various hospitals. The overall average is $15.96 in 1964 and it varies from a low of around $9 for NP patients and $6 plus at some local TB hospitals to almost $27 a day.

Mr. EVINS. $16,466,000, estimated for 1964. Is that the total cost of your contract hospital charges?

Mr. BAKER. Yes, sir.

Mr. JONAS. Will the gentleman yield?

Mr. EVINS. Yes.

Mr. JONAS. You haven't got a single one that even approaches your cost.

Mr. BAKER. The reciprocal rate for the Federal hospitals is established by the Bureau of the Budget and is consistent between all agencies.

Mr. JONAS. But you have some civil hospitals.

Mr. BAKER. These are mostly public hospitals, State, local, county.

Mr. THOMAS. The taxpayers pay for them like you do. The question he raises is why can't you do it as cheaply as they do. It is the same service.

Mr. GLEASON. We give better service.

Mr. BOLAND. What is the difference between the civil and municipal and State? You list them separately. What is a civil hospital?

Mr. BAKER. That would be a private hospital.

Mr. BOLAND. So you do have private hospitals here.

Mr. EVINS. U.S. Army hospitals, Air Force hospitals, Navy, Marine. You have them in the Panama Canal Zone. You list other Federal hospitals. At one time that was $70. This runs about the same. Let us put the chart on pages 22 to 64 in the record.

(The chart referred to follows:)

Contract Hospitalization Activities

Comparative costs, average daily patient load, and patient-day costs by activity

	Fiscal year 1962 actual			Fiscal year 1963 estimate			Fiscal year 1964 estimate			Increase (+) or decrease (−), 1964 over 1963

Domiciliary Care

Mr. Evins. We will move on to VA domiciliary care. Place in the record 22–65, 66, and 71.

(The pages referred to follow:)

Domiciliary Care

inpatient activities

The estimate provides for averages of 16,431 operating beds and 15,496 member load in VA domiciliaries during fiscal year 1964 with approximately 615 additional members receiving domiciliary care in VA hospitals, or decreases of 415 operating beds and 485 member load. These adjustments are due to the establishment of the 200-bed restoration center at East Orange, N.J., shifts of member load to alleviate overcrowding in other VA domiciliaries, and decreased demand in certain localities.

Pilot projects are planned in fiscal year 1963 and fiscal year 1964 to study the operation of restoration centers as part of the VA domiciliary program. Special restorative training will be afforded certain former hospital patients that have received maximum hospitalization benefits to fit them for more purposeful and independent living. The restoration center program will emphasize restoration and outplacement of disabled veterans, and serve to make more hospital beds available for those in need of hospitalization.

A decrease in domiciliary waiting lists was experienced in fiscal year 1962. The number of eligible applicants not scheduled for admission at the end of each month for both the 1961 and 1962 fiscal years is shown below:

Month	Fiscal year 1961	Fiscal year 1962	Month	Fiscal year 1961	Fiscal year 1962
July	190	239	February	1,035	578
August	328	241	March	633	489
September	393	276	April	567	267
October	414	335	May	466	186
November	579	569	June	432	100
December	786	699			
January	977	794	Monthly average	567	398

Workload and object summary

	Fiscal year 1962 actual	Fiscal year 1963 estimated	Additional 2 workdays and 1 calendar day	Public Law 87-793 and within-grade increases	Workload changes	Other program changes	Fiscal year 1964 estimated	Increase (+) or decrease (−) 1964 over 1963

Mr. EVINS (reading):

A decrease in domiciliary waiting lists was experienced in fiscal year 1962. The number of eligible applicants not scheduled for admission at the end of each month for both the 1961 and 1962 fiscal years is shown below.

This seems to increase in December and January and the winter months.

The number of domiciliaries increased from 19 to 20. Where is the new one?

Mr. BAKER. That is the restoration center that we are planning to open at East Orange.

Dr. MIDDLETON. There are 18 domiciliaries, 1 restoration center, the next one to be added in June.

Mr. EVINS. The occupancy rate anticipated is about the same as this year. It was my impression a few years ago that the ones in the old soldiers' homes were the ones that were increasing.

They were in there for a long period of time. They get in and do not want to get out.

Mr. GLEASON. They almost vegetate.

Mr. BAKER. The demand has dropped in the last year or so. Whether it is due to social security legislation, I am not sure. The waiting list is not so great.

Mr. EVINS. For equipment costs you have an increase in parenthesis, $240,000.

Mr. Baker, what is that? That is item 31, page 22–66.

Mr. WISE. That is the initial equipment for the new restoration center at East Orange.

State Homes

Mr. Evins. Let us insert the charts on pages 22–72 and 73. This shows where they are located.

(The pages referred to follow:)

State Homes

Cost summary by object

	Fiscal year 1962 actual	Fiscal year 1963 estimated	Fiscal year 1964 estimated	Increase (+) or decrease (−) 1964 over 1963
COSTS				
41 grants, subsidies, and contributions	$7,365,937	$7,460,000	$7,481,000	+$21,000
Average daily member load	9,062	9,100	9,100	

PROGRAM NOTES

In accordance with title 38 United States Code, section 610, domiciliary and hospitalization care are furnished to eligible beneficiaries in State soldiers' homes. Under the legislation, the Federal Government reimburses States or territories for domiciliary or hospitalization care furnished members meeting the same criteria for admission as those required by the Veterans' Administration. Payment is effected at a rate not to exceed $2.50 per diem for each veteran, or one-half the cost of maintenance, whichever is less.

The average daily member load in fiscal year 1962 of 9,062 was 323 less than in fiscal year 1961. This decline was due primarily to admission eligibility requirements imposed by several States regarding length of residency and financial status. Based on latest station estimates, the average member load for fiscal year 1963 is planned at 9,100 or an increase of 38 over fiscal year 1962 experience. The fiscal year 1963 member load level of 9,100 also is projected for fiscal year 1964.

Comparative average daily member loads since fiscal year 1948 are as follows:

Fiscal year:	*Actual average daily member load*	Fiscal year:	*Actual average daily member load*
1948	6,150	1957	8,938
1949	6,712	1958	9,318
1950	7,437	1959	9,678
1951	7,774	1960	9,418
1952	7,900	1961	9,385
1953	8,088	1962	9,062
1954	8,346	1963 (estimated)	9,100
1955	8,802	1964 (estimated)	9,100
1956	8,739		

Member loads actually experienced in fiscal year 1962 are indicated in the table shown below:

Distribution of fiscal year 1962 average daily member load by State home

STATE HOME	*Average daily member load*	STATE HOME	*Average daily member load*
Napa County, Calif	1,822	Vineland, N.J	109

Tilton, N.H	37	Total	9,062
Menlo Park, N.J	75		

COST CHANGES

Fiscal year 1964 costs reflect no change in the fiscal year 1963 unit cost level with the exception of the expense for one additional calendar day in fiscal year 1964, which amounts to $21,000.

Mr. EVINS. You have grants, contracts, $7,481,000—an increase of $21,000.

Mr. BAKER. This is due to the additional day in 1964 because of leap year.

Mr. BOLAND. Is it true in all State homes admission is only for those who have service-connected disabilities?

Mr. MONK. The same eligibility requirements apply here as to the domiciliary.

Mr. JONAS. But not to contract hospitals.

Mr. MONK. Not to contract hospitals but in the State homes.

Mr. JONAS. Only in service-connected cases. They are eligible for contract hospitalization?

Mr. MONK. Basically that is right.

Mr. GLEASON. Basically but not entirely.

Mr. DRIVER. Females would be the big exception.

Mr. GLEASON. We do not have a large hospital in Puerto Rico. So we have contract hospitalization there.

OUTPATIENT CARE

Mr. EVINS. Outpatient care, increase $3,388,000 and 28 average employment. Mr. Reporter, put pages 22–74 and 77 in the record.

(The pages referred to follow:)

PROGRAM NOTES

Veterans with service-connected disabilities are provided medical and dental care by the staffs of VA outpatient clinics and by physicians and dentists participating in the hometown medical care program. Other outpatient services also available for eligible veterans consist of the following: (1) treatment for veterans of the Spanish-American War, the Boxer Rebellion, and the Philippine Insurrection; (2) medical examination of claimants for compensation and pension, and to determine need for VA hospitalization; (3) treatment to avoid interruption of training to veterans receiving vocational rehabilitation; (4) nursing service, social service, and guidance in nutrition; and (5) furnishing, fitting, and repairing orthopedic appliances and sensory aids and supplying pharmaceuticals.

Medical care through this program supplements or prevents costly hospitalization. In fiscal year 1962 the program was conducted through 93 outpatient clinics and 16 VA offices operated as branches of the parent clinic. During fiscal year 1963 outpatient clinics located at VA regional offices Houston, Tex.; Hartford, Conn.; and Nashville, Tenn.; will be consolidated with agency hospitals at Houston, Newington, and Nashville respectively. Three additional clinic consolidations are planned for fiscal year 1964 at VA hospitals, Cleveland, Ohio; Washington, D.C.; and Syracuse, N.Y.

For fiscal year 1963, the estimate contemplates 3,679,000 medical visits; 37,500 dental examination cases completed; and 30,000 dental treatment cases completed in the outpatient care program. Outpatient medical workloads are expected to increase in fiscal year 1964 because of the 2 additional workdays and planned activations of one new audiology clinic and five new day care centers. Workload declines resulting from virtual completion of the 1954 compensation and pension program will be offset largely by increasing numbers of World War II veterans under age 65 that apply for pensions as they advance in years.

The new audiology clinic will be located at VA hospital, Oklahoma City, Okla. The five additional psychiatric day care centers planned for activation in fiscal year 1964 will be located at VA center, San Juan, P.R., VA center, Des Moines, Iowa; VA hospital, Palo Alto, Calif.; VA hospital, Waco, Tex.; and VA regional office, Louisville, Ky.

Dental workloads for fiscal year 1964 are projected at a slight increase over levels experienced in fiscal year 1962 and anticipated for fiscal year 1963. The increase is associated with veterans requiring dental services in connection with treatment of their medical disabilities and is expected to continue, but without appreciable effect for the present on the overall dental workloads projected.

The estimate for fiscal year 1964 contemplates 28 additional personnel for the new audiology clinic and five-day care centers; an increment for increased drug utilization; continuance of the program for replacing worn and obsolescent equipment; an increment for increased utilization of communications and utilities; funds for initial portable equipment for consolidation of the outpatient clinic at VA hospital, Syracuse, N.Y.; minor rate increases in medical and dental fees; and an increment for paying costs of the Public Law 87–793 postal and salary rate and within-grade increases.

REPLACEMENT OF MOTOR VEHICLES

Mr. EVINS. You are asking for $975,000 for replacement of 104 passenger vehicles that are 6 years old or older with 60,000 miles. Do you absolutely need this? Do you absolutely have to have these 104 passenger vehicles replaced?

Mr. BAKER. We believe it is more economical to replace them than it is to maintain them and keep them in operation.

Mr. EVINS. You list one at Amarillo, Tex., that has been 26,000 miles. That is not too much, is it?

Mr. BAKER. It is a 1956 model and it is rather hard to maintain in good operating condition.

Mr. WISE. Mr. Evins, many of these you will find with low mileages which are essentially trucks that have been used for snowplows. I have a condition report here on any vehicle in here and I am sure that in terms of the estimated repair expense in every case it is more than advantageous to the Government to replace them.

Mr. EVINS. Now you come to Mountain Home, Tenn. You have a sedan down there that has 30,000 miles on it. They treat you mighty nice when they come down there. They give you a ride. It has 30,000 miles on it. Does it have to be exchanged or could you use it another year or two?

Mr. BAKER. That was 30,000 miles last June 30 and by the time we get around to replacing it it might have another 30,000 miles on it.

Mr. EVINS. Here is one in Kansas that has 25,000 miles on it.

Mr. JONAS. Some in there have 100,000 miles on them and they are still operating.

Mr. EVINS. The average is 60,000.

Over on the next page you have an ambulance that has 16,000 miles on it. It is stationed in Maryland. That is practically a new one, is it not?

Mr. WISE. Many of these may have been accidents and are no longer economically repairable. If there are any particular one or two——

Mr. GLEASON. I would like to inquire about one. What about the first one we show from Amarillo, Tex., a 1956 Ford sedan. This is not a truck or pickup. It only has 27,000 miles. I would like to know about that myself.

Mr. EVINS. Here is another one, 6,000, another 6,000, one 6,000 and 13,000. I think you could give us a closer look on some of your vehicles.

CANTEEN SERVICE REVOLVING FUND

We will place in the record the statement on the canteen service revolving fund.

(The material referred to follows:)

CANTEEN SERVICE REVOLVING FUND

No appropriation by the Congress will be required for the operation of the Veterans' Canteen Service during fiscal year 1964. The Veterans' Canteen Service was established by Congress in 1946 to furnish at reasonable prices merchandise and services necessary to the comfort and well-being of veterans in hospitals and domiciliaries operated by the Veterans' Administration (38 U.S.C. 4201–08). The budget estimate in the amount of $12,777,000 for the Veterans' Canteen Service, fiscal year ending June 30, 1964 is submitted for the purpose of providing for its maintenance and operation.

The Congress originally appropirated a total of $4,965,000 for the operation of the Veterans' Canteen Service and no additional appropirations have been required. Funds in excess of the needs of the service totaling $6,900,000 have been paid to the Treasury. Funds in the amount of $40,000 will be paid to the Treasury during fiscal year 1963. Contingent upon the operating results for fiscal year 1963, and the capital requirements for fiscal year 1964, the 1964 estimate anticipates a further payment to the Treasury of $29,000.

94926—63—pt. 1——63

CAPITAL REQUIREMENTS

At the end of fiscal year 1962, there were canteens in operation at all VA hospitals and domiciliaries. Capital requirements for operation of the Veterans' Canteen Service for fiscal year 1964 are as follows:

1. Cash

(*a*) *Petty cash and change funds.*—The average sum of $834 per canteen is considered necessary for the purpose of making limited local purchases, paying incidental operating and housekeeping expenses, and providing adequate change requirements. Such funds are established in amounts commensurate with the size and requirements of each individual canteen. Total requirements—$141,000.

(*b*) *At the field station depositaries.*—It is estimated that the average sum of $8,579 per canteen is necessary for the maintenance of field station depositary accounts. Total requirements—$1,450,000.

(*c*) *At the field offices and central office.*—It is estimated that the capital requirements for five field offices and central office will amount to $3,364,000. This total will provide a portion of the cash for payment of outstanding accounts payable, accrued annual leave, accrued payroll, withholding taxes, retirement, unredeemed coupons, etc.

(*d*) *Cash reserve in special deposit account.*—It is estimated that a $300,000 cash reserve in the special deposit account with the Treasury Department should be reserved in order to provide a source for emergency cash requirements.

(*e*) *Cash reserve for contingencies.*—It is estimated that a minimum cash reserve of $200,000 in the special deposit account with the Treasury Department is required to provide sufficient cash on hand for the following contingencies:

(1) To provide a reserve for losses that may materialize due to cost price depreciation of merchandise inventory and decreased sales volume.

(2) To provide adequate protection for possible losses resulting from fire, robberies or other casualties.

2. Accounts receivable, prepaid expenses and other assets

It is estimated that accounts receivable and prepaid expenses and other assets will be $594,000.

3. Inventories—commodities for sale

(*a*) *Retail departments.*—It is estimated that a retail inventory of $4,727,000 is required for canteens in operation.

(*b*) *Food departments.*—It is estimated that a food department inventory of $289,000 is required.

(*c*) *Service departments.*—Service department inventories consist primarily of vending machine stocks. It is expected that an inventory of $20,000 is required.

4. Equipment

Capital requirements for replacement of wornout equipment and remodelings during fiscal year 1964 are estimated to be $982,000.

OPERATING RESULTS

It is expected that sales will amount to $47,157,000 in fiscal year 1964, and that a net profit of $298,000 will be realized.

PERSONNEL REQUIREMENTS

It is estimated that a total of 2,631 permanent positions and 283 full-time equivalent of all other positions will be required in fiscal year 1964, as indicated in the following tabulation.

	Actual, 1962	Increase or decrease (−), 1963 over 1962	Estimate, 1963	Increase or decrease (−), 1964 over 1963	Estimate, 1964

FINANCIAL CONDITIONS

The current assets of the Veterans Canteen Service consist of cash, accounts receivable, merchandise inventories, prepaid expenses and other assets. At the close of fiscal year 1964, it is expected that cash on hand and on deposit will be $6,445,000. It is estimated that accounts receivable, consisting mainly of amounts due from personal funds of incompetent patients will be $580,000. It is believed a capital investment in inventory of $5,036,000 will be required. Prepaid expenses and other assets should amount to $14,000. Current assets are estimated to total $12,075,000. Current liabilities are estimated to be $3,419,000; this amount will be made up of trade accounts payable, accrued payrolls accrued leave, unredeemed coupons, withholding taxes, retirement, and other current liabilities. The total working capital (current assets less current liabilities) as detailed above will amount to $8,656,000.

The total budget estimate for the Veterans Canteen Service for fiscal year 1964 is made up as follows:

Total working capital	$8,656,000
Investment in equipment, net	4,121,000
Total investment of U.S. Government	12,777,000

Mr. EVINS. Congress originally appropriated a total of $4.9 million for operation of this service and no additional appropriation has been received. Funds in excess of the need of the service totaling $6.9 million have been paid to the Treasury.

Mr. THOMAS. Let us take a look at construction. This is program 9000. Let's put pages 26–2, 3, and the table on 4 in the record.

(The pages referred to follow:)

ASSISTANT ADMINISTRATOR FOR CONSTRUCTION

INTRODUCTION

The Office of Assistant Administrator for Construction is responsible for designing and constructing Veterans' Administration facilities, which include new and replacement hospitals and modernization and improvement of existing facilities. After construction project requirements are determined by the operating departments, this office directs the construction program involving preliminary planning, budget formulation, preparation of working drawings and specifications, supervision of construction and delivery of the completed facility to the operating department.

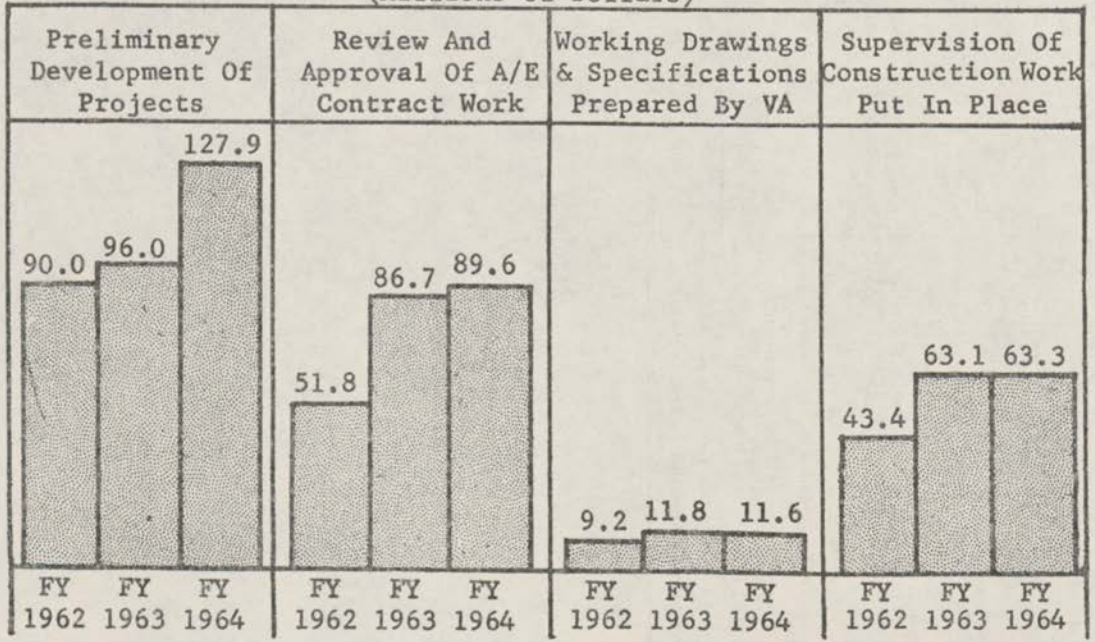
The costs of the Office of Assistant Administrator for Construction are paid from two appropriations "Medical administration and miscellaneous operating expenses" (program 1700), and "Construction of hospital and domiciliary Facilities (program 9000).

The "Medical administration and miscellaneous operating expenses" appropriation provides for architects, engineers and others who work on projects and programs being developed for appropriation and approval of funds, for salaries of those persons engaged in organizationwide or staff activities, and for related other costs.

The construction of "Hospital and domiciliary facilities" appropriation, which becomes available for use after Presidential approval, provides for planning, building sites, working drawings, construction, and personal services applicable to approved projects.

The budget requests and justification for the programs mentioned above are presented in this section to facilitate review and evaluation.

Magnitude and Scope of Workloads
(Millions of Dollars)



Summary of construction program workloads

[Millions of dollars]

Type of workload	Fiscal year 1962, actual	Fiscal year 1963, estimated	Fiscal year 1964, estimated
Manager of operations:			
(a) Preliminary development of projects:			
1. New and replacement hospitals	45.5	49.8	56.2
2. Modernization and other improvements:			
Projects costing over $0.3 million	37.6	41.2	67.7

[3] Capital cost, not an operating expense.

NOTE.—1700—Medical administration and miscellaneous operating expenses appropriation. 9000—Construction of hospital and domiciliary facilities appropriation.

Mr. THOMAS. We have two programs 1700 and 9000.

The 1700 program is where they get the program up to the appropriations stage. After they get the money it goes over to program 9000. They are the construction people. You have 106 in 1700 for 1962, 9000 you have 234, a total of 340. That figure goes up to 363 in 1963, and 370 in 1964, an increase of only 7.

FUNDS FROM MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES

Here are your other objects on page 5. We will return to them and be looking over other services which shows a reduction of $36,700. You have a note "Objects 25–31 include costs of $35,700 and $14,000 respectively for obligations incurred, in fiscal year 1962. Funding requirements for object 25 are $1,000 less in fiscal year 1964 than in

1963, and the funding requirements for object 31 are the same in fiscal years 1963 and 1964.

Let us go 26–6. I have a note here, "Thirty-percent increase in work." (Reading:)

The estimate for 1964 is a net of $146,000 more than the estimate for 1963. Other services account for an offsetting decrease of $1,000 while personnel compensation and benefits account for an increase of $147,000.

FUNDS FROM CONSTRUCTION OF HOSPITALS AND DOMICILIARY FACILITIES

Let us put 26–8 and 9 in the record.

(The pages referred to follow:)

CONSTRUCTION OF HOSPITAL AND DOMICILIARY FACILITIES, $81 MILLION

This appropriation provides for construction of hospitals and domiciliary facilities and becomes available for use after Presidential approval of individual projects or groups of projects. The facilities may include new and replacement hospitals and domiciliaries, building sites, modernization of and other improvements at existing facilities including regional offices and supply depots and alterations and additions for medical research facilities.

A construction program of $81 million is recommended for 1964 to be financed with new obligational authority. This estimate includes the fourth increment toward financing an orderly 15-year program for replacement and modernization of our existing hospital facilities and is the estimated additional amount needed in 1964.

Further details for the amount recommended are shown in the program summary and the project listings which follow:

Program summary

Replacement hospitals	$46,630,100
Modernization	24,738,300
Other improvements	3,881,600
Research facilities	3,000,000
Restoration of funds	2,750,000
Total appropriation request	81,000,000

Replacement hospitals.—The $46,630,100 estimate for this activity includes funds for: (*a*) balance of technical services and construction, $8,793,000 for 480 beds at Gainesville, Fla.; $16,052,600 for 1,040 beds at Long Beach, Calif., phase II; $8,799,500 for 500 beds at Oteen, N.C.; and $9,685,000 for 480 beds at Temple, Tex.; (*b*) partial technical service, $1,000,000 for 1,040 beds at Los Angeles, Calif.; and $700,000 for 720 beds at San Juan, Puerto Rico; and (*c*) $1,600,000 for acquisition of a building site and partial technical services for 1,000 beds at Long Island, N.Y.

Modernization.—The $24,738,300 requested for this activity includes $16,794,800 for construction of projects for which technical services were previously appropriated and $7,943,500 for planning 8 new projects estimated to cost $60,510,400. The balance for construction for these projects, $61,858,900, will be requested for 1965 when plans are scheduled to be completed.

Other improvements.—The $3,881,600 requested for this activity for the total cost of 41 new projects.

Research facilities.—The $3 million requested for this activity includes $1,341,500 for construction of medical research facilities for which technical services funds were previously appropriated and $1,658,500 for a new list of projects estimated to cost $3,447,600. The balance, $1,789,100 will be requested for 1965 when plans are scheduled to be completed.

Restoration of funds used to finance special air conditioning projects.—Included in this appropriation request is $2,750,000 to restore part of the funds which were used, with the approval of the chairman of the House and Senate Appropriation Subcommittees, to finance the special 1962 air conditioning program. Any balance of funds which must be restored will be requested when needed.

Fallout shelter facilities.—In accordance with the stated policy to provide fallout shelters in new construction, the above estimates include: for planning and construction, Danville, Ill., (Phase V) $100,000; for planning only, Long Island,

N.Y., $16,000; Hines, Ill., (Phase I) $16,000; San Juan, Puerto Rico, $13,000; Portland, Ore., $12,000; and Seattle, Wash., $5,000.

Mr. THOMAS. Here is a good trade to work from. Here is your summary: Hospital construction, domiciliary facilities. Your whole program is $81 million this year?

Mr. GLEASON. Yes, sir.

Mr. THOMAS. That is the whole thing. Here is the way it is broken down: Replacement hospitals, $46,630,100. Where will you spend the $46 million?

Mr. MONK. 26–10, sir.

PROJECTS IN 1964 BUDGET

Mr. THOMAS. Let us insert this page showing the projects for 1964 in the record and the succeeding pages that complete the table. This shows all of your projects.

REPLACEMENT HOSPITALS				
Gainesville, Fla.: 480 bed new hospital, including 200 G.M. & S. beds, 40 TB beds, and 240 NP beds to meet increasing demands for beds in State of Florida. No outpatient clinic. No laundry. To be located near and affiliated with University of Florida	9,595.0	802.0	8,793.0	----------
Long Beach, Calif.—Phase II: Phase I provided for construction 561 new beds to replace part of the beds located in cantonment-type construction. Under phase II it is planned to replace the remaining 1,040 beds with permanent new construction and modernize certain existing buildings for supporting facilities. Upon completion of this phase, there will be a total of 1,601 beds, 1,461 G.M. & S. including 205 spinal cord, 120 TB, and 120 NP. The hospital also provides for outpatient treatment	17,087.6	1,035.0	16,052.	----------
Long Island, N.Y.: 1,000 bed new hospital, including 240 G.M. & S. beds and 760 NP beds, to replace approximately 800 overcrowded beds presently located at the Northport, L.I., N.Y., hospital and to provide 200 beds to meet the increasing demands for G.M. & S. treatment in this area. The site for this hospital has not yet been selected	26,827.0	----------	1,600.0	25,227.0
Los Angeles, Calif.: 1,040 bed new hospital, including 800 G.M. & S. beds and 240 NP beds, to replace 840 obsolete and overcrowded beds at the existing VA Center, Los Angeles, Calif., and to provide 200 additional beds to meet the increasing demands for G.M. & S. treatment in this area. It is planned to locate near and affiliate with the University of Southern California Medical School	23,525.0	750.0	1,000.0	21,775.0
Oteen N.C.: 500 bed new hospital, including 440 G.M. & S. and TB beds and 60 NP beds, on existing site to replace present obsolete facilities	9,737.0	937.5	8,799.5	----------
San Juan, P.R.: 720 bed new hospital to replace our existing 200 bed hospital and to reduce a substantial number of contract beds. The new hospital as proposed will include 400 G.M. & S. beds, 40 TB beds, 240 NP beds, and 40 beds for the Department of Army requirements. The plans are to locate the hospital adjacent to the University of Puerto Rico Medical Center on a site to be donated by the Commonwealth of Puerto Rico	21,097.0	----------	700.0	20,397.0
Temple, Tex.: 480 bed new hospital, including 240 G.M. & S. and TB beds and 240 NP beds, on existing site to replace present 800 bed World War II cantonment-type hospital	10,435.0	750.0	9,685.0	----------

MODERNIZATION				
Bedford, Mass.—Phase VII: This project provides for modernization of bed buildings 62 and 70 and addition to sewage disposal plant. This is part of a continuing program for overall modernization of this hospital. Previous projects have provided for modernization of 6 bed buildings, construction of new admission and treatment building, and miscellaneous ancillary facilities. Future work will consist of modernizing bed buildings 8 and 9 and miscellaneous other work. An overall plan for remaining work is being developed	635.8	----------	57.8	578.0
Coatesville, Pa.—Phase VII: This project provides for alterations for chapel, new TEC Building, new elevators, replacement of boiler plant, and automatic fire sprinklers in 12 buildings. This is the final phase for overall modernization of this hospital. Future work will provide for air-conditioning of this hospital	3,520.5	298.0	3,222.5	----------
Danville, Ill.—Phase IV: This project provides for construction of a new240-bed NP building to replace beds presently housed in nonpermanent buildings. Previous projects provide for a new A. & T. building of 180 beds, modernization of building 58 for 235 G.M. & S. beds, and miscellaneous ancillary facilities. Future work will consist of 2 new 240-bed NP buildings, 40-bed foster home building and additional supporting ancillary facilities	2,616.8	340.0	2,276.8	----------
Danville, Ill.—Phase V: This project provides for construction of 2 new 240-bed NP buildings to replace beds presently housed in nonpermanent buildings. Previous projects provide for 2 new NP buildings for 420 beds and modernization of building 58 for 235 beds. Future work will provide for a 40-bed foster homebuilding and additional ancillary facilities	5,252.8	----------	5,252.8	----------
Fort Meade, S. Dak.—Phase IV: This project provides for construction of a new 240-bed NP building to replace beds presently housed in nonpermanent buildings. Previous projects provide for 168 beds in new construction and improvements in ancillary facilities. Future work will provide or a 20-bed foster home unit and modernization of some existing buildings for ancillary facilities	2,502.7	292.0	2,210.7	----------
Hines, Ill.—Phase I: This project provides for phase I of an overall modernization and/or replacement of facilities for a total of approximately 1,700 beds. The scope of this project and future work required will be determined by a master plan which is currently being developed	25,000.0	----------	1,000.0	24,000.0
Louisville, Ky.: This project provides for addition of 180 NP beds to replace beds which will be lost by modernization of the Lexington hospital, consolidation of outpatient clinic with the hospital, increased research, and various other adjustments in space to meet current medical criteria	6,500.0	135.3	254.7	6,110.0
Northport, N.Y.—Phase I: This is the 1st phase of an overall modernization of this hospital. Tentative plans provide for construction of a clinical wing as the 1st phase The scope of this project and future work required will be determined by a master plan which is currently being developed	4,950.0	----------	300.0	4,650.0
Palo Alto, Calif.—Phase III: This project provides for alterations to existing D.H. & K. Building No. 104 for special services and a new TEC Building. Previous projects provide for new D.H. & K. Building and modernization of buildings 101, 105, 110, 137, and 205. Future projects will provide for modernization of buildings 106, 111, 113, 202, 203, 208 and 307	1,475.0	185.8	1,289.2	----------
Palo Alto, Calif.—Phase IV: This project provides for modernization of patients buildings 111, 113, 208, and 307. Previous projects provide for new D.H. & K. Building, alterations to old D.H. & K. Building for special services, new therapeutic exercise clinic building, and modernization of buildings 101, 105, 110, 137, and 205. Future projects will provide for modernization of buildings 106, 202, and 203	485.0	----------	44.0	441.0

MODERNIZATION—continued				
Perry Point, Md.—Phase III: This project provides for new boiler plant, new special activities building, connecting corridors, modernization building 17–H for D.H. & K. and P.M. & R., and rehabilitation of utility distribution system. Previous projects provide for modernization of patient buildings and improvements to sewage disposal system. Future work will consist of further improvements to building 9–H, alterations to building 80 for foster home care, and air conditioning of buildings not included under this project	5,485.8	300.0	5,185.8	----------
Perry Point, Md.—Phase IV: This project is the final phase of the modernization program and provides for improvements to building 9–H, alterations to building 80 for foster home care, and completion of air-conditioning program. Previous projects provide for modernization of patient buildings, new boiler plant, new special activities building, connecting corridors, modernization building 17–H for D.H. & K. and P.M. & R., and rehabilitation of utility distribution system	2,077.8	----------	188.9	1,888.9
Portland, Oreg.: This project provides for addition of 505 beds including 240 psychiatric beds, consolidation of outpatient clinic with hospital, increased research space, and various other adjustments in space to meet current criteria	15,844.0	----------	700.0	15,144.0
Roanoke, Va.: This project provides for a new canteen building which is necessary to relieve a very unsatisfactory condition in canteen operations, presently located in a quonset hut, prior to complete modernization of the hospital. Future work will consist of complete modernization	310.0	220.0	90.0	----------
San Francisco, Calif.—Phase III: This project provides for modernization of building 7 for canteen, chapel, and recreation, modernization of building 8 for mental hygiene clinic, alterations and additions to building 12 for research and expansion of parking facilities. Previous projects provide for alterations to D.H. & K. building 6 and addition to building 2 for clinics. Future work will consist of modernizing buildings 1, 2, 4, 5, and 6	1,365.5	124.0	1,241.5	----------
Seattle, Wash.: This project provides for addition of 250 beds, including 30 psychiatric beds, consolidation of outpatient clinic with hospital, increased research space, and various other adjustments in space to meet current criteria	6,265.0	----------	400.0	5,865.0
Tuskegee, Ala.—Phase V: This project provides for alterations to building 38 for a chapel and construction of a physical medicine and rehabilitation building. Previous projects provide for modernization of patient buildings and additional ancillary facilities. Future work will consist of construction of a new TEC building and air conditioning of the entire hospital	990.8	99.6	891.2	----------
White River Junction, Vt.—Phase II: This project provides for completion of modernization of this hospital by alterations and additions to existing buildings. Previous projects provide for construction of new administration building and miscellaneous alterations	3,500.0	185.6	132.4	3,182.0
Subtotal	88,777.5	2,180.3	24,738.3	61,858.9
OTHER IMPROVEMENTS				
Albany, N.Y.: This project provides for alterations to establish an intensive treatment unit in order to furnish better treatment for critically ill patients	26.5	----------	26.5	----------
Albuquerque, N. Mex.: To provide for alterations to building 3 to permit relocating pulmonary disease service in a closer proximity to applicable clinics	185.0	----------	185.0	----------
Baltimore (Fort Howard), Md.: This project provides for replacement of present obsolete ammonia, brine refrigeration system with modern freon equipment to insure safe dependable cold storage, conversion of ice storage refrigerator for storage of frozen foods, and renovation of 6 walk-in refrigerators	47.4	----------	47.4	----------
Chicago, Ill.: To provide for installation of a trash incinerator to eliminate present, unsightly, unsanitary, and hazardous conditions involved in the accumulation of trash for disposal by contract	56.0	----------	56.0	----------

UNOBLIGATED CONSTRUCTION FUNDS

Mr. THOMAS. How much money do you have unobligated as of now? In that connection hand me the General Accounting Office criticism of the construction program.

Mr. ASHBRIDGE. We have $131 million unobligated as of now, sir.

Mr. THOMAS. $131 million as of now unobligated?

Mr. ASHBRIDGE. Yes, sir; as of December 31, 1962.

Mr. THOMAS. Do you need this $131 million? What does Mr. Campbell say?

COMPTROLLER GENERAL'S REPORT

Mr. BOLAND. You are familiar with the criticism of the Comptroller General's office with respect to the premature requests for construction appropriations. Aren't you doing the same thing here, asking for funds you are not going to use next year?

Mr. ASHBRIDGE. I am familiar with that. We feel we can use the funds we are requesting at this time.

Mr. THOMAS. Why?

Mr. BOLAND. Mr. Reporter, will you insert the statement of the Comptroller General on hospital construction for the Veterans' Administration on premature requests for construction appropriation?

(The document follows:)

REPORT TO THE COMMITTEE ON APPROPRIATIONS
HOUSE OF REPRESENTATIVES

(By the Comptroller General of the United States, January 1963)

VETERANS' ADMINISTRATION

HOSPITAL CONSTRUCTION

Premature requests for construction appropriation

In our report to the Congress dated July 26, 1962, on our review of selected activities under the hospital construction program administered by the Veterans' Administration (VA), we commented on the fact that the VA had included in its appropriation requests funds for designing hospitals and supervising construction, although the funds could not be obligated for several years after the appropriations were received. The funds were requested on the basis of a predetermined schedule for hospital construction. Some of the appropriated funds had remained unobligated for several years because the VA was not prepared to start the work for which the funds were requested.

We stated our belief that a request for funds to cover the cost of designing a hospital should be better coordinated with the development of hospital requirements and the preparation of preliminary design plans so that when the funds are appropriated the VA will be ready to commence the design work. We further expressed the belief that the VA should not request funds for the supervision of construction of a hospital until the agency is prepared to request funds for the actual construction of the hospital because the two activities are logically inseparable.

The VA agreed in principle with our position and stated that it would continue to refine its scheduling techniques in an effort to obtain more accurate predictions of its fiscal year fund requirements.

UNOBLIGATED CONSTRUCTION FUNDS

Mr. BOLAND. The report says—

Some of the appropriated funds have remained unobligated for several years because the VA was not prepared to start the work for which the funds were requested.

Is this still a legitimate criticism?

Mr. ASHBRIDGE. It does happen sometimes, yes, sir.

Mr. BOLAND. To what extent does it happen here? The chairman asked you for the total amount of unobligated funds and it is considerable here.

Mr. ASHBRIDGE. Yes, but of the funds that we now have unobligated we expect to obligate quite a substantial amount between now and the end of the year.

Mr. BOLAND. How much?

Mr. ASHBRIDGE. About half of that, sir.

Mr. BOLAND. Wouldn't it be better for you to ask for the funds when you are going to use them? We know you need lead time but I imagine you have funds here unobligated for projects that you appeared before this committee some years ago that you have not even spent yet.

Mr. ASHBRIDGE. That is correct, sir, because the priorities change.

Mr. BOLAND. If priorities change why don't you use the funds to construct those that are more urgent?

Mr. ASHBRIDGE. We have done that to a considerable extent.

Mr. BOLAND. You are not going to use the money for Gainesville, Fla., in 1963. How many millions are you requesting for Gainesville here?

Mr. ASHBRIDGE. We are going to open bids——

Mr. GLEASON. $8,793,000.

Mr. BOLAND. Are you going to commence building in Gainesville, Fla.?

Mr. GLEASON. Yes, sir.

Mr. BOLAND. When?

Mr. ASHBRIDGE. We are going to open bids next October.

Mr. JONAS. Excuse me, may I inquire? What are you going to do with these unobligated funds? You have about $60 million that you do not expect to obligate. Why can't you use some of that money?

Mr. ASHBRIDGE. That is all earmarked for certain specific jobs. We are going to obligate in this year the money for the Charleston hospital, for the Atlanta hospital, and those are quite sizable amounts. Then we are designing.

Mr. THOMAS. What period are you talking about, 1963 or 1964?

Mr. ASHBRIDGE. In the current fiscal year, sir.

Mr. THOMAS. At the end of this fiscal year what part of that $131 million will you have obligated?

Mr. GLEASON. About half of it.

Mr. JONAS. Are you planning to obligate the other half in 1964?

Mr. ASHBRIDGE. Not all of it.

Mr. GLEASON. It will be increased, Mr. Jonas, in 1964.

Mr. JONAS. I am talking about what you have on hand now already appropriated.

Mr. GLEASON. I understand that, sir.

Mr. JONAS. Where will you obligate the other $80 million? Do you have a list of the projects?

Mr. GLEASON. I can tell you right now where $40 million of it is going and that is the air-conditioning of hospitals that has been determined best for patient care throughout the country.

Mr. JONAS. I think we need a little more detailed information on that.

Mr. ASHBRIDGE. I have this which I can supply for the record.

Mr. THOMAS. Read it into the record.

Is that in our justifications?

PLANNED CONSTRUCTION OBLIGATIONS IN 1963

Mr. ASHBRIDGE. No, sir. These are the estimated obligations for 1963: Atlanta, Ga., 587-bed hospital, $11,800,000; Battle Creek, Mich., alterations, $294,000; Bonham, Tex., air-conditioning, $282,000; Charleston, S.C., 500-bed hospital, $9,550,000; Cincinnati, Ohio, air-conditioning, $1,407,000; Dallas, Tex., alterations, $520,000; East Orange, N.J., 200-bed restoration center, $1,577,000; Fort Harrison, Mont., alterations, $635,000; Gulfport, Miss., rehabilitate electrical system, $325,000; Houston, Tex., seventh floor addition, $521,000; Kansas City, Mo., research project, $352,000; Lake City, Fla., alterations, $1,170,000; Memphis, Tenn.——

Mr. JONAS. Right there, may I interrupt you?
Mr. ASHBRIDGE. Yes, sir.
Mr. JONAS. What will that consist of?
Mr. ASHBRIDGE. Memphis, Tenn.?

LAKE CITY, FLA., HOSPITAL

Mr. JONAS. No, Lake City, Fla.
Mr. ASHBRIDGE. Alterations to buildings 62 and 64.
Mr. JONAS. I thought that was one we were going to abandon.
Mr. GLEASON. No, sir.
Mr. JONAS. How close is it to Gainesville, Fla., where you are building a brandnew hospital?
Mr. GLEASON. About 70 to 80 miles, I think.
Mr. JONAS. About 50, is it not?
Mr. GLEASON. If you know—I do not know the exact mileage, Mr. Jonas.
Mr. JONAS. How close is it to the nearest medical school?
Mr. GLEASON. The nearest medical school is Gainesville, Fla.
Mr. JONAS. It is about the same amount you had previously appropriated for Bay Pines, yet you freeze that money but you are going to spend $1.7 million at Lake City?
Mr. GLEASON. Yes, sir.
Mr. JONAS. How do you justify that?
Mr. GLEASON. As I mentioned to you last year, Mr. Jonas, if we were now to be considering Lake City, Fla., we would never build a hospital there. Within the last 5 years there has been a great substantial amount of money spent on Lake City, Fla., and I just do not want to lose out on the efficiency and economics of giving up Lake City at this time. I think the time will come, Mr. Jonas, when this hospital should be replaced and it should not be replaced in Lake City.
Mr. JONAS. In the meantime, you are spending $1.7 million on it in 1 year.
Mr. GLEASON. This is a continuation of the modernization program that began some time ago. The modernization program has been underway at Lake City, Mr. Jonas, for the last 4 or 5 years, and this is the last phase of it.
Mr. JONAS. It is a little strange to me that you would spend that much money on a rehabilitation program for a hospital that is remote from any medical center, in view of your previous decisions with respect to Bay Pines.
Mr. GLEASON. Well, Mr. Jonas, as you will recall from the testimony here today there are only 94 medical schools in the United States and we have 169 hospitals, so each hospital cannot be built adjacent to a medical school; but where they can be, we get better treatment for the medical patients.
Mr. EVINS. How much is your investment in your Lake City hospital today?
Mr. GLEASON. I really couldn't say.
Mr. SCHWEICKART. We can supply that for the record.
Mr. EVINS. How much?
Mr. ASHBRIDGE. We will supply it.

(The information supplied follows:)

General Services Administration records show the value of the Lake City VA Hospital as $6,087,000, which takes into account modernizations accomplished costing $4,210,546. The current phase of modernizations presently under construction will cost $1,881,500.

GAINESVILLE HOSPITAL

Mr. THOMAS. There is some $47 million here in a half a dozen projects. Let us expand a little on some of them.

Here is Gainesville, 480 beds, at a total cost of $9.6 million and you have already had $802,000 for sites and planning money.

What is that going to cost per bed?

Mr. ASHBRIDGE. Approximately $20,000, sir.

Mr. THOMAS. That is the most inexpensive hospital on the list.

Is that a contractor's estimate?

Mr. ASHBRIDGE. This is our estimate.

WASHINGTON, D.C., HOSPITAL

Mr. THOMAS. You built a hospital here in the District of Columbia recently. How many beds were there?

Mr. ASHBRIDGE. 710.

Mr. THOMAS. What did that hospital cost you?

Mr. ASHBRIDGE. $17.5 million. That ran somewhat over our estimate, sir. Others are under.

Mr. THOMAS. How much funds were appropriated for it? Almost $19 million, wasn't it?

Mr. ASHBRIDGE. $19,319,500.

Mr. THOMAS. Couldn't you have built that good 700-bed hospital and cut out a lot of frills and things, couldn't you have built that for a lot less money? In other words, you had that much money and you spent it.

Mr. ASHBRIDGE. This is a teaching hospital and this has a great many more facilities.

Mr. THOMAS. It is still a hospital. You can come up with variations and always justify it. Is there any hospital out there close to it that is that expensively built with private funds? If you had $25 million you would have spent that. Why couldn't you have reduced it? How many beds is it?

Mr. ASHBRIDGE. 710 beds.

Mr. THOMAS. And you say it is a teaching hospital. Your original estimate was $17 million. Who was your architect?

Mr. ASHBRIDGE. Edwin A. Keeble & Associates of Nashville and Eggers & Higgins of New York. This hospital also has regional office clinic facilities in addition to the 710 beds.

Mr. JONAS. Why do you need two architects?

Mr. ASHBRIDGE. It is a joint venture. That happens quite frequently.

Mr. THOMAS. I am glad we didn't have three. It would have cost $25 million.

ARCHITECT FEES

Mr. JONAS. What do you pay the architect?
Mr. GLEASON. Generally 5 percent of the estimate.
Mr. THOMAS. You don't get any at less than 6, do you?
Mr. GLEASON. Yes, sir; we do.
Mr. THOMAS. Do you have any less than 5?
Mr. ASHBRIDGE. Yes; but on a small job like some of these air-conditioning jobs it may run a little bit over 5.

LONG BEACH, CALIF., HOSPITAL

Mr. THOMAS. Look at the one at Long Beach. Phase I provided for construction, 561 beds to replace part of the beds located in the cantonment-type construction. Under part II it is planned to replace the remaining 1,040 beds.

You already have the land. You are not buying the land. What you are building is virtually a brandnew thousand-bed hospital. You are spending how much for it? $17 million, and you have the land, you have the utilities. How much is that a bed?

Mr. ASHBRIDGE. About $17,000.

SAN JUAN, P.R., HOSPITAL

Mr. THOMAS. Here is one at San Juan, P.R., 720 beds, to replace an existing 200-bed hospital. The new hospital as proposed will include 700 G.M. & S. beds, 40 TB beds and 240 NP beds. They plan to locate it adjacent to the University of Puerto Rico Medical Center and that is fine.

You have a figure here of $21 million. How much is that per bed?

Mr. ASHBRIDGE. That is almost $30,000 a bed.

Mr. THOMAS. You do not miss it far. You own the land, you have the utilities there. What in the world could justify your putting $30,000 per bed in the hospital?

Mr. ASHBRIDGE. We shall have to put in the utilities but the large amount of that cost is in shipment of materials from the continental United States to the island of Puerto Rico.

Mr. THOMAS. We went through the same thing in the Philippines. They wanted $15 million to build a hospital over there. The costs on it—that was before your day—and I think it was $9.4 million used and you built the best hospital on the island. You reduced the cost 40 or 50 percent.

COMPTROLLER GENERAL REPORT ON VA CENTER, LOS ANGELES

Will you insert at this point in the record the Comptroller General's criticism of the large installation at Los Angeles where they spent about $75,000 remodeling the manager's home?

(The material referred to follows:)

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., January 22, 1963.

To the President of the Senate and the Speaker of the House of Representatives:

Herewith is our report on the review of the renovation of housekeeping quarters No. 23 at the Veterans' Administration Center, Los Angeles, Calif.

Our review disclosed that, in calendar year 1961, housekeeping quarters No. 23—a dwelling over 80 years old designated as the station director's residence—was renovated and modernized at a cost which we estimate to be at least $73,000. We were advised that about 25 patients worked an estimated 5,000 hours on this project on such tasks as removing plaster from the walls and gutting the inside of the dwelling. The cost of patient labor is not a part of the cost estimate of $73,000. In view of the age, seriously deterioriated condition, and obsolete design of this dwelling, we believe that the decision which resulted in the expenditure of large sums of money to restore it to acceptable condition was unsound. We noted that the alternatives to renovating this building were not adequately explored to determine whether the most effective use of Government funds would be made. In addition, the renovation was erroneously classified by the local Veterans' Administration officials as maintenance and repair work and was financed with station operating funds rather than being properly classified as a construction project which would, under Veterans' Administration central office policy, have required the review and approval by the central office and the Bureau of the Budget.

The Veterans' Administration, in commenting on our findings, advised us in a letter dated September 28, 1962, that the renovation of housekeeping quarters No. 23 was an unwise expenditure and an apparent circumvention of its requirements concerning construction or renovation projects of this magnitude. The Veterans' Administration has agreed that there is a need for tightening policies and procedures to assure more effective management controls and that policies and procedures for controlling total financing of repairs, maintenance, improvements, alterations, and renovations from station operating funds will be improved.

Copies of this report are being sent to the President of the United States and to the Administrator of Veterans' Affairs.

RALPH CAMPBELL,
Comptroller General of the United States.

Mr. THOMAS. The need is great in the California area. I think the committee ought to go out there and go over the situation with the managers—they are intelligent men—and see about the figure of $30,000 per bed. I think $18,000 or $20,000 per bed would build them a fine hospital, much better than the average hospital in the United States today.

Mr. GLEASON. Well, Mr. Chairman, I would like to ask the——

CONSTRUCTION COST ESTIMATES

Mr. THOMAS. These are inhouse estimates. There is no contractor's bid and we certainly can reduce these estimates 10 to 20 percent—with the exception of some that ought to be reduced more than that—and you will come up with a good hospital.

Mr. BOLAND. Could we get some information from you with respect to how successful the bidding has been over the past year or so?

Mr. ASHBRIDGE. Certainly.

(The information supplied follows:)

Total (24 projects)			49,113	135	50,521

Mr. BOLAND. Do you have any figures on whether or not you can build it for more or less than you anticipate?

Mr. ASHBRIDGE. Certainly, and we will also furnish that.

(The information supplied follows:)

Summary of financially completed projects, July 1960–August 1962

[Dollars in thousands]

Cost range	Number of projects	Budget request [1]	Actual cost
$300,000 and under	244	$12,057	$10,221
Over $300,000	34	74,586	71,526
Total	278	86,643	81,747

[1] These represent "magnitude or in-house estimates" which were made without the benefit of preliminary plans or working drawings. Savings are used to offset succeeding appropriation requests. For example, $2.9 and $2.4 million used to reduce the 1962 and 1963 appropriation requests respectively.

Mr. ASHBRIDGE. I have the figures on some hospitals we have let out for construction recently.

Mr. THOMAS. If you will tell your architect you have $10 million to spend on a hospital he is going to give you $10 million worth of plans. If you tell him you have $8 million to spend on a hospital he will give you that type of plan.

Mr. GLEASON. This isn't quite true, Mr. Chairman, because the Bureau of the Budget goes over this pretty thoroughly.

Mr. THOMAS. Tell me where I am wrong.

UNOBLIGATED CONSTRUCTION FUNDS

Mr. GLEASON. Last year we discussed here at the committee meeting the unobligated funds. At that time I made the statement that by the time we met here this year, that that unobligated balance would be down by the end of the fiscal year. It will be down lower than it was the previous year. I would just like to inform the committee that the unobligated balance as it is shown here for 1964 will be reduced quite a bit. If you will just give me a little opportunity for the next 2 years, I am sure you will be most satisfied with the work we will accomplish in that period.

Mr. THOMAS. This is just to take care of the criticism of the General Accounting Office.

Mr. BOLAND. Are you prepared to start work for which you are requesting funds? How soon can you start work with the $46 million in replacement hospitals?

Mr. GLEASON. Most all of that will be obligated, Mr. Boland, in fiscal year 1964.

Mr. BOLAND. You are prepared to start all the work for which you are requesting funds in the fiscal year 1964 budget?

Mr. ASHBRIDGE. Yes, sir, that is our plan.

Mr. JONAS. Is it also your plan to obligate all existing balances in fiscal year 1964?

Mr. GLEASON. No, this would be almost impossible, Mr. Jonas, but I am fairly confident that by 1965 the unobligated balance will be down practically to zero.

Mr. JONAS. The unobligated balances on hand now are for projects that were funded by appropriations previously made?

Mr. GLEASON. That is correct, sir.

Mr. JONAS. What you are planning to do is to superimpose this 1964 program and put it ahead of previous programs?

Mr. GLEASON. No, sir. I don't mean to say that at all. Many of the unobligated project funds that we now have on hand will also be contracted in 1964.

Mr. MONK. Mr. Jonas, if you will look at 26–16 you will see that we plan to have our unobligated balance at the end of fiscal year 1964 down to $31 million.

Mr. GLEASON. This is a lot different, Mr. Jonas, than the $131 million that we referred to earlier.

Mr. JONAS. That is not my point. My point is you are going to carry over $31.5 million in previous appropriated funds that you have not obligated. Yet you just told Mr. Boland that you are prepared

to obligate this entire $46 million program for 1964. So you are bound to have skipped over some previously funded projects.

Mr. GLEASON. That is correct, sir, and I hope you don't mind my saying it, but this was before I became Administrator and now that I am Administrator I am going to make sure that it is done.

Mr. JONAS. You are not explaining why you don't obligate the funds you already have on hand before you asked for $46 million new money. You cannot charge that up to your predecessor.

Mr. GLEASON. No, I do not mean to say that, Mr. Jonas. The thing is that some of this work has been held back and we are going to rush through and see that it is obligated in 1964.

Mr. JONAS. Please do not misunderstand me. I am not insisting on your obligating it.

Mr. GLEASON. Well, Mr. Jonas, as I hope you will—I rather hope you were insisting on it because this is construction that we vitally need.

Mr. JONAS. I am asking you to justify asking us to put up $46 million in new money when you already have on hand $31 million that you don't even plan to obligate.

Mr. GLEASON. When you say we don't plan to obligate it, Mr. Jonas, that is not quite correct.

Mr. THOMAS. What you mean is that by the end of 1964 you will still carry over $31 million unobligated?

Mr. GLEASON. By the same token though, Mr. Chairman, by September of fiscal year 1965 most of that $32 million will also be obligated. An important thing to us is that whether it is June or July it makes a difference in the fiscal year in which it is contracted.

HOLDING CONSTRUCTION COSTS WITHIN AVAILABLE FUNDS

Mr. THOMAS. Here is what we want to impress upon you, Mr. Administrator. You set out these projects. We do our best to comb them over and come to some judgment on it. We give you "X" amount of dollars for that project. We expect you to do it exactly for that amount of money. If you have to reduce your plans, reduce them. We don't want you coming back here 2 years from now saying you have an overrun. We expect you to stay current enough with your plans and with your contracting fraternity so that when you let a plan it is going to be just this way and there will be no overruns or anything else. You have four or five programs here. You have a lot of them here under $300,000 and no doubt these are quite important. You are letting them accumulate. There is bound to be some reason for accumulation. Is it lack of staff or what is the trouble?

Mr. DRIVER. There are many reasons, depending on the type of project. We have some cases we throw out and start over again when the bids come in.

Mr. THOMAS. Why do you do that?

Mr. DRIVER. We are not satisfied with what we got on the bids. It seems in a program as big as this, $70 million, $80 million, $90 million a year, that the carryover which is automatically established because of an arbitrary June 30 date, is always going to be off some millions of dollars. But, as Mr. Gleason indicated, right after the first of the year you may soon obligate it. And we won't be back to

see you in time to get that money if we get down to zero each year, and that means that we will slow down the requirements people, we will slow down Mr. Ashbridge's people, because we cannot plan on the projects.

FUNDS FOR AIR CONDITIONING

Mr. THOMAS. Do you ever do a project for less than what you originally estimated it for?

Mr. ASHBRIDGE. Yes, sir, we do; and we have been able to fund quite a bit of our air-conditioning projects from savings from other things.

Mr. THOMAS. You alluded to that. How much have you spent on air conditioning?

Mr. GLEASON. We plan a total of about $40 million.

LONG-RANGE MODERNIZATION PROGRAM

Mr. EVINS. Several years ago we started on an 8- or 10-year modernization program. What year is this since that program was started?

Mr. GLEASON. This is the fourth year. The Bureau of the Budget, Mr. Evins, because of cost increases in construction and materials and some additional construction not included in the original plan, have now agreed to a total of $1.3 billion instead of $900 million.

VARIATION IN CONSTRUCTION COST PER BED

Mr. THOMAS. Explain the variation in these two projects. Here is one in Long Island, a thousand-bed new hospital including 240 G.M. & S. beds and 760 NP beds to replace approximately 800 beds existing in a hospital where you have the land, you have the streets, you have the grading and everything in there, and the cost will be $26,827,000. How much is that a bed?

Mr. ASHBRIDGE. $26,800 a bed.

Mr. THOMAS. Here is one in Los Angeles. A 1,040-bed hospital including 840 G.M. & S., and they are a little bit more expensive than your TB, and your NP beds, aren't they?

Mr. ASHBRIDGE. Yes, sir.

Mr. THOMAS. To replace an old hospital of 840 beds and to provide 200 additional beds, and it is going to be close to the University of California and that makes a lot of good sense. You come up with an overall figure of $23,525,000.

Mr. ASHBRIDGE. These are all trended according to the location. We use the Boeckh Index, which takes into account the difference in labor and material costs in various parts of the country. We have an overall national average square foot cost——

Mr. THOMAS. California is supposed to be a high-cost area.

Mr. GLEASON. But there are many materials, I might mention, Mr. Chairman, that go into a hospital in the State of New York that wouldn't go in necessarily on the same basis in Los Angeles. One, for example, is heat.

Mr. ASHBRIDGE. And perhaps air-conditioning, because I believe Los Angeles may not be air-conditioned.

Mr. THOMAS. Let us look at the one at Temple, Tex. This is a 480-bed new hospital including 240 G.M. & S. and TB beds and 240 NP beds. Some of it is high-priced construction and you have a cost here of $10.5 million. How much is that?

Mr. ASHBRIDGE. That is a little over $20,000 a bed.

Mr. THOMAS. A little over $21,000 a bed, and less than half of them are G.M.S.

Can't you reduce that cost here 15 to 18 or 20 percent and come up with a good substantial hospital that will last 50 or 75 years?

Mr. ASHBRIDGE. Sir, we have been attempting to reduce the costs as much as we can, bearing in mind the maintenance——

Mr. THOMAS. Cut out the waste space, cut out some of the offices and some of the lobbies on the ground floor. If you look up and down the hall there are 20 or 40 offices. What in the world you need with them, I don't know. Some fellow has a title in there as long as my recollection, and that is pretty long, and he has two or three rooms.

Mr. GLEASON. I know, Mr. Chairman, that the committee is interested in having physicians of the highest grade. It is rather difficult for them to do work in a generally open room. If they do not have an office in which they can do it—it is the same for examinations and——

Mr. THOMAS. That is true, but you are not talking about physicians. You have a man here with a long title, "Social Services," and so forth.

Mr. GLEASON. That is a very important thing to us, Mr. Chairman, the social services.

Mr. THOMAS. I can figure out 15 or 20 other titles just about like it before you get through.

Mr. EVINS. I personally don't think you can build them all like Army barracks hospitals, Mr. Chairman. They have to have a little variety.

Mr. THOMAS. When you go to thinking about $20,000 a bed, up to $30,000, you certainly don't have barracks-type construction.

Mr. GLEASON. There may well be the difference, as I tried to mention. Between California and New York, just the heating equipment necessary for hospital in New York is a great deal different than the same type of heating equipment for a hospital in Los Angeles of the same size.

Mr. THOMAS. This is nothing comparable to that.

Mr. GLEASON. Well, it is a couple millions of dollars, Mr. Chairman.

MODERNIZATION PROJECTS

Mr. THOMAS. Here is your modernization program. You have 18 projects. What do they cost?

Mr. ASHBRIDGE. These vary according to the complexity of the modernization.

Mr. THOMAS. What is the sum total that you have set out here?

Mr. ASHBRIDGE. $24,730,000.

Mr. THOMAS. Haven't you a table here for that?

Mr. ASHBRIDGE. It starts on page 26–11 and it finishes on page 26–12.

Mr. THOMAS. That is not what I want. You have another one here.

Mr. ASHBRIDGE. We have a summary of the appropriations on pages 26–8 and 26–9.

Mr. THOMAS. Let us see what 26–3 does. This shows the workload for preliminary development of projects.

New and replacement hospitals are $56 million. Modernization projects costing over $300,000 show $68 million.

Now, your modernization and other improvements, over $300,000, what are they, 18?

Mr. ASHBRIDGE. Eighteen.

Mr. THOMAS. Now your projects under $300,000, how many are they?

Mr. ASHBRIDGE. Forty-one.

Mr. THOMAS. You have 66 projects here with a total cost for fiscal year 1964 of how much money?

Mr. ASHBRIDGE. $81 million. That includes five research projects on page 26–15 and restoration of funds for last year's air-conditioning program.

Mr. THOMAS. What do you have set out here on page 26–3, your breakdown?

Mr. SCHWEICKART. That is a listing of the projects for which we shall prepare the preliminary plans.

Mr. THOMAS. In other words, none of this money is included in the fiscal year 1964 budget. That is a part of your $136 million unobligated.

Mr. SCHWEICKART. Some of it is. This will be a cross section of all of the outstanding work, depending on the projects for which we develop preliminary drawings this year. This is a workload figure.

Mr. THOMAS. You have 41 modernization programs under $300,000, and they are set out on pages 26–13 and 26–14.

What is the nature of these?

I notice you are building one or two chapels in there.

Mr. ASHBRIDGE. Yes, sir.

Mr. THOMAS. What are the chapels costing you a square foot?

Mr. ASHBRIDGE. About $30.

Mr. THOMAS. That is pretty high construction cost, isn't it?

Mr. ASHBRIDGE. That includes air conditioning——

RESEARCH FACILITIES

Mr. THOMAS. You are building four or five additions or separate constructions anywhere from 20,000 to 30,000 square feet each for research laboratories.

Mr. ASHBRIDGE. Sir, our research facilities are on pages 26–15—there are $3 million worth.

Mr. THOMAS. They are included in this appropriation and are not under medical care.

Mr. ASHBRIDGE. That is correct, sir.

Mr. THOMAS. The five are Birmingham, Boston, Bronx, Minneapolis, and minor research projects.

Mr. ASHBRIDGE. There are five items here. There are four good-sized jobs and the last item includes several smaller ones.

Mr. THOMAS. Here is one at Minneapolis costing $1,475,000. How much is that a square foot?

Mr. ASHBRIDGE. $46 at the Bronx.

Mr. THOMAS. What is this one at Minneapolis?

Mr. ASHBRIDGE. $73.79.

Mr. THOMAS. Why does it cost so much to build these buildings?

Mr. ASHBRIDGE. They have a great many mechanical things in there that we have to provide. Also electrical services, air conditioning, and so forth.

Mr. THOMAS. This is not equipment cost, this is just construction.

Mr. ASHBRIDGE. We include fixed equipment like laboratory benches and cabinets. Then there are vacuum piping, gas piping, pyrex glass acidproof drain piping, and so forth.

Mr. THOMAS. You are getting up into a lot of money, $73 a square foot. And these are in-house estimates?

Mr. ASHBRIDGE. Yes, sir.

Mr. THOMAS. Let us take a look at "Other objects" on 26–17.

This is a construction program. This is your other objects set out that apply exclusively to that 9,000 program?

Mr. ASHBRIDGE. Yes, sir.

Mr. THOMAS. That is nothing but the construction program.

CONSTRUCTION EMPLOYMENT

What did you have in your 1700 program? How many employees?

Mr. ASHBRIDGE. In our 1700 program—167.

Mr. THOMAS. Is that the field and District, too?

Mr. ASHBRIDGE. These are all in the District of Columbia.

Mr. THOMAS. How many do you have in the field on this program?

Mr. ASHBRIDGE. None on the 1700 program.

The ones in the field are the resident engineers, field clerks and hired labor on the 9000 program.

Mr. THOMAS. What do you mean by hired labor? Are these consultants, or what?

Mr. ASHBRIDGE. No, sir; these are people who actually do the work. On some of our jobs in operating hospitals where it is difficult to have a contractor come in unless you disrupt the flow of medical treatment, we do the work on a purchase and hire basis. We buy the materials, we hire the craftsmen and do the work with our own foremen, under our supervision.

Mr. THOMAS. It is contract personnel you are talking about, then?

Mr. ASHBRIDGE. No, sir. These are our own.

Mr. THOMAS. Force account?

Mr. ASHBRIDGE. That is correct.

Mr. THOMAS. Personal compensation and benefits. You have a little increase there. That is statutory?

Mr. ASHBRIDGE. Yes, sir.

Mr. THOMAS. Travel and transportation is $120,000 for this year and last year. That is up about $32,000 over 1962. Why that much money for travel?

Mr. ASHBRIDGE. We spent $64,000 so far in the first half of this fiscal year. We have a larger program.

TOTAL CURRENT PROJECTS

Mr. THOMAS. How many projects are you working on now?
Mr. ASHBRIDGE. We have over 100 projects.
Mr. THOMAS. Over and under $300,000, both programs?
Mr. ASHBRIDGE. We have over a hundred projects in operation.
Mr. THOMAS. How many are over $300,000 and how many under $300,000?
Mr. ASHBRIDGE. About half and half.

EQUIPMENT

Mr. THOMAS. Gentlemen, look at this equipment. What is this equipment item? Where is that broken down? It is up $1,818,000.
Mr. ASHBRIDGE. That is an addition over last year's amount. This is equipment that goes into the hospitals, initial portable equipment for some projects and fixed equipment that is purchased by the VA and placed in the hospitals under the construction contract.
Mr. THOMAS. What is the nature of it?
Mr. ASHBRIDGE. Laboratory benches, all sorts of built-in equipment, sterilizers, X-ray equipment, et cetera.
Mr. THOMAS. What part of the portable equipment does this appropriation bear?
Mr. ASHBRIDGE. In this table of obligations there is money listed from previous years for initial portable equipment, such as at Oteen, where we have $229,000. That is an old project that started several years ago.
Mr. THOMAS. You made some change in your initial portable equipment. Tell us about it.
Mr. ASHBRIDGE. It is all covered by Medical Care except for projects funded by earlier appropriations.
Mr. THOMAS. Listen to this. He has changed his program. It is now charged under medicine rather than under construction?
Mr. ASHBRIDGE. That is correct. It used to be that we included the initial portable equipment in the construction appropriation.
Mr. THOMAS. How much are you asking for that equipment?
Mr. WISE. $1,540,000.
Mr. THOMAS. This covers all of them?
Mr. WISE. Yes, sir.
Mr. THOMAS. What is the nature of the portable equipment?
Mr. WISE. New beds, desks, typewriters, medical equipment.
Mr. THOMAS. Have you already bought them?
Mr. WISE. Not the 1964 yet.
Mr. THOMAS. Are they in storage in California? You buy them 3 years before you need them and pay rent to store them. How much do you have in inventory now in the big warehouse in Wilmington?
How many mattresses and beds do you have? One time we were out there and you had equipment stored for 3 years waiting to build a hospital in which to use it. Have you been doing that recently?
Mr. WISE. No, sir. We do not do that now.
Mr. THOMAS. What did the GAO say about it?
Mr. WISE. They never commented on that.

UNOBLIGATED CONSTRUCTION BALANCES

Mr. GLEASON. Mr. Chairman, I could refer to 26–17, on the unobligated balances brought forward.

Mr. THOMAS. I thought you and Mr. Boland decided that a while ago.

Mr. BOLAND. He has a fine table on 26–17. We ought to get in on the qualitative balance.

Mr. GLEASON. So by the end of 1964, estimated unobligated balance will be down to $31 million and by the end of 1965 I am confident it will be eliminated almost entirely.

Mr. THOMAS. This table is the one we have been working on, 26–17. You show an increase here of $4 million.

Mr. MONK. In the appropriation.

Mr. THOMAS. Yes. You show at the end of 1964 the figure of $31.5 million unobligated.

Mr. GLEASON. Yes, sir.

Mr. THOMAS. Is it necessary you carry that over 18 months?

Mr. DRIVER. It won't be 18 months.

Mr. GLEASON. It would not be, sir. For example, at the end of this year if I might mention, we are obligating in the fiscal year 1963, $98 billion; in 1964 we are going to obligate $95,776,000, with the $81 million that we hope that you will appropriate for us, which will reduce our unobligated balance to $31.5 million and by the following year it will almost be gone.

Mr. THOMAS. May we request a change in your budget next year where it will be less burdensome on you and more understandable to the committee? Give us your new projects, what they are going to cost, those in process, over and under $300,000, what appropriated funds you have, what your contract cost is, and show us on each project what your overrun is or your unobligated balance. We can see it clearly then.

Mr. JONAS. Mr. Chairman, will you yield?

Mr. THOMAS. Yes.

PROJECTS COMPOSING UNOBLIGATED BALANCES

Mr. JONAS. I would like to have at this point in the record a table showing the projects represented by these current unobligated balances and the projects you expect to have unobligated for at the end of 1964.

Mr. ASHBRIDGE. Sir, I have the estimated unobligated balances for 1962, 1963, and 1964 broken down, also estimated obligations for 1963 and 1964 in detail.

Mr. JONAS. Give it to the reporter. Is it by project?

Mr. ASHBRIDGE. Yes, sir.

Mr. JONAS. With the chairman's permission, I would like to have that in the record.

CONSTRUCTION FINANCING

Mr. SCHWEICKART. With regard to the unobligated amount for each construction contract there has to be a reserve to take care of contingencies during construction, whether they be for foundation conditions or other conditions that occur and which require additional expenditures beyond the contract price.

Mr. THOMAS. When you are given the full sum of what you are supposed to spend on the projects, you have all you are entitled to.

Mr. GLEASON. If I might add something here. We sometimes run into unforeseen things that change the costs.

Mr. THOMAS. Did you let cost-plus contracts or do you have turnkey projects, Mr. Administrator?

Mr. ASHBRIDGE. No, sir, sometimes a lump-sum contract and then something happens on the footings——

Mr. THOMAS. What do you mean a lump-sum contract?

Mr. ASHBRIDGE. Call it a turnkey contract, if you like.

Mr. THOMAS. Based upon certain plans and specifications?

Mr. ASHBRIDGE. Yes, sir.

Mr. THOMAS. That is too bad for him if he missed his estimates.

Mr. GLEASON. Not quite, Mr. Chairman.

Mr. THOMAS. It is a pinpointed contract.

Mr. SCHWEICKART. Changed conditions, Mr. Thomas, are the basis for changes in the contract price and in our active contracts——

Mr. THOMAS. You mean to say that you let a contract for a building, you know you have to have certain foundations and you do not have the contractor bore in order that he knows what he is bidding on?

Mr. GLEASON. They do that

Mr. ASHBRIDGE. Borings are made but the soil tests indicate that the bearing capacity of the soil is not as good as the architect believed it would be from their interpretations of the borings.

Mr. THOMAS. We made a mistake. We have to pay for it.

Mr. ASHBRIDGE. We do.

Mr. SCHWEICKART. We carry a contingency item that will range around 3 percent on major projects. On alterations contingencies will be higher because of what you encounter when you begin to break into the walls, so part of this $31 million we are talking about is the reserve that has to be available to keep these contracts moving. Otherwise, you get into delays in construction and are faced with claims by the contractor.

CONSTRUCTION CONTRACTS

Mr. THOMAS. It looks to me you could protect yourself on 99 percent of your contingencies by good hard and fast contracting.

Mr. SCHWEICKART. Another factor is that these conditions such as the Administrator mentioned are not always resolved immediately with respect to the amount of money involved so sometimes you have an unsatisfied account on a major construction contract.

Mr. THOMAS. If you write the wrong contract you will expose yourself.

Mr. SCHWEICKART. It is a standard form contract.

Mr. ASHBRIDGE. The GSA issues contract forms 23 and 23–A which we use, sir.

Mr. THOMAS. When you get a work order change that changes it, too.

Mr. ASHBRIDGE. Yes, sir.

Mr. THOMAS. What usually produces a work order change?

Mr. ASHBRIDGE. Changed conditions.

Mr. THOMAS. Not a change in plans and specifications?

Mr. ASHBRIDGE. Sometimes we do that.

Mr. THOMAS. That is chargeable then to the administration.

Mr. GLEASON. That is right.

Mr. THOMAS. Your plans and specifications enter into it. You have to pay for it.

DEDUCTION OF UNOBLIGATED BALANCE

Let us summarize this now: You do not think you have too much money. At the end of this fiscal year you are going to obligate how much of your present $136 million?

Mr. GLEASON. 1963, sir?

Mr. THOMAS. Yes, sir. You have 4½ months to go.

Mr. GLEASON. We will have $46 million left unobligated at the end of fiscal year 1963 and at the end of fiscal year 1964 that will be reduced to $31 million.

Mr. THOMAS. With the work you have laid out, we think your figures are a little high. Why carry $141 million?

Mr. GLEASON. We are trying to catch up with this construction. For example, in fiscal year 1963, although we only got $77 million last year from the committee and the Congress, we are obligating $98 million in this present fiscal year.

Mr. THOMAS. At the end of fiscal year 1963 you will have $46 million unobligated. How many approved projects do you have to obligate that $46 million?

Mr. ASHBRIDGE. That is shown in the material which I have given you here, sir, to be inserted.

Mr. THOMAS. Is that what you requested?

Mr. JONAS. Yes.

Mr. THOMAS. What do they total? How many are there?

Mr. ASHBRIDGE. Unobligated at the end of 1963 we have funds for 17 major projects. We have money for 17 new and replacement hospitals that is unobligated. Some of these are complete, some under construction and some in early stages of development.

Mr. THOMAS. Is that all or over or under $300,000?

Mr. ASHBRIDGE. These are all over $300,000. Some of this is on the Washington Hospital, Brecksville, and so forth. Some of this is on projects already started and for which we have money carried over for contingencies. Some is for jobs that are physically complete but not financially closed out.

Mr. THOMAS. Could you get by with $50 million to carry through your 1963 programs?

Mr. GLEASON. No, sir.

Mr. THOMAS. What is the least you can use?

Mr. GLEASON. We have an entry here of $75 million.

Mr. THOMAS. You will reduce that figure by at least $15 million.

PROCESSING TIME FOR CONSTRUCTION PROJECTS

Mr. GLEASON. Yes, sir, Mr. Chairman, but I would like to try to impress upon you how long it takes to get a hospital from the time it passes through Mr. Ashbridge's shop until it actually finishes. It is approximately 5 years. We have to have some basis upon which we can plan.

Mr. THOMAS. What does Mr. Ashbridge's program 9000 do? His 9000 program is going to follow the construction crew. What does this 1700 program do that takes 5 years? It is not going to take a contract for five years. If it did it would be the equivalent of the office building over here.

Mr. GLEASON. The Bureau of the Budget goes over it. It takes anywhere from 6 months to a year for their people to approve it.

Mr. THOMAS. That is the 1700 program crowd?

Mr. ASHBRIDGE. It is before that.

Mr. THOMAS. Your job in 1700 is to prepare it for the Bureau of the Budget?

Mr. ASHBRIDGE. Only a part of it. The lion's share of that is done by the Department of Medicine and Surgery with their Medical Facilities and Requirements people.

Mr. THOMAS. How long does it take you to carry on after D.M. & S.?

Mr. ASHBRIDGE. Once we get it we can prepare the preliminary plans in 6 to 8 months. It normally takes about a year for the

architect-engineer to do his working drawings and specifications and from there on about 2½ years.

Mr. THOMAS. That is 18 months.

Mr. ASHBRIDGE. And about 2½ years for construction.

Mr. SCHWEICKART. That is for a new hospital.

Mr. THOMAS. That is 4 years, not 5 years.

Mr. GLEASON. One thing that was forgotten, this is after the Bureau of the Budget gives us the green light on it, it might take us almost 6 months from the approval of the Bureau.

Mr. THOMAS. You do not need any money. All you need is 1700 money for 18 months.

Mr. GLEASON. I am afraid I cannot agree.

Mr. THOMAS. 1700 money is office work, plans, getting the project ready?

Mr. SCHWEICKART. Not the working drawings.

Mr. THOMAS. The Department of Medicine and Surgery is taking its costs out of M. & S.

Mr. SCHWEICKART. Mr. Thomas, the working drawings are paid for out of the 9000 account, working drawings and specifications.

Mr. THOMAS. There is no argument about that.

Mr. SCHWEICKART. One other point——

Mr. THOMAS. What has that to do with it?

Mr. SCHWEICKART. You were saying that the 1700 money is all we need for a year and a half. The year and a half Mr. Ashbridge was referring to was for working plans and specifications.

Mr. THOMAS. They do not draw the plans?

Mr. SCHWEICKART. Yes. We draw the plans or have an architect-engineer do them for us.

Mr. THOMAS. You give 6 percent to an architect. You do not draw the plans.

Mr. ASHBRIDGE. We prepare the preliminary plans with the 1700 money. The architect-engineer prepares the plans and specifications on which the job is bid and built with the 9000 money.

Mr. THOMAS. We all agree. What is wrong with what I said?

Mr. ASHBRIDGE. Nothing, sir.

Mr. THOMAS. Your 1700 money is appropriated in salaries and expenses. It is not under construction money. You do not need any construction money for 18 months.

Mr. EVINS. You would like to have money in reserve in the bank, but if you ran out how long would it take you to come up with a deficiency?

Mr. GLEASON. This is a difficult thing to answer. If we ran out in August we might be in trouble until the following March or April until we could get the money.

Mr. SCHWEICKART. Mr. Thomas, one thing I think we are overlooking is that we have a staff of people who are on the C. of H. & D.F. payroll who prepare working drawings and specifications or review the work of the architect-engineer contractor.

Mr. THOMAS. Where are they paid from?

Mr. SCHWEICKART. The 9000 account, C. of H. & D.F. account.

Mr. THOMAS. How many of those do you have?

Mr. SCHWEICKART. 260 approximately. That is the bigger part of our organization. All of our resident engineers out on the sites are on the 9000 account. One thing that is important——

Mr. THOMAS. That is the first construction money you have any need for, then.

Mr. SCHWEICKART. For the planning, but we have to have money in the bank before we can ask a contractor to prepare bids.

Mr. THOMAS. Do you have to get Budget Bureau approval before you draw those plans?

Mr. SCHWEICKART. That is correct.

Mr. THOMAS. You do not need that money until you get Budget Bureau approval and the time spent by Dr. Middleton's shop and the time spent by your shop, up until that time, is all appropriated funds from different accounts. It has nothing to do with construction. It is still 18 months any way you look at it.

Mr. GLEASON. We are liable to get back to problems that the VA has had in the past whereas right now the Bureau of the Budget has given us permission to include in our budget for construction and modernization money up as high as $85 million, so that over a 15-year period we will be able to modernize and construct new hospitals or replace them. We have to have the authority from the Bureau of the Budget and also from you in order to do this over a period of 15 years. Otherwise, we will get back 1 year where we are asking you for $17 million, the next year we might be asking for $130 million.

Mr. THOMAS. What is wrong with that?

Mr. GLEASON. This does not give us a very sound basis to plan because we do not always know, Mr. Chairman, whether you gentlemen will be the same members of the committee, you know.

Mr. THOMAS. Now you are getting honest. You are afraid the Congress will change its mind from year to year.

Gentlemen, this has been a pleasure for all of us. We have enjoyed working with you.

Mr. JONAS. If I may ask one question before you close up.

Mr. THOMAS. Surely.

REPLACEMENT HOSPITAL IN PUERTO RICO

Mr. JONAS. Is the Puerto Rican hospital the only oversea construction in the program?

Mr. GLEASON. Yes, sir.

Mr. JONAS. What is the veteran population in Puerto Rico?

Mr. GLEASON. I do not know.

Does anyone here have that? We have about 800 veterans in those various islands.

Dr. MIDDLETON. There are 810 contract hospital beds.

Mr. JONAS. Are they occupied?

Mr. GLEASON. Yes, sir; they are occupied. Otherwise, we would not be paying them.

Mr. THOMAS. Why don't you give Mr. Jonas that figure?

Mr. JONAS. You have 90 percent capacity in your own hospital.

Mr. DRIVER. 114,000.

Mr. JONAS. Veterans?

Mr. DRIVER. Yes, sir.

Mr. JONAS. The table shows your occupancy rate in your own hospital is only 90 percent.

Mr. GLEASON. We have a big contract hospital load in addition to our own Puerto Rican hospital. One reason why we decided to put the Puerto Rican hospital ahead of schedule planning, and that was because the Air Force, the Navy, would like to have some of these beds available so that they themselves won't have to build another hospital. They would like to be able to use our hospital in Puerto Rico such as we use the Army Tripler Hospital in Hawaii. We do not have a hospital of our own in Hawaii and we have so many beds allocated by Tripler for use of veterans.

Mr. JONAS. If it weren't for the Army and Navy, you would not need this big hospital in Puerto Rico?

Mr. GLEASON. This is probably true.

Mr. WYMAN. Why isn't the hospital shown on the projections for the next 2 years at a 100 percent instead of 92 percent of occupancy, the 200 bed hospital that you have there now?

Mr. GLEASON. It is pretty hard, sir, to have a hospital 100 percent full. As I mentioned earlier in our proceedings there are always beds that are going to be not used, either because of modernization, painting, redecorating, putting new tiles on floors, et cetera, so that at any one given time 100 percent occupancy is almost impossible; 90 to 92 percent occupancy is far higher than any civilian hospital in the United States.

Mr. JONAS. That is 20 beds vacant. That strikes me as being a pretty high vacancy rate if you are going to spend $30,000 a bed.

Mr. THOMAS. He is not going to spend that.

Gentlemen, we thank you very much. We have enjoyed being with you.

Mr. THOMAS. Gentlemen, will the subcommittee please come to order.

We have with us this morning the General Services Administration. It is a pleasure to welcome the Administrator and his distinguished staff. We think you have a great organization, Mr. Administrator. I do not have to tell the people in attendance that the committee feels as close to this agency as any agency we have the privilege of working with.

We welcome you, Mr. Administrator.

Mr. Turpin, we have looked over your budget. It is a work of art. How you came up with some of these figures is amazing. You must have spent days and weeks. We want to commend you and, as a matter of fact, we will give you an A-plus.

How much unobligated back-door spending do you have in your fund now? I do not think Brother Turpin was good enough to tell us that in his justifications. Be prepared to give us that figure.

Mr. TURPIN. Yes, sir.

GENERAL STATEMENT

Mr. THOMAS. Do you have a statement for us, Mr. Administrator?

Mr. BOUTIN. Yes, I do, Mr. Chairman.

Mr. THOMAS. We are certainly glad to have you with us, Mr. Boutin. We have high regard for the Administration, for you, and your staff. You may talk as long as you like.

Mr. BOUTIN. Mr. Chairman, if I might, what I would like to do is submit the statement for the record and speak to the statement and tell you a little bit of what we have been trying to do. Is that satisfactory?

Mr. THOMAS. That is the way we like it.

(The prepared statement follows:)

GENERAL STATEMENT OF THE ADMINISTRATOR

Mr. Chairman and members of the committee, it is a pleasure to appear before your committee to discuss the 1964 request for appropriations and the status

of our various programs. During the past year many actions were taken to achieve the objectives envisioned by the Congress when it created GSA, and the groundwork is well established for significant additional progress. I would like to highlight for the committee a few of the more significant items.

PUBLIC BUILDINGS SERVICE PROGRAMS

GSA is currently working with Federal agencies to achieve improvements in space management and utilization within the framework of Executive Order 11035, issued by the President on July 9, 1962. In addition, we have developed, and are implementing, a system utilizing our computers to provided needed data to management on a timely basis with respect to the current assignment and use of space in each of some 10,000 locations in Government owned and leased buildings managed by GSA. By perfecting and utilizing these new management tools, we expect to accomplish significant improvements in our space-management program, including ultimate savings in the magnitude of $3 to $5 million annually from improved space utilization when the program is fully developed.

Since enactment of the Public Buildings Act of 1959, we have developed a program calling for construction of 319 projects with an estimated improvement cost of $1,422.8 million, of which $689.5 million has already been appropriated, $172 million is requested for fiscal year 1964, and the balance of $561.3 million is to be requested after 1964. By the end of fiscal year 1962, 94 projects were completed or under contract and an additional 83 projects will be placed under contract by the end of fiscal year 1964.

I would like to emphasize that the selection of projects for construction is accomplished after very careful evaluation, giving full weight to geographical distribution and urgency of need in accordance with provisions of the Public Buildings Act of 1959.

The completion and occupancy of new Federal buildings made possible under the foregoing construction program enables us to progressively carry out a policy of meeting the requirements for new or badly needed replacement space in Government owned rather than leased space. As an indication of this trend, between fiscal years 1952 and 1964 total space financed by the operating expenses, PBS appropriation, will have increase by 19.6 million square feet (23 percent) while our leased space decreased by 2.7 million square feet (9 percent). The objective of housing Federal activities in Government owned space is being aggressively pursued. However, the present rate of financing new construction makes it necessary to continue leasing space to accommodate some of the more urgent needs of agencies we serve.

Continuous efforts have been made to effect better manpower utilization in building operations. Since 1956, our total space workload has grown from 100.7 million net square feet to 141.6 million net square feet in 1962, or a 41 percent increase. During the same period the related employment in the buildings management fund has increased only 2.5 percent. As a result of improved manpower utilization and increased productivity, we estimate that by the end of fiscal year 1964 there will be 1 building employee for each 7,221 square feet of space, compared with 5,201 square feet in 1956.

Due to the rate of physical obsolescence of our Federal buildings and budgetary limitations, we have been unable to reduce the backlog of repair and improvement work. The $10 million increase requested in the repair and improvement appropriation for 1964 will permit a small start toward reducing the backlog of repair work which totaled an estimated $413 million at the beginning of fiscal year 1963.

FEDERAL SUPPLY SERVICE PROGRAMS

The services provided by our Federal Supply Service have gained wide acceptance throughout the Federal community with the result that alltime highs have been reached in the procurement, sale, and inspection of common-use items of supply. During fiscal year 1964, our depot sales are estimated to reach $364 million, an increase of 31 percent over fiscal year 1963. Similarly, purchases of all types of supplies and equipment are estimated at $1,480 million, an increase of 12 percent.

To assist in the gold-flow problem, we are working closely with the military agencies in their efforts to channel procurement to U.S. sources. We have established a customer sales center at Sembach Air Force Base in Germany to provide quick support on the many items in the GSA supply system produced

in the United States. We also arranged for supporting Army oversea installations with many common-use items and for restricting awards for household and quarters furniture for Far East Air Force bases to domestic sources. These actions will contribute substantially to the U.S. balance of payments.

A new approach to the cataloging of civil agency items has been initiated whereby GSA will restrict its efforts to cataloging only new items being procured for stock and existing items which are being restocked. This approach will preclude the cataloging of items in civil agencies supply systems which become obsolete and are being deleted at the rate of about 30,000 per year. As a part of our continuing joint efforts with the Department of Defense in coordinating supply activities, a study of 86,000 supply items resulted in the elimination of 25,000 from the supply system because they were nonstandard or duplicate items. This item reduction program is producing substantial benefits to the Government.

Our firm policy is to use Government-owned warehouse space wherever it is economically feasible. Of the 8.7 million square feet in use during 1962, 22 percent was leased and it is our intent to convert this to Government-owned space as rapidly as possible.

We installed a new automatic data processing system on July 1, 1962, in order to accommodate the change in supply requisitioning and issue system (MILSTRIP) adopted by DOD. In addition to permitting efficient service to our customers, the ADP system is providing many benefits in inventory management, transportation routing, and bill of lading preparation.

Sales of goods and services through our general supply fund in 1961 totaled $347 million, as compared with $649 million estimated for 1964. This rapid expansion in sales volume cannot be handled without adequate additional working capital to pay vendors timely and finance inventories, operating equipment, and receivables. Our justification for the appropriation of additional capital reflects improvement in our receivable position. Outstanding bills are now considered delinquent if payment is not received within 30 days.

UTILIZATION AND DISPOSAL SERVICE PROGRAMS

One of the primary objectives of GSA is to attain maximum utilization of Federal property within the Government. During the year we streamlined our procedures to improve the screening of excess property to determine its usability and to increase utilization by Federal agencies. Further emphasis is being placed on the utilization of excess inventories held by Government contractors. During fiscal year 1962, utilization transfers of real and personal property totaled $460 million at acquisition cost and this is expected to increase to $575 million in fiscal year 1964.

As a result of an intensive program to dispose of surplus property, sales price of real and personal property totaled $85 million in 1962, and our target for 1964 is $114 million.

In our disposal of real property, we have emphasized the sale of surplus plants to "user-buyers" to enhance employment in labor-surplus areas. In the past calendar year, 26 such disposals were made and, when the plants are converted to commercial production it is expected they will employ some 27,000 people with an annual payroll of about $189 million. This will do much to offset the adverse economic impact resulting from Government closure of the installations. During 1962 the property rehabilitation program was transferred from the Federal Supply Service to the Utilization and Disposal Service to obtain better coordination of our property utilization efforts. We are placing considerable emphasis on the use of rehabilitated property so as to avoid new procurement of similar items.

TRANSPORTATION AND COMMUNICATIONS SERVICE PROGRAMS

Establishment of the civil agency telecommunications system is making rapid progress. The system is designed to connect over 8,000 Government offices in more than 1,700 cities and towns throughout the United States and its possessions. Direct dialing through strategically located switching centers and increased capability to handle the rapidly rising communications volumes are being made possible through this system and are expected to produce substantial savings to the Government.

By October 31, 1962, switchboard consolidations were made in 31 metropolitan areas. This eliminated 218 positions and resulted in annual recurring savings

of $340,000. We are studying similar consolidations at an additional 300 major cities.

On February 15, 1963, the first phase of the nationwide circuit switching system was accomplished with the interconnection of 42 major metropolitan areas. This will be extended to an additional 308 cities and towns by the end of fiscal year 1964. Centralized procurement of circuits for civil agencies is well underway and, when fully accomplished, is expected to produce approximately $7 million in annual savings of the estimated $30 million now spent for circuits. Negotiations are now underway with the Department of Defense for a joint effort in this area to obtain further economies.

The Federal Telecommunications System will eventually be the most efficient single civilian agency communications network in the country with message rates lower than any other source available to Federal agencies.

Assistance to other agencies in determining proper rates, routing and classification for freight shipments resulted in transportation savings of $16.9 million in 1962.

During 1962, the motor pool activity was transferred to the Transportation and Communications Service from the Federal Supply Service to achieve better coordination of transportation activities. At the beginning of this fiscal year, we had 66 motor pools in operation. By the end of fiscal year 1964, we will have 75 pools operating. During fiscal year 1962, we had 24,359 vehicles in our motor pool which traveled 249 million miles at an average cost of $.075 per mile. Savings to the Government continue to accrue from the consolidation of agency vehicles into GSA motor pools and further possibilities for improvement are being investigated.

NATIONAL ARCHIVES AND RECORDS SERVICE PROGRAMS

Workload of the regional records centers is continuing to increase. Records administered by our 16 centers reached an all-time high of 6.6 million cubic feet on June 30, 1962. During the year over 5 million inquiries were received at the centers from Federal agencies, veterans, scholars, and the general public. This activity which releases significant amounts of space and equipment for reuse by Government agencies has shown substantial increases in work efficiency over the past decade.

Since we took over the civilian personnel records centers in 1951, we have reduced employment from 305 to 216—29 percent. By the end of 1963, employment at the military personnel records center will be reduced to 600 as compared with 659 in 1961.

By the end of this fiscal year, 12 of our 16 records centers will be in Government-owned space adequate for their long-run operation. The remaining four (Washington, San Francisco, Boston, and Chicago) will eventually require construction of new space. This budget contains a request for funds for construction of the center in Washington which is urgently needed.

NARS will initiate a formal audit of agency records management activities in 1964. At the same time the program of informal audits and assistance to agencies will be continued. Major assistance in paperwork problems will be given to some 90 Federal agencies during the current fiscal year.

During calendar year 1962, we dedicated the Hoover and Eisenhower Libraries, bringing the total to four Presidential libraries now in operation.

DEFENSE MATERIALS SERVICE PROGRAMS

In our defense materials service program, a concerted effort has been made to dispose of excess strategic materials. In calendar year 1962 congressional approval was obtained for 15 new disposal plans for commodities costing $180 million, and 12 additional plans for disposal of materials costing $145 million were developed and are in process of clearance with interested agencies or pending approval by the Congress. Each disposal plan is published in advance of sales action, and all sales are made with due regard to possible impact on the current market.

We have been successful in developing programs for the use of excess materials by other Government agencies to meet their requirements, such as the Bureau of the Mint, Department of Defense, and the Agency for International Development (AID).

We have also been working with the Bureau of the Budget and the Office of Emergency Planning in developing new legislation which will improve stockpile management and enhance disposal possibilities.

During fiscal year 1962 sales commitments covered materials acquired at a cost of $116 million with an estimated return of $87.5 million. Our program for 1964 contemplates sales of materials with an estimated return of $158 million.

The lead and zinc stabilization program is well underway. By December 31, 1962, 103 applications had been received from small domestic producers and payments of $654,000 had been made.

During fiscal year 1962, we were successful in renegotiating contracts which resulted in reducing the Government's obligations by $14.1 million. We are expecting deliveries under only two remaining DPA contracts with an estimated expenditure of $31.4 million.

We also have had a continuing program to maintain our stockpile inventories at the least cost consistent with security considerations. In line with this principle, we store our materials in Government-owned space to the maximum extent possible. During the past 2 calendar years we have gotten out of 6 commercial warehouses and have transferred responsibility for 35 commercial cotton warehouses to the Department of Agriculture.

AGENCYWIDE COMMENTS

Staff specialization has enabled us to render valuable assistance to other agencies through interagency conferences, formal training, and surveys of agency operations. For example, greater productivity, shorter processing time, and reduction or elimination of backlogs resulted from 42 GSA surveys of records management practices. Five interagency motor equipment management conferences (with industry participation) were held to explore ways and means of reducing operating costs and improving safety. Surveys of other agencies' supply management practices resulted in recommendations which will improve their operations.

It is our conviction that properly trained employees will contribute substantially to improved manpower utilization, increased productivity, and lower unit costs. Accordingly, we recently established the GSA institute which will make available to personnel of other agencies, training in those fields for which GSA has Government-wide responsibility, such as procurement, contracting, supply operations, records management, space management, buildings operations, and traffic management. We have had an excellent response from personnel who have taken the courses offered thus far through the institute. Our budget provides for centralized management and operation of the institute by a staff of four people. All other costs are recovered from the agencies whose employees are trained at the institute.

A significant step was taken to improve our centralized organization which provides administrative, financial, legal, and data processing support to all operating programs. We created the Office of Finance and Administration to replace the former Office of Comptroller and Office of Administration. Under this new organization, increased emphasis is being placed on short- and long-range planning, manpower utilization, and funding requirements.

Our Manpower Utilization Division has embarked on a program to review, improve, or establish standards for performance, employee production and unit costs of operations. The GSA planning cycle calls for 5-year advance planning with a semiannual review and the reporting of progress against approved program levels, standards of performance, and unit cost targets. I am confident that these steps will make a significant contribution to better service and more effective management of our resources.

THE 1964 APPROPRIATION REQUESTS

Our 1964 budget calls for new obligational authority of $660.3 million, a net increase of $38.2 million over comparable amounts for fiscal year 1963. The committee realizes, of course, that GSA's workload is not self-generated. Rather, its services bear a direct relationship to the increasing demands placed upon it by other agencies of Government. The funds requested represent the minimum requirements to handle our expanding workload and to continue to provide an acceptable level of service to customer agencies.

We will be happy to answer any questions you may have at this point or proceed to the detailed discussion of the estimates contained in our justifications.

REORGANIZATION

Mr. BOUTIN. I would like to speak informally about what we are trying to do. When the chairman said we have been working down at GSA, I can say amen to that because everyone has just been literally working their heart out and I think we have made some real gains, Mr. Chairman and members of the committee.

One of the real problems we have—I don't think this is peculiar to GSA; it is the same in business; it is the same in other agencies and departments—is trying to provide an absolute equation through our own organization of bringing together personnel requirements and funding requirements, and to get a good fix on this we have done a number of things. I think the most significant has been to abolish the Comptroller's Office and the Office of Administration and bring them together in one shop under Bill Turpin so that we have financial management, management services, and manpower requirements all in one office.

Mr. THOMAS. Is that the reason you went up $1.8 million this year?

Mr. BOUTIN. No; I think the operation of the agency will show some really economical benefits from this, Mr. Chairman.

We are putting together standards for all of the people employed by GSA where we can properly adopt standards to measure productivity, measure job performance, evaluate the individual as to his relationship to our goals and also to give us a real fix on how many people we need.

We have brought together the whole agency and regard it as a single manpower pool.

Now, besides standards, we have improved our training substantially. We have also adopted a plan for a new GSA institute not only for the training of our own people but on a reimbursable basis providing training for people of other agencies in things like records management, transportation management, and the whole gamut for which GSA has responsibility and the know-how. We are developing this to be available to other agencies so that they will have the benefit in their areas of responsibility as well as the benefit to GSA itself.

In addition to the foregoing we have made some significant changes in some of our personnel.

I think that Joe Moody in his appointment as General Counsel is going to be a great help to the agency. Joe has been in Operations. As well as being a fine lawyer, he understands things from an operating point of view. He has seen it from both sides of the table and is very helpful to our Commissioners and to me as Administrator in trying to make the law work for us rather than act as a barrier against us. I think this has been a significant change.

Paul Barron, as Joe's replacement, is Commissioner of UDS. He brings a lot of experience with him, both with GSA and with the National Science Foundation. I am convinced he is going to do a really good job.

Bob Daly is our new Commissioner of PBS. He has been in the regions. I think this is very important. Colonel Wallace came from

the same background. He knows the regional problems, he knows the people in the regions and knows the everyday responsibilities.

Mr. THOMAS. From what region did he come?

Mr. BOUTIN. Region 3, which includes the District of Columbia, Virginia, West Virginia, and Maryland.

ASSIGNMENT AND UTILIZATION OF SPACE

Another thing that we have been doing that I hope will please this committee as it pleases us is the fact that we have taken a hard line relative to assignment and utilization of space. This is not a popular thing with the agencies we serve but we are trying to make it serve as an important tool toward further efficiency in government.

Mr. THOMAS. What is the net figure for the space you took over from DOD this year? You set out 113 million square feet in 1963 and 119 million in 1964. Are we to assume you have a net 5 million square feet or 6.4 million square feet?

Mr. BOUTIN. This would be overall, Mr. Chairman.

Mr. DALY. You wanted the overall figure, sir?

Mr. BOUTIN. The overall figure of increased space we have taken over this year.

Mr. DALY. 5,886,000 square feet under O.E., PBS.

Mr. BOUTIN. This is additional space, Mr. Chairman.

Mr. THOMAS. Ninety percent of it from DOD?

Mr. BOUTIN. There were two properties, Mitchel Field, N.Y., and the Naval Weapons Plant in the District of Columbia that we took over from DOD and we have already converted a lot of this space at the Naval Weapons Plant for use of other agencies of the Government. We really haven't started at Mitchel Field. We took over some of the old hangar buildings and some of the barracks buildings.

Mr. THOMAS. You set up in your fiscal year 1964 budget about 6 million additional square feet that you are taking over at a cost of $12.6 million. We will go into that in detail later but that seems like a high figure. You might explain that later.

Proceed.

EXECUTIVE ORDER 11035

Mr. BOUTIN. We have now to back us the strength of the Presidential order that was issued last July 9 giving to GSA the responsibility for assignment and reassignment of space and also the evaluation of requirements. Our goal is to cut down the average square feet utilization per person in the Government, so that we can point within a 5-year period to a net saving to the Government in excess of $5 million recurring annual savings.

Mr. THOMAS. I believe you said you would reduce that space per person. What was that exact figure?

Mr. BOUTIN. We are looking toward reducing the overall average square foot utilization of office space from 153 down to 150 immediately, with a goal to go down to 140 square feet per person. But I think we have to define what the space is. This includes all office type space, but excludes garage space, cafeteria space, hearing rooms, courtrooms, and so forth.

Mr. THOMAS. That was my point.

Mr. BOUTIN. That is a high figure.

Mr. THOMAS. I think your justifications show figures a little less than that. My thought was, does that figure actually mean much when you include hearings rooms, courtrooms, garages, cafeterias, and so forth?

Mr. BOUTIN. It really doesn't—you almost have to take each building—we have 10,000 locations we are responsible for, give or take a few. We are taking each of these buildings and prescribing the utilization within that building. This is the only meaningful way you can possibly do it. Otherwise you get all this other type space reflected in overall figures.

Mr. THOMAS. It doesn't make sense to take 100 employees on one floor and crowd them up and then waste three times as much space on the next floor with records, files, cafeterias, and so forth.

Mr. BOUTIN. That is why we are doing it on a building basis but hoping to bring down this average to show the kind of savings that I think is going to be very significant as we go along.

Mr. THOMAS. Your savings, to compare it to a golf game, might well be best accomplished on the first hole. If you are going to show any substantial saving it is going to be on that initial deal, that is the lease contract.

Mr. BOUTIN. On our Government-owned property this is very important. When we first occupy a building we must make sure the utilization is the maximum we can achieve without ruining the operational capability of the agency itself. We are getting good support here in Washington. I think one of the most significant in the last few days has been the order issued by the Administrator of the Veterans' Administration where he spelled out in an order to his people the responsibilities that GSA had, and stated it was urgent that they cooperate with us to the maximum extent to see that it is done.

We have had agreements with other agencies, occupancy agreements and occupancy guides, where we spell out what the utilization is to be within their agency, both in the field and in the District of Columbia.

Mr. THOMAS. The record ought to show at this point for the first time since the agency has been established that the Executive has given to the General Services Administration authority to say "Yes" or "No" in assignment of space. Is that true?

Mr. BOUTIN. That is correct, Mr. Chairman.

Mr. THOMAS. It should be said to the credit of the former administration they started the ball rolling by breaking the ice and issuing an order in that general direction, but about a year ago it was finally consummated, we will say, with an order that really meant something from the Executive.

On the basis of that order you do have authority now to control Government space under your jurisdiction.

Mr. BOUTIN. That is correct.

We actually go one step further than that, Mr. Chairman. We have under this order the same type responsibilities in planning for space and reporting such requirements to the President on utilization as the Civil Service Commission does on personnel and the Bureau of the Budget does on financing. The agencies now come to us and say, "We need so much additional space." We have a chance to evaluate it rather than give it to them without question.

SPACE MANAGEMENT JURISDICTION

Mr. THOMAS. In order that the record may be complete at this point, just what is the jurisdiction and what agencies are covered by the jurisdiction of the General Services Administration in the general service and management of space?

Mr. BOUTIN. All buildings we have direct responsibility for, some 104 million square feet where we operate and manage the space under direct appropriations to GSA. In addition to that around 60 million square feet more where we have assignment and reassignment responsibility.

One of the agencies excepted is DOD on military establishments. We have the responsibility, as I understand it, for DOD off military establishments. Mr. Turpin, I think, AEC is exempt from this responsibility, is it not?

Mr. TURPIN. Yes, sir; it is for research and production facilities.

Mr. BOUTIN. And outside of the District of Columbia NASA is not responsible to GSA, but in the District they are.

Mr. TURPIN. That is correct.

JURISDICTION OVER POSTAL SPACE

Mr. THOMAS. How about the Post Office Department?

Mr. BOUTIN. The Post Office Department does come under this responsibility so far as I know.

Mr. TURPIN. It comes under this responsibility except in those post-office buildings where they occupy more than 50 percent of the building. In those cases it remains under their control.

Mr. BOUTIN. But we can still have the authority to go in, in case of poor utilization, and require proper utilization of those buildings?

Mr. TURPIN. Of the space excess to their needs, where it is turned over to us for assignment, but I do not believe in the space actually occupied by the Post Office Department.

Mr. BOUTIN. Mr. Moody?

Mr. MOODY. That is right, Mr. Boutin.

Mr. THOMAS. For example, there is a big one in Chicago. What part of that building is used by the Post Office Department and what part is general office space? Do you have jurisdiction over that part of the building, the general office space?

Mr. BOUTIN. I think we have jurisdiction over the whole building don't we, Mr. Schmidt?

Mr. SCHMIDT. We don't manage the building but we do have the responsibility for assignment and reassignment of the nonpostal space. As far as the postal space is concerned, the Post Office Department reserves the right to assign and reassign that.

Mr. BOUTIN. They have an exception to our authority then.

Mr. SCHMIDT. Under Reorganization Plan 18 of 1950.

Mr. OSTERTAG. I understood the criteria to be 50 percent.

Mr. BOUTIN. Fifty percent or more of occupancy.

Mr. SCHMIDT. That criteria applies only to the management and operation of a building whether GSA manages and operates or the Post Office Department.

Mr. THOMAS. Even in the space the Post Office Department manages you have no jurisdiction whatsoever over that part of the building?

Mr. SCHMIDT. We interpret the plan to mean postal space in the buildings that were in existence at the time of Reorganization Plan 18, whether operated by GSA or Post Office.

Mr. THOMAS. When did that go into effect?

Mr. SCHMIDT. July 1, 1950.

Mr. THOMAS. Let's put it on a percentage basis. The best figure I could come up with—and it is purely a horseback guess—that of all the post office establishments in the United States, GSA doesn't have jurisdiction over 50 percent of it, if that much?

Mr. BOUTIN. Less than that I would say, Mr. Chairman, because of the many small locations.

Mr. THOMAS. Even in a big city post office building where the Post Office Department will occupy three or four floors, you have no jurisdiction over maintenance or operation of that portion of the building, do you?

Mr. BOUTIN. That is correct.

WORK DONE FOR POST OFFICE DEPARTMENT

Mr. THOMAS. Your justification intimates in one place that you are doing a lot of construction for the Post Office Department. Did the Post Office Department abandon its division for maintenance and construction of properties?

Mr. BOUTIN. They still have a good many people over there but we do work on a reimbursable basis for them. On rehabilitation, remodeling, some extension work, strictly on a reimbursable basis.

Mr. THOMAS. What part of the work do you do for them, even though it is on a reimbursable basis?

My point is you still have a duplicate setup in GSA and the Post Office Department. The question in which I am interested is, What part of their overall volume of work do you do on a reimbursable basis even though they have a construction unit over there?

Mr. SCHMIDT. I think it is around $35 million that we will be doing next year. This is modernization of postal space in post office buildings, including extensions to such buildings for postal purposes. As far as the nonpostal work is concerned, GSA does this with its funds. GSA does all the work for the Post Office Department in all federally owned buildings, all modernization, repair, and alterations.

Mr. THOMAS. You do it all?

Mr. SCHMIDT. That is right, sir. We act as their agents.

Mr. THOMAS. How much of a staff have they in that field of activity? Architectural work, construction, and so forth? Do they give you plans and specifications?

Mr. SCHMIDT. They give us sketch drawings based on their requirements and these we then assign to an architect and engineer to develop the working drawings and specifications.

Mr. BOUTIN. They set forth their original requirements, Mr. Chairman, and then they review the plans, diagrammatics, tentatives and finals, and so forth as they are developed to make sure this is what they want and then we go ahead with the contract. We select the

architect. We take it right through the planning and design stage right through completion of the job itself.

Mr. THOMAS. And you are sure you do it all for them?

Mr. SCHMIDT. The work that they do begins with the preparation of sketch drawings to show the requirements and then in the process of designing they do review the drawings at two or three stages.

Mr. THOMAS. The Post Office Department is building annually many, many buildings—not under lease purchase; that has been eliminated. But now they are building many, many small buildings purely for postal use even in the form of post offices themselves, the general post offices in many of the smaller cities of the country. They are going into the big cities and building what we call classified stations or substations.

Do you do that construction work for them?

Mr. BOUTIN. Most of this, Mr. Chairman, is on straight lease and we don't do anything on that at all. The only time we enter into it is when it is Government owned and its modernization or extension of an existing building or part of a new building.

Mr. THOMAS. What we don't understand is why you do part of their work and they do the remainder. They will go out and build a complete building. They do it lock, stock, and barrel.

Why is it they pass over to you a $50,000 alteration or enlargement job?

Mr. BOUTIN. I think the difference is whether it is leased or owned. If it is Government owned they come to us. Mr. Schmidt has testified that this we do 100 percent. But it is a small part of the total.

Mr. THOMAS. We understand the line of demarcation, where it exists, but why does it exist? If they are capable of building their own building lock, stock, and barrell, why shouldn't they have the capability of doing a much smaller job of modernization or extension of one of their properties?

Mr. BOUTIN. I think the reason is, Mr. Chairman, that they don't have a very large staff, as I understand it, on these lease projects. They go out and enter into a lease arrangement where the design is made by private funds, the actual work is done by private funds, and it is strictly on a long-term lease, or in some instances a shorter term lease basis.

Now, we can only do what they turn over to us and ask us to do, and this we are doing. They have never asked us to enter into this picture of leases that I know of at all. Is that correct?

Mr. SCHMIDT. That is correct.

We might make this point: The General Services Administration has always had the responsibility for the repair and improvement of Government-owned buildings, which includes all the Government-owned post offices. And the work that is done under the postal modernization fund are the improvements to the postal portion of the building but the basic repairs and improvements to the building are done by GSA under its repair and improvement appropriation.

Mr. EVINS. Even though there is no nonpostal services in the building?

Mr. SCHMIDT. That is right.

DECREASE IN LEASED SPACE

Mr. BOUTIN. A couple of other things will be of interest to the committee: We are getting out of leased space just as fast as we can. We are getting out of the leased space we have used heretofore, for Federal supply depots and in storage of strategic critical materials or DPA Act materials or supplemental stockpile materials. Within the next couple of years—providing that we come to the Congress next year and obtain authority to buy the Franconia facilities—we will be practically out of all leased facilities, both in the DMS area and the Federal supply area. This, I think, makes good sense. Where we are in Government-owned space it is proven to be cheaper and more economical in operation and certainly over the long pull, a lot cheaper as far as our costs are concerned.

The DMS area has been reorganized so it is now disposal oriented. We are ready, if new legislation is presented and passed by the Congress and approved by the President, to undertake a substantial disposal program of excess materials that are in long supply. This committee has spoken to this many times—where we will be able to undertake a——

Mr. THOMAS. I don't know about $9.4 million set up in this year's budget for things under construction in the District of Columbia area, and the purchase of the building in Franconia.

Mr. BOUTIN. That would be next year, Mr. Chairman, in 1965. That is when we have our option to purchase, between December 31, 1964, and June 30, 1966. It will cost $5,800,000 to purchase the facility, including land.

Mr. THOMAS. The justifications indicate new construction, but it is purchase of existing facilities?

Mr. BOUTIN. What we are asking for this year is funds to build a new records center, to replace what we have down in Alexandria, down at the old torpedo plant and in other scattered locations—to bring together under one roof a regional records center.

Mr. THOMAS. Is there enough land at Franconia to take care of the records center?

Mr. BOUTIN. No, Mr. Chairman. We are extremely short of space. We want to move out what we have because we need the space to handle our Federal supply operation. As it is, we have had to use part of the Bengies plant near Baltimore and we have had to open up an annex operation in Government-owned space down at Norfolk.

We are really crowded for space. We are moving toward complete use of Government-owned space all the way. I think this will have long-term benefits.

PROPERTY UTILIZATION

We have also made changes in our utilization and disposal activities so we are improving substantially utilization of real and personal property excess to a given agency's requirements. You will notice in the justifications we show a good increase in utilization and every bit of this is savings to the Government. It prevents the purchase of new items by utilizing these excesses generated to the tune of about $1 billion a year in acquisition costs for personal property alone.

We have been able to sell quite a number of the excess and surplus real properties. We have sold to user buyers and this has helped to offset the economic impact of the Government plants closing. There are going to be payrolls generated instead of some junk dealer coming in and taking the property and scrapping it. We have quite a number of user buyers and this is precisely our goal, to have more of them.

We have also been trying to improve our techniques on sale to increase the amount returned to the Treasury. We are anticipating in 1964 fiscal year that we will have $114 million in sales for real and personal property, which is a very substantial increase over what we have ever had since the formation of GSA.

FEDERAL SUPPLY SERVICE SALES

In the FSS area you will notice we point to an increase in store sales of 31 percent. This program is growing rapidly. Its acceptance by the other agencies, including the Department of Defense, is 100 percent better than it has ever been before. We are also taking a significant part in the flow of gold problem by supplying overseas from domestic purchases rather than having purchases made overseas with U.S. dollars. I think from our unit costs you will see we are making every effort possible to keep these just as low as we possibly can.

AUTOMATIC DATA PROCESSING

We have had changes in our ADP operations where finally we have standardized equipment. We had equipment before where there was no compatibility in machine language between one type and another. We have several program applications now on our computers in addition to the FSS program and are making good progress in taking full advantage of the potential offered by computers. In another 2 years we will be able to show some substantial increases in utilization and benefits to the program operations.

PRESIDENTIAL LIBRARIES

Finally, I think it would be well to point out that we this year have opened two additional Presidential libraries, the Hoover Library and the Eisenhower Library, both of which were dedicated last summer. This changes the Archives workload to a certain extent. We can see real benefits coming from the establishment of these libraries and the number of people who visit them each year and the number of scholars who are there doing research.

We know we have a long way to go at GSA before we can finally tell this committee or tell the Congress that we are doing everything that can be done to improve the business arm operation of the Federal Government. However, I think we are making headway. We are at it every single minute of every single day.

Mr. THOMAS. That is a very comprehensive statement and we appreciate it very much.

PAY ACT COSTS

I didn't find in the justifications the complete wrapup figure of what the Pay Act cost for 1963 and 1964. You set out at one place about

$7.4 million. I assumed from that it was for fiscal year 1964. What did the entire Pay Act cost you?

Mr. TURPIN. The entire Pay Act cost for 1963 was $4,554,645 of which $1,523,645 is being financed within funds we have, and there is a pending supplemental of $3,031,000.

Mr. THOMAS. That is for fiscal year 1963?

Mr. TURPIN. Yes, sir.

The total Pay Act cost for all programs in GSA for 1964 is $9,273,700.

Mr. THOMAS. What did the entire Pay Act cost then, about $13.8 million, for fiscal year 1963 and fiscal year 1964?

Mr. TURPIN. For the 2 years; yes, sir.

Mr. THOMAS. And you set out a figure of $7 million. That was for public buildings alone?

Mr. TURPIN. Sir, the $7.4 million is the cost in 1964 for those appropriations that are now before the committee for new obligation authority.

Mr. THOMAS. Is that agencywide or just under public buildings?

Mr. TURPIN. That is agencywide. All of our appropriations.

Mr. THOMAS. You will absorb $1.3 million in fiscal year 1963 out of a possible $4 million?

Mr. TURPIN. $1.5 million, sir.

Mr. THOMAS. Out of a possible $4 million?

Mr. TURPIN. Out of $4.5 million; yes, sir.

Mr. THOMAS. A pretty small cost.

Mr. TURPIN. We put the squeeze on to absorb as much as we can.

Mr. THOMAS. How much are you going to absorb of that $9 million for fiscal year 1964?

Mr. TURPIN. We are in effect absorbing an equivalent amount because the $3 million is all that is in our base for 1963.

Mr. THOMAS. I am talking about 1964 now. You set out a figure of $7.4 million. Now you say the pay act will cost you $9 million for 1964. I am asking how much of that $9 million will you absorb? Will you absorb the difference between $9 and $7.4 million?

Mr. TURPIN. Yes, sir, from total funds available to GSA.

Mr. OSTERTAG. Mr. Turpin, is the application of the pay increase as it applies to the General Services Administration generally approximately $9 million?

Mr. TURPIN. For 1964, yes, sir.

Mr. OSTERTAG. For the fiscal year?

Mr. TURPIN. Yes, sir.

Mr. OSTERTAG. In other words, the amount is not $7 million. The additional obligation is not $7 million but rather $9 million.

Mr. TURPIN. That is correct, sir.

Mr. THOMAS. Your justification is not clear, but I assume the difference between $7.4 million and your $9 million plus is Wage Board? Is your Wage Board included in that $9 million for 1964?

Mr. TURPIN. No, sir. That is just the pay act.

WAGE BOARD COSTS

Mr. THOMAS. What will the Wage Board cost you?

Mr. TURPIN. The Wage Board percentagewise has been running about 5 percent a year.

Mr. THOMAS. You have a supplemental pending for the Wage Board item?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. You have how many supplementals pending, seven or eight?

Mr. BOUTIN. Wage Board is $2.4 million in the supplemental.

Mr. TURPIN. We have pending in the supplemental seven items plus sort of an omnibus item for the pay act increases, which would be eight items in total. The Wage Board item in the supplemental is $2.4 million.

Mr. THOMAS. Gentlemen of the committee, I suggest it might be interesting to turn to these organization charts A and B.

Mr. BOUTIN. Mr. Chairman, I neglected to make one point. May I make it, please?

Mr. THOMAS. Surely.

FEDERAL TELECOMMUNICATIONS SYSTEM

Mr. BOUTIN. On one of the things we have been talking to this committee about for 2 years we can finally point to some real accomplishment. We implemented phase I of the Federal Telecommunications System on the 15th of this month, just 3 days ago, and we are in motion.

Mr. THOMAS. Good. I see you have an item set up for $10 million in the supplemental.

Mr. BOUTIN. For the revolving fund; yes, sir.

Mr. THOMAS. Gentlemen, look over this organization chart. I imagine the members have some general questions.

GROWTH OF GSA

Mr. OSTERTAG. Mr. Administrator, you and your organization, namely the General Services Administration, might be regarded as a big business within the Federal Government of the United States and in that connection your responsibilities are involved in many, many services, which to some extent might be regarded as a barometer of Government functions.

We have seen your agency grow and grow over these years and that is not to your discredit. That is to the credit of the General Services Administration and your efficient operation.

The point I am trying to make is whether or not you can see any reasonable leveling off to this whole picture? After all is said and done, as Government grows your responsibilities grow. It is naturally reflected in your budget. We now have a Federal budget of approximately $100 billion this year which, to some extent, reflects expansion and growth in our National Government. What would you say as to the picture of the respective growth or expansion and added expenditures as reflected in your budget as compared to the national budget?

Mr. BOUTIN. Congressman, that is a difficult question to answer and I think I should preface it by saying that until such time as GSA meets the responsibilities given to it by the 1949 act, we are going to see some substantial additional growth, or the agency should be abolished. I think these are the alternatives but when you look at the number of systems of supply and procurement still in the Government, realistically, either the Administrator or someone else, should have these responsibilities. There should be no duplication in these areas. The handling of surplus real and personal property is a GSA function. GSA delegated its heart and soul. We are trying to bring it back in one house. In defense materials, for instance, we have a fluctuating program. We are substantially through with the acquisition stage. Now we are going into disposal. We are going to be subject there to the dictates of the Congress. If Congress says we are going into a big disposal program, which the President agrees should be done, then you are going to see some growth in that area. We have seen growth in the area, for instance, of stocking shelters where GSA has procured and has stocked in central locations various types of equipment which will be redistributed to the shelters themselves. This speaks to GSA growth but we have not begun to reach the level that I think the Hoover Committee foresaw, that President Truman foresaw and the Congress foresaw in the passage of the 1949 act.

Until such a time as these responsibilities are brought together under one head, we are not meeting our responsibilities, in my judgment, so you have a certain amount of growth from this gradual retaking of delegated authority.

If you were to separate that out, then I would say that our budget should be just about in the same ratio of increase every year as the change in the national level of budget requirement, just about the same. We are speaking of space, of telecommunications, transportation, supply, all of these various areas. We are trying to bring this animal together so that we can manage it and so far we are quite a long way from reaching that, but I think the day is not far away when we are going to do away with this duplication or overlapping which is what we all are trying to get done.

Mr. OSTERTAG. Perhaps if we look at the picture as you have described your relationship to it—and I am not quarreling with it, in fact I am applauding your views and objectives. It is granted that in our overall national expenditures we find many obligations which are fixed, such as the interest on the national debt, assistance programs, many, many expenditures or obligations on the part of the National Government are not matters pertaining to direct services or supply.

GSA SUPPLY RESPONSIBILITIES

Of course, the national defense, which embraces more than half of the total, is in a peculiar category by virtue of the very nature of this obligation and responsibility but what percentage of this overall national function actually should and does come within the jurisdiction of General Services Administration in regard to supply and management and services of that character?

Mr. BOUTIN. The best example I can give you, Congressman, is in the area of supply and procurement. Right now, in spite of the broad language in the act, GSA is doing 3.6 percent of the total of the Federal Government. This, to me, is not an acceptable indication of our progress in the direction that we should long since have been going. We should be doing much, much more than that. In the R. & D. areas, we have no responsibility other than to issue the Federal Procurement Regulations, et cetera, which establish requirements of contracting. But, in supply itself we should be actually in a position where we could tell you that there are two systems. There is a Department of Defense system and a GSA system serving the entire Government and on all the common-use items that GSA is furnishing them for the total Government. That is why I say we are scratching the surface, and are just beginning to get into this area, with the Department of Defense on common-use items—taking them out of their system, putting them in our system. This way we get the benefit of the competitive bidding for the total Government requirement. The other agencies on the civil side that still have their own supply distribution setups are largely duplications of what GSA should be doing.

OTHER GOVERNMENT SUPPLY SYSTEMS

Mr. THOMAS. Who are those agencies, who are those civilian agencies outside of Veterans' Administration that have their own supply system, common use?

Mr. BOUTIN. Post Office Department is a big one, FAA is a big one.

Mr. OSTERTAG. The Defense Department maintains a supply system, I am sure.

Mr. BOUTIN. The military, of course.

Mr. THOMAS. Post Office, FAA, you have mentioned DOD and Veterans. Who else?

Mr. BOUTIN. NASA is certainly a big one. What others, Joe?

Mr. BEAN. He mentioned the larger ones but each of them have a small area in which they do some of their own work, too.

OVERSUPPLY PROBLEMS

Mr. OSTERTAG. We hear from time to time about obsolescence and oversupply and situations where there has been an absolute waste and extravagance and misuse of funds by way of purchases, et cetera.

If it all came under GSA where you have greater and absolute control over the supply line of the Federal Government, would that be substantially overcome?

Mr. BOUTIN. I think it would be very substantially overcome. The one exception, Congressman, would be when we have a certain item that we have experience on, or experience from others where over the years there has been the general ratio of procurement, and all at once that should change for any given reason. There is always the possibility of small oversupply, but you are not going to be talking 5, 10, 15, or 40 percent oversupply as you have seen; you would have a better handle on it, the percentage would be vastly changed.

Mr. BOLAND. Doesn't the waste and extravagance usually come in an article that is not common use? Most of the extravagance occurs

in DOD, and is not connected with a common-use article. This agency would not be interested in this.

Mr. OSTERTAG. That was my point.

FORECASTING REQUIREMENTS

Turning to another aspect of this overall picture, and I am merely trying to develop our general situation in the operation of this big business known as our Federal Government, we have seen a terrific expansion in our services and our operations—new agencies and expansion of existing agencies—so that we now find ourselves so large that we are unable to see ourselves, and here again in each and every agency and program we witness a budgeting of increased personnel, for example. Have you any estimate as to the growth or the requirements and justifications for these expansions? It is directly associated with your business. How do you plan it? How do you figure? How do you deal with it?

Mr. BOUTIN. I think public buildings is a very good example.

Mr. OSTERTAG. Public buildings is a part of it.

Mr. BOUTIN. Yes. For instance, in public buildings we can forecast requirements exactly by knowing how many new buildings are going to come into our inventory in a given year. We know that from contracting dates and completion dates. We get our space, leased space, on the second year of financing. The agencies finance the first year themselves, and this is a matter, by the way, that we are working with the Bureau of the Budget on right now at the request of this committee, but we know by the second year what we have to finance.

Mr. THOMAS. There is something that should be stopped and it should be stopped this year, and there is a good reason for it. They finance their own space requirements for the first year. You take them over the second year and you are stuck. They want you to nullify your Executive order.

Mr. BOUTIN. With the exception that now, and we do not disagree with your position, but now when they come to us for space, the first year even though they have their own financing we actually do the contracting and evaluating the requirements that they have. We won't contract for that space unless they have maximum utilization of the space already assigned to them.

Mr. THOMAS. That is just walking around in a jug. You ought to do it all. It makes your job the second year twice as hard as it would be if you started in right.

Mr. BOUTIN. In Federal Supply is another example. Any agreements that are reached in a preceding year, such as this year when we are working with DOD and some of the civilian agencies, we can forecast what our personnel requirements are going to be with the job standards being established as to productivity per individual and get a pretty good handle on it. We always leave a safety margin there to take care of the peaks and valleys by contracting. For instance, Mr. Bean, I think, this year has something like $875,000 in the budget for contract labor to take care of these peaks where it would be foolish to hire permanent people.

Mr. OSTERTAG. Perhaps I can make my point a little clearer when I ask you, Do you have in your agency the figures of the total overall personnel requirements throughout the Federal Government, particularly in the several agencies exclusive of the military?

Mr. BOUTIN. If we do not have them on hand they are always available to us from the Bureau of the Budget as to the ceilings they establish in the budget documents for the various agencies. We can get a fix on that at any given time.

Mr. OSTERTAG. Do you know what the total increase is over last year, requested in fiscal year 1964 as compared to 1963?

Mr. BOUTIN. I do not know. Do you know?

Mr. TURPIN. No, sir. I do not have that figure.

Mr. OSTERTAG. How do you plan or deal with these requirements if you do not have information or knowledge as to what the requirements will be?

Mr. BOUTIN. We have only this, Congressman: We have the space, the financing for first year space that the Bureau of the Budget has allowed any given agency. This is the best measure for us as to our own requirements.

Mr. THOMAS. Mr. Evins?

INCREASE REQUESTED OVER 1963

Mr. EVINS. Mr. Administrator, you are asking for about a $38 million increase. You say the payroll for the 2 years is $13 million, which is required by law. That makes an increase of $25 million you are asking for next year in your budget over last year. What basically are you needing this $25 million for?

Mr. BOUTIN. There are two big areas, Congressman, that are essential to us. With the budget allowance that we had last year by the Congress, we will be down to about 60-percent effectiveness in cleaning our buildings, which includes preventive maintenance, window washing, cleaning of floors, walls, trying to keep the buildings in decent shape. We have up to this year been at about 80 percent of our standard, doing a reasonably good job. We are trying to get back to at least 70 percent in 1964, which is not as high as we would like. We would like to get back to 80 percent but to try and keep our request within the realm of reasonableness, we are trying to get back to 70 percent. This is the biggest increase in personnel and funding requirements in GSA's request. We also have to a lesser extent additional personnel requirements in Federal supply. We show 31 percent projected increase in our sales. We are just about up to the limit of productivity right now that we can see accomplishing for the next year.

CONTRACT CLEANING

Mr. EVINS. How much is the overall round figure for custodial services for all the Federal buildings that you are maintaining, the contracts that you are letting for cleaning and servicing Federal buildings? How much does it run a year at the present time?

Mr. DALY. We are looking that up now, sir.

Mr. BOUTIN. I might say while they are looking that up, Congressman, that our experience has become progressively worse with each

passing year on contract cleaning, with the exception of two regions, because contractors have been underbidding each other until they are at a point where the performance has been atrocious. We have been changing this by evaluation; if we have a good contract, fine, if we do not, we have gone into force account, where we can get good performance, and cleaner buildings. But some contract cleaning has been bad, not only for GSA, but also the Building Owners & Managers Association tell us that their experience has been equally bad.

Mr. THOMAS. You set out the figures Mr. Evins asked you about. You show a $3,100,000 increase in your 1964 budget over 1963 for the same purpose.

Mr. EVINS. I would like the total current annual cost.

Mr. DALY. For fiscal year 1963, the total cost for operation and protection of all of our Government-owned space is $89 million.

Mr. EVINS. This is not cleaning and protection. That is another item.

Mr. DALY. I was trying to give you the total cost, sir. This would be cleaning, operating the elevators, the guards, et cetera.

Mr. EVINS. That is not what I asked. We are talking about the cleaning item now.

Mr. BOUTIN. All he wants is cleaning. We have that.

Mr. EVINS. Your principal increase in the two items is for cleaning service and for supply and storage. We are getting into a $25 million increase in the budget for next year over the current year.

Mr. THOMAS. I do not think that is quite accurate. The table reflects about a $13 million increase in buildings management in one item alone.

Mr. EVINS. Would you tell us how much your current custodial cleaning service and contract accounts are?

Mr. DALY. I will have to work that figure up for you, sir. I have it on a square foot basis. I will develop it in just a second.

Mr. EVINS. Do you know how much increase you are asking for this item for next year?

Mr. DALY. In the overall it is $13 million. As you pointed out that took care of heating, elevators, et cetera.

Mr. BOUTIN. Including utility costs.

Mr. EVINS. The Post Office Department has a provision in their law where there is a star route carrier and if he is satisfactory, rendering efficient service, they have authority to recontract with the existing operator service carrier. Do you have that authority in your law?

Mr. BOUTIN. No. We go out to competitive bidding when it is going to be done under contract.

Mr. EVINS. You say competitive bidding is getting to the point you have less efficiency?

Mr. BOUTIN. It has gotten to a point where with some of these contracts, employees remain on the job only about 6 weeks and we have the constant security check expense because of turnover. If an employee is with them in excess of 6 weeks he is a veteran.

Mr. OSTERTAG. Do these employees come under the Wage Board?

Mr. BOUTIN. No, sir. They are subject to the minimum wage law. These are private employees.

Mr. EVINS. Do you propose a change in this contract service to a different method of operation?

Mr. BOUTIN. What we are doing is evaluating each single instance where we have had contract service evaluated that versus what it would cost and the performance we would get from force account. With very few exceptions we are going force account and getting much better service.

Mr. EVINS. You will employ your own people and keep them aboard to do the different services?

Mr. BOUTIN. You can train them and get mileage out of them.

Mr. EVINS. You said a while ago you were up to 80 percent of the buildings. Now you are cutting to 70.

Mr. BOUTIN. No. We were at 80 percent in fiscal year 1962; in fiscal year 1963 we are down to about 60. We are trying to get back up. We have some dirty buildings. That is the fact of the matter.

Mr. EVINS. You need how much for this service next year?

Mr. SCHMIDT. About $30 million for cleaning. That is total estimated cleaning cost under operating expenses.

Mr. EVINS. That is your current year cost?

Mr. SCHMIDT. That is our estimate for next year. The current year would be about $3 million less or $27 million.

Mr. EVINS. In other words, you are asking for a $3 million increase in your cleaning costs?

Mr. SCHMIDT. Yes, sir.

Mr. BOUTIN. Also a substanial amount of the increase for 1964 would be for new construction that is going to come into being.

Mr. EVINS. That is only $3 million out of $25 million for these two items. There is a $25 million increase in the budget and only $3 million for the contract service. Where is the other $22 million?

Mr. BOUTIN. You have increases in Federal Supply, but really, as the chairman indicated, this difference in the budget is not a fair evaluation because you have new items in there that were not there before and you have cuts in old items. Construction is way down from last year.

Mr. EVINS. What are your increases proposed in the Federal Supply Service, Mr. Bean's department?

Mr. BOUTIN. How much of an increase do you require for manpower?

Mr. BEAN. I am sorry, I do not have that information with me.

Mr. EVINS. I thought they would be paying you back on time and you would be making a profit, Mr. Bean.

Mr. BEAN. No, pardon me.

Mr. EVINS. You would be needing the increase.

Mr. BOUTIN. The profit all goes back into the Treasury.

EFFORTS TO HALT OUTFLOW OF GOLD

Mr. EVINS. You mentioned lightly on this subject that you are doing a great deal to arrest the outflow of gold from this country. What really are you doing about this and what can you do? You are to be commended. This is a laudable thing if you can do it and are really doing it. What are you doing?

Mr. BOUTIN. We are doing a great deal. We have opened a supply service center at Sembach Air Force Base, Germany, serving the European Command over there. We commented about transceiver service into our New York office.

We can provide their requirements for common use items. Things in our system are also on their stocklists. We can provide them from stateside sources rather than have them bought there. This is very new. We opened this center a little less than 60 days ago. It is in operation. We hope to do the same thing in the Pacific Theater and also in the Caribbean where we can supply from stateside sources. This growth has been really fantastic. We have agreements with the Air Force on all of their quarters furniture for instance, a very big item. These are all purchased through GSA, either from our schedules or through special purchase to meet their requirements. We plan to equip some of the military hospital facilities in Europe, also using stateside sources. We have a recent arrangement with the Army that is effective the 4th of March.

They will be sending orders for our stock and schedule items direct to our port regions. We are talking about a good many millions of dollars in business which we expect to handle from stateside contractors rather than offshore purchases.

Mr. EVINS. We find that the VA is providing more veteran services overseas, that many agencies are not really contracting their spending which would help the gold situation about which the President and the administration have shown concern. If each agency directed its attention to this problem I think the benefit would be substantial.

Mr. BOUTIN. We are also doing a great deal with the State Department. This is a brand new program. We have just started. We are rendering substantial increases in supply support to the embassies and consulates, et cetera, which were largely buying locally. We can give them excellent service. The thing is really working very well, but it has just started.

CONTRACTS ALLOCATED TO SMALL BUSINESS

Mr. EVINS. Mr. Administrator, what percentage of your contracts are now being allocated to the small business segment of our economy? GSA is one of the big Federal contractors.

Mr. BOUTIN. Fifty-six percent.

Mr. EVINS. That has gone up over the years. You are to be commended.

Mr. BOUTIN. Yes; it has. This figure is correct, is it not?

Mr. GRIFFITH. Yes, sir.

Mr. BOUTIN. We have gone up from 42 percent to 56 percent.

Mr. EVINS. I hope you can do something in the area of arresting the outflow of gold from our counrty.

Mr. BOUTIN. I think when we come back next year we can show you a real significant accomplishment there, Congressman.

OVERSEA SUPPLY OPERATIONS

Mr. OSTERTAG. How do you handle your program or your functions in oversea supply? You have a transportation factor involved, do you not?

Mr. BOUTIN. Usually, the vendor's bids are based on delivery to the port from which the goods will be shipped. We ship almost exclusively now—there are exceptions—but almost exclusively through military air transport or military sea transport. Bearing in mind now that of our overall Federal Supply stores business, 70 percent is with the military; overseas would be closer to 98 percent or 90 percent.

Mr. BEAN. Ninety percent.

Mr. BOUTIN. This is the usual method of transportation overseas for our military customers.

Mr. OSTERTAG. Do they absorb the transportation cost?

Mr. BOUTIN. They absorb the total cost. They reimburse us for all expenses for export packing and they pay the costs of transportation to and from the port of shipment.

Mr. OSTERTAG. This has nothing to do with the assistance program in any way, our foreign assistance program?

Mr. BOUTIN. Not in any way.

Mr. OSTERTAG. It is only to agencies including military overseas?

Mr. BOUTIN. And of course military is a big procurement source.

Mr. OSTERTAG. Have you any figures as to how much that amounts to?

Mr. BOUTIN. What can we forecast for fiscal year 1964 oversea business?

Mr. BEAN. About $150 million, stores and nonstores.

Mr. EVINS. Most of this is with the Defense Department?

Mr. BOUTIN. Ninety percent Defense Department.

Mr. EVINS. Is one of the objects of this program not just to give them service but to cut down on the purchasing otherwise in the countries that are flourishing and prospering and where economies have been built up and their growth rate is greater than our own at the present time?

Mr. BOUTIN. Secretary McNamara has issued specific instructions on this, where the goal is to buy domestic United States for their requirements wherever it is possible.

INCREASE IN STRATEGIC AND CRITICAL MATERIALS

Mr. EVINS. One other thing: Just running down your summary here, Mr. Administrator, and we will get into details later, I notice a $10 million increase for strategic and critical materials. I thought you were tapering off on that and cutting down.

Mr. BOUTIN. This is broken down into several areas of importance. One is a funding increase to fulfill the increased workload that we see for sales. As I said, in my opening statement, we have tried to make this service of our agency sales oriented so there is an increase there. There is an increase for rotation because we intend to rotate sisal and abaca by direction of the Office of Emergency Planning. Actually, the net cost for this rotation will be about $1.4 million, because sales of the item being rotated go into the Treasury under requirements of the law.

Mr. THOMAS. We will cover that later.

Mr. BOUTIN. Yes, sir.

Mr. EVINS. Mr. Administrator, I made an observation to our chairman a while ago during your testimony, that you are like the banker

who is out of money. You have control of space but you are short of space for your own department.

Mr. BOUTIN. That is correct.

Mr. EVINS. Couldn't you take care of your own needs with a little priority?

Mr. BOUTIN. We only have so much in the kettle and we try to distribute it around to satisfy as many as we can.

Mr. EVINS. You are taking care of the others first. Not many people do that. That is all. Thank you.

CONTRACT CLEANING

Mr. EVINS. With respect to the contract services in which you are asking for a $3 million increase, how much personnel does it involve in the way of increase? How many new people are you proposing to take on board just to do this custodial and training service?

Mr. DALY. We have a figure on that, sir, which we can give you.

It is about 700 strictly custodial-type cleaners, but that also takes into consideration the extra space that we are getting for new buildings coming on board.

Mr. EVINS. 700 more employees?

Mr. DALY. Yes, sir.

Mr. EVINS. Not altogether, but an increase of 700?

Mr. DALY. Yes, sir.

Mr. EVINS. For custodial and cleaning services?

Mr. DALY. Yes, sir.

Mr. EVINS. I was of the impression, like Mr. Boland and perhaps our chairman, that the contract service would be more economical if you could operate on that basis.

Mr. THOMAS. I do not think there is any doubt that they can. The question is if you get the same results as far as the dollar cost. It is bound to be cheaper. You did not intend to leave the impression it was cheaper to go back to the old method of force account; did you? Your point is that perhaps you would get a cleaner building, but for the overall dollar cost it is considerably higher than contract cleaning.

Mr. BOUTIN. For the degree of cleaning effectiveness, however, Mr. Chairman, we think it is cheaper by force account in many instances. New York City is one of the places where we have been able to prove that.

Mr. THOMAS. Mr. Ostertag.

GSA BUDGETS, 1960–64

Mr. OSTERTAG. I have one general question which has to do with the comparative expenditures or budgets of the GSA over a period of 4 or 5 years. I note you have figured the 1963 fiscal year at $622 million, which includes certain supplemental estimates.

Mr. BOUTIN. That is correct.

Mr. OSTERTAG. The estimated budget for 1964 is about $660 million, which is an increase of approximately $38 million.

How does this compare with the last 4 or 5 years? What has been your general increase?

Mr. BOUTIN. As far as the percentage increase overall?

Mr. OSTERTAG. Either dollarwise or percentagewise.

Mr. BOUTIN. This would not be very far off, would it, Mr. Turpin?

Mr. TURPIN. For the last 2 or 3 years, it has been about the same overall dollar level.

Mr. OSTERTAG. Have you a breakdown of comparative total GSA budgets for the last 4 or 5 years?

Mr. TURPIN. I do not have it available here, Congressman.

Mr. BOUTIN. We can get that and have it available.

Mr. OSTERTAG. Yes; if you will.

Mr. BOUTIN. Of course, part of the fluctuation is in the construction appropriations. We had practically a moratorium in some years on the "Construction and improvement" item. That would make a big difference.

Mr. OSTERTAG. If we could have that picture put together, and if there is any particular variation, may we have the general reasoning for it?

Mr. TURPIN. We shall supply that if the committee desires it.

Mr. OSTERTAG. I am trying to look at the picture on the broad basis of comparative figures over a period of years. I do not care whether it is 4 or 5, any number of years that you can give us some idea as to where this is going and what it looks like by years.

94926—63—pt. 1——67

(The information supplied follows:)

Summary of new obligational authority, 1960–64

Appropriation items (grouped by major purpose)	1960	1961	1962	1963 comparable amount [4]	1964 budget estimates
(a) Basic operations:					
(1) Operating expenses, Public Buildings Service	$154,610,000	$171,609,081	$179,416,355	$193,928,366	$216,439,000
(2) Operating expenses, Federal Supply Service	6,045,000	7,665,500	4,101,400	41,905,000	51,000,000
(3) Expenses, supply distribution	21,450,000	24,468,000	30,188,700	----------	----------
(4) Operating expenses, Utilization and Disposal Service	----------	----------	[2] 8,233,400	9,140,000	10,000,000
(5) Operating expenses, National Archives and Records Service	9,404,360	[1] 14,261,273	13,967,800	14,438,000	15,000,000
(6) Operating expenses, TCS	----------	----------	[2] 3,960,400	4,617,000	5,870,000
(7) Operating expenses, Transportation and Public Utilities Service	2,000,000	2,536,000	----------	----------	----------
(8) Salaries and expenses, Office of Administrator	225,000	247,000	[3] 1,285,000	1,408,000	1,500,000
Total	193,734,360	220,786,854	241,153,055	265,436,366	299,809,000
(b) Construction and improvement	86,675,000	248,847,000	306,451,800	281,605,600	293,265,000
(c) Stockpiling (S. & C.M.)	----------	22,237,000	39,977,300	18,100,000	28,145,000
(d) Other appropriation items (additional court facilities, expenses, U.S. court facilities, general supply fund, Federal telecommunications fund, allowances, former Presidents, working capital fund, refunds under Renegotiation Act)	200,000	22,750,000	18,400,000	54,810,000	36,887,000
(e) Limitation item (expenses, disposable of surplus property)	1,895,705	1,229,196	1,209,224	2,200,000	2,200,000
Total new obligational authority	282,505,065	515,850,050	607,191,379	622,151,966	660,306,000

[1] Includes $4,082,273 transferred from Department of Defense due to transfer of the Military Personnel Records Center at St. Louis, Mo., to GSA on July 1, 1960.
[2] Financed by transfers from other GSA appropriations.
[3] Includes $995,000 transferred from other GSA appropriations due to realinement of functions under sec. 106 of the Federal Property Act.
[4] Includes appropriations in annual act; supplemental appropriations proposed for later transmission in 1963; transfers and comparative transfers.

Mr. THOMAS. There are so many component parts. After all, these appropriations are for about 16 or 17 items. There are about six different services. When we go into the detailed justifications, you will find that the Public Buildings Service has about $400 million of the $660 million but that includes construction, sites, and repair and improvement which have varied through the years. Then you have to look at the rest of them. When we go into it, we will look into each one of the component parts. You will find the big increase goes back to one thing, that is real property management. As I say, there are some 16 or 17 different items in here. We shall try to go back on a 5-year basis for each one of them. That is the only way you will get a reasonably accurate idea of where the increase is. This one item, property management, is in the neighborhood of one-third of the entire budget. That is where the big increase is.

BUILDINGS MANAGEMENT EMPLOYMENT

Mr. EVINS. These charts are certainly very interesting. There are 10,000 employees in the Washington, D.C. region, and 2,700 employees in New York. When you get down to the South, Atlanta has just 810. Region 1, Boston, Mass., 799 employees; region 2, New York, 2,706 employees; region 3, Washington, D.C., 10,369 employess; region 4, Atlanta, 810 employees; region 5, Chicago, 2,328 employees; region 6, Kansas City, 1,315; region 7, Dallas, 1,222; region 8, Denver, 828; region 9, San Francisco, 1,272; region 10, Auburn, Wash., 529. There is a great difference.

Mr. BOUTIN. In direct ratio to workload. Of course, you have a couple of port cities here which are very significant. I think one thing that is interesting, Congressman, is that, in 1952, GSA had roughly 29,000 employees. In 1962, 31,500, with all the changes in the interim in workload.

Mr. OSTERTAG. That is outside of your contracts?

Mr. BOUTIN. That is all direct employees; force account employees.

Mr. OSTERTAG. But it is outside of your contracts?

Mr. BOUTIN. Yes.

Mr. THOMAS. Any further general questions? Let us take a look at the justifications.

Mr. BOUTIN. Mr. Turpin called to my attention, several days ago, the position charts by organization that are submitted with the justifications.

Mr. THOMAS. You can look over these charts, and they really tell the tale.

Mr. BOUTIN. Yes, they do, sir.

Mr. THOMAS. We shall go into the personnel load and the supergrades. We shall have to take that up, more or less, under each one of the big subheads.

SUMMARY JUSTIFICATION MATERIAL

Mr. Reporter, let us put the introductory statement in the record.

(The statement referred to follows:)

ESTIMATES OF APROPRIATIONS, 1964

INTRODUCTORY STATEMENT

The General Services Administration was established July 1, 1949, under authority of the Federal Property and Administrative Services Act of 1949 which authorized the transfer to it of previously established agencies engaged in performing functions related to Federal property and records management. Amendments to that act have authorized further transfers and functions.

GSA serves as the central agency for management of Government real and personal property, construction of public buildings, procurement of common-use supplies and services, stockpiling of critical materials, custody of the National Archives, and provision of archival, records, transportation, communications, and public utilities services.

Program operations are grouped under six services and are performed mainly through 10 regional offices under central office direction and supervision. Financial, administrative, and legal support for all service operations is provided by the respective integrated staff organizations financed by deposits, from funds provided for supported programs, into an administrative operations fund.

Basic operations are provided for in five operating expense appropriations. Policy direction and information pertaining to all programs are provided for in an appropriation for the Office of the Administrator. Other major operations

such as construction, improvement and repair of buildings, operation of a nationwide system of supply depots, stockpiling of critical materials, and others are provided for in separate appropriations. In addition, substantial financing is provided by transfers and reimbursements from funds appropriated directly to other major agencies of Government for services performed at their request.

GSA also serves, by delegation from the Office of Emergency Planning, as executor of defense-production expansion programs financed by allocations of borrowing authority made available to the President.

In addition to basic functions authorized by the Federal Property Act of 1949, as amended, other functions and operations are authorized by specific legislation, the most significant being:

Stockpiling Act of 1946 (Public Law 520, 79th Cong.).
National Industrial Reserve Act of 1948 (Public Law 883, 80th Cong.).
Public Buildings Act of 1959 (Public Law 86-249).
Reorganization Plans 18 and 20 of 1950.
Federal Records Act of 1950 (Public Law 754, 81st Cong.).
Materials Expansion Program (Executive Order 10480 of Aug. 14, 1953).
Interagency Motor Pools (Public Law 766, 83d Cong.).
Reorganization Plan No. 1 of 1957.

The full extent of GSA operations cannot be judged solely by the number and amount of direct appropriations in the annual act. As a service agency, extensive operations are conducted at the request of other agencies, and financed by reimbursements or transfers of funds. It is also significant that as of June 30, 1962, the assets for which GSA has responsibility for stewardship totaled over $11.8 billion, an increase of $467 million over the preceding fiscal year.

ORGANIZATIONAL CHART

Mr. THOMAS. Gentlemen, look at the organization chart on page 3. This is a good chart and gives a bird's-eye view of the GSA organization. If we could add the total employees to each one of the organization setups, that certainly would be helpful.

Mr. Reporter, put this chart in the record.

SUMMARY OF GSA PROGRAMS FOR 1964

Mr. THOMAS. Put page 4 in the record. This is the summary of all GSA appropriations.

(The page referred to follows:)

Summary of budget estimates for 1964 and comparison to 1963

Appropriation items (grouped by major purpose)	1963 comparable amount [1]	1964 budget estimates	Change, 1963 to 1964
(a) Basic operations:			
(1) Operating expenses, Public Buildings Service	$193,928,366	$216,439,000	+$22,510,634
(2) Operating expenses, Federal Supply Service	41,905,000	51,000,000	+9,095,000
(3) Operating expenses, Utilization and Disposal Service	9,140,000	10,000,000	+860,000
(4) Operating expenses, National Archives and Records Service	14,438,000	15,000,000	+562,000
(5) Operating expenses, Transportation and Communications Service	4,617,000	5,870,000	+1,253,000
(6) Salary and expenses, Office of Administrator	1,408,000	1,500,000	+92,000
Subtotal	265,436,366	299,809,000	+34,372,634
(b) Construction and improvement:			
(7) Repair and improvement	65,000,000	75,000,000	+10,000,000
(8) Payments, purchase contracts	5,150,000	5,200,000	+50,000
(9) Construction, public buildings projects	180,955,600	171,965,000	−8,990,600
(10) Sites and expenses	30,500,000	41,100,000	+10,600,000
Subtotal	281,605,600	293,265,000	+11,659,400
(c) Stockpiling:			
(11) Strategic and critical materials	18,100,000	28,145,000	+10,045,000
(d) Other appropriation items:			
(12) Expenses, U.S. court facilities	1,000,000	1,587,000	+587,000
(13) General supply fund (capital)	43,500,000	35,000,000	−8,500,000
(14) Federal Telecommunications Fund (later transmission)	10,000,000		−10,000,000
(15) Allowances, etc., former Presidents	310,000	300,000	−10,000
Subtotal	54,810,000	36,887,000	−17,923,000
(e) Limitation items:			
(16) Expenses, disposal surplus property	2,200,000	2,200,000	
(17) Administrative operations fund	(12,111,300)	(13,965,000)	(+1,853,700)
Total, direct appropriations	622,151,966	660,306,000	+38,154,034

[1] Includes appropriations in annual act; supplemental appropriations proposed for later transmission in 1963; transfers and comparative transfers.

Mr. THOMAS. Basic operations: Operating expenses, public buildings service, $216,439,000, which is an increase of $22,510,634.

Following my statement of a while ago, you will see this one item, "Operating expenses, public buildings service," is just about one-third of the entire budget. Of course, that is some 80 percent of the basic operations total.

Under construction and improvement, the cost goes up to $293,265,000 for this year, an increase of $11,659,400.

Stockpiling, a $10 million increase over last year. It was $18,100,000 for 1963.

Under other appropriation items, we get into the multiplicity of items that this agency must handle. By multiplicity, I mean just exactly that. We often think your jurisdiction is larger than some Cabinet posts.

Under the limitation items, we shall have to look at the disposal of surplus property. We want to go into Mr. Turpin's operation. He is up $1,853,700 to a total of $13,965,000.

Mr. TURPIN. We have a really good explanation.

Mr. THOMAS. You always have, and we shall be delighted to hear it. This is the administrative services, finance, bookkeeping, legal, and so forth and so on.

What is the chief counsel requesting, Mr. Moody?

Mr. MOODY. How much money, sir? $1,640,000.

Mr. THOMAS. How many lawyers do you have, Mr. Moody?

Mr. MOODY. I have 95 lawyers.

Mr. THOMAS. Have you any economists?

Mr. MOODY. No, sir.

Mr. THOMAS. Not any in the agency?

Mr. BOUTIN. Yes, sir.

Mr. MOODY. Yes, but not in the law shop.

Mr. THOMAS. The economists are in the Administrator's Office. He has a little set-up there, has he not?

Mr. BOUTIN. No. They are in Mr. Turpin's office.

Mr. THOMAS. Where are your economists, Mr. Turpin. I thought they were in the Administrator's Office.

Mr. TURPIN. You may be referring to the Office of Procurement and Economic Policy. There is no increase in the staff of 16—for that office engaged in developing and publishing Procurement Regulations.

HIGHLIGHTS OF BUDGET FOR 1964

Mr. THOMAS. We will look at that later. Gentlemen, let us put page 5 in the record. This is well done, Mr. Turpin. You have done a fine job here. This language is well put together.

(The material referred to follow:)

HIGHLIGHT OF PROVISIONS FOR GSA IN THE 1964 BUDGET

The budget of the United States for 1964 includes 15 items involving new obligational authority for GSA totaling $660,306,000, including $7,410,000 for increased pay costs under the Federal Salary Reform Act of 1962. This is $38,154,034 more than the comparable total for 1963. Major changes are as follows:

A. *Basic operations of GSA.*—The fields of real property, personal property, excess and surplus personal property, records, transportation and communications management and for top direction of GSA are provided for in 6 appropriation items. An increase of $34.4 million over comparable amounts for 1963 is requested mainly to provide: (1) a net increase of $6.1 million to finance additional buildings management workload due to completion of new buildings and transfers of buildings from other agencies (total additional amount of $10.2 million offset by a decrease of $4.1 million for space released due to new construction); (2) $9.2 million for full-year costs of additional leased space furnished agencies and financed by transfers of funds in 1963; (3) $2.5 million due to increased utilities and rental rates; (4) $3.1 million to partially restore level of building services to the 1962 minimum; (5) $9.1 million to administer an expanding worldwide common-use supply system being increasingly called upon by DOD; (6) $0.9 million to provide expanding and increased emphasis on reuse or prompt disposal of excess and surplus real and personal property; (7) $0.6 million in the records activity; and (8) $1.3 million for increased support for the Federal telecommunications system and Government-wide transportation services function.

B. *Construction and improvement.*—Appropriations of $293.3 million for 4 items are requested for 1964 as follows: (1) $172 million for direct construc-

tion, including $2.8 million for fallout shelters, provides for 27 new projects and one increase costing $164.6 million and 6 extension and conversion projects costing $7.4 million; (2) $41.1 million for design starts including acquisition of sites where necessary for approximately 77 additional projects involving improvement costs in the magnitude of $184 million; (3) $75 million for repair and improvement of public buildings for continuation of long-range programs of general repairs and improvements; and (4) $5.2 million for payment of principal, interest, and taxes on 20 projects remaining under lease-purchase contract.

C. *Stockpiling.*—The increase of $10 million for S&CM includes $7.1 million for rotation of materials, $1.9 million for storage costs, $0.8 million for disposals, $0.2 million for upgrading materials.

D. *Other appropriation items.*—The estimate of $1.6 million for "Expenses, U.S. court facilities" provides for costs, not otherwise provided for, incident to space expansion, furniture, and furnishings for the U.S. courts of appeals and district courts. The request of $35 million for the "General supply fund" in 1964 and the proposed supplemental request of $30 million in 1963 is required for continued expansion in supply and motor pool sales and other programs financed through the fund.

PAY ACT COSTS

Mr. THOMAS. You notice we had a little trouble in coming up with your figure on the pay increase for 1963 and 1964. This alludes to it, but in a left-handed manner, and it is far from being complete.

(Reading):

The budget of the United States for 1964 includes 15 items involving new obligational authority for GSA totaling $660,306,000, including $7,410,000 for increased pay costs under the Federal Salary Reform Act of 1962. This is $38,154,034 more than the comparable total for 1963.

So, the figure of $7,410,000 is quite incomplete, is it not?

Mr. TURPIN. No, sir. That is the amount that is included in the appropriation items before this committee, $7,410,000.

Mr. BOUTIN. But that does not include more than a million and a half we are absorbing.

Mr. TURPIN. That is correct, the different between $7,410,000 and $9,273,700.

Mr. BOLAND. You absorbed one and a half million in 1963?

Mr. TURPIN. In 1963. But in 1964, the total Pay Act cost is $9,273,700. We are asking in this budget for only $7,410,000.

Mr. THOMAS. Are you deducting from that, or is there absorption of any part of the Wage Board increase?

Mr. TURPIN. On the Wage Board increase, no, sir. There is an estimate in here under OE, PBS for Wage Board pay.

Mr. THOMAS. That is separate and distinct from the Pay Act of 1962, and that is the reason it is not included there?

Mr. TURPIN. That is correct.

Mr. THOMAS. The figure you refer to here is purely the Pay Act of 1962?

Mr. TURPIN. That is correct.

Mr. THOMAS. Your increase for 1964 is $9,273,000. You seek an appropriation for $7,410,000.

Mr. TURPIN. That is correct.

Mr. THOMAS. You are absorbing how much, then?

Mr. BOUTIN. About $1,800,000.

Mr. THOMAS. What did you absorb for 1963?

Mr. TURPIN. A million and a half.

Mr. THOMAS. What was your cost for 1963?

Mr. TURPIN. $4,554,000.

Mr. THOMAS. You have a supplemental for how much?

Mr. TURPIN. $3,031,000.

Mr. THOMAS. You did not absorb very much, did you?

Mr. TURPIN. A million and a half.

Mr. OSTERTAG. Mr. Turpin, you are absorbing nearly $2 million for fiscal 1964?

Mr. TURPIN. Yes, sir.

Mr. OSTERTAG. How are you doing that? How is that being achieved?

Mr. TURPIN. It is being financed out of funds available to carry on the programs, and without asking for additional money specifically for Pay Act increases.

Mr. THOMAS. That is not what he is asking. He is asking how you did it. You did not fill vacancies. Go on and tell him.

Mr. BOUTIN. That is correct, and forecasting increased productivity. We had 1,564 jobs in fiscal 1963 being vacated that we shall not fill in the PBS area alone.

SUPPLEMENTAL ESTIMATES, FISCAL YEAR 1963

Mr. THOMAS. Gentlemen, may I suggest that you look over page 6. You set out some supplementals. I have counted seven here. The seventh one goes back to our old jewel bearings plant in North Dakota, $1,150,000. Put page 6 in the record.

(The page referred to follows:)

SUPPLEMENTAL ESTIMATES FOR 1963 RECOGNIZED IN THE 1964 BUDGET

The Budget of the United States for 1964 recognizes under the head "Proposed for Separate Transmittal" the following supplemental estimates of appropriations to be submitted during 1963:

Operating expenses, PBS.—$3,370,000, of which (1) $2,400,000 is for costs due to wage board rate increases consisting of $1,554,000 for full-year costs in 1963 due to rates actually effected in 1962 between September 17, 1961, and June 30, 1962, and $846,000 for such increases to be granted during 1963 and (2) $970,000 for pay costs, together with additional amounts of $290,000 and $10,000 to be transferred from "Payments, Public Buildings Purchase Contracts" and "Allowances and Office Facilities for Former Presidents," respectively, as a result of the Federal Salary Reform Act of 1962.

Sites and expenses, public buildings projects.—$3,000,000 for acquisition of a site in the District of Columbia, drawings and specifications, supervision of construction, etc., for a Federal office building for headquarters activities of the Housing and Home Fiannce Agency. Total estimated cost of this project, including construction, is $32,000,000 as shown in the prospectus approved by the Public Works Committees in October 1962.

Hospital facilities in the District of Columbia.—$375,000 to provide additional funds for a matching grant for the construction of a hospital in southeast Washington, D.C. The sum of $3,000,000 already made available for this purpose is insufficient because of rising costs.

Operating expenses, FSS.—$2,095,000, of which (1) $1,100,000 is required to finance an additional $5.5 million of sales of stores items from stock as a result of the new issuance of DOD regulations governing relationship between military ordering activities and GSA, and implementation of the MILSTRIP system and (2) $995,000 for increased pay costs due to the Federal Salary Reform Act of 1962.

General supply fund.—$30,000,000 for additional capital to provide adequate financing for increased sales, primarily to DOD, and for additional equipment investment.

Federal telecommunications fund.—$10,000,000 to provide initial capital for this new fund established by Public Law 87-847, approved October 23, 1962, to finance the procurement of equipment and operating facilities and other

expenses necessary to the operation of a Federal telecommunications system.

Improvements, National Industrial Reserve Plant No. 485.—$1,150,000 to provide for certain improvements in NIR Plant No. 485 to assure the continued production of jewel bearings deemed essential to national defense requirements.

In addition to the above the Budget recognizes supplemental requirements as a result of the Federal Salary Reform Act of 1962 as follows: Operating expenses, UDS, $270,000; operating expenses, NARS, $438,000; operating expenses, TCS, $200,000; strategic and critical materials, $100,000; and salaries and expenses, Office of Administrator, $58,000.

Mr. THOMAS. What did we allow last year on that figure?

Mr. BOUTIN. Nothing.

Mr. THOMAS. Yes, we did.

Mr. BOUTIN. Excuse me. But it never was passed. It was $1 million, Mr. Chairman, that was the mark of the House.

Mr. THOMAS. That was not passed, however.

Mr. BOUTIN. No; it was not.

Mr. THOMAS. So, this is the same million dollars, but it has gone up $150,000 in the meantime?

Mr. BOUTIN. I think we asked for more than that originally.

Mr. THOMAS. Look over your supplementals, gentlemen. Operating expenses, Public Buildings Service, $3,370,000. Then it is broken down. Of that, $2,400,000 is for costs due to wage board rate increases, and so forth.

For sites and expenses, you have $3 million.

For hospital facilities in the District of Columbia, $375,000. What did we make available last year—$3 million?

Mr. BOUTIN. There was $3 million in the fiscal 1962 Supplemental Appropriation Act.

Mr. TURPIN. The supplemental of $375,000 for 1963 is the same item that was before the committee last year. It was passed by the House but did not become law.

Mr. THOMAS. We supplied the last amount of your authorization, though, in the 1962 budget, did we not?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Then this is the deficiency. Was there any authorization for that?

Mr. TURPIN. Yes, sir; there was authorization.

Mr. THOMAS. Passed when—that same year?

Mr. TURPIN. Yes; approved July 1, 1962.

Mr. THOMAS. I remember that.

Then there is Operating Expenses, Federal Supply Service. I notice your supply fund is $30 million for 1963, and you are coming in for another one in 1964 for $35 million. That is $65 million.

Mr. BOUTIN. And we are really hurting for this item, Mr. Chairman.

Mr. THOMAS. Your Federal telecommunications fund is $10 million. That is a new item. This is all quite interesting.

Your terminology is set out on page 7. "UDS" is a new term—utilization and disposal. We set that up last year.

LEASING AUTHORITY

I note on page 10, in the language changes [reading]:

The eighth paragraph is recommended for deletion because it precludes the procurement of new privately owned buildings to be constructed to meet Government requirements and leased to the United States over a term of years sufficiently long to substantially amortize the owners' investment unless a prospectus for the project is approved by the Public Works Committees. GSA is currently leasing more than 42 million square feet of space at an annual rental of over $100 million. Much of this space is substandard and inefficient for the conduct of agency activities occupying the space. Changes in agency programs, including expansion, dictate the acquisition of additional and/or improved space, or space at new locations. In addition, large blocks of space in which to consolidate agency activities are often not available in the community without new construction. For meeting these needs, much of which cannot be fulfilled in the foreseeable future through Federal construction at present budgeted levels, it is most desirable that GSA retain the maximum degree of flexibility in exercising its leasing authority so as to make timely acquisitions under prevailing conditions of the commercial rental market. The requirement for prospectus approval of lease construction transactions is inconsistent with this objective.

I am afraid the GSA misinterpreted the language. The language was intended absolutely to forbid the leasing of that space under your jurisdiction, and requiring of you to come to the proper committees for authorization. Your language is quite weak. The reason you want this deleted is that you do not want to come back to Congress every year for your funds and authorization. In that regard, you are no different from any other agency that wants back-door authority.

PUBLIC BUILDINGS SERVICE, GENERAL SERVICES ADMINISTRATION

WITNESSES

ROBERT T. DALY, COMMISSIONER, PUBLIC BUILDINGS
WILLIAM A. SCHMIDT, DEPUTY COMMISSIONER
ROBERT B. CONRAD, COMMISSIONER, TRANSPORTATION AND COMMUNICATIONS
WILLIAM P. TURPIN, ASSISTANT ADMINISTRATOR FOR FINANCE AND ADMINISTRATION
CHARLES G. PALMER, DEPUTY ASSISTANT COMMISSIONER, DESIGN AND CONSTRUCTION

Mr. THOMAS. Gentlemen, turn now to the real property activities administrated by the Public Buildings Service. Mr. Reporter, insert pages 13 and 14 in the record.

(The pages follow:)

FUNCTIONS PERFORMED BY THE PUBLIC BUILDINGS SERVICE

Real property activities of GSA administered by the Public Buildings Service can be summarized in two general categories: (a) Those financed by direct appropriations, and (b) those financed by transfers of funds or reimbursements from other Government agencies.

(*a*) Activities financed by direct appropriations to GSA are:

(1) *Operation and management.*—Acquisition, operation, maintenance, protection, and utilization of general-purpose buildings and space; operation of the GSA communications system; and overall administration of real property programs. Cost of these functions is financed from the "Operating expenses, PBS" appropriation.

(2) *Repair of buildings.*—Maintaining, repairing, remodeling, improving, and other alterations of federally owned buildings under the jurisdiction of GSA. These activities are financed from the appropriation "Repair and improvement of public buildings."

(3) *Construction.*—Acquisition of sites; preparation of drawings and specifications; construction; extension and conversion of buildings, and supervision of construction. These operations are financed mainly by appropriations "Construction, public buildings projects" and "Sites and expenses, public buildings projects."

(4) *Miscellaneous activities.*—Provision of furniture, furnishings, and space for U.S. courts; payment of principal, interest, and taxes relating to lease-purchase contracts, and a Federal grant toward construction of Southeast Hospital, Washington, D.C.

(*b*) Activities financed by transfers of funds or reimbursements from other Government agencies are:

(1) *Construction.*—Transfers of funds from various departments and agencies relating to acquisition of sites; construction, repair and alteration of research and laboratory facilities; schools and dormitories; hospitals, clinics and public health facilities; general and special purpose buildings; etc. Amounts to be transferred for the foregoing purposes are estimated at $98.9 million in 1963 and $99.7 million in 1964.

(2) *Operation, management, and special alterations.*—Reimbursements from various Government agencies for the operation and protection of Government owned and leased space; operation of communication facilities, such as consolidated switchboards and teletypewriter service; job order work for providing special facilities and improvements, such as the post office modernization program; providing special services, such as security guarding, etc. Reimbursements for the foregoing purposes are estimated at $137.4 million in 1963 and $152.3 million in 1964.

Summary of new obligational authority and average employment

	New obligational authority		Average employment					
			Total		Central office		Field	
	1963	1964	1963	1964	1963	1964	1963	1964

[1] Financed by prior appropriations for sites and expenses.

REIMBURSABLE SERVICES FOR OTHER AGENCIES

Mr. THOMAS. I have some notes here. In 1964, $100 million for construction for other agencies. This goes to your general fund from other agencies. In 1964, $152 million for other services for other agencies. In your general fund this year you are doing about $252 million for agencies not appropriated in this budget. Is that figure substantially correct?

Mr. BOUTIN. The total amount that we are doing for other agencies in reimbursable construction this year is how much money?

Mr. DALY. That appears on page 13, sir, and it is $99,700,000 for construction with transfer funds.

Mr. THOMAS. I just lumped it as $100 million, so we are not very far apart.

Mr. DALY. Yes, sir; also $152,300,000 for reimbursable operations for operation, management, and special alterations.

Mr. THOMAS. That is about right.

Mr. DALY. Yes, sir.

OPERATING EXPENSES, PBS

Summary reconciliation of 1964 estimate to 1963 funds

1963 appropriation in annual act		$181,200,000
Transferred from other agencies for space costs (75 Stat. 353 and 76 Stat. 728)		9,868,266
Advances from other accounts for rental of space		36,100
Proposed supplementals:		
Cost of wage board rate increases effected in 1962 from Sept. 17, 1961 to June 30, 1962	$1,554,000	
Pay Act costs	970,000	
		2,524.000
Proposed transfers to cover Pay Act costs from:		
Payments, public buildings purchase contracts	290,000	
Allowances, former Presidents	10,000	
		300,000
Comparative total for 1963		193,928,366
Decreases in 1964:		
Space released due to completion of new buildings:		
Government-owned space	1,220,000	
Leased space	2,935,000	
		4,155,000
Subtotal		189,773,366
Increases in 1964:		
Government-owned space: increased utilities cost $1,130,000; space in newly constructed buildings $6,871,000; space in buildings transferred to GSA and abandoned post office buildings $2,553,000; partial restoration of services to minimum level provided in 1962 $3,100,000; annualization 1963 wage board rate increases from July 1 through Sept. 15, 1962 $110,000	13,764,000	
Leased space: increased rental rates $1,090,000; increased utilities cost $230,000; annualization cost of agencies' expansion space $9,158,634; additional leased space $221,000	10,699,634	
Temporary space and moving costs incident to new construction	780,000	
Increase in space management	217,000	
Increase in administrative operations	90,000	
Pay Act costs	1,115,000	
		26,665,634
1964 estimate		216,439,000

Analysis by activities

Change	+22,510,634
1964 estimate	216,439,000

GENERAL STATEMENT

This appropriation provides for the basic real property operations of General Services Administration, including the acquisition, operation, maintenance, protection, and utilization of general-purpose buildings and space; and overall direction of buildings design, construction, repair, and modernization.

The appropriation request for 1964 is a net increase of $22,511,000 above a comparable amount for 1963. The 1963 amount includes proposed transfers of $9,904,000 for costs of expansion space acquired in 1962 and 1963, not provided for in GSA's 1963 budget. Also included is an estimate of $1,554,000 anticipated for later transmittal for full-year costs of 1962 wage board rate increases effected between September 17, 1961, and June 30, 1962. The net increase for 1964 includes $110,000 for full-year costs of wage board increases effected July 1 through September 15, 1962, but does not include increases effected subsequent to September 15, 1962.

The net increase of $22,511,000 provides primarily for partial restoration of services to minimum level provided in 1962; management and operation of new Federal buildings scheduled for occupancy in 1963 and 1964; increased rental rates and utility costs; full-year costs of rent and operation of additional leased space acquired during 1963 for other agencies with funds transferred from those agencies to cover the part-year costs; increase in space management to carry out objectives of Executive Order 11035; offset by credits due to new construction.

Continuing the policy established in 1962, fund requirements are not included in this estimate for the rental and operation of additional leased space to be acquired during 1964 to support expanding programs of Federal agencies of the executive branch, but are included in estimates of the other agencies.

Fair value of property received from other appropriations or funds without cost for use by GSA (in thousands of dollars):

	1962 actual	1963 estimate	1964 estimate
Real property	7,072	35,809	12,620
Personal property	33	35	57

From the budget for 1964.

The amount of $12.6 million reflected for real property in 1964 represents excess installations to be acquired from DOD and proposed to be added to the GSA inventory for utilization for various Federal agencies. Installations include the Mitchel Air Force Base, Long Island, N.Y. ($6.6 million) and a portion (47 buildings) of the Naval Weapons Plant, Washington, D.C. ($6 million). The minor items of personal property are primarily office equipment acquired from excess.

The estimate for 1964 includes $2,385,000 for increased pay costs as a result of the Federal Salary Reform Act of 1962.

The President's budget includes an "Item proposed for separate transmittal" for 1963 in the amount of $2,400,000 comprising $1,554,000 for full-year cost of 1962 wage board rate increases effected September 17, 1961, through June 30, 1962, and $846,000 for wage board increases estimated to occur in 1963.

As in prior years, GSA's 1964 estimates are based on continued application of "Principles Governing the Financing, Management, and Servicing of Buildings," published December 2, 1959, after review by the General Accounting Office and the Bureau of the Budget.

Detailed application of the $22,510,634 increase is explained in the detailed estimates which follow.

APPROPRIATION LANGUAGE

"For necessary expenses, not otherwise provided for, of real property management and related activities as provided by law; rental of buildings in the District of Columbia; restoration of leased premises; moving Government agencies (including space adjustments) in connection with the assignment, allocation, and transfer of building space; acquisition by purchase or otherwise of real estate and interests therein; and contractual services incident to cleaning or servicing buildings and moving; [$181,200,000] *$216,439,000*: [*Provided*, That this appropriation shall be available, without regard to section 322 of the Act of June 30, 1932, as amended (40 U.S.C. 278a), with respect to buildings, or parts thereof, heretofore leased under the appropriation for "Emergency operating expenses":] *Provided* [*further*], That this appropriation shall be available to provide such fencing, lighting, guard booths, and other removable facilities on private or other property not in Government ownership or control as may be appropriate to enable the United States Secret Service to perform its function of protecting the person of the President of the United States and his immediate family, the President-elect, and the Vice President pursuant to title 18, U.S.C. 3056."

Explanation of proposed changes in appropriation language

Elimination of the first privso from the language is recommended inasmuch as there are no leases or extensions of leases now in effect which were initially financed under the appropriation for "Emergency operating expenses."

GOVERNMENT-OWNED SPACE

Mr. THOMAS. Let us look over your buildings management. This is where the big money is. This is your operating expense under the Public Buildings Service, and the big heading is "Buildings Management." I have a longhand note here: 5 million square feet of Government-owned space in 1964 taken over from DOD and one other location. I came up with the figure of 6.4 million, but your Government-owned space from 1963 to 1964 goes up about 5 million. Is that the space you took over from the military?

Mr. SCHMIDT. The net increase in Government owned under OE, PBS is 4.936 million square feet. A small portion of that, something less than 1 million square feet, was taken over from the military, the Naval Weapons Plant in Washington, 872,000 square feet, and an excess naval plant in St. Louis with 49,000 square feet.

Mr. THOMAS. Break down the total figure of Government-owned space, the new additions from 1963 to 1964, between newly constructed and space you acquired from other departments as well as DOD. You use the round figure of 5 million, or is it 6.4 million?

Mr. DALY. I think we can use the round figure of 5 million.

Mr. THOMAS. I will go back in your justifications in a minute and show where it is 6.4 million, but go ahead.

Mr. DALY. There is 375,000 square feet in 12 buildings to be completed in 1963, and 4,206,000 square feet in buildings to be completed

in fiscal 1964. This will be Government-owned space that we will have to take over, manage and operate.

Mr. THOMAS. You are going to use the figure 4 million square feet of Government-owned new space that you are going to move into in 1964?

Mr. DALY. 4,581,000 square feet of new space.

Mr. THOMAS. How much are you going to take over from DOD and some other agencies in 1964?

Mr. DALY. What was the figure from DOD, Mr. Schmidt?

Mr. SCHMIDT. 921,000 from the Department of Defense, and one building at Anchorage, Alaska, 34,000, from that Post Office Department.

Mr. THOMAS. The other figure, 6.4 million, is the correct figure, then, including DOD, other agencies, and brandnew construction of 5 million. That is 6.4 million that you are going to take over, maintain and operate, that you have not operated before. Is that correct?

Mr. SCHMIDT. We will be reducing, however, 940,000 square feet, buildings vacated, demolished or disposed of.

Mr. THOMAS. You had better stay with what I asked you; 6.4 million is correct for brandnew space that you are taking over that you have not had before; 5 million of it is new buildings; 1.4 million is from DOD and other agencies. Correct?

By how much are you going to reduce it?

Mr. SCHMIDT. 940,000 square feet of Government-owned space. This will be disposed of with the completion of new buildings.

Mr. THOMAS. We shall go to lunch now and come back at 1 o'clock.

BILLINGS, MONT., PROJECT

Mr. THOMAS. Will the committee please come to order.

Have you any questions, Mr. Jonas?

Mr. JONAS. What happened to the building in Billings, Mont.—is that going forward?

Mr. BOUTIN. It is going forward, Congressman.

Mr. JONAS. I keep getting letters from people out there, thinking I have something to do with it, protesting about a building.

Mr. BOUTIN. We get most of ours from a single source.

Mr. JONAS. Did you reconsider the matter and review it again after the protest came in?

Mr. BOUTIN. Yes, we did.

Mr. JONAS. There is quite an article in a national magazine about it, the U.S. News & World Report.

Mr. BOUTIN. It was unilateral in nature. It represented one side of the picture and did not represent the actual economies that are achieved through the construction of this building. This is a good project. As individuals we always feel badly to say we are all done in leasing a man's property but it is always economically sound in every instance where we do it.

Mr. JONAS. I wanted the record to show whether you had recanvassed the situation following the complaint.

Mr. BOUTIN. We thoroughly reviewed it.

Mr. JONAS. That is all, Mr. Chairman.

Buildings Management

Mr. Thomas. Genelemen, we will go now to Public Buildings Management. This is your big item. Page 18 shows for 1963 you had $182,815,366, and an increase up to $204,619,000 for 1964 which is an increase of $21,803,634.

Put pages 18, 19, and 20 in the record, Mr. Reporter.

(The pages follow:)

Buildings management

Year	Amount	Average employment [1]
1963	$182,815,366	
Change	+21,803,634	
1964	204,619,000	

[1] All employment shown under Buildings Management Fund.

Highlight

This activity provides for—

(*a*) rental, operation, protection, and utilization of Government owned, leased, and purchase contract space, as indicated in the following table:

Average net square feet

[Thousands]

	1962 actual	1963 estimate	1964 estimate
Government-owned space	68,031	71,257	76,193
Leased space	24,018	26,531	27,481
Purchase contract space	1,216	1,306	1,306

and (*b*) operation of GSA system of joint-use communication facilities.

The net increase for 1964 of $21,804,000 over the comparable amount for 1963 is composed generally of increased workload with fixed costs. (From the budget for 1964.)

Operation and protection of Government-owned space	+$13,046
Rental, operation, and protection of leased space	+7,851
Temporary space and moving costs incident to new construction	+780
Operation of communication facilities	+127
Total	21,804

The following tabulation details the net increase for 1964 over a comparable amount for 1963:

	Deductions	Additions	Net change
Operation and protection of Government-owned space:			
New buildings to be completed		$6,871,000	$6,871,000
Transfer of buildings to General Services Administration		2,043,000	2,043,000
Transfer of vacated Post Office buildings		510,000	510,000
Increased utilities cost		1,130,000	1,130,000
Partial restoration of building services		3,100,000	3,100,000
Pay Act costs		502,000	502,000
Wage board annualization, July 1 to Sept. 15, 1962		110,000	110,000
Buildings to be disposed of or demolished	$1,220,000		−1,220,000
Net increase in Government-owned space cost	1,220,000	14,266,000	13,046,000
Rental, operation and protection of leased space:			
Increased rental costs, existing space		1,090,000	1,090,000
Annualization cost of agencies expansion space		9,158,634	9,158,634
Additional leased space		221,000	221,000
Increased utilities cost		230,000	230,000
Pay Act costs		86,000	86,000
Rented space to be released due to new construction	2,935,000		−2,935,000
Net increase in leased space	2,935,000	10,785,634	7,850,634
Temporary space and moving costs incident to new buildings: Increased workload		780,000	780,000
Operation of communication facilities: Pay Act costs		127,000	127,000
Total net increase over 1963	4,155,000	25,958,634	21,803,634

The estimate for 1964 reflects the continued aggressive program of public building construction and conversion of existing Government-owned facilities to replace inadequate and obsolete buildings, and the release of rented quarters. The program, however, continues to be aggravated by the expansion of Federal agencies, such as HEW, Treasury, POD, U.S. courts, FAA, and Commerce. Executive Order 11035, issued July 9, 1962, provides greater authority to GSA in the assignment and utilization of space for the Federal agencies. Through the use of standards and control of space utilization, agency requests for additional space to house expanded programs which could not be accommodated in quarters already assigned has resulted in substantial reduction of such requests. These reductions have resulted in obviating more than $2 million in rental costs for expansion space in 1963 and 1964 (which would have been financed initially by other agency appropriations). Also, the construction program will result in the replacement of obsolete Government-owned and rented space having an operating and rental cost of more than $4 million during 1964.

The $6.2 million reduction made in the 1963 appropriation request had to be applied to the operation of buildings and resulted in a reduction in the service level below acceptable standards. The 1964 estimate provides for only a partial improvement in poor service levels and will still result in a level of service below acceptable minimums and substantially less than commercial standards.

Consistent with the revised space financing policy placed in effect in 1962, no provision is made for financing of rental and related building service costs for space for new or expanded program requirements of Federal agencies during 1964.

No provision has been made for annualizing wage board increases which may be granted during 1963 after September 15, 1962, nor for those increases to be effected during 1964. Financing for these costs will be requested in supplemental estimates during 1964.

The following table sets forth the workload, unit costs, and performance costs by subactivities for 1962, 1963, and 1964 for the total program under this activity. It reflects application of increases of $21,803,634 in 1964 over comparable amounts for 1963, each of which is explained in the narrative justification which follows.

GOVERNMENT OWNED AND LEASED SPACE

Mr. THOMAS. We covered some of this in general this morning. Government-owned space for 1962 is 68,031,000 square feet. For 1963 it went up to 71,257,000 and for 1964, 76,193,000.

We broke this down in some detail, that GSA has for the fiscal year 1964 about 6.4 million square feet more under its jurisdiction in the form of Government-owned space to maintain and operate than it did in 1963. About 5 million of that square footage is in new buildings coming into operation in fiscal year 1964 and the remaining 1.4 million square feet is in buildings taken over from DOD and other Government agencies.

Leased space. The table speaks for itself. It goes up from 26,531,000 square feet in 1963 to 27,481,000 in fiscal year 1964.

PURCHASE CONTRACT SPACE

Purchase contract space is the same, 1,306,000 square feet in fiscal year 1963 and 1,306,000 in fiscal year 1964.

What do you mean by "purchase contract space"?

Mr. BOUTIN. This is leased purchase space, Mr. Chairman. We have 20 buildings where we entered into contracts under previous authorization whereby we pay a rental equal to the amortization cost, taxes, and related expenses over a set period of years.

Mr. THOMAS. Your budget for this year includes 20 buildings and you gave us a little statement before to the effect that it was your hope and aspiration through some good hard trading and bargaining you would acquire 2 of those 20 buildings at a very nominal cost.

Mr. BOUTIN. That is correct, Mr. Chairman, 2 of the 20, leaving a balance of 18.

Mr. THOMAS. How much money will you actually save in acquiring this? I mean not over a period of years but at the moment the takeover occurs?

Mr. TURPIN. Burlington, Vt., $237,000.

Mr. BOUTIN. $51,930 for Durham, N.H.

Mr. THOMAS. That is a feather in your cap. You save the taxpayers $290,000. We will go into detail on that a little bit later.

BUILDINGS MANAGEMENT INCREASES

The net increase in buildings management for 1964 of $21,804,000 over 1963 is broken down into the component parts shown here. We went into that generally this morning and we can go into it in more detail now.

This is $21,804,000 increase, this year over last year, and it is confined to one item and that is buildings management. In other words, that is the maintenance and operation of the Government owned and leased property. That is more than 50 percent of your overall increase for the entire agency; is that correct?

Mr. BOUTIN. That is correct.

Mr. THOMAS. To be exact it is $21.8 million over $38.2 million.

Operation and protection of Government-owned space, $13,046,000. That is an increase this year. We will look into that in detail.

Rental, operation, and protection of leased space, $7,851,000.

We have $780,000 for temporary space and moving costs incident to new construction.

Operation of communication facilities, $127,000.

OPERATION AND PROTECTION OF GOVERNMENT-OWNED SPACE

This is an interesting table; operation and protection of Government-owned space. We have increases shown here.

New buildings to be completed is $6,871,000.

Transfer of buildings to GSA, $2,043,000.

Transfer of vacated post office buildings, $510,000.

Increased utility costs, $1,130,000.

Partial restoration of building service, $3.1 million. We spoke of this this morning. That is mainly janitorial services.

Pay act costs, $502,000.

Wage board costs, $110,000.

Buildings to be disposed of or demolished, that is a reduction of $1,220,000. You subtract that and come up with a net increase of $13,046,000.

I noticed in here you have your wage board. I didn't think you were going to include that in this item.

Mr. TURPIN. That is just for those wage board increases that become effective between July 1 and September 15, 1962. They were known at the time this budget was submitted to the Bureau and under the ground rules the estimate for that is included.

The pay increases following September 15 will have to be a matter of a supplemental.

Mr. THOMAS. You continue with this table on the next page.

"Rented space to be released due to new construction." In round figures that is $3 million.

VARIATION IN UNIT COSTS

Mr. JONAS. Why did your unit cost go down in 1963 below 1962 and is back up now in 1964?

Mr. BOUTIN. Due to cut in our services, Mr. Congressman. We cut from an 80 percent effective cleaning job to about 60 percent. We had to, to keep within our appropriation.

Mr. JONAS. Did you find that to be satisfactory?

Mr. BOUTIN. No, sir. We have dirty buildings as a result.

Mr. JONAS. That accounts for the spread there.

Mr. BOUTIN. Yes.

SPACE ASSIGNMENT AND UTILIZATION

Mr. THOMAS. I have a paragraph I would like to read into the record:

The estimate for 1964 reflects the continued aggressive program of public building construction and conversion of existing Government-owned facilities to replace inadequate and obsolete buildings, and the release of rented quarters. The program, however, continues to be aggravated by the expansion of Federal agencies, such as, HEW, Treasury, POD, U.S. courts, FAA, and Commerce. Executive Order 11035, issued July 9, 1962, provides greater authority to GSA in the assignment and utilization of space for the Federal agencies. Through the

use of standards and control of space utilization, agency requests for additional space to house expanded programs which could not be accommodated in quarters already assigned has resulted in substantial reduction of such requests. These reductions have resulted in obviating more than $2 million in rental costs for expansion space in 1963 and 1964 (which would have been financed initially by other agency appropriations).

You were paid $2 million right there. However, I have a second point in reading this. If you don't go back to doing a turnkey job, you are making your job harder. If you let the agencies finance the first-year cost and then come to you the second year after they have already moved, you have virtually undone your order and your authority.

It is one thing to say, "Well, we are going to get them out but we are going to reduce," but you are doing it the hard way. If you control the first year, half your troubles are over with. You are not going to give an agency 300,000 feet the first year and the second year ask them to go down to 250,000. If you do you are going to incur more cost and more headaches.

(Reading):

The $6.2 million reduction made in the 1963 appropriation request had to be applied to the operation of buildings and resulted in a reduction in the service level below acceptable standards. The 1964 estimate provides for only a partial improvement in poor service levels and will still result in a level of service below acceptable minimums and substantially less than commercial standards.

WORKLOAD AND COSTS, BUILDINGS MANAGEMENT

Mr. Reporter, put the table on page 21 in the record.

(The table follows:)

Summary by subactivity showing workload, unit costs, and total costs for 1962–64

[All square footage is net]

Subactivity	1962			1963			1964			1964 increase over 1963
	Workload, average square feet	Unit cost	Total cost	Workload, average square feet	Unit cost	Total cost	Workload, average square feet	Unit cost	Total cost	
(*a*) Operation and protection of Government-owned space	68,031,000	$1.332	$90,641,630	71,257,000	$1.249	$89,003,000	76,193,000	$1.339	$102,049,000	+$13,046,000
Portion in District of Columbia	29,477,000	1.344	39,622,000	29,256,000	1.288	37,691,000	31,220,000	1.374	42,906,000	5,215,000
Portion outside District of Columbia	38,554,000	1.323	51,019,630	42,001,000	1.222	51,312,000	44,973,000	1.315	59,143,000	7,831,000

(*c*) Operation and protection of purchase-contract space, all outside District of Columbia	1,216,000	1.480	1,799,993	1,306,000	1.529	1,997,000	1,306,000	1.529	1,997,000	----------
(*d*) Moving, alterations, and furniture	----------	----------	1,671,764	----------	----------	1,700,000	----------	----------	1,700,000	----------
(*e*) Temporary space and moving costs incident to new buildings	----------	----------	626,465	----------	----------	1,000,000	----------	----------	1,780,000	+780,000
(*f*) Operation of communication facilities	----------	----------	4,976,885	----------	----------	5,336,000	----------	----------	5,463,000	+127,000
1. Telephone switchboards	----------	----------	3,413,453	----------	----------	3,582,000	----------	----------	3,667,000	+85,000
2. Teletype system	----------	----------	1,563,432	----------	----------	1,754,000	----------	----------	1,796,000	+42,000
Total cost or estimate	----------	----------	170,012,301	----------	----------	[1] 182,815,366	----------	----------	204,619,000	+21,803,634

[1] Includes proposed supplemental of $1,554,000 for annualization of 1962 wage board increases (Sept. 17, 1961–June 30, 1962); $835,000 for pay act costs during fiscal year 1963.

NOTE—Includes proposed appropriation transfers of $3,817,454 from other agencies in fiscal year 1963 for annualized cost of space acquired in 1962 and not in GSA's budget; $6,086,912 from other agencies in fiscal year 1963 for cost of additional space to be acquired in 1963.

GOVERNMENT-OWNED SPACE COSTS

Mr. THOMAS. Let us look at this table on page 21, "Operation and protection."

You have a unit cost in the District of Columbia at $1.34 per square foot. Outside of the District of Columbia it is $1.32 per square foot.

Now, that is for 1962. Follow your table out to 1963 and it has gone down as you point out in both categories. And for 1964 it goes up and the reason for it going up is you are seeking about $3.1 million more than you had last year for this same purpose.

Mr. BOUTIN. That is right, sir.

Mr. THOMAS. Now, translate that into dollars. That is what we were trying to get this morning.

Now let's break this down. Can you break it down into janitorial services, guard service, and then your utility cost?

Mr. BOUTIN. Yes, I can break it down this way, Mr. Chairman: On a per square foot basis for this $1.339 it is 44 cents for cleaning. It is 10.8 cents for protection, and 79 cents for all other costs including utility costs, elevator operation, air-conditioning expense, ground maintenance expense, all of them.

Mr. THOMAS. Air-conditioning expenses, you mean for the current, now?

Mr. BOUTIN. Yes.

Mr. THOMAS. That is for taking care of utilities?

Mr. BOUTIN. That is correct. This is only for the utility costs.

ADDITIONAL UTILITY COSTS

Mr. THOMAS. You show your utility costs going up $1,130,000.

It is our general understanding that about the most stable thing in this country has been our utility costs. Which one of the utilities have gone up the most? Which of them have been stable? Break that down. You mean by utilities: heat, light, and water?

Mr. BOUTIN. Heat, light, water would be the principal ones.

Mr. DALY. Mr. Chairman, this is principally increased consumption rather than increased rate. The increase is due to additional air-conditioning units being placed in buildings, improved lighting and additional electrical equipment.

Mr. THOMAS. What do you use for heat mostly throughout the Government-operated buildings?

Mr. BOUTIN. Coal would be the most commonly used fuel but we are converting an awful lot into natural gas and into oil.

Mr. THOMAS. Do you know what part of this utility cost goes to lighting, as opposed to heat? Which is the most expensive bill, lighting or heat? Can you give us a breakdown on that?

Mr. DALY. We will see if we have it, Mr. Chairman.

Mr. BOUTIN. One of the things added to the electricity cost is air conditioning and ADP. The more equipment, the greater the electrical consumption.

Mr. THOMAS. Then you are saying your electrical bill and perhaps your heat bill accounts for the increase. It is greater consumption rather than increase in price or rate?

Mr. BOUTIN. Not too much in the way of rate increases, Mr. Chairman, that would be correct. Increased consumption and increased number of square feet are primary reasons for increased utility costs. And as we modernize with air conditioning you get a commensurate increase in cost.

Mr. THOMAS. You have a list of locations where you are operating. How many of them have had an increase in the electrical current? Do you have any information along that line?

Mr. BOUTIN. Do you have anything current, Mr. Conrad, with you right now?

Mr. CONRAD. We do review increases in electrical rates and charges. As a matter of fact we have recently been in two cases involving increased electrical rates.

Mr. THOMAS. Where were those two places?

Mr. CONRAD. One was in Idaho and one in Montana.

Mr. THOMAS. Those two you looked into, what did they amount to? Were they entitled to it?

Mr. CONRAD. The one in Idaho, Mr. Chairman, resulted in an avoidance of rate increases in the Government's bill of somewhere in the neighborhood of $91,500 annually.

Mr. THOMAS. In the whole State?

Mr. CONRAD. Yes sir; primarily however, for the military installations and the AEC.

Mr. BOUTIN. And other Government, too.

Mr. CONRAD. Yes sir; and other Government agencies.

Mr. THOMAS. Where does the power come from in Idaho, does that come from that big Snake River project?

Mr. CONRAD. Yes sir; from the Snake River project.

Mr. BOLAND. I would think the Idaho test site of the AEC would use the most.

Mr. CONRAD. Yes sir; it was one of the big ones in the case.

REPLACEMENT OF DEMOLISHED SPACE

Mr. THOMAS. Buildings to be demolished, $1,220,000. How much will you have to spend in rent to take care of that $1,220,000? The Government has already bought and paid for the buildings. What does this cover?

Mr. BOUTIN. All operating costs.

Mr. THOMAS. You are going to have to replace that space with rented buildings. When we take off your back $1,220,000 on one page, how much are you going to add on the next page?

Mr. BOUTIN. I do not believe, Mr. Chairman, that we incurred 1 penny of additional cost for rental for this space being demolished. It was moved from Government-owned to Government-owned space. This is largely the tempoes around the D.C. Stadium.

Mr. DALY. That is correct. It would also take in such structures as the Civil Service Building which is going over to the Smithsonian. Then when building 10–A is finished we will be tearing down tempoes 3, 4, and 5. The Washington Auditorium is another building we occupy now which we will tear down to straighten out E Street.

Mr. THOMAS. What figures are you showing for that increased cost? You are going to have to pay that for space you are moving into.

Where you show a reduction of $1,220,000 to offset that you are going to have to show an additional cost of $10 million or $15 million, are you not?

Mr. DALY. No, sir; the additional cost is where new Government space comes into being and we take it over for operation. The figure of $1,220,000 is——

Mr. THOMAS. How do you arrive at that figure? Explain that figure.

Mr. DALY. Do you mean the $1 million——

Mr. THOMAS. Now, you have 5 million square feet. We will get back to that figure. Where are you showing the cost of that?

Mr. DALY. On page 18, sir.

New buildings to be completed, $6,871,000.

That is the operating cost for new buildings to be completed.

Mr. THOMAS. You have an item here for demolishing. By tearing up these buildings you will save $1,220,000?

Mr. DALY. Yes, sir.

Mr. THOMAS. Do you mean to say you are offsetting this with a cost of $6,871,000?

Mr. DALY. No, sir, not for these old buildings entirely, sir. The new space coming in would be to——

Mr. THOMAS. You give us a very definite minus figure here. Offset that with a plus figure. It is bound to exist some place.

Mr. DALY. I will have to work it up.

Mr. THOMAS. Can you put your finger on it?

Mr. BOUTIN. That figure will be very close to the same, Mr. Chairman. The increase would be just about the same as this because we are operating so many square feet of space.

Mr. THOMAS. And the only difference is in the construction cost, and that will show up somewhere.

Mr. BOUTIN. That will show up in the part of the budget dealing with construction and in the cost of new buildings.

Mr. THOMAS. If you didn't demolish the old buildings you wouldn't have to build the new ones. And you are not building anything in the District of Columbia in the way of an office building for less than $20 a square foot, are you?

Mr. BOUTIN. No, we are not.

Mr. THOMAS. What is the square footage involved in this maintenance and operation cost item of $1,220,000?

Mr. TURPIN. 940,000 square feet.

Mr. BOUTIN. And the rate is about 1.339 overall.

COMPARISON OF GOVERNMENT OWNED AND LEASED SPACE

Mr. THOMAS. Well, refer to page 23 and follow out this breakdown. Put the table on page 22 in the record.

(The table follows:)

Space financed by operating expenses, Public Buildings Service

Year	Average net square feet in millions			
	Total	Government owned	Leased	
			Square feet	Percent of total
1952	85.4	55.2	30.2	35.4
1953	87.7	56.2	31.5	35.9
1954	84.4	56.3	28.1	33.3
1955	80.1	56.4	23.7	29.6
1956	76.7	56.4	20.3	26.5
1957	75.4	54.9	20.5	27.2
1958	76.3	54.9	21.4	28.0
1959	77.1	55.1	22.0	28.5
1960	79.8	57.7	22.1	27.7
1961	84.9	62.9	22.0	25.9
1962	93.2	69.2	24.0	25.8
1963	99.1	72.6	26.5	26.7
1964	105.0	77.5	27.5	26.2
Change, 1952-64 (percent)	+23	+40	−9	

NOTE.—Total space increased by 23 percent; leased space dropped by 9 percent.

Mr. THOMAS. Page 22 shows a good table, on Government-owned-and-leased space and it breaks down the percentage. From 1952 down to 1964 it shows the Government-owned compared with leased square footage. It says, "Total space leased increased by 23 percent." That is that period of 14 years. It shows leased space dropped about 9 percent. Your first table shows it graphically and the next shows it by figures, by year.

In 1952 the total was 85.4 million square feet. That is leased and owned. Government-owned of that 85.4 million was 55.2 million; leased is 30.2 million. That makes 85.4 million. The table shows each year through 1964.

COST CHANGES IN GOVERNMENT-OWNED SPACE

Refer to page 23 and then turn to 18, dealing with the four items of operation and protection of Government-owned space, rental and operation of leased space, the temporary space, and moving costs incident to new building, and operation of communication facilities.

Now, on page 23 is shown square footage of 71,257,000 for 1963. That is operation and protection of Government-owned space, an amount of $13,046,000. That is the first item up here.

Now, it says "Changes."

You add 4,581,000 square feet at an annual cost of $6,871,000, which provides for servicing space in new buildings being completed in 1963 and 1964. You use a round figure of 375,000 square feet in 12 buildings to be completed in 1963 and 4,206,000 average square feet in 66 buildings to be completed in 1964.

You have 955,000 square feet at a cost of $2,043,000, which provides for servicing space in buildings transferred to GSA, including build-

ings 159 and 159–E and 160 and 213 at the Naval Weapons Plant in Washington, D.C.; Anchorage, Alaska, post office and courthouse; and 4100 Forest Park, St. Louis.

You haven't constructed this one at Anchorage?

Mr. BOUTIN. This is being transferred to us. This is not the new building in Alaska.

Mr. THOMAS. What are you going to do with the old one?

Mr. BOUTIN. It is transferred to us and we will occupy it.

Mr. SCHMIDT. That is an existing building where the Post Office has reduced its requirements in the building and have asked that we operate and maintain it from here on.

Mr. THOMAS. What are you going to do with it?

Mr. SCHMIDT. It is fully occupied, sir.

Mr. THOMAS. All they want then is a new one? Are you going to build one? Where are you building one in the next 2 or 3 years in Alaska?

Mr. BOUTIN. Juneau.

Mr. THOMAS. All this amounts to is you are going to transfer it and you are going to continue to maintain and operate it?

Mr. SCHMIDT. We will operate it and maintain it instead of the Post Office Department.

Mr. THOMAS. It is full now?

Mr. SCHMIDT. Yes; it is fully occupied.

Mr. THOMAS. Here is another item: 340,000 square feet at a cost of $510,000 to provide for servicing space in buildings vacated by the Post Office Department and transferred to GSA for general-purpose use progressivly during 1963 and 1964.

What do you mean by "servicing" here?

Mr. BOUTIN. Operating and maintaining, sir. This is located all over the place, Mr. Chairman. These are buildings where the Post Office Department has a leased facility built for their use and we convert the space to general-purpose space and make it a Federal office building and house agencies there instead of leased space. We are taking them out of leased space and putting them in our own property.

Mr. THOMAS. You have a reduction of 940,000 square feet showing a reduction of $1,220,000. That is the tempos around the D.C. Stadium that you are demolishing?

Mr. BOUTIN. That is right.

Mr. THOMAS. That is quite a price to pay for football and baseball.

Mr. BOUTIN. I think our choice here, Mr. Chairman, was to come before the committee and ask for substantial funds to modernize this space if we continued to use it. It was in rough shape.

Mr. THOMAS. Now you go back to $3.1 million which provides for partial improvement in janitoring service. That is what it means, isn't it?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. What was the total figure you gave Mr. Evins for your janitorial service in Government-owned space?

Mr. SCHMIDT. Slightly more than $30 million.

Mr. THOMAS. Does that include leased space?

Mr. SCHMIDT. The Government-owned space.

Mr. THOMAS. What is an approximate figure now for the leased space?

Mr. BOUTIN. That is a difficult one, Mr. Chairman, because most of the leases include servicing, so there isn't a breakdown between rent and services.

Mr. THOMAS. You have many of them there where you pay all the utility costs and maintain it too.

You have a plus item here which provides $1,130,000 for increased electricity consumption. It results from an additional electrical equipment item required by Federal agencies and new air-conditioning equipment.

You stated a while ago that you only had two places where you had a rate increase. The rest of it is increased consumption; is that right?

Mr. BOUTIN. No; two where the rate increase was significant enough for us to enter into the case.

Mr. THOMAS. Contest it?

Mr. BOUTIN. That is right.

Mr. THOMAS. $502,000 provides for increased Pay Act costs due to Federal Salary Reform Act of 1962.

One hundred and ten thousand dollars provides for the annualization of Wage Board rate.

Insert pages 23 and 24 in the record.

(The pages referred to follows:)

OPERATION AND PROTECTION OF GOVERNMENT-OWNED SPACE, $13,046,000

1963 program	Square feet 71,257,000	Annual cost $89,003,000
Provides for servicing space in new buildings being completed in 1963 and 1964; 375,000 average square feet in 12 buildings to be completed in 1963 and 4,206,000 average square feet in 66 buildings to be completed in 1964	+4,581,000	+6,871,000
Provides for servicing space in buildings transferred to GSA, including buildings 159, 159E, 160, and 213 at Naval Weapons Plant, Washington, D.C.; Anchorage, Alaska, Post Office Court; and 4100 Forest Park, St. Louis, Mo.	+955,000	+2,043,000
Provides for servicing space in buildings vacated by the Post Office Department and transferred to GSA for general purpose use progressively during 1963 and 1964	+340,000	+510,000
Reduction due to Government-owned space disposed of due to completion of new buildings	−940,000	−1,220,000
Provides for partial improvement in poor 1963 service level which is substantially below the 1962 level (considered the minimum acceptable level)		+3,100,000
Provides for increased electricity consumption and rate increases resulting from additional electrical equipment required by Federal agencies and from new air-conditioning equipment installed in Government-owned buildings		+1,130,000
Provides for increased paycosts due to the Federal Salary Reform Act of 1962. Includes annualization of increases effected in 1963, and cost of increases to be made during 1964		+502,000
Provides for the annualization of Wage Board rate increases granted between July 1 and Sept. 15, 1962		+110,000
1964 budget	76,193,000	102,049,000

RENTAL, OPERATION AND PROTECTION OF LEASED SPACE, $7,850,634

Reduction due to leased space released due to completion of new buildings	−985,000	−2,935,000
Provides for the annualization cost in 1964 of expansion space provided agencies during 1963 and for which such agencies will transfer appropriated funds to GSA for actual costs during 1963	+1,895,000	+9,158,634
Provides for rental payment cost of the Matomic Bldg., Washington, D.C., other than for public roads space which is to be financed directly by that agency	+40,000	+221,000
Provides for increased rental costs incident to the execution of new leases at current rental rates to succeed leases which by their terms have expired		+1,090,000
Provides for increased electricity consumption and rate increases resulting from additional electrical equipment required by Federal agencies and for additional air-conditioning equipment installed in leased buildings		+230,000
Provides for increased pay costs due to the Federal Salary Reform Act of 1962. Includes annualization of increases effected in 1963 and cost of increases to be made during 1964		+86,000
1964 budget	27,481,000	91,630,000

Mr. THOMAS. We have $9,158,634 to provide for the annualization cost in 1964 of expansion space provided agencies during 1963 and for which such agencies will transfer appropriated funds to GSA for actual cost during 1963. That will be a dangerous item for you. That will be hard to take care of. You have authority in one hand and you turn it loose with the other.

MATOMIC BUILDING COSTS

We have $221,000 increase for 40,000 square feet to provide for rental payment cost for the Matomic Buildings, Washington, D.C., other than for Public Roads space which is to be financed directly by that agency.

In other words, Public Roads picks up the rental on the garage.

Mr. BOUTIN. They reimburse us for their space, Mr. Chairman.

Mr. THOMAS. What is this extra $221,000 for?

Mr. BOUTIN. This is for all other costs.

Mr. DALY. On the Matomic Building, as the chairman will remember, we did not have rent money in the budget. We were going to buy the building and then we had a reversal by the court. The money in here is to provide for rent except for the space occupied by Public Roads.

Mr. THOMAS. What does that building cost you a year to rent? Do you pay utility costs and the maintenance and operation costs?

Mr. SCHMIDT. The total rent is $1,122,100, and the operation and maintenance——

Mr. THOMAS. Wait a minute. You pay the rent at what rate?

Mr. SCHMIDT. $1,122,100.

Mr. THOMAS. Do you have the entire building?

Mr. SCHMIDT. Yes, we have the whole building.

Mr. THOMAS. You pay rent every year to the tune of $1.1 million?

Mr. SCHMIDT. Yes, sir.

Mr. THOMAS. In addition to that do you have to pay for any maintenance and utilities?

Mr. SCHMIDT. $388,800 for servicing of space.

Mr. THOMAS. So it costs the taxpayers how much?

Mr. SCHMIDT. $1,510,900 a year.

Mr. THOMAS. Why should you have to pay $221,000 more this year than you paid last year?

Mr. SCHMIDT. Our budget last year did not include rental and this represents a net adjustment from the reimbursement by Public Roads and the total rental that we have to pay.

Mr. BOUTIN. Actually, this is the difference between what Public Roads pays and the total rental for the property.

INCREASED RENTAL COSTS FOR NEW LEASES

Mr. THOMAS. You have $1,090,000 here for increase in rents where you are going to renew a lease. How do you arrive at this figure?

Provides for increased rental costs incident to the execution of new leases and current rental rates to succeed leases which by their terms have expired.

If it is current rental rates and you draw up a new lease based on that, why do you have to go up $1.1 million for it?

Mr. BOUTIN. This is the best projection we could make, Mr. Chairman, of what it is going to cost us.

Mr. THOMAS. I am just reading this language:

Provide for increased rental cost incident to execution of new leases at current rental rates.

If you are already in the building and you are paying the current rate, why $1.1 million more? Is your language inaccurate or do I read it wrong?

Mr. BOUTIN. I think you are reading it wrong, Mr. Chairman. I think what we are referring to is current market value when we say current rent rates.

Mr. THOMAS. Where are you incurring this $1.1 million additional cost just in the District of Columbia?

Mr. BOUTIN. Nationwide.

Mr. THOMAS. How do you arrive at that figure?

Mr. DALY. These are leases, Mr. Chairman, that have expired, where we could not renew them at the present rate, where we had to pay a higher rate.

Mr. THOMAS. Is this a firm figure or is this an estimate?

Mr. DALY. This is a firm figure based on a number of leases that we know are expiring or have expired.

Mr. THOMAS. Then you have a plus item of $230,000 to provide for increased electricity consumption and rate increases.

That is all very interesting.

Mr. EVINS. You have a tremendous jump from $89 million to $102 million for Government-owned space and another jump from $83 million to $91 million for leased space.

TEMPORARY SPACE AND MOVING COSTS

Mr. THOMAS. Temporary space and moving costs incident to new building shows an increase of $780,000. This provides for additional cost of moving and space adjustments incident to the expanded new construction program. With the completion of new buildings during 1964 providing 6.9 million total net square feet—we have used two or three sets of figures for this item for 1964—the requirement for moving will be $1,291,000. Space adjustments will be $165,000. Temporary rental costs due to demolition of buildings, $324,000. The foregoing totals $1,780,000 during 1964.

When you get through, it is an increase of $780,000 over 1963; is that not right?

Mr. TURPIN. Yes, sir.

BUILDINGS MANAGEMENT FUND

EXPENSES AND EMPLOYMENT

Mr. THOMAS. Where are your green sheets on all this employment? [Reading:]

No personal compensation is paid directly from appropriated funds. Such costs are initially paid from the management fund and are excluded under other services.

Now you get down to the part of the budget that is not too explanatory.

Mr. TURPIN. Page 30 indicates total employment.

Mr. THOMAS. Is this the only place? We will insert page 30 in the record at this point.

(The page referred to follows:)

Statement of buildings management expense—1962, 1963, and 1964

BUILDING MANAGEMENT FUND PERSONNEL

Mr. THOMAS. Employment is shown on this sheet numbered 30, and this is the only place where you get it.

Can you supplement this right quick with some salary sheets? Let's see what your employment is in the way of grades and compensation.

You have under this building management fund 19,665 for 1962; 20,545 for 1963. That is an increase roughly of 1,000.

Now, next year you increase it by 1,700. You go from 20,545 to 22,255. Now, it is this buildings management fund that takes care of the vast majority of your expenses, plus the $250 million you are being reimbursed from other agencies.

Can you give us some information on the type and character of your employment?

Mr. TURPIN. On page 36 of the green sheets are the figures in total, and also the average grades.

Mr. THOMAS. That still doesn't get to it by any means.

All this gives is the average salary of ungraded positions: $4,676 for 1963; $4,650 for 1964. This is the first time I have seen anbody going down in pay.

Average GS grade, 4.4:4.4. Average GS salary, $5,287 in 1963; $5,264 in 1964, and next is what I have already read, which is your ungraded positions. Your average GS salary is down from 1963 about $23 per year and your ungraded positions go down $26. I wondered if you wanted to check those figures again.

Mr. BOUTIN. This is accounted for by people coming in at lower grades or at the base of a grade.

Mr. THOMAS. Give us a little peep at what type of people you have in here. You have space management, design and construction. You favor us with each other activity. Somtimes you give us a breakdown, and you show us by grades you have a 16 and a 15, and so forth, and sometimes you don't do it. Tell us something about your big fund here.

Mr. TURPIN. The green sheet is in employment, where it is financed directly from the appropriation. For the building management fund, we do have the green sheets here that appeared in the regular printed budget. I do not believe it was made a part of this justification, but I have them here, which give the detail of the numbers of each grade in the building management fund.

Mr. THOMAS. Is that secret?

Mr. TURPIN. No, sir.

Mr. THOMAS. Then why didn't you have it in all these budget justifications that we have?

Mr. TURPIN. It is in the printed budget and it was left out here solely in the interest of trying to keep the volume down.

Mr. THOMAS. Who is paid from the big fund here?

Mr. TURPIN. All employees in the Building Management Division are paid from this fund.

Mr. THOMAS. What is the total?

Mr. TURPIN. The total, sir——

Mr. THOMAS. We have already read them into the record, haven't we?

Mr. TURPIN. Yes, sir. Total estimated average employment for 1964 is 22,255, of which 16,646 would be financed from the operating expense "Public Buildings Service" appropriation.

Mr. THOMAS. Where are the rest?

Mr. TURPIN. 943 are financed from the "R. & I." appropriation.

Mr. THOMAS. What is R. & I.?

Mr. TURPIN. "Repair and improvement" appropriation.

Mr. THOMAS. Go ahead.

Mr. TURPIN. 810 are financed from other GSA appropriations.

Mr. THOMAS. What are they?

Mr. TURPIN. That would be principally the "Federal supply" appropriation for the FSS warehouses. The "NARS" appropriation for the maintenance of the record centers and the "S. & C.M." appropriation for the maintenance and operation of depots operated by GSA. Then, there are other agencies for which we do reimbursable work, which accounts for an estimated 3,856 of the employees, making a total of 22,255.

CONSTRUCTION SERVICES FINANCING

Mr. THOMAS. What about construction costs? What is that dollar-wise; $252 million?

Mr. TURPIN. Reimbursements to this fund are estimated at $172 million. Salary and expense costs for strictly construction projects would be from our construction services fund.

Mr. THOMAS. Well, you have two funds; do you not?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. What is the other one, now?

Mr. TURPIN. Construction service fund.

Mr. THOMAS. What is your general management fund?

Mr. TURPIN. We have two related to PBS. They are the buildings management fund and the construction services fund.

BUILDINGS MANAGEMENT FUND FINANCING

Mr. THOMAS. Are you losing any money on that work you do for other agencies?

Mr. TURPIN. No, sir; it is based on actual costs. The reimbursement is just what it costs to do the job.

Mr. THOMAS. Did you say 3,600 or 3,800 employees?

Mr. TURPIN. It is estimated for 3,856.

Mr. THOMAS. In round figures, 4,000 out of your 22,200?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. You are supposed to do $22 million worth of work and how much are you doing under your own financing?

Mr. TURPIN. The total, sir, is in round figures, $375 million, of which $204 million would be from the OE, PBS appropriation and the rest from other agencies and other GSA appropriations.

Mr. THOMAS. Then what have you for other agencies and what you are charging yourselves? Your total operations under "Buildings management" for GSA alone is how much?

Mr. TURPIN. $204 million.

Mr. THOMAS. You set it up in your budget as $216 million.

Mr. TURPIN. I was speaking here of the part that goes through the buildings management fund.

Mr. THOMAS. Just say for "Buildings management" alone, $204 million?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Now, for other agencies how much?

Mr. TURPIN. $172 million. That is other agencies.

Mr. THOMAS. How about the $75 million for repair and improvement, doesn't that come through the big fund? What makes up that $172 million? You have "Repair and improvement," $75 million, and you have "Building management" of $204 million.

Mr. TURPIN. What runs through buildings management fund that makes up this $172 million from other agencies and GSA appropriations is mostly "Buildings operation" and "Maintenance and repair" as distinguished from "New construction."

Mr. THOMAS. Is any of your new construction charged against this account?

Mr. TURPIN. No, sir.

Mr. THOMAS. No salaries at all?

Mr. TURPIN. No, sir.

Mr. THOMAS. Go ahead.

Mr. TURPIN. Of the $172 million there is about $75 million that is composed of maintenance, repairs and job order type work.

Mr. THOMAS. Now, you are referring to your modernization program of $75 million. That is all charged to this account, isn't it?

Mr. TURPIN. Only the maintenance repair, which is about $20 million. Just the day-to-day maintenance repairs.

Mr. THOMAS. And the other $55 million, where is that charged?

Mr. TURPIN. It is charged directly against the "R. & I." appropriation. That is where we enter into contracts with private contractors.

Mr. THOMAS. Is there not some way by which you can simplify all this?

Mr. TURPIN. Mr. Chairman, I would say it is our intention to try to present it in as understandable form as we can, but it is pretty complicated by having so many different funds and serving so many agencies.

Mr. THOMAS. We are not fussing with you, we are just asking you if there is any way you can simplify it. There is no argument with anything you have said.

Mr. TURPIN. We will try to do a better job of expressing it.

Mr. THOMAS. Tell us about it now. What can you do?

Mr. TURPIN. On this buildings management fund where we are doing work for practically every other agency in Government——

Mr. THOMAS. Including yourselves.

Mr. TURPIN. Including ourselves. It is difficult to present it in a form which gives the total picture but yet gives all of the individual pieces. It gets pretty voluminous.

Mr. THOMAS. Perhaps our complaint should be—if you want to call it a complaint, and we don't mean it in harsh terms—that you could break it out a little more clearly so we understand what your problem is and understand what you are doing. If you can clearly set it out and break down each component part, it might help a little. You have $204 million under your "Buildings management" and that is the biggest item that you have. That is even larger than your new construction item.

Then you have another item here of about $75 million for your repairs. Do you commingle that day to day, and where you let at least two-thirds of it by contract? Then you have a fourth category where you are doing for other people.

Mr. TURPIN. The buildings operation of $150 million referred to earlier in the justification is all in the buildings management fund. It was $99 million for construction and repair type jobs, of which only a small part is included here. The part that is run through the buildings management fund on a job order basis.

Mr. THOMAS. Where are you charging your people now?

Mr. TURPIN. The money going through this fund is charged to the particular job involved.

FINANCIAL STATUS OF BUILDINGS MANAGEMENT FUND

Mr. THOMAS. You have set up your buildings management fund here. What is your cash position? What is your cash position of your fund now?

Mr. TURPIN. As of December 31, sir, the principal assets included $10 million in cash; $16 million work in process; and accounts receivable totaling $19 million. The principal liabilities included accounts payable, $22 million; deferred credits of $14 million and annual leave liability $9 million.

Mr. THOMAS. What amount of money do you have unobligated as of January 1 or any date you have convenient there?

Mr. TURPIN. Well, sir, we have no new obligation authority in this fund as such. There was an original appropriation of capital to the fund of $3.5 million to provide working cash and that remains intact.

Mr. THOMAS. Did I understand you to say you had $10 million unobligated?

Mr. TURPIN. No, sir. That was just cash, $10 million. At the time this fund was set up there was an appropriation of $3.5 million. There was also authority to transfer to the fund the then existing assets or equipment that was being used in the buildings operation. That totaled $4,384,175, which gives us a total capital of $7,884,175.

BUILDINGS MANAGEMENT FUND EMPLOYMENT

Mr. THOMAS. How many people do you have employed in the District of Columbia in buildings management?

Mr. DALY. We do not have it broken down.

Mr. THOMAS. Do you have the green sheets on it? What is the classification? What is the nature of employment? Are they engineers or architects?

Mr. DALY. Of the 22,255 people, they break down on these general classifications. There are about 63 area managers, 260 building managers, 7,900 cleaners, 6,389 crafts, such as plumbers, carpenters, electricians, et cetera.

Mr. THOMAS. Where are your regional office managers charged?

Mr. BOUTIN. Regional administrators are charged to my budget. They are the only ones outside of the central office and the business service setup.

Mr. THOMAS. Where are the green sheets on the Washington office? How many people do you have charged to buildings management in the District of Columbia?

Mr. DALY. I do not have that figure, sir.

Mr. THOMAS. Give us a horseback opinion. You know how many people you have working for you in the District, do you not?

Mr. DALY. I think we can give you an estimate. We have a total of buildings management people under the fund of 22,255. Mr. Schmidt, what do we have in the regional buildings management, about 8,200?

Mr. SCHMIDT. About 35 percent.

Mr. DALY. About 35 percent of the 22,000 total employees in buildings management would be in the District of Columbia under the regional office here, sir.

Mr. THOMAS. All the people under buildings management are not chargeable to the Washington regional office.

CENTRAL OFFICE BM EMPLOYMENT

How many are chargeable to the central office?

Mr. DALY. Eighty-one, sir.

Mr. THOMAS. Where are the green sheets on those 81 and what do they do?

Mr. DALY. Included in the 81 would be the Assistant Commissioner for Buildings Management, his Deputy, and some of his staff.

Mr. THOMAS. Are they charged to the fund?

Mr. DALY. Yes, sir.

Mr. THOMAS. What is the classification of them?

Mr. DALY. Assistant Commissioner for Buildings Management is GS–16. His Deputy—correction, sir—Assistant Commissioner is a 17; his Deputy is a 16 and he has some Directors of his Divisions of GS–15 rank that are under him, sir.

Mr. THOMAS. How many 15's are there?

Mr. DALY. Four 15's sir.

Mr. THOMAS. Two supergrades, 4 15's, and you have 81 total?

Mr. DALY. Yes, sir.

Mr. THOMAS. What is their function? What does this office do in the District of Columbia?

Mr. DALY. This office is responsible for the buildings management operations all over the country. They are the people that actually develop the programs, work up the standards, make the inspections, and supervise the job.

Mr. THOMAS. You mean they do all of that?

Mr. DALY. Yes, sir.

Mr. THOMAS. It is their job to supervise which programs?

Mr. DALY. That is cleaning, maintenance of the buildings, operation of the elevators, day-to-day repairs of the plumbing, the operation of the concessions, supervision of guards and protection, everything having to do with the maintenance and operation of the building as distinguished from the construction of the building.

BUILDINGS MANAGEMENT REGIONAL EMPLOYMENT

Mr. THOMAS. You have 10 regional offices. You have that exact setup in each of your 10 regional offices, have you not?

Mr. DALY. Yes, sir.

Mr. THOMAS. Detail how many you have in each of your 10 regional offices doing this.

Mr. DALY. It varies as between each regional office, Mr. Chairman, but generally speaking——

Mr. THOMAS. You had broken it down for your overall employment in your 10 regional offices. Now break down this function here.

Mr. DALY. In the typical regional office, this would include the Buildings Management Branch Chief, which in some regional offices is a GS–14, in other regional offices depending on the size, he would be a GS–13. It would also include the buildings managers and in some cases the area managers.

Mr. THOMAS. Let us be a little more specific. Take the Chicago regional office. You have 2,394 positions.

Mr. DALY. Yes, sir.

Mr. THOMAS. How many of them do you have in buildings management?

Mr. DALY. Buildings management, a GS–14 Division Chief, 5 GS–13 buildings managers, 2 GS–13 engineers, 4 GS–12 engineers, 2,382 other classifications, which would include cleaners, crafts, elevator operators, guards, electricians, plumbers, et cetera, sir.

Mr. THOMAS. And all of those are charged to the big buildings management fund?

Mr. DALY. Yes, sir.

Mr. THOMAS. You only have four 12's?

Mr. DALY. Four 12's charged to this fund, sir.

Mr. THOMAS. These people are not all in your building in Chicago, they are scattered all over the five States?

Mr. DALY. Yes, sir, over the region.

Mr. THOMAS. How many do you have in the Chicago office? These top 12 are all there?

Mr. DALY. No. The division chief would be there. That is the 14, and probably 6 engineers would be there, the 5 buildings managers, 1 of them may be, or 2 of them may be directly in Chicago, but the others would probably be in cities outside of Chicago.

FINANCING BUILDINGS MANAGEMENT EMPLOYMENT

Mr. THOMAS. I notice for this office your personnel compensation is $11,644,926. That is for fiscal year 1963. Where does all this money come from?

Mr. DALY. Mr. Turpin, would you want to reply to that question?

Mr. TURPIN. It is all initially financed through the BM fund in what we call the buildings management overhead account—the buildings management office in each region, and here in the central office all comes ultimately out of the OE, PBS appropriation.

Mr. THOMAS. You lost me with that last statement.

Mr. TURPIN. The staff in the central office who have the responsibility for administering the whole buildings management operation

and the staff in each of the 10 regional offices, the regional office itself, is initially financed through the buildings management fund and reimbursed from the OE, PBS appropriation.

Mr. THOMAS. It all comes out of the big fund?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. The big fund is partially implemented by this particular appropriation we are considering now?

Mr. TURPIN. OE, PBS; yes, sir.

Mr. THOMAS. And the other part by transferred funds from the other agencies?

Mr. TURPIN. That is correct, sir.

Mr. THOMAS. Is there any part in here for your modernization program? Do they have anything to do with it?

Mr. TURPIN. On the Post Office modernization program or the GSA?

Mr. THOMAS. All of your programs.

Mr. TURPIN. For what we call the day-to-day maintenance.

Mr. THOMAS. Only that?

Mr. TURPIN. Yes, sir, and that is identified in our budget under the R. & I. appropriation.

Mr. THOMAS. About $20 million?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Where are the employees for the other $55 million? Where are they paid from?

Mr. TURPIN. To the extent it involves force account people, it would be financed through the buildings management fund for the work we do for the Post Office, for example.

Mr. THOMAS. That is included in your $20 million.

Mr. TURPIN. The $20 million is that part that we finance out of R. & I. appropriation. When you talked about modernization, I thought you were talking about the Post Office, the special postal modernization authority they have for which they transfer funds to us to do work in postal space in post offices.

Mr. THOMAS. Yes. In other words, your $250 million from other agencies is made up of four or five parcels—construction of big buildings, modernization by the Post Office Department, et cetera?

Mr. TURPIN. Yes, sir, but the part of the $250 million that you refer to that deals with the new construction is not run through the buildings management fund. It is only where it involves job order work to existing Government buildings, that is run through this fund.

Mr. THOMAS. What does the green sheet show for employment in the District of Columbia?

Mr. TURPIN. That is the green sheet for the detailed employment, total employment, under the buildings management fund.

Mr. THOMAS. How many people are employed under buildings management? That is 19,000 for 1962 and 21,900 for 1964. You have about 750 here that are employed other than under the fund?

Mr. TURPIN. No, sir; the grand total under the fund, average employment for 1964, is 22,255, which includes your GS grades and the ungraded positions.

Mr. THOMAS. Does your sheet tally up here?

Mr. TURPIN. I believe it does, sir.

Mr. THOMAS. Total permanent, 22,615 for 1964, 20,656 for 1963, and 20,129 for 1962.

Mr. TURPIN. That was positions. I believe you will find average employment, the figure I was talking about, 22,255 for 1964.

JUSTIFICATION MATERIAL FOR BUILDINGS MANAGEMENT FUND

Mr. THOMAS. Let us look at the justification for the buildings management fund. Put pages 27 and 28 in the record and the schedule of income from the other agencies on page 29.

(The pages follow:)

BUILDINGS MANAGEMENT FUND

GENERAL STATEMENT

This fund finances, on a reimbursable basis, building management activities consisting of: Management, rental, operation, and protection of Government-owned and leased space in and outside the District of Columbia for housing Federal agencies; recurring repairs to Government-owned space under jurisdiction of General Services Administration; operation of joint-use communication facilities; protection and maintenance of excess and surplus properties; and maintenance and repair of sites or improvements thereon reserved for future construction of Federal buildings, including operation of space occupied by commercial tenants; and other related building services (66 Stat. 594). Retained earnings resulting from operations, after making provision for prior year losses, if any, are paid into the Treasury as miscellaneous receipts.

Operating costs for 1964 are estimated at $374.5 million, a net increase of $37.5 million over 1963, due mainly to net additional space to be serviced and an increase in operation of communication facilities.

1. *Buildings management*—(*a*) *Operation and protection of Government-owned space.*—Provides for operation and protection of 119.4 million average square feet of space in 1964 compared to 113 million average square feet in 1963 and 103.4 million average square feet in 1962. The change from 1963 reflects net additional space to be serviced due to construction of new buildings, buildings being vacated by the Post Office Department, and certain buildings being transferred to GSA for operation and protection.

(*b*) *Rental, operation, and protection of leased space.*—Provides for 42.5 million average square feet in 1964 compared to 40.6 million average square feet in 1963 and 37 million average square feet in 1962, based on currently projected programs of Federal agencies.

(*c*) *Operation and protection of purchase contract space.*—Provides for 1.3 million average square feet in 1964 with no change from 1963.

2. *Moving and space alterations.*—Provides for minimum of moving and related alterations based on experience factors derived from buildings management operations.

3. *Temporary space and moving costs incident to new buildings.*—Provides rents, alterations, etc., incident to setting up temporary quarters for agencies that must be moved to make way for demolition due to construction and moving agencies into temporary space or completed buildings.

4. *Operation of communication facilities.*—Provides for operation of telecommunication services and facilities for use of Federal agencies which will be transferred effective July 1, 1963, to the new Federal Telecommunications Fund established by Public Law 87-847, approved October 23, 1962. A supplemental to provide initial capital for this fund is included in the budget as an item proposed for separate transmittal in the section for transportation and communications service.

5. *Protection and maintenance, surplus properties.*—Provides for protection and maintenance of excess and surplus properties.

6. *Maintenance repairs.*—Provides for day-to-day maintenance to GSA operated buildings, Public Health Service facilities and other Government buildings under jurisdiction of General Services Administration.

7. *Security guarding.*—Provides extra guarding service for other agencies where specifically authorized by law.

8. *Operation and maintenance of sites held for future construction.*—Provides for maintenance and repairs of sites or improvements thereon reserved for future construction of Federal buildings, and operation of space occupied by commercial tenants.

9. *Job order work.*—Provides for special services and improvements to buildings for General Services Administration and other agencies, including work for the Post Office Department in connection with its modernization program.

10. *Other.*—Provides for program supervision of repair and improvement operations as distinguished from architectural and design activities initially financed from the Construction services fund, utility services furnished in the District of Columbia to buildings operated by other agencies and utilities to concessionaires. (From the Budget for 1964.)

Supplementary analysis of income for 1962 by source

GSA appropriations:	
Operating expenses, PBS	$168,535,079
Repair and Improvement	16,217,367
Strategic and critical materials	3,831,491
Expenses, supply distribution	3,277,470
Operating expenses, UDS	1,600,540
Operating expenses, NARS	650,657
General supply fund	376,717
Administrative operations fund	114,214
Additional court facilities	182,521
Consolidated working fund	339,837
Minor amounts from other funds	222,098
GSA transfer accounts from other agencies	14,899
Income from GSA appropriations	195,362,890
Income from other agencies:	
Executive Office of the President	6,364,499
Judiciary	350,618
Legislative	708,572
Department of Agriculture	5,365,252

Other income	1,275,060
Total buildings management fund revenue and other receipts, 1962	287,571,366

INCOME FROM OTHER AGENCIES

Mr. THOMAS. Who is your biggest customer?

Mr. DALY. Department of HEW, now.

Mr. THOMAS. Executive Office of the President, $6.3 million; Department of Agriculture, $5.3 million; Department of Defense, $14.1 million; HEW, $16.7 million; Justice, $2.49 million; Post Office Department, $16.5 million; Treasury, $4.6 million; Housing and Home Finance Agency, $5.8 million; Federal Aviation Agency, $2.2 million; Veterans' Administration, $1,268,000. They have a large construction unit. What are they doing spending money with you? Your total income from other agencies, $286,296,306. I used the figure of $252 million. I see our figures do not exactly gibe.

Mr. TURPIN. Sir, this was the actual for 1962 and the total there from other agencies in 1962 was about $90 million.

Mr. THOMAS. Gentlemen, turn to page 30 and look this over. You will get a bird's-eye view of what this catchall fund does. They do not break it down other than this table.

Moving and space alteration: You break it down to average employment, 156 people in 1962, in 1963, it is 196; 1964, 196, and your dollars, $1,595,000 in 1962, 1963, $1.9 million, protection and maintenance, surplus properties, $900,000.

Your guard duty costs more than you sell it for?

Mr. BOUTIN. No, sir.

Mr. THOMAS. Are we getting more than 6 percent now?

Mr. BOUTIN. On real property we are doing substantially better.

Mr. THOMAS. We will go into that after a while.

OPERATION OF COMMUNICATION FACILITIES

Operation of your communications facilities, telephone and rapid written, $26,747,199. That is the dollar cost for 1962. That goes up to in round figures to $32 million in 1963 and for 1964 it is $50,653,000. Where is that money we were going to save?

Mr. BOUTIN. This is based on use, Mr. Chairman, and we are getting substantial additional use, particularly in telegraph work.

Mr. THOMAS. We have 1,762 people involved in it for 1964 and in 1963 you had 1,432. In 1962 you had 1,182.

Mr. BOUTIN. We have taken over a substantial number of switchboards from other agencies, too, in this consolidation program.

Mr. THOMAS. Tell us more about this now. What about your operation of your communications facilities? Give us some detail. I do not find very many details in your justifications. Give us some now.

Mr. CONRAD. In connection with the 1964 projection, Mr. Chairman, the total dollar volume you see projected there together with the total number of personnel which would be the operators required to operate the system——

Mr. THOMAS. What is the system? You have telephone and rapid written. What is that?

Mr. CONRAD. Rapid written is the teletype system.

Mr. THOMAS. You have long lines that carry the spoken word and you have your own version of Western Union?

Mr. CONRAD. Our own leased teletype system; yes, sir. On the teletype system we are expecting to go to 75 million words in fiscal year 1963 and to a capacity of 150 million words in 1964. For this increased volume we need additional teletype operators, and is the reason for the increase reflected in the number of teletype operators.

Mr. THOMAS. You had better get first things first; what is the purpose of this system? How does it operate? Why do you need 1,700 employees? What do they do? Where are they located?

Mr. CONRAD. There are 1,762 man-years, sir, of which 513 apply to teletype operators and the other 1,249 to switchboard operators, who will be located at the Government switchboards in different cities throughout the country where our leased telephone system serves the Federal agencies. The teletype operators are located in each one of the teletype stations and at our teletype centers scattered around the country.

Mr. THOMAS. These are all Indians? How many chiefs do you have?

Mr. CONRAD. None. Of the employees listed in 1964, sir, the average grade is 4.3.

Mr. THOMAS. How many of them do you have located in the central office here?

Mr. CONRAD. There are none in the central office, sir.

Mr. THOMAS. No managers?

Mr. CONRAD. No.

Mr. THOMAS. All in the regional offices?

Mr. CONRAD. Yes, sir.

TELECOMMUNICATIONS SYSTEM OPERATION

Mr. THOMAS. How long has this system been in operation?

Mr. CONRAD. The Government has had a teletype system since about 1945.

Mr. THOMAS. Does this serve anything except the civilian agencies?

Mr. CONRAD. This serves all the civilian agencies of the Government and it also has a compatibility with the military networks.

Mr. THOMAS. What do you mean a compatibility?

Mr. CONRAD. The ability to interconnect and exchange traffic. This is administrative traffic. I would like to qualify it to that degree.

Mr. THOMAS. This cost is going up every year. Why does it go up?

Mr. CONRAD. By virtue of the increased requirement of the Government for communications services.

Mr. THOMAS. Is this service to other agencies on a reimbursable basis?

Mr. CONRAD. Yes, sir.

Mr. THOMAS. What do you charge them?

Mr. CONRAD. Our rate per word on the teletype, or on the rapid written word, at the moment is 15 mills, which is about one-third of the commercial rate.

TELECOMMUNICATIONS CUSTOMER AGENCIES

Mr. THOMAS. Who is your biggest customer now?

Mr. CONRAD. The four biggest customers of the teletype system right now are Treasury, Justice, Interior, and GSA in that order.

Mr. THOMAS. How much of this $50 million do you use?

Mr. CONRAD. The $50 million that is reflected there is the total communications cost for the communications operation that will be financed in the building management fund, and you will see $39 million there is for the voice program and $11 million for the other programs.

Mr. THOMAS. At this point give us a list of your customers, how you make up this total figure of $50 million.

What will be the source of your fund? What part is the GSA actually charging to itself for communications and where does the remainder of the $50 million come from?

Mr. CONRAD. All agencies, to a varying degree, are our customers. General Service charges itself the same rate that it charges all of the other using agencies, Mr. Chairman.

Mr. THOMAS. What part of that $50 million is chargeable to GSA?

Mr. CONRAD. About $7.5 million of the $50 million is chargeable to GSA. This includes $2 million for actual communications services, and $5.5 million provided by "Operating expenses," PGS appropriation for operators' salaries.

REIMBURSEMENT TO WESTERN UNION

Mr. THOMAS. And in addition to that do you have any bill from Western Union?

Mr. CONRAD. We pay Western Union for the facilities which we lease from it.

Mr. THOMAS. These are all Western Union lines you are using, are they not?

Mr. CONRAD. The entire picture that you see represented here would be Western Union lines that you see represented in the rapid written portion.

Mr. THOMAS. You do not pay Western Union any bill other than rental of its lines. You do not pay them for sending messages, do you?

Mr. CONRAD. No, sir.

Mr. THOMAS. What about A.T. & T.?

Mr. CONRAD. We lease their circuitry as well in the same way that we do Western Union.

Mr. THOMAS. Out of your $50 million GSA spends $7.5 million of it. Who is your next big user?

Mr. CONRAD. In 1964 the big customer for combined communication services would be NASA based on a recent traffic survey. They depend upon us, to a great extent for communications.

Mr. THOMAS. Can you read into the record the amounts for each?

Mr. CONRAD. I could supply that for the record, Mr. Chairman, if I may.

Mr. THOMAS. At this point insert that in the record.

(The information requested follows:)

Estimated distribution of fiscal 1964 income by agencies, communications operations

[In thousands]

NASA	$6,108	SBA	$789
Defense	5,697	Labor	647
Treasury	5,434	CSC	630
HEW	4,677	NLRB	571
Agriculture	3,197	AEC	454
Interior	2,393	State	399
Commerce	2,050	U.S. courts	321
GSA	2,021	All other	1,969
VA	1,847	GSA (operators' salaries paid from "Operating expenses," PBS)	5,463
PO	1,615		
HHFA	1,533		
FAA	1,422		
Justice	1,416	Total	50,653

Mr. THOMAS. Who is your next largest?

Mr. CONRAD. On the voice program we have NASA, DHEW, FAA, and Commerce. On the rapid written portion of the program the biggest single customer, as I indicated, is Treasury, with GSA the fourth largest.

Mr. THOMAS. They make their own justification for their funds and then transfer it to you?

Mr. CONRAD. They pay the bill that is submitted to them by GSA for this service.

MESSAGE TRANSMITTAL

Mr. THOMAS. You might give us a little insight into the mechanics of the system. How does it work? Suppose HEW wants to send a teletype message. How do they do it? Do they send it from their own installation and it is automatically billed by you.

Mr. CONRAD. This is true; yes, sir.

Mr. THOMAS. Does it require any special installation or equipment?

Mr. CONRAD. Yes, sir.

Mr. THOMAS. What about that?

Mr. BOUTIN. Yes, sir; Mr. Chairman. It requires the installation of equipment at the office where it is going to be sent.

INITIAL FUNDING OF SYSTEM

Mr. THOMAS. What amount of money did we appropriate for this purpose 2 years ago to set up the equipment? You really got started good then.

Mr. BOUTIN. That was in the voice program, Mr. Chairman.

Mr. THOMAS. What was the amount of that money, do you remember?

Mr. BOUTIN. How much did we get 2 years ago?

Mr. CONRAD. $850,000.

Mr. BOUTIN. How much of this was for equipment?

Mr. CONRAD. $32,000 for office equipment.

SAVINGS DUE TO TELECOMMUNICATIONS SYSTEM

Mr. THOMAS. How is this working out, Mr. Administrator? Have you been able to save anything?

Mr. BOUTIN. In the rapid written we save about one-third by consolidating within one agency rather than have each do its own. In the voice communications, the new program we just started, we save about 25 percent. That is our immediate goal and we are going to better that as we go along.

Mr. THOMAS. You have a cost here of $50 million. Without this program what would that $50 million be? Would be be $55 million, or what?

Mr. CONRAD. About $65 million.

Mr. BOUTIN. $65 million very easily, probably a little better than that.

Mr. OSTERTAG. Will the chairman yield there?

Mr. THOMAS. Surely.

VOLUME OF BUSINESS ESTIMATES

Mr. OSTERTAG. Do you have any prior estimates of what the several agencies are going to require for this next year?

Mr. BOUTIN. We have estimates on what they are going to require based on current usage and their own forecasts of what they are going to require on the rapid written, yes. On the Voice we are just beginning so all we can use is what their telephone bill actually was last year.

Mr. OSTERTAG. Out of this $50 million which you are budgeting, how much of that will be reimbursed to GSA?

Mr. CONRAD. The entire $50 million.

Mr. BOUTIN. Part of which we will reimburse to ourselves from other funds.

Mr. OSTERTAG. Where does that money go?

Does it revert to the Treasury?

Mr. BOUTIN. This is a break-even proposition. We are reimbursed to the exact extent of expenditures; is that correct?

Mr. CONRAD. This is correct.

Mr. OSTERTAG. In other words, you are not actually budgeting this. If you are reimbursed and you have it in your funds you have it twice.

Mr. BOUTIN. These are the funds that go through the BM fund itself. This is the funding vehicle for it.

Mr. TURPIN. This is not a request for new obligation authority. It is only an estimate of the volume of business.

Mr. OSTERTAG. That is the point.

Mr. JONAS. Would you yield?

Mr. OSTERTAG. Yes.

NATURE OF SAVINGS DUE TO TELECOMMUNICATIONS SYSTEM

Mr. JONAS. I would like to read the following response by Mr. Boutin last year to Mr. Thomas' question apropos this increase in cost as a result of increased usage. Mr. Thomas said:

I cannot see where the big savings will come from. The long-lines people now have the business. Will this entail more talking on the part of the Government? What is the other side of the coin?

Mr. BOUTIN. I do not think it will result in a curtailment of the use of the service, but if we have the lines additional use will not entail additional cost anywhere and proper use of telecommunications might possibly result in reduced paperwork.

Mr. BOUTIN. That is correct. I still stand by that statement, Congressman.

Mr. JONAS. You mean you stand by the statement "additional use will not entail additional cost anywhere?

Mr. BOUTIN. We have to look at this from a Government-wide point of view. By bringing these communications together in one ball of wax, we can reduce the cost because we can secure lines cheaper through Telpak on voice communication.

Mr. JONAS. You told us last year it would save $15 million a year, but that is not reflected in this increase in the budget. You said the increase is caused by increased use but you told us last year that increased use would not increase the cost.

Mr. BOUTIN. Increased use won't increase the cost within the limitations of the equipment itself. If you have to add equipment, you are going to increase costs, but yet your unit cost, which is the important thing here, consistently goes down.

Mr. JONAS. It was not quite accurate, then, to tell us last year additional use would not increase the cost.

Mr. BOUTIN. Within the equipment available that statement is true.

Mr. TURPIN. Congressman, a good bit of this $50 million estimated volume of business in 1964 is the voice part of the communication.

Mr. JONAS. $39 million of it.

Mr. TURPIN. Yes, sir; and a lot of that estimated increase is from incorporating into the GSA communications system elements that are now being operated by other agencies.

Mr. JONAS. But you told us last year that was your objective, to bring them all within the scope of this system, and that you were going to save $15 million a year.

Mr. BOUTIN. I think in the long pull we are going to save substantially more than that a year, Congressman, but you would have to sit here with the budget of every single agency in order to make an accurate comparison of what the overall cost to the Government is.

Mr. EVINS. This is what I was interested in. I daresay you cannot show a single agency of Government has reduced their overall communication cost by reason of using your services. They are still using the other services also. I daresay they have not cut down a single person. Can you show reduction in cost to other agencies and a reduction in personnel in other agencies by reason of this service?

Mr. BOUTIN. Yes, we can. We can show, for instance, on the number of switchboards we have already consolidated that we have cut down employment 218 positions.

Mr. EVINS. In other agencies.

USE OF FACILITIES BY AGENCIES

Mr. THOMAS. What part of the civilian agencies' voice business, long-distance calls, is included in this cost of $39 million? Is it mandatory that the civilian agencies use this service?

Mr. BOUTIN. Not mandatory to the point where somebody is going to get fired if they do not, but the Bureau of the Budget has directed

that they shall use it and we have only been in operation now, I would like to point out, 3 days. We only cut over this system the 15th of February, so it is pretty hard to forecast in absolute terms.

Mr. THOMAS. Let's go back to rapid written, teletype, $11.4 million for 1964. Last year it was $6.6 million. Is it mandatory that the other civilian agencies use this service? What part of them use it; what part of them still rely on Western Union?

Mr. BOUTIN. I would say the vast bulk of it. Bob, can you give accurate percentages here? It is so cheap they just do use it, Mr. Chairman. It is very well accepted.

Mr. CONRAD. A great many agencies do use the GSA teletype system. However, many agencies, such as the Veterans' Administration, the Bureau of Old Age and Survivors' Insurance, have their own teletype network which they also lease from Western Union or from A. T. & T. and it is these networks that eventually will be unified into one system, and this is the overall mission which we have.

(Discussion off the record.)

BM COMMUNICATIONS SERVICE

Mr. THOMAS. A big part of your $374 million expense in the BM fund is for your buildings management. This is not all of your property management feature by any means; $50 million is for communications. It is about 15 percent.

Mr. BOUTIN. About 13 percent, or one-eighth.

PERCENT OF TOTAL TRAFFIC HANDLED

Mr. CONRAD. We do not make any claim that we handle all of the teletype messages for the civilian agencies. Our figures show we handle about 23 percent.

Mr. THOMAS. You are beginning to tell us something we have been asking you about for 10 or 15 minutes. Nobody said you did. We were just trying to get that information. Give it to us now. You handle about 23 percent of the teletype messages of the civilian agencies of Government? Is that it?

Mr. CONRAD. Of the teletype; yes, sir.

Mr. THOMAS. What about the long lines, the voice?

Mr. CONRAD. On the voice program, I do not have an exact figure on how much of the voice program we do handle, but I know we will service all of the civilian agencies of the Government and the military in 300 locations. The total communications bill for the civilian agencies is about $100 million. This gives you an indication, this $50 million, of how much we serve.

Mr. JONAS. May I ask a question?

Mr. THOMAS. Yes, sir.

Mr. JONAS. Is the basis of the charge minutes used, seconds, or words? It would be words on teletype, I guess, and on voice is it minutes?

BASIS FOR DETERMINING SAVINGS

Mr. JONAS. How can you ever prove that there will not be more talking than before, when the facts show that the costs go up every year?

Mr. BOUTIN. I do not think we can prove that, Congressman, at all. I think all we can prove is for the number of minutes talked that we save a substantial amount of money versus commercial rates. I think that is about all we can prove.

Mr. EVINS. What I would be interested in is your showing the amount of reduction in the other services. If you could do that, you would be showing something.

Mr. BOUTIN. The one problem is we do not see those other budgets so we do not know.

Mr. EVINS. The agencies that do business with you can tell you how much they have cut down their other services, if they have, which I doubt.

Mr. JONAS. Just one final question, Mr. Chairman. I would like to emphasize that point.

Mr. THOMAS. Mr. Jonas.

Mr. JONAS. The fact we operate the system, there is no way to tell whether that operates to encourage more use of it or not and, if it does, that would reduce any prospective savings, would it not? If it stimulates use and causes more talking and communication, the total cost would go up. We have been a little skeptical in here about that very thing, or at least I have. I know when you think you are getting something for nothing there is a temptation to use it, or if it is at a reduced rate there is a temptation to use it. If you have to pay for these things out of a budget and justify them, one agency after another, you can keep a little more control over the talking that goes on than you can if you have a wide-open service, can you not?

METHOD OF BILLING CUSTOMERS

Mr. CONRAD. Congressman, I believe I should clarify one point if I may, and that is, when you asked how the billing was rendered, when I said call minutes, I was referring to the billing made by GSA to the participating agency; the billing by the telephone carrier to GSA is based on the number of circuit miles, and we could talk on this particular circuitry 24 hours a day without increasing the cost to the Government by virtue of the use of that circuit.

Mr. JONAS. That makes a considerable difference.

Mr. CONRAD. It makes a great deal of difference. I am sorry I misunderstood your earlier question.

Mr. THOMAS. What did you say, about the billing to the agency, to Mr. Jonas?

Mr. CONRAD. On the billing to the agencies, GSA bills the agencies on the number of call minutes that the agency uses during a billing period.

Mr. JONAS. You have been in it long enough to see whether those charges are going up?

Mr. BOUTIN. No, we have not. We have been in it 3 days. We have not got a good fix on it.

BUILDINGS MANAGEMENT FUND EMPLOYMENT

Mr. THOMAS. You have personnel compensation, departmental and field, on page 36 of the green sheets. I do not see any exact breakdown. That goes back to the big fund. How many have we in the

District of Columbia, in the Central Office? Eighty-one in Building Management?

Mr. BOUTIN. I now have that exact figure. We have 8,200 in the District of Columbia and 11,679 outside the District of Columbia, as of December 31, 1962.

Mr. THOMAS. I really meant the departmental office. I beg your pardon. Is that figure of 81 correct for departmental?

Mr. DALY. Yes, sir; that is correct.

Mr. THOMAS. But in the District you have a total of how many?

Mr. BOUTIN. 8,200.

OTHER OBJECTS COSTS IN BUILDINGS MANAGEMENT FUND

Mr. THOMAS. We have personal benefits of how much?

Mr. TURPIN. Mr. Chairman, on page 36, for the buildings management fund as a whole, we have the object-class breakdown. That is in the buildings management fund in total. For the personnel benefits, as indicated, there are $7,747,000 for 1963, and $8,421,000 for 1964.

Mr. THOMAS. I have it circled here. What is your travel bill? You have $55,000?

Mr. TURPIN. Yes, sir, $55,000; and for the motor pool, travel by motor vehicles, $155,000.

Mr. THOMAS. You have rent, communications, and utilities, $143,395,000 for 1963; and it goes up to $169,251,000 for 1964. Where is that $50 million?

Mr. TURPIN. What $50 million, sir?

Mr. THOMAS. For communications. Where does that fit into this figure?

Mr. TURPIN. That $50 million, so far as this table is concerned, would be broken between the costs for personal services that are involved, switchboard operators and teletype operators, and the rental of the lines would be under 23.

RENT, COMMUNICATIONS, AND UTILITIES—BUILDINGS MANAGEMENT FUND

Mr. THOMAS. Let us break object class 23 down. You have three different classifications. Utilities, which I presume is heat, light, and water; you have communications, long lines, and teletype; and you have rent. You lump them all in here for $169 million, which is about a $26 million increase over 1963. What part of that is paid by GSA, and what part is paid by other agencies?

Mr. TURPIN. Mr. Chairman, we do not have available here a breakdown of that. We can supply that for the record.

Mr. THOMAS. What part of your communications, of this figure of $169,250,000, is chargeable to GSA?

Mr. TURPIN. Mr. Conrad estimated a while ago that would be about $7.5 million.

Mr. THOMAS. Who spends that other $162 million?

Mr. TURPIN. I thought you said for communications.

Mr. THOMAS. What part of that $169 million is for communications? You have lumped three big ones in these: rent, communications, and utilities. The utility item is a tremendous one.

Mr. TURPIN. Yes; and the rent item is a tremendous one, too. For example, the rent alone would be $101,806,000 of the $169,251,000. The other——

Mr. THOMAS. That is in Government-leased space, then.

Mr. TURPIN. That is leased space; yes, sir. The other $68 million would be for utilities, and what is paid to the communications companies for the rental of the lines.

Mr. THOMAS. What does GSA pay for the utilities—for its own account, not for everybody in the fund?

Mr. TURPIN. The breakdown on that basis, Mr. Chairman, is what we do not have available at this time. We can supply it, but we do not have it available with us.

(The information supplied follows:)

Breakdown of object class 23 for buildings management fund, fiscal year 1964

	Total	OE, PBS	Reimbursable
Rent, communications, and utilities:			
Rent, including services financed by lessor	$101,806,000	$78,991,000	$22,815,000
Utilities, electricity, water, gas, etc	27,006,000	21,632,000	5,374,000
Communications	40,439,000	227,000	40,212,000
Total	169,251,000	100,850,000	68,401,000

PRINTING AND REPRODUCTION—BM FUND

Mr. THOMAS. What about your printing and reproduction item? Where is that? It is $250,000 this year against $250,000 last year and $231,000 in 1962. You do not do any printing and reproduction for anybody except yourself, do you?

Mr. TURPIN. This would be any printing requirements involved in the whole buildings operation, which includes some printing in connection with the specifications and plans for some of the repair and renovation work financed through the fund.

Mr. BOUTIN. Booklets and pamphlets of all types.

Mr. THOMAS. Can you give us any concrete information? You ask for $250,000 here. Suppose we just cut this item out. You do not know anything about it, and we do not.

Mr. BOUTIN. What type of items would this include?

Mr. SCHMIDT. This would include all of our manuals and printed materials on standards, job order work forms that are used, time cards, and all that sort of thing used in the whole building operation throughout the country.

Mr. THOMAS. Have you examples of your printing and reproduction items here? Have you any samples of your booklets or instructions or whatever it is you print? How do you arrive at this round figure? A round figure always excites curiosity. It is the same in 1964 as this year. What did you spend in 1962 for this item? Do you have that figure?

Mr. SCHMIDT. $231,000.

Mr. THOMAS. I want you to look at something besides this green sheet. Have you any secret information over there? What did you spend?

Mr. TURPIN. Mr. Chairman, we do accumulate in our accounting records summary information by object class, but all of our accounting reports that are used for management control purposes in the buildings operations are by the unit cost of the different elements of work performed in the fund.

Mr. THOMAS. Can you give us any sort of breakdown? How much do you spend for printing for the use and benefit of the agency itself, GSA, and what do you spend for the use and benefit of the other agencies that you serve?

Mr. TURPIN. We can develop that figure and submit it for the record, sir.

(The information supplied follows:)

Breakdown of object class 24, buildings management fund, fiscal year 1964

	Total	OE, PBS	Reimbursable
Printing and reproduction:			
Printing, general, handbooks, manuals, forms, etc.	$185,000	$160,000	$25,000
Drawings and specifications, bidding documents, etc.	65,000	6,000	59,000
Total	250,000	166,000	84,000

OTHER SERVICES—BM FUND

Mr. THOMAS. Item 25 is a big item, "Other services," $39 million in 1962, $65,600,000 in 1963, and $66,341,000 in 1964. What is that?

Mr. TURPIN. That is contractual services in connection with the maintenance done by other than our force account; also for any repairs to equipment and items of that nature, any contractual services done by outside suppliers.

Mr. THOMAS. Architect fees?

Mr. TURPIN. No, sir. Contractual services under the buildings management fund, in connection with the buildings operation.

Mr. THOMAS. That comes under your construction program, then?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. You see what we were driving at this morning when we said we gave you A-plus, but. We still give you that A-plus, provided you really get in here next year and fix this up right. Do you think you can do it so it can be understood? If you can understand it, we will be right behind you. You do not have all the information we want so will you have it next year? Is that a deal?

Mr. TURPIN. Yes, sir. It is our desire to try and present it the way the committee wishes it.

Mr. THOMAS. We are not fussing at you. Do not get in that position. Do not take the defensive. You are doing all right.

SPACE MANAGEMENT

Let's take a look at space management. Insert pages 37, 38, and 39 in the record.

(The pages follow:)

Space management

	Amount	Average employment		
		Department	Field	Total
1963	$4,503,000	77.5	372.5	450
Change	+400,000		+12.0	+12
1964	4,903,000	77.5	384.5	462

HIGHLIGHT

"This activity provides for (a) acquisition of real property by lease, purchase, exchange, or donation, including appraisal and management of building sites pending construction, (b) assignment and reassignment of Government-owned and leased space, and (c) review, analysis, and determination of Federal space requirements and the development of programs and projects for fulfillment." (From the budget for 1964.)

Justification of the activity is presented under 3 subactivities summarized below:

Summary of performance cost

	1962	1963	1964
a. Acquisition	$2,050,612	$2,303,800	$2,489,400
b. Assignment and utilization	1,416,259	1,720,200	1,915,100
c. Space requirements	311,751	479,000	498,500
Total cost or estimate	3,778,622	4,503,000	4,903,000

JUSTIFICATION

GSA's responsibilities in the acquisition and utilization of federally owned, and leased office space in the United States were expanded and given greater emphasis by Executive Order 11035, dated July 9, 1962. Additional employment and funding are essential to fully carry out the objectives of this order and at the same time continue to provide the space needs of a growing Federal population.

a. Acquisition.—Under this subactivity real property or interest therein is acquired by lease, exchange, purchase, or donation; building sites held by GSA are put to productive uses pending construction of Federal facilities; and an appraisal service is provided for all PBS programs and, upon request, for other agencies.

Total cost or estimate:

1962	$2,050,612
1963	2,303,800
1964	2,489,400

The total increase of $185,600 in 1964 over 1963 consists of $85,600 due to pay costs authorized by the Federal Salary Reform Act of 1962, and $100,000 for in-lease contract appraisals.

Acquisition workload

	1962	1963	1964
Number of leases in effect	6,778	6,950	7,800
Total square feet of space under lease (million)	42.9	44.8	48.3
Number of parcels acquired for new construction	127	200	300
Appraisals completed:			
Staff	1,023	1,233	1,492
Contract	336	411	497
Total appraisals	1,359	1,644	1,989

During fiscal year 1963 the number of urban centers where GSA will lease space will be increased from 128 to 282. This will result in the transfer to GSA in 1964 of approximately 850 leases involving approximately 2.1 million square feet of space currently administered by the Departments of Defense, Agriculture, and Commerce. GSA will become the sole leasing agency in these areas, thereby eliminating any competition between Government agencies for available space which will ultimately result in savings made possible through lease consolidations, conversions to longer term leases, and uniform assignment practices.

In-lease activity has increased from 5,198 leases in 1957 to 6,778 in 1962, an increase of 30.4 percent. The appraisal activity associated with the in-lease program is generally handled by staff appraisers; however, employment in this area has not been increased commensurate with the increased appraisal workload. As a result, it is estimated that during 1964 it will be necessary to contract for 86 of the 345 increase in appraisals to be performed over the 1963 level. An increase of $100,000 is included in the estimate for this purpose.

b. *Assignment and utilization.*—Under this subactivity, agency requests for space are evaluated and determination made with respect to source of available space. Specifications are prepared detailing space requirements for acquisition by lease or by construction. Functional space studies are conducted and partition and furniture layouts prepared for the assignment of space in all buildings in the Federal construction program. Existing Government-owned and leased space is inspected periodically to determine use being made of the space to insure economic utilization by occupying agencies.

Total cost of or estimate:

1962	$1,416,259
1963	1,720,200
1964	1,915,100

The total increase of $194,900 in 1964 over 1963 consists of $77,900 due to pay costs authorized by the Federal Salary Reform Act of 1962; $104,000 for 12 additional field positions; and $13,000 for travel.

Assignment and utilization workload

	1962	1963	1964
Square feet under assignment responsibility (million)	146.36	153.39	163.96
Employees housed	558,835	583,200	606,400
Assignment actions completed	7,630	8,100	9,200

The amount of space which GSA will manage under its assignment and utilization responsibility will increase 10.57 million square feet in 1964 over 1963, brought about by the completion of new Federal buildings now under construction, extending the number of urban centers for which GSA will have space management responsibility, and the transfer of certain property to GSA.

In order to accomplish improved space utilization in compliance with Executive Order 11035, an accelerated inspection program is being undertaken which will require additional employment and travel funds in 1964. Through better utilization of Government-owned and leased office space, a reduction of space occupancy per person from 153 square feet in 1962 to below 150 square feet by the end of 1964 is proposed. Accomplishment of this objective will produce substantial savings to the Government by obviating the need for an equivalent amount of additional space.

c. *Space requirements.*—Under this subactivity, long-range Federal space needs are identified and plans for the fulfillment of such needs are developed. From community surveys and other data obtained, nationwide programs of improvements, extensions and conversions, new construction, leasing, and disposals are developed with due regard to priority of need. Specific public building projects are identified and prospectuses prepared for consideration and approval by the Public Works Committees of the House and Senate pursuant to the Public Buildings Act of 1959. In addition, prospectuses are prepared for consideration and approval by the appropriate committees of the Congress for certain lease construction of space, pursuant to general provisions of the Independent Offices Appropriation Act for 1963.

Total cost or estimate:

1962	$311,751
1963	479,000
1964	498,500

Communities having sufficient concentration of Federal employment are surveyed to determine Federal space requirements and housing plans are developed. Resurveys are made and revised housing plans developed when required because of expansion or curtailment of an agency's activity in an area. During 1962 there were 258 communities surveyed for the first time and 188 communities resurveyed. A total of 500 surveys, comprising both initial and resurveys, are scheduled for accomplishment in both 1963 and 1964.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing.—$3,840,400 for 467 positions distributed as follows:

	1962			1963			1964		
	Department	Field	Total	Department	Field	Total	Department	Field	Total
Acquisition	27	166	193	31	182	213	31	182	213
Assignment and utilization	28	147	175	32	159	191	32	171	203
Space requirements	15	25	40	16	35	51	16	35	51
Total positions	70	338	408	79	376	455	79	388	467
Average employment	64.5	313.2	377.7	77.5	372.5	450	77.5	384.5	462

Other objects.—$1,062,600 provides:

(1) $292,500 personnel benefits, including $250,000 retirement contribution, $26,200 health benefits, and $16,300 group insurance.

(2) $339,300 for contract appraisals of and advertising for property to be leased to the Government, and other contractual services.

The remainder of $430,800, or 8.8 percent of total estimate, includes:

(3) $171,000 travel based on 6,334 days at $27; $28,200 motor pool services; $7,100 transportation charges.

(4) $95,700 communications; $59,800 printing.

(5) $50,200 supplies; $18,800 equipment.

Mr. THOMAS. In 1963 you had $4,503,000. You go up to $4,903,000 in 1964. You break down your personnel. You had a total of 450 average employment for 1963, which goes up 12 to 462. It is broken down: In the field you had 372 in 1963 and 77 in the Department. For the Department this year you have the same figure, 77, and the field increases to 384. [Reading:]

This activity provides for (a) acquisition of real property by lease, purchase, exchange, or donation, including appraisal and management of building sites pending construction, (b) assignment and reassignment of Government-owned and leased space, and (c) review, analysis, and determination of Federal space requirements and the development of programs and projects for fulfillment.

You break this down between acquisition, assignment and utilization, and space requirements. We are interested in assignment and utilization. That goes up from $1,416,000 in 1962, to $1,720,000 in 1963, to $1,915,000 in 1964. [Reading:]

GSA's responsibilities in the acquisition and utilization of federally owned and leased office space in the United States were expanded and given greater emphasis by Executive Order 11035, dated July 9, 1962. Additional employment and funding are essential to fully carry out the objectives of this order and at the same time continue to provide the space needs of a growing Federal population.

If we give you more authority, you have to have more people to carry out the authority.

Mr. BOUTIN. We would have needed them whether we got the authority or not. We have been woefully inadequate.

Mr. THOMAS. Let us see what you say about acquisition. That has gone up from $2,050,000 in 1962, to $2,303,000 in 1963, to almost $2,500,000 in 1964. [Reading:]

Under this subactivity real property or interest therein is acquired by lease, exchange, purchase or donation; building sites held by GSA are put to productive uses pending construction of Federal facilities; and an appraisal service is provided for all PBS programs and, upon request, for other agencies.

APPRAISAL FEES

What do you spend on that appraisal service? You will make 1,492 staff appraisals in 1964 against 1,233 in 1963, and 1,023 in 1962. Adding contracts, it totals around 2,000 in 1964. What do you do, go out and get private appraisers? What do you pay them?

Mr. DALY. The average appraisal, Mr. Chairman, will cost about $1,000. It will vary, but it averages out about a thousand dollars.

Mr. THOMAS. You have a regular yardstick, a regular fee scale, have you not? What do you pay?

Mr. BOUTIN. Actually, Mr. Chairman, we have a list of approved appraisers for any given area of the country. We go out to them and ask them to submit proposals to appraise a property. We take the lowest proposal we can get in terms of time.

Mr. THOMAS. Is the unit cost based upon the value of the property, the size of it, or what is the yardstick? By what is it governed?

Mr. KNOTT. Time spent.

Mr. DALY. Time spent and complexity of the problem.

Mr. BOUTIN. These are the two big ones.

Mr. THOMAS. Do you usually allow them so much per diem—$100 a day, or what?

Mr. DALY. No, sir; it is a flat rate as far as we are concerned.

Mr. THOMAS. Whether 5 minutes or 5 days?

Mr. DALY. Yes, sir.

Mr. THOMAS. What is the usual fee?

Mr. DALY. About $1,000 for the type of work that we have been doing recently.

Mr. THOMAS. That is pretty indefinite. Have you not a yardstick to go by? I might want to get in the appraising business.

Mr. DALY. I think, sir, we probably could furnish for the record the actual fees for a number of appraisal projects that we have had in the past. As I say, it averages out about a thousand dollars.

Mr. THOMAS. How many sites did you buy last year?

Mr. BOUTIN. 127 in fiscal 1962, and we are anticipating 200 in 1963 and 300 in 1964.

Mr. THOMAS. You bought 127 different properties in 1962. Can you give us a description of some of them and the appraisal fee you paid?

Mr. DALY. I do not believe I have that information, Mr. Chairman. I will have to furnish it.

Mr. BOUTIN. You see, on architects, Mr. Chairman, we do have a sliding scale of fees, but in appraisals we do not have. We go out for proposals. You would be amazed at the difference in the proposals for the same piece of property. One fellow may say, "I will do it in 90 days, guaranteed, and charge you $30,000." Another fellow in the same community may say, "I couldn't do it for 6 months, and I will charge you $42,000." They are not even close.

We start out first having our own in-house appraisal to establish an estimated reasonable fee for this property, taking into consideration complexity, urgency, and all these things. We have no such pattern of fees.

Mr. THOMAS. We have already looked into the personnel setup here. This is appropriated funds charged directly to what? This does not come out of the building management fund, does it?

Mr. KNOTT. No, sir.

Mr. THOMAS. Why not? Why make fish out of this when you make fowl out of the other? You have your green sheets in here. The next one will not have a green sheet.

Mr. TURPIN. This is an identifiable function which really is not a part of the buildings operation as such.

Mr. THOMAS. You have to have a piece of land before you can put a building on it. You are not buying land just to be buying it. You are going to build something on it. Maybe you have to buy a piece of land to protect a building, or something like that, but normally it is connected with the construction of a building. You could argue about that.

Mr. JONAS. How much did you pay last year for appraisals?

Mr. BOUTIN. We have that figure and will supply it for the record.

(The information supplied follows:)

A total of $161,996 was spent for contract appraisals in 1962.

SELECTION OF APPRAISERS

Mr. JONAS. How do you select your appraisers?

Mr. BOUTIN. An appraiser who wants to get on our approved list can submit his qualifications. We have our own in-house appraisers that rule on the qualifications of that appraiser. It would depend, if he wants to qualify for industrial-type properties, he must have substantial experience and be recognized as an authority in this matter, experienced in court testimony.

Mr. JONAS. There is no need to have a list of approved appraisers on file in an area where you are not acquiring property.

Mr. BOUTIN. You never know when you are going to need them, Congressman. We try to have a group of approved appraisers.

Mr. JONAS. Do you try to maintain a nationwide list of appraisers?

Mr. BOUTIN. Yes.

Mr. JONAS. City by city?

Mr. BOUTIN. Yes. We use this list with other agencies, too. If we get a call from another agency and they ask, "What do you know about appraisers in Buffalo?" for example, we say, "Here is a list of approved appraisers we have for the type of property you are interested in."

Mr. OSTERTAG. Mr. Administrator, I am a bit confused as to where you are budgeting money for acquisition of sites. Is this money separate and apart from the money that is appropriated for sites planning and design?

Mr. BOUTIN. Yes.

Mr. OSTERTAG. In other words, it is associated with it to a certain extent, but moneys in the other fund would not be used for acquisition of property?

Mr. BOUTIN. In the sites and expenses appropriation, would be the money actually spent for the acquisition of the property, not for the events leading up to it.

Mr. THOMAS. This is salaries and expenses.

Mr. OSTERTAG. In other words, the money here is just for administration costs.

Mr. BOUTIN. Yes.

Mr. THOMAS. Let us come back in the morning, gentlemen, at 10 o'clock. Mr. Schmidt, bring something about your appraisers in the morning, giving us whatever information is available.

TUESDAY, FEBRUARY 19, 1963.

Mr. THOMAS. The committee will please come to order. We were looking over space management yesterday and talking about contract appraisals and advertising.

Were you able to come up with some figures on that?

Mr. DALY. Yes, Mr. Chairman. Mr. Schmidt has some figures on that.

Mr. THOMAS. Will you hold that in abeyance for just a moment? You have a travel item of $171,000, plus $28,200 for motor pool services and $7,100 for transportation charges.

You have $95,700 for communications, and $59,800 for printing. Also, $50,200 for supplies, and $18,800 for equipment. That does not give us much information, does it?

The committee has been anxious to get the agencies to curtail appreciably their travel bills; also the communications, and the printing and binding, and supplies and equipment, where possible.

Could you give us a breakdown of these items, and comparable figures for 1962, 1963, and 1964?

SPACE MANAGEMENT EMPLOYMENT

You were good enough, Mr. Budget Officer, to give us a breakdown of your personnel, which is very helpful. In the department you had, in 1962, 1 GS–17, 1 GS–16, 4 GS–15's, 12 GS–14's, 9 GS–13's, and 9 GS–12's. In the field you had no 17's, no 16's, 2 GS–15's, 12 GS–14's, 34 GS–13's. It does not vary too much in classification through 1963 and 1964.

I notice in 1964 in the field you still have no GS–17 and GS–16, but three GS–15's; but in the department you have four GS–15's, which is an increase of two GS–15's.

What are the qualifications of these people? Are they architects, or engineers, or what?

Mr. DALY. Mr. Chairman, in Washington the GS–17 is an Assistant Commissioner for Space Management. It is not necessary that he be either an architect or an engineer, because they are more concerned with the real estate side of the business than, actually, the technical side.

There is also a GS–16 who is a Deputy Assistant Commissioner for Space Management.

Then, with respect to the GS–15's, there is one GS–15 who is the director of the standards staff. That is the staff that actually works out the occupancy guides for the various departments and agencies. There is a GS–15 who is the Director of the Acquisition Division. That is the division which is concerned with the acquisition of leased space and acquisition of sites. Then there is a GS–15——

Mr. THOMAS. Are all these people what we call expert real estate men?

Mr. DALY. Yes, sir.

Mr. THOMAS. What are the qualifications of a man who is to allocate space, who has to do with the assignment of space? What is his training and experience, and background?

Mr. DALY. That is a difficult function, and we have found, Mr. Chairman, that, generally speaking, we have to train our own people. If we can get someone with some architectural training, that is very helpful, because this has to do with the space layout within the building so we can conserve space and eventually get down to this figure of 140 square feet per person.

Mr. THOMAS. You are getting the cart before the horse there, are you not? That is the job of the architect. He cannot change the space after it is handed to him. He has to assign it and utilize it in the shape it is given to him, does he not?

Mr. DALY. Yes, sir. The point I was making, though, sir, is that, by scientific arrangement of workflow and furniture, we can get more people in a given area of space, and the type of people we have in the Assignment and Utilization Division are people who are skilled in that line of work—in space layout—to get the best usage out of the space we have in the buildings.

Mr. THOMAS. Where did they acquire that skill? Do you train them? How do you pick him in the first place? If he does not know anything about the business, how are you going to pick him? If you are to train him, what do you require him to have—a Ph. D. in math or psychology?

Mr. DALY. No, sir. A young man with a background in business administration can learn this. As I say, if you are fortunate enough to get a young architect or someone who has a feel for space and mathematics, it is helpful. By and large, we have had to train our own people in this particular field.

Mr. THOMAS. What do your people in the field do?

Mr. DALY. Mr. Chairman, a typical field office for the Space Management Division would be a Chief of the Space Management Division, who would be a GS–14 or GS–15, depending on the size of it. He would have the same type of functional activities under him.

Mr. THOMAS. In your 10 regional offices, how many people do you have assigned to space management?

Mr. DALY. In the 10 regional offices, in 1964 we will have a total of 388 full-time positions.

Mr. THOMAS. And 80 in the District of Columbia, is that correct?

Mr. DALY. In 1964, 79 departmental, sir.

Mr. THOMAS. And 388 in the field.

Mr. DALY. Yes, sir.

Mr. THOMAS. That is about 40 to the office, averaging the big ones and little ones?

Mr. DALY. Dallas, for example, has 33 people.

Mr. THOMAS. What do the 79 people in the District of Columbia do, if you have 388 in the field? That is where the work is done, is it not?

Mr. DALY. Yes, sir, but the people in the District of Columbia, for example——

Mr. THOMAS. This 79 is not in your field office of the District of Columbia. This is the headquarters.

Mr. DALY. That is the departmental headquarters, that is correct, sir. The departmental people have to review some of the work and then they are the people, Mr. Chairman, who actually pull together our prospectuses and do the work in connection with building up the program and directing the activities of the field.

Mr. Schmidt, do you want to add anything to that?

Mr. THOMAS. Do you mean you have 79 chiefs and 388 Indians?

Mr. DALY. No, sir, I will not agree that all of the 79 are chiefs. We have some workers and some Indians in there, too, sir. For example——

Mr. THOMAS. Let us see. There are 40 GS–11 to GS–17. They are certainly chiefs, are they not? You have 40 chiefs, and 388 Indians.

Mr. BOUTIN. In the central office, Mr. Chairman, I would not call anybody a chief below grade 15. They are all Indians. They are in there pitching every day. A good example of what is done in the central office——

Mr. THOMAS. That is just the point. You have 388 in the field where the work is done. What are they doing, pitching papers?

Mr. BOUTIN. They review many of the things that come in from the field. One of the most significant things are these occupancy guides which they put together. They sit down with Internal Revenue and determine their space requirements.

Mr. THOMAS. What authority does the field have? Does the field have to send everything up to headquarters to get approval?

Mr. BOUTIN. A lot of the significant work they have to. Another thing they do, before I forget it, Mr. Chairman, in the central office we get our space requirements in all our new buildings from the various agencies. The architects design the buildings. These people in space management lay out the space, lay out the desks, to get the best utilization of that space possible.

Mr. THOMAS. New buildings are a smaller part of your program.

Mr. BOUTIN. It is in new buildings, and also in existing buildings. We are reviewing the space on a day-to-day basis.

Mr. THOMAS. What do the people in the field do? Why have so many people in the field if they are not competent to do the job? They walk over the space and see it every day. Is that the reason you will have a travel bill of $171,000, that the people in the District of Columbia have to go down and doublecheck the people in the field?

SELECTION AND ACQUISITION OF SITES

Mr. BOUTIN. It has to happen occasionally, Mr. Chairman, but I think one of the big expenses here is on the acquisition of sites for new buildings. There is nothing any more controversial than selecting a site.

Mr. THOMAS. We agree with you.

Mr. BOUTIN. We make community surveys. We get requests continuously.

Mr. THOMAS. Don't the people in the field do that? You do not have to send people from the Washington office when you have a grade 14 in the district office.

Mr. BOUTIN. This is normally handled in the region, but we do very frequently have to send these fellows out. Some of these sites are very, very expensive, and we have to make sure that we are right.

Actually, the statute requires the Administrator to make the selection, and I do not want to make a selection that I do not think is a good one. We review these things very carefully.

Mr. THOMAS. The statute deals with the Administrator, and you are responsible for your agency, but no one expects you to go out and do everything.

Mr. BOUTIN. Let us put it this way: There is no passing the buck beyond me. I cannot blame anybody else. When I get my name on the line, I am the guy who is responsible.

Mr. THOMAS. That is what draws the blood, your name on the line. Anything short of that does not draw it.

Mr. OSTERTAG. Are decisions made in the field?

Mr. BOUTIN. Recommendations are made in the field.

Mr. OSTERTAG. And all of the final processing is in the central office?

Mr. BOUTIN. The final processing on the big ones is in the central office, but the smaller ones are done strictly in the field.

OTHER OBJECTS OF EXPENSE—SPACE MANAGEMENT

Mr. THOMAS. Give us a little preview of these "other objects." It appears to me they are getting out of line.

You use this sentence under assignment and utilization:

> The total increase of $194,000 in 1964 consists of $77,000 due to pay costs authorized by the Federal Salary Reform Act of 1962; $104,000 for 12 additional field positions; and $13,000 for travel.

We assume by that, printing and reproduction is the same as last year, and other services are the same as last year, supplies and materials are the same as last year, equipment is the same as last year. The only increase is for 12 jobs and a $13,000 increase in travel.

Mr. BOUTIN. Could I point out one thing, Mr. Chairman?

Mr. THOMAS. What about those items, though? Is that assumption correct?

Mr. TURPIN. That is correct, sir. There are 12 additional employees in 1964 over 1963, and they are all in the Assignment and Utilization Division.

Mr. THOMAS. What about the items besides 12 new jobs and $13,000 for travel? What about the "Other objects"—printing and reproduction, supplies and materials, equipment, and so forth?

CONTRACT APPRAISALS

Mr. SCHMIDT. One other increase in other services is $100,000 for contract appraisals.

Mr. THOMAS. You do not give us very much information here, do you?

Mr. Daly, what about your appraisals? You said they averaged about $1,000 each.

Mr. DALY. Yes. I would like Mr. Schmidt to speak to this point because we have some typical cases. Unfortunately, Mr. Chairman——

Mr. THOMAS. How much did you spend in the complete year 1962 for appraisals, and where did you spend it? Mr. Jonas asked for that yesterday. Give us a little detail itemization, if you will, please.

Mr. SCHMIDT. We spent $161,996 for contract appraisals in 1962. I do not have the exact locations where this money was spent. As Mr. Daly indicated, most of our——

Mr. THOMAS. We asked you yesterday and gave you all afternoon and all night to bring us detailed information on it. You have that information, surely.

Mr. SCHMIDT. Most of these appraisals are handled at field level. I have, however, selected some site acquisition appraisals from our records in the central office.

Mr. THOMAS. I thought these 79 people had traveled to the field and did the selecting. Now you are saying the field does it.

Mr. SCHMIDT. Most of the work is done at the field level. Only the more complicated cases are reviewed in the central office.

Mr. THOMAS. All right, please look through your records and give us a breakdown of that $161,000. How many cases were appraised? What was the fee for them? Can you name some of them? You said it averaged about $1,000 each. That would be about 138 appraisals.

Mr. SCHMIDT. Here are some typical appraisals.

Mr. THOMAS. We are not asking for typicals. We are asking what you did in 1962 for the $161,000.

Mr. DALY. We will furnish it for the record, sir.

Mr. SCHMIDT. We do not have a list of all those appraisals, sir.

Mr. THOMAS. When can you get it? We asked you yesterday to bring it in.

Mr. DALY. Yes, sir; but most of that detail is in the regional offices, and we are sending for it.

Mr. THOMAS. If you have no information here and you rely on the field, we will take out your 79 District of Columbia people. We assume that is the logical thing to do, because from what you have said, everything is done in the field.

Mr. OSTERTAG. I should think it would be a part of the records and responsibilities of your central office to have that.

Mr. DALY. I do not think we have it in the detail that the chairman wants. We will get it from the field and furnish it.

Mr. THOMAS. Apparently you do not have much that we want.

(The information supplied follows:)

APPRAISAL CONTRACTS AWARDED DURING FISCAL YEAR 1962

Financed from "Operating expenses, Public Buildings Service"

SITE DONATIONS

Mr. OSTERTAG. Before you leave space managament, may I ask just one question about donations, which is a part of your acquisition, is it not, Mr. Administrator?

Mr. BOUTIN. I did not get the question.

Mr. OSTERTAG. Donations.

Mr. BOUTIN. Donations have no part in here, other than donations to the Government.

Mr. OSTERTAG. That is what I mean.

Mr. BOUTIN. It would have no bearing at all on this appropriation. It would have bearing only on the "S. & E." appropriation. Whether we had money appropriated for the site or if we had a site donated, it would include only the cost of administration.

APPROVAL OF LEASES AND SITE ACQUISITIONS

Mr. EVINS. Mr. Administrator, have you a firm line that the people in the field approve up to a certain amount, and the Administrator in Washington approves beyond that, a larger amount? Have you such a line of division?

Mr. BOUTIN. We have as far as leases are concerned, Mr. Congressman. On acquisition of sites we have not, except in the accelerated public works program. We have no authorized projects yet, and that will be before Public Works tomorrow. If that comes to realization, because of limitations of time, we will delegate that to the field.

Mr. EVINS. All acquisitions come in to Washington, then?

Mr. BOUTIN. And are reviewed in Washington and are sent up to the Administrator for his approval.

Mr. EVINS. Some leases are approved in the field?

Mr. BOUTIN. A great many of the small leases are.

SPACE MANAGEMENT RESPONSIBILITY AND EFFICIENCY

The point I wanted to make, Mr. Chairman, is that the paragraph at the top of page 38, is one of the most significant in this whole section, because it speaks to workload and it indirectly speaks to additional efficiency within the Government itself, because we have increased the number of urban centers where GSA——

Mr. THOMAS. I have this underlined here.

Mr. BOUTIN (continuing). undertakes the leasing responsibility from the other agencies that are each doing their own leasing now.

Mr. THOMAS. You brought that on yourself, did you not, through your own regulations?

Mr. BOUTIN. We made the determination, that is correct, Mr. Chairman. I do not think we are doing our job until we blanket the whole United States and centralize this responsibility of management of space. We cannot do it until we develop sufficient skilled personnel to undertake the responsibility. This means if Agriculture has a little Soil Conservation office in a town, we will go in and manage the space for them—acquire the space and lay the space out, so we have maximum efficiency. This means somebody from the regional office must go into that town and see that space.

Mr. THOMAS. You are increasing your activities under the new Executive order and that is most commendable.

Mr. BOUTIN. That is correct.

Mr. THOMAS. That is the reason we pointed out two or three times we think it is a very important activity.

UTILIZATION OF EXCESS POST OFFICE SPACE

Mr. OSTERTAG. On that point, what do you do in a case where there might be a post office which would have, by modernization or improvements, space available for other Federal agencies?

Mr. BOUTIN. We make an economic evaluation of that building, Congressman, and we make a determination whether it is economically beneficial to the Government to convert it and keep it, or to put it up for disposal by sale or donation.

Mr. OSTERTAG. Have you jurisdiction over that, or would the Post Office Department have jurisdiction?

Mr. BOUTIN. The minute the Post Office moves out, it comes to GSA.

Mr. OSTERTAG. I did not mean moving out. I meant remodeling or modernizing the building to include other Federal agencies.

Mr. BOUTIN. In many cases, if they are modernizing postal space, we will join with Post Office and make it one project—we providing part of the funds and they providing part—to modernize the building for continued Federal use.

Mr. OSTERTAG. But, you have jurisdiction over requiring the Post Office Department to make it available.

Mr. BOUTIN. No; we do not.

Mr. OSTERTAG. I know of one or two locations where that might well be done.

Mr. BOUTIN. Frankly, Congressman, there are hundreds and hundreds of locations that we are reviewing with Post Office to see what we can do to modernize space and keep it for a long time.

COMMUNICATIONS COST—SPACE MANAGEMENT

Mr. THOMAS. What about this item of $95,700 for communications? What was your expenditure for 1962 and 1963 for communications?

Mr. TURPIN. In 1962, sir, it was $86,890, as compared with an estimate for 1963 of $95,700; and the same for 1964.

Mr. THOMAS. Has not telecommunications cut down the bill? Apparently not.

Mr. BOUTIN. Most of this is increased postal costs.

Mr. THOMAS. Mail costs? Can you break it down?

Mr. BOUTIN. Have you a breakdown on that, Mr. Daly?

Mr. DALY. I have a breakdown, sir, with respect to the telephone charges. Equipment rental, mileage charges, $42,700. Tie-line service cost, $10,000. Long-distance phone calls, $35,000. Teletype services, $8,000.

Mr. THOMAS. That is more than $95,700, is it not?

Mr. DALY. $95,700.

Mr. THOMAS. What was your postal cost? I did not get that.

Mr. BOUTIN. Where did you include that, Mr. Daly?

Mr. DALY. The postal costs are carried under "Service direction" and not under "Space management."

Mr. THOMAS. How much was that?

Mr. TURPIN. $35,000.

Mr. THOMAS. You add that, then, to your $95,000, and you come up with how much? About $130,700 for communications.

Mr. TURPIN. I think Mr. Daly was just giving the breakdown on the communications costs for the space management activities, and not the OE–PBS area.

Mr. THOMAS. We asked him, and he said about $35,000 was mail costs.

Mr. TURPIN. Yes, sir. The total payment that we make to the Post Office Department for postage fees for this OE–PBS area is $35,000.

Mr. THOMAS. What part of that $35,000 is allocated to space management?

Mr. DALY. We do not have that breakdown. We will supply it.

(The following was supplied for the record:)

The breakdown is $24,240 for space management, $3,700 for design and construction, $2,800 for program planning, and $4,300 for service direction.

PRINTING COSTS—SPACE MANAGEMENT

Mr. THOMAS. What do you do for the printing item of $59,800?

Mr. DALY. Mr. Chairman, this item represents the printing or occupancy guides, layout plans, regulations, and procedures that have to do with other agencies, our manuals and procedures, and handbooks. I think the Administrator has some samples.

Mr. THOMAS. Here is one the Administrator has handed us entitled "Occupancy Guide." How often is this printed, and what does it cost? How many copies do you print?

Mr. DALY. How many occupancy guides do we have?

Mr. SCHMIDT. We have a total of 47 guides issued to date. We expect to issue another 11 by the end of April.

Mr. THOMAS. Does the guide go to one particular bureau? This one is headed "Bureau of Reclamation, Regional Offices, U.S. Department of Interior."

Mr. DALY. That is correct, sir. We issue a guide, for a particular bureau or agency, which sets forth the standards that are applicable to its particular type of work.

Mr. THOMAS. How often do you issue these guides to the bureaus?

Mr. DALY. We will issue it once, and update it as it becomes necessary.

Mr. THOMAS. What will you do for your $59,800 for printing in 1964?

Mr. DALY. We think our printing bill in 1964 will be the same as it was in 1963, which was $59,800, and in addition to issuing the occupancy guides——

Mr. THOMAS. How many guides did you print in 1963?

Mr. DALY. Copies, sir? I would have to look it up. I do not have that figure.

Mr. THOMAS. How many do you intend to print in 1964?

Mr. DALY. In 1964, we have 11 more guides; but, Mr. Chairman, the guides are just part of the printing work. In addition, as I say, we have regulations, procedures, manuals, that our own people use——

Mr. THOMAS. Have you copies of them here?

Mr. DALY. Yes, sir.

Mr. BOUTIN. We have here various samples of printing that is done in the PBS area, Mr. Chairman.

Mr. DALY. Here is a handbook on the appraisal of real property that our own people use.

Mr. THOMAS. What is your printing bill to run all the activities of the Public Buildings Service? This is just one segment of it.

Mr. TURPIN. For the items in here, excluding the buildings management program, it is $84,500. That is the total. Of course, the largest portion of that is in the space management activity, $59,800.

Mr. THOMAS. What is the charge against the fund? Give us a wrap-up figure for what you are spending in 1963 and 1964 for printing and binding in the Public Buildings Service, in all its ramifications and activities.

Mr. BOUTIN. While he is looking that up, Mr. Chairman, just about 100 percent of the printing is done in our own print shop.

Mr. THOMAS. Mimeographing?

Mr. BOUTIN. Offset, mimeograph, hectograph, flatbed, rotary, the whole gamut.

TOTAL OTHER OBJECTS OF EXPENSE—PBS

Mr. TURPIN. The total for printing and binding in the whole OE–PBS area was $326,000 for fiscal year 1962, and it is estimated at $334,500 in both 1963 and 1964.

Mr. THOMAS. What part of that $334,500 is contributed to by other agencies—10 percent?

Mr. TURPIN. I would estimate it would be over 25 percent, Mr. Chairman. That is the best estimate that I can make at this time; yes, sir.

Mr. THOMAS. That is reimbursable?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Do you have a table showing throughout the agency all your big 6 or 7 activities, your "Other Objects" breakdown—travel, supplies and material, printing and reproduction, all your "Other Objects?"

Mr. TURPIN. Not all the "Other Objects". We do have a summary table already prepared on the travel. We do not have a summary table ready at the moment on all the "Other Objects" for GSA in total. We have it for the individual appropriations.

Mr. THOMAS. Do you have it for your seven big services.

Mr. TURPIN. Yes, sir, we have a summary behind each of our service appropriations.

Mr. THOMAS. Put your finger on the one for PBS, the wrap-up on it.

Mr. TURPIN. On the PBS, sir, it would be in two pieces.

Mr. THOMAS. Where is it in the justification book?

Mr. TURPIN. On the OE, PBS summary, it is on page 49.

Mr. THOMAS. What does this purport to give?

Mr. TURPIN. This is the summary of all the obligations of the OE–PBS appropriations by object class.

Mr. THOMAS. Yes; this is it. Does this include it all?

Mr. TURPIN. That is the grand total; yes, sir.

Mr. THOMAS. You have travel, $307,500 for 1962, $400,000 for 1963, $450,000 for 1964. Then you have travel, motor pool, $32,500 for 1964. Printing and reproduction, $95,800 for 1962, $84,500 for 1963, $84,500 for 1964.

You gave us a complete wrap-up figure a while ago of $334,500.

Mr. TURPIN. That is correct, sir.

Mr. THOMAS. Why the inconsistency?

Mr. TURPIN. The summary page you are looking at on page 49 is the summary by objects, of the total OE–PBS appropriation. Then for the other services, which is the big sum, that is financed through the buildings management fund. Then on the printing and binding figure that you asked for, I took the figure of $84,500, which is for all OE–PBS items except the BM fund, and then I added to it the object class of $250,000 in the BM fund for printing and binding, which brought us up to $334,500.

Mr. THOMAS. You failed to show the $254,000 which is in the BM fund for printing and binding.

Mr. TURPIN. On that page, yes, sir; because it is included——

Mr. THOMAS. What do you mean, on that page?

Mr. TURPIN. It does show up, Mr. Chairman, under the buildings management fund on page 36, $250,000 for printing and reproduction.

Mr. THOMAS. This is the summary on the fund. Let us see if we have it checked out here. Printing and reproduction, $250,000; supplies and materials, $15,500,000. Travel is what—$55,000?

Mr. TURPIN. That part, yes, sir; that is financed through the fund.

Mr. THOMAS. This is only to the fund?

Mr. TURPIN. This is that part within the building operations that is financed through the buildings management fund.

Mr. THOMAS. Page 50 is your summary of all PBS.

Mr. TURPIN. That is all of OE–PBS, and that is the explanation of what is in the 1964 column that appears on page 49, Mr. Chairman.

Mr. THOMAS. Your figures do not dovetail. You have travel and transportation of persons, $482,500.

Mr. TURPIN. Sir, the figure of $482,500 is the explanation of the items appearing on page 49, just preceding it, which is $450,000 for travel, plus $32,500 for payments to the motor pool, which makes the $482,500.

Mr. THOMAS. These two figures come out all right, then?

Mr. TURPIN. Yes, sir, they do.

Mr. THOMAS. This is a somewhat weak justification of the green sheets on your summary sheet.

Then you have rents, communications, and utility services, $162,900. Here is where you charge in your $35,000 postage fees?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. And $127,900 for normal telephone and teletype service. You have a wrapup figure of $162,900 for rents, communications, and utility services. [Reading:]

Printing and reproduction of administrative and program materials, including floor plans of buildings for use in space assignment and utilization surveys, $84,500.

Do you know how many of these pamphlets you are going to publish this year for $84,500?

Mr. DALY. The $84,500 would cover not only the occupancy guides we spoke to earlier, Mr. Chairman, but many other pamphlets. I would have to give you an individual breakdown by type and kind.

EQUIPMENT

Mr. THOMAS. You have equipment, $733,100, which includes $150,000 for replacement of cafeteria equipment and $583,100 for furniture for GSA. Then you have administrative supplies and materials, $71,000. What part of that is charged to space management? You have $50,200 for supplies, $18,800 for equipment. For all the Public Buildings Service, you have $733,100 in here for equipment. You charge $18,800 to space management. Is that correct? What is that $18,800 for?

Mr. DALY. That is correct. That is the part of the equipment that is chargeable to the space management function, sir.

Mr. THOMAS. We assume that; but what is the $18,800 for?

Mr. DALY. That includes the cost of office equipment, such as typewriters, adding and calculating machines, and furniture such as desks, chairs, and so forth.

Mr. THOMAS. Does this equipment item of $733,100 include the big buildings management fund?

Mr. TURPIN. On equipment purchases out of the OE–PBS, it is charged directly to the OE–PBS appropriation rather than through the fund.

Mr. THOMAS. Then there is no charge against the fund for equipment?

Mr. TURPIN. For this equipment, no, sir.

Mr. THOMAS. For this equipment? Is there any charge against it other than this?

Mr. TURPIN. Mr. Schmidt, can you speak to that?

Mr. SCHMIDT. The buildings management fund is charged $400,000 for equipment. Of course, this is the operating equipment for the buildings.

Mr. THOMAS. Is that in addition to the $733,000?

Mr. SCHMIDT. That is right, sir.

Mr. THOMAS. You have $1,100,000——

Mr. SCHMIDT. For equipment.

Mr. THOMAS. What are you going to buy with it? What is the nature of it?

Mr. SCHMIDT. This includes all of our scrubbing machines, polishing machines—all of the equipment used in the management of buildings.

Mr. THOMAS. The only item you give us any information on, you have $150,000 for replacement of cafeteria equipment and $583,000 for furniture for GSA activities. Under space management you have $18,800, and not one word. Where are you going to put your cafeteria equipment, and what is that other $583,000 for? What is your $400,000 for in your buildings management fund?

Mr. SCHMIDT. The $400,000 is for building operation and maintenance equipment, as distinguished from these other administrative items, including furniture, which is office equipment, adding machines, calculators, and desks and chairs. The $400,000 is for that kind of equipment.

Mr. THOMAS. That goes into new buildings, or what does it go into?

Mr. SCHMIDT. New buildings and existing buildings where replacements are necessary.

Mr. EVINS. There is an added cost where you have the force account. If you had the contract service, you might not have to buy this million dollars worth of polishing equipment.

Mr. SCHMIDT. We would pay for a share of it, anyway, in the contract cost. The contractor has to buy and use the equipment.

Mr. THOMAS. Gentlemen, you see we get in a lot of difficulty here. We have two or three big funds here, and there is no justification on items of $1.1 million. I do not know what can be done, Mr. Administrator. We will have to tighten up some way so you can get a better view. Apparently, you do not know what it goes for, and your staff does not have any particular idea. Of course, if you do not know, we know a great deal less. It seems that we are all dealing with figures, without having any idea to justify the figures and what it is all about.

Mr. BOUTIN. Mr. Chairman, may I speak to that?

Mr. THOMAS. Please.

Mr. BOUTIN. We have tried to put in controls, and we have to evaluate whether it costs more to control than it is worth. For instance, on travel, I require the commissioners in the central office to approve every single bit of travel that is done out of the central office. The regional directors for the respective services have to approve all of the travel that is done out of the regional offices. We use, as a matter of firm policy, motor pools wherever it is possible. We have put tight controls on class of aircraft service, for instance, going other than first class the bulk of the time. We have reduced expenses substantially there.

I have told all the services to have a firm program of modernization of office equipment over a given period of years. Either have the poor equipment still around rehabilitated or if it cannot be rehabilitated, replace it. It has a marked influence on the effectiveness of the employee himself. This does not mean that I can look at every dollar and every single piece of equipment, but we try to get the best handle on it we can.

The same thing with cleaning buildings. Everything we can automate in the long pull will save us money. The day of the broom and the mop is an expensive day. When we can clean a corridor, for instance, with a piece of equipment that somebody just has to push and one man can do the work of several people normally, this is money saved.

I think we show that with the number of square feet increase that we have in custodials.

This is all brought about by acquisition of equipment.

To be able to tell you precisely that I can identify by item even 10 percent of the total $1,100,000, I cannot, but I have to depend upon the ability of these people to use their good judgment within the framework of some guidelines.

Mr. THOMAS. Mr. Administrator, we are not fussing at you. Certainly, out of the 15 or 20 staff here, somebody ought to be able to give the committee a little concrete information. We are not saying you do not need it, but we will have to guess along with your 30 people here who cannot supply any detailed information on it. We will have to guess just as you do.

CAFETERIA EQUIPMENT

Mr. BOUTIN. How about this cafeteria equipment, Mr. Schmidt. Can you identify where that is going?

Mr. SCHMIDT. I do not have the identification here, but it is in connection with new buildings. This is equipment other than the fixed equipment that will be put in these cafeterias. It includes the tables and chairs for the dining room and the other mobile equipment that is not supplied by the contractor. This is aside from the utensils and knives, forks, and chinaware.

Mr. THOMAS. Is this in new buildings or existing buildings?

Mr. SCHMIDT. It is predominantly in new buildings which will be taken over in fiscal 1964.

SIZE AND LOCATIONS OF CAFETERIAS

Mr. THOMAS. What size are these cafeterias, and where are they located? Do you put a cafeteria in every building?

Mr. SCHMIDT. No; not in every building, sir.

Mr. THOMAS. What is the nature of the buildings in which you put the cafeterias?

Mr. SCHMIDT. Only in the larger buildings where there is not a feeding service available commercially in the neighborhood.

Mr. THOMAS. I cannot imagine where that is in the United States.

Mr. SCHMIDT. That is, commercial facilities available to handle the lunch hour traffic in a reasonable length of time and within a reasonable distance from the building. We ordinarily prefer not to put any cafeterias in the buildings.

Mr. THOMAS. Do you have a cafeteria in each of your regional office buildings?

Mr. BOUTIN. No, sir.

Mr. SCHMIDT. No. The Chicago regional office building does not have. In the Dallas building we had one and closed it out.

Mr. THOMAS. These do not go in buildings occupied by GSA proper for your field offices and for your office here, but it is in buildings you are constructing for the use and benefit of some agency?

Mr. SCHMIDT. For other agencies; right, sir.

Mr. THOMAS. Can you give us any detailed information on it?

Mr. SCHMIDT. I do not have the detailed listing of the buildings, but I can supply that.

Mr. THOMAS How did you arrive at this figure?

Mr. SCHMIDT. It was arrived at by an analysis of each of the buildings and what it would cost to equip the cafeterias that will be located in these buildings.

OPERATION OF CAFETERIAS IN GSA BUILDINGS

Mr. THOMAS. How many cafeterias do you have throughout the PBS?

Mr. SCHMIDT. I do not have the figures, sir. We will supply it for the record.

(The following information was supplied:)

At the present time there are 50 basic food service cafeterias in operation in GSA buildings.

Mr. THOMAS. Do you maintain and operate all those cafeterias? Certainly you do not operate them.

Mr. SCHMIDT. No; we do not operate them.

Mr. THOMAS. Do you maintain them?

Mr. SCHMIDT. We have to maintain the space. We do not clean the space. The cleaning is done by the contractor.

Mr. THOMAS. Who maintains the cafeterias?

Mr. SCHMIDT. That is, the building itself is maintained by GSA, but the equipment and the cleaning and the servicing of the space is done by the cafeteria concessionaire.

Mr. THOMAS. You have an item in here for equipment, $150,000, have you not?

Mr. SCHMIDT. This is the equipment that is supplied by the Government, and the Government continues to own the equipment. The operator operates the cafeteria on a management basis.

Mr. THOMAS. The Government buys the equipment for the cafeteria?

Mr. SCHMIDT. That is right, sir.

Mr. THOMAS. Then some organization operates it. Is it by contract?

Mr. SCHMIDT. By contract. We take bids for the operation of the cafeterias.

Mr. THOMAS. The contractor does what? Does he maintain the equipment?

Mr. SCHMIDT. He maintains the equipment, and he services the space. He pays the Government a franchise fee for the operation.

Mr. THOMAS. Do you amortize the equipment here?

Mr. SCHMIDT. It is not amortized.

Mr. THOMAS. Is the price the contractor pays on a break-even basis?

Mr. SCHMIDT. It is more than that, sir. Usually some small amount accrues to the Government over and above the operating expenses.

Mr. THOMAS. I have been in a good many agency buildings, some of which come under your jurisdiction, and the employees of the building have an employee committee and they run the cafeteria and they do a bangup good job of it. They set the price of the food. They do the purchasing. They pay somebody to operate it.

Mr. OSTERTAG. Do you control the prices that are charged in these cafeterias?

Mr. BOUTIN. No; we do not, in cafeterias run by employee organizations. However, under the GSI contract, all food price increases proposed by GSI must be approved by GSA. Approval is based on a survey of prices charged by comparable cafeterias in the Washington metropolitan area. In specific cases, for example, an increase caused by an increase in wages of food-service employees, the prices are adjusted in proportion to the increase in wages. In other food concession contracts outside of the Washington metropolitan area, prices usually are stated in the contract itself, or the contract provides that prices to be charged must be approved by GSA.

Mr. TURPIN. Mr. Chairman, I can tell you with respect to the contract here in the District of Columbia area, which is with GSI, Government Services, Inc., not a Government activity. They operate most of our cafeterias here in the District of Columbia area. In the new buildings, we do have to equip them initially, but then, once it is under operation by GSI, they are required by the contract to put a certain reserve aside to replace the equipment as it becomes worn out.

Mr. THOMAS. Is that the general rule throughout GSA for all the cafeterias under your jurisdiction? You equip them initially, and then turn them over to contractors, and the contractors maintain them and operate them? From there on out, they are cost-free to GSA? Is that correct?

Mr. TURPIN. I believe that is true generally. I know it is with respect to contracts we have in this area. Does that apply to the contracts we have outside?

Mr. SCHMIDT. That is true outside the District of Columbia area.

RETURN ON CAFETERIA INVESTMENT

Mr. THOMAS. Do you get back the orginal investment in the cafeteria?

Mr. SCHMIDT. Through the franchise fee, which can vary from 3 to 10 percent on gross receipts.

Mr. THOMAS. It could be. The question is, do you set up your books where you amortize over a period of x years, 10 to 15? Certainly 15 would be the longest period in which you could get back your original investment.

Mr. SCHMIDT. I do not believe the accounts are handled that way.

Mr. THOMAS. Would that not be a good business way to handle it, Mr. Administrator?

Mr. BOUTIN. Yes, it would, Mr. Chairman.

Mr. THOMAS. Can we not do it that way?

Mr. BOUTIN. We can look into it.

OPERATION OF CAFETERIAS UNDER GSI CONTRACTS

Mr. OSTERTAG. Mr. Chairman, it is difficult for me to understand or see that point. This is a matter of appropriated funds for the acquisition or purchase of these supplies and equipment. Then you lease it under a contract. First of all, there is the question of how much money we have in this whole picture, and then how much revenue is derived and where that revenue goes.

Mr. TURPIN. Congressman, with respect to the cafeterias in this area operated under this contract with GSI with which I am familiar, in new space where a cafeteria is being established for the first time, GSA provides the equipment for it, and then a contract is entered into with GSI for operating the cafeteria. Under the contract they pay all of the utility expenses, the cost of maintaining and operating the space internally, and under the contract they are required to set aside a reserve in order to replace the equipment as it is worn out. So, when that contract terminates, for example, 5 years from now, the equipment should be in as good condition as it was when the contract was made.

Mr. THOMAS. Oh, Mr. Budget Officer.

Mr. OSTERTAG. That does not answer my question.

Mr. THOMAS. I do not know anything worth less than new kitchen and cafeteria equipment unless it would be my old Ford. Mr. Administrator, would you get your staff together and go into this item and tighten it up. When you come up with some businesslike plan, will you be good enough to communicate with the committee and tell them what you have done?

Mr. BOUTIN. I would like to add one thing, Mr. Chairman. We certainly will do that. The income goes into miscellaneous receipts of the Treasury. It does not go into a revolving fund where we keep the money. It goes into miscellaneous receipts of the Treasury.

Mr. EVINS. Is this routed through the GSA?

Mr. THOMAS. You do not know whether you lose money or make money or break even. Let us put it on a business basis.

INVESTMENT IN CAFETERIA EQUIPMENT

Mr. OSTERTAG. You would not have an estimate of how much we have invested in the whole picture?

Mr. BOUTIN. In cafeteria equipment?

Mr. DALY. We will get that figure, sir.

Mr. BOUTIN. This, as I understand it, Mr. Daly, is all for new buildings.

Mr. DALY. Substantially all.

Mr. BOUTIN. FAA Building, NASA Buildings, and so forth.

Mr. DALY. And buildings out of town.

Mr. THOMAS. Is the capital investment by the Government amortized?

Mr. DALY. We are not keeping our books as the Chairman suggested, but we will take a look at it.

The gross value of our inventory as of June 30 this fiscal year was $3,733,137.

NUMBER OF CAFETERIAS IN OPERATION

Mr. THOMAS. How many cafeterias does that cover?

Mr. BOUTIN. We have 50 cafeterias in operation as of this month.

Mr. THOMAS. That is in Government owned or rented?

Mr. BOUTIN. Government owned, sir.

Mr. THOMAS. Do you have any more in leased buildings?

Mr. BOUTIN. No; that is the total.

RETURN ON INVESTMENT IN CAFETERIA EQUIPMENT

Mr. DALY. You were asking what return the Government was getting from the cafeteria operator. According to our records in fiscal year 1962 we deposited $414,339 into miscellaneous receipts in fees received from the cafeteria operators who repay us for rents and for equipment of this type.

Mr. THOMAS. Are you sure? You are paying the utilities, heat, and light?

Mr. DALY. The cafeteria operator pays the utilities into the fund. He reimburses, aside from this $414,000——

Mr. THOMAS. You mean he is on a special meter?

Mr. DALY. In some buildings he is on a special meter and in others they prorate it, but he pays the electricity and steam if we furnish it in addition to this $414,000. We deposit this in miscellaneous receipts of the Treasury.

Mr. OSTERTAG. Did you say the Government investment is $3.7 million?

Mr. DALY. Yes, sir.

Mr. BOUTIN. That is our investment at acquisition cost.

Mr. THOMAS. Which is right? You said different things.

Mr. DALY. This is the value of our inventory at acquisition cost.

PURCHASE OF $150,000 OF CAFETERIA EQUIPMENT IN 1964

You requested that we break out the $150,000—where we will spend it.

It will be spent in San Francisco, Hartford, Cincinnati, Pittsburgh, Denver, Salt Lake City, and in Washington Federal Office Building 8, Federal Office Building 9, Federal Office Building 10A, and Federal Office Building 10B. This amounts to $144,500 and we will hold a balance of $5,500 for replacement and updating.

Mr. THOMAS. Will you put that in the record, please?

Mr. DALY. Yes.

(The information supplied follows:)

THE 1964 CAFETERIA EQUIPMENT ESTIMATE

Buildings involved and estimated cost of equipment required for each is as follows:

New buildings:	
San Francisco, Federal Office Building	$10,000
Hartford, Conn., Federal Office Building	12,000
Cincinnati, Federal Office Building	10,000
Pittsburgh, Federal Office Building	15,000
Denver, Federal Office Building	10,000
Salt Lake City, Federal Office Building	12,000
Federal Office Building 8, Washington, D.C.	14,000
Federal Office Building 9, Washington, D.C.	18,500
Federal Office Building 10A and 10B, Washington, D.C.	43,000
Total	144,500
Buildings which are to be extended or remodeled and for the replacement, updating, and supplementing of existing equipment in existing buildings	5,500
Grand total	150,000

Mr. THOMAS. Are those all brandnew buildings?

Mr. DALY. These are brandnew buildings.

Mr. THOMAS. And this is the original capital investment?

Mr. DALY. Yes.

Mr. THOMAS. How many do you have there?

Mr. DALY. San Francisco, $10,000; Hartford, $12,000; Cincinnati, $10,000; Pittsburgh, $15,000; Denver, $10,000; Salt Lake City, $12,000; Federal Office Building 8, $14,000; Federal Office Building 9, $18,500——

Mr. THOMAS. How many square feet are there in these cafeterias? That figure is mighty low. What does that cover? Does it pay for steamtables or chairs and tables?

Mr. DALY. The serving lines and fixed equipment are a part of the cost of the building. This fund where we are asking $150,000 this year is for movable equipment such as the chairs, tables, slicing machines, and so on.

INSUFFICIENT RETURN ON CAFETERIA EQUIPMENT

Mr. THOMAS. You still have a capital investment of $3.7 million in all your cafeterias. If you put in your construction cost and everything it would be nearer $40 million or $50 million.

Mr. DALY. It would be in excess of that if you included fixed equipment.

Mr. THOMAS. Over a period of 10 or 15 years, are you getting enough rent on that cafeteria to amortize its cost? The answer is obviously no if you have a return of only $400,000 on it.

Mr. DALY. Well, I think we would have to admit we are not getting a complete refund on this.

Mr. THOMAS. It has been my observation these cafeterias are certainly worth a great deal to the agencies that use them.

Mr. DALY. That was our point, sir.

Mr. THOMAS. That much ought to be said for them. We were trying to find out just exactly what they are costing. It is a safe thing to say that on a day-to-day maintenance and operation they are on a break-even basis, or practically so, but when you amortize the actual cost you are not a hundred miles of doing that.

Mr. BOUTIN. Certainly not the construction cost, but I think the difference is between a half-hour lunch period or an hour or an hour and a half.

DESIGN AND CONSTRUCTION

Mr. THOMAS. Let us take a look at design and construction. Put pages 41, 42, and 43 in the record.

(The pages referred to follow:)

Design and construction

	Amount	Average employment [1]
1963	$678,000	
Change	+25,000	
1964	703,000	

[1] All employment shown under Construction Services Fund.

HIGHLIGHT

"This activity provides for a small staff responsible for overall direction of programs involving design, construction, and remodeling of Federal buildings." (From the Budget for 1964.)

The total increase in 1964 over 1963 is due to pay costs authorized by Public Law 87–793.

Total cost or estimate:

1962	$572,523
1963	678,000
1964	703,000

JUSTIFICATION

Technical direction is provided for design, construction, and remodeling of Federal buildings, including projects financed with funds transferred from other Government agencies. Services consist of (a) architectural and engineering planning; (b) preparation of initial cost estimates for proposed building projects and programs of GSA and other Government agencies; (c) maintenance of design and construction handbooks, standard details and stock specifications; and (d) providing service to Federal committees and boards dealing with building design and construction.

This activity provides financing for salaries and related expenses of 27 central office employees and 20 regional office employees engaged in the overall direction of building construction and improvement programs. Also included is $75,000 the same as for 1963, to finance the cost of making feasibility studies, developing preliminary sketches, and initial cost estimates for other Government agencies for their use in support of an appropriation for design and construction of specific projects. All employees engaged in design and construction operations are paid initially from the construction services fund, with reimbursement being obtained from this activity for the salaries and related expenses of the 47 employees engaged in overall direction and the equivalent of 11.5 man-years of services rendered by technical personnel in performing initial cost estimates, etc., for other Government agencies on a nonreimbursable basis. Salaries and related expenses of technical and administrative personnel engaged directly on approved work programs and projects are reimbursable from funds provided for such construction programs and projects.

The total design, construction, and remodeling workload for which this activity has overall direction was as follows, on December 31, 1962:

	Number of projects	Estimated improvement cost (million dollars)
Under design:		
GSA funds	642	$399.8
Other agencies' funds	927	196.6
Total	1,569	596.4
Under construction:		
GSA funds	816	337.8
Other agencies' funds	772	160.4
Total	1,588	498.2

A summary of employment and financing for all design and construction activities is presented on the following page.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation.—No personal services for this item are paid directly from appropriated funds. Such costs are initially paid from the construction services fund and are included under "Other services."

Other objects.—$703,000, of which $592,600 is to reimburse the construction services fund for salaries as follows: (1) $522,900 for 47 positions engaged in

overall direction; and (2) $69,700 for the equivalent of 11.5 man-years engaged in developing construction cost estimates, etc., for other Government agencies for which no reimbursement is received. In addition, $44,500 is to reimburse the construction services fund for personnel benefits applicable to these salaries.

(1) $13,000 for 482 days travel at $27 per day, and $500 motor pool services.

(2) $5,800 communications; $6,200 printing.

(3) $24,000 to assist in financing the President's Committee on Equal Employment Opportunity.

(4) $3,400 contractual services; $5,000 supplies; $8,000 office equipment.

OFFICE OF DESIGN AND CONSTRUCTION

Summary of average employment and personal services cost by source of financing and function

	Fiscal year 1962		Fiscal year 1963		Fiscal year 1964	
	Average employment	Personal services cost	Average employment	Personal services cost	Average employment	Personal services cost
Source of financing:						
Operating expenses, PBS	49.3	$458,080	58.5	$569,300	58.5	$592,600
Repair and improvment projects	468.7	3,648,086	472.8	3,857,000	552.3	4,689,100
Construction projects	197.0	1,621,958	233.3	2,011,700	266.5	2,394,500
Other GSA funds	7.5	55,115	10.0	78,900	10.0	82,700
Total GSA financed	722.5	5,783,239	774.6	6,516,900	887.3	7,758,900
Financed by funds of other agencies (construction, repair, etc.)	381.5	3,034,805	583.4	4,726,100	662.7	5,789,100

Coordination staff	9	37,803	10	45,100	10	47,100
Schedules and services	186	953,739	208	1,118,000	220	1,230,600
Field offices	42	375,354	45	421,200	45	439,000
Total	1,104	8,818,044	1,358	11,243,000	1,550	12,548,000
Distribution:						
Central office	229.8	1,991,055	238	2,276,700	244	2,425,000
Regional offices	874.2	6,826,989	1,120	8,966,300	1,306	11,123,000
Total	1,104	8,818,044	1,358	11,243,000	1,550	13,548,000

Mr. THOMAS. Gentlemen, take a look at page 44, which gives an itemization of the other objects but there is no breakdown whatsoever on the positions. I have a longhand note written here: What are the grades of these 58 people? Where are they located, and so forth? I am not sure the figure of 58 is correct. I have written in longhand on page 41: "47 employees plus 14 others who may come out of the BM fund, makes a total of maybe 61 rather than the 58"; $678,000 was provided for this activity in 1963, and you have an increase of $25,000 for this year, making $703,000. [Reading:]

This activity provides for a small staff responsible for overall direction of programs involving design, construction, and remodeling of Federal buildings.

That differs from space management. You still have your upper crust. Space management deals with acquisition of property by lease, purchase, and exchange, and assignment and reassignment of space. This crowd deals with design. These are the construction people.

Reading an underlined sentence at the middle of page 41:

All employees engaged in design and construction operations are paid initially from the Construction Services Fund, with reimbursement being obtained from this activity for the salaries and related expenses of the 47 employees engaged in overall direction and the equivalent of 11.5 man-years of services rendered by technical personnel in performing initial cost estimates * * *

Under "Design, GSA funds," 642 projects, big, little, and everything. What part of that is done in the field and never comes to Washington?

Mr. DALY. Mr. Chairman, I think I can explain it best this way: Of the 47 people who are covered by this particular appropriation——

Mr. THOMAS. Am I right? I have 61 rather than 47. At one place you say 58, at one place 47, and I say 61. Are all three of us wrong?

Mr. DALY. No, sir. I think it is 58.5 average man-years, but when you work it out on the number of positions, I think it comes to 61.

Mr. THOMAS. Under "Design, GSA funds," you have 642 projects; other agency funds, 927; and a total under design of 1,569.

Under "Construction, GSA funds," 816 projects; other agencies' funds, 772; and a total of 1,588.

Under construction, you see the dollar marks opposite these projects. It is already in the record. It runs into money. $596,400,000 under design, GSA and other agencies. GSA is about 2 to 1. Under construction, it is about the same proportion, a total of $498,200,000 under construction; $337,800,000 by GSA funds and $160,400,000 under other agencies.

DESIGN AND CONSTRUCTION PERSONNEL

The question I ask you, Mr. Daly, is: What part of this 642 projects under design is done turnkey in the field, and what part is done in the District of Columbia by the central office by the 61 employees?

Mr. DALY. In the central office we have 27 employees covered by the appropriation we are requesting here. These 27 employees are the top architects and engineers. For example, the assistant——

Mr. THOMAS. And the other 20 are in the regional offices?

Mr. DALY. That is right.

Mr. THOMAS. Where are the green sheets on the 27 in the District of Columbia and in the field? You don't give us grade classifications, either. We would like to look at them and see the types of employees they are.

Do you have that information?

Mr. DALY. I have the information here. It is not shown in that detail on the green sheets.

Mr. THOMAS. I am positive it is not.

Mr. DALY. In the 27 in the District there is a 17, a 16, seven 15's, five 14's, two 13's, one 11, one 8, one 7, five 6's, and three 5's.

I would like to explain, Mr. Chairman, because this is a little bit confusing. We have far more people than this in the design and construction function. The majority of these people are charged to specific projects.

Mr. THOMAS. Under the big fund?

Mr. DALY. Not under buildings management fund.

Mr. BOUTIN. Construction services.

Mr. THOMAS. Individual projects. Go ahead.

Mr. DALY. The point I want to make here is that this nucleus group are the people we cannot charge by a timecard basis to any particular project.

Mr. THOMAS. This is the overall braintrust crowd.

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. These are the boys who design the cost estimate on your construction program, which we will go into soon?

Mr. DALY. That is right. Many times they prepare preliminary plans which never get into a project.

About two-thirds of these are architects and engineers, and the others are supporting personnel, such as secretaries.

Mr. THOMAS. You don't mean to give us the idea that the vast majority charged under each project are temporary?

Mr. DALY. No, sir.

Mr. THOMAS. We shall get into that soon, but how many do they number?

Mr. BOUTIN. We haven't a single consultant.

Mr. DALY. No consultants.

Mr. THOMAS. Go ahead.

Mr. DALY. The total number of positions we have in the overall design and construction function——

Mr. THOMAS. You are charging only 61?

Mr. DALY. These 47 are charged to this appropriation, but we have others that are charged——

Mr. THOMAS. Let us get a figure and stay with it. Is it 47, 58, or 61?

Mr. TURPIN. There are 47 of the nucleus people, the design chief, two assistants in each of the regions, and the others in the Central Office. There are 47 people.

Of the other people working on all of the different jobs financed by the respective construction appropriations——

Mr. THOMAS. Mr. Daly said it was 61 a while ago.

Mr. TURPIN. There are 47 people that can be specifically identified. Then, in addition, there is the equivalent of 11½ man-years.

Mr. THOMAS. I have 14. Where are they charged?

Mr. TURPIN. They number 47; plus the equivalent of 11½ man-years.

Mr. THOMAS. How many people is that; 14?

Mr. TURPIN. That is about right. They are not specifically identified that way.

Mr. THOMAS. Are they charged to the $703,000?

Mr. TURPIN. That is right. That is part of the time of people——

Mr. THOMAS. All right. We are going to use 61, 58, 47, or just pick out one figure. You pick it out.

Mr. TURPIN. Fifty-eight and a half, sir.

Mr. THOMAS. Let us make it hog round—58 or 60—whatever it is. We will say 59.

Mr. TURPIN. All right, sir.

DESIGN AND CONSTRUCTION PERSONNEL CHARGED TO PROJECTS

Mr. THOMAS. How many do you have charged against the individual construction projects?

Mr. DALY. The total number of permanent positions in design and construction, going back to 1962, is a total of 1,180; in 1963 it is 1,500, and we are asking to go to 1,600 this year. That is an increase of 100.

Mr. THOMAS. One thousand five hundred and forty are charged to the specific projects?

Mr. DALY. Yes, sir.

Mr. THOMAS. It all comes out of the big fund?

Mr. DALY. Construction services fund.

Mr. THOMAS. But these 59 or 60 here come out of the buildings management fund.

Mr. DALY. Not the buildings management fund.

Mr. THOMAS. Not charged to any specific project?

Mr. DALY. That is correct, sir.

Mr. THOMAS. What are these top-level people here? What do they do? This is the brain trust?

Mr. DALY. They are the people who prepare the overall estimates, run the entire program, make estimates for the program and, in many cases, they do preliminary design work which never gets into a project. Except for a handful of secretaries and stenographers, these are engineers of various types—mechanical, structural, and so on—and also some architects.

FINANCING OF DESIGN AND CONSTRUCTION PROJECTS

Mr. THOMAS. What part of these 642 projects is charged to the construction fund itself, rather than the repair and improvement program?

Mr. TURPIN. The answer is that it would be charged to the construction appropriation or the R. & I. appropriation.

Mr. DALY. That is what we are trying to work out.

Mr. SCHMIDT. Seventy against the sites and expenses appropriation and 563 against the repair and improvement appropriation, and 9 against other GSA appropriations, a total of 642.

Mr. THOMAS. What about the specific projects, appropriated funds for the construction of some 27 buildings? What do you charge against that?

Mr. SCHMIDT. The 27 new buildings for 1964? Some of those would be included——

Mr. THOMAS. What was the figure you gave a while ago for the total employment in construction, Mr. Turpin? It was in excess of 1,000.

Mr. DALY. 1,600.

Mr. THOMAS. How many did you count, Mr. Schmidt?

Mr. SCHMIDT. These are projects.

Mr. THOMAS. Projects and not people?

Mr. SCHMIDT. New or alteration projects.

Mr. THOMAS. You were breaking down the 642 projects under the GSA fund. I did not follow you.

OTHER OBJECTS OF EXPENSE—DESIGN AND CONSTRUCTION

What about the other objects here? You show $703,000 total of other objects. This is under design and construction, part of the operating expense.

Does this $703,000 include the salary cost?

Mr. TURPIN. Yes, sir; it does, Mr. Chaiman.

Mr. THOMAS. Of this amount, $592,600 is to reimburse the construction services fund for salaries. You have $111,000 here for other objects and $600,000 worth of salaries and benefits. Is that correct? Is that the way it breaks down?

Mr. TURPIN. That is about right.

Mr. THOMAS. $522,900 is shown next for 47 positions, then $69,700 for the other 11 or 12 people. In addition $44,500 is to reimburse the construction services fund for personnel benefits.

The remainder of $65,900 includes $13,000 for travel, $500 for the motor pool, $5,800 for communications, $6,200 for printing, $24,000 to assist in financing the President's Committee on Equal Employment Opportunity.

PBS ASSESSMENT FOR PRESIDENT'S COMMITTEE ON EQUAL EMPLOYMENT OPPORTUNITY

How does the President's Committee on Equal Employment Opportunity fit into the picture?

The $24,000 shown here could not fit in. Is this just an assessment?

Mr. SCHMIDT. That is the PBS share of this cost and it is charged here because this is the one item that involves construction.

Mr. THOMAS. How? What is the overall cost? How do you arrive at your share of the cost which is $24,000?

Mr. SCHMIDT. It is in the nature of an assessment on GSA.

Mr. THOMAS. That is the Committee headed by the Vice President.

Mr. DALY. That is correct, sir.

Mr. THOMAS. And the cost is borne by each agency?

Mr. DALY. Yes, sir. The several agencies that are concerned with this problem are assessed a certain amount.

Mr. THOMAS. This involves only equal opportunity of employment inside the Federal Government. This is not going out beyond that; is it?

Mr. DALY. Yes, sir. This is equal opportunity, in construction jobs, for example, in which the Federal Government is interested.

Mr. THOMAS. Do you have any information on what the total cost is to the Government and the agencies which are involved?

Mr. TURPIN. We do not have the information on the totals here, Mr. Chairman. The only part we have is the part assessed on GSA.

Mr. THOMAS. And that is by the Committee on Equal Employment Opportunity?

Mr. TURPIN. That is right.

Mr. THOMAS. They assess that on the theory you are a construction agency?

Mr. TURPIN. That is right, sir; construction and contracting agency.

Mr. EVINS. Do they send you a directive assessing you a certain amount and you pay it over to the Committee?

Mr. TURPIN. The financing is worked out through the Bureau of the Budget and the Department of Labor—they work out the assessment.

REPAIR SHOPS

Mr. THOMAS. How many repair shops do you have and where are they located? Don't you have a general repair shop?

Mr. BOUTIN. We have crafts in just about every region.

Mr. THOMAS. You used to have two or three good repairs shops scattered at strategic locations where you repaired furniture and everything else.

Is it in the budget?

Mr. TURPIN. We do not have repair shops for furniture operated by PBS. That is done largely by contractors.

Mr. THOMAS. You used to have it at one time, did you not?

Mr. TURPIN. Not repair shops for furniture. We have a couple of repair shops for equipment. We had one in region 3 several years ago.

Mr. BOUTIN. A substantial portion is done by prison industries.

(Discussion held off the record.)

PROGRAM PLANNING

Mr. THOMAS. What about this program planning? You show $506,000 in 1963, and a salary increase of $23,000, making it $529,000 in 1964. Insert page 45 in the record.

(The page follows:)

Program planning

Year	Amount	Average employment		
		Department	Field	Total
1963	$506,000	18.0	21.8	39.8
Change	+23,000	−0.4	−0.2	−0.6
Total, 1964	$529,000	17.6	21.6	39.2

HIGHLIGHT

"This activity provides technical guidance for Public Buildings Service real property programs in program planning, management information systems, analysis and evaluation, and policy development." (From the budget for 1964.)

The total increase in 1964 over 1963 is due to pay costs authorized by the Federal Salary Reform Act of 1962.

Total cost or estimate:

1962	$471,243
1963	506,000
1964	529,000

JUSTIFICATION

Functions under this activity involve formulating policies for long-range planning, developing management information systems, including scheduling and reporting requirements, establishing objectives and annual program goals, and the evaluation of performance against predetermined goals and objectives of approved programs. Implementation of approved plans are reviewed in the light of changing emphasis, technology, and programs, and actions are taken to effect revision of the plans as appropriate. A continual review and analysis is made of existing Public Buildings Service policies and, when necessitated by changing continuous improvement of real property program planning and evaluation.

A primary objective of this activity is to assure a coordinated approach to the

continuous improvement of real property program planning and evaluation, leading to more efficient and economical operation.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing.—$446,500 for 40 positions, distributed as follows:

	1962	1963	1964
Central office	23	18	18
Regional offices	22	22	22
Total positions	45	40	40
Average employment	38.2	39.8	39.2

Other objects.—$82,500, of which $33,500 is for personnel benefits, including $29,000 retirement contributions, $2,300 health benefits, and $2,200 group insurance.

The remainder of $49,000, or 9.3 percent of total estimate, includes—

(1) $13,000 travel based on 482 days at $27; $1,400 motor pool services; $200 transportation charges.

(2) $10,400 communications; $10,300 printing.

(3) $5,400 contractual services; $5,400 supplies; $2,900 office equipment.

Mr. THOMAS. This activity provides technical guidance for PBS real property programs in program planning, management information systems, analysis and evaluation, and policy development.

That is the language from the budget. It is a little difficult for me to understand exactly what this crowd does which cannot be done by your space people and your architectural group.

I notice this language, also [reading]:

A primary objective of this activity is to assure a coordinated approach to the continuous improvement of real property program planning and evaluation, leading to more efficient and economical operation.

I have a longhand note here: "Just exactly what do they do? What does this language mean?"

I say "See salary grades on next page."

On the next page we have the green sheet which sets this out. You have one 16 in the department, four 15's, and six 14's, and one 13, one 12.

In the field you have one 15, eleven 14's, and so forth.

You have a total of 40 in 1963 and 1964 against 45 in 1962.

What do these people do? This is a select group. Personnel compensation is $446,500 and other objects are $82,500, for a total of $529,000 in 1964.

(Discussion held off the record.)

FUNCTIONS OF PROGRAM PLANNING PERSONNEL

Mr. THOMAS. What do these people do?

Mr. DALY. Mr. Chairman, as you know, it is quite a difficult task to direct space management, design and construction, and acquisition of sites, and develop a coordinated effort so that we can really plan in advance for our programs and prevent what we call slippage, which really means inefficiency.

Mr. THOMAS. Who is the head of this division?

Mr. DALY. There is a grade 16 in the Central Office.

Mr. THOMAS. Who is the gentleman?

Mr. DALY. Mr. Kaufholz. He is an engineer by profession and was a former regional director of the Public Buildings Service. He is a well-qualified man.

Mr. THOMAS. We have no doubt about that.

Mr. DALY. To explain further, what we try to have this group do is to develop the overall plans and details so that we can get a coordinated effort by the three functions for which we are responsible, so the space management people move out on time, the design and construction people fit in with that.

They are also doing considerable work——

Mr. THOMAS. This is the group which originates business for you, then?

Mr. DALY. I would not say that, sir. Business originates in a number of different ways.

Mr. BOUTIN. Really, they keep the business going.

Mr. EVINS. One outfit acquires the sites and another does the design and planning, and still another organization sets the time schedule?

Mr. DALY. These people try to plan in advance. Private industry has the same problem, Mr. Evins, as we do. They have a terrible time and they have made great strides recently in better planning so that you eliminate the slippage and inefficiency.

One project in particular I am having these people work on at the present time is what is known as a critical path method of scheduling construction.

Industry has used this to great benefit, and government is just beginning to pick it up.

This is a technique where we can interrelate all the things that have to do with construction so that we know when we are getting off schedule in sufficient time to do something about it rather than waking up some morning and finding we are too far behind schedule.

Mr. EVINS. With a program of this magnitude all over the United States it seems you need some coordination. There might be duplication, some lag in time schedules, and so on. Each man goes ahead with his own function, but this unit looks at all of them.

Mr. DALY. This is a coordinating staff.

Mr. EVINS. And advises the Administrator?

Mr. DALY. Yes, sir.

What we have tried to do is to group people, the space people and construction people, and put them together so they have the time and incentive to plan in advance.

Mr. EVINS. Why do you need the 11 in the field? It seems most of this would be in Washington.

Mr. DALY. The 11 in the field breaks down to 1 man and a stenographer except in 1 region where they have a few more.

We try to give the regional director in the field the same sort of support we are working out in Washington because he, too, has to plan his program in the field. He has one man to whom he can turn who is responsible to him to see that all of these various functions are fitting together, that we are adhering to timetables, and that we are exploring new things.

Also these people coordinate with Mr. Turpin's people on automatic data processing.

Mr. BOUTIN. They are really the right arm of the Commissioner and the Deputy Commissioner.

Mr. EVINS. Program request for next year shows the same personnel but is up $23,000 for pay increases.

SERVICE DIRECTION

If there are no further questions we shall turn to the Public Buildings Service direction. In 1963 you have $810,000. For 1964 you ask for $32,000 increase to $842,000. Insert page 47 in the record.

(The page referred to follows:)

Service direction

Year	Amount	Average employment		
		Department	Field	Total
1963	$810,000	31.0	41.2	72.2
Change	+32,000	−0.5	−0.7	−1.2
Total, 1964	842,000	30.5	40.5	71.0

HIGHLIGHT

General direction and administration of all programs assigned to the Public Buildings Service is provided in the central office by the Commissioner, his immediate staff, and staff of an administrative officer which includes a mail-room operation. In each of 10 regions, direction is provided by a regional director for PBS, an administrative officer, and necessary stenographic assistance. Postage fees for all activities under this appropriation except "Buildings management" are included in this estimate.

The total increase in 1964 over 1963 is due to pay costs authorized by the Federal Salary Reform Act of 1962.

	1962	1963	1964
General supervision	$682,639	$775,000	$807,000
Postage fees	31,100	35,000	35,000
Total cost or estimate	713,739	810,000	842,000

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing.—$686,000 for 74 positions, distributed as follows:

	1962	1963	1964
Central office	31	31	31
Regional offices	43	43	43
Total positions	74	74	74
Average employment	66.4	72.2	71

Other objects.—$156,000 provides—

(1) $51,200 personnel benefits; including $44,600, retirement contributions; $4,000, health benefits; and $2,600, group insurance.

(2) $35,000, postage fees for all OE, PBS activities except "Buildings management."

The remainder of $69,800, or 8.28 percent of total estimate, includes—
(3) $23,000, travel based on 794 days at $29; and $2,400, motor pool services.
(4) $1,000, transportation of things; $16,000, communications.
(5) $8,200, printing; $5,400, contractual services.
(6) $10,400, supplies; $3,400, office equipment.

Mr. EVINS. You say general direction and administration of all programs assigned to the Public Buildings Service is provided in the central office by the Commissioner, his immediate staff, and staff of an administrative officer which includes a mailroom operation. In each of the 10 regions direction is provided by a regional director for PBS.

Mr. Chairman, these are the Commission's offices we are covering. They are asking for an increase of $32,000. Is this to be largely justified on the basis of the salary increase?

Mr. DALY. Pay Act.

Mr. EVINS. This is the Commissioner and his immediate staff.

In 1962 you had a total of 74 positions. In 1963 you show 74 positions. For 1964 you also have 74 positions, no increase.

In "Other objects," you have $51,000 for personnel benefits, which includes $44,600 for retirement contributions; $35,000 for postage fees, the remainder of 69,800 includes $23,000 for travel, $1,000 for transportation of things, $8,200 for printing, $5,400 for contractual services.

What is that last item in the Commissioner's office? Is it alteration of space? What is the item of $5,400 for contractual services in the Commissioner's office?

Mr. DALY. That has to do with the money we pay the Civil Service Commissioner for security clearances, our pro rata share for the health room which we pay to HEW, and some minor space alterations which come out of this appropriation.

OE, PBS PAYMENT TO BM FUND

Mr. EVINS. We have discussed the summary data. The chairman has gone into this quite thoroughly and at length.

I am a little stricken by item object class 25, other services, which jumped from $173 million to $187 million and now is projected at $209 million. This includes what? Give us a wrap-up of this. Tell us why the increase is necessary.

Mr. DALY. This is rent, cleaning, and all the things in the building management area.

Mr. BOUTIN. This goes back again to all of these custodial people we talked about.

Mr. EVINS. You said yesterday you planned to have both a force account and continue the contractual services in certain regions?

Mr. BOUTIN. Whichever was most economical; correct.

Mr. EVINS. The chairman has gone into the breakdown and pages 49 and 50 are in the record.

Transferred to "Salaries and expenses, Office of Administrator" (5 U.S.C. 630d) (−)	−143		
Appropriation (adjusted)	57,941	65,000	75,000

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1961, $27,777,000; (1962 adjustments, −$264,000); 1962, $30,256,000; 1963, $33,028,000; 1964, $35,528,000.

Mr. EVINS. In 1963, for repair and improvement of public buildings, you were provided with an appropriation of $65 million. For 1964 you ask for an increase of $10 million, to $75 million.

(Reading:)

This appropriation provides for maintaining, repairing, remodeling, improving, and other alterations in federally owned buildings under the jurisdiction of the GSA for these purposes, except extensions and conversions estimated to cost $200,000 or more. The budget for 1964 provides for continuation of the long-range program initiated in 1957, to alleviate deterioration and obsolescence of buildings which adversely affect efficient operations of occupying agencies.

There is an estimate of $200,000, or more, for extensions. Where does that come?

Mr. BOUTIN. Under the construction appropriation.

Mr. THOMAS. It requires congressional approval.

Mr. BOUTIN. Alteration projects over $200,000 require congressional approval. These are leaving the building intact, the outside walls as they are, and rehabilitating the interior where under construction we are changing the exterior of the building through extensions, and so on.

Mr. EVINS. You had an unobligated balance brought forward of $772,169 from 1962. That would give you $65,772,000.

Increase in maintenance, repair, and small improvements shown here. The major repairs and improvements total $4,450,000. Air conditioning is $100,000.

Program direction is $22,000. Administrative operations is $255,000. The total increase is $10 million.

Mr. THOMAS. This is the best money in the entire budget.

Mr. EVINS. This is to repair Federal buildings all over the United States.

Mr. OSTERTAG. This is repair and improvement, is it not?

Mr. THOMAS. These are repairs and improvements to take care of the buildings we already have.

Mr. EVINS. That is right.

Mr. THOMAS. All of this is charged into the buildings management fund, and you operate out of this?

Mr. BOUTIN. That is right, the R. & I. maintenance repair portion.

Mr. THOMAS. What Mr. Evins talks about comes in the form of construction appropriation.

Mr. OSTERTAG. Is there an unexpended balance involved here?

Mr. BOUTIN. We will probably have a very small carryover, Congressman, at the end of June. We normally obligate close to 98 percent.

Mr. DALY. The $772,169 carried over from last year appears on page 51.

JUSTIFICATION MATERIAL—REPAIR AND IMPROVEMENT

Mr. EVINS. Place in the record, please, the table on pages 51 and 52. Also insert pages 54 through 57.

(The pages referred to follow:)

REPAIR AND IMPROVEMENT OF PUBLIC BUILDINGS

Summary reconciliation 1964 estimate to 1963 funds

1963 appropriation in annual act	$65,000,000
Unobligated balance brought forward from 1962	772,169
Comparable obligation program	65,772,169
Increase in 1964:	
Maintenance repair and small improvements	4,400,000
Major repairs and improvements	4,450,831
Air conditioning	100,000
Program direction	22,000
Administrative operations	255,000
Total increases	9,227,831
1964 estimate	75,000,000

Analysis by activities

Activities	1963	Increases	1964
1. Maintenance repair and small improvements	$24,800,000	$4,400,000	$29,200,000
2. Major repairs and improvements	27,496,169	4,450,831	31,947,000
3. Air conditioning	10,000,000	100,000	10,100,000
4. Program direction	2,438,000	22,000	2,460,000
5. Administrative operations	1,038,000	255,000	1,293,000
Total obligations	65,772,169	9,227,831	75,000,000
Financed from prior-year balance	−772,169		
Total (appropriation)	65,000,000		75,000,000

1963 appropriation	$65,000,000
Change	+10,000,000
1964 estimate	75,000,000

GENERAL STATEMENT

"This appropriation provides for maintaining, repairing, remodeling, improving and other alterations in federally owned buildings under the jurisdiction of the General Services Administration for these purposes, except extensions and conversions estimated to cost $200,000 or more. The budget for 1964 provides for continuation of the long-range program initiated in 1957, to alleviate deterioration and obsolescence of buildings which adversely affect efficient operations of occupying agencies." (From the budget for 1964.)

The buildings for which this appropriation provides funds to maintain, repair, remodel, improve and otherwise change, include (1) public buildings as defined under the Public Buildings Act of 1959 and other federally owned buildings under the jurisdiction of GSA; (2) Government-owned facilities occupied under permit from other agencies and for which GSA has space assignment responsibility; (3) buildings under the control of other departments and agencies where alterations are required in connection with the moving of such other departments and agencies from buildings then, or thereafter, to be under the control of GSA. Renovation and improvements to space occupied by the Post Office Department in Government-owned buildings and financed by POD under their postal modernization programs are excluded; however, maintenance and repairs for such space are included.

The estimate of $75 million for 1964 will provide for maintenance repair and small improvements at a nationwide average of 22 cents per net square foot, and the scheduling of major repairs and improvements and air-conditioning projects at an increase over the 1963 level. It also provides for continuation of the programs to improve PHS facilities, modernization of buildings simultaneously with the modernization program of POD, and the extension and conversion of buildings estimated to cost less than $200,000, including the conversion from special to general-purpose use of buildings released by POD and other agencies. Extension and conversion projects estimated to cost $200,000 or more are provided for under "Construction, public buildings projects."

The long-range program

Information obtained from an anlysis of building evaluation reports, developed from continuing inspections of Federal buildings and physical obsolescence which occurs each year, reveals that at the beginning of fiscal year 1963 the amount of work necessary to relieve major obsolescence and deterioration and to bring the properties up to modern standards of usefulness and improve working conditions for occupying agencies would cost $412.8 million. The tabulations on the following page show proposed phasing of the workload for the period of 1962–67 and proposed funding of the total program for that period.

Workload summary

[In millions]

	1962	1963	1964	1965	1966	1967
Backlog (beginning)	[1] $405.8	$412.8	$418.9	$417.5	$369.9	$325.9
New work generated due to physical obsolescence	66.3	68.5	69.8	73.4	77.0	80.6
Total workload	472.1	481.3	488.7	490.9	446.9	406.5
Work performed during year	59.3	62.4	71.2	121.0	121.0	121.0
Estimated backlog (ending)	412.8	418.9	417.5	369.9	325.9	285.5
PROPOSED FUNDING PROGRAM						
Repairs and improvements	$59.3	$62.4	$71.2	$121.0	$121.0	$121.0
Program direction	2.3	2.4	2.5	2.7	2.7	2.7
Administrative operations	1.0	1.0	1.3	1.3	1.3	1.3
Total	62.6	65.8	75.0	125.0	125.0	125.0

[1] Based on inventory of known projects.

APPROPRIATION LANGUAGE

For expenses, not otherwise provided for, necessary to alter public buildings and to acquire additions to sites pursuant to the Public Buildings Act of 1959 (73 Stat. 479) and to alter other federally owned buildings and to acquire additions to sites thereof, including grounds, approaches and appurtenances, wharves and piers, together with the necessary dredging adjacent thereto; and care and safeguarding of sites; preliminary planning of projects by contract or otherwise; maintenance, preservation, demolition, and equipment; [$65,000,000] *$75,000,000*, to remain available until expended: *Provided*, That for the purposes of this appropriation, buildings constructed pursuant to the Public Buildings Purchase Contract Act of 1954 (40 U.S.C. 356) and the Post Office Department Property Act of 1954 (39 U.S.C. 2104, et seq.), and buildings under the control of another department or agency where alteration of such buildings is required in connection with the moving of such other department or agency from buildings then, or thereafter to be, under the control of General Services Administration shall be considered to be public buildings.

Justification

	1962	1963	1964
(1) Maintenance repair and small improvements	$23,060,981	$24,800,000	$29,200,000
(2) Major repairs and improvements	24,012,798	27,496,169	31,947,000
(3) Air conditioning	12,256,534	10,000,000	10,100,000
(4) Program direction	2,287,388	2,438,000	2,460,000
(5) Administrative operations	956,200	1,038,000	1,293,000
Total obligations	62,573,901	65,772,169	75,000,000

This appropriation provides for repairing, remodeling, improving and other alterations in federally owned buildings under the jurisdiction of GSA for these purposes, except for extensions to buildings and conversions of space costing in excess of $200,000. Requirements in buildings are developed through analysis of current building evaluation reports based on engineering inspections of facilities. In further support of these requirements, studies have been made to ascertain the rate of physical obsolescence which occurs in federally owned buildings and facilities for which GSA has repair responsibilities. The workload generated by this obsolescence has been reflected in the workload summary through 1967. This study shows that at current cost indices physical obsolescence occurs at the rate of about $0.52 per net square foot annually, broken down as follows:

	Obsolescence rate per net square foot
Structural	$0.02910
Roofs	.00847
Grounds and approaches	.01660
Painting	.10800
External masonry surfaces	.00500
Lighting	.08420
Elevators	.03540
Heating plants	.01080
Mechanical and electrical systems	.07700
Air conditioning	.14100
Total	.51557

The obsolescence factor shown above compares favorably with rates used by private industry. For example, the report issued by the National Association of Buildings Owners and Managers for calendar year 1961 shows a depreciation rate of $0.548 per square foot of total rentable area compared with the physical obsolescence rate of $0.52 used by GSA for net assignable square feet of space.

The justification of new obligational authority requested for each activity for 1964 follows:

1. Maintenance repair and small improvements

	1962	1963	1964
Area of buildings (net square feet):			
In District of Columbia	22,860,914	23,215,914	24,694,594
Outside District of Columbia	105,624,791	109,722,486	110,738,979
Total	128,485,705	132,938,400	135,433,573
Unit cost per square feet.:			
In District of Columbia	$0.16	$0.16	$0.16
Outside District of Columbia	.18	.19	.23
Total	.18	.19	.22
Obligations:			
In District of Columbia	3,690,359	3,725,000	4,000,000
Outside District of Columbia	19,370,622	21,075,000	25,200,000
Total	23,060,981	24,800,000	29,200,000

This activity provides for recurring maintenance repair work, and minor work of all types and kinds, costing up to $10,000 per job. The proposed increase of $4.4 million will provide a nationwide average of $0.22 per net square foot, which contemplates expenditure of about $0.16 for 24.7 million square feet in buildings in the District of Columbia and $0.23 for 110.7 million square feet in building outside the District of Columbia.

The lower unit cost for the District of Columbia is caused by the predominant number of large buildings in the District of Columbia, where the work undertaken usually develops into major projects which are scheduled for accomplishment and reported by individual locations. Outside the District of Columbia, smaller buildings predominate. In many instances the total requirements at these smaller locations can be accomplished for less than $10,000. The increase in rate, from $0.19 to $0.23 per net square foot, for buildings outside the District of Columbia will provide more adequately for day-to-day maintenance requirements, and will preclude the deferral of much needed work.

A study made of private industry, institutions, universities, and State and municipal organizations revealed a requirement of $0.23 to $0.25 annually for the types of work financed under this activity. Also, the BOMA report for calendar year 1961 shows an annual rate of $0.296 per square foot for substantially comparable types of work.

Category of work	1962	1963	1964
Grounds and approaches	$1,336,712	$1,375,000	$1,600,000
Electrical systems	2,180,803	2,250,000	2,600,000
Heating systems	1,564,244	1,600,000	1,900,000
Air conditioning and ventilating systems	1,536,724	1,575,000	1,900,000
Plumbing and sewage systems	1,300,134	1,350,000	1,600,000
Elevators, escalators, and dumbwaiters	882,331	900,000	1,000,000
Structural and miscellaneous repairs	7,380,754	7,600,000	8,500,000
Painting and decorating	5,069,487	5,600,000	7,000,000
Cleaning and pointing exterior masonry surfaces	767,116	1,500,000	2,000,000
Small improvements and space adjustments	1,042,676	1,050,000	1,100,000
Total	23,060,981	24,800,000	29,200,000

2. Major repairs and improvements

	1962	1963	1964
In District of Columbia	$3,330,700	$5,050,000	$5,400,000
Outside the District of Columbia	20,682,098	22,446,169	26,547,000
Total obligations	24,012,798	27,496,169	31,947,000
Financed from prior year balance	−4,182,901	−772,169	----------
New obligational authority	19,829,897	26,724,000	31,947,000

At the start of 1962, the inventory of major work to be accomplished totaled $405.8 million, including $285.7 million for major repairs and improvements. The programs for 1963 and 1964 and projected programs for future years will permit the accomplishment of the current inventoried workload within a reasonable period and provide a start toward offsetting physical obsolescence which occurs each year as indicated in the table on page 54. Major renovation projects costing in excess of $10,000 each are selected from this total workload of urgently needed projects.

The increase from $27.5 million in 1963 to $31.9 million in 1964 will permit accelerating the accomplishment of high-priority projects. Selection is based on urgency of need, increased efficiency in operations of occupying agencies, and economies to be effected by lowered operation and maintenance costs.

In accordance with provisions of the Public Buildings Act of 1959, prospectuses have been approved or will be submitted for approval for 153 projects totaling $268.2 million. Of these projects, the estimate for 1964 includes financing in whole, or in part, for 42 projects with a total estimated cost of $46.7 million.

Following is a breakdown of major repairs and improvements by categories of work accomplished in 1962, and programed for 1963 and 1964:

Category of work	1962	1963	1964
Structural repair and replacement	$2,937,241	$3,086,000	$2,850,000
Roof repair and replacement	2,107,528	2,110,000	670,000
Grounds and approaches	985,034	650,000	530,000
Modernization of office space	2,551,949	1,542,000	4,150,000
Lighting	1,770,705	2,633,000	1,320,000
Elevators	2,068,945	2,170,000	6,010,000
Heating plants	660,771	582,000	2,310,000
Modernization of restroom facilities	76,063	454,000	270,000
Mechanical and electrical systems	2,430,674	4,720,000	2,930,000
Food handling facilities	28,524	64,000	350,000
Protection facilities	210,254	411,000	250,000
Extension and conversion	2,708,454	3,000,000	4,167,000
Disaster repairs	216,204	11,300	
Space adjustments	1,686,503	1,600,000	1,600,000
PHS facilities	1,506,684	2,000,000	2,000,000
Design and engineering supervision	2,069,260	2,462,869	2,540,000
Total	24,012,798	27,496,169	31,947,000

3. Air conditioning

	1962	1963	1964
In District of Columbia	$1,214,034	$2,680,000	$2,940,000
Outside District of Columbia	11,042,500	7,320,000	7,160,000
Total obligations	12,256,534	10,000,000	10,100,000
Financed from prior year balance	−450,000		
New obligational authority	11,806,534	10,000,000	10,100,000

The inventory of $405.8 million of major work to be accomplished at the start of 1962 included $120.1 million for air conditioning. The 1964 estimate provides for accomplishing highest-priority projects at approximately the 1963 program level. Selection is based on consideration of climatic conditions and operating efficiency of agencies occupying the buildings. A number of projects included under this activity are estimated to cost in excess of $200,000 and therefore require approval of the Committees on Public Works of the Senate and House of Representatives in accordance with provisions of the Public Buildings Act of 1959.

Mr. EVINS. We will go into the justification at the bottom of page 54. The table shows in 1962 you had maintenance and repair of $23 million, $24,800,000 for 1963, and next year you ask for $29,200,000. For major repairs the increase is up from $27,496,000 to $31,947,000 comparing 1963 to 1964.

AIRCONDITIONING BACKLOG

Air conditioning is up $100,000 from $10 million to $10,100,000.

Mr. THOMAS. You might give us a bird's-eye picture of the air conditioning. How much do you have to do?

Mr. BOUTIN. After 1964, Mr. Chairman, anticipating this amount, we would still have a backlog, as I understand it, of about $87 million. Is that correct, Mr. Daly?

Mr. DALY. That is right.

BACKLOG OF R. & I. PROJECTS

Mr. THOMAS. The rate of this expenditure is $75 million. How long will it take you to get caught up with your backlog in day-to-day maintenance?

Mr. BOUTIN. We practically never will. At this rate we would just about equal the development of these repair needs and improvement needs.

Mr. THOMAS. Put it in language we can all understand. At this rate are you not accumulating a backlog and are you not 2 or 3 years behind?

Mr. BOUTIN. Actually as of right now, at the end of this fiscal year, it will be $418.9 million behind.

Mr. THOMAS. Put that in terms of years. How many years behind is it?

Mr. BOUTIN. We are about 5½ years behind.

Mr. THOMAS. On the basis of the $75 million a year?

Mr. BOUTIN. That is right.

Mr. THOMAS. Gentlemen, this is the best money in the budget. They are taking care of what you already have.

COMPARISON OF GOVERNMENTAL AND INDUSTRIAL REPAIR COSTS

What do you spend here as compared with private industries, universities, and colleges?

Mr. DALY. We have some figures on that, Mr. Chairman.

Mr. THOMAS. Read them into the record. You are spending about 20 cents——

Mr. DALY. We are proposing to spend 22 cents a square foot in 1964 for maintenance repairs. On the average this compares with 29 cents in the experience of commercial operators.

Mr. THOMAS. Who takes care of their property best in this country—churches, industries, schools, commercial buildings, or the Government? How do we stack up with the others? It has been said churches take care of their properties about as well as anybody. Is that true?

Mr. BOUTIN. I would say no. I would say private industry.

Mr. THOMAS. How about the universities and colleges?

Mr. BOUTIN. If you were to break it down into land-grant colleges I would say they would be in first place, but if we use all educational institutions at the higher level they would place very low.

Mr. THOMAS. Lower than the Government?

Mr. BOUTIN. No; we would be at the bottom.

Mr. THOMAS. You say churches are not high on the list?

Mr. BOUTIN. No; they are not. One of the big reasons is the rate of obsolescence which is very rapid.

Mr. THOMAS. Private industry does a better job than any of the five classifications?

Mr. BOUTIN. Yes; they do.

Mr. THOMAS. What is their figure?

Mr. SCHMIDT. For maintenance repairs 29 cents a square foot.

Mr. THOMAS. Against your figure of 22 cents?

Mr. SCHMIDT. That is right.

Mr. THOMAS. Virtually 30 percent higher than Government.

INDUSTRY'S PROVISION FOR MAINTENANCE REPAIRS

Mr. SCHMIDT. The institutions you speak of normally set aside 1½ or 2 percent of replacement cost each year for maintenance repairs and major replacements and improvements.

Mr. THOMAS. What is the figure again? You have private industry putting up a building, including land cost, and so on. The building and utilities cost them $1 million. I refer to capital investment for the building itself.

What does private industry normally set aside a year, what part of that $1 million, for maintenance?

Mr. SCHMIDT. About 1½ percent for overall maintenance and repairs.

Mr. THOMAS. What does the Government set aside? This is the appropriation where you take care of Government property. What is this figure?

Mr. SCHMIDT. To do the total job, both major replacements and improvements, we estimate it would take 51 cents a square foot per year to keep up our properties. The 22 cents I spoke of are the maintenance repairs, day-to-day repairs.

Mr. THOMAS. Against that figure you say private industry spends 29 cents?

Mr. SCHMIDT. 29 cents against the 22 cents.

Mr. BOUTIN. The 22 cents is a real improvement, Mr. Chairman.

Mr. THOMAS. We have been picking it up and doing better every year.

Mr. BOUTIN. That is right.

Mr. THOMAS. Mr. Evins asked you a while ago about your carryover. Do you have any unobligated funds which will be carried over?

Mr. BOUTIN. We anticipate we will obligate about 98 percent of the total appropriation.

Mr. THOMAS. You can't do much better than that.

Mr. BOUTIN. Two percent results from cases where we may be in a joint program with Post Office and it is held up.

Mr. THOMAS. Mr. Evins.

OVERALL INVESTMENT IN FEDERAL BUILDINGS

Mr. EVINS. I wanted to ask the Administrator the total overall investment in Federal buildings under his jurisdiction.

Mr. BOUTIN. At acquisition cost, construction cost?

Mr. EVINS. Present-day values.

Mr. BOUTIN. We couldn't supply that. We are working on a pilot program with the Department of the Interior right now to supply that for a committee of Congress. That will mean up-to-date appraisals, which will take a lot of doing.

Mr. EVINS. Off the record.

(Discussion held off the record.)

Mr. EVINS. You had acquisition value?

Mr. BOUTIN. That is right, but not present-day value.

Mr. THOMAS. Does the inventory you publish show the acquisition value of all the property?

Mr. BOUTIN. Initial cost.

Mr. OSTERTAG. Is it the responsibility of GSA to make these determinations and to keep an inventory?

Mr. THOMAS. It was an act of Congress.

(Discussion held off the record.)

Mr. THOMAS. Is the catalog you print worth the money you spend on it, some $60,000 a year?

Mr. TURPIN. We get a lot of activity and request for it. There is considerable interest by some of the committees on the Hill, and also we get a number of requests from the States for this information.

ACQUISITION COST OF REAL PROPERTY UNDER GSA JURISDICTION

Mr. EVINS. Overall what is the acquisition value?

Mr. TURPIN. $59 billion for the real property.

Mr. EVINS. Percentagewise how much are you spending on repair and improvement?

Mr. TURPIN. Mr. Ostertag, the other book was just recently published.

Mr. BOUTIN. Off the record.

(Discussion held off the record.)

Mr. EVINS. The Administrator has testified that the acquisition costs of Federal buildings and Federal properties and real estate under his management and direction is calculated to be $59 billion. How much are we spending percentagewise to maintain this $59 billion Federal investment from deterioration and obsolescence?

Mr. SCHMIDT. That figure, I think, relates to the total inventory.

Mr. EVINS. I refer to that.

RATIO OF MAINTENANCE REPAIR TO REPLACEMENT COST

Mr. SCHMIDT. The only figure we have for the 4,900 buildings that are repaired under this appropriation is an estimated replacement value of $3½ billion.

Mr. EVINS. For the 4,900 buildings repaired under this appropriation?

Mr. SCHMIDT. $3½ billion, for those buildings; yes.

Mr. EVINS. How much are you spending percentagewise to maintain these buildings?

Mr. SCHMIDT. We have been spending at the rate of $65 million last year, and we are asking for $75 million this year, so this is just about a little over 1½ percent, 1½ to 2 percent.

Mr. EVINS. Against obsolescence?

Mr. SCHMIDT. That is right. This we equate to be the wearout rate each year.

Mr. EVINS. The chart on page 53 is interesting.

REPAIR AND IMPROVEMENT BACKLOG

You had over $400 million in 1962 in the way of backlog in repair and improvement. You are doing only about $50 million.

In 1967, if you continue the present program, $125 million will be expended on this work and the backlog will be reduced a little over half.

Repair and maintenance work is going up and the backlog is declining correspondingly.

Mr. BOLAND. What did you ask the Bureau of the Budget for in this particular activity?

Mr. SCHMIDT. I believe we requested $100 million.

Mr. BOUTIN. And projected $125 million after fiscal 1964.

Mr. EVINS. There is an interesting chart at the bottom of page 55 showing maintenance repair and small improvements in the District of Columbia and outside the District.

REPAIR PROJECTS INSIDE AND OUTSIDE THE DISTRICT OF COLUMBIA

Mr. THOMAS. Here you have some information in the tables. Can you put your finger on one figure, inside and outside the District of Columbia, not in terms of square footage but how many actual projects you will touch with this appropriation next year?

Mr. SCHMIDT. On major improvements and repairs in the District of Columbia we propose to undertake 20 projects totaling $5.4 million, and outside the District 149 projects totaling $26,547,000.

In air conditioning in the District of Columbia we propose to do 9 projects totaling $2,940,000 and outside 37 projects totaling $7,160,000.

Mr. THOMAS. What about minor repairs?

Mr. SCHMIDT. On the minor repairs I do not have the number of projects because this would run into the thousands where we would expect to spend $4 million in the District of Columbia and $25,200,000 outside the District of Columbia.

Mr. THOMAS. Would you say the total number of projects is 1,000, big, little, inside and outside?

Mr. BOUTIN. More than that, Mr. Chairman.

Mr. SCHMIDT. I would say 2,000 to 3,000.

Mr. THOMAS. That is the type of information we need. It seems to me the cost of getting the job done in the way of salaries and expenses and other objects is a little bit high.

Mr. EVINS. Other objects is shown on page 59.

ADMINISTRATIVE COSTS FOR R. & I.

Mr. THOMAS. You have administrative operations here, $1,293,000, program direction $2.4 million. You have there in the neighborhood of $4 million. Is that all of your administrative costs? Is that a correct figure?

Mr. TURPIN. The sum of those two would be the total of it all, which would be about $3.7 million.

Mr. THOMAS. You administer all that work for about 5 percent? The remainder actually goes into hardware?

Mr. TURPIN. Into actual work and repairs and maintenance of buildings.

Mr. THOMAS. I am not trying to put words in your mouth, but what is the administrative cost? You set out a category of administrative operations. That is your fund.

Mr. TURPIN. The administrative operations, which is 1.7 percent of the total. Then the $2.4 million would be about 3 percent, so it is about 4.7 percent.

Mr. THOMAS. What percentage is that of your total $75 million?
Mr. TURPIN. Just under 5 percent.
Mr. THOMAS. That is not too bad, is it?

OTHER OBJECTS OF EXPENSE—R. & I.

Mr. EVINS. Turning to other objects we have a chart on page 59 which does not give the breakdown of personnel.

Travel is up to $500,000 from $450,000.

Significantly enough there are no changes in personnel benefits. I wonder why we have that. I thought personnel benefits were up all along. They are not shown here.

Mr. TURPIN. Personnel benefits go along with the personal services costs which in this case would be in the Buildings Management and Construction Services funds.

Mr. EVINS. Rents and utility services and communication services goes from $161,000 in 1962 to $190,000 in 1964. These items go up constantly.

Printing and reproduction is $255,000, $300,000, and then $350,000.

Other services is next. This is a catchall. It goes from $45.6 million to $47.1 million to $52.2 million. Tell us again why the increase in other services. Why is this necessary?

Mr. TURPIN. That is the cost for repairs and maintenance. That is because of the increase in the appropriation from $65 million in 1963 to proposed $75 million for 1964.

Mr. EVINS. The equipment has increased from $614,000 in 1962 to $1 million in 1964. Did we cover that earlier? This is new equipment which would be reinstalled in buildings to be repaired?

Mr. DALY. Under item 31?

Mr. EVINS. Yes.

Mr. DALY. That is right. That equipment is replacement equipment, not included in contract specifications, such as water coolers, portable as distinguished from central air-conditioning units, and so forth.

Mr. EVINS. Lands and structures, $16 to $20 million. You acquire lands for extensions of buildings?

Mr. DALY. That is right. However, most of this involves capitalized structural improvements.

Mr. EVINS. We shall place this chart on page 59 in the record and also the chart at page 60.

(The material referred to follows:)

REPAIR AND IMPROVEMENT OF PUBLIC BUILDINGS—OTHER OBJECTS

Personal services required for program direction, design, and construction activities, and staff services are initially financed under the "Buildings Management," "Construction Services," and "Administrative Operations" funds, respectively. Provision for reimbursing these funds is included in this estimate under "25 Other services."

Classification by objects

	Actual, 1962	Program, 1963	Request, 1964
Personnel compensation: Departmental, field			
11 Total personnel compensation			
Other objects:			
12 Personnel benefits	$560		
21 Travel	326,005	$450,000	$500,000
Travel (motor pool)	71,607	75,000	75,000
22 Transportation of things	9,674	10,000	10,000
23 Rents and utility services	32	1,000	1,000
Communication services	161,090	175,000	190,000
24 Printing and reproduction	255,866	300,000	350,000
25 Other services	45,640,871	47,169,169	52,293,000
26 Supplies and materials	244,526	300,000	350,000
31 Equipment	614,980	750,000	1,000,000
32 Lands and structures	15,237,794	16,517,000	20,206,000
42 Insurance claims and indemnities	10,896	25,000	25,000
Total other objects	62,573,901	65,772,169	75,000,000
Total obligations	62,573,901	65,772,169	75,000,000

SUMMARY STATEMENT ON "OTHER OBJECTS" FOR 1964

21 *Travel and transportation of persons, $575,000.*—$500,000 for 18,519 days travel at $27 per day in connection with administration of this program, engineering surveys, supervision of construction, etc., and $75,000 for motor pool services, principally in connection with general and special inspections of Federal buildings.

22 *Transportation of things, $10,000.*—Mainly for shipments of equipment to construction sites.

23. *Rents, communications, and utility services, $191,000.*—$80,000 for penalty mail, $110,000 for telephone and teletype services, and $1,000 for standby utility services and equipment while certain replacement work is in progress.

24 *Printing and reproduction, $350,000.*—$325,000 for reproduction of drawings and specifications and $25,000 for reproducing standard forms, including bidding documents, job orders, etc.

25 *Other services, $51 million.*—$45,305,000 for contractual repair, replacement, and improvement work, except for a nominal sum for repairs to office equipment, etc., and $5,045,000 for design and construction services initially financed from the construction services fund, and $650,000 for program direction and administration initially financed from the buildings management fund.

25 *Payments to administrative operations fund, $1,293,000.*—For administrative operations necessary to support this program.

26 *Supplies and materials, $350,000.*—Except for a nominal amount for office supplies, this amount is for purchase of construction supplies and materials.

31 *Equipment, $1 million.*—For equipment replacement not included in contract specifications.

32 *Land structures, $20,206,000.*—For improvements to buildings and equipment including purchases of land to accommodate extensions to buildings, driveways, and parking areas.

42 *Insurance claims and indemnities, $25,000.*—For payment of tort claims.

NUMBER OF R. & I. PROJECTS INSIDE AND OUTSIDE THE DISTRICT OF COLUMBIA

Mr. THOMAS. You have done an excellent job in setting out 12 and 15 pages of repair projects by State, and the information is perfect. This is the kind of information we need.

Give us a total here. We will not put all this information in the record. Give us a total inside and outside the District of Columbia,

major, minor, and air conditioning by numbers. We came to a horseback opinion a while ago that during fiscal 1964 in all categories you will handle about 2,000 or 3,000 projects. Give us an exact figure, please. That will tell the story.

(The information requested follows:)

Analysis of repair and improvement funds and projects—Distribution by inside and outside the District of Columbia

	1962		Estimate, 1963		Estimate, 1964	
	Number	Amount	Number	Amount	Number	Amount
Maintenance repair and small improvements:						
In the District of Columbia	160	$3,690,359	160	$3,725,000	160	$4,000,000
Outside the District of Columbia	4,740	19,370,622	4,740	21,075,000	4,740	25,200,000
Total [1]	4,900	23,060,981	4,900	24,800,000	4,900	29,200,000
Major repairs and improvements:						
In the District of Columbia	49	3,330,700	39	5,050,000	20	5,400,000
Outside the District of Columbia	388	20,682,098	298	22,446,169	149	26,547,000
Total	437	24,012,798	337	27,496,169	169	31,947,000
Air conditioning:						
In the District of Columbia	16	1,214,034	11	2,680,000	9	2,940,000
Outside the District of Columbia	76	11,042,500	70	7,320,000	37	7,160,000
Total	92	12,256,534	81	10,000,000	46	10,100,000

[1] Represents small improvements and recurring maintenance repairs to approximately 4,900 Government-owned buildings under control of GSA.

NOTE.—The projects and/or buildings indicated above include small paint jobs up to construction jobs involving a total of some 10,000 this fiscal year.

Mr. THOMAS. Gentlemen, let us get lunch and return at 1 o'clock. We shall commence with the construction program at that time.

Construction, Public Buildings Projects

Program and financing

[In thousands of dollars]

	Costs to this appropriation					Analysis of 1964 financing			
	Total estimate	To June 30, 1961	1962 actual	1963 estimate	1964 estimate	Deduct selected resources and unobligated balance, start of year	Add selected resources and unobligated balance, end of year	Appropriation required, 1964	Appropriation required to complete

New obligational authority (appropriation)			188,946	180,956	171,965				

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1961, $121,400,000; 1962, $123,982,000; 1963, $273,982,000; 1964, $313,982,000.

Mr. THOMAS. Gentlemen, will the committee please come to order?

Let us make a study of "Construction, public buildings projects." Let us put in the record pages 86 and 87. Follow that with the appropriation language and the tables on pages 91, 92, and 93.

(The material referred to follows:)

Summary reconciliation of 1964 estimate to 1963 funds

1963 appropriation in annual act	$180,955,600
Decrease in 1964	—8,990,600
1964 estimate	171,965,000

Analysis by activities

Activities	1963	Decrease	Increase	1964
1. Construction	$274,800,000	$76,400,000		$198,400,000
2. Extension and conversion	15,200,000		$6,400,000	21,600,000
Total obligations	290,000,000	76,400,000	6,400,000	220,000,000
Financed from balances of prior years	−109,044,400			−48,035,000
Appropriation or estimate	180,955,600			171,965,000

1963 appropriation	$180,955,600
Change	—8,990,600
1964 estimate	171,965,000

GENERAL STATEMENT

"This appropriation provides for financing (*a*) construction of new public buildings, and (*b*) extension and conversion of existing structures where individual project costs exceed $200,000. Expenses for related site acquisition, design, and supervision are provided for under "Sites and expenses, public buildings projects." Provision is made in the estimate for fallout shelters where appropriate. From 1959 through 1963 appropriations totaling $689,553,000 have been made for construction.

Summary of funded and unfunded program

	"Number of projects	Improvement cost (in millions)
1. Buildings completed and occupied	45	$94.4
2. Buildings purchased	21	37.4
3. Under contract as of Dec. 1, 1962	34	284.7
4. Contracts to be awarded by July 1, 1964	77	273.0
Total, funded program	177	689.5
Estimate for 1964	33	172.0
Unfunded, including 77 projects at $184,000,000 to be submitted to Public Works Committees, 1st sess., 88th Cong	109	561.3
Total, funded and unfunded program	319	1,422.8

"The recommended program for 1964 provides for 33 new projects and an increase in 1 project totaling $171,965,000 for improvements.

"1. *Construction.*—Under the regular construction program the estimate for 1964 provides for 27 new projects and 1 increase amounting to $164,553,000.

"2. *Extension and conversion.*—Through major extension and conversion projects, existing buildings are brought up to standards and expanded to make them suitable for current and future needs of the tenant agencies. The estimate for 1964 includes six such projects at an estimated cost of $7,412,000. In-

dividual projects involving expenditures of more than $200,000 are financed under this appropriation while those costing less are financed under 'Repair and improvement of public buildings.'" (From the budget for 1964.)

The estimate of $171,965,000 for 1964 is applicable to selected high-priority projects for which site and expense funds have been appropriated and completion of design will permit contract awards during fiscal year 1964. The estimate includes $2,788,000 for fallout shelter protection in line with the national shelter policy. Such shelter protection is included for only those projects where authorized in the project prospectus approved by the Committees on Public Works of the Senate and House of Representatives.

A summary of obligations by activity for 1962–64, amounts appropriated for 1962 and 1963, and the estimate for 1964, follow:

	1962	1963	1964
1. Construction	$72,696,881	$274,800,000	$198,400,000
2. Extension and conversion	6,164,369	15,200,000	21,600,000
Total obligations	78,861,250	290,000,000	220,000,000
Balances forwarded (net)	+110,085,250	−109,044,400	−48,035,000
Appropriation	188,946,500	180,955,600	171,965,000

APPROPRIATION LANGUAGE

For an additional amount for expenses, not otherwise provided for, necessary to construct public buildings projects and altar public buildings by extension or conversion where the estimated cost for a project is in excess of $200,000 pursuant to the Public Buildings Act of 1959 (73 Stat. 479), including *fallout shelters therein* and equipment for such buildings, [$180,955,000] *$171,965,000*,[1] and not to exceed $500,000 of this amount shall be available to the Administrator for construction of small public buildings outside the District of Columbia as the Administrator approves and deems necessary, all to remain available until expended: *Provided*,[2] That the foregoing amount shall be available for public buildings projects at locations at maximum construction improvement costs (excluding funds for sites and expenses) as follows:

[Post office and courthouse, Juneau, Alaska, $11,482,600;]

[Border station (construction and alteration), Nogales, Arizona, $997,500;]

[Federal office building, Bakersfield, California, $1,311,000;]

[Border patrol station, Calexico, California, $288,800;]

[General Services Administration stores depot, Denver, Colorado, $5,505,200;]

[Post office and Federal office building, Wallingford, Connecticut, $836,000;]

[Post office and courthouse, Gainesville, Florida, $2,178,300;]

[Post office and courthouse (construction and alteration). Marianna, Florida, $518,700;]

[Federal office building, Tampa, Florida, $2,254,300;]

[Post office and Federal office building, Macon, Georgia, $3,605,400;]

[Border station, Porthill, Idaho, $116,800;]

[Courthouse and Federal office building, Chicago, Illinois, in addition to the sum heretofore provided, $5,000,000;]

[Post office and Federal office building, Seymour, Indiana, $455,000;]

[Post office and courthouse (construction and alteration), Owensboro, Kentucky, $280,200;]

[Federal office building (construction and alteration), New Orleans, Louisiana, $1,225,500;]

[Post office and courthouse (construction and alteration), New Orleans, Louisiana, $3,447,500;]

[Post office and Federal office building, Augusta, Maine, $2,470,000;]

[Border patrol sector headquarters, Houlton, Maine, $318,200;]

[Federal office building, Boston, Massachusetts, $27,114,900;]

[1] Insertion of a specific authorization for construction of fallout shelters in certain buildings is intended to insure compliance with provisions similar to those contained in sec. 303 of the Independent Offices Appropriation Act, 1963, if reenacted.

[2] Changes in the first proviso merely substitute new projects and amounts to reflect construction starts proposed for 1964, and increase the amount for one previously approved project—Federal Office Building, Baltimore, Md.

[Post office, Webster, Massachusetts, $390,400;]
[Post office and courthouse (construction and alteration), Grand Rapids, Michigan, $700,100;]
[Border station, Pigeon River, Minnesota, $281,200;]
[Post office and courthouse, Clarksdale, Mississippi, $1,164,700;]
[Federal office building, Kansas City, Missouri, $29,816,700;]
[Courthouse and Federal office building, Billings, Montana, $5,342,800;]

[Post office and courthouse, Cheyenne, Wyoming, $4,664,500;]
Border patrol sector headquarters, Tucson, Arizona, $344,000;
Post office and courthouse, Pine Bluff, Arkansas, $2,391,000;
Courthouse and Federal office building, Fresno, California, $5,400,000;
Post office and courthouse, Newnan, Georgia, $1,155,000;
Courthouse and Federal office building, Boise, Idaho, $7,505,000;
Federal office building, Gary, Indiana, $1,156,000;
Courthouse and Federal office building, New Albany, Indiana, $950,000;
Courthouse and Federal office building (construction and alteration), London, Kentucky, $310,000;
Post office and courthouse, Bangor, Maine, $3,653,000;
Federal office building, Baltimore, Maryland, in addition to the sum heretofore provided, $13,706,000;
Post office and courthouse (construction and alteration), Detroit, Michigan, $3,990,000;
Post office and courthouse, Hannibal, Missouri, $1,832,000;
Post office and Federal office building, Independence, Missouri, $1,647,000;
Post office and Federal office building, Bozeman, Montana, $2,255,000;
Border patrol sector headquarters, Havre, Montana, $343,000;
Post office and courthouse (construction and alteration), Helena, Montana, $1,596,000;
Courthouse and Federal office building, Las Vegas, Nevada, $4,772,000;
Federal office building (construction and alteration), Laconia, New Hampshire, $368,000;
Post Office and Federal office building, Portsmouth, New Hampshire, $2,396,000;
Post office and Federal office building (construction and alteration), Carlsbad, New Mexico, $353,000;

Post office and Federal office building, Clovis, New Mexico, $830,000;
Courthouse and Federal office building, Roswell, New Mexico, $1,595,000;
Federal office building, Cleveland, Ohio, $41,223,000;
Post office and Federal office building (construction and alteration), Providence, Rhode Island, $795,000;
Federal office building, Charleston, South Carolina, $2,903,000;
Post office and Federal office building, Alamo, Tennessee, $336,000;
Post office and Federal office building, Alice, Texas, $601,000;
Federal office building, Forth Worth, Texas, $15,664,000;
Post office and Federal office building, Pasadena, Texas, $1,094,000;
Border patrol sector headquarters, Swanton, Vermont, $309,000;
Border patrol sector headquarters, Blaine, Washington, $325,000;
Border patrol sector headquarters, Spokane, Washington, $316,000;
General Services Administration, Federal records center, metropolitan area, District of Columbia, $12,705,000;
Federal office building, numbered 5, District of Columbia, $36,656,000;
Provided further, That the foregoing limits of costs may be exceeded to the extent that savings are effected in other projects, but by not to exceed 10 percentum [: *Provided further,*[1] That not to exceed $6,500,000 for the foregoing appropriation may be used for partial construction of the authorized public building project at Baltimore, Maryland].

JUSTIFICATION

This appropriation provides for financing (*a*) construction of new public buildings and (*b*) extensions and conversions of existing structures where the cost of extension or conversion exceeds $200,000, pursuant to the Public Buildings Act of 1959. Expenses for related site acquisition, design and supervision are provided under "Sites and expenses, public buildings projects."

From 1959 through 1963 appropriations for construction totaled $689,553,100. Exhibit B reflects the application of these funds to 177 specific projects, shows the year in which they were funded, and current status of the projects. The following summarizes the status of the funded program:

	Number of projects	Improvement cost
1. Buildings completed and occupied	45	$94,396,330
2. Buildings purchased	21	37,373,377
3. Under contract (through June 30, 1962)	28	216,768,142
4. Additional contract awards scheduled during 1963	57	200,884,900
5. Contract awards scheduled for 1964	26	42,473,350
Total	177	681,896,099
Reserve for contingencies		7,657,001
Total, funded program	177	689,553,100

[1] The last proviso authorizing funds for partial construction of the project at Baltimore, Maryland, has been deleted as no longer appropriate.

The estimate of $171,965,000 for 1964 provides for 27 new building projects and 6 extension and conversion projects. Specific projects for which financing is requested in 1964 are set forth below. Amounts included for fallout protection pursuant to the national shelter policy are identified.

	1964 estimate		
	Total	Basic Improvement cost	Fallout shelter
I. CONSTRUCTION			
Arizona: Tucson, BPS Headquarters	$344,000	$344,000	
Arkansas: Pine Bluff, post office-court	2,391,000	2,306,000	$85,000
California: Fresno, court-Federal office building	5,400,000	5,271,000	129,000
Georgia: Newnan, post office-court	1,155,000	1,100,000	55,000
Idaho: Boise, court-Federal office building	7,505,000	7,356,000	149,000
Indiana:			
Gary, Federal office building	1,156,000	1,100,000	56,000
New Albany, court-Federal office building	950,000	902,000	48,000
Maine: Bangor, post office-court	3,653,000	3,547,000	106,000
Maryland: Baltimore, Federal office building (increase)	13,706,000	13,454,000	252,000
Missouri:			
Hannibal, post office-court	1,832,000	1,757,000	75,000
Independence, post office, Federal-office building	1,647,000	1,579,000	68,000
Montana:			
Bozeman, post office, Federal-office building	2,255,000	2,170,000	85,000
Havre, BPS Headquarters	343,000	343,000	
Nevada: Las Vegas, court-Federal office building	4,772,000	4,651,000	121,000
New Hampshire: Portsmouth, post office Federal-office building	2,396,000	2,309,000	87,000
New Mexico:			
Clovis, post office: Federal office building	830,000	830,000	
Roswell, court: Federal office building	1,595,000	1,530,000	65,000
Ohio: Cleveland, Federal office building	41,223,000	40,710,000	513,000
South Carolina: Charleston, Federal office building	2,903,000	2,811,000	92,000
Tennessee: Alamo, post office: Federal office building	336,000	320,000	16,000
Texas:			
Alice, post office: Federal office building	601,000	567,000	34,000
Fort Worth, Federal office building	15,664,000	15,443,000	221,000
Pasadena, post office: Federal office building	1,094,000	1,042,000	52,000
Vermont: Swanton, BPS Headquarters	300,000	300,000	
Washington:			
Blaine, BPS Headquarters	325,000	325,000	
Spokane, BPS Headquarters	316,000	316,000	
District of Columbia:			
Federal office building No. 5	36,656,000	36,200,000	456,000
GSA Federal Records Center	12,705,000	12,705,000	
Unspecified small projects	500,000	500,000	
Total, construction (27 new projects and 1 increase, plus $500,000 for small projects)	164,553,000	161,788,000	2,765,000
2. EXTENSION AND CONVERSION			
Kentucky: London, court: Federal office building	310,000	310,000	
Michigan: Detroit, post office, court	3,990,000	3,990,000	
Montana: Helena, post office, court	1,596,000	1,596,000	
New Hampshire: Laconia, Federal office building	368,000	345,000	23,000
New Mexico: Carlsbad, post office: Federal office building	353,000	353,000	
Rhode Island: Providence, post office: Federal office building	795,000	795,000	
Total, extension and conversion (6 projects)	7,412,000	7,389,000	23,000
Total, 1964 estimate (33 new projects and 1 increase)	171,965,000	169,177,000	2,788,000

The foregoing projects together with other approved projects which have been funded for sites and expenses but unfunded for construction are reflected in exhibit A. This exhibit shows the year in which the projects were funded for sites and expenses and the estimated contract capability date. Exhibit B lists the construction projects funded for sites and expenses and improvement costs and also shows the respective years in which these funds were appropriated and the current status of each project.

The following tabulation shows the totals for exhibits A and B, appropriations made to date, estimate for 1964, and unfunded requirements for the program:

[In millions]

	Sites and expenses	Improvement cost	
		Number	Amount
Approved projects:			
Exhibit A, funded for sites and expenses only	$60	63	$490
Exhibit B, funded for sites and expenses and improvements	119	177	689
Total, approved projects	179	240	1,179
Less: Appropriations for improvements:			
Fiscal year 1959		69	154
Fiscal year 1961		35	165
Fiscal year 1962		26	189
Fiscal year 1963		47	181
Total through 1963		177	689
Estimate for 1964		33	172
Total appropriations and 1964 estimate		210	861
Projects funded for sites and expenses, unfunded for construction		30	318
Add:			
Projects approved by Public Works Committees, unfunded for sites and expenses		2	59
Estimated additional projects to be submitted to Public Works Committees, 1st session, 88th Congress		77	184
Total, unfunded program		109	561

Mr. THOMAS. You have an estimate of $171,965,000 for these public buildings projects, against $180,955,600 last year. [Reading:]

This appropriation provides for financing (*a*) construction of new public buildings and (*b*) extension and conversion of existing structures where individual project costs exceed $200,000. Expenses for related site acquisition, design, and supervision are provided for under "Sites and expenses, public buildings projects." Provision is made in the estimate for fallout shelters * * *.

I have $2,788,000. Is that correct?

Mr. TURPIN. Yes.

STATUS OF CONSTRUCTION PROGRAM

Mr. THOMAS. From 1959 through 1963 appropriations totaling $689,553,000 have been made for construction.

At the rate we are going, when will we finish the original program and what was the goal of the original program instituted under your predecessor, Mr. Floete, about 5 or 6 years ago?

Mr. BOUTIN. In 1959, Mr. Chairman, the identified backlog of need was $3 billion. We are just over the halfway mark, but we are within 3 or 4 years of having completed the large projects. We shall be able to get more and more into small projects which now largely go on lease.

Mr. THOMAS. This table is interesting. Buildings completed and occupied, 45. Then the cost figure is shown, $94.4 million. Buildings purchased, 21, at a cost of $37.4 million. Under contract as of December 1, 1962, 34, at a cost of $284.7 million. Contracts to be awarded by July 1, 1964, 77, at a cost of $273 million. Total, funded and unfunded program, 177 buildings, at a cost of $689.5 million.

CONSTRUCTION ESTIMATE FOR 1964

Then we come up with the estimate for 1964. In round figures, what is it? $172 million, including 33 buildings.

Unfunded including 77 projects at $184 million to be submitted to Public Works Committees, 1st session, 88th Congress. Along with that goes sites and planning. That is 109 more, is it not?

Then, assuming the Public Works Committees and the Congress go along on the budget request, you will have funded and in process of construction in calendar year late 1964, 319 buildings, either completed or under construction.

Mr. BOUTIN. Yes.

Mr. THOMAS. That will be at a cost of $1,422,800,000. Have you any plans beyond these?

FUTURE CONSTRUCTION PROGRAM

Mr. BOUTIN. Yes, sir. In addition to these that we have identified here, we have the program that we are working out now for subsequent years.

Mr. THOMAS. We shall just touch on what you are going to submit to the legislative committee for next year, and then beyond that is when you will have either funded or under construction or fully constructed, 319 projects. What have you beyond that in the works?

Mr. BOUTIN. We do not have it identified, Mr. Chairman.

Do you wish to go into that any further?

Mr. SCHMIDT. We do not have specific projects identified but on the basis of our original projection as to the probable need for public buildings construction of $3 billion, we would figure we are about halfway at this point.

Mr. BOUTIN. In authorized projects.

Mr. SCHMIDT. That is right.

Mr. THOMAS. When did you come up with that figure of $3 billion?

Mr. BOUTIN. 1959.

Mr. THOMAS. You mean that was the overall advanced thinking, we will say?

Mr. BOUTIN. That is correct.

Mr. THOMAS. Has it changed since 1959?

Mr. BOUTIN. I would say it has not.

Mr. SCHMIDT. No; it is still a good figure.

Mr. BOUTIN. Our thinking has not changed on it, Mr. Chairman. Our projections have not changed. This was a pretty good estimate.

MODERNIZATION OF VETERANS' HOSPITALS

Mr. THOMAS. What are we spending on this modernization of the VA hospital program? Do you remember that figure? I have a round figure in my mind of over a billion dollars.

Mr. OSTERTAG. You mean over a period of years?

Mr. THOMAS. It is $1.3 billion now. That is for VA hospitals alone.

Mr. BOUTIN. This would not enter into our figure.

Mr. THOMAS. I understand. I am just trying to get a comparative figure. I assume the VA program may include a few regional office buildings. I am not sure it does, though.

Mr. OSTERTAG. That comes out of GSA.

Mr. THOMAS. We have a program for the Veterans' Administration alone of $1.3 billion. On a comparative basis, this seems to be relatively small, does it not? The hospital system is 176. This is, in round figures, about 320 buildings, and you are halfway through, so let us say 640 or 650 buildings at a cost of $3 billion, against the VA with 175 to 180 buildings at a cost of $1.3 billion.

Mr. JONAS. Hospital construction is more expensive.

Mr. THOMAS. We figure $20,000 or $22,000 a bed. Yes, it is considerably more expensive.

GSA CONSTRUCTION PROJECTS IN AND OUTSIDE THE DISTRICT OF COLUMBIA

Mr. EVINS. Of the 319 projects, how many are in the District and how many are outside the District?

Give us a breakdown in the District and outside the District on these projects.

Mr. THOMAS. I do not remember seeing that in the justifications. Supply it for the record.

(The information supplied follows:)

Breakdown of 319 construction projects between inside and outside the District of Columbia

	Number	Improvement Cost
		(In thousands)
Inside the District of Columbia:		
Federal Office Building No. 8		$18,623
Federal Office Building No. 9		14,755
Federal Office Building No. 10		30,516
GPO field plant		1,510
Naval Weapons plant (C. & R.)		2,000
U.S. Court of Claims, Customs and Patent Appeals Building		6,375
119 D St., NE.		1,651
1724 F St., NW.		559
Federal Office Building No. 5		36,656
FBI Building		47,735
GSA Federal Records Center		12,705
Geological Survey		30,115
Housing and Home Finance Agency Building		29,000
Labor Building		38,037
National Science Foundation Building (E. & R.)		4,222
Total, inside the District of Columbia	15	274,459
Outside the District of Columbia	304	1,148,330
Total program	319	1,422,789

Mr. THOMAS. Let us get to the prospectuses. These are wrapup, turnkey cost estimates for each of these projects, 27 in number, is that correct?

They are in-house estimates made by your staff of how many people?

Mr. BOUTIN. Fifty-nine, Mr. Chairman.

Mr. THOMAS. These tables are quite interesting. Your projects over $200,000 must have legislative authorization. They are set out.

Let us take a look at some of these projects. Beginning on page 91: (Reading:)

The estimate of $171,965,000 for 1964 provides for 27 new building projects and 6 extension and conversion projects. Specific projects for which financing is requested in 1964 are set forth below. Amounts included for fallout protection pursuant to the national shelter policy are identified.

FALLOUT SHELTERS IN FEDERAL BUILDINGS

You are spending $2,788,000 for fallout shelters. What does that figure out? Five percent of the total construction cost of each building? Do you have that breakdown?

Mr. SCHMIDT. Overall about 1⅔ percent of the total improvement cost.

Mr. THOMAS. Is that 1⅔ percent new construction, or what?

Mr. SCHMIDT. That is the relationship of the fallout shelter to the basic improvements.

Mr. THOMAS. Here is Portsmouth, N.H., Federal Office Building and post office. The total cost is $2,396,000, of which you show $87,000 set aside for fallout shelter. What is the nature of these fallout shelters? What extra, if anything, are you doing in the construction of the building? Where are they located? Are they located on the roof or the middle of the building, the basement, or where?

Mr. SCHMIDT. They are usually located in the basement of the building, trying to utilize space in the building with its structural features that lend themselves——

Mr. THOMAS. You say usually. Are you putting them any place except in the basement?

Mr. SCHMIDT. In the basement.

Mr. BOUTIN. Exclusively?

Mr. SCHMIDT. Exclusively.

FEATURES PROVIDING FALLOUT PROTECTION

Mr. THOMAS. What are you doing to this specific project which I mentioned, Portsmouth, where you are spending $87,000 for the fallout shelter, of the $2,396,000 estimated total cost? What are you doing to the basement with that $87,000?

Mr. SCHMIDT. We would equip the space with proper ventilation and electrical equipment for its use as a shelter over a period of 2 or 3 weeks. It would provide space for equipment and food items, and medical supplies. We do very little as far as the structure itself is concerned, except in the design of the building initially to attempt to take advantage of the protective features that are ordinarily supplied in the structure itself and the basement area.

Mr. THOMAS. What are the added features you will put to the normal basement in one of these new buildings?

Mr. SCHMIDT. There would have to be a separate electrical system, a separate ventilating system——

Mr. THOMAS. Stay with the ventilating system. What are you going to do to it?

Mr. SCHMIDT. Provide for a standby system of periodic changes of air——

Mr. THOMAS. Fans, you mean?

Mr. SCHMIDT. Fans, a mechanical ventilating system.

Mr. THOMAS. Have they any filters in them?

Mr. SCHMIDT. It would have filters; yes, sir.

Mr. THOMAS. What is the nature of the filter?

Mr. SCHMIDT. I cannot speak to the specifics on that. The criteria on this are generally established through the Department of Defense, its civil defense unit.

Mr. THOMAS. What you are doing here, then, for your $87,000, is virtually buying equipment, and you are not changing the plans and specifications of the building. You are not making the walls any thicker. You are arranging duplicate electrical systems, more and heavier wires, I guess. They will be charged from a generator located right there, a separate generator.

Mr. SCHMIDT. To operate independently.

Mr. THOMAS. Do you pay for the generator with that $87,000?

Mr. SCHMIDT. That is part of the cost.

Mr. THOMAS. Do you pay for the fans and the exhaust?

Mr. SCHMIDT. And the installation of duct work.

Mr. THOMAS. Do you put in extra water equipment, toilets, and so forth?

Mr. SCHMIDT. To some extent; yes.

Mr. THOMAS. What part of your $87,000 on this project would go for toilet facilities and water facilities, bathing?

Mr. SCHMIDT. I do not have the detail on the estimate itself. This estimate was prepared by our engineers on the basis of the criteria supplied by Defense, tying it in with the design of the building.

Mr. THOMAS. What group designed this and came up with these figures?

Mr. SCHMIDT. Part of our design and construction group.

Mr. THOMAS. Those are the 59 people we agreed on, is that correct?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. This is an in-house estimate. Is the chief designer here?

Mr. DALY. No, sir, he is not present.

Mr. THOMAS. Did you and Mr. Schmidt help out with these cost estimates here?

Mr. DALY. They were prepared by the design and construction division, sir, and were submitted to us for approval.

Mr. THOMAS. What will the Portsmouth, New Hampshire, Post Office and Federal Office Building cost on a square footage basis? Do you have the square footage there?

Mr. SCHMIDT. Yes, sir. The basic building, without the fallout shelter, will be $21.18 per square foot gross area; with the fallout shelter, $21.98.

Mr. THOMAS. How many square feet in the building, and how many people will it accommodate? You have an area of approximately 109,000 square feet. Net assignable space, 77,400 square feet. What becomes of that 37,000 square feet?

Mr. SCHMIDT. The net square footage is the space that actually will be used by the occupants of the building. The difference between the net and the gross is the space for mechanical and air-conditioning equipment, heating equipment, public corridors, the lobby, the stairways, the elevator hoistways, et cetera, all of which is deducted from the gross area to come up with the actual work space to be assigned.

RATIO OF NET TO GROSS SPACE

Mr. THOMAS. The administration has been criticized that there is too much lost space in these buildings. How much space do you set aside? Is my figure correct here? You have 109,000 square feet, and you have usable space of 77,400 square feet. How many do you lose for closets, hallways, ductways, and so forth? Almost 30 percent of the total building, is it not?

Mr. SCHMIDT. It amounts to about one-third. The gross here is measured from the outside to the outside walls, all floor areas. There are some losses, of course, in your construction elements. Then the other items I mentioned. We have standard widths of corridors, depending upon whether they are primary or secondary. Generally, the lobby is determined on the basis of the number of tenants in the building. The architect in designing has to allow sufficient space for his equipment and for the servicing of the building.

STANDARDIZED BUILDING DESIGN

Mr. THOMAS. In this list of 27 construction projects, I count here 15 or 20 post offices and courthouses that are to serve the same general purpose. Do you have a common plan and design for all of these buildings of the same nature which are to serve the same purpose?

Mr. BOUTIN. We do not, Mr. Chairman, except for the smaller projects. For the list of, I think 86, that is before the Public Works Committee now, we have 20 alternate plans, prototype designs. When you get up to a building of this size, it is almost impossible to do it and save any money doing it. We could perhaps have the outside look pretty much the same, but the interior would depend on radical differences in use. Some have court space, some do not have court space. Some have space use that is peculiar to that particular building that would make an awful difference in trying to standardize the design. But on the small ones, we can do it and save a barrel of money and an awful lot of time.

Mr. THOMAS. The largest buildings are usually post offices, courthouses, and office buildings all wrapped up in one, are they not?

Mr. BOUTIN. A lot of them are; yes, sir.

Mr. THOMAS. Most of them are. You have the post office on one or two floors, a half dozen floors for courts and court offices, and then various agency offices even above them. Why cannot that building be standardized and save some money, just as you said you save it on small buildings?

Mr. BOUTIN. The post office requirements are one of the biggest problems.

Mr. THOMAS. Is there any difference in handling the mail for a city of half a million against a city with a million population, except in the amount of space required? The operation is practically the same, is it not?

Mr. BOUTIN. We would not save any money, Mr. Chairman, if we just tried to make the appearance the same. It would have to be in the design of the building itself.

Mr. THOMAS. I am talking about the actual usable functional space. What is the difference betwen a post office in Chicago and one in St.

Louis or one in Baltimore? They are all big cities. They all handle the same general type of mail. They serve the same purpose. Why could not a standard plan be developed for them? You may have to suit the postmaster of the particular area. He may want to have one machine over here and another wants it over there. Why could not the general design be the same for these big buildings that have anywhere from 6 to 10 courtrooms in them?

Mr. SCHMIDT. I think to a degree we do standardize various elements in the buildings, but when you get into the larger structures, each has to be adapted to the particular site. You do not have the same foundation conditions. You do not have the same site sizes. This is what forces you into an individual design, even though in an individual design you do incorporate a lot of standard provisions, on court layout, for instance.

Mr. THOMAS. You are talking about outside appearance. That is what the Administrator was talking about a while ago. Of course, I guess what is on the inside is governed by what the outside is, too.

Mr. BOUTIN. You run into big problems, too, Mr. Chairman, by weather conditions and the requirements, and the availability of materials. For instance, speaking of my own State, in Concord, N.H., if we built a stainless steel building or aluminum-frame building, I might as well head for Shanghai. You have to adapt to the local conditions.

Mr. THOMAS. You have to use local material. That makes sense. Nobody objects to that.

Mr. BOUTIN. It would make a big difference in the design of the building.

Mr. THOMAS. Spell that out. That is the outside walls you are talking about.

Mr. BOUTIN. That is right, the outside walls.

Mr. THOMAS. A courtroom is a courtroom, regardless of whether the outside of the wall is made out of tin, brick, or granite.

Mr. BOUTIN. The courtroom itself, yes; that is true. It would be just exactly the same, depending upon the size of court that was required. That would depend a lot on caseload.

Mr. THOMAS. Mr. Jonas, you and Mr. Evins are familiar with the construction field. What do you think about this proposition?

Mr. EVINS. In New York, you go up with a skyscraper design. In Arizona, you have plenty of land to spread it out in ranch-type architecture. I imagine in Florida it would be different.

Mr. BOUTIN. That is true. You get into different terrain and soil conditions that really dictate the type of building you are to construct.

Mr. EVINS. We have a county in my district that producers crab orchard stone, and the courthouse, the jail, the post office, the bank, are all built out of crab orchard stone. They use the native stone.

Mr. THOMAS. That makes sense. It will last a thousand years, will it not?

What has that to do with the internal arrangement of that building?

INVESTIGATIVE REPORT ON SPACE UTILIZATION

We have read this language to you before, but we think it makes a lot of sense on space utilization. This is a report to the Committee

on Appropriations of the House on public buildings construction. It says, on space utilization [reading]:

The usable floor area assigned to an agency divided by the gross area gives the space efficiency ratio. For Government office buildings an efficiency ratio of 80 to 85 percent in buildings not exceeding 12 stories and 75 to 80 percent in buildings exceeding 12 stories is recommended by a Federal Construction Council report published by the Building Research Advisory Board of the National Academy of Sciences-National Research Council.

The National Research Council is part and parcel of the big Academy. Here in the first little building we pick up, you have 30 percent set aside. This report says it ought to be what? At least 75 or 80 percent.

Mr. SCHMIDT. I think this becomes a matter of definition and what you include in the net area for comparison with the gross. In the commercial buildings, for instance, in a single tenant occupancy, you pay for everything on a floor except the stair wells, the elevator hoistways, the elevator lobby. All the rest you pay for. You are actually paying for the circulation areas, which in themselves amount to 10 to 12 percent of the space.

Mr. THOMAS. What about this statement?

Space efficiency ratios in the 15 buildings examined by the staff ranged from 58 to 75 percent, with an average of 66 percent for all buildings studied.

A big contractor who does his own design and construction and owns quite a few, could do it, I believe, 15 or maybe 20 percent cheaper than the Government. He would build a different type of building, more usable, with less space waste. When he got through, he would save that much.

LIFE EXPECTANCY OF BUILDINGS

Mr. BOUTIN. Mr. Chairman, I think the difference is that most of the private contractors build their buildings on a life expectancy of 20 or 25 years. We build our buildings for 50, 60, or 65 years. We readily admit we try to build them better than we would if we were a private builder for investment.

Mr. THOMAS. May I interrupt you, Mr. Administrator. Are you not in error on that 20 years? In the first place, these buildings are bonded for 20 or 25 years. The mortgage is for 30 years. Do you mean to say the lending agencies and insurance companies will lend 30- to 35-year money on a 20-year building, which would fall down before it was paid for?

Mr. BOUTIN. I think you will find, by and large, Mr. Chairman, anybody in private investment figures any investment that cannot liquidate itself inside of 20 years is not a very good investment. As a businessman outside of government, I never would invest in a building that could not pay for itself.

Mr. THOMAS. Then we had better send you over to FHA, because they are building a lot of multi-family buildings on 25- and 30-year mortgages.

Mr. BOUTIN. But this is rental.

Mr. THOMAS. I know we have one or two programs of 50 years, have we not? Many of these people tell us the buildings are good for 75 and 100 years if you just maintain them. You are not talking about residences now. You are talking about office buildings.

Mr. BOUTIN. College buildings, for instance, college buildings under HHFA go up to 35 years. These buildings probably will be there 100 years from now. They are well built. Look at any of these buildings.

Mr. OSTERTAG. How about these big apartment houses?

Mr. BOUTIN. The apartment houses, I would judge, probably are in excess of 20 years. Probably 30 years would be more accurate. If you look at any of the office buildings, space comparable to what we are building, a prudent investor is getting rid of his investment inside of 25 years, in my judgment.

Mr. THOMAS. Of course, in this country, this town or in anybody's town that you go to, I would not make any guess on the number of them, but you can find large numbers that are 50 and 60 and 75 years of age. Go up in good old New England and you will find a lot of frame houses 75 years of age. I have stopped and admired a lot of them. Some of those office buildings are that old and are still usable. As a matter of fact, the Federal Government owns some that have been occupied 75 years.

(Off the record.)

Mr. JONAS. I do not understand how building for longer occupancy or for longer life would diminish the usable space within the outer walls. That would be reflected in stronger foundations and that sort of thing, but it would not cause you to increase closet space or corridor space. We are talking about extraordinarily wide corridors and passageways, entries, and things of that sort.

Mr. BOUTIN. I was talking more to the difference in square foot costs, Congressman, than I was to the ratio of net assignable to gross. I think one has some bearing on the other, perhaps not so much by a comparison of what a private investor would build per se as to the type of building, but the type of space which is required. For instance, in Federal buildings, FOB 6 is a very good example where you have fairly wide lobbyways which you need there properly to service the public.

Mr. THOMAS. Let us see what this report says about Federal Office Building 6. Will you let me interrupt here at this point?

Mr. BOUTIN. Surely.

ASSIGNABLE SPACE PER PERSON

Mr. THOMAS. On the point of usable space, assignable space per person, here is what the report says:

> This report also recommends an allowance of 80 square feet of office space per person, assuming private offices for not more than 10 percent of agency personnel and other features in general office areas which are common to Government practices. On the basis of net usable area for an entire building, including conference rooms—

they take up a lot of area—

> dining area, etc., the report recommends a range of 100 to 145 net square feet per person.

You exceed that when you take in conference rooms, dining rooms, and everything else, do you not? (Reading:)

> The National Office Management Association recommends assigning 60 to 80 square feet per person for general office area, and 200 square feet for administrative private offices.

That is 10 by 20.

We mentioned FOB 6. Here is what the report says:

For FOB 6, Washington, the allowance is 177 square feet of office space per person—more than double the recommendation of 80 square feet per person by the Federal Construction Council. For 10 of the buildings surveyed, which had courtroom or post office spaces—

now we are getting back to the building we have under consideration here, which is the Portsmouth, N.H. post office and Federal office building—

net usable area per occupant ranged from 148 to 243 square feet, with an average of 184 square feet.

GSA CONTROL SPACE UTILIZATION

I will continue reading the report:

GSA officials advised the staff GSA has no effective control over space utilization by Federal agencies.

That was last year. We have it now by the Executive order.

They—

meaning GSA officials—

emphasized that the role of GSA is essentially to serve the needs of these agencies and not to enforce their utilization of space.

That is out the window, too, by virtue of the Executive order. You can do that now. (Reading:)

These officials agreed that the space utilization in FOB 6, Washington, indicated considerable underpopulation and that the assignment of 177 square feet of office space per person was certainly excessive. The inability of GSA to control utilization of space in FOB 6 is indicated by the fact that the building was originally designed to house 2,900 occupants and is actually housing 1,873.

WASTED SPACE IN BUILDINGS

Here is another pretty good criticism which has some teeth in it and is to the point. We would like your comment on this statement, Mr. Administrator. (Reading:)

Large lobbies were designed mainly for esthetic effect. The Chicago building and the New York Customs Courts Building have lobbies occupying almost the entire floor—29,000 and 20,400 square feet, respectively. In some of the buildings the lobbies are two stories high, thereby reducing the second floor area substantially, as much as 3,300 square feet in one project. A driveway through the interior of FOB 9, Washington, occupies 10,000 square feet of first-floor space.

Gentlemen, is that not good, sound advice they are giving you there?

Mr. BOUTIN. I do not agree with it, Mr. Chairman.

Mr. THOMAS. We can say anything we want to in here. Start talking. Where is it wrong?

Mr. BOUTIN. Let me give you an example. As far as the utilization of office space in a building, our average, nationwide, today is 151 square feet per person. Anybody can make a report critical of someone else if they use apples and oranges and bananas and try to make believe that everyone is seeing the same thing, but this is not so. You have to have a standard form of measurement.

As far as the question of lobby space and post office space and court space, the Federal Government is the only one that builds post offices, so we have no one to compare them with. We have to build accord-

ing to what the Post Office says they need. We have to put in lookout galleries, which take up space but they say they need them for internal control. We have been talking to them about that. The best that we can, with the best ability that we have, we have to fit these needs within the amount of money that is available and the amount of money that it is prudent to spend.

We can take any given building. FOB 6. What is your square foot utilization there right now?

Mr. DALY. The square foot utilization in FOB 6, for that portion occupied by NASA is 164.8, and by HEW and NASA combined it is 160.6. But you may remember, Mr. Boutin——

Mr. THOMAS. That is twice what this report says it ought to be.

Mr. DALY. The point I was going to make is this, and I spoke to you about this the other day, Mr. Boutin, we have been letting these agencies go along for a while because they had informed us that they had approved personnel increases that were going into this building, and had they materialized, it would considerably reduce this ratio. We have blown the whistle on them and told them now——

Mr. THOMAS. Do you mean to say HEW and Space have not gone up?

Mr. DALY. But not in this building. The point I am trying to make is that they said, "Don't force us to crowd up, because we have new personnel coming in here." So, we let them go along with that, but we have issued instructions to our regional office here in Washington to allow them no more space anywhere until we can recapture some of the space or until they can crowd up and show better utilization of the space they have.

SPACE UTILIZATION IN FOB 6

Mr. OSTERTAG. What is the figure in FOB 6 as compared to capacity and utilization?

Mr. BOUTIN. They give it in people.

Mr. OSTERTAG. I have in mind, capacity and utilization.

Mr. THOMAS. I will read that again.

For FOB 6, Washington, the allowance is 177 square feet of office space per person, more than double the recommendation of 80 square feet per person by the Federal Construction Council.

Mr. OSTERTAG. Yes, but the capacity that is being used is 1,800?

Mr. THOMAS. 2,900 capacity against 1,873.

Mr. OSTERTAG. How do you account for that?

Mr. BOUTIN. If I understand this criticism correctly, they say including cafeterias, hearing rooms, meeting rooms, all of this extra space, it should be around 140-some-odd square feet, Mr. Chairman. We are saying that our total here is 160. So, we are a long way from double. That is why it is very easy to fall into a trap on space utilization.

Mr. THOMAS. Nobody is falling into a trap.

Mr. OSTERTAG. Mr. Administrator, that indicates a ratio of 177 square feet, does it not?

Mr. THOMAS. Yes.

Md. BOUTIN. We are down from that, down around 160.

Mr. THOMAS. Read your figures again, Mr. Daly. As of what date are those figures? You gave figures for HEW and NASA in FOB 6.

Mr. DALY. This was June 30, 1962, sir. Overall, 160.6, sir. Roughly 160½ square feet.

Mr. OSTERTAG. That does not jibe with the 177.

Mr. DALY. What was the date of that report, sir?

Mr. THOMAS. This is older, December 1961.

Mr. DALY. I would imagine, sir, that the change downward is because both NASA and HEW have recruited and put more people in the building.

SPACE FOR VARIOUS TYPE PERSONNEL

Mr. SCHMIDT. Mr. Chairman, that 80 square feet per person seems to be more closely related to the tolerances for certain types of positions. We check this out quite closely with the industry. Ordinarily, the allowance for repetitive clerical positions is 60 square feet for their workspace. This goes on upward, depending upon the nature of the job that the individual does. We have taken a typical 500-employee organization and reduced this to space requirements. With minimum tolerances, it comes out to 140 square feet per person average office use. This is allowing for the top director, the supervisor positions, some professionals who do not supervise and can use a smaller office, and finally you get down to the clerical positions allowance of 60 square feet.

Mr. THOMAS. It is stated in this report the executive office space in privately owned buildings is 200 square feet.

Mr. OSTERTAG. They take that into account.

May I point out, if I understood the report correctly, the 177 square feet ratio or basis is applicable to the total capacity of 2,900, rather than the actual occupancy as of today.

Mr. DALY. I am not familiar with the report, sir. I do not know.

Mr. OSTERTAG. Do you agree with that Mr. Chairman?

Mr. THOMAS. Yes.

COMPARISON OF GOVERNMENT AND PRIVATE BUILDINGS

Mr. Administrator, is it not a generally accepted fact that private industry constructs buildings anywhere from 10 to 15 or 20 percent cheaper than the Government?

Mr. BOUTIN. We are not really comparing the same type of buildings, Mr. Chairman. That is the problem in giving you a valid answer to this question. Our life expectancy is so much longer.

Mr. THOMAS. Why should the Government do so much better than private industry? After all, private industry is helping to pay the bills. What is the purpose of it?

Mr. BOUTIN. I think we would have to take a 50-year period, Mr. Chairman, and compare what private industry would do with a site and the development of that site into a building.

Mr. THOMAS. You go into an ordinary small town, like the one in which I was born and reared, and the post office building is by far the most expensive building in town. I think you will find that to be true in almost any town from 4,000 population up to 15,000 or 20,000. The most expensive building in town would be the Federal building. Why is that?

Mr. BOUTIN. I think the prudence of that, Mr. Chairman, is shown by the fact that we are able, when the post office moves out of a building they may have been in 40 or 45 years, to go in and remodel that building at minimum cost and look for another 40 years' occupancy. It takes almost an earthquake to knock them down. They are there for a long time. We can build them cheaper.

Mr. OSTERTAG. I suppose, Mr. Administrator, there is a variation, too, in the actual utilization of the building. For example, just recently I visited the site for your St. Petersburg Federal Building, and in looking over the design or the plans, I noticed that considerable space, in fact, I believe 70 percent, is to be utilized by the Veterans' Administeration. In addition to that, you include a clinic. Space for a clinic cannot be measured in terms of numbers of people.

Mr. BOUTIN. And post offices are particularly bad for this, and courts are particularly bad for this.

Mr. OSTERTAG. I only mention that as an example.

Mr. THOMAS. I think you have three special examples, as you brought out. One is clinics. Another is the post office. It makes "John Public" mad to try to get up to one of those windows and not be able even to get in the building, let alone to the window. Of course, courtroom ceilings must be high, and so forth. So you have special problems which are peculiar to the Government which you do not find in industry.

Mr. BOUTIN. Customs space, too, is difficult to evaluate that way, Mr. Chairman.

PINE BLUFF (ARK.) POST OFFICE AND COURT

Mr. THOMAS. Let us look at the justification for these buildings. Here is a sizable one at Pine Bluff, Ark., post office and court. Do you not have some office space, too? Do you just have the courts and the post office?

Mr. BOUTIN. Post office, court, U.S. marshal, Department of Agriculture, Civil Service Commission——

Mr. THOMAS. Then your terminology here ought to be post office, court, and Federal office building, to cover them all.

Mr. BOUTIN (continuing). Congressional office, Defense, GSA HEW, Justice, Labor, Selective Service System, Treasury, and VA in that building.

Mr. THOMAS. What is the justification on that building? How many square feet is it to have?

Mr. BOUTIN. The total number of square feet, gross, is 108,500. Net assignable is 74,000. The ratio is 68.2 percent.

Mr. THOMAS. Could you not increase that? What takes up that? The lobby for the post office, the courtrooms, or what?

Mr. BOUTIN. Lobby, courtrooms, corridor space, particularly outside of the courtrooms, space around the U.S. marshal's office.

Mr. THOMAS. How many courtrooms do they have?

Mr. BOUTIN. Do you have the number of courtrooms?

Mr. SCHMIDT. Judging from the amount of space that would be a single court unit.

Mr. THOMAS. That occupies what part of a floor? One-half?

Mr. SCHMIDT. The whole court unit with rotated activities would take about 9,600 square feet.

Mr. THOMAS. That is one-tenth of it, then, in round figures.

Mr. SCHMIDT. A little better than 10 percent.

Mr. THOMAS. The court occupies the whole floor, then.

Mr. SCHMIDT. That is right.

Mr. THOMAS. The clerk's office, marshal's office, probation office, judge's chambers, grand jury room, courtroom, and all.

Mr. BOUTIN. The post office takes four-sevenths of that building, Mr. Chairman, a large part of it.

Mr. THOMAS. How many floors to the building?

Mr. BOUTIN. The building has not been designed as yet. In fact, we are just completing the architectural selection. So I cannot tell you how many floors we will have.

Mr. THOMAS. Your design people lay down the pattern, and then turn it over to an architect to fill in the detail, saying "We have to have so many square feet, so many to a courtroom, so many to this and that." You assign the usable square feet to each one of the different classifications, to the post office, to courtroom, or what?

Mr. BOUTIN. Yes, we do. This is where our space management people and the design and construction people work very closely together, so we know precisely.

Mr. THOMAS. What is the justification for the construction of the building? What rent are you paying? What are you going to save? What does it figure out per square footage cost?

Mr. BOUTIN. The square footage cost of this building, Mr. Chairman, exclusive of fallout shelter, is $21.25.

Mr. THOMAS. Is it in this prospectus?

Mr. SCHMIDT. The unit costs are not in the prospectus, sir.

Mr. THOMAS. Why leave that very valuable information out?

Mr. SCHMIDT. We have not been following the practice of putting it in the prospectus.

Mr. THOMAS. Of course, we can figure it out. It might take a little time, but I guess we can do it.

Mr. BOUTIN. I would like to say, Mr. Chairman, we have revised our system of prospectuses, and if you will notice, the ones we have before Public Works now contain an awful lot more detail than they have heretofore.

Mr. THOMAS. That is good, is it not?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. What is it a square foot?

Mr. BOUTIN. $21.25, exclusive of fallout shelter.

Mr. THOMAS. What will that cost extra? 1½ percent did you say?

Mr. BOUTIN. Just about; 1⅔ percent overall average.

SAVINGS AT PINE BLUFF

Mr. THOMAS. What are you going to save by constructing this building?

Mr. BOUTIN. Over a 50-year period, Mr. Chairman, the estimated saving is $2,767,094.

Mr. THOMAS. What rent are you paying in the city now?

Mr. BOUTIN. Right now we are paying a total of $30,071.

Mr. THOMAS. You are not paying any rent on the post office and you are not paying any rent on the existing court building, are you?

Mr. BOUTIN. No, sir.

Mr. SCHMIDT. There are no courts in the existing buildings. That is just a post office and Federal office building.

Mr. THOMAS. Does the court sit in the town?

Mr. SCHMIDT. It is now authorized to sit in Pine Bluff, and we have a request from the courts for space.

Mr. THOMAS. Can you rent courtroom space?

Mr. SCHMIDT. No, sir.

Mr. BOUTIN. We share courtroom space in some locations, Mr. Chairman. We have a building that is no longer required by the Federal Government except for courts, and the local county wants to buy it. We make arrangements, for perpetuity of need for the Federal court, to sit in the same chambers as does the county court.

(Off the record.)

Mr. SCHMIDT. In Pine Bluff, you have the matter of court facilities, the expansion of the Post Office Department, and then the other Federal agencies. The existing building cannot accommodate their requirements nor can the building be enlarged to include them.

BASIS OF DETERMINING SAVINGS

Mr. THOMAS. How do you figure that $30,000 a year saving? How did you arrive at that figure?

Mr. SCHMIDT. This is what is actually being paid now for those agencies, now accommodated in rented quarters.

Mr. THOMAS. In figuring your justification over a 50-year period, you still do not include the courts and the post office, do you?

Mr. SCHMIDT. Over the 50-year period, our rental saving is based on what it would cost us if we had to rent a comparable facility.

Mr. THOMAS. And the post office?

Mr. SCHMIDT. Court, post office, and the other agency requirements. This is a location where the Post Office Department was considering a separate postal facility for their expanded needs. There was a requirement for the courts and other agencies. We presented this project to the Public Works Committee.

Mr. OSTERTAG. In your existing costs, in figuring your savings over a period of time, is there not a sort of restoration provision involved, that you must restore these buildings back to the condition they were in when you got them in the first place?

Mr. BOUTIN. Many of our leases do have restoration provisions, and they cause us trouble all the time. When it comes to the day of reckoning, when we move out, to get an agreement on what the condition of the property was when we took it over is just about the most impossible thing, next to selecting a site, that I know of. They are both impossible.

Mr. OSTERTAG. I wondered if you took that into account in your estimated savings over a period of 50 years.

Mr. BOUTIN. Actually, if we were to take this into account, Congressman, we would increase the savings substantially. You would almost have to take pictures of every square inch of a leased facility to get away from this.

Mr. EVINS. The jurisdiction, work, and dockets of the Federal courts over the past decade have been growing and increasing tremendously in comparison with the State courts. Federal court activities are increasing. You probably have some instances in which the Federal court has been meeting in rented space or in a county court building, and the county court wants the Federal Government to move out and provide its own facilities.

Mr. BOUTIN. The big problem, of course, is their workload, which has been made more acute, Congressman, with the approval of the increase in the number of judges. As you say, their workload has increased like thunder. They have had very few facilities which could be used. They have visiting judges in to help with the caseload. I know in my own State of New Hampshire, they have a visiting judge come in and help. It really caused a problem.

Mr. EVINS. You had an increased number of Federal court jurisdictions.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

Mr. BOUTIN. You will notice, Mr. Chairman, in this supplemental sheet the great variance in the ratio of net assignable to gross, and you will see in almost every case you can pinpoint the reason for it.

For instance, in your border stations it is very high. It is very high at the GSA records center. Wherever you see courts normally it is pretty low. This is because of the type of space you have to provide.

FRESNO, CALIF., BUILDING

Mr. THOMAS. What is this square footage cost at Fresno, Calif.? $5,400,000, is it?

Turn to the justification on Fresno, Calif. What is the square footage cost there?

Mr. BOUTIN. Gross square feet, 198,700; net, 120,300.

Mr. THOMAS. Why are you losing 70,000 square feet there?

Mr. BOUTIN. Almost 80,000.

Mr. THOMAS. Don't make it any worse. That is due to the courthouse?

Is there a post office there?

Mr. BOUTIN. Not there.

Mr. THOMAS. Why that tremendous loss in square footage? There is about a 40-percent loss. Are you occupying the lobby of the post office?

Mr. BOUTIN. The information shown here is all I have.

Mr. THOMAS. What is the square-foot cost?

Mr. BOUTIN. $26.52.

Mr. THOMAS. Let me compare that with something about which I have some personal knowledge.

(Discussion held off the record.)

Mr. THOMAS. How do you justify this large difference in cost per square foot, Mr. Administrator? One area may have more rainfall, but what is the answer to this? Is it labor cost?

Mr. BOUTIN. I am checking the labor comparison.

Mr. BOLAND. Everything is more expensive in California.

Mr. PALMER. You have seismic framing there to begin with which you do not have in Dallas.

Mr. THOMAS. You refer to earthquakes?

Mr. PALMER. Yes. That adds 5 percent to the cost. You can add about 6½ percent to the cost of construction since that bid was taken on the Houston building. I am talking from memory now.

You also have the additional cost, and that is a contract cost you are quoting, of 5 percent for contingencies.

We spent more money there, also——

Mr. THOMAS. You have no earthquakes in Arkansas and you spend $21.25 a square foot there.

Mr. PALMER. The building cost goes by the size, too. The larger the building the less will be the cost per square footage, according to the record. A smaller building will cost more per square foot.

BALTIMORE, MD., FEDERAL OFFICE BUILDING

Mr. THOMAS. What about this building in Baltimore, $13,706,000—fallout shelter, $252,000? What is the square footage in Baltimore?

Mr. SCHMIDT. 812,000 square feet gross, 510,000 square feet net.

Mr. THOMAS. Losing 300,000 square feet? Those deducts are going to break us.

Mr. SCHMIDT. This is a comparison of the usable space with the gross area.

Mr. THOMAS. Perhaps we have better reread that report which was read a while ago.

Mr. SCHMIDT. I don't believe I have ever seen that report.

Mr. THOMAS. We read it into the record last year.

Mr. BOUTIN. The average square foot involved, however, is $24.56.

Mr. THOMAS. But you are losing 300,000 square feet out of 800,000, in round figures.

Mr. PALMER. The net assignable space is that really occupied. To that has to be added the thickness of the walls——

Mr. THOMAS. Judge, we know those details. Tell us how you lose 300,000 square feet.

Mr. PALMER. It is all in there.

Mr. THOMAS. This one must be mostly walls.

Mr. PALMER. Elevator shafts, corridors, stairs, pipe shafts, air duct shafts.

PERCENTAGE OF NET TO GROSS SQUARE FEET

Mr. THOMAS. Mr. Palmer and Mr. Schmidt didn't read this report. We want to read you some information here. I will tell you who wrote it later. [Reading:]

The usable floor area assigned to an agency divided by the gross area gives the space efficiency ratio. For Government office buildings an efficiency ratio of 80 to 85 percent in buildings not exceeding 12 stories and 75 to 80 percent in buildings exceeding 12 stories is recommended by a Federal construction council report published by the Building Research Advisory Board of the National Academy of Sciences—National Research Council.

That is the blue ribbon committee. Nobody can doubt that.

Space efficiency ratios in the 15 buildings examined by the staff ranged from 58 to 75 percent, with an average of 66 percent for all buildings studied.

What is the average you show here? You show 62 percent.

Well, the report is right.

Anyway, this report states we are losing far too much space. The report says it should be between 80 and 85 percent, and here we are down to 60 percent.

What about that?

Mr. PALMER. We cannot in our net assignable space get any 80 percent. We have tried to get it as high as we can.

Mr. THOMAS. How does private industry get it?

Mr. PALMER. They get it by the way it is figured. They figure in space we do not.

Mr. THOMAS. Is there any law prohibiting our figuring the space the same way?

Mr. PALMER. It goes back to the space we acquired and the requirements from the different agencies. They give us the space requirements.

Mr. THOMAS. You have no control over it?

Mr. PALMER. That is right.

Mr. THOMAS. You know, we have an Executive order now, Mr. Palmer. We are armed with that Executive order and we can tell these agencies yes or no, and that is just as it should be.

You got that order last year, you will recall.

Well, that is too must wastage in space, gentlemen.

Mr. BOUTIN. We have come up about 3 percent in the past year in our net assignable.

FEDERAL RECORDS CENTER BUILDING

Mr. THOMAS. What is this records center, $12,705,000? What does the justification say on that? GSA Records Center, $12,705,000. We have no fallout shelter in that.

Mr. DALY. The reason for including the records center at this time is so that we can abandon the very poor space that is at the Franklin Street Annex in Alexandria, and space at Mechanicsburg which will go back to the Department of Defense, and get out of leased space at Franconia.

USE OF EXCESS BUILDINGS FOR RECORDS CENTER

Mr. THOMAS. To my knowledge within a radius of 50 miles of where we are now sitting there are many buildings which have been abandoned by the military which are good buildings you can use for records centers.

What about here at Fort Washington? What about Quantico in Virginia? What about Frederick, Md.? This records center does not have to be closer than 50, 60, or 70 miles from here.

Mr. JONAS. And the Naval Gun Factory.

Mr. THOMAS. That is the one I was trying to think of. You want to spend $13 or $14 million. All you need is a good substantial building. You don't have to have anything fancy for the records center.

Mr. DALY. Speaking first to the Naval Gun Factory, sir, the usable buildings there, such as buildings 159, 159–E, and the other buildings, are for office type space which we consider more critical than records center space.

Mr. THOMAS. You have adequate use for every one of those vacated buildings?

Mr. DALY. Yes, sir.

Mr. THOMAS. What are you going to do with that?

Mr. DALY. One building is for a classified activity. 159–E has parts of the Library of Congress, parts of the Department of Commerce. It is for expansion needs of agencies in Washington so we can eliminate having to lease space for these people.

Mr. THOMAS. Are you going to use it for office buildings?

Mr. DALY. Yes, sir, most of it. I refer to the Naval Weapons Plant now, the old navy yard.

Mr. THOMAS. Anyway, there are no abandoned buildings in an area of 50 to 60 miles from here you can use?

Mr. DALY. We did consider at one time a building outside of Baltimore. It was the old Martin plant. The Federal Supply Service is using part of the building and other agencies are now using it.

CRITERIA FOR RECORDS CENTER

We would have run into a problem of having the records immediately available.

Dr. Grover might want to speak to this point. Part of the agreement with the agencies in putting certain records in the records centers is that they will be——

Mr. THOMAS. The doctor can get that information. He may have to twist arms to get the information, which is very commendable, but he has efficient people there on the floor. He can phone there and put his finger on any file in nothing flat.

Do you agree with that?

Dr. GROVER. I went to look at that plant twice. That is the only place which turned up within any reasonable radius which looked like a prospect.

My people felt if we went there we might as well give up any idea of trying to get more records out of the Washington offices than just the most inactive ones because we could not give the agencies service.

I think there are several things involved here. We have to have a center building. In the first place, many of these things we get from the Defense Department are not capable of keeping records. They are ratty, subject to flood being on the Alexandria waterfront, expensive to maintain, and they are difficult to operate. I think you can almost pay off building a building for a records center purpose over the years through economy of maintenance and operation.

Mr. THOMAS. I am willing to wager there are 50 different buildings the military are giving up which may be 100 to 200 miles out of Washington where you can get a tremendous amount of square footage. How many square feet do you figure you need?

Dr. GROVER. 900,000 gross and 800,000 net.

Mr. THOMAS. You can get 2 million square feet of space. They are pretty good buildings. There is no particular reason you should be right in the District of Columbia, is there?

Dr. GROVER. We have to give these offices prompt service or there is no use talking to them about taking their records into the center.

Mr. THOMAS. Can that be done by the telecommunications system?

Dr. GROVER. They want the original records back. If they wanted that——

Mr. THOMAS. You mean they want the file?

Dr. GROVER. They do.

Mr. THOMAS. You usually get a phone call to look up some information, do you not? Sometimes they send a messenger and take the file back with them.

Dr. GROVER. In most of the services they withdraw the files.

Mr. THOMAS. You do not deliver it to them, do you?

Dr. GROVER. Yes; we deliver it to them.

Mr. THOMAS. I thought they usually sent a messenger.

Dr. GROVER. We have a regular daily run. We give them good service and that is why they are willing to send their records to the center.

Mr. EVINS. You have records centers in St. Louis, Denver, Minneapolis.

Dr. GROVER. But the offices are in those regions. The centers in St. Louis are specialized centers having personnel files.

Mr. EVINS. Nothing is more important than personnel.

Dr. GROVER. There we respond to inquiries by taking information from the records. Those are also our costly centers, I might say. It is cheaper for us to send the file back to the agency.

Mr. BOUTIN. One of the big problems we have with these records centers is that we must have buildings which are relatively fireproof or resistant. They must be buildings where records can be laid out and where we can keep personnel to a minimum.

In every single square foot of space we can release for office occupancy rather than file occupancy we save $4.75 in the District of Columbia.

Mr. THOMAS. Is there anything down at Quantico? Have you been down there?

Mr. BOUTIN. We think it would be too far.

Mr. THOMAS. How far is it from here?

Mr. BOUTIN. About 35 miles.

Mr. EVINS. I am in agreement with the general philosophy of the chairman. All the records do not have to be in Washington.

We have a drive on now to decentralize in the event of atomic attack. Many of the records should be elsewhere. Part of the Capital should be elsewhere. There should be a site where the Congress could meet if necessary in case of extreme national emergency.

I think the doctor should disperse some of his records out to Tennessee and Texas.

Dr. GROVER. We have some in Texas.

Mr. EVINS. New York and North Carolina. He wants them all right here.

Dr. GROVER. I don't want them all right here.

Mr. EVINS. At arm's length.

Dr. GROVER. I want Washington office records within arm's length of Washington just as you want your records within arm's length.

Mr. THOMAS. Why is Quantico too far away, 35 miles?

Dr. GROVER. I have never looked at space there at Quantico.

Mr. THOMAS. You say you have a regular run. You can deliver them the records the same day they ask for them. They can phone in the morning and they will get them in the afternoon. I guarantee they will not use them for at least 4 or 5 days after they get them.

OTHER POSSIBLE SITES FOR RECORDS CENTER

Is there any excess space at Quantico? Thirty-five miles is not too far, is it?

Mr. JONAS. How about Bainbridge?

Mr. THOMAS. How far is Bainbridge from here, 50 or 60 miles?

Mr. TURPIN. About 80 miles.

Mr. THOMAS. Is that too far away?

Dr. GROVER. I think it is too far.

Mr. OSTERTAG. Farther than Quantico?

Mr. THOMAS. Quantico is 35 to 40 miles away, and you have fine roads.

Mr. EVINS. How about a building in Washington for the active files and then decentralize some of the archaic files to other places, Civil War records, and so forth?

Mr. THOMAS. What did you say about Quantico?

Dr. GROVER. We are asking for 900,000 square feet of space. I don't know what kinds of buildings they have down there. In most of these posts the buildings are broken up considerably, as you know, with various types of things.

Mr. THOMAS. Every now and then you get hold of a tremendous one. Look at all these warehouses in these installations. They range from a half million up to a million feet. Take the Quartermaster Supply Depot. They may not have any available; I don't know.

Mr. OSTERTAG. Are there industrial reserve plants you can use?

Mr. BOUTIN. The only one was the one in Bengies. I would like to point out to the committee that we have not been shortsighted. Exactly what you say you are interested in having us do we have done this year. We were out at Sand Point where the heat was on for us to get out. We remodeled that building at a very nominal cost because it was a Federal supply warehouse, our own building, and we moved our records in there. It makes a perfectly good records center. We will not bother this committee for many years because we had something there to work with.

Mr. JONAS. I believe there is an abandoned military installation at Frederick, Md.

Mr. THOMAS. That is only 45 to 50 miles from here.

Look into this and see what can be done.

(NOTE.—See p. 1233 for additional information on space for Records Center.)

FT. WORTH, TEX., FOB

Let us look at the building in Fort Worth, Tex., $15,664,000 for how many square feet?

Mr. BOUTIN. The gross is 795,000 and the net assignable 503,000.

Mr. THOMAS. That is worse than any of them; is it not?

Mr. BOUTIN. The ratio there is 63.27 percent.

Mr. THOMAS. Gross is 800,000 and net assignable 500,000. The percentage is what?

Mr. BOUTIN. 63.27 percent, Mr. Chairman.

Mr. THOMAS. Can we raise the percentage to around 80 to 85? What does this cost per square foot?

Mr. BOUTIN. The cost at Fort Worth per square foot is $19.43, exclusive of fallout shelter.

Mr. THOMAS. That is the cheapest square foot cost you have come up with yet. What is the justification for it? How bad is the need?

Mr. BOUTIN. The need is considerable there because of the amount of leased space we have.

Mr. THOMAS. This is purely a Federal office building and not a courthouse building or post office building?

Mr. BOUTIN. Strictly that.

Mr. DALY. Federal office building.

Mr. THOMAS. Why can it not be the same as the square footage in Houston?

Mr. BOUTIN. Prices have gone up 6½ percent since the time that was contracted.

Mr. DALY. You asked for the justification, sir. At the present time we are paying $383,144 for leased space for agencies in Fort Worth.

Mr. THOMAS. Are you going to give up that big warehouse you have there?

Mr. DALY. You mean the Federal supply service warehouse?

Mr. THOMAS. You are not going to put the Federal Supply Service in there, are you?

Mr. DALY. That is leased.

Mr. SCHMIDT. That operation is being moved——

Mr. THOMAS. What agencies are paying that rent in Fort Worth?

Mr. DALY. Federal Aviation Agency.

Mr. THOMAS. Post Office is leased, 49,000 square feet.

Mr. DALY. Yes, sir.

Mr. THOMAS. Who else is there? You have the Federal Aviation Agency. They have a regional office and their own properties 12 or 15 miles from town.

Mr. DALY. I don't recall where they are located.

Mr. SCHMIDT. They are located in Government-owned space.

Mr. THOMAS. Are they going to abandon it?

Mr. SCHMIDT. They asked that we provide for them in the new building.

Mr. THOMAS. What are they going to do with that space?

Mr. SCHMIDT. There was a decision we had to make either to remodel and revamp that space or relocate them.

Mr. JONAS. Will the chairman yield there?

Mr. THOMAS. Certainly.

URGENCY OF DALLAS AND FORT WORTH PROJECTS

Mr. JONAS. I keep hearing comments about your failure to program the Dallas center. How does this Fort Worth requirement compare with that at Dallas?

Mr. BOUTIN. Congressman, this is the decision of the Administrator. Actually we had construction capability in the sum of close to $365 million for fiscal 1964. The Bureau of the Budget set a mark for us. They said: "This is the amount you can request of the Appropriations Committees and the Congress."

Within that framework of these buildings, for which we have construction capability, it was up to me to select those which I considered most urgent and where the need was greatest and fit a pattern in.

Mr. JONAS. Do you consider the Fort Worth project more important than the Dallas project and more urgent?

Mr. BOUTIN. In relation to cost; yes. The Fort Worth building is less expensive than the Dallas building. If I were to put in Dallas and take out Fort Worth I would have had to take out three or four projects or more in order to fit it in with the total amount available.

Mr. JONAS. Do you base your decision on the money which is available or the need? Was not Dallas authorized a long time before Fort Worth?

Mr. BOUTIN. We have not had a pattern of requesting appropriations on the basis of strict construction capability in a timely manner, one, two, three. We get an appropriation mark for which we may request appropriation. We take those projects which have been approved and funded for sites and expenses which we can construct in that year, and then put together the most meaningful program we can.

We could spend the whole budget in the State of California, for example. We can spend the whole thing there and still not fulfill their needs for any given year.

The law states we should take into consideration geographical distribution, which we try to do, and relative needs.

Mr. JONAS. How does the need at Fort Worth compare with the need at Dallas? Forget about money now.

Mr. BOUTIN. They are both needed.

Mr. JONAS. I want comparability figures. One was authorized before the other. Dallas was authorized before Fort Worth, was it not?

Mr. BOUTIN. Yes. Under the Lease Purchase Act. But Dallas had to be reapproved under the Public Buildings Act of 1959 and this approval was later than the Fort Worth approval.

Mr. JONAS. Would that not indicate it had a higher priority as to need?

Mr. BOUTIN. Not necessarily, no, because of changing conditions which always make a difference.

Mr. JONAS. How much are you spending on rent in Dallas?

Mr. BOUTIN. Mr. Schmidt, have you current information on that?

Mr. SCHMIDT. I do not.

Mr. JONAS. If you don't have it, supply it for the record.

(The information requested follows:)

Current rentals in Dallas total $1,536,122.

ALLOCATION OF SPACE AT FORT WORTH

Mr. THOMAS. How are you going to alocate this space, the number of usable square feet? How are you going to allocate 500,000 feet in that new building? Supply that for the record.

(The information supplied follows:)

Proposed occupancy of space in the Fort Worth, Tex., Federal office building

	Net assignable area (square feet)
Federal Aviation Agency	150,000
Department of Defense	100,100
Department of Agriculture	40,750
Housing and Home Finance Agency	38,400
Department of Commerce	25,450
Federal Power Commission	4,500
Interstate Commerce Commission	3,800
Selective Service System	1,650
Railroad Retirement Board	1,150
Civil Aeronautics Board	600
Garage	75,000
Building operational space:	
Custodial	9,500
Communications	2,200
Health unit and vending stand	1,700
Conference	2,000
Cafeteria	6,500
Total, operational space	21,900
Reserve for expansion	40,000
Total, net assignable space	503,300
Rounded	503,000

FUTURE PLANS FOR DALLAS PROJECT

Mr. OSTERTAG. Have you any estimates as to when you will go forward with the Dallas project?

Mr. BOUTIN. No, I could not tell you that without knowing what our program is going to be for next year, Congressman. It has construction capability right now. We could construct it next year or the year after.

We have said repeatedly we consider Dallas an important project.

Mr. JONAS. What was the estimate for Dallas?

Mr. BOUTIN. I believe it was $26.7 million.

CLEVELAND, OHIO, FEDERAL OFFICE BUILDING

Mr. JONAS. You have one in Cleveland, Ohio, in this program for $41 million. How many smaller projects did you have to cancel to get the Cleveland, Ohio, project in?

Mr. BOUTIN. As far as Cleveland, Ohio, is concerned, we considered that a more urgent project.

Mr. JONAS. More urgent than what?

Mr. BOUTIN. More urgent than Dallas.

Mr. THOMAS. What is the net usable space? How many square feet do you have in Cleveland? You have $41,223,000 and a half million dollars for fallout space.

Mr. BOUTIN. The cost there, per square foot, excluding fallout, is $24.69.

Mr. THOMAS. What rent are you paying? That is $24 a square foot?

Mr. BOUTIN. $24.69.

Mr. THOMAS. What is the nature of it—nothing but as office building?

Mr. BOUTIN. Cleveland is strictly a Federal office building; that is correct, Mr. Chairman.

Mr. THOMAS. What is the usable square footage?

Mr. BOUTIN. Usable square footage in Cleveland is 995,500.

Mr. THOMAS. How many square feet in the building?

Mr. BOUTIN. 995,500 net; 1,649,000 gross.

Mr. THOMAS. How many usable?

Mr. BOUTIN. 995,500.

Mr. THOMAS. What is the percentage?

Mr. BOUTIN. 60.34.

Mr. THOMAS. For an office building that is very low. It should be at least 80 to 85 percent.

Mr. BOUTIN. There is only one which is lower than that, Mr. Chairman—no, two, Boise, Idaho, and New Albany, Ind. All the others range considerably higher.

Mr. Palmer, have you the detail on Cleveland?

Mr. PALMER. Cleveland is about 33 stories high. It is a rectangular building.

Mr. THOMAS. What is the justification? How much rent will you save? What rent are you paying?

Mr. PALMER. $1,381,299.

(NOTE.—This was the rent figure as of April 1960 when the report of building project survey on the Cleveland project was made.)

Mr. THOMAS. Deducting taxes it will take 75 years to pay for it, would it not?

Mr. JONAS. May I ask a general question?

Mr. THOMAS. Surely.

CONSOLIDATING GOVERNMENT ACTIVITIES IN ONE BUILDING

Mr. JONAS. What is the advantage of having the CAB in the same building with the FBI, for example? Is there any definite advantage in having all Government agencies in one building in a city, or is the consideration solely one of saving money?

Mr. BOUTIN. I think there is a great advantage from several viewpoints in having them all together.

So far as CAB and FBI there is no magic there. Overall, it is a big item from the standpoint of convenience to the public.

We have people every day coming in looking for somebody else. To have them all in one location is helpful to the public, saves us a lot of time, difficulty, and money in servicing the space, controlling the space, the assignment, reassignment, cleaning, management of the space.

Mr. JONAS. You don't have any of that to do when you rent an office in the Universal Building, for example?

Mr. BOUTIN. We still have the assignment, reassignment and utilization responsibility.

Mr. JONAS. Service and utilities, I mean.

Mr. BOUTIN. That is right.

Mr. JONAS. You think there is some distinct advantage to the general public, then, in having a lot of Government agencies in one location?

Mr. BOUTIN. Yes, sir; I have had ever so many people tell me in my own city, long before I came here. We have that in my hometown. They are all in the same building. If somebody wants to check on their social security and wants to talk to the Internal Revenue man, if there are one or two other calls; they do it all at one place rather than going all over the community to find them.

Mr. JONAS. I can see that.

SAVINGS ESTIMATE AT CLEVELAND

Mr. BOUTIN. Do we have those costs, Mr. Daly?

Mr. DALY. On Cleveland?

Mr. BOUTIN. Yes.

Mr. DALY. We were paying $1,381,299 annual rent for space to be released with construction of the new building. Annual rental for comparable space is estimated at about $4 million.

Mr. BOUTIN. How much do you save over a 50-year period?

Mr. JONAS. That will not be responsive to the question, what it would cost to rent comparable space, if you have more space than you need in this building. That will not be a true test of the saving, will it?

That assumes that you have an efficient utilization of space and that you really have a requirement for all of the space you are providing.

Mr. DALY. I think that is true, Mr. Jonas, except for certain expansion space which we would allow in any new building.

Mr. THOMAS. How do you justify this expenditure of $41¼ million when you are going to save $1.3 million in rent?

Mr. SCHMIDT. The $1,380,000 is the rent paid as of April 1960 for those activities to be housed in the building. The space requirements so far as the new building is concerned, based on a 50-year life of the building, include some agency expansion with their current requirements. In fact, we get this from the agencies in planning for the building.

If we were to compare this with a rental facility of comparable size and quality the annual rental would be approximately $4 million, so that the rental savings——

Mr. THOMAS. If the tenants who occupy the building were to move tomorrow and the building is constructed you would save only $1.3 million a year.

Mr. SCHMIDT. By giving up the space they now occupy—a lot of it is substandard space. In fact, one sizeable unit is a former garage, the Euclid Square Garage building in Cleveland.

Mr. THOMAS. Who are the tenants and how much space will they occupy compared with what they are occupying now? Give us that information.

Mr. SCHMIDT. I cannot identify this from the report we have here. This was not a prospectus but a report to the committee under section 11(b) of the Public Buildings Act. It does not have the occupancy plan for the building.

Mr. THOMAS. Are these figures just a guess?

Mr. SCHMIDT. No, sir.

Mr. THOMAS. What is in the prospectus? How do you arrive at the need? Let us say you know nothing about this big one and let us take this one in Texas, $601,000.

ALICE (TEX.) PROJECT

Tell me about this project in Alice.

This is a nice little city in southwest Texas, and I know they need the building. What is the population of Alice?

Mr. SCHMIDT. 21,000 people.

Mr. THOMAS. It has grown a lot.

Mr. DALY. Gross square footage 25,000, net 16,500. Total cost of the building——

Mr. THOMAS. What are you going to put in it? You have a post office, Federal office building.

Mr. SCHMIDT. Post Office Department, 8,748 square feet; Agriculture, 4,245 square feet; Defense, 650 square feet; Selective Service, 500 square feet; Treasury, 500 square feet.

Mr. JONAS. How can you include Selective Service when the act expires in June? They don't know they will be in existence.

Mr. THOMAS. What is the cost per square foot?

Mr. SCHMIDT. $22.68 per square foot.

FEDERAL OFFICE BUILDING 5, WASHINGTON, D.C.

Mr. THOMAS. What about Federal Office Building 5? How many square feet in this?

Mr. SCHMIDT. 1,780,000 square feet.

Mr. THOMAS. Who is going to use this building?

Mr. BOUTIN. Department of Defense.

Mr. THOMAS. Where is it to be located?

Mr. BOUTIN. It will bridge 10th Street, right down next to the FAA building.

Mr. THOMAS. How many square feet?

Mr. BOUTIN. 1,789,000 gross, net 1,263,000, ratio, 70.96 percent, and the cost per square foot is $20.34. That excludes fallout.

Mr. THOMAS. It is a general office building?

Mr. BOUTIN. General office building.

Mr. EVINS. Is this Department of Defense?

Mr. BOUTIN. Yes.

Mr. THOMAS. Will it be a young Pentagon?

Mr. BOUTIN. We call it the Baby Pentagon.

Mr. THOMAS. Do you think you will need all that square footage? I understand Mr. Khrushchev is moving his troops out of Cuba.

Mr. OSTERTAG. Why is that located there? That is strictly military, is it not?

Mr. BOUTIN. This is in the new redevelopment area, in the same general area where we will be talking in our supplement for Housing and Home Finance, the building to which the chairman referred. It is a general improvement of this area where practically all the old buildings were torn down and the area is awaiting redevelopment.

Mr. THOMAS. How badly does the Department of Defense need this building?

Mr. BOUTIN. Quite badly.

Mr. JONAS. They are getting rid of 10,000 civilian employees. The new budget calls for 10,000 fewer employees in the Department of Defense than last year.

Mr. EVINS. I think it should be farmed out.

Mr. THOMAS. What is this building doing in this appropriation, anyway? Why is it not "Military construction"?

You are going to maintain it for them and everything else?

Mr. BOUTIN. This is a building for which we will have full responsibilities, just as we do the Pentagon.

Mr. THOMAS. They have a little appropriation of around $43 billion this year. Can't they put up a building from that? It is only $36 million.

Mr. BOUTIN. We would have to turn back the clock.

Mr. EVINS. You are about 60 percent complete now? How far along are you on this building?

Mr. BOUTIN. Just the design.

Mr. EVINS. One building already is bridging the street. Which building it that?

Mr. BOUTIN. That is FAA on the one side and NASA on the other side.

Mr. OSTERTAG. Do you take care of the Pentagon?

Mr. BOUTIN. That is right.

Mr. OSTERTAG. That is part of your responsibility?

Mr. BOUTIN. All the military buildings not on military reservations. There is one in St. Louis, the Pentagon, a lot of space all over Washington scattered all over the city.

Mr. EVINS. You don't have much control over the military, do you?

Mr. THOMAS. Let us try to finish this tomorrow and go into the Federal Supply in the afternoon.

Be prepared to give us information on sites and expenses, locations, and how much it will cost.

WEDNESDAY, FEBRUARY 20, 1963.

CLEVELAND PROJECT

Mr. THOMAS. Gentlemen, will the committee please come to order.

When we adjourned yesterday we were looking over some of these projects and were talking about this big Cleveland project. Are there any further questions on it?

Mr. BOLAND. Is there much opposition to this project?

Mr. BOUTIN. There is no opposition to the project itself that I am aware of. There has been some opposition in Cleveland to the design of the building, the use of a lot of metal in the building instead of masonry, but you hit that in almost every building you have. If you use masonry, the steel and aluminum boys are angry with you, so you never win on that one.

A question has been raised by a delegation from Cleveland about the setback of the building. We are working on that and we think we can reach a reasonable solution without its costing any more money.

Mr. BOLAND. Have you seen the building site?

Mr. BOUTIN. Yes.

Mr. BOLAND. Is it directly across from the Cleveland Press?

Mr. BOUTIN. It is in that new redevelopment area overlooking the lake.

Mr. JONAS. Will the gentleman yield?

Mr. BOLAND. Yes.

Mr. JONAS. I am surprised to hear you say there is no opposition to it. That is a little contrary to the way my mail reads.

Mr. BOUTIN. I have heard of none.

OBJECTION OF ASSOCIATION OF BUILDING OWNERS TO CLEVELAND PROJECT

Mr. JONAS. I have a prospectus or document from the Cleveland Association of Building Owners & Managers. I would gather they are certainly not disinterested. They say you do not need that building, that there is an 8¼-percent vacancy of rentable space in Metropolitan Cleveland now, 657,993 square feet of good usable space that is vacant, and they do not understand why the Government should be spending $41 million building a Federal office building which will not be connected with the post office but just for office space when there is all this vacant space available there now.

Mr. BOUTIN. The problem is, Congressman, you get down to basic policy. Everywhere we build a building the fellows who have been leasing to the Government for years do not like it, but the basic policy is to build whenever it is economically feasible, and here we have determined it is in the best interest of the Government and this is what we are trying to do.

Mr. JONAS. Let me ask you to comment on these facts. When you refer to its being economically feasible, I take it you mean by that expression it would be a moneymaking proposition?

Mr. BOUTIN. It would save the Government money; correct?

Mr. JONAS. They say the interest on this $41 million will be $1.5 million per year cost to the Government; that depreciation figured at 2 percent would be $825,000 a year; and that the cost of cleaning, operating, and servicing this 1,200,000 square feet of space would be $2.5 million a year. That runs up to a cost of $4.7 million and the cost of your present space is $2.3 million.

If those figures are correct, tell me how that is a good deal for the Government.

Mr. DALY. First I would like to comment on the lease situation as it now stands in Cleveland. We have about 750,000 square feet under lease but it is in 31 scattered locations. Unless the situation has changed recently, there are no large blocks of space where we could consolidate.

PROJECTED SAVINGS ON CLEVELAND PROJECT

I would have to make a more critical analysis of those figures to talk to them as I would like, but according to our analysis based on our usual prospectus technique of projecting it on a 50-year cost basis, we figure there will be an annual saving of about $1.7 million and over the 50-year period there will be a saving of about $88 million.

Mr. JONAS. How do you arrive at the figure of $1.7 million saving?

Mr. DALY. The average annual cost per net square foot for comparable space as we see it—and that would take into consideration the upgrading of some of this space because some of the space is not air conditioned, and so on—we figure is about $3.62 per square foot.

Mr. JONAS. What are your other cost items you calculated there?

Mr. DALY. Well, I think in the analysis that you had they talked to the question of the estimated repair and upkeep cost, and we figure it would cost $25 million for 50 years.

Mr. JONAS. That is only a half million dollars a year?

Mr. DALY. Yes.

Mr. JONAS. That is contrary to your experience in Washington, is it not? What does it cost to upkeep and maintain 1,200,000 square feet?

Mr. THOMAS. 52 cents a square foot.

Mr. DALY. This is based on 50 cents a square foot. This is for repair.

Mr. JONAS. What about servicing and cleaning?

Mr. DALY. It would come to about the same one way or another. If you are under lease you are either paying for it in your rent or you are doing the servicing and paying for it.

Mr. JONAS. Yes, but you are only paying $1,366,000 for 788,000 square feet of space now in good buildings scattered around Metropolitan Cleveland. Is that correct?

Mr. DALY. We do not agree that all of this is good space. Some is not particularly good space.

Mr. JONAS. It is occupied by other people who are in business, they are maintaining space in these buildings. Why should the Government have better space than Tom, Dick, and Harry?

Mr. DALY. I do not think we have ever taken the position that the Government should have better space, but space that is adequate to carry out their business and that is reasonably comfortable and safe.

Mr. JONAS. Have you figured depreciation in the calculation you have there?

Mr. DALY. No. We have interest at the rate of 4¼ percent for 18 years, which would amount to $21,802,596.

Mr. JONAS. They figure interest at 3¾ percent. So they are on the liberal side. The Government is not borrowing much money at that low rate?

Mr. DALY. No.

Mr. JONAS. They figure there would be $825,000 a year depreciation and that the cleaning, operating, and servicing would cost $2.4 million as a minimum, and I assume they are basing that on what it costs to service, clean, and maintain comparable buildings in Cleveland, but you question that figure, as I understand?

Mr. DALY. No; I did not question it. My point was we would pay practically the same for servicing whether Uncle Sam is doing it or we are paying it in the rent.

Mr. JONAS. You are not paying it in the rent if you are getting 788,000 square feet for $1,366,000 now.

They say the reason you cannot get better leases is because you have a maximum lease of 3 years with an option for a 1-year extension. Is that correct?

Mr. DALY. No. GSA does have authority to rent for a maximum period of 20 years. We seldom exercise that.

Mr. JONAS. They say in leasing your requirements in Cleveland you do not enter into a lease for more than 3 years.

Mr. DALY. That was an administrative action. The reason for that is, we had the new building coming along so we wanted to have short-term leases so we could pull out.

Mr. JONAS. Are you figuring on going in this new Galbreath Building?

Mr. DALY. I am not familiar with that.

Mr. JONAS. In the area of the Tower Building now under construction?

Mr. BOUTIN. No; we have not considered going in that because we had our own building coming along.

Mr. JONAS. I do not mind saying, as one member of this committee, I take a dim view of spending $41 million for the Government to build an office building in Cleveland when there is that much vacant space in Cleveland, and if these figures given by this association are anywhere near correct, instead of saving money it will cost about $1.5 million a year in excess cost.

Mr. BOUTIN. What do you show as the saving over 50 years?

Mr. DALY. $88,345,804.

Mr. BOUTIN. What we have to keep in mind is, if we went on the basis wherever there was vacant lease space we would not build Government buildings, we would not build any, because private builders will supply it as fast as we need it on a rental basis. Any place we build these buildings, the owners do not like it because it means the loss of a good high-rent tenant. And if the Government is to occupy space only as good as the bottom half of the tier, we will not have a good, efficient operation.

Mr. JONAS. You would not say that is the situation in Cleveland?

Mr. BOUTIN. I would say in Cleveland at least one-third of the space we occupy we should not be occupying, it is bad space.

Mr. JONAS. I am not familiar enough with the Cleveland situation to know about that.

Mr. THOMAS. Mr. Jonas, I understood yesterday Mr. Daly used these figures—I am relying on my memory—that the annual rental they are paying now is $1.3 million a year and I calculated it would take 50 or 60 years to pay for the building.

Mr. DALY. Let me clear this up to make sure we are comparing apples with apples. The figure I gave today was based on the average cost for comparable leased space. It is very difficult here, without an analysis of your paper, Mr. Jonas, to compare apples with apples.

Mr. THOMAS. Here is one that is apples for apples. What figure are you paying for rent? Yesterday you testified, as I recall, $1.3 million a year.

Mr. DALY. $1.9 million.

(NOTE.—The record was examined and the rent figures referred to are as follows: $1.38 million was the figure testified to Feburary 19, 1963, as the amount of rent being paid in Cleveland. It developed that this was the figure as of April 1960 when the building project survey report was made. The current rent for all leased space in Cleveland is $1.9 million.)

Mr. THOMAS. Did you not say $1.3 million yesterday?

Mr. DALY. I cannot recall, sir.

Mr. JONAS. As I recall, the chairman said at the time it would take over 50 years to pay for it.

Mr. THOMAS. I could be mistaken.

Mr. DALY. I rechecked all my figures last night on Cleveland. I cannot recall if I said $1.3 million.

Mr. OSTERTAG. In simple arithmetic, $1.3 million over a period of 50 years would amount to $65 million. Now, it is costing you $41 million for this building. There is a difference of about $24 million. Where does this $88 million saving come in?

Mr. BOUTIN. As Mr. Daly pointed out, the difference is we are comparing what it would cost us for first-class space which we are providing with a new building. In other words, we would have to build a building which would be of the same variety as we now occupy to get an absolute figure. To make sure we are comparing like with like here, we are comparing class 1 space, with some of the class 1 space we are occupying in Cleveland.

NATURE OF ESTIMATED SAVINGS IN CLEVELAND

Mr. OSTERTAG. It was in terms of dollars rather than type of space. You gave a $88 million figure as the amount of saving.

Mr. BOUTIN. If we were to go out and rent space in the same class as we are building, the saving over this period of years would amount to $88 million.

Mr. DALY. But it would not be the space that Congressman Jonas is talking about.

Mr. JONAS. In the same type of building, instead of a saving of $88 million it would be a loss of $40 million or $50 million, would it not?

Mr. BOUTIN. No; I think you would also have to take into consideration that at the end of the 50 years you own a building which has potential value, and in the other case you have nothing.

Mr. JONAS. You cannot figure the ownership value because it would not be salable?

Mr. BOUTIN. If Uncle Sam wanted to sell it it would be salable. It would be an asset of the U.S. Government.

Mr. JONAS. It would be an asset in that we have $41 million invested in it.

Mr. THOMAS. I think we have a pretty good record on it and the committee, I know, will want to go into this in detail.

NET USABLE SPACE IN BUILDING

Mr. Daly, I was disappointed in the remark you made yesterday, you and Mr. Schmidt. I read from an investigative report quoting the National Academy of Sciences on the ratio of usable

against unusable space, and they thought that private industry, in its total square footage in a building, used about 80 percent of it whereas you were using about 60 percent. You said you had never heard of the report. May I request that you read last year's hearings where we went into it. We quoted the same report, the same figures, and had you comment on it. The committee quoted several expert private builders, without calling any names—of course the names are available if it is necessary that they be called—to the effect they could build and are building every day as good a building, as usable a building, as the Government for 15 percent less. When you say you never heard of it, may we suggest that you reread the hearings. From your remark, it evidently went in one ear and out the other.

Mr. DALY. No, Mr. Chairman. May I have an opportunity to comment on that remark?

As you know, I was not at the House hearing last year. As I recall it, I said I was not completely familiar with the report, but before I came up here Mr. Hunter——

Mr. THOMAS. A capable citizen, I might say for the record.

Mr. DALY. Before I came up here this year I read last year's hearing very thoroughly.

Mr. THOMAS. We did not expect you only to read it but act on it, and you did not act on it because your justifications are the same 60-percent usability.

Mr. DALY. I would like to say this for the chairman's information: The Administrator ordered a number of studies by the management people this year and one of the studies had to do with the ratio between net and gross. I am not entirely satisfied with this, but we find commercial industry, as we brought out yesterday, includes certain things that we eliminate in ours. What I would like to do is really refigure some of these.

Mr. THOMAS. We would like you to do that but you are a little late in refiguring, Judge Daly. We do not like to do all this talking in here and you come 12 months later and say you have not heard of it. You figure and we will figure. Is that a fair deal?

Mr. DALY. All right.

Mr. THOMAS. Let us take a look at some of the major alterations and see if that same percentage of wastage applies. Let us take a look at major conversion.

Here is one at Helena, Mont., post office and court building, $1,596,000. And here is one of the same type at Detroit, $3,990,000. We will say $4 million in round figures. That is under your major extensions and conversions. What will you do at Detroit?

Mr. BOUTIN. Mr. Chairman, while we are getting that together I would like to point out that I think you would find in comparison with last year's testimony we had increased on new construction the ratio from about 65.6 percent to 67.65 percent.

ANNUAL RENT PAID IN CLEVELAND

Mr. THOMAS. Mr. Administrator, will you forgive me for the interruption. Going back to that figure on the annual rent paid in Cleveland, yesterday I asked this question:

"How much rent will you save? What rent are you paying now?"

And Mr. Palmer replied: "$1,381,299."

I used the figure of $1.3 million. It is still not $1.9 million, is it?

Mr. DALY. No, sir.

(Note.—See explanation of these figures on p. 1201.)

Mr. THOMAS. Go ahead, Mr. Boutin.

DETROIT, MICH., PROJECT

Mr. BOUTIN. That is the point I wanted to make, Mr. Chairman. You asked a question on Detroit.

Mr. THOMAS. Yes. This is not a new building. This is a major extension and conversion. My question was that you give us the prospectus on it. How many square feet and what is it costing per square foot?

Mr. DALY. The gross on Detroit is 694,700 square feet.

Mr. THOMAS. What is the cost per square foot?

Mr. DALY. $5.74 gross on the conversion.

Mr. THOMAS. What is the nature of the conversion? You have an existing building and are changing the inside?

Mr. DALY. We propose to convert and remodel 192,000 square feet of space that was vacated by the Post Office Department.

Mr. THOMAS. I thought you said 695,000 square feet. Now you say 192,000.

Mr. DALY. The portion I am talking about was for the post office. In addition, 41,000 square feet will be retained and remodeled as a postal station. The total of the project is 695,000 square feet.

Mr. THOMAS. What will you do with the remainder of it?

Mr. DALY. The remainder of it will be for office space.

Mr. THOMAS. But it will cost about how much per square foot?

Mr. DALY. $5.74 gross.

Mr. THOMAS. That does not seem to be out of line, does it?

Mr. BOUTIN. This is mostly postal space, Mr. Chairman.

Mr. THOMAS. What is your usability of that 695,000 square feet when you get through with it?

Mr. DALY. Net to gross, you mean?

Mr. THOMAS. Yes.

Mr. DALY. 59.74 percent.

Mr. THOMAS. It is going from bad to worse.

Mr. BOUTIN. This is post office space.

Mr. THOMAS. What does that have to do with it? You mean it goes into lobby? Is this working space or lobby space?

Mr. BOUTIN. Everything.

Mr. THOMAS. I do not know of any space that gets more use than a lobby in a post office.

Mr. PALMER. The lobby is always considered in the net, the post office lobby, but not the elevator lobby.

Mr. BOUTIN. How much of the post office lobby is in the square footage?

Mr. PALMER. I do not know.

Mr. DALY. We will have to get that figure for you, Mr. Chairman.

Mr. THOMAS. That does not give us very much detail, does it?

(NOTE.—Subsequently in the hearing the following response was made:)

With respect to the size of the lobby in Detroit, Mich., we are improving utilization there by reducing the lobby from 5,980 square feet that it is now, to 1,456 square feet. So we are going to improve utilization there.

Balance forwarded, net	−11,500,000			1,100,000
Appropriation or estimate	27,500,000			41,100,000

1963 appropriation	$27,500,000
Change	+13,600,000
1964 estimate	41,100,000

GENERAL STATEMENT

"This appropriation provides for preliminary planning of public buildings, acquisition of sites, preparation of drawings and specifications, supervision of construction, and related costs incident to projects approved under the Public Buildings Act of 1959. Costs of improvements are financed from 'Construction, public buildings projects.'

"The estimate of $41.1 million for 1964 provides for design starts including acquisition of sites, where necessary, for approximately 77 additional projects involving improvement costs in the magnitude of $184 million. Prospectuses for these projects have been developed for submission to congressional public works committees under provisions of the Public Buildings Act of 1959. Continued administration of other projects will be financed out of funds previously appropriated." (From the budget for 1964.)

It is planned to submit a supplemental estimate in the amount of $3 million for site and design costs for the proposed building for the Housing and Home Finance Agency, which was approved by the Public Works Committees in October of 1962.

APPROPRIATION LANGUAGE

For an additional amount for expenses necessary in connection with the construction of public buildings projects not otherwise provided for, as specified under this head in the Independent Offices Appropriation Acts of 1959 and 1960, including preliminary planning of public buildings projects by contract or otherwise, [$27,500,000] *$41,100,000*, to remain available until expended.

JUSTIFICATION

Except for a nominal amount, all funds appropriated through 1963 have been applied to specific projects or purposes in a manner consistent with the legislative history of the appropriation acts. Appropriations totaling $179,905,000 have been made available for this program through 1963. Schedules A and B included under the estimate "Construction, public buildings projects," reflect the application of these funds by specific projects. These schedules also show the year in which the projects were funded for sites and expenses and their current status.

The estimate of $41,100,000 for 1964 provides for design starts, supervision, and acquisition of new sites, where necessary, for approximately 77 projects selected after a thorough review and evaluation from some 350 proposed projects submitted by the regions which were developed as a result of community surveys and analysis of Federal space requirements. Prospectuses for these projects will be submitted to Senate and House Public Works Committees early in the 1st session of the 88th Congress.

Following is a breakdown by activity of the estimate of $41,100,000 for 1964:

(1) *Site acquisition, $28,700,000.*—For acquisition of sites, including appraisal costs.

(2) *Design and supervision, $12,400,000.*—Preparation of drawings and specifications, by contract or otherwise; technical services by the Design and Construction Division; soil surveys and tests, reproduction of plans and specifications; and supervision of construction, by contract or otherwise.

(3) *Program development, 0.*—Preliminary planning of projects, by contract or otherwise, and program direction, not distributed to specific projects. Costs for 1964, estimated at $960,000, are financed entirely from prior appropriations under "Sites and expenses."

(4) *Administrative operations, 0.*—Costs for 1964, estimated at $640,000, will be financed entirely from prior appropriations under "Sites and expenses."

SUMMARY OF EMPLOYMENT AND BREAKDOWN OF EXPENSES

Mr. THOMAS. We have the green sheets showing positions by grade and field and central office. Let us put pages 105 and 106 in the record.

(The pages follow:)

Average salary, all positions	7,960	8,914	9,021
Average grade, GS positions	9.2	9.6	9.6

SUMMARY STATEMENT ON OTHER OBJECTS FOR 1964

Of the $40 million total obligations for 1964 $414,000 is for personal services directly payrolled and $39,586,000 for other objects. Obligations for other than personal services are summarized below.

12 Personnel benefits, $30,900: $27,000 retirement contributions, $2,500 health benefits, and $1,400 group insurance.

21 Travel, $320,000: $300,000 for 11,111 days travel at $27 per day to acquire sites, superivse and inspect construction, and make on-site surveys and investigations to secure essential space data; and $20,000 for payment to interagency motor pools for use of vehicles.

22 Transportation of things, $30,000: For moving household goods of construction engineers, and transportation costs on administrative supplies and materials.

23 Communication services, $65,000: For telephone and teletype services and postage fees.

24 Printing and reproduction, $600,000: For reproduction of drawings, specifications, bidding documents, contract forms, etc.

25 Other services, $10,033,100: $6,775,100 for contract drawings and specifications, project supervision, site surveys and investigations; $2,617,000 payment to "Construction services fund" for technical services; $640,000 payment to "Administrative operations fund" for administrative services necessary to support this program; and $1,000 for services of other agencies.

26 Supplies and materials, $5,000: For program supplies and materials and miscellaneous administrative supplies.

31 Equipment, $2,000: For office and inspection equipment.

32 Lands and structures, $28,500,000: For acquisition of sites and for appraisal costs.

Mr. THOMAS. This appropriation provides for preliminary planning of public buildings, acquisition of sites, preparation of drawings and specifications, supervision of construction, and so on.

Do you mean this overlaps with our design and construction group where we have those famous 59 people? Your justifications say "Costs of improvements are financed from 'Construction, public buildings projects'." That is your language.

You had $27,500,000 last year and you want $41,100,000 for 1964.

EMPLOYMENT—SITES AND EXPENSES

Your total personnel compensation is $414,000 in 1964 against $394,000 for fiscal 1963. In 1962 you had 46 employees; in 1963 you have 46; and for 1964 you want 46. That is broken down between the field and the Department as follows: The Department has 23 for this year and the field has 23.

Gentlemen, read your green sheets if you do not mind. On page 105 you show you have 3 GS–14's in the Department, 10 GS–13's, and from there on down to the lower grades.

In the field you have four GS–13's, seven GS–12's, and so forth.

This table on page 102 gives you a detailed breakdown. For 1963 for "Site acquisition" you had $22,300,000 and that has increased to $28,500,000.

NUMBER OF SITE ACQUISITIONS—1963 AND 1964

How many sites will you acquire in 1964 and how many did you acquire in 1963 and what unexpended balance do you have in your 1963 funds? There you have three questions wrapped in one. Can you give us that information?

Mr. DALY. Yes, sir.

In 1964, Mr. Chairman, we will acquire about 74 sites.

Mr. THOMAS. I read from the bottom of page 103:

The estimate of $41,100,000 for 1964 provides for design starts, supervision, and acquisition of new sites, where necessary, for approximately 77 projects.

Is that right?

Mr. DALY. I stand corrected. I think I said 74. I meant to say 77.

Mr. THOMAS. How many did you acquire in 1963?

Mr. BOUTIN. Did you want that to date or the projection?

Mr. THOMAS. The projection. You have only 4 months to go in 1963.

Mr. BOUTIN. There are a number scheduled for the fourth quarter. How many sites do we intend to acquire for the full 1963?

Mr. DALY. Forty-one.

Mr. BOUTIN. How many of those have we acquired to date?

Mr. DALY. I do not have that figure with me.

FUNCTIONS OF PERSONNEL ON SITE ACQUISITION

Mr. THOMAS. How many people do you have in "Site acquisition" where you will acquire 41 pieces of property in fiscal 1963 and 77 in fiscal 1964?

Mr. DALY. We have a total of 46 full-time people, 23 departmental and 23 in the field.

Mr. THOMAS. So your total employment of 46 are assigned to "Site acquisition."

You have a $9.9 million item for "Design and supervision," and I thought we had a design group of 50 or 60 experts; and you have an item of $960,000 for "Program development," and of course we have to have an item for "Administrative operations."

Mr. TURPIN. We have just a minimum.

Mr. DALY. These 46 employees are funded from this particular appropriation of "Sites and expenses."

Mr. THOMAS. I understand.

Mr. DALY. They not only acquire the sites and do certain program planning in connection with our overall program development, but——

Mr. THOMAS. These are financed not from the Building and Management Fund but from "Sites and expenses"?

Mr. DALY. That is right, and their work is connected with acquisition and so on.

Mr. THOMAS. What you mean is there is no real breakdown in your 46 people?

Mr. DALY. Yes.

Mr. THOMAS. Why have this fancy table on page 102 and break it down into site acquisition, design and supervision, program development, and administrative operations? How did you arrive at all this if there is no division in labor in your 46 people? This table does not mean much.

Mr. DALY. Except to us in attempting to maintain some budgetary control, because most of these people are time carded.

Mr. TURPIN. Mr. Chairman, the amount for "Site acquisition" is the actual cost of the site and the same thing on "Design and supervision," it is the actual cost for design and supervision.

Mr. THOMAS. What is this $414,000 for your personnel compensation.

Mr. TURPIN. That is the personnel cost for the 46 people.

TRAVEL CONNECTED WITH SITE ACQUISITION AND CONSTRUCTION

Mr. THOMAS. You have a travel cost of $300,000 for 1964. It is $200,000 this year. That is too much travel, is it not?

Mr. BOUTIN. A large portion of this is supervision of construction, checking the progress of the jobs, and checking information on the sites themselves, Mr. Chairman.

Mr. THOMAS. You have a tremendous travel item under "Construction." That should not be so much travel on sites. It is not like going to a construction project where you have to have regular supervision.

Mr. TURPIN. All the supervision of construction by GSA personnel is financed from this appropriation.

Mr. THOMAS. I am trying to differentiate between the construction travel, and the travel connected with the acquisition of the sites. Do you mean to say the item of $300,000 is all the travel you will have for both sites and construction?

Mr. TURPIN. Yes, sir. There is no financing under "Construction" for travel.

Mr. THOMAS. None whatsoever?

Mr. TURPIN. No, sir.

Mr. THOMAS. Good.

Mr. OSTERTAG. This $300,000 for travel, does that cover the 46 persons that are involved in this work. Is that the sum and substance of it? Does that cover the 46 employees.

Mr. DALY. Not only the 46 employees, it also covers employees engaged in supervision of construction. The construction appropriation covers nothing but construction.

Mr. OSTERTAG. In other words, it is not limited to these 46 employees?

Mr. DALY. No, sir.

Mr. THOMAS. You are bound to have some travel under "Construction." Where is that?

Mr. TURPIN. The construction green sheet is page 94. All the expenses of supervision in connection with construction is financed from the "Sites and expenses" appropriation.

Mr. THOMAS. I notice it is blank here but there is bound to be some travel here.

Mr. TURPIN. No, sir. All the travel performed in connection with supervision of construction done by our people is charged to "Sites and expenses."

PRINTING OF DRAWINGS, SPECIFICATIONS, ET CETERA

Mr. THOMAS. What about this item of $600,000 for "Printing and reproduction" of drawings and specifications? Is all that covered here too for construction?

Mr. DALY. Yes, sir.

Mr. THOMAS. How do you arrive at the figure of $600,000?

Mr. DALY. This is arrived at for this year on our previous experience on reproduction on projects of this size. The blueprints, drawings, bidding documents, and so on are quite expensive. I have some typical cases here. In Los Angeles, for example, on that building the drawings and reproduction costs ran to $24,000. That gives you an idea.

Mr. THOMAS. That is your blueprints and so forth.

Mr. DALY. Blueprints, specifications, and so on.

Mr. THOMAS. Do you have your own blueprinting shop or is that contracted?

Mr. OSTERTAG. Is that not part of the architect's work?

Mr. BOUTIN. Only the initial set of plans.

Mr. OSTERTAG. These are reproduced?

Mr. BOUTIN. Reproduced to go out to the bidders.

Mr. OSTERTAG. You programed $600,000 for next year and the same amount for this year and yet you have 77 projects as compared to 41 this year.

Mr. DALY. It depends on the size of a project, Mr. Ostertag. For example, the building in Chicago cost around $48,000 for all the reproduction. The size of the projects this year are somewhat smaller.

Mr. JONAS. Off the record.

(Discussion off the record.)

Mr. THOMAS. Gentlemen, look at item 25, "Other services." You have $6,775,100 for contract drawings and specifications, project supervision, site surveys, and investigations. What does all that mean, architect fees?

Mr. DALY. Yes, sir.

Mr. THOMAS. You do not say it. You say "contract drawings." How do you break down that $6,775,100?

Mr. JONAS. How can you investigate without traveling? You have some traveling in this item?

PAYMENTS TO CONSTRUCTION SERVICES FUND

Mr. THOMAS. $2,617,000 is for payment to "Construction services fund." What is that for?

Mr. BOUTIN. This is the difference, Mr. Chairman. The first figure is what we pay the contract architect for the actual design. The next figure is our work charged against this appropriation. This is the internal GSA work.

Mr. THOMAS. That is the $2,617,000?

Mr. BOUTIN. That is the $2,617,000.

Mr. THOMAS. What goes to make up this "Construction services fund"?

Mr. TURPIN. That is a clearinghouse for all our GSA employees in the design and supervision division. All of the time is timecarded to the projects they are working on; and for the projects financed by the GSA construction appropriation the cost is charged to "Sites and expenses," which is estimated at $2,617,000 for 1964.

Mr. THOMAS. This is $6,775,100, then, is to pay outside architects?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Why do you not account for this $2,617,000 under "Salaries and expenses"? They are all on the payroll?

Mr. TURPIN. They are on the payroll of the "Construction services fund," but their time is timecarded to the projects they are working on. If it is a project we are doing for another agency, it is charged to its funds.

Mr. THOMAS. You ought to show a deduction of $2,617,000, then, in your "Salaries and expenses" if it is reimbursable.

Mr. TURPIN. There is no appropriation for that fund. All the employees under "Construction services" are financed by reimbursements from GSA appropriations and from other agencies.

Mr. THOMAS. We understand that. Where is the reduction shown in "Salaries and expenses," because you are reimbursed to the tune of $2.6 million?

Mr. TURPIN. The fund for paying their salaries comes——

Mr. THOMAS. You set up the fund.

Mr. TURPIN. The "Construction services fund" is really a clearing account.

Mr. THOMAS. No direct appropriation. You take a little here and a little there and put it in this fund?

Mr. TURPIN. We only put it in the fund in relationship to the work that these people do on a particular project based on the timecards.

SUPPLIES AND MATERIALS—SITES AND EXPENSES

Mr. THOMAS. What about this item of $5,000 for "Supplies and materials"?

Mr. DALY. This is for administrative supplies.

Mr. THOMAS. For 46 people?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. What will you buy with that, paper and pencils?

Mr. DALY. This also includes various forms that are used.

Mr. THOMAS. That is a little high for 46 people.

Mr. DALY. Well, this, in addition to actual supplies they use on their desks——

Mr. THOMAS. How much is that per person?

Mr. BOUTIN. About $108 per person.

Mr. THOMAS. For paper and pencils?

Mr. BOUTIN. Mr. Chairman, I suppose the Administrator should take some of the responsibility for this $5,000 because the number of reports I require covers that pretty fast. A lot of this is for forms.

Mr. THOMAS. That is for your report which takes a lot of scratch paper, and so forth and so on, and then finally you whip it into shape?

Mr. BOUTIN. We have a lot of printed forms to keep track of exactly where we are at a given time on any project.

Mr. JONAS. Mr. Chairman, before you leave this subject, may I ask a question?

Mr. THOMAS. One further thing.

SITES AND PROJECTS FOR 1964

Where is your list of sites for this $41 million next year? I am told that a list was submitted to us yesterday or the day before and I am sure we have not all had a chance to look at it very carefully. I know that I have not.

Have you had a chance to look at it?

Mr. BOLAND. No.

Mr. THOMAS. Let us pass this copy around.

Mr. BOUTIN. Here is an extra copy, Mr. Chairman.

Mr. Knott and Mr. Schmidt are testifying before the Public Works Committee this morning, Mr. Chairman.

Mr. THOMAS. We do not like to appropriate money in advance before we know what it is all about.

Mr. OSTERTAG. This list shows a total of 74?

Mr. BOUTIN. It shows a list of 74 for completely new buildings and then it shows 41 repair and improvement.

There are 74 new buildings and there are 8 extensions and conversions and 41 R. & I.

Mr. THOMAS. Summarize that for us, Mr. Ostertag.

Mr. OSTERTAG. I understood you expect to acquire 77 in fiscal 1964?

Mr. THOMAS. Mr. Ostertag, get it down to the new buildings, extensions, and something in the record about it at this point if you will, please.

Mr. OSTERTAG. As the chairman indicated, the total number of extensions and new projects are all listed here and will require approval by the legislative committee?

Mr. BOUTIN. Every single one of these projects is going to require approval of the legislative committee with the exception of the increase we are requesting for Baltimore, Md. The Congress appropriated $6.5 million to put the foundation and preparing for construction—we are requesting funds for the construction this year.

The rest of the projects here are all new ones.

Mr. THOMAS. Mr. Ostertag, let us take a bird's eye view of some of these big ones in here. He has a total cost and that is going to be sites, planning, and construction, is it not?

Mr. TURPIN. There are two figures; yes, sir.

Mr. OSTERTAG. Will you explain that?

Mr. BOUTIN. I would like to speak here, Mr. Chairman, to this total that we are requesting. The figure 77 was a projection at the time we made up the budget document—what we thought we were going to have at that time—this is the reason for the disparity. We are requesting approval by the legislative committee of 82 projects for new construction or for extension and conversion and 41 under R. & I. that would be financed by the S. & E. appropriation or by the R. & I. appropriation. Of these projects, there is a sizable number of small projects which we have never gotten into before to any large extent.

As the chairman points out, there are some large projects in here, too.

DISTRICT OF COLUMBIA PROJECTS

Mr. THOMAS. Gentleman, I think the committee ought to take a look at this item where you have around $113 million set up for the District of Columbia in four projects. That is the wrap-up costs for site and planning and construction. What would be your total construction bill for new projects next year, Mr. Administrator?

What would be your figure next year if you are spending $113 million in the District of Columbia? What will it be throughout the 50 States?

Mr. BOUTIN. Mr. Chairman, as I am sure——

Mr. THOMAS. I understand that matter is pending before the legislative committee and with that on the record, let your answer be off the record.

(Discussion off the record.)

Mr. THOMAS. I am not sure that one follows the other.

You are not going out to buy a piece of land to get into the real estate business. One follows the other.

There may be a time lag of 4 or 5 years but it soon catches up with you?

Mr. BOUTIN. That is right.

Mr. THOMAS. There is a direct connection?

Mr. BOUTIN. We do have a backlog, that is my point.

This year we had construction capability, as testified to yesterday, several times what we are asking for funding.

Mr. THOMAS. Here is a center undetermined for the Patent Office for sites and planning in round figures of $2.5 million. The expenditure of that $2.5 million is going to entail a further expenditure of $45.7 million.

DEPARTMENT OF LABOR BUILDING

We have here the Department of Labor Building and on sites and planning you show $$9,580,000. What are you paying for that land a square foot?

You show $38 million that is going to entail the construction of the building. The wrap-up, turnkey job, building, site and planning is almost $48 million. What are you paying a square foot for that land? Where is it going to be located?

Mr. BOUTIN. We have not made a determination as to location but if it is in the downtown area, you are going to be in the vicinity of anywhere from $55 to $65 a square foot. If it is on the outskirts——

Mr. THOMAS. Gentlemen, you flabbergast me. Would you repeat that?

Mr. BOUTIN. $55 to $65 a square foot, including the land and improvements on it.

Mr. THOMAS. This $9.6 million is purely an estimate and that is the best that you can do?

Mr. BOUTIN. That is correct.

Mr. THOMAS. It is going to cost you $55 to $65 a square foot?

Mr. BOUTIN. If it is in the downtown area—it varies from community to community.

PATENT OFFICE BUILDING

You mentioned the Patent Office. The prospectus was approved for submission to the Congress with the strict provision that it could not be located in the metropolitan area. We can look nationwide——

Mr. THOMAS. Off the record.

(Discussion off the record.)

CHANGES IN SITES AND EXPENSES ESTIMATE

Mr. BOUTIN. To carry on with this point, if I might, please, we were given a budget allowance by the Bureau of the Budget of $41.1 million. We came up with changes on the Springfield, Mass., project; the Pembina project for the border station and the Canton, Ohio, project for which $1.2 million had been previously appropriated. That is not in this $41.1 million figure.

Then there is also the item of Tax Court for which no funding is requested for that this year, strictly an authorization from the legislative committee.

The two IRS centers for Covington and Lawrence in the Boston area, funds are being requested for sites and expenses in a supplemental appropriation. They do not form a part of this. In other words, we are asking for authorization for more projects than we are funding.

Mr. THOMAS. For sites and planning?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. Name those projects again where there is no funding asked for for sites and planning.

Mr. BOUTIN. The Tax Court and the two IRS centers.

Mr. THOMAS. The Tax Court in the District of Columbia?

Mr. BOUTIN. The Tax Court in the District of Columbia.

Mr. THOMAS. Approximately what will that land cost us a square foot?

Mr. BOUTIN. In the neighborhood of the figure I quoted, if it is in the downtown area, which it probably would be, $55 to $65 a square foot.

Mr. THOMAS. What is the IRS Building?

Mr. BOUTIN. The two IRS buildings are the automatic data processing centers, one in Covington and one up in Massachusetts where there has been a change in policy from lease to Government owned.

Mr. THOMAS. What is the nature of those structures?

Mr. BOUTIN. These are data computing centers, large amounts of automated equipment for tabulating tax returns.

Mr. THOMAS. The Internal Revenue Service?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. Heretofore you built a few of those under lease deals, have you not?

Mr. BOUTIN. I think we have had three of them that have been under a lease arrangement.

Mr. OSTERTAG. The Administrator just mentioned that there are some projects not being funded this year for which he is asking authorization.

Mr. BOUTIN. We are asking authorization of the legislative committee.

Mr. OSTERTAG. Is that reflected in the difference of $45,194,000 and $41 million in the budget?

Mr. BOUTIN. That is correct.

Mr. THOMAS. Go ahead and finish your detail of those projects that have not been funded for site and planning that you are seeking legislative authorization for.

You mentioned the Internal Revenue Data Processing Building. One is in Covington, and the other is where?

Mr. BOUTIN. In the Boston-Lawrence area, north end.

Mr. THOMAS. The other is the Tax Court in the District of Columbia?

Mr. BOUTIN. The Tax Court in the District of Columbia.

Mr. THOMAS. What are the others?

Mr. BOUTIN. Part of the cost for Springfield, Mass.

We had a prospectus approved last year and we requested funds for sites and expenses.

Mr. THOMAS. What is the nature of that construction?

Mr. BOUTIN. For an extension of the existing Federal building. This has not proved to be feasible and we want to remodel the existing building. It is a good building and we should keep it but instead of providing an extension. We plan to build a new building.

Mr. THOMAS. You have to have site and planning money that is not funded?

Mr. BOUTIN. That is not completely funded. It is going to require an additional $792,000.

Mr. THOMAS. That is four projects. How many more?

Mr. BOUTIN. Pembina. Is that North Dakota?

Mr. DALY. Border Station, yes.

Mr. BOUTIN. The building at Canton, Ohio, for conversion and extension.

Mr. THOMAS. What is the approximate figure for all unfunded items? What will they cost?

Mr. BOUTIN. You mean as far as new construction costs are concerned?

Mr. THOMAS. Yes. If you do not have that, insert the information at this point in the record.

(The information supplied follows:)

Summary of proposed public building projects submitted to the Public Works Committees

	Sites and expenses	Improvement cost	Total
Projects submitted to Public Works Committees for approval (82 projects)	$46,779,100	$214,844,000	$261,623,100
Less:			
Funds previously appropriated:			
Springfield, Mass., PO-CT (EC)	320,000		320,000
Pembina, N. Dak., BS	42,200	183,350	225,550
Canton, Ohio, PO-FOB (EC)	750,000	2,503,200	3,253,200
Funds in 1963 supplemental:			
Covington, Ky., IRS Center	790,000	3,820,000	4,610,000
Boston-Lawrence, Mass., IRS Center	815,000	4,165,000	4,980,000
Tax Court, S. & E. funding deferred	2,022,000	7,826,000	9,848,000
Total reductions (6 projects)	4,739,200	18,497,550	23,236,750
Total (76 projects)	42,039,900	196,346,450	238,386,350

List of proposed public building projects for submission to the Public Works Committees, 1st sess., 88th Cong.

Additional required	−73,000	965,800	892,800
Total additional required	732,800	5,553,450	6,286,250

Mr. OSTERTAG. It is the difference between $45,194,000 and $41.1 million; is that right?

Mr. THOMAS. Give us that figure right quick for the record.

Mr. OSTERTAG. What constitutes the difference?

Mr. BOUTIN. The difference is about $4 million in S. & E. costs.

Mr. THOMAS. That is hardly accurate because your one Tax Court building will cost you more than that.

Mr. BOUTIN. Only in S. & E. costs.

Mr. THOMAS. We are talking about sites.

Mr. BOUTIN. Yes; sites and——

Mr. THOMAS. The Tax Court land will cost you more than $4 million?

Mr. BOUTIN. No; the Tax Court for site and expenses, is $2,022,000.

Mr. THOMAS. Would that be a small building?

Mr. BOUTIN. It is a small building.

Mr. OSTERTAG. Does that mean the $1 million for Springfield is out entirely?

Mr. BOUTIN. No, sir; the difference required for Springfield is $792,000.

Mr. OSTERTAG. That would be $2 million right there.

Mr. BOUTIN. That is correct.

PATENT OFFICE AND TAX COURT

Mr. THOMAS. Is your Patent Office in that?

Mr. BOUTIN. Yes, sir; it is.

Mr. THOMAS. That is unfunded, too?

Mr. BOUTIN. No; the Patent Office is included in the $41 million.

Mr. THOMAS. We have already gone into that but there are four or five unfunded. The Tax Court is unfunded?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. What is the amount of money for the Tax Court?

Mr. BOUTIN. $2,022,000.

Mr. THOMAS. How much is the Patent Office?

Mr. BOUTIN. The amount for the Patent Office for site and expenses is $2,476,000.

Mr. THOMAS. Where will that be located?

Mr. BOUTIN. No decision has been made, Mr. Chairman, and that is the reason for the statement made in the prospectus. It is at an undetermined location but must be outside the metropolitan area of Washington. It could be in Detroit or could be——

Mr. THOMAS. Could it be anyplace in the continental United States?

Mr. BOUTIN. It could be anyplace in the continental United States but that would be subject to agreement of the Department of Commerce. It is subject to their requirements and they try to be as reasonable as possible as far as patent attorneys are concerned. The decision was made that it is an organization which does not have to have ready access to the Congress or to the President like some of the others on a day-to-day basis.

Mr. THOMAS. There is no particular reason why it should be within a radius of 50 miles of Washington?

Mr. BOUTIN. No reason at all that I can see.

Mr. OSTERTAG. Does that item include land acquisition?

Mr. BOUTIN. That includes land acquisition; yes, sir.

Mr. JONAS. Off the record.

(Discussion off the record.)

Mr. THOMAS. This committee is quite familiar with the Patent Office since we have worked with them for years and years. We are familiar with their headaches and backlog and so on. They do have a problem.

Mr. BOUTIN. Mr. Chairman, may I point out something else in the prospectus that is significant here. It states implicitly that this building must be located either on a Government-owned site or a site that is donated for Government use. There is no money in here for acquisition of site at all. It is all for design, supervision of construction, and any related expenses of test borings and so forth.

Mr. OSTERTAG. That Washington site acquisition of land, $7.5 million, you indicate squares 168 and 169. That must be a specific site then?

Mr. BOUTIN. This goes from the FDIC Building on 17th Street right up to Pennsylvania Avenue, that area opposite the Executive Office Building. I am sure that the committee has seen some of this property we are talking about. Other properties in the area have already been purchased and new construction is going on. This proposed action is protection for the future when we need a site which must be in a central location and we will have it in hand.

Mr. OSTERTAG. In other words, the tentative location where you intend to build?

Mr. BOUTIN. A location we feel the Federal Government should own for future construction without indentifying what is going to go on it.

Mr. OSTERTAG. As the chairman pointed out, you want to acquire this land at a price in the neighborhood of $7.5 million?

Mr. BOUTIN. Yes, sir.

Mr. OSTERTAG. With a view of eventually building but you have no particular project in mind as yet?

Mr. BOUTIN. That is correct.

We are trying to safeguard here and avoid paying an increase in the cost of land we know is going to occur in this area from the best projections that we can make. We feel that if the Government does not buy it, someone else is going to buy it and put expensive improvements on it. If we do need it at a later time, we then would have to pay a highly inflated price for it.

Mr. OSTERTAG. As the chairman said, it is an indication you want to go into the real estate business?

Mr. EVINS. No; it is a saving. That land is appreciating in value everyday and later on it will cost more.

Mr. BOUTIN. This is the first time we have ever done this as an agency and we feel very strongly if we do not do it, we are going to regret it in 2, 3, or 4 years. In the meantime, the rental income from the property would go to miscellaneous receipts——

Mr. JONAS. Mr. Chairman, before you leave this subject, may I ask a question?

Mr. THOMAS. Surely.

Mr. JONAS. Do you have in contemplation now any buildings along Pennsylvania Avenue on the north side?

Mr. BOUTIN. We are thinking in terms of perhaps putting the Tax Court there but we have not made a firm decision. We are waiting for this study that is being made and we have checked with the special committee every step of the way. For instance, before we selected the site for the FBI Building we talked with them to make sure we were not doing something that was going to upset their planning.

Mr. JONAS. With respect to any building you plan or contemplate on Pennsylvania Avenue on the north side, are you giving consideration to using the ground floor for commercial purposes?

Mr. BOUTIN. No, sir; we are not. We are not for several reasons. No. 1, with the terrific shortage of space we have of Government-owned space right now, while we are out paying leases, to turn around and lease to somebody else to occupy our space does not seem to me to be a good judgment to make. Private industry is already, as a result of this study on the north side of Pennsylvania Avenue, coming in. You gentlemen probably saw recently where a large portion of that has just been purchased. It has been in the last couple of weeks. We run into all kinds of problems on joint occupancy. The FBI was a very good example.

Next to the Washington Monument there is not a more highly used tourist attraction in Washington than the FBI Building. In case of national emergency, we would have to move out whoever was in there almost overnight because of the nature of the operation of the FBI.

There were so many pitfalls here, not to give any consideration——

Mr. JONAS. That would not apply to the Tax Court though?

Mr. BOUTIN. No; it would not apply to the Tax Court, Mr. Jonas, as far as security, but I certainly would not think it desirable to mix private industry, and design a building to suit the needs of private industry, on the first floor of a Government-owned building where we are in competition with private industry and occupying the balance for the Tax Court.

My own frank opinion is this: I would be opposed to leasing any part of Government-owned property to private industry.

Mr. JONAS. Is that exactly what you are doing with these two squares if you are going to lease?

Mr. BOUTIN. Only on an interim basis until we build our own buildings.

Mr. JONAS. I think this is subject to some argument on both sides. If you absorb or use all of the space on Pennsylvania Avenue, you are going to do something to the city of Washington.

Mr. BOUTIN. We do not intend to, Mr. Congressman. The whole philosophy of this improvement of the north side of Pennsylvania Avenue is a joint venture between the Federal Government and private industry. As I pointed out the FBI Building and possibly the Tax Court are the only things we have in view as of right now, but this has stimulated a lot of interest from the private sector of the economy where people are coming in and buying these properties with a view toward building there.

Mr. THOMAS. From what I have heard on the radio, Mr. Jonas, and from what I have read in the papers, it looks like the Federal Government is going to end up picking up the entire check; is that right?

Mr. JONAS. That seems a reasonable inference.

Mr. BOUTIN. If this is something that is true, GSA has not been so informed. We have worked with that committee from the beginning.

Mr. THOMAS. Off the record.

(Discussion off the record.)

Mr. THOMAS. What is the amount of money involved in this whole thing?

Mr. BOUTIN. I have no idea, Mr. Chairman; no idea at all. This would be completely out of our jurisdiction although we are in on it for planning of the Federally owned buildings.

SITE DONATIONS

Mr. OSTERTAG. Mr. Administrator, involved in all of this program of sites and planning, acquisition and design, is this aspect one which might be termed donation? In your selection of sites, and in the matter of locating in new buildings, do you frequently have an opportunity to take advantage of donations?

Mr. BOUTIN. I would not say frequently, but occasionally we do. When we have a chance we do. A very good example of this is in Covington for this IRS Building that we are talking about. The city has volunteered to donate a site. In a big decision we had, you remember, a couple of years ago on the "Customs facility" in Los Angeles, it was a question of a donated site either by Los Angeles or Long Beach. Occasionally we do and when we do, we try to evaluate what is in the best interests of the Government in the long pull.

We could get donated sites in undesirable areas, for instance, that would not be a good judgment to accept. If it is not going to affect the investment and serve the public, it would not be a good judgment to accept. Occasionally we do and occasionally we have donated sites or partial donations.

Mr. OSTERTAG. In this total amount for "Sites and expenses," do you, in your estimates, take into account certain donations that might be involved?

Mr. BOUTIN. Where we have a known factor of donation, where we know that a community has gone on record and said, "Gentlemen, if this building is built we will donate that site" and we have examined the site and know it is a good site: yes, we have.

With respect to the Patent Office, we are moving under a directive that it must be Government-owned or donated. We also take into consideration where we have known factors of Government-owned sites.

Where there is a Government-owned site or a known donation we reduce our "Sites and expenses" requests.

PATENT OFFICE BUILDING

Mr. EVINS. Mr. Administrator, we know that the FBI is a tremendously important and valuable arm of the Government and you built a separate building for them but I do not think you should build a separate building for every agency or bureau of the Governmnet.

The Department of Commerce Building was called at the time it was built Hoover's Folly because it was the biggest building in Washington and the Patent Office was a small office in the Department of Commerce. Now you are going out and build separate buildings for each branch of the government. It looks like they could find room in the Commerce Building for the Patent Office. Why do we have to build a separate building for the Patent Office?

Mr. BOUTIN. Mr. Evins, the Commerce Department is scattered all over the metropolitan area of Washington. We have to make a judgment of whether it is more prudent to take all of the Patent Office out of there, which takes a tremendous amount of space, and build them a building or build a building for other elements of the Commerce Department. It is six of one and a half dozen of the other, as far as the amount of space is concerned.

It is a question of what is going to give the most economical operation.

AUDITORIUM BUILDING, WASHINGTON, D.C.

Mr. EVINS. What was your decision with regard to the old auditorium building on 19th Street near the Interior Department?

Mr. BOUTIN. A judgment was made before my time on that and I think it was a good judgment. When FOB–9 was authorized, it was decided that the old auditorium, I think you are referring to, would be torn down. The plan is to continue the Mall between the GSA Building and the Department of Interior and straighten out the street pattern. The building is now occupied really as a storage building.

Mr. EVINS. When are you going to get started on this?

Mr. BOUTIN. It is scheduled for demolition in August.

Mr. THOMAS. Gentlemen, let us now take a look at the next item. We will try to wind up this session before noon and then get into the Federal Supply Service, Communications, and so forth.

EXPENSES, U.S. COURT FACILITIES

Object classification

[In thousands of dollars]

		1962 actual	1963 estimate	1964 estimate
25	Other services—Payment to buildings management fund		400	497
26	Supplies and materials		60	109

1963 comparative	$1,000,000
Change	+587,000
1964 estimate	1,587,000

HIGHLIGHT

"This appropriation provides for costs, not otherwise provided for, of the U.S. courts incident to space expansion and for furniture and furnishings requirements of the U.S. Court of Appeals and district courts." (From the budget for 1964.)

Provision for these expenses was included under the "Additional court facilities" appropriation in 1963. However, because that appropriation was primarily for the purpose of providing facilities for the new judgeships authorized by 75 Stat. 80 and no additional appropriation is being requested, the requirements of the U.S. courts for normal space expansion and furniture and furnishings incident to replacement and expanded activities are requested under this head. Such action is also consistent with the desires of the Subcommittee on Independent Offices, House Appropriations Committee, as discussed on pages 243 and 244 of the House hearings on Independent Offices Appropriations for 1963, part 2.

The requirements for 1964 are in accordance with data furnished by the courts and are detailed in the justification which follows.

APPROPRIATION LANGUAGE

"For necessary expenses, not otherwise provided for, to provide, directly or indirectly, additional space for the United States Courts incident to expansion of facilities (including rental of buildings in the District of Columbia and elsewhere and moving and space adjustments), and furniture and furnishings, $1,587,000."

JUSTIFICATION

1. Rent and related costs:

1962	
1963	[1] $400,000
1964	497,000

[1] Financed from "Additional court facilities" appropriation.

Estimate includes $288,000 for cost in 1964 of expansion space acquired in 1963, and $209,000 for space to be acquired in 1964 for expansion. Space is to be provided for 10 judges estimated to retire and remain active (37,000 square feet), for additional referees in bankruptcy and staffs (5,700 square feet), and for

quarters for conversion of part-time referees to full-time status at Boise, Idaho (2,200 square feet), and Albuquerque, N. Mex. (2,000 square feet). Exact locations of retiring judges and new referees have not been determined.

2. Furniture and furnishings, newly constructed buildings:

1962	
1963	[1] $230,000
1964	720,000

[1] Financed from "Additional court facilities" appropriation.

The 1964 amount provides for requirements in the following newly constructed buildings to be completed in 1964: Marianna, Fla., $24,000; Gainesville, Fla., $25,000; Clarksdale, Miss., $25,000; Bismarck, N. Dak., $38,000; North Platte, Nebr., $25,000; Grand Forks, N. Dak., $20,000; New Orleans, La., $388,000; and Denver, Colo., $175,000. Provides for furniture for newly established court activities and for rehabilitation and/or replacement of furniture for existing court activities to be located in new buildings.

(Typical costs are as follows: Judge's chambers, $2,300; secretary, $1,300; law clerk—library, $700; rugs and draperies for judge's suite, $2,500; courtrooms, $3,700; jury and witness rooms, $1,300; court reporter, $800; deputy clerk, $500; U.S. commissioner's office, $1,700; attorney consultation room, $700.)

3. Furniture and furnishings, other buildings:

1962	
1963	[1] $370,000
1964	370,000

[1] Financed from "Additional court facilities" appropriation.

Provides for continued provision of furniture and furnishings at level contained in appropriations of the U.S. courts for preceding years of $100,000 for buildings operated by the Post Office Department and $270,000 for other buildings, for new and replacement furniture. (Figures supplied by Administrative Office of U.S. courts.)

EXPLANATION OF DISTRIBUTION BY OBJECTS

Other objects: $1,587,000 provides:

(1) For payment to buildings management fund for rental and related costs, $497,000.

(2) For office furnishings, such as draperies and carpeting, $109,000.

(3) For office furniture, $981,000.

PURPOSE OF NEW APPROPRIATION

Mr. THOMAS. This deals with expenses of the U.S. court facilities.

In 1963, you had $1 million which you transferred from "Additional court facilities" and in 1964 you are requesting an appropriation of $1,587,000.

Gentlemen, this appropriation provides for "costs not otherwise provided for, of the U.S. courts incident to space expansion and for furniture and furnishings required of the U.S. Courts of Appeals and district courts."

How many do we have now?

Mr. AIRHART. Ninety-two, Mr. Chairman, plus eleven.

Mr. THOMAS. I read this language and I think it needs a little explanation, gentlemen. This is at the top of page 111 (reading):

Provision for these expenses was included under the "Additional court facilities" appropriation for 1963.

I thought we supplied that need, period.

Now we are right back in here for more of the same. However, the justifications say:

Because that appropriation was primarly for the purpose of providing facilities for the new judgeships authorized by 75 Stat. 80 and no additional appropriation

is being requested the requirements of the U.S. courts for normal space expansion and furniture and furnishings incident to replacement and expanded activities are requested under this head. Such action is also consistent with the desires of the Subcommittee on Independent Offices, House Appropriations Committee, as discussed on pages 243 and 244 of the House hearings on "Independent Offices Appropriations for 1963, part 2."

If you took care of the new judges last year to the tune of $1 million and had more prior to that, why this year $1,587,000? Apparently it is for the existing courts. Is that what it adds up to?

Mr. AIRHART. That is correct.

Mr. BOUTIN. And courts in new buildings.

Mr. THOMAS. We took care of that last year and the year before last.

Mr. BOUTIN. These new buildings coming into being during fiscal year 1964 we will occupy that year.

Mr. THOMAS (reading):

The requirements for 1964 are in accordance with data furnished by the courts and are detailed in the justification which follows.

Let us take a look at the breakdown of that and see how it adds up.

You gentlemen might go on reading the bottom of page 111 and the top of page 112 while I read over this paragraph here:

Rent and related costs, $400,000 in 1963 and $497,000 in 1964.

I did not think we were paying any rent.

Estimate includes $288,000 for cost in 1964 of expansion space acquired in 1963.

There is no rent involved there; is there?

ADDITIONAL SPACE FOR U.S. COURTS

Mr. TURPIN. I think this is a case where additional space has to be provided for the courts. We have to move people out of existing Government-owned buildings to be housed in rented space to make this additional space available to them.

Mr. THOMAS. When we say "rent" here, that is hardly true. We do not pay any rent on our Federal courts.

We prohibited this by law, did we not?

Mr. TURPIN. It is equivalent rent, Mr. Chairman. It is where we have to go out and rent space to house people.

Mr. THOMAS (reading):

* * * $209,000 for space to be acquired in 1964 for expansion.

You have an item of $288,000 plus $209,000 for expansion. Where are you going to expand, what courts? What is the nature of this item?

You have here in the neighborhood of half a million dollars but what is it for?

Mr. TURPIN. The requirement generally is for additional space——

Mr. THOMAS (reading):

Space is to be provided for 10 judges estimated to retire and remain active.

They are housed now, are they not, in 37,000 square feet?

Mr. BOUTIN. Their replacements will be coming in.

Mr. THOMAS. That costs half a million dollars for 37,000 square feet for 10 judges who are going to retire. We had better keep them active, had we not?

Then for additional referees in bankruptcy and staffs, we have 5,700 square feet which gives you a total of about 43,000 square feet.

Then for quarters for conversion of part-time referees to full-time status at Boise, Idaho, 2,200 square feet, and Albuquerque, N. Mex., 2,000 square feet.

You say the exact locations of retiring judges and new referees have not been determined.

Is each judge now appointing his own referee and the retiring judges are keeping their referees active?

Mr. AIRHART. Mr. Chairman, each new judge does not appoint a referee. This is done by the Judicial Conference, adding referees as required by caseload.

On retiring judges, we can only predict on past experience. We do not know which ones will retire but we think 10 will retire.

Mr. THOMAS. What it adds up to is that you need how many more referees than you now have? You mentioned one at Boise and one at Albuquerque, but that is only two?

Mr. AIRHART. That was two converted to full time, and we requested space for the three newly created referees' offices.

Mr. THOMAS. Where are they located?

Mr. AIRHART. That would be dependent on the caseload and approval by the Judicial Conference.

Mr. THOMAS. That is half a million dollars, and where is the rest of it?

FURNITURE AND FURNISHINGS FOR COURT FACILITIES

Let us take up the furniture and furnishings item.

What is the total for this item, $720,000?

Mr. TURPIN. There are two items; there is one of $720,000 for furniture and furnishings for new and extended or converted buildings being completed in 1964, and following that is an item of $370,000 for other buildings.

Mr. THOMAS. What do you mean by new buildings? You are dislodging certain people and you are going to pay $230,000 for the dislodged tenants? Is that what it adds up to?

Mr. TURPIN. Sir, in this case, it is tied right into the new Federal buildings being constructed by GSA and under the appropriation made to us in the "Construction" item.

Mr. THOMAS. But you are seeking a separate appropriation of $1.5 million.

Mr. TURPIN. This is for the furniture.

Mr. THOMAS. It is not all furniture. You have an item of $230,000 in here.

Mr. TURPIN. The $230,000 was in 1963 and the $720,000 is the estimate for 1964.

Mr. THOMAS. The $720,000 is purely for furniture? You set it out here and it is all furniture and no rent?

Mr. TURPIN. That is right.

Mr. THOMAS. Here is where it is going to be spent. The 1964 amount provides for requirements in the following newly constructed buildings to be completed in 1964.

This is all furniture?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Marianna, Fla., $24,000; is this a new courthouse?

Mr. DALY. It is an extension to the present building.

Mr. THOMAS. It is going to cost $24,000 to equip office space for the judge and his staff?

Mr. DALY. Correct, sir.

Mr. THOMAS. Gainesville, Fla., $25,000.

Mr. DALY. A new building.

Mr. THOMAS. Clarksdale, Miss., $25,000. Is this a new building in Clarksdale?

Mr. BOUTIN. These are all new court facilities, Mr. Chairman.

Mr. THOMAS. Bismarck, N. Dak., $38,000; North Platte, Nebr., $25,000; Grand Forks, N. Dak., $20,000; New Orleans, La., $388,000.

NUMBER OF FACILITIES PROVIDED FOR

These are all new buildings but how many judges are you taking care of in New Orleans?

Mr. DALY. That provides for 25 judges, 8 courtrooms, 10 jury and witness rooms, and 6 court reporters.

This provides for five visiting judges. In addition, suites are required for 6 probation officers, 8 U.S. attorneys, 30 clerks of the court, and deputies, and a marshal.

PRIOR APPROPRIATIONS FOR COURT FACILITIES

Mr. THOMAS. Again, I refer to the 1963 appropriation. Were not these new buildings taken care of for the new judges then?

Let us get out the record and see what happened.

I think it was the intention of the committee last year to take care of only part of it, or was it all?

Mr. JONAS. All of it, I thought.

Mr. EVINS. It is a substantial amount, Mr. Chairman.

Mr. THOMAS. Do you remember, Mr. Boutin, or any of you gentlemen?

Mr. DALY. Mr. Chairman, may I——

Mr. AIRHART. Mr. Chairman, because of the time limit on the omnibus judgeship bill, as I remember, the initial costs for the new judgeships came in by way of a supplemental. In the supplemental GSA brought in the item for furniture and facilities.

This was a separate item which was intended to cover every one of the appointees under the new judgeship bill. It did not touch any costs for the courts as a whole, simply the cost of the new judgeships.

NEW ORLEANS COURT FACILITY

Mr. THOMAS. What is this new item in New Orleans?

Mr. AIRHART. New Orleans is a complete remodeling, as I remember it, of the courthouse which has necessitated moving both the court of appeals and the district courts——

Mr. THOMAS. No; there is no construction money in here. According to the justifications it is all furnishings.

Mr. AIRHART. Moving the court and this is for furniture and furnishings when they move back into the remodeled building.

Mr. THOMAS. That gets back to the deficiency. We appropriated for this item last year, did we not?

Mr. AIRHART. There is one new judge in New Orleans and then furniture and furnishings.

Mr. THOMAS. Only one?

Mr. AIRHART. Only one in New Orleans and one in Baton Rouge.

Mr. THOMAS. Those were new judges?

You must be taking care of the court of appeals in here?

Mr. AIRHART. Correct.

Mr. THOMAS. They were not appropriated for last year?

Mr. AIRHART. No, sir.

Mr. THOMAS. These are not new judges but it is the old court?

Mr. AIRHART. That is correct.

Mr. THOMAS. What are you doing for them?

Mr. AIRHART. In essence, this is to be the cost for the court of appeals judges who sit in New Orleans plus the expanded court of appeals quarters, plus the total of the district court.

Mr. THOMAS. Have we not already appropriated some money for New Orleans?

Let us get ourselves straightened out here.

This is for the court of appeals in New Orleans, then?

Mr. AIRHART. And the district courts.

Mr. THOMAS. Did we not appropriate for the new judge down there last year?

Mr. AIRHART. For furniture and furnishings; yes, sir. It did not touch on any other judge or any of the other court offices.

Mr. THOMAS. Do you have any new judges other than the ones we appropriated for last year in New Orleans?

Mr. AIRHART. No, sir.

Mr. THOMAS. What do you mean when you say new judges? Do you have any new judges on the circuit court?

Mr. AIRHART. Not in New Orleans; no, sir. I am saying this request would exclude new judges who were taken care of under the previous——

Mr. THOMAS. Exclude? I thought you said include.

What are the judges going to do with this $388,000? Is this throwing everything out the window and completely refurbishing the quarters, or what?

BASIS OF CURRENT ESTIMATE

Mr. AIRHART. Under the terms of our agreement with GSA, Mr. Chairman, we would see detail on this only if they felt it was unreasonable or if they deviated from the standards we have given. I do not know whether we yet have in Washington that detail but it has not been referred to us.

Mr. THOMAS. Who prepared this justification, Mr. Administrator?

Mr. BOUTIN. PBS.

Mr. TURPIN. On the details with respect to each of the locations, the information was developed in the regional offices, as I understand it, Mr. Chairman. It was then submitted to you people, Mr. Daly?

Mr. DALY. That is correct. We coordinated with the Office of the U.S. Courts on this.

Mr. THOMAS. Your language is quite misleading.

You say—

provides for furniture for newly established court activities—

What do you mean by—

newly established court activities—

And what do you mean by—

and for rehabilitation and/or replacement of furniture for existing court activities to be located in new buildings.

We do not want to be critical in the slightest to our judges, but as far as I am concerned, and I expect I speak the sentiment of the committee, we cannot tell from this justification what it is all about.

You say that costs are as follows:

Judge's chambers, $2,300; secretary, $1,300; law clerk, library, $700; rugs and draperies for judge's suite, $2,500; courtrooms, $3,700; jury and witness rooms, $1,300; court reporter, $800; deputy clerk, $500; U.S. Commissioner's office, $1,700; attorney consultation room, $700.

Furniture and furnishings, other buildings, 1963, $370,000, and 1964, $370,000.

You say:

Provides for continued provision of furniture and furnishing at level contained in appropriations of the "U.S. Courts" for preceding years of $100,000, for buildings operated by the Post Office Department and $270,000 for other buildings, for new and replacement furniture.

Apparently this is the figure you do not need now. It is a contingency that has not arisen.

Can you shed any light on that?

Mr. AIRHART. Mr. Chairman, as I understand it, this figure is, year in and year out, our costs. This is not concerned with new buildings or new judgeships, but with replacing of furniture or furnishings in the various existing court facilities. It can be a bit deceptive, as I told you a moment ago. We have some 103 district courts and courts of appeals. We have 355 places of holding court in which there are facilities which we maintain.

In those 355 places, we have what we might call 753 units.

The judges are provided for in those places so that our year-in-and-year-out costs—and this figure is based on our own past experience both in GSA and the Post Office when they handle part of this—runs at about this level.

RENT AND RELATED COSTS

Mr. THOMAS. You have some "Other object" breakdowns here that add more confusion.

You have an item here of $497,000 in the breakdown of your overall $1,587,000.

You say that $497,000 is for payment to "Buildings management fund" for rental and related costs.

That is where you are displacing tenants?

Mr. BOUTIN. That is the rent.

Mr. THOMAS. In an existing building?

Mr. TURPIN. That is correct.

Mr. THOMAS. Would that not be taken care of in one of your other appropriations?

Mr. BOUTIN. No, sir.

Mr. THOMAS. $109,000 for "Office furnishings" such as draperies and carpeting and $981,000 for office furniture.

NEW JUDGES FOR WHICH FACILITIES ARE PROVIDED

What did we appropriate for that last year?

Mr. BOUTIN. That was for new judges.

Mr. THOMAS. Last year we appropriated $8.5 million for how many new judges?

Mr. AIRHART. Seventy-three.

Mr. THOMAS. How many do we have altogether now excluding the——

Mr. AIRHART. Mr. Chairman, including the active retired judges, roughly 450 judges.

Mr. JONAS. Have all 73 places been filled?

Mr. AIRHART. All but five as of this moment.

Mr. THOMAS. We have 88 courts and how many judges?

Mr. AIRHART. We have 92 district courts and 11 courts of appeals.

Mr. THOMAS. How many judges in your district courts?

Mr. AIRHART. 350, I believe, is the figure for district courts, and about 100 for circuit courts of appeal. Again, I am including retired and active judges.

Mr. THOMAS. How many judges are you taking care of in this furniture item of $1.1 million?

Mr. AIRHART. Mr. Chairman, I could not answer as to the whole of the item because of the replacement figure. I do not know the number it is going to be for the new buildings but I can supply the exact number of judges for the record.

I would like to try to supply from memory, but I am not sure that I can be accurate.

Mr. THOMAS. Supply it for the record.

(The requested information follows:)

Federal court quarters in new facilities

Judicial district	Number of Judges	Location of new facility
Florida, northern	[1] 4	Marianna, Gainesville.
Mississippi, northern	2	Clarksdale.
North Dakota	2	Bismarck, Grand Forks.
Nebraska	3	North Platte.
Louisiana, eastern	4	New Orleans.[2]
Colorado	3	Denver.[3]

[1] 1 judge also sits in middle and southern districts.
[2] Also headquarters of 5th Circuit Court of Appeals where all 10 circuit judges have quarters.
[3] Also headquarters of 10th Circuit Court of Appeals where all 9 circuit judges have quarters.

Mr. THOMAS. Off the record.

(Discussion off the record.)

Mr. THOMAS. Any questions on this item?

(No response.)

Mr. BOUTIN. Mr. Chairman, could I give you some information we have missed the answers on quickly?

Mr. THOMAS. Yes.

DETROIT, MICH., PROJECT

Mr. BOUTIN. The first is the size of the lobby in Detroit, Mich. We are improving utilization there by reducing the lobby from the 5,980 square feet that it is now, to 1,456 square feet. So we are going to improve the utilization there.

(NOTE. See p. 1203.)

Mr. BOUTIN. The second is that in fiscal 1963 under sites and expenses, we will acquire 41 sites.

SPACE FOR RECORDS CENTER

The other piece of information we did not have the answer to yesterday was on the availability of space that could be utilized or converted for utilization for the Federal Records Center.

We checked at Quantico and out of a total of 478,000 square feet of storage space they had there, they only have 7,000 that they are not presently using or could make available.

There is nothing in the Naval Weapons Plant.

At the Bengies plant up near Baltimore, that is being entirely used by a wide variety of agencies, including GSA for Federal Supply and the maritime warehouse in Baltimore has 465,000 square feet in 1 building with 200,000 scattered over an additional 57 buildings.

Federal Supply made an economic analysis of it with a view toward possible conversion to Federal Supply space. They determined it would cost more than it was worth.

I am sorry we did not have this at the time you asked for it.

PAYMENTS, PUBLIC BUILDINGS PURCHASE CONTRACTS

Total	5,150,000	50,000	5,200,000

1963 appropriation	$5,440,000
Transfer	—290,000
Comparative	5,150,000
Change	+50,000
1964 estimate	5,200,000

GENERAL STATEMENT

"This appropriation provides for payments to contractors and taxing authorities on 20 projects constructed through lease purchase arrangements under the Public Buildings Purchase Contract Act of 1954." (From the budget for 1964.)

APPROPRIATION LANGUAGE

"For payments of principal, interest, taxes, and any other obligations under contracts entered into pursuant to the Public Buildings Purchase Contract Act of 1954 (40 U.S.C. 356), [$5,440,000] *$5,200,000.*"

JUSTIFICATION

Upon completion of buildings and acceptance by the Government, equal quarterly payments in arrears are made to contractors for amortization of principal with interest over 10- or 25-year contract periods. In addition, real estate taxes are paid to taxing authorities until title of the property is vested in the United States.

GSA is continually striving to acquire all facilities still not fully owned by the Government. Letters were addressed to all financing contractors in the fall of 1962, inquiring whether they would be interested in earlier liquidation of the contracts by prepayment of the outstanding principal balance plus accrued interest to date of settlement.

The estimate of $5,200,000 for 1964 includes $4,228,000 for payment of principal and interest on 20 projects remaining under purchase contract, and $972,000 for taxes. Taxes are based on actual or published tax assessment and levy data

adjusted to reflect known local customs and practices, or legal precedents. Details by project are set forth on the following page.

NATURE OF LEASE-PURCHASE CONTRACTS

Mr. THOMAS. Give us a bird's-eye view of how many there were in the beginning and how many we have already bought, redeemed we will say, and how many you are trying to redeem.

As of today there are 20 still outstanding. Give us the cost this year of paying taxes and amortization.

That is $5.2 million; is that correct?

Mr. TURPIN. That is correct, Mr. Chairman.

Originally, there were 29 lease-purchase projects.

Mr. THOMAS. If you were to buy, and I assume your lease on it is so worded, you can take it over within what earliest period?

Mr. TURPIN. At one-half of the period, we can take it over with a 2-percent penalty at that time.

Mr. THOMAS. What were the contracts based on, 20 or 25 years?

Mr. TURPIN. Of the 20 remaining, 14 are 10-year contracts and 6 are 25-year contracts.

Mr. THOMAS. Of those 10-year contracts can you take them over at any time without a penalty?

Mr. TURPIN. No, sir. We can take them over when 5 years have gone by, and at that time we can take them over with a 2-percent penalty. In the latter part of 1964——

AMOUNT TO PURCHASE OUTSTANDING CONTRACTS

Mr. THOMAS. To exercise the full extent of your rights to take over those 20 buildings for which you are paying, what amount of money would it take?

Mr. TURPIN. Mr. Chairman, if we bought them out, each one of them at the half-way mark, it would cost us about $29 million.

It would be $28,494,232 in principal and $569,000 in penalty.

PRINCIPAL, INTEREST, AND TAXES IN 1964 REQUEST

Mr. THOMAS. What is the breakdown of this $5.2 million that you are requesting?

Mr. TURPIN. Sir, the principal is $2,334,000. The other items are $1,894,000 for interest and $972,000 for taxes and assessments, making $5.2 million total.

Mr. THOMAS. You state here, $4.2 million for payment of principal and interest, and then $972,000 for taxes and assessments.

Mr. TURPIN. Correct.

Mr. THOMAS. What equity is there?

Mr. TURPIN. $2,334,000.

Mr. THOMAS. Out of your $5.2 million you are getting equity of $2.3 million and the remainder goes into taxes and interest?

Mr. TURPIN. Yes, sir.

ACQUISITION OF BUILDINGS FROM CONSTRUCTION SAVINGS

Mr. EVINS. You can only acquire how many in 1964 when you reach the half-way point?

Mr. TURPIN. Four.

Mr. EVINS. How much would be necessary to acquire these when you reach that point? That is all we can handle.

Mr. TURPIN. That would be $756,050.

Mr. THOMAS. We understand you are trying to make some arrangements to acquire two of these buildings. Which two and how much money is involved?

Mr. BOUTIN. Durham, N.H., is one and Burlington, Vt., is the second. The balance in principal on those two is, roughly, $2.5 million as of this time.

Mr. THOMAS. Are you about to buy them or what arrangements are you going to make?

Mr. BOUTIN. Well, we are attempting to make an exchange as at least part payment, and we would like to think the whole payment, with the John Hancock Life Insurance Co. for a piece of land in Back Bay Boston for these two, and we are negotiating with them now.

Mr. THOMAS. In other words, it is not going to require a special appropriation to acquire these two properties; you are going to get them, if you can get them, out of existing assets?

Mr. BOUTIN. Out of construction savings, if required, plus the value of this land.

Mr. EVINS. What are the others?

Mr. BOUTIN. The four of them are Sedan, Kans.; Durham, N.H.; Manning, S.C.; and Gainesville, Tex. Burlington, Vt., is not in here and it would be only by negotiated arrangement that we could get them to back down.

BUILDINGS PREVIOUSLY ACQUIRED

Mr. THOMAS. You have already acquired how many?

Mr. BOUTIN. Nine.

Mr. THOMAS. At what cost?

Mr. TURPIN. For the nine we did purchase, the purchase price was $5,606,887.

ACQUISITION OF BUILDINGS FROM CONSTRUCTION SAVINGS

Mr. THOMAS. Did you acquire those with appropriated funds or savings?

Mr. TURPIN. That was from construction savings.

Mr. THOMAS. That is a feather in your hat.

Mr. OSTERTAG. Up to now they have been acquired from construction savings?

Mr. TURPIN. Nine were acquired from construction savings, eight of which were negotiated without paying a penalty.

Mr. EVINS. That is a triple saving.

Mr. OSTERTAG. What means do you employ to achieve this construction saving?

Mr. BOUTIN. The construction savings come to us on our construction projects.

Mr. THOMAS. We just appropriated too much money.

Mr. OSTERTAG. I believe the Administrator wanted to answer it.

Mr. BOUTIN. We get this from contracts we let where the amount contracted for is less than the amount appropriated. We have a 10-percent leeway where the amount contracted for is in excess of the appropriation, if it is reasonable and the prudent thing to do. So it is the difference between these two that constitutes the construction saving.

Mr. OSTERTAG. And you have the right to transfer these savings?

Mr. THOMAS. We gave them some language, I think.

Gentlemen, let us get some lunch and come back at 1 o'clock.

WEDNESDAY, FEBRUARY 20, 1963.

FEDERAL SUPPLY SERVICE, GENERAL SERVICES ADMINISTRATION

WITNESSES

BERNARD L. BOUTIN, ADMINISTRATOR
C. D. BEAN, COMMISSIONER, FEDERAL SUPPLY SERVICE
WILLIAM P. TURPIN, ASSISTANT ADMINISTRATOR FOR FINANCE AND ADMINISTRATION
ROBERT B. CONRAD, COMMISSIONER, TRANSPORTATION AND COMMUNICATIONS SERVICE
JOE E. MOODY, GENERAL COUNSEL
JOHN M. McGEE, DEPUTY COMMISSIONER, FEDERAL SUPPLY SERVICE
LEWIS E. SPANGLER, ACTING ASSISTANT COMMISSIONER, OFFICE OF SUPPLY DISTRIBUTION
GEORGE W. RITTER, ASSISTANT COMMISSIONER, OFFICE OF STANDARDS AND QUALITY CONTROL
CHARLES W. GASQUE, JR., DIRECTOR, OFFICE OF PROCUREMENT AND ECONOMIC POLICY
EUGENE M. ENGLISH, ACTING DIRECTOR, PROCUREMENT OPERATIONS DIVISION

Mr. THOMAS. Gentlemen; will the committee please come to order. Let us go into the "Federal Supply Service."

We certainly again want to welcome our distinguished friend, the Commissioner, Mr. Bean; Mr. McGee, the Deputy Commissioner; Mr. Spangler, the Acting Assistant Commissioner of the Office of Supply Distribution; Mr. Ritter, the Assistant Commissioner of the Office of Standards and Quality Control; and Mr. Gasque, the Director of the Office of Procurement and Economic Policy. Where is Brother Gasque?

Mr. GASQUE. Right here, sir.

Mr. THOMAS. You are hidden over there. Of course, our able Administrator, Mr. Boutin is with us as well as Brother Turpin and some of our other distinguished guests.

Mr. Administrator, do you or Commissioner Bean have any general observations to make to us?

We have not seen you for several months, Commissioner Bean. You look grand and we hope you feel as good.

Mr. BOUTIN. Mr. Chairman, I have no opening statement other than the one I presented to the committee at the beginning of the hearings unless Mr. Bean has something he wishes specifically to add.

Mr. BEAN. If you want a short presentation of some of the items to set the stage.

Mr. THOMAS. You do not have to make it too short.

RECENT INCREASES IN BUSINESS

Mr. BEAN. Our growth in the past 2 or 3 years I think has been very significant, especially when you take it from 1958 forward.

Our purchases in 1958, the stores items, were $147 million; this year it will be $351.6 million; and next year we expect it to be $440 million.

Purchases from schedules in 1958 were $411 million; next year they will be $840 million. Consolidated purchases will be up for a total volume of business in 1964 of $1,480 million. If you want to add 35 percent to that it is bigger than Montgomery Ward.

We expect that before the end of 3 years we will reach $2 billion. This is largely because we have recently made arrangements with the Army to take on their business on the same basis we have in the past in dealing with the Air Force.

LARGE ITEMS OF EXPENSES

Mr. THOMAS. What are a half dozen or so of your big items on the schedules?

Mr. BEAN. Household and quarters furniture, office furniture, typewriters, and the ADP equipment is a very large schedule. These types of things run into a lot of money.

Mr. THOMAS. You are overlooking your automobiles and gasoline and tires.

Mr. BEAN. Gasoline and tires; yes.

Mr. THOMAS. Those are your biggest items, are they not?

Mr. BEAN. No, ADP is bigger than tires, and automobiles are a nonstores item.

TYPEWRITERS

Mr. THOMAS. The limitation was taken off on typewriters years ago. What is the situation on typewriters now?

Mr. BEAN. As a matter of fact, we are having more competition and when we make consolidated definite quantity purchases we can get them cheaper, and the agencies are very cooperative, too.

Mr. THOMAS. What do you pay for a standard keyboard typewriter?

Mr. BOUTIN. A manual machine, Mr. Chairman? What is a manual costing now?

Mr. MCGEE. About $150, in lots of 100.

Mr. THOMAS. What was the limitation?

Mr. MCGEE. $84.70 in 1947.

Mr. THOMAS. It has gone up about 75 percent, then, is that right, Mr. McGee?

Mr. MCGEE. I think it is generally in line with the increase in other merchandise.

Mr. THOMAS. Oh, no.

Mr. BEAN. I think we had better check into that.

OTHER PROGRAM INCREASES

Our inventory has increased from $39.6 million in 1958 to this year, at the end of the year, it will be $114.7 million.

And space has increased from 4,727,000 square feet to 11,800,000 square feet at the present time.

The cost of operations on a unit basis has come down from 5.09 in 1958 to 4.56 in 1964.

The back order ratio was 10.8 in 1958 and is 5.6 this year.

The work in process was 8.8 days in 1958 and it is 5.3 days this year.

The annual stock turn was 3.8 in 1958, 3.2 in 1962, and 2.8 this year.

SAVINGS TO THE GOVERNMENT BY VIRTUE OF GSA SUPPLY SYSTEM

Mr. THOMAS. How much money do you figure you save the taxpayers per year as a result of the $1.5 billion business you are doing? What is a good "horseback" figure?

Mr. BEAN. 40 percent.

Mr. THOMAS. 40 percent of $1.5 billion is how much?

Mr. BEAN. It runs into money.

Mr. THOMAS. Do you think you save $600 million a year?

Mr. BEAN. Yes, sir.

Mr. OSTERTAG. On what basis do you say that?

Mr. BEAN. This is on the basis of actual comparison of items and "horseback" guessing.

Here is a list of items, for instance, that is significant. Here is a toggle switch. We paid 14 cents for it. The wholesale price is 22 cents. The over-the-counter price is 45 cents.

For a small flashlight battery we pay 5 cents. The wholesale price is 10.3 cents, and the price is 20 cents on the market.

Mr. OSTERTAG. The saving you refer to, is that a saving to the Government, generally speaking, over market prices?

Mr. BEAN. Yes.

Mr. OSTERTAG. But not on the basis of what other agencies might acquire the same product for?

Mr. BEAN. I would say yes, sir, it is. I can speak to agencies, too, if necessary. I have some information on that subject. Would you care to discuss it off the record?

Mr. THOMAS. You can discuss it on the record.

Mr. BEAN. I would like to discuss it off the record, if I may.

Mr. THOMAS. All right.

(Discussion off the record.)

OTHER GOVERNMENT SUPPLY SYSTEMS

Mr. THOMAS. This comparison ought to be on the record, gentlemen. Go ahead. You are talking about something that is not a foreign subject to this committee.

Mr. BEAN. My study of the operation in Long Beach, which I think we understand fairly well, and because of the fact it is not a large operation, if that was split between our three western operational units we could absorb this because we already have the space and

have enough people to take care of this small volume of business and it would not cost the Government anything.

I can do the same thing in Chicago. I might have to put two or three people on in the warehouse to take care of the additional business, but this business of paying long-haul freight on canned goods such as tomatoes could be greatly reduced.

Mr. THOMAS. That is a small part of their business. They have many hospitals and domiciliary facilities and the vast majority of their procurement is made in the town where the installation is located, everything with the exception of a few canned goods, flour, fats, and so forth, but day-to-day items like meat, sugar, fruit, fresh vegetables, which may be 65 or 70 percent of the total, they buy in the town where the installation is located.

Mr. BEAN. It may be that much but there is no necessity, in addition to that, for having a separate warehouse system, especially one where they are so scattered.

Mr. EVINS. You have discussed that with them several times?

Mr. BEAN. Yes. We are discussing it now.

There is one other point in this thing that I think very important, and that is you cannot consider our system as just a few warehouses scattered across the country. We buy goods that are not carried in the stores and distribute them at lower cost, and the bigger part of our business is schedule business which is at very low cost. Our store operation costs $9.09 per hundred dollars of sales. Our nonstores items that we buy cost us $2.28 per $100 of purchases. Our schedules, with everything in, cost us 23 cents per $100 of purchases. Our total cost on all our distribution, space, buying, inspection, standards, cataloging, and administrative is $3.50 a hundred, and I will stack that against anybody and also invite an audit.

Mr. THOMAS. That is pretty good language. Go ahead.

Mr. OSTERTAG. Is this basically a matter of cost of distribution or is it one of volume?

Mr. BEAN. Volume and distribution.

Mr. OSTERTAG. Both?

Mr. BEAN. Both.

WAREHOUSE UNIT COST

Mr. THOMAS. As he has just pointed out, the biggest part is sales from the catalog and the expense of the catalog sales is in the office. His big expense per dollar unit is in his warehouses.

Mr. BEAN. That is right.

Mr. THOMAS. But even that expense is less than 10 cents on the dollar, is it not?

Mr. BEAN. $9.09 on a hundred dollars.

Mr. THOMAS. We will just call it 9 cents, then. And that is where you handle 150,000 or 160,000 items.

NUMBER OF WAREHOUSES

How many warehouses do we have now?

Mr. BEAN. We have a lot of little places now. We have 31. These are satellite places.

Mr. THOMAS. How many large ones?

Mr. BEAN. Out of the 31 locations, 11 are major depots.

Mr. THOMAS. How many satellites do you have out of Chicago?

Mr. BOUTIN. We have two. We are in the depot in Chicago and we are also downstate.

Mr. BEAN. We are in Shelby, Ohio, and we have a small amount of space in the old quartermaster building, in Chicago.

COST OF AUTOMOBILE TIRES

Mr. THOMAS. What about automobile tires?

Mr. BEAN. Automobile tires are purchased at favorable prices.

Mr. THOMAS. What do you pay for them? What is the wholesale cost and what is the retail cost?

Mr. BEAN. Here is an example, a 4 ply, 7.50x14, ——

Mr. THOMAS. What is that for, a Chevrolet?

Mr. BEAN. A Ford or Chevrolet. We are paying $14. The wholesale price is $17.64; and the retail price is $27.95.

Mr. THOMAS. How many ply is that?

Mr. BEAN. 4-ply.

Mr. THOMAS. You mean to say you are buying that tire cheaper than Sears, Roebuck?

Mr. BEAN. It is hard to tell. Montgomery Ward and Sears, Roebuck do a contract business where they write their own specifications and it is difficult to compare them.

Mr. THOMAS. They are standard 4-ply tires?

Mr. BEAN. You really cannot compare them with Ward's or Sears'.

Mr. THOMAS. Why not?

Mr. BEAN. Because they do not go through the regular process of buying the items from the manufacturers. They have their own specifications and make them in a separate plant to those specifications.

Mr. OSTERTAG. Are they inferior?

Mr. BEAN. Not necessarily. They make very good tires, both of them.

Mr. THOMAS. Can they not buy that tire cheaper than you can? How would they compare?

Mr. BEAN. I do not know.

Mr. THOMAS. You buy as many as they do; do you not?

Mr. BEAN. I am not sure about that.

Mr. OSTERTAG. This $14 is a manufacturer's price; is it not?

Mr. BEAN. That is what he charges us. The wholesale price is $17.64. We buy it for $14.

Mr. OSTERTAG. From the manufacturer?

Mr. BEAN. Yes.

Mr. OSTERTAG. But that does not include transportation cost?

Mr. BEAN. Most of the tire prices include delivery to any leading city.

Mr. THOMAS. Do not Sears and Montgomery Ward get them cheaper than you do? They say they want them according to their plans and specifications and will take the entire output of a manufacturer and they will come up with probably the same tire you are buying. It is the plans and specifications that count, it is not, the rubber content, how many plys, whether there is nylon in it, and so on?

KANSAS STATE LIBRARY OCT 7 1963 MANHATTAN, KANSAS

Mr. BEAN. Whether or not the person can manufacture them as cheaply on that basis, I have no way of knowing.

Mr. THOMAS. It is not generally talked of in the trade?

Mr. BEAN. Not at all. It is a very great secret with both of them.

Mr. THOMAS. Sometimes you hear it whispered around you can go to Sears, Roebuck and Montgomery Ward and buy a tire as cheaply as from your schedule.

Mr. BEAN. I doubt it very much.

Mr. THOMAS. What is your doubt based on?

Mr. BEAN. Because we have shopped Sears and Montgomery Ward stores for the same kind of merchandise.

FURNITURE PRICES

Mr. THOMAS. What about your furniture?

Mr. BEAN. Our prices on furniture—for example, here is a typewriter desk, $76. The wholesale price is $138.15, and the retail price is $230.25. This is less than half the retail price.

Mr. THOMAS. Is that generally true with all your wooden furniture?

Mr. BEAN. Yes.

Mr. THOMAS. We wanted some chairs for this committee room a couple of years ago and we requested the clerks to find some chairs and the prices and they got your catalog and looked at it and it was too rich for our blood so we just said "No." You wanted about $150 for the chairs, so we took the ones we had and fixed them up.

What was the price for the chairs? Get out your schedule and see what the chairs cost. You do not mean to say if we bought that same chair downtown from some merchant we would have to pay $300 for it?

Mr. BEAN. Yes, sir.

Mr. OSTERTAG. What is the general markup on furniture?

Mr. BEAN. In the trade?

Mr. OSTERTAG. Yes.

Mr. BEAN. They just multiply it by 2.

Mr. THOMAS. They have to have a 100-percent markup. Look at all the storage costs they have.

Look at your schedules and see about these chairs.

Mr. BEAN. I do not think we have anything in stock that is similar to this.

Mr. MCGEE. We do not have the chairs you are talking about.

Mr. THOMAS. We are just asking for chairs.

Mr. MCGEE. We have a regular office chair but not this banker's type chair.

Mr. THOMAS. What type?

Mr. MCGEE. This banker's type chair.

Mr. BEAN. That is the trade name. He is not being facetious.

Mr. MCGEE. We do have a chair somewhat similar for $28 in the store stock catalog.

Mr. THOMAS. What would this chair cost off your schedule?

Mr. BEAN. We do not have a chair like this on schedule. This is a handmade chair. It is made with a lot of loving care.

Mr. THOMAS. What is the difference if it is handmade or not. They have all sorts of modern machines for woodworking. What do you mean by handmade?

Mr. BEAN. That is the way these were made. There are not many people who do that now.

Mr. THOMAS. Furniture is pretty high, is it not?

Mr. BEAN. Yes, sir.

Mr. THOMAS. What part of the furniture is made by hand and what part is machine made?

Mr. BEAN. All ours is machine made.

Mr. THOMAS. Is not all furniture machine made?

Mr. BEAN. No. A great majority of it is, but there is a lot of it that is not.

Mr. BOUTIN. I know a factory at home where they make the real fine furniture for people willing to pay the price. It is still made as it was 200 years ago, all by hand. Even the inlays are all by hand. I have gone in there by the hour and watched them make it. Almost all their help comes from abroad in this factory. It is a skill handed down from father to son.

TIRE PROCUREMENT FOR THE AIR FORCE

Mr. THOMAS. What about your automobile tires? Are you buying tires for the Air Force now too?

Mr. BEAN. Automobile tires; yes, sir.

Mr. THOMAS. Are you buying them for the Army?

Mr. BEAN. No.

Mr. THOMAS. FAA has planes of their own. Do they buy their airplane tires from you?

Mr. BEAN. No, I think they have an agreement with the Air Force.

Mr. THOMAS. Can the Air Force buy them cheaper than you can?

Mr. BEAN. They have recently bought them cheaper than we did.

Mr. THOMAS. How do you account for that?

Mr. BEAN. We were buying on a different basis for them at the time the schedule was in effect.

Mr. THOMAS. Why did you not get that cheap price?

Mr. BEAN. When we were buying, the Air Force felt they had to have a stockpile of tires to maintain production sources for mobilization purposes which had to be turned and had to be manufactured to their specifications, and that probably brought the price up.

Mr. THOMAS. What do you mean when you say they had to be turned?

Mr. BEAN. They had to be kept fresh all the time.

Mr. THOMAS. What does that have to do with the initial cost of the tire?

Mr. BEAN. The labor and cost of maintaining the stockpile and sources of supply.

Mr. THOMAS. Is it not the same tire whether used 30 days after it is bought or 2 years?

Mr. BEAN. The manufacturer was probably maintaining a stockpile and was charging for that in his price. When it was determined it was no longer necessary to do that, the Air Force was able to get a lower price, for a definite large quantity.

GAO AUDIT OF MANUFACTURERS' COSTS

We asked the General Accounting Office to make an audit of the manufacturers' production costs at that time to see whether or not there was anything about this that was very wrong. GAO does not like it. I have a prepared statement which summarizes the situation.

Mr. THOMAS. Read it into the record.

Mr. BEAN (reading):

From 1936 to 1960, aircraft tires were procured through Federal supply schedule term contracts. The procurement procedures were premised on the special problems involved in purchasing aircraft tires, including the constantly changing specifications, the need for maintaining the only six established sources to assure adequate supply in the event of a national emergency, and the requirement for constant product improvement to develop aircraft tires capable of meeting the increasingly critical applications on a timely basis.

Mr. THOMAS. What does that mean?

Mr. BEAN. Airplane designs were being changed very rapidly at that time carrying heavier loads and bigger engines, and there had to be a constant reevaluation and change of specifications in order to keep up with the type of aircraft being used.

Mr. THOMAS. Go ahead.

Mr. BEAN (continuing reading):

The pattern of procurement described in the draft report developed in response to this situation. Both the Attorney General and the Federal Trade Commission have been aware of the antitrust aspects that might be involved and the Renegotiation Board has examined the price structure in an effort to renegotiate any excess profits. However, Federal requirements had to be met in the most feasible manner that could be provided. Federal supply schedule prices compared to published industry price lists were approximately 49 percent below commercial list prices and approximately 4 percent below list prices to commercial airlines.

We knew that this 49 percent could be misleading because, after all, the Air Force was the principal user, and suppliers could adjust commercial prices as desired. [Continuing reading:]

In 1960, the Air Force determined that the need for maintaining the mobilization base for aircraft tires no longer existed. The Air Force, Navy, and GSA agreed to a price of $100,000 per order limitation in subsequent schedule contracts, which theretofore had contained no maximum order limitation. Schedule prices did not increase as a result. Thereafter, in response to Air Force bid invitations for large definite quantity requirements, suppliers bid the same prices as provided in the GSA schedule contracts.

GSA, in an effort to acquire cost data for assistance in negotiating better prices, then requested GAO, under the examination of records clause included in the schedule contracts, to examine the pertinent books and records of the manufacturers. This clause permitted only the GAO and its representatives to examine these books and records.

The GAO draft report is based upon their study of the cost data so obtained. Effective February 1, 1961, following establishment of the $100,000 limitation in schedule contracts, a number of items were deleted from the Federal supply schedule. This led to reduced interest on the part of the manufacturers in supplying the less-attractive items that remained and, eventually, to discontinuance of the schedule as of August 31, 1962, when it became apparent that nearly all of the suppliers were unwilling to participate except on a highly selective item basis.

The draft report concludes, upon the basis of comparison with prices obtained under Air Force contracts, that the negotiated procurements by GSA under Federal supply schedule contracts did not obtain reasonable prices. It seems apparent in the light of the above-related background, that direct price comparisons for the 1960–61 transition period under the large definite quantity

method of procurement with prices available under the Federal supply schedule requirements method of procurement is unrealistic. Additional factors which could affect prices are (1) changes in specifications on some tires, (2) lowering of quality as a result of direct competitive procurement, (3) the extent to which supplier's investment in testing facilities and research and development costs were reflected in Federal supply schedule prices.

The draft report recommends that the Administrator of General Services initiate as soon as possible a critical evaluation of contracting practices used in establishing prices for all Federal supply schedules to assure reasonableness of prices. We have initiated this review. However, it was known from the outset that the aircraft tire schedule was unique in that it had contained no maximum order limitation, was founded on a mobilization base concept, only a few ordering offices placed orders under the schedule, the type of product required constantly changing specifications to meet critical applications, and was the only commodity covered by negotiated schedule contracts where Government purchases represented the majority of industry production.

With regard to the balance of the negotiated Federal supply schedules contracts, where Government purchases represent only a small percentage of total industry production, we feel reliance can be placed upon competition in the commercial market to produce a basis for determining reasonableness of prices to the Government. This concept is fully supported by the Congress in the recently enacted Public Law 87-653 which directs certain Federal agencies to obtain cost data, but does not apply this requirement "where the price negotiated is based on adequate price competition (or) established catalog or market prices of commercial items sold in substantial quantities to the general public." Where such standards for measuring reasonableness of price exist, it would not be economical or in the Government's interest to incur the additional expense of developing and evaluating contractors' cost data.

The second recommendation in the draft report is that GSA, together with DOD, undertake to negotiate appropriate price adjustments for aircraft tires procured under Federal supply schedule contracts. We have initiated action to review cost data and other information bearing on the question of price adjustment. We shall conclude our studies and evaluations at the earliest possible date and advise GAO of our findings and action taken.

Mr. THOMAS. Who is buying the Air Force tires now?

Mr. BEAN. The Air Force.

Mr. THOMAS. Why are they doing it? Are they able to buy cheaper than you are?

Mr. BEAN. Yes, when they make single purchases of large quantities.

Mr. THOMAS. How were you buying them?

Mr. BEAN. They were buying in small quantities according to their needs because at that time there were so many changes in the specifications for the tires themselves.

Mr. THOMAS. What is the upshot of the criticism of the General Accounting Office that you have just read?

Mr. BEAN. Well, it would seem there might be some collusion, and that they might have overcharged even on this basis.

Mr. THOMAS. Overcharged whom, the GSA?

Mr. BEAN. Yes, on the GSA contracts.

Mr. THOMAS. Who were your suppliers?

Mr. ENGLISH. We had contracts with all the producers in the industry. There were six of them which represented the total production capacity.

Mr. OSTERTAG. Are your contracts subject to renegotiation?

Mr. BEAN. Not all of them, but these were.

Mr. THOMAS. If the Air Force buys the tires it is subject to renegotiation. If you buy them it is not?

Mr. BEAN. Both are.

Mr. OSTERTAG. That is what I was leading up to.

Along that same line, under your supply arrangement as compared with the military, there is no obsolescence and oversupply as compared to what they find themselves involved in; is that correct?

Mr. BEAN. That is correct.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

CORRECTION OF RECORD ON PURCHASE OF AIRCRAFT TIRES

STATEMENT SUBMITTED BY GENERAL SERVICES ADMINISTRATION CORRECTING CERTAIN ELEMENTS OF ABOVE TESTIMONY ON AIRCRAFT TIRES

From some of the answers given above, certain misleading impressions could be gained. The GSA Federal supply schedule contracts for aircraft tires discussed above were entered into on the basis that the Air Force needed to maintain production sources for all types and sizes of aircraft tires for mobilization purpose, and in the prices quoted by the suppliers included the cost of testing facilities and research and development required due to rapidly changing specifications.

Subsequent to a determination that the mobilization base was no longer required, the Air Force purchased large, definite quantities of aircraft tires at lower prices than were contained in the Federal supply schedule contracts. The reasons for these lower prices were mainly attributable to the method of contracting and change in concept.

The statement concerning obsolescence and oversupply is misleading. The Air Force stocked aircraft tires at use points, but because of the ready availability of multiple sources of supply for all sizes and types of tires under the Federal supply schedules, the Air Force inventories could be held to a minimum since orders could be placed immediately under Federal supply schedule contracts without advertising for bids.

The Federal supply schedule contracts for aircraft tires were unique in that (1) they contained no maximum order limitation; (2) they were founded on a mobilization base concept; (3) only a relatively few ordering offices placed orders under the schedule; (4) at that time, aircraft tires required constantly changing specifications to meet critical applications; and (5) aircraft tires were the only commodities covered by negotiated schedule contracts where Government purchases represented the majority of industrial production.

Action has been initiated to review cost data and other information bearing on the question of price adjustment for aircraft tires procured under the former Federal supply schedule contracts. The Federal supply schedule contracts for aircraft tires were discontinued as of August 31, 1962.

METHOD OF PROCURING GROUND TIRES

Mr. EVINS. When you buy tires do you get prices from all major manufacturers and how do you make a selection?

Mr. BEAN. For ground tires, it is done on the basis of standard specifications in the industry.

Mr. EVINS. You need x quantity of tires. How do you procure them?

Mr. BEAN. If we need a large quantity, not available under the schedule, we will put out an invitation for bid to every manufacturer that can produce that tire.

Mr. EVINS. And when the bids come in, are they close?

Mr. BEAN. The low man gets the business.

Mr. EVINS. The low man gets the business?

Mr. BEAN. Yes.

Mr. EVINS. Do you buy Goodyear tires or what kind?

Mr. BEAN. It depends on the low man.

Mr. BOUTIN. From whom are you buying right now?

Mr. ENGLISH. The schedule contracts, of course, are available for the agencies to place orders against so that a given agency having a requirement for tires right now would place it on the basis of service and availability, which means under the contract he would draw on the manufacturer's outlet which was most convenient to him at the most advantageous price.

Mr. EVINS. Does the agency get the tires from you?

Mr. ENGLISH. The agency places its own order.

Mr. EVINS. You just serve a purchasing agent for him?

Mr. BEAN. Yes. We do not stock tires.

Mr. EVINS. Have you ever considered the system used by major trucking companies and bus lines of replacing their tires when they have had a certain use?

Mr. BEAN. Yes. We know about that and have had studies on them.

Mr. EVINS. You are not finding uniform or identical bids or anything that would arouse suspicion to turn it over to the Justice Department?

Mr. BEAN. No, sir.

Mr. EVINS. You did have your suspicions aroused in the case of the Air Force tires?

Mr. BEAN. Yes. That is why we asked the General Accounting Office to make this study.

Mr. THOMAS. Any other general questions, gentlemen?

PURCHASING FOR OVERSEA SHIPMENT

Mr. BEAN. One of the gentlemen was asking yesterday about the oversea-gold-flow arrangement we have made with the Army, and I have some additional information here which I think is very interesting.

Mr. EVINS. If you have some information that would help to keep the gold in this country, we would be glad to hear it.

Mr. BEAN. Last year, for oversea bases——

Mr. THOMAS. Where is that setup, in Wiesbaden?

Mr. BEAN. In Sembach. That is close to Wiesbaden. Last year we shipped overseas $73 million in merchandise. That stopped that much from being spent overseas.

Mr. THOMAS. What was the nature of the items?

Mr. BEAN. All kinds of common-use items in our catalog and schedules.

Mr. THOMAS. What would be a half dozen of the biggest dollar items you would ship?

Mr. BEAN. Furniture, refrigerators, ranges, washing machines, floor wax, detergents, paper items, tools——

Mr. OSTERTAG. You ship to them, is that right?

Mr. BEAN. Yes.

Mr. OSTERTAG. More than you have before?

Mr. BEAN. Yes. This is a new program which came out at the time the President asked for this gold flow to be stopped.

This year we expect to ship overseas $100 million.

Mr. THOMAS. What stock are you carrying at Wiesbaden?

Mr. BEAN. No stock at all. We have a complete setup of schedules and catalogs covering more than 700,000 items we have available for

supply. We have only samples in that place. But from these, orders are made up and sent over real fast.

HANDLING OF OVERSEA ORDERS

Mr. THOMAS. Where is the order executed?
Mr. BEAN. Overseas, and it is sent to New York.
Mr. THOMAS. Your New York office handles it?
Mr. BEAN. The New York regional office writes the order, expedites the order, does the quality control, does the packing, and puts it on the dock.
Mr. THOMAS. Where is the control executed?
Mr. BEAN. At the New York regional office.
Mr. THOMAS. It is handled at the factory?
Mr. BEAN. Inspection of merchandise is usually at the source.
Mr. THOMAS. What is your port of embarkation, New York?
Mr. BEAN. That is correct.
Mr. THOMAS. Do you have any other for Europe?
Mr. BEAN. We have another one in New Orleans, which takes care of the Mediterranean area and Africa, and one in San Francisco that takes care of most of the Far East.
Mr. BOUTIN. And one in Seattle for the Far East, also.
Mr. THOMAS. Where are you buying?
Mr. BEAN. At each of the shipping locations we do buying.
Mr. SPANGLER. For New Orleans our buying office is at Fort Worth.
Mr. THOMAS. That is the regional office?
Mr. BEAN. Yes.
Mr. THOMAS. Off the record.
(Discussion off the record.)

LIMITATION ON REGIONAL BUYING

Mr. THOMAS. What is the limitation on any buying office before it has to go to central office?
Mr. MCGEE. $100,000. Any proposed award exceeding $100,000 has to be referred to the central office for review.
Mr. THOMAS. Do all your buying orders originate in the field?
Mr. BOUTIN. Yes, sir.
Mr. THOMAS. Off the record.
(Discussion off the record.)

BOARD OF CONTRACT APPEALS

Mr. THOMAS. The Appeals Board is under the jurisdiction of and assigned to the Office of the Administrator?
Mr. BOUTIN. Yes.
Mr. THOMAS. What is their jurisdiction? What do they do?
Mr. BOUTIN. They have the same jurisdiction as the Administrator in determining any single appeal that is made to GSA as a result of any of our contracts. The Administrator does retain the right at any time to direct the Board to render an advisory opinion instead of a decision. I have never exercised that right.
Mr. OSTERTAG. This is not an appeal from your decision?
Mr. BOUTIN. This is an appeal from the decision of the contracting officer.

Mr. THOMAS. Where does most of their business originate?

Mr. BOUTIN. Most is in the PBS area, decisions of the contracting officer as to whether or not additional money will be allowed for a change order and whether the contracting officer was justified in requiring them to do certain things in the performance of their contract.

Mr. THOMAS. How many cases did they handle in fiscal year 1962?

Mr. BOUTIN. They handled during fiscal 1962 a total of 101 cases.

Mr. THOMAS. In fiscal 1962?

Mr. BOUTIN. Yes.

Mr. THOMAS. Is there any breakdown on them?

Mr. BOUTIN. I do not have it here, Mr. Chairman.

Mr. THOMAS. You have the Board of Contract Appeals, one chairman, GS–15; four 15's——

Mr. BOUTIN. They are all grade 15's, Mr. Chairman.

Mr. THOMAS. And seven other positions. So they have a total of 12 positions and they handle 101 cases?

Mr. BOUTIN. These are the cases completed. In addition to the cases completed they had hearings and were preparing the material on a good number more. For instance, they had completed hearings on an additional 46.

Mr. THOMAS. That is less than 9 cases a month, 8½ cases a month.

Mr. BOUTIN. As of the 30th of June we had pending 191 cases.

Mr. THOMAS. How many of those cases appealed has the Attorney General been invited to look at?

GAO INTEREST IN BOARD OF APPEALS

Mr. BOUTIN. I do not think the Attorney General has been invited to look at any of them, Mr. Chairman. I think, however, some of the decisions of the Board have been further appealed to the General Accounting Office. We have never had GAO reverse a decision of the Board.

Mr. THOMAS. I meant the General Accounting Office. What did I say?

Mr. BOUTIN. You said the Attorney General.

Mr. THOMAS. Out of your 101 cases how many were the General Accounting Office asked to look into?

Mr. BOUTIN. Mr. Chairman, we do not ask the GAO to look into any of the cases that the Board has an appeal pending on. However, the appellant may appeal to GAO if they feel that the decision of the Board of Contract Appeals is improper.

Mr. THOMAS. And GAO has never reversed one of the decisions of the Board of Contract Appeals?

Mr. BOUTIN. I know of no such case that has been reversed by GAO.

Mr. THOMAS. Do you know how many cases the GAO has reversed in a calendar year for any agency of the Government?

Mr. BOUTIN. I know they have reversed us on other matters.

Mr. OSTERTAG. It is difficult for me to understand what power the GAO has in this matter.

Mr. MOODY. All our contracts contain a disputes clause under which the decisions are made by the contracting officer in the original instance. Under the clause in the contract a contractor who is not satisfied can appeal that decision to the agency head.

Mr. THOMAS. What is the yardstick used in evaluating the correctness of one of these Appeal Board decisions?

Mr. BOUTIN. The yardstick of law?

Mr. THOMAS. Yes.

Mr. MOODY. It is my understanding that the decisions of the agency on questions of fact arising under the disputes clause are final and conclusive in the absence of fraud and they will not be reviewed by the GAO; the GAO will review them only on questions of law.

Mr. THOMAS. What it adds up to, the GAO takes the position that the facts found by the Board are binding on them and in the absence of some outstanding fraud they leave the parties where they are and say, "After all, this comes in your jurisdiction and if you want to pull a bonehead that will be your grave and not ours." So what it all boils itself down to, the GAO does not do too much in these contract disputes. Is that right?

Mr. MOODY. They only get into those cases which the contractor takes to them on appeal from the agency. We do not refer any to them.

Mr. THOMAS. In this case I discussed off the record I think the decision of the GAO was that in the absence of fraud on its face—it was bad judgment but it was in the contracting officer's authority to do that so they were not much kinder to the taxpayer than to GSA.

OVERSEA SUPPLY CUSTOMERS

Mr. OSTERTAG. You mentioned the fact you had supplied about $100 million to the Air Force but you limited that to the Air Force. What would be the overall figure?

Mr. BEAN. I was going to continue by saying next year we plan to ship $150 million overseas. We have recently made an agreement with the Army whereby they will work with us on the same basis, use our catalogs and schedules for their oversea installations. We expect our business on that basis to go up to $225 million. This again, however, also includes the State Department, the Peace Corps, and AID.

EXPECTED INCREASES IN OVERSEA SUPPLY

Mr. OSTERTAG. Up to now, the oversea supply through GSA from continental U.S. sources has been limited to about $100 million?

Mr. BEAN. That is correct, sir.

Mr. OSTERTAG. You anticipate under this plan an arrangement that that will be substantially increased?

Mr. BEAN. That will be increased this coming year and we expect $225 million.

Mr. OSTERTAG. How about the Navy? Are they involved in this?

Mr. BEAN. Not to a great extent. They only have a few bases and they are at tidewater and supplied by their own ships, out of their main depots on the east coast and west coast.

Mr. OSTERTAG. Where does the Navy obtain its supplies?

Mr. BEAN. The Navy buys some of these items from us.

NONSTORES BUYING

Mr. SPANGLER. May I include in the record the answer to the statement as to how much was bought in the regions and how much was bought by——

Mr. THOMAS. I was just coming back to that item.

Thank you for your help.

Mr. SPANGLER. In fiscal year 1962 there was $71 million bought by the regions and $122.1 million by NBD in what we call nonstores items.

Mr. THOMAS. What do you mean by that?

Mr. SPANGLER. National Buying Division.

Mr. THOMAS. That is in your New York office?

Mr. SPANGLER. That is in Washington.

Mr. THOMAS. Is that from schedules?

Mr. SPANGLER. That is all nonstock purchases, anything that might have been bought——

Mr. THOMAS. $71 million in your regional offices?

Mr. SPANGLER. Yes, sir; $122.1 million in our central office.

Mr. THOMAS. Is that special buying not set out in your catalogs?

Mr. SPANGLER. Yes, sir.

Mr. THOMAS. What does that total of your gross business?

Mr. SPANGLER. That should be about $193.1 million.

Mr. THOMAS. In round figures $200 million.

What business do you do?

Mr. BEAN. It is actually $1.4 billion.

Mr. THOMAS. What are you buying out of the catalog and stores? I believe you said around $800 million, and that is 25 percent of your business there. What control do you have over that?

Mr. BEAN. The nonstores is $200 million and buying from schedules $840 million.

Mr. THOMAS. I missed the $40 million part. Go ahead.

Mr. SPANGLER. May I also add that this regional review by the central office is based on any formal invitation for bid over $100,000? The award must be reviewed in the central office. Any negotiated award over $50,000 must also be reviewed in Washington by our central office.

Mr. THOMAS. How big a unit do you have in each one of your regional offices doing this buying? What are their qualifications, and what are their grades?

Mr. SPANGLER. The grades range from grade 7 up to grade 12.

TYPES OF NONSTORES ITEMS

Mr. THOMAS. What are some of the items they do that buying on? What are some of the items they buy in the regional offices? Why do you have to go to the regions to get them?

Mr. SPANGLER. It does not go to the regions. It comes into the regions because the requirements are generated from agencies that are within the regional area. They flow, therefore, into the regions and not into Washington. Under our criteria, depending on the commodity, they do the buying in the regions up to reasonable limitations. It

is in the areas of things like refrigerators, ranges, special items for PBS like parts, motors, generators, and cables.

Mr. THOMAS. Those are common-use items.

You do not have a regular schedule for them?

Mr. SPANGLER. Not all of these items are on the schedule, no sir.

Mr. BEAN. Many of these are special purpose items which you could not afford to carry in stock. There is only an occasional demand.

CONTRACTING FOR NONSTORES ITEMS

Mr. THOMAS. Why do you not do your buying in overall contracts? Why does that not cover them?

Mr. BEAN. For the reason we do not have enough demand to do it on a contract basis. We have to do it as they are needed. For instance, items that are not sold readily.

Mr. THOMAS. What kind of prices do you get when you buy them?

Mr. BEAN. We get less than the wholesale price.

Mr. THOMAS. That is what I am getting at. You are no more than the small jobber for a quarter of your business?

Mr. BEAN. Except that we get a better price than he does and there it is much cheaper for the Government to buy these odds and ends on this basis than to buy them or to carry them in stock for months and months.

Mr. THOMAS. Why can you not ship them with the big overall contracts?

Mr. BEAN. There is not enough volume.

Mr. THOMAS. You said you have $200 million worth of it and that sounds like a pretty good sized operation.

Mr. BEAN. All over the United States there are many, many items——

Mr. THOMAS. The volume on each item is not enough?

Mr. BEAN. Each one item is not enough.

Mr. SPANGLER. It varies by locality. The items that the region in Denver is buying varies considerably.

Mr. THOMAS. What are they buying in Denver?

Mr. SPANGLER. For example, in Denver they do a lot of buying in support of the Indian Service, specialized food, rations that we do not buy in other parts.

Mr. THOMAS. A bean is a bean, is it not?

SPOILAGE AND LOSS ON INVENTORY

Mr. OSTERTAG. You have been calling attention to the savings and the general benefits, but what about the matter of obsolescence, surplus, waste and spoilage and matters of that kind? Certainly you encounter a certain percentage of that, do you not?

Do we have any overall picture on that?

Mr. BEAN. I think it is less than 1 percent of sales.

Mr. SPANGLER. A small fraction of 1 percent.

Mr. BEAN. We get a three-time turnover on this volume, it does not stand around very long.

Mr. OSTERTAG. Isn't it true that some of these items are bound to be obsolete during the course of events to the point where there is no means of distribution or sale?

Mr. BEAN. We only carry in our warehouses things which have a continuous use and things which are very staple. When somebody wants a pint can of paint, which we do not carry, that is a local purchase, and we tell them to buy it on the local market, because it is not feasible to handle that and save any money on it for the Government.

NUMBER OF ITEMS IN STOCK AND ON CONTRACT

Mr. OSTERTAG. What percentage of your entire supply system is a matter of stock on hand as compared with what you have and what might be termed orders for an item and actually automatic disposal of?

Mr. BEAN. In our warehouses we have now——

Mr. THOMAS. Give him a good round figure.

Mr. BEAN. 13,000.

Mr. THOMAS. One-third?

Mr. BEAN. One-third of the items which we ship are in the warehouse and ready for shipment.

Mr. THOMAS. That is what he asked you exactly.

Mr. BEAN. We have over 1 million items on contract.

Mr. OSTERTAG. In other words, two-thirds of it is already on order before you purchase it?

Mr. THOMAS. That is right.

Mr. BEAN. Practically, yes.

Mr. OSTERTAG. It is disposed of and you have a means to distribute it? In other words, you do not stock it?

Mr. BEAN. We do not stock it.

Mr. THOMAS. You bought it for a particular customer?

Mr. BEAN. We contract for it for many customers and do it on an annual basis. This is at a very low cost of 14 cents a hundred dollars.

Mr. EVINS. How much do you get in the way of brokerage fees on these orders?

Mr. BEAN. It ought to be a lot of money but I have not received any yet.

Mr. THOMAS. He meant how much do you save?

Mr. BEAN. I am sure that on the ones the manufacturer carries in stock we are saving at least 30 percent there and about 40 percent in the things——

Mr. THOMAS. He is talking about where you are really serving as a good jobber on those small items and that is what it amounts to?

Mr. BEAN. Even on the small items our prices are lower.

Mr. THOMAS. You even beat the jobbers' prices?

Mr. BEAN. That is right.

Mr. EVINS. In round figures that you can throw out here they total two-thirds of your purchases for other customers and which you never put in your warehouse? How much do you save on that two-thirds?

Mr. BEAN. Here are the figures in the stores. This year, or rather next year, we will sell $364 million.

Mr. THOMAS. Store sales?

Mr. BEAN. The difference between that and the $1,480 million is what is shipped directly from the source to the customer.

Mr. THOMAS. Let's go back to your original figure of a while ago of $600 million saving.

Mr. BEAN. I am going to back down on that.

Mr. THOMAS. He is not asking you to back down but he is just asking you to state it.

Mr. BEAN. I will state it.

Mr. SPANGLER. If I understand your question correctly, you wanted to know what our projected savings were on our procurement other than the stock program?

Mr. EVINS. That is right, all in this operation.

Mr. SPANGLER. In 1962 we figure we saved the Government on that part of the program $129.5 million. On the total program, including the stores, it would run about $222 million.

Mr. EVINS. Offset against that is the $34.9 million salary item and $13.5 million for the general supply fund which we appropriated for last year.

Mr. SPANGLER. I am sorry. I could not hear you.

Mr. EVINS. You said that $200 million earnings were gained through savings through your total operations last year, but the committee appropriated for you about $48 million.

Mr. BOUTIN. Except that on our general supply fund, that is just converted to assets. It is a revolving fund but the other appropriation is for operating expenses.

Mr. EVINS. It is pretty much exhausted every year?

Mr. SPANGLER. This does not include the administrative savings in the agencies themselves, because they do not have to go through the procurement process, including the issuance of invitations to bid, announcements of bids, evaluation of bids, awarding of contracts, and so forth.

Mr. THOMAS. Let us get these figures straightened out.

You have given one set of figures and Mr. Bean another. Let us get together at this point in the record and get this savings point clear.

Assuming we are going to do $1.4 billion of business in 1964 and $800 million of which is schedules—these are approximate figures, but is that correct?

Mr. BEAN. There is $200 million nonstores and $840 million schedules. A schedule is a contract we have in being and a nonstores item is one which we buy as needed.

Mr. THOMAS. Break down your classifications that make up your total of $1.4 billion as between your schedules, nonstores, and stores.

Mr. BOUTIN. Stores stock, we are estimating $374 million; direct delivery of store items, $66 million; schedules, $840 million; nonstores, $200 million; for a total of $1,480 million.

Mr. THOMAS. On all classification of sales, they total $1.4 billion but what amount of money do you think you save the Government?

Mr. SPANGLER. $432.3 million.

Mr. THOMAS. I thought Mr. Bean was using a figure of $600 million.

Mr. BOUTIN. A little generous.

Mr. BEAN. I was being optimistic.

Mr. THOMAS. Let us stay with round figures, $400 million; that is quite a saving but break that down for Mr. Evins into your three classifications.

What do you save on your stores? That is the highest cost operation.

Mr. SPANGLER. We will save $134.7 million. On the nonstores we will save $166 million; and on the schedules, the figure is $112.6 million.

I am sorry, gentlemen. I really am. I transposed a figure.

Mr. BOUTIN. What is the right one?

Mr. THOMAS. Do not change that $400 million figure because if you do we are going to jump out the window. Straighten out your figures and give it to us in a minute.

TIRE PRICES

Mr. EVINS. While he is getting that, tell us how you compare with Sears, Roebuck and Montgomery Ward.

Mr. BEAN. If you add 35 percent to our prices, which they do, we are bigger than Montgomery Ward. We are not as large as Sears, Roebuck and A. & P.

Mr. THOMAS. How do your prices compare?

Mr. BOUTIN. I can give it to you on tires. I have this right here.

Mr. THOMAS. Give it to us.

Mr. BOUTIN. As Mr. Bean said, $14. There are several grades in Sears at $26.22 for one grade and $23.72 on another grade, $21.72 on another, $17.22, $14.72.

Mr. OSTERTAG. Sales price?

Mr. BOUTIN. Sales price.

Mr. BEAN. Ours is a first line tire.

Mr. BOUTIN. Montgomery Ward on a guaranteed tire, $24.75 each, and if you buy four at a time——

Mr. EVINS. The same grade and size?

Mr. JONAS. What if you buy 100,000?

Mr. BOUTIN. They have another price of $23.76 if you buy four at a time. They have another one of $20.65 if you buy them four at a time.

You get all over the place in grade, and that is the problem.

Mr. OSTERTAG. Are these tires comparable to the $14 tire you spoke about?

Mr. BEAN. The tire I am talking about is a first-line tire and that would be their best tire.

Mr. OSTERTAG. There is not too much difference between their retail price and your manufacturer's price?

Mr. BEAN. Yes, sir.

REVISED SAVINGS FIGURE

Mr. EVINS. Have you been able to figure up some more savings and profits?

Mr. SPANGLER. Yes, sir.

For 1964, $285.6 million in total; nonstores is $38.3 million.

The other two figures I gave you are correct.

Mr. THOMAS. Mr. Evins, let us go ahead with the justifications.

FUNCTIONS PERFORMED BY THE FEDERAL SUPPLY SERVICE

Mr. EVINS (reading):

Functions performed by the Federal Supply Service:

The Federal Supply Service performs all functions of GSA with respect to (1) establishment of efficient supply management practices throughout the Federal Government, and (2) operating a supply system through which common-use commodities are sold to Government agencies both domestic and overseas, and cost-type contractors from depot stocks, retail stores, customer service centers, or by direct delivery from suppliers, whichever is more economical or meets customer demands.

The basic operations are financed from two sources: (1) a single appropriation for all operating expenses, and (2) a revolving fund which initially finances the purchase of commodities, subject to reimbursement by ordering agencies. Whenever possible purchases are made for direct payment by ordering agencies thereby obviating use of the revolving fund.

In addition, a special packaging service, required for export shipments, is available to oversea customers at four port cities (New York, New Orleans, San Francisco, and Seattle), subject to reimbursement from ordering agencies.

Mr. THOMAS. He is coming in for two deficiencies. One is for $30 million for the general supply fund. This is not an expenditure but remains in the fund as an asset of one sort or another.

Among other things it finances receivables and I presume you demand cash on the 30-day basis?

Mr. Evins, this last paragraph ought to be paid attention to.

PROPERTY REHABILITATION

You have your repair shop in one or two of those places, do you not?

Mr. BOUTIN. Nothing to do with this program, Mr. Chairman. We have one at Cheli in Los Angeles for the AID program that comes under——

Mr. THOMAS. You have only one?

I thought you had one at each of those shipping ports, too?

Mr. BOUTIN. No.

Mr. THOMAS. You pay the bill for it or are you reimbursed for it?

Mr. BOUTIN. Completely reimbursed.

Mr. THOMAS. Just one?

Mr. BOUTIN. Just one. We have two office machine repair shops for our own staff and some we do for the others.

Mr. THOMAS. You do some contract repairing, too, do you not, for furniture and so forth?

Mr. BOUTIN. By contract, yes, but not through——

Mr. THOMAS. I said, contract.

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. How many of those do you have?

Mr. BOUTIN. Our Commissioner of UDS is not here, Mr. Chairman. He could tell us exactly.

We have a lot of contracts out and a lot with the Bureau of Prisons. The Bureau of Prisons is a principal source.

Mr. THOMAS. We will go into that in detail later.

DIRECT AND REVOLVING FUND PAYMENTS

Mr. OSTERTAG. In connection with this statement of functions performed, reference has been made to direct payment by ordering agencies. What is meant by direct payment? Is that a 30-day proposition?

Mr. BOUTIN. Whenever we can, Congressman, if an agency wants to buy something we perform the procurement, but rather than our paying the bill and their reimbursing us, the supplier bills them and they pay it directly. It never comes to us at all.

Mr. OSTERTAG. I was confused as to the point of direct payment without it coming out of the revolving fund.

I can see now by your explanation that you merely transfer the charge to them?

Mr. BOUTIN. Yes; it saves time.

Mr. OSTERTAG. They would take it out of their funds almost immediately?

Mr. BOUTIN. That is correct. In fact, on some of these we get payment at the time we enter into the contract for their procurement. Some go through the fund and we get reimbursement from them and some are direct payments. The latter never goes through our system at all.

SUMMARY OF FEDERAL SUPPLY ACTIVITIES

Mr. EVINS. Mr. Reporter, place in the record the tabulation on page 115.

(The page follows:)

Federal Supply Service

Summary of new obligational authority and average employment

	New obligational authority		Average employment					
			Total		Central office		Field	
	1963	1964	1963	1964	1963	1964	1963	1964
A. New obligational authority and related employment, operating expenses, FSS	$41,905,000	$51,000,000	3,144.5	3,880.7	744.0	834.1	2,400.5	3,046.6
1. Supply operations	25,544,300	31,767,000	2,433.4	3,092.1	410.5	465.5	2,022.9	2,626.6
(*a*) Supply distribution	17,751,000	22,486,000	1,531.6	2,020.2	66.5	79.4	1,465.1	1,940.8
Depot operations	12,664,000	16,602,000	1,531.6	2,020.2	66.5	79.4	1,465.1	1,940.8
Space and related costs	5,087,000	5,884,000						
(*b*) Buying operations	7,793,300	9,281,000	901.8	1,071.9	344.0	386.1	557.8	685.8
2. Standards and quality control	5,945,700	6,831,000	599.5	673.9	257.8	289.8	341.7	384.1
(*a*) Supply standards	2,339,000	2,651,000	228.7	257.8	288.7	257.8		
(*b*) Quality control	3,606,700	4,180,000	370.8	416.1	29.1	32.0	341.7	384.1
3. Procurement policy and supply coordination	735,000	827,000	56.7	60.0	56.7	60.0		
4. Service direction	848,000	986,000	54.9	54.7	19.0	18.8	35.9	35.9
5. Administrative operations	8,832,000	10,589,000						
General supply fund	43,500,000	35,000,000						
Total NOA, subtotal employment	85,405,000	86,000,000	3,144.5	3,880.7	744.0	834.1	2,400.5	3,046.6
B. Other employment reimbursements, operating expenses, FSS	(1)	(1)	372.9	506.8			372.9	506.8
Total, employment			3,517.4	4,387.5	744.0	834.1	2,773.4	3,553.4

[1] Funds available not considered new obligational authority in budget schedules.

INCREASES IN OPERATING EXPENSES

Mr. EVINS. This is a summary of new obligational authority and average employment. This gives pretty much the whole picture and in going down the totals for 1963, you say that earlier there was appropriated $85,405,000 and in 1964, you are requesting an appropriation of $86 million.

Let us take up the "Operating expenses" item, Federal Supply Services. In 1963 you had in the central office 744 and you are asking for 834.1 personnel in the central office for 1964. In the field the number is 2,400 in 1963 and in 1964 you are asking for 3,046. That is an increase, both in the central office and the field, for a total of 3,880, as against 3,144 last year.

This is a total increase in personnel in the Federal Supply Service of how many, Mr. Bean?

Mr. TURPIN. 736 man-years for OE, FSS.

Mr. EVINS. Why do you need 736 more people to operate the Federal Supply Service?

Mr. BEAN. This year we expect to do $278 million in store sales.

Mr. EVINS. You have your warehouses and personnel set up and going and it looks to me like you ought to be able to absorb an increase in your business without taking on this many more employees.

Mr. BEAN. That is what we are doing, sir. Our cost right now is $4.56 to pick up and pack and ship goods and we expect to do it for $4.56 next year even though we are going to add an increase in the pay raise.

Mr. BOUTIN. We have a very tough system of standards in the manning of these depots. We only hire to our actual need at a given time and take out the peaks through contract labor. This is in line with the increased business we anticipate doing.

STANDARDS AND QUALITY CONTROL

Mr. EVINS. Let us take another item here, "Standards and quality control." You are increasing from $5,945,000 to $6,831,000, nearly $1 million increase in funds.

You are in the field going from 341 to 384 and in the central office from 257 to 289 for an overall total of 599 to 673.

Why do you need more standards and quality control?

Mr. BEAN. Mr. Ritter, would you speak to that, please?

Mr. RITTER. In our standardization program, we are far from having current standards and specifications to keep abreast of our procurement program. Out of our stores stock items alone, 22 percent do not have specification which permit us to buy to the best advantage competitively. In our quality control organization, we have to inspect the material as it is being procured. Our inspection requirements increase as we procure more for the Department of Defense, since they request that we inspect all of the material shipped overseas. Our increase in quality control is tied directly to the overall procurement volume.

Mr. EVINS. How long have you been working on the catalog? This is in your branch, is it not?

Mr. RITTER. Yes, sir.

Mr. EVINS. Do you have that edited, published, and compile it and complete it?

Mr. BOUTIN. It changes, Congressman, just about as fast as you can think. There are about 30,000 items in civil agencies which drop out every year. They are the items with no recurrence of purchase, that should not be kept in the system. It is like the Sears, Roebuck catalog. Every year there are a lot of changes in items, changes in specifications, and changes in prices.

PROCUREMENT POLICY AND SUPPLY COORDINATION

Mr. EVINS. The next item is "Procurement policy and supply coordination." You ought to have that procurement policy pretty well firmed up and established by now. You are asking for an increase from $735,000 to $827,000.

There are about four new employees in that branch.

Mr. BOUTIN. This is a divisible operation, Mr. Chairman. The procurement policy comes under Mr. Gasque and they actually put together the procurement regulations, Federal procurement regulations, that are coordinated with ASPR regulations of the Department of Defense.

This year they hope, for the first time, to print in looseleaf form all of these regulations, compile them together. They do not deal just with GSA procurement but procurement for the entire civil side of the Federal Government.

Mr. THOMAS. This is an educational unit? They are teaching these various agencies how to buy?

Mr. BOUTIN. They are putting some pretty firm requirements on how they do buy, including ourselves.

Mr. THOMAS. When do you expect to get them educated? You have been educating them for a long time.

Mr. BOUTIN. Sometime the economy—I hope it never does—when it stands still, then we will be able to——

Mr. THOMAS. What part of personnel is engaged in the day-to-day consultation with the various agencies of the Government that you serve? I am talking about the supply system, stockpile items they buy, how to buy off the schedule, and everything else? How many people do you have to get into your section?

Mr. GASQUE. In my own operation of procurement policy, I have a total of 16 people; 9 professionals. These 9 people, including myself, are in day-to-day contact with all of the agencies with respect to the development and maintenance of Governmentwide Federal procurement regulations.

Mr. THOMAS. When are you going to get the agencies educated?

Mr. BOUTIN. We have 45 people anticipated in 1964 working in supply coordination, which is the field you are talking about.

Mr. THOMAS. All you can do is to hold their hands? You cannot make them do anything?

Mr. BOUTIN. We are gaining on it.

Mr. THOMAS. You do not attempt to——

Mr. BEAN. We do attempt to and we have gotten some very excellent results. These are the people who are working with the Department of Defense on the new items we are getting from them.

Mr. BOUTIN. In procurement policy we have 16 and that is why I said it is a divisible operation, different functions

Mr. BEAN. This number of people remain pretty much static in this.

ADMINISTRATIVE OPERATIONS—FSS

Mr. EVINS. For "Administrative operations" you go from $8,832,000 to $10,589,000. Why is this necessary? Why is it required? How do you justify this $2 million increase?

Mr. BOUTIN. Mr. Turpin said he has a good story on that, Mr. Chairman.

Mr. EVINS. He wants $2.5 million more.

Mr. THOMAS. This is his biggest activity, in all fairness to the gentleman.

Mr. TURPIN. This is the biggest activity we have in the AO area.

Mr. THOMAS. Mr. Evins is about to let you off the hook. You better leave him alone.

Mr. TURPIN. It would be better if I could take care of it at the end and then we will take care of the total picture.

Mr. EVINS. I am not as tough as the chairman but I do want to know why you need 740 more people in this Federal Supply Service.

Mr. TURPIN. Those are the additional employees for all operations in FSS required to handle the increased volume of business projected in supply.

Mr. EVINS. Could you not get by with around 500 employees?

Mr. TURPIN. No, sir. As a matter of fact, even with what is projected, we anticipate reducing our unit costs for the business handled in 1964.

Mr. EVINS. Mr. Turpin, you also reduced the unit costs but you do not reduce personnel.

Mr. TURPIN. Well, it is difficult to reduce personnel when the volume of business you are handling increases.

Mr. EVINS. Could I bargain with you for 600?

GAO REPORT ON ADP EQUIPMENT

Mr. THOMAS. What about the ADP equipment you bought? Did you get it too hot and burn it up?

Mr. TURPIN. No, sir. Are you talking about the two GAO reports?

Mr. THOMAS. I am talking about the one you are thinking about.

Mr. TURPIN. Well, the one we had here in region 3, which I think is the one you are referring to, did give us a problem.

Mr. THOMAS. How much did that problem cost us?

Mr. TURPIN. In the GAO report, they indicated the cost to the Government as $650,000. I do think it is a little unfair, though, to say that it cost the Government $650,000 without the Government getting something for it, because part of that $650,000——

Mr. THOMAS. What did it cost us, $500,000?

Mr. TURPIN. Well, I was going to say that the $650,000 included site preparation for the machine that we did have in there, that did not work, but we are also using that same site for the equipment that is there now.

Mr. THOMAS. What did the machine cost? You are the next biggest bookkeeper to Social Security in the country, are you not?

Mr. TURPIN. We have a tremendous lot of accounts to keep. Of course, a lot of the volume we have——

Mr. THOMAS. How much money did you lose on that machine and why? What was the trouble? What went wrong?

Did the contractor perform or did the machine perform?

Mr. BOUTIN. We tried to make the machine do things it could not do and we could not make it do, and that is about the size of it, Mr. Chairman.

Mr. THOMAS. We just bought the wrong machine, but how come?

Mr. BOUTIN. We did not buy it. We rented it.

Mr. TURPIN. It was on a rental, sir.

Mr. EVINS. It would not do the work and you sent it back?

Mr. TURPIN. Yes, sir; the figure that was referred to in the GAO report was $650,000. In arriving at that figure, there was——

Mr. THOMAS. Who was the contractor?

Mr. TURPIN. It was an RCA machine.

Mr. THOMAS. Are they not substantial people? Do you have a lawsuit if it does not perform?

Mr. TURPIN. Actually, the rent that was paid out was pretty——

Mr. EVINS. More than the value of the machine?

Mr. TURPIN. No, sir; a relatively small amount, but in the cost that was identified as $650,000 was $139,000 for the preparation of the site and that we are still using. Also, in computing that estimate of cost to the Government was the time of the people that were in training and working on this system from 1957 to 1961, which was $496,000. That was the big chunk of it. It is true that the precise system they were working on during that period, and which we had planned to put on this particular machine did not pan out, but the know-how that was developed and many of the concepts that were developed on that machine are incorporated in the system we have going today which is a very good one.

Mr. THOMAS. Who is your contractor today?

Mr. TURPIN. The equipment we have is IBM; 1401 machines.

Mr. BOUTIN. Nine 1401's and one 1410.

Mr. THOMAS. You have no recourse against the first contractor?

Mr. TURPIN. No, sir. The contract with RCA was just for the rental of their equipment plus support service they provide along with it.

Mr. THOMAS. There is no cause of action?

Mr. TURPIN. No, sir.

Mr. BOUTIN. I do not think we can point the finger here at RCA or the 501. I think we have to share the blame. We had a concept that did not work out.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders. 1961, $597,000 (1962 adjustments, −$150,000); 1962, $942,000; 1963, $876,000; 1964, $1,007,000.

Mr. THOMAS. Mr. Evins, let us go into "Operating expenses, Federal Supply Service."

PAY ACT INCREASES

Mr. EVINS. I notice your Pay Raise Act figure is how much to Federal Supply Service? Last year it was $995,000 and in the 1963 Appropriation Act it was $40.5 million. You now have an item here of $995,000 for the supplemental due to that pay increase?

Mr. BOUTIN. In the 1964 budget the addition for the pay increase is $2,225,000.

Mr. EVINS. Here is an analysis by activity and a very good table at the bottom of page 116.

Mr. Reporter, put that page in the record.

(The page referred to follows:)

OPERATING EXPENSES, FSS

Summary reconciliation of 1964 estimate to comparable amounts for 1963

1963 appropriation in annual act	$40,500,000
Transfer to "Operating expenses, UDS"	−370,000
Transfer to "Operating expenses, TCS"	−320,000
Proposed supplemental due to pay increases	995,000
Proposed supplemental to provide for stores stock sales increase from $272.5 million to $278 million at sales price	1,100,000
Comparative total for 1963	41,905,000
Increases in 1964:	
Increase in stores stock sales from $278 million to $364 million at sales price and total purchasing volume increase from $1,325.6 million to $1,480 million	6,796,000
Accelerated program for promulgation of new standards and specifications and amendments thereto	148,500
Increased participation in the item identification program, catalog maintenance, and item simplification	163,500
Increased liaison with civil and military agencies to assure uniform purchasing and contracting policies and procedures, print first revised volume of Federal Procurement Regulations, and extended supply coordination activities	92,000
Other increases, primarily postage fees	138,000
Administrative operations	1,757,000
Total	9,095,000
1964 estimate	51,000,000

Analysis by activities

Activities	1963 adjusted	Increases	1964 estimate
1. Supply operations	$25,544,300	$6,222,700	$31,767,000
(a) Supply distribution	17,751,000	4,735,000	22,486,000
Depot operations	12,664,000	3,938,000	16,602,000
Space and related costs	5,087,000	797,000	5,884,000
(b) Buying operations	7,793,300	1,487,700	9,281,000
2. Standards and quality control	5,945,700	885,300	6,831,000
(a) Supply standards	2,339,000	312,000	2,651,000
(b) Quality control	3,606,700	573,300	4,180,000
3. Procurement policy and supply coordination	735,000	92,000	827,000
4. Service direction	848,000	138,000	986,000
5. Administrative operations	8,832,000	1,757,000	10,589,000
Total	41,905,000	9,095,000	51,000,000

INCREASES IN 1964

Mr. EVINS. I note that "Supply distribution" goes up from $17.7 million to $22.5 million and "Depot operations" increase from $12.6 million to $16.6 million. There is a $4 million jump in your "Depot operations."

Then in your "Buying operations," that goes from $7.8 million to $9.3 million, an increase of $1,487,700. In every item there is a substantial increase.

The next item is "Standards and quality control" and that goes from $5.9 million to $6.8 million, an increase of $885,000.

Under "Quality control" that goes from $3.6 million to $4.2 million, an increase of $573,300; "Procurement policy and supply coordination," $735,000 to $827,000, an increase of $92,000; "Service direction" is up from $848,000 to $986,000, an increase of $138,000.

Here, again, we have "Administrative operations" at $8.8 million, which go up to $10.6 million, an increase of $1,757,000.

COST ELEMENTS OF THE SUPPLY OPERATION

Mr. THOMAS. Mr. Evins, may I make an observation here?

The thing that interests me about the "Administrative expense" item, or impresses me, is that it brings out the difference between your business and the retail business.

Your big expense here is not in the operation of the stores. We consider that you are a retail outlet, so to speak. However, let us look at your space and related costs, your standards and quality control, and your buying.

Your "Procurement and supply coordination" is three-quarters of a million dollars and omitting these two administrative items which are about $11 million, your big cost is in procurement, buying, and standards? It is just the opposite of the retail store?

Mr. BEAN. That is right because, after all, we buy over a billion dollars worth of goods, and do not run it all through the store, because it is cheaper to ship most of it direct. We ship directly to the customers and that is how we get our total costs down to this $3.50 per $100.

Mr. OSTERTAG. You mean you ship directly from the source of procurement?

Mr. BEAN. From the source; yes, sir.

Mr. THOMAS. Your stock operators really earn money because they ship and package a world of merchandise?

Mr. BEAN. They sure do.

STORES EMPLOYMENT

Mr. THOMAS. Where are the green sheets on those people in the warehouses? You do not set that out in the justifications.

You do that in one or two of your upper bracket people but you do not do it on stores.

Mr. BEAN. "Depot operations," page 124.

Mr. THOMAS. Do you set them out here?

Mr. TURPIN. That is on page 124.

Mr. THOMAS. What are the classifications of each one of your top people in your stores?

Mr. BEAN. Grade 14.

Mr. THOMAS. What are the rest of them? Your employment in those big warehouses is surprisingly conservative, taking into consideration the amount of detail work. What are the rest of them

in an average warehouse? Your big one in Chicago has how many people?

Mr. McGee. We asked for 172.

Mr. Thomas. You have one grade 14?

Mr. McGee. We have one grade 14; one grade 13; one grade 12; two grade 11's.

Mr. Boutin. In Chicago?

Mr. McGee. That is for Chicago.

Mr. Boutin. Most of them are wage board employees, Mr. Chairman, in the depots themselves.

Mr. McGee. In Chicago we will have approximately 110 wage board employees.

Mr. Thomas. Go ahead.

Mr. Bean. Every one of the wage board employees and every one of the people in buying are subject to performance standards. If they cannot perform up to standard, action is taken to retrain, reassign, or release them.

Mr. Evins. You say that except for customers orders placed directly with suppliers under the supply schedule, most of the purchase of commodities are financed initially from the general supply fund, subject to reimbursement by ordering agencies. Wherever economical and feasible, costs of commodities furnished directly from suppliers are paid directly from funds of the requisitioning agency without involving the general supply fund.

APPROPRIATIONS, 1963 AND 1964

I think we ought to go into this paragraph a little carefully. [Reading:]

In addition to the adjusted appropriation of $39,810,000 for 1963, supplemental appropriations are being proposed for later transmittal to provide (1) $995,000 for Pay Act increases, and (2) $1,100,000 due to the increased volume of stores stock sales which is currently being realized above that which can be handled by the initial appropriation. The estimate of $51 million for 1964 proposes an increase of $9,095,000 over the comparable financing of $41,905,000 for 1963. The increase includes $6,796,000 to handle an additional $86 million in stores stock sales and $154.4 million in purchases; $312,000 to provide the minimum number of specifications standards and item identifications to support the increased supply activity; $1,757,000 to provide normal administrative operations supply of the expanded supply program; and $230,000 for other activities.

Mr. Bean, this no longer is small business. This has gotten to be in the big business category?

Mr. Bean. That is correct.

PAY ACT INCREASES AND ABSORPTION

Mr. Ostertag. Recognizing that this is limited to the area of Federal Supply Service, I note that in the statement just read by Mr. Evins, the supplemental calls for $995,000 for the Pay Act increase. How much has been absorbed? What was the total effect of the increase in your area? Can you tell us that?

Mr. Bean. I think Mr. Turpin probably has that exactly.

Mr. Turpin. Sir, the increase in 1963 was $1,024,000 of which $29,000 was absorbed and there is $995,000 included in the supplemental.

The figure in the 1964 estimate represents the results of the Pay Act increase and is $2,225,000.

Mr. EVINS. How much have you absorbed? I think he is asking beyond that.

Mr. OSTERTAG. Have you absorbed any?

Mr. TURPIN. Only to the extent we have reduced the unit of cost for handling the business in 1964. Applying the pay act increase to the employees projected in 1964, the cost would be $2,225,000.

Mr. OSTERTAG. $2,225,000 would be the effect of the pay increase on your total personnel?

Mr. TURPIN. Yes, sir.

Mr. OSTERTAG. Including the additional personnel program?

Mr. TURPIN. Yes, sir; that is correct.

Mr. OSTERTAG. But you made only a slight absorption of the pay increase in fiscal 1963 if you are going to require $995,000 of slightly over a million-dollar cost?

Mr. TURPIN. That is correct.

The reason for that is that the volume of business we are having cannot be handled and that is why we are having to come in with a supplemental for 1963 for an amount even over and above the cost of the pay act increase.

Mr. BEAN. In 1964, in the "Depot operations," our costs per hundred dollars is not going to go up at all, even though increased pay amounts to 8 cents per $100. We are absorbing all of that next year.

SALES VOLUME AND OPERATING COSTS

Mr. EVINS. Mr. Bean, there are two ways to make money: One is to increase your sales volume and the second is to cut down your expenses.

Mr. BEAN. That is correct.

Mr. EVINS. I believe you are increasing your sales but I do not believe you are reducing your expenses.

Mr. BEAN. Yes; we are.

Mr. EVINS. I have not been too much impressed with that.

Mr. OSTERTAG. How does it work out proportionately? How much have your sales increased and what percentage increase is being applied as compared with your percentage increase in costs?

Mr. BEAN. Let us look at it this way: Here is 1959 and our cost per unit for depot operations was $4.97. This includes packing, shipping, picking the business, and everything else. It was $4.60 in 1960.

In 1964 we are going to drop that to $4.56. We are going down.

Mr. OSTERTAG. Comparatively?

Mr. BEAN. Yes, sir.

Mr. EVINS. Because you have a few more items on your listing, that is your basis of comparison?

Mr. BEAN. Certainly, but after all your expenses have to come in comparison with your volume of business and expenses are lowering as the volume of business goes up. We are creating more efficiency.

Mr. EVINS. Your costs are going up?

Mr. BEAN. Dollars go up but the percentage in the amount of tonnage——

Mr. EVINS. You augment the supply fund every year?

Mr. BEAN. The amount of tonnage that goes out every year is greater. The actual cost of doing the job is less than it was per unit.

Mr. EVINS. You make it look good with a sharp pencil but realistically it does not square.

Mr. OSTERTAG. As a general observation, I would say that you are bound to have increased costs and increased personnel as your area of service and responsibility grow and expand. There is no question about that.

While you are not responsible for all of the other agencies of Government, I can say to you that from the standpoint of their budgets and increases in personnel, the absorption of this service by GSA is not in any degree reducing their budgets and their personnel. Perhaps that is an expression of opinion rather than an observation.

Mr. BOUTIN. It would have to be on an area-by-area basis. You would have to look at the procurement supply people in a given area that we are servicing to look for those reductions.

Either now or when we come back next year with our 1965 budget, we will be able to demonstrate some substantial improvements in taking over some of these missions, lock, stock, and barrel; personnel, inventory, and mission.

This is as far as supply and procurement is concerned.

We will have something we can really put our teeth into.

Mr. OSTERTAG. You understand my point?

Mr. BOUTIN. Yes.

Mr. BEAN. We are comparing prices between our organization and others and the only way you can get that down to zero with the other organizations is for us to take it over, lock, stock, and barrel, and then I think we can measure it.

Mr. EVINS. Are there any further questions?

If not, we will turn to "Supply operations appropriations."

SUPPLY OPERATIONS

Mr. Reporter, place in the record pages 118 through 123.

(The pages follow:)

1. Supply operations

	Amount	Average employment		
		Department	Field	Total
1963	$25,544,300	410.5	2,022.9	2,433.4
Change	+6,222,700	+55.0	+603.7	+658.7
1964	31,767,000	465.5	2,626.6	3,092.1

HIGHLIGHT

"(*a*) *Supply distribution*

"Stocks of common-use commodities are received, warehoused, and issued at cost to Federal agencies through a nationwide system of supply depots. Stores stock sales reflect a continuous increase as follows:

[In millions of dollars]

	1959	1960	1961	1962	1963	1964
Gross sales	151.3	160.5	190.5	238.8	278.0	364.0
Excluding transportation costs to the ultimate point of deliveries	145.5	154.3	183.2	229.6	267.3	350.0

"Included in this activity are space and related costs as follows: 1962, $3.6 million; 1963, $5.1 million; and 1964, $5.9 million.

"(*b*) *Buying operations*

"Commodities are procured to maintain inventories at stores depots to insure availability in advance of sales orders and for direct delivery to agencies. Term contracts for common-use commodities and services are established for large aggregate volume requirements against which agencies place individual orders at uniform price advantages. Total procurement in 1964 is estimated at $1,480 million, compared to $1,325.6 million in 1963 and actual purchases of $1,187.9 million in 1962." (From the budget for 1964. Amounts struck through have been changed to reflect the revised estimate for 1963.)

Summary of performance cost

	1962	1963	1964
Supply operations	$21,233,799	$25,544,300	$31,767,000
(*a*) Supply distribution	14,631,916	17,751,000	22,486,000
(1) Depot operations	11,069,452	12,664,000	16,602,000
(2) Space and related costs	3,563,464	5,087,000	5,884,000
(*b*) Buying operations	6,601,883	7,793,300	9,281,000
(1) Stores items buying	3,719,947	4,437,300	5,710,000
(2) Nonstores items buying	1,978,746	2,272,000	2,416,000
(3) Federal supply schedule purchases	903,190	1,084,000	1,155,000

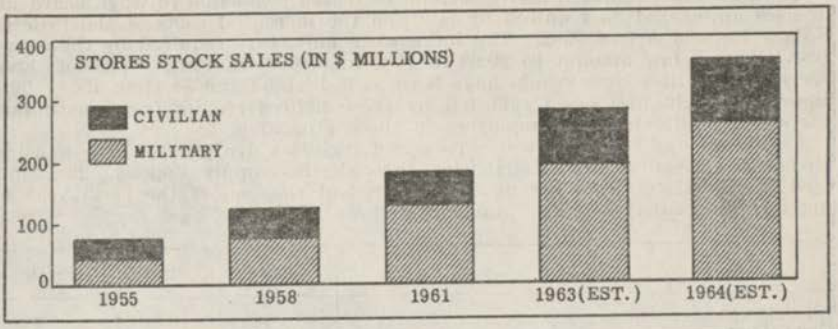
JUSTIFICATION

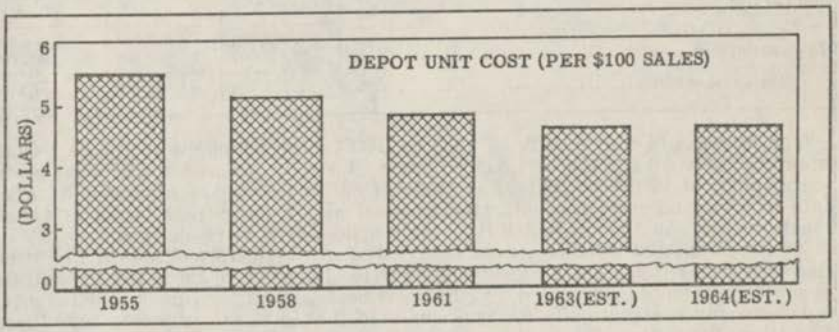
(*a*) *Supply distribution*

(1) *Depot operations.*—The unit cost is related to sales from stores stock, including warehouses, fuel yard, buildings materials yard, and retail stores as follows. Space and related costs are included under (2).

	1962	1963	1964
Sales from stores stock (millions)	$238.8	$278.0	$364.0
Cost per $100	4.64	4.56	4.56
Performance cost	11,069,452	12,664,000	16,602,000

STORES STOCK SALES AND UNIT COST





SALES IN $ MILLIONS

FISCAL YEAR	TOTAL SALES	CIVILIAN	MILITARY		DEPOT UNIT COST
			AMOUNT	PERCENT	
1953	54.7	31.6	23.1	42.2	9.65
1954	52.8	26.5	26.3	49.8	9.55
1955	75.9	31.9	44.0	58.0	5.50
1956	96.4	35.4	61.0	63.3	5.10
1957	116.4	44.1	72.3	62.1	4.82
1958	120.7	45.1	75.6	62.6	5.09
1959	145.5	48.2	97.3	66.9	4.97
1960	154.3	51.6	102.7	66.6	4.60
1961	183.2	60.0	123.2	67.2	4.80
*1962	238.8	76.1	162.7	68.1	4.64
*1963 (EST.)	278.0	82.7	195.3	70.3	4.56
*1964 (EST.)	364.0	100.1	263.9	72.5	4.56

*ADJUSTED TO REFLECT DELIVERED PRICES.

The volume of stores sales ($364 million) at delivered prices, to be shipped from stock in 1964 represents a 31-percent increase above the revised volume for 1963 ($278 million). The increased volume in 1964 of $86 million will result from $68.6 million of increased sales to military activities both in the continental United States and overseas, and $17.4 million of increased sales to civilian agencies. These sales estimates do not include any projection of increased sales to installations of the Department of the Army overseas as a result of a recent directive requiring more extensive use of GSA supply facilities. In view of this the 1964 sales estimate must be considered conservative. The chart

on opposite page shows the trend in sales to military and civilian agencies for a period of years.

The unit costs reflected above include increased costs due to wage board increases authorized as required by law and the increased costs of the Federal Salary Reform Act of 1962. The increase in unit costs required by these two provisions of law amount to $0.08 in 1963 and $0.15 in 1964. Without these increases the unit costs would have been $4.48 in 1963 and $4.41 in 1964. The improvement in unit costs reflected by these figures results from continuing increased productivity of employees in these programs.

(2) *Space and related costs.*—Space and facilities are provided for housing inventories required for distribution through the supply depots. The unit cost is related to stores inventories required at the end of the fiscal year to support the projected sales volume as follows:

	1962	1963	1964
Inventories for sale (millions)	$88.9	$114.7	$137.0
Cost per $100	3.86	4.22	4.15
Recurring cost	3,433,464	4,837,000	5,684,000
Nonrecurring cost	129,000	250,000	200,000
Performance cost	3,562,464	5,087,000	5,884,0000

The increase in unit cost from 1962 to 1963 is due primarily to the fact that approximately $6 million of inventory was stored in space for which no costs were incurred in 1962. This was Government-owned space allocated to FSS late in 1962 and used for bulk storage until active operations began at those locations early in 1963 at which time appropriate costs were charged.

To the maximum possible extent GSA will continue to rely on use of facilities declared excess by other Government agencies in order to meet the expanding space requirements generated by the increased sales program outlined above. Nonrecurring costs provide for contemplated moves of some depots into these facilities, incidental depot space alterations not otherwise provided for, and installation costs of selected items of operating equipment acquired through the "General supply fund."

Inventories proposed for the end of 1964 will provide for operations at a stock turn of approximately 3, the optimum ratio required in order to be completely responsive to the military priority system and other customer agency requirements, without generating excessive back orders.

(*b*) *Buying operations*

Performance costs for each mode of buying include, as applicable, review of specifications, prices and sources; evaluation of items offered by suppliers which differ from specifications; development and issuance of invitations for bids; awarding and administering contracts; determinations of whether merchandise should be supplied from stock or by direct delivery; all phases of inventory management, including determination of stock levels, optimum inventory-sales ratios, economic order quantity tables, etc.; determination of new items that should be contracted for and items which should be discontinued; and the printing and Government-wide distribution of GSA stores stock catalogs and Federal supply schedules. The unit of measure for each subactivity is the value of purchases made through the respective mode.

Increases programed for each mode are primarily related to the progressively expanding use of GSA facilities by DOD for supply support of common-use items.

(1) *Stores items buying.*—Provides contracting for (1) replenishment of depot stocks equivalent to sales discussed in subactivity 1a; Depot Operations and inventory buildup; (2) Space and related costs; and (3) large volume orders shipped direct from supplier to ordering agencies, thus obviating handling costs.

	1962	1963	1964
Stores items buying (millions)	$297.7	$351.6	$440.0
Unit cost (per $100)	1.25	1.26	1.30
Performance cost	3,719,947	4,437,300	5,710,000

The increase in unit cost is fully attributed to the Federal Salary Reform Act of 1962. On a comparable basis with 1962 the unit cost would have been $1.22 in 1963 and $1.22 in 1964, the effect of pay increases being $0.04 in 1963 and $0.08 in 1964.

(2) *Nonstores items buying.*—Provides contracting for items of supply which are not economical to store and issue from supply deposits because of bulk or other characteristics. Orders, reflecting consolidation of agencies' requirements wherever possible to attain maximum price advantages, are placed for direct delivery from supplier to ordering activity.

	1962	1963	1964
Nonstores items buying (millions)	$193.1	$194.0	$200.0
Unit cost (per $100)	1.02	1.17	1.21
Performance cost	1,978,746	2,272,000	2,416,000

The unit cost for this subactivity increases in 1963 and 1964 because of additional purchasing which will be performed for the oversea activities of the military services, as a result of the policy to improve the gold flow situation. This type of purchasing incurs higher communications costs and other additional costs because of (1) difficulties in providing proper purchase descriptions for items being bought and (2) additional expediting costs due to necessity to meet delivery dates conforming to air or water shipping schedules. The low-unit cost in 1962 resulted chiefly from a large consolidated purchase of radiological instruments for the Office of Civil Defense totaling $24 million. Single purchases of this magnitude are not expected to be repeated in 1963 or 1964.

The increase in unit cost attributable to the Federal Salary Reform Act of 1962, is $0.04 in 1963 and $0.08 in 1964. On a comparable basis with 1962, the unit cost for 1963 and 1964 would have been $1.13 and $1.13.

(3) *Federal supply schedule purchases.*—Term contracts for common-use commodities and services are established for large aggregate volume requirements against which agencies place individual orders at uniform price advantages. This method of contracting is used when: (1) Industrial distribution facilities are adequate to properly serve numerous use points, (2) items are noncompetitive, (3) installation or supervision of installation by supplier is essential to proper use of equipment, (4) concentration of agency installations in a given area require common services, or (5) price or other advantages accrue to the Government.

	1962	1963	1964
Value of orders placed against Federal supply schedules (millions)	$697.1	$780.0	$840.0
Unit cost (per $100)	0.13	0.14	0.14
Performance cost	903,190	1,084,000	1,155,000

The increase in unit cost in 1963 and 1964 is due to the Federal Salary Reform Act of 1962.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $19,387,300 provides for 3,304 positions, an increase of 642 positions (658.7 average employment) over 1963 distributed as follows:

	1962			1963			1964		
	De-partment	Field	Total	De-partment	Field	Total	De-partment	Field	Total
(a) Depot operations	56.0	1,311.0	1,367.0	70.0	1,590.0	1,660.0	81.0	2,031.0	2,112.0
(b) Buying operations	329.0	510.0	839.0	375.0	627.0	1,002.0	427.0	765.0	1,192.0
Total positions	385.0	1,821.0	2,206.0	445.0	2,217.0	2,662.0	508.0	2,796.0	3,304.0
Average employment	359.2	1,673.2	2,032.4	410.5	2,022.9	2,433.4	465.5	2,626.6	3,092.1

Other objects: $12,379,700 provides:

(1) $1,390,500 for personnel benefits, including $1,189,000 retirement contributions, $120,500 health benefits, $60,000 group insurance, $10,300 FICA, and $10,700 accident claims.

(2) $324,500 for 12,019 days' travel at $27 per day, and $40,500 for motor-pool service.

(3) $420,000 for transportation of things which includes motor-pool truck service, transportation costs incident to relocation of warehouses, and transshipment of stocks between warehouses.

(4) $1,899,000 space rental and utility costs, and $415,000 rental of operating equipment.

(5) $1,542,500 printing which includes $662,000 for printing ADP cards and forms, $95,500 for order processing and invoice documents, and warehouse and operation forms, $650,000 for Federal supply schedules, invitations to bid, purchase documents and related forms, and $135,000 for GSA stores stocks catalogs.

(6) $5,274,000 contractual services which includes contract labor and other commercial services, payments to buildings management fund, health room services, handling costs in military depots, and contractual services necessary for relocation of warehouses.

(7) $409,000 operating supplies, including packaging and crating materials.

The remainder of $664,700, or 2.1 percent of total estimate, provides:

(8) $327,500 communication services.

(9) $176,000 office supplies, and $161,200 equipment.

SUPPLY DISTRIBUTION

Mr. EVINS (reading):

(a) Supply distribution

Stocks of common-use commodities are received, warehoused, and issued at cost to Federal agencies through a nationwide system of supply depots. Stores stock sales reflect a continuous increase as follows:

[In millions of dollars]

	1959	1960	1961	1962	1963	1964
Gross sales	151.3	160.5	190.5	238.8	278.0	364.0
Excluding transportation costs to the ultimate point of deliveries	145.5	154.3	183.2	229.6	267.3	350.0

Included in this activity are space and related costs as follows: 1962, $3.6 million; 1963, $5.1 million; and 1964, $5.9 million.

These represent costs of sales?

Mr. BEAN. Warehouse costs.

Mr. EVINS. Your costs are going up.

Mr. SPANGLER. No, for comparative purposes we took out the transportation on the bottom line.

Mr. BOUTIN. They are the same sales as in the first line with the exception of the 4-percent transportation charge which has been removed.

Mr. EVINS. Here is a summary of performance costs.

TRANSPORTATION COST TO POINT OF DELIVERY

Mr. THOMAS. Mr. Evins, that transportation cost item is increasing, too.

Are you putting the 4 percent on the customer?

Mr. BOUTIN. Four percent on the customer added to the price of the merchandise.

Mr. THOMAS. It is all by truck or by rail? What is the majority of it?

Mr. BOUTIN. Just about every combination you can think of. I say the majority right now is by truck on outgoing.

TRANSPORTATION CONTRACTS

Mr. THOMAS. How are the contracts let?

Mr. BOUTIN. Mr. Conrad, you handle a lot of that. Would you speak to it?

Mr. CONRAD. These are outbound shipments from the depots which are made on section 22's, which we negotiated with the carriers.

Mr. THOMAS. Who does the negotiating?

Mr. CONRAD. The regional representatives of the Transportation Service.

Mr. THOMAS. Domiciled in regional offices?

Mr. CONRAD. Yes, sir.

Mr. THOMAS. What supervision do they have over those contracts?

Mr. CONRAD. Supervision is exercised by the regional representatives of the Transportation and Communications Service.

Mr. THOMAS. Tell us in some detail. Is there any limitation on what the transportation officer can award in the way of a contract without coming to the Washington office or any other authority?

Mr. CONRAD. Our transportation contracts in the regions have a limitation of $50,000. Transportation contracts in excess of that amount are referred to the central office for approval.

FIELD SUPERVISION OF TRANSPORTATION CONTRACTS

Mr. THOMAS. How much supervision is given to those contracts under $50,000?

Mr. CONRAD. The people in the regional offices, Mr. Chairman, the regional chief of the Transportation Branch and the people in the Office of Transportation in the regions all play a part in supervising these contracts.

Mr. THOMAS. This is all? When all is said and done, the Transportation Section does not have too much to do with it? They do not have the final say on what is going to be let in the way of contracts, do they?

Mr. CONRAD. Yes, sir, and they are the ones who negotiate the rates in the outbound movements from the depot.

Mr. THOMAS. Does every contract have a rate item for negotiation or does the contracting officer say, "I think this is a fair price and I will just give it to X. It will be X, Y, and Z, and A, B, and C bid."

Will he say, "I think this is the proper party to get this contract"?

Mr. BOUTIN. First of all, they must have the ICC rights to the area they are going to serve, whoever has the——

Mr. THOMAS. He has to be a common carrier?

Mr. BOUTIN. Correct.

Mr. THOMAS. We assume that.

Mr. BOUTIN. That limits the bidding right away.

Mr. THOMAS. How?

Mr. BOUTIN. Because unless they have the rights, they cannot come in and bid against somebody who does have the rights; correct?

Mr. CONRAD. That is correct. Close attention is paid, also, Mr. Chairman, to see that the tonnage is distributed among the carriers.

Mr. THOMAS. You mean to say that in the area there is only one certificated carrier and therefore you are bound by law to do business with him?

Mr. BOUTIN. There may be several certificated carriers in the same area.

Mr. THOMAS. That is what I am talking about then.

You gave the impression there would be only one.

Mr. BOUTIN. I did not mean that.

Mr. CONRAD. All who have authority and who have filed competitive rates with us participate in the tonnage in the outbound movements from the depots and a very strict record is kept of all of this. It is equally distributed to the greatest extent possible.

DECISION ON AWARD OF TRANSPORTATION CONTRACTS

Mr. THOMAS. Who makes the ultimate decision on who is going to get this contract? This is a highly competitive field and I am not telling you something you do not know. Everybody wants this business.

How do you award it? What supervision do you keep over the awarding officer?

If you do not know what happened in Fort Worth over a little contract down there on the purchase of $100,000 worth of furniture, I will tell you. That is what I have in the back of my mind, and if I have to, I will spell it out for you.

Mr. CONRAD. The regional chief of the Transportation office has on-the-spot responsibility. He is subject to the jurisdiction and supervision of the Transportation and Communications Service representatives here in Washington, D.C.

Mr. THOMAS. The Supply Service does not make the contract? This is the transportation people who make it?

Mr. CONRAD. Yes, sir; the transportation people negotiate rates and——

Mr. THOMAS. Negotiating the rates and making the contract are two different things. That is just one part of it.

Mr. BOUTIN. Your people have full jurisdiction and responsibility?

Mr. CONRAD. Yes, sir. We handle all of this.

Mr. THOMAS. It is all your responsibility and the Supply Service does not have anything to say about it?

Mr. CONRAD. We do the selection of the carrier; yes, sir.

Mr. THOMAS. And negotiate the rates?

Mr. CONRAD. Yes, sir.

Mr. THOMAS. Do you consult the supply people about that in any way? Do you say, "Here is a contractor we have just negotiated a contract with and he is going to deliver your merchandise?"

Mr. BOUTIN. They set forth the requirements first, Mr. Chairman, and Mr. Bean's people say, "We need a contract between Boston and Albany" as an example.

Here is the type of tonnage, the type of commodities so we can get class rates as well as distance rates and then it goes over to Mr. Conrad's people. If it is under $25,000 total, it is handled in the field subject only to audit by his people and by the auditors in Mr. Turpin's shop; if it is over $25,000, it comes to the central office for approval: Is that correct?

Mr. CONRAD. Correct.

Mr. BEAN. We have many problems and things we need to resolve and we work very closely with them so they can take care of them.

SALES TO THE MILITARY

Mr. EVINS. The volume of stores sales of $364 million is estimated in Mr. Bean's shop next year. This represents a 31 percent increase over last year. The increased volume in 1964 will result in $68 million for the military and $17 million for civilian agencies. This chart reflects that the military is the largest buyer. I had the impression that you were supplying the military, but principally you were supplying civilian agencies of Government.

Mr. BEAN. That is correct. And these figures do not include the Army which is not coming in with us until March.

Mr. OSTERTAG. In that connection, Mr. Bean, we were discussing a moment ago about the oversea supply agreement which you have entered into with the Air Force and now you plan to expand it, but is it not correct to say that a great deal of the supplies you procure for the military will find their way overseas?

Mr. BEAN. Well, yes. I think more goes overseas than is consumed here in the United States—the boys tell me that is not true, that there is more consumed in the United States than overseas.

Mr. OSTERTAG. But some of the supplies procured here that are not shipped overseas by you find their way overseas? In other words, it is not entirely consumed in the United States?

Mr. BEAN. On the new basis with both the Air Force and the Army we will ship their requirements to them directly. It will not come from one of our warehouses.

Mr. OSTERTAG. What is the total of the supplies you have procured, let us say, in 1962 for the military? What is the total figure, roughly?

Mr. EVINS. It is estimated to be about $276 million.

Mr. BEAN. On stores sales in 1963 it is almost $200 million and we expect it to get to $264 million next year.

Mr. OSTERTAG. My point is that in the area of supply for the military, is it not quite probable that a certain part of that is used overseas?

Mr. BEAN. Oh, yes, but not as much as half, they tell me.

Mr. OSTERTAG. My only point is that this $100 million figure you gave us awhile ago which has a relationship to the balance of payments.

Mr. BEAN. That is the part that goes overseas.

Mr. OSTERTAG. That goes directly overseas as a part of a decrease in the sales overseas?

Mr. BEAN. In the gold flow; yes.

Mr. OSTERTAG. Yet at the same time the supply to the military for oversea use is not limited to that figure?

Mr. BEAN. That is correct. We have $300 million of military sales, as that chart shows. It is about $264 million, I guess. So that we are only going to send a portion of that overseas and the other portion will be consumed in the United States.

Mr. SPANGLER. The majority of our shipments to the military stateside go to posts, camps, and stations; places like Fort Meade and Belvoir. Some shipments we do make to depots like Schenectady General Depot or Columbus. These shipments may or may not eventually find their way overseas. Things we ship to the Navy, for example, in Norfolk, go in their system there. Some may go out on ships and go to England, for example.

Mr. OSTERTAG. That is my point.

Mr. SPANGLER. But normally a very small percentage would find its way overseas.

FEDERAL SUPPLY SCHEDULE PURCHASES

Mr. EVINS. "Federal supply schedule purchases." "Term contracts for common-use commodities and services are established for large aggregate volume requirements against which agencies place individual orders at uniform price advantages."

How long are these term contracts for?

Mr. SPANGLER. They run from 3 months to a year, normally a year.

Mr. EVINS. That ought to make your workload less. You make your contract and they just pay you twice a year and the manufacturer ships directly to the user.

Mr. BEAN. This is where we really make money.

Mr. BOUTIN. We do not have a big workload any given month and nothing the next month.

Mr. EVINS. But your volume is large.

Mr. BOUTIN. Yes; and, of course, the volume is something we have no control over. This is open end.

Mr. EVINS. The large part you do not have too much work to do?

Mr. BOUTIN. Once the contract is let, after that it is simply a matter of policing it and checking the quality.

Mr. SPANGLER. And this is no small task.

OTHER OBJECTS—SUPPLY OPERATIONS

Mr. EVINS. In your "Other objects," $1,390,500 is for personnel benefits including $1,189,000 retirement contributions, $120,500 health benefits, $60,000 group insurance, $10,300 FICA, and $10,700 accident claims.

You have $324,500 for 12,019 days of travel at $27 per day, and $40,500 for motor pool service.

And you have $420,000 for transportation of things; and $1,899,000 for space rental and utility costs; and $415,000 for rental of operating equipment.

This is a thing personally I have never looked favorably upon. You buy this equipment and then you have to pay them a half million dollars a year after you buy the equipment to supervise it and keep it running.

Mr. SPANGLER. May I correct that impression, sir?

This $415,000 is payments back to our general supply fund for depreciation of equipment that has been financed through the general supply fund.

Mr. EVINS. How much do you pay the calculating machine manufacturers as an annual charge?

Mr. SPANGLER. I was referring to warehouse operating equipment.

Mr. BOUTIN. Instead of rental it should be called depreciation.

Mr. SPANGLER. It is depreciation.

Mr. EVINS. You have an item of $1,542,500 for printing which includes $662,000 for printing ADP cards and forms, $95,500 for order processing and invoice documents, and warehouse and operation forms; $650,000 for Federal supply schedules, invitations to bid, purchase documents, and related forms; and $135,000 for GSA stores stocks catalogs.

You have an item of $5,274,000 for contractual services which includes contract labor. This is a large item. What is that for?

Mr. BEAN. That is in our warehouse operation. We have to keep a certain amount of flexibility and that is why we have contract labor when we have peakloads.

Mr. BOUTIN. The total contract labor is only $875,000 of that amount, Mr. Chairman.

Mr. THOMAS. Gentlemen, let us stop. We will finish this tomorrow morning and I hope we can go into volume III tomorrow and finish Friday noon.

Thank you so very much.

THURSDAY, FEBRUARY 21, 1963.

TOTAL COST OF SUPPLY OPERATION

Mr. THOMAS. The committee will please come to order.

When we adjourned yesterday we were talking about "Supply operation." It was brought out most effectively yesterday that the total cost figure for "Supply operations," is $31,767,000 for 1964 as against $25,544,300 for this year.

Is that the complete overall cost?

Mr. BOUTIN. For supply operations only, Mr. Chairman, yes.

Mr. THOMAS. What other items of expense go into the total besides this? You have buying, supply schedules, depot operations, and your space and related cost. Are there any others?

Mr. TURPIN. Standards and quality control, procurement policy and supply coordination, service direction and administrative operations.

Mr. THOMAS. That last is a big item?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. As I remember, that is $10 million but that wraps it all up?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. What is the entire cost?

Mr. BOUTIN. The total is $51 million. There is $6,831,000 broken down into "Supply standards and quality control"——

Mr. THOMAS. I am including that. I thought that was a part of the $31.7 million. Apparently it is not?

Mr. BOUTIN. No, sir. The bottom of page 116 gives you that information.

Mr. THOMAS. This overall table at the bottom of page 116 is interesting. Is there any other item of expense other than that set out right here?

Mr. BOUTIN. No, sir.

Mr. THOMAS. $51 million?

Mr. BOUTIN. $51 million.

Mr. THOMAS. I believe this table is already in the record. This includes the "Administrative account" of $10.5 million and if you take a look at that table you will notice the big expense in the "Supply system" is not in the retail end of the business, as we would normally look for it, but it is in administrative operations, procurement policy, standards, quality control, buying operations, and so forth and so on.

What was your figure on "Stores," around $16 million?

Mr. BOUTIN. "Depot operations," $16,602,000.

Mr. THOMAS. That is only about one-third of the total cost as compared with a retail operation where it would be just the reverse?

Mr. TURPIN. You still have buying inspection and administrative operations applicable to stores stock, in the total figure.

Mr. THOMAS. Well, they lump it in.

Off the record.

(Discussion off the record.)

OVERHEAD COSTS

Mr. THOMAS. What is the breakdown of that? The normal markup in an average store is anywhere from 33⅓ to 50 percent over the wholesale cost; is that correct? How do they usually break down that 33⅓ or 50 percent? How do they allocate it to expense?

Mr. BEAN. It has been quite a little while since I have worked on that but actual store operations, the rent is about 10 percent and the other operating costs 10 percent.

Mr. THOMAS. Is rent that high?

Mr. BEAN. It is very high in choice locations. Then your personnel is about 10 percent in the store, and, of course, on top of that you have your buying organization and your administrative operations.

Mr. THOMAS. There is another big item, advertising?

Mr. BEAN. Advertising is about 8 to 10 percent in chainstores.

Mr. THOMAS. Are buying costs the cheapest item of expense they have?

Mr. BEAN. In the retail stores, that is not true. The buying operation is a very large operation and they have a lot more people than we do.

Mr. THOMAS. What does that usually comprise, what part of the overhead? Certainly it is not more than 2 or 3 percent, if that much, is it?

Mr. BEAN. I would guess now it must be 5 percent. We may be getting more figures in here than we have in our markup but those things have risen quite a bit.

Mr. THOMAS. The point of my raising the question is that our costs are almost the reverse of that?

Mr. BEAN. That is right.

Mr. BOUTIN. Our costs would not be much different than a mail order house like Montgomery Ward or Sears, Roebuck? Their buying and ours, percentagewise, would be pretty close?

Mr. BEAN. That would be more comparable than a retail store. We do ship a great deal more goods directly than anyone else in the country and that is what brings down our costs in distribution.

Mr. THOMAS. Your direct sales? Repeat that cost again. What was it? I believe it is in the record from yesterday but what is it in the stores?

Mr. BOUTIN. The store-stock sales are estimated for 1964, Mr. Chairman, as $364 million.

Mr. THOMAS. I am talking about the percentage. It is around 9.1 or 9.2 percent, is it not?

Mr. BEAN. Yes, for everything.

Mr. THOMAS. What are the administrative costs on direct sales?

Mr. TURPIN. The total for the nonstore items is $2.28.

Mr. THOMAS. Go ahead.

Mr. TURPIN. The costs related to orders placed against schedules comes to 23 cents.

Mr. THOMAS. That is even less. The store operation is about what, $9?

Mr. TURPIN. $9.09 projected for 1964.

Mr. THOMAS. The hog-round average figure is around what, 4.5? To me that is quite interesting.

PROCUREMENT POLICY AND SUPPLY COORDINATION

Let us take a look at "Procurement policy." Let us put pages 134 and 135 in the record.

(The pages follow:)

3. Procurement policy and supply coordination

	Amount	Average employment		
		Department	Field	Total
1963	$735,000	56.7	----------	56.7
Change	+92,000	3.3	----------	3.3
1964	827,000	60.0	----------	60.0

HIGHLIGHT

"Policies and regulations are promulgated to establish uniform and simplified procurement practices and to improve supply operations throughout the Government. The Federal procurement regulations system is administered under this program and orderly transfers of supply functions are arranged. Federal agencies are also assisted in the installation of improved supply procedures." (From the budget for 1964.)

Summary of performance cost

	1962	1963	1964
Procurement policy and supply coordination	$658,321	$735,000	$827,000
(a) Procurement policy	166,452	197,500	236,000
(b) Supply coordination	491,869	537,500	591,000

JUSTIFICATION

(a) *Procurement policy.*—Provides for planning, directing, and coordinating the development and promulgation of new and revised Federal Procurement Regulations and for developing and maintaining the GSA Procurement Regulations which implement and supplement the FPR. The increase in funds requested will provide for printing the first complete revised looseleaf edition of the FPR during 1964, and for additional costs for the 1962 Pay Act.

(b) *Supply coordination.*—The scope and depth of coverage of technical guidance and on-site assistance to Federal agencies will be increased. Continuous effort will be made to improve supply management practices at agency warehouses and at more than 1,000 agency storerooms. These improvements will be made through reductions of investment in inventory, reductions in operating costs, and the establishment of more effective and economical supply management records and reporting systems.

Since the start of 1963, surveys have been initiated in the following agencies:

Internal Revenue Service, Department of the Treasury.
U.S. Coast Guard, Department of the Treasury.
Bureau of Indian Affairs, Department of the Interior.
U.S. Coast and Geodetic Survey, Department of Commerce.
Office of Administrative Assistant Secretary, Department of Labor.

Plans for the remainder of 1963 include surveys of the supply operations of the Bureau of Reclamation and three other bureaus in the Department of the Interior; and three major payment centers of the Social Security Administration.

During 1963, over 200 individual supply activity reports submitted to GSA by all Federal executive civilian agencies will be analyzed in detail. Indicated deficiencies in agency reporting and supply management practices will be discussed with the appropriate agencies and corrective actions initiated. Data contained in these reports will also be utilized in establishing priorities for conducting comprehensive surveys of the procurement and supply operations of Federal agencies wherever our analysis indicates that maximum potential benefits and economies could accure to the Government.

During 1964 it is planned to survey the supply management practices of the following agencies:

U.S. Information Agency.
Public Health Service, Department of Health, Education, and Welfare.
Housing and Home Finance Agency.
Atomic Energy Commission.
Bureau of Engraving and Printing, Treaasury Department.
Bureau of Customs, Treasury Department.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $683,000 for 61 positions. All employment is departmental.

	1962	1963	1964
(a) Procurement policy	13.0	16.0	16.0
(b) Supply coordination	40.0	42.0	45.0
Total positions	53.0	58.0	61.0
Average employment	52.3	56.7	60.0

Other objects: $144,000, of which $51,300 is for personnel benefits, including $44,400 retirement contributions, $4,400 health benefits, and $2,500 group insurance.

The remainder of $92,700, or 11.2 percent of total estimate, provides:

(1) $27,300 for 1,011 days' travel at $27 per day; and $1,800 for motor pool services.

(2) $44,600 printing and reproduction of Government-wide Federal Procurement Regulations; and Government-wide regulations, procedures, and handbooks in various areas of supply management.

(3) $1,200 transportation of things; $8,500 communications.

(4) $4,600 contractual services; $4,700 supplies.

Mr. THOMAS. How many people do you have doing this?

I see you have 61 in the Department for 1964. These are all Departmental people; are they not?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. These are not your buyers? I still get confused in my own mind about this. Is this overlapping with your standards people?

Mr. BOUTIN. No, sir; it is not. Mr. Chairman, the procurement policy activity actually sets forth policies for the entire Government on the civil side and coordinates with the military and ASPR. There is close coordination with the standards people but there is no overlapping.

Mr. THOMAS. Do these people do any buying at all?

Mr. BOUTIN. They do no buying at all. There are 16 people Mr. Chairman, in procurement policy and 45 in supply coordination.

Mr. THOMAS. These are your people who go around to your various agencies and advise them, show them how to buy from your catalogs? Do they have anything to do with this at all?

Mr. TURPIN. That is "Supply coordination."

Mr. THOMAS. Just exactly what do these people do?

Mr. BOUTIN. In procurement policy——

Mr. THOMAS. You have used broad language here. [Reading:]

Policies and regulations are promulgated to establish uniform and simplified procurement practices and to improve supply operations throughout the Government.

They are not in the procurement business at all?

Mr. BOUTIN. Mr. Chairman, Mr. Gasque, who heads up procurement policy can give us a good explanation of that.

Mr. THOMAS. Go ahead and tell us.

SCOPE OF THE PROCUREMENT POLICY PROGRAM

Mr. GASQUE. Mr. Chairman, the procurement policy program is designed to prescribe Government-wide policies and procedures relating to methods of procurement contracting. Under this program, we describe and prescribe the manner in which contracts are made, whether they may be made by formal advertising or by negotiation, and what the circumstances are which permit negotiation.

In addition the program prescribes the various economic and social contract clauses and provisions, and administrative procedures, which Government procurement must take into account, such as the assurance of the award of a fair share of Government contracts to small business under the Small Business Act, the question of labor surplus area concerns, and providing for equal employment opportunity through nondiscrimination.

These Government-wide policies and procedures are prescribed as Federal Procurement Regulations. We provide for the publication of these regulations in codified form, both in the Code of Federal Regulations, as chapter I of title 41, and in looseleaf form for distribution to and the use of Government agencies. The system of codification used is similar to the West Publishing Co. system of reports of Federal and State cases.

BUYING OPERATIONS

Mr. THOMAS. Where are your buying operations set out? They go from $7.7 million in 1964 up to $9.2 million. Where do you set those out?

Mr. TURPIN. The buying operations start on page 121 of the justifications.

Mr. THOMAS. You do not break it out clearly here. You have "Performance costs for buying, review specifications, price sources, evaluation of items, awarding and administering contracts." How many people do you have doing that?

You have set out the store-buying items but it could be regrouped a little more clearly than you have it here. Can you do it that way in the future?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. That is one of your big items of expense, $9 million, and then you give us some nice language here at the top of page 121 but you do not show how many people. You then give us a green sheet on page 126, also. You have 839 people in 1962 and in 1964 it goes up to 1,192. The figure for the Department is 427 in 1964 and your whole tale is here on your green sheets and that is about all.

Mr. TURPIN. Sir, it is broken down beginning on page 121 by type of buying.

Mr. THOMAS. I see that here but then in your nonstore items you set it out in terms of dollars but not in terms of employment. In stores buying, you set that out in terms of dollars and unit costs but not in terms of personnel.

Then you use this good language, "* * * Increased program for each mode primarily related to the progressively expanded * * *," and so forth. You let it go at that. You have two very confusing titles and one rings a bell with most everybody and that is buying operations.

You relegate that to about a third spot.

Next year change it around and make it a little bit clearer.

Mr. TURPIN. Yes, sir. I believe one of the problems is that the same personnel buy store items, nonstore items, and schedule items.

Mr. THOMAS. We understand that but you go to a lot of trouble here setting out supply standards where you have about one-fourth of the people involved.

STANDARDS AND QUALITY CONTROL

Let us put pages 127 and 128 in the record.

(The pages follow:)

Standards and quality control

	Amount	Average employment		
		Department	Field	Total
1963	$5,945,700	257.8	341.7	599.5
Change	+885,300	+32.0	+42.4	+74.4
1964	6,831,000	289.8	384.1	673.9

HIGHLIGHT

"(a) *Supply standards*

"Standards of quality and other characteristics of common-use commodities are established by specifications, qualified products lists, and uniform item identifications for mandatory use by Government agencies. The estimated workload for 1963 and 1964 is based primarily on the expanded supply support program of General Services Administration. The cataloging program results in establishing a uniform identification for each item of supply and establishes a basis for expansion of supply support for General Services Administration once the commonality of the items is revealed.

"(b) *Quality control*

"Timely delivery of commodities of specified quality is assured by inspection at contractor's plants or supply depots, by laboratory tests and analyses of samples prior to acceptance, and by contract administration assistance." (From the budget for 1964.)

Summary of performance cost

	1962	1963	1964
Standards and quality control	$4,620,695	$5,945,700	$6,831,000
(a) Supply standards	2,044,545	2,339,000	2,651,000
(1) Federal specifications and standards	614,265	769,500	918,000
(2) Federal catalog participation	1,430,280	1,569,500	1,733,000
(b) Quality control	2,576,150	3,606,700	4,180,000
(1) Stores items inspected	1,663,000	1,989,700	2,490,400
(2) Nonstores items inspected	696,000	1,065,000	1,084,200
(3) Schedule items inspected	217,150	552,000	605,400

JUSTIFICATION

(a) Supply standards

This program provides essential tools for effective management of supplies by GSA and the civil agencies and enhances GSA's capabilities to provide responsive supply support to other civil agencies and to the DOD. The program consists of three elements: Development of specifications, development of standards, and cataloging.

Federal specifications are procurement tools. They are formal expressions of the characteristics and requirements of items which the Government wants to buy. They establish quality levels to be met and provide testing procedures to check the quality.

Federal standards for commodities limit the range of acceptable items to be procured, thus holding to a minimum the variety of items required to meet the needs of Government agencies. Other Federal standards cover procedures, practices, and techniques.

Cataloging involves researching item identification data to clearly establish the essential characteristics of an item, and the recording of those characteristics to permit comparison with other items to determine duplicates or establish uniqueness. The result is that an item is identified by the same name, description, and stock number regardless of who makes it, who uses it, or the purpose for which it is used.

(1) *Federal specifications and standards.*—Since Federal specifications are procurement tools, the need for development of new specifications or the revision of existing specifications to express present technology increases as the range of items procured by GSA increases. The projected workload for 1963 and 1964 is based on the estimated procurement program. It is estimated that GSA will procure 25 percent more new items in 1964 than in 1963. To provide current specifications required to procure the increased number of new items in 1964, it is estimated that 406 new Federal specifications and 893 amendments and revisions to existing specifications will be necessary. In addition, GSA in progressively assuming responsibility for the development and updating of Federal specifications for items which GSA is supplying to DOD (heretofore the responsibility of DOD).

The number of Federal standards (42 new Federal standards and 45 amendments and revisions) projected for 1964 is based on the commodity areas in which item reduction programs will be completed. The data developed will be utilized in standards which will limit the range of items to be procured to the minimum required to meet Government needs.

The increase in unit costs attributable to the Federal Salary Reform Act of 1962, is $24 in 1963 and $45 in 1964. On a comparable basis with 1962 the unit cost for 1963 and 1964 would be $631 and $617, respectively.

	1962	1963	1964
New specifications	335	345	406
Amendments and revised specifications	590	760	893
New standards	18	35	42
Amendments and revised standards	17	34	45
Total actions performed	960	1,174	1,386
Unit cost	$640	$655	$662
Performance cost	$614,265	$769,500	$918,000

(2) *Federal catalog participation.*—In 1962, 59.1 percent of GSA's procurement was in support of DOD. The remaining 40.9 percent included only a relatively small portion of the total procurement by civil agencies. A prerequisite to increasing GSA's supply support to other civil agencies is the completion of cataloging all civil agency items in the Federal catalog system. Until this is accomplished, accurate knowledge of what identical or similar items are used by more than one agency does not exist. It is this knowledge which provides the strongest force toward extending supply support to civil agencies of long supply or excesses generated either in the civil agencies or DOD. To accelerate the cataloging of items used by civil agencies, we have programed the completion of 97,000 items in 1963 and 115,100 items in 1964.

This program also includes as a prerequisite to increased GSA supply support to DOD, a joint GSA–DOD technical review of homogeneous groups of items to determine which items can be eliminated to reduce to a minimum the varieties and sizes of items procured to meet user requirements. During 1962, such reviews resulted in recommendations to discontinue 34 percent of the 56,274 items reviewed.

Also included in the cost for operating the catalog system are (1) reimbursement to DOD for services in processing data and assigning stock numbers ($150,000) and (2) maintenance of items already cataloged including revisions to item identifications and the addition of management data.

The increase in unit costs attributable to the Federal Salary Reform Act of 1962 is $0.29 in 1963 and $0.62 in 1964. On a comparable basis with 1962 the unit cost for 1963 and 1964 would be $8.45 and $7.90, respectively.

	1962	1963	1964
Items identified	63,153	97,000	115,100
Catalog maintenance actions		39,200	39,300
Item simplification and TDR	99,541	43,300	49,000
Total actions performed	162,694	179,500	203,400
Unit cost	$8.79	$8.74	$8.52
Performance cost	$1,430,280	$1,569,500	$1,733,000

QUALITY CONTROL

Mr. THOMAS (reading):

Timely delivery of commodities of specified quality is assured by inspection at contractor's plants or supply depots, by laboratory tests and analyses of samples prior to acceptance, and by contract administration assistance.

We have been to your supply depots and you have some chemists working in a little laboratory where you examine and test paint and paper and so forth, but what about the other 150,000 items that you buy? I have looked over the laboratories and I feel that if you can test 1 item out of every 2,000 that you buy, you would be doing a pretty good job with the tools and equipment you have. Are you overplaying this a little bit?

Mr. BOUTIN. Mr. Chairman, an awful lot of this is inspection for quality, compliance with specifications, right at the source of manufacture.

Mr. THOMAS. How many people do you have doing that? That is what we are getting into.

Mr. RITTER. 334 on board now.

Mr. THOMAS. Doing what?

Mr. RITTER. They are performing inspection primarily.

Mr. THOMAS. At the source?

Mr. RITTER. At the plant, at the source. Eighty-three percent of the stores and nonstores products we buy now are inspected at the manufacturers' plants.

Mr. THOMAS. Under "Supply standards" you have Federal specifications and standards, $918,000, and then you throw in "Catalog participation." I do not know where that gets in.

Down here under "Quality control" you show a cost of $2,490,400, and then under "Nonstore items inspected," $1,084,200, and "Scheduled items inspected, $605,400."

What is your entire inspection cost, around $4 million?

Mr. RITTER. Yes, sir.

Mr. BOUTIN. $4,180,000.

Mr. THOMAS. How many people do you have involved in that?

Mr. BOUTIN. 440 are projected for 1964, Mr. Chairman.

Mr. THOMAS. That is not very well set out, is it?

Mr. TURPIN. The breakout of the employment, Mr. Chairman, is on the bottom of page 130 by the number in specifications and standards, the number in cataloging and the number in quality control.

Mr. THOMAS. Let us put pages 129 and 130 in the record.

(The pages follow:)

Quality control.—The quantity of defective material received into the supply system is directly related to the level of quality control and contract administration effort. In 1962, $9.6 million of material was rejected as being unacceptable and it is estimated that $11.7 million and $13.1 million will be rejected in 1963 and 1964, respectively. Even at the 1962 level of rejections an increasing quantity of defective merchandise is getting into the supply system as revealed by the complaints from customer agencies which increased from 2,867 in 1961 to 3,285 in 1962.

If materials shipped overseas are found not to meet GSA standards or are not usable in the condition received there are two solutions: (1) pay an oversea contractor to put the merchandise in proper condition, and send an inspector overseas to insure that the work is completed and meets the desired standard, or (2) dispose of the items, usually at a loss, and buy new items, pack, and ship them overseas. These alternatives create an expense that would not be necessary if adequate inspection coverage is initially provided.

Costs are related to the value of material inspected as set forth below:

	1962	1963	1964
(1) Stores items inspected (millions)	$297.7	$351.6	$440.0
Unit cost (per $100)	0.56	0.57	0.57
Performance cost	1,663,000	1,989,700	2,490,400

The volume of stores items to be inspected is the total of stores items purchased. The increase in unit costs attributable to the Federal Salary Reform Act of 1962, is $0.02 in 1963 and $0.04 in 1964. On a comparable basis with 1962 the unit cost for 1963 and 1964 would be $0.55 and $0.53. The improved unit cost of stores items inspection is the result of improved performance standards, better quality control by vendors, and additional suppliers being placed under quality assurance permitting them to ship merchandise on their own certification of compliance with contract provisions.

	1962	1963	1964
(2) Nonstores items inspected (millions)	$182.5	$200.0	$204.6
Unit cost (per $100)	0.38	0.53	0.53
Performance cost	696,000	1,065,000	1,084,200

The volume of nonstores items to be inspected in 1963 and 1964 reflects the total purchased. The slight variation from the buying level discussed in subactivity "1b(2) Nonstores items buying" represents undelivered orders at end of year.

The increase in unit costs from $0.38 in 1962 to $0.53 in 1964, represents an increase of $0.06 relating to the cost of the Federal Salary Reform Act of 1962, and $0.09 cost of increased quality of our coverage of nonstores items. In 1962, because of the unexpected volume of nonstores merchandise to be inspected, sampling techniques had to be varied by increasing sample sizes and reducing the number of samples taken to a dangerous level, with the result that unsuitable merchandise entered the supply system.

	1962	1963	1964
(3) Federal supply schedule items inspected (millions)	$163.1	$230.5	$250.0
Unit cost (per $100)	0.13	0.24	0.24
Performance cost	217,150	552,000	605,400

The volume of Federal supply schedule merchandise to be inspected is 30 percent of the total value of Federal supply schedule purchases. This is the same percentage as programed for 1963. The unit cost of $0.24 also remains at the 1963 level. The increase over the actual $0.13 per $100 in 1962 to $0.24 in 1963 and 1964 is chiefly attributable to the increased level of quality control necessary for many of the schedule contracts, increased contract administration assistance, and the necessity to assure that orders to schedule contractors for shipment overseas are afforded the priority treatment the purchasing agency requires. Two of the prerequisites and incentives for DOD oversea installations to use the Federal supply schedules are (1) that such merchandise is inspected prior to shipment to insure that it meets specifications, and (2) that such merchandise is expedited to assure that it is delivered within the time required.

EXPLANATION OF DISTRIBUTION BY OBJECTS

(See Activity Data Sheets)

Personnel compensation and staffing: $5,349,800 provides for 725 positions, an increase of 46 positions (74.4 average employment) over 1963 distributed as follows:

	1962			1963			1964		
	Department	Field	Total	Department	Field	Total	Department	Field	Total
Federal specifications and standards	71.0	----	71.0	79.0	----	79.0	95.0	----	95.0
Federal catalog participation	156.0	----	156.0	160.0	----	160.0	190.0	----	190.0
Quality control	28.0	276.0	304.0	34.0	406.0	440.0	34.0	406.0	440.0
Total positions	255.0	276.0	531.0	273.0	406.0	679.0	319.0	406.0	725.0
Average employment	213.9	249.2	463.1	257.8	341.7	599.5	289.8	384.1	673.9

EMPLOYMENT FOR STANDARDS AND QUALITY CONTROL

Mr. THOMAS. What importance do you put on your quality control? What importance do you put on it as compared with your Federal standards and specifications? How many people do you have in specifications and standards?

Mr. RITTER. In specifications——

Mr. THOMAS. I mean these two categories. You put this thing in formation for the last 2 or 3 years and see if we cannot regroup it next year and break it down so it is a little bit clearer and simpler.

Instead of using that broad generic language, saying that these are buyers, that these are inspectors, say these are "catalog people" and we can understand that and maybe you will, too.

Mr. RITTER. We need 285 people in standards, specifications, and cataloging for 1964.

Mr. THOMAS. What is the difference between standards and cataloging now?

Mr. RITTER. The one function is the development of specifications and standards for procurement that set forth what we want to buy and the quality levels we want. The cataloging people identify the

items that not only we procure, but all of the civil agencies' procurement.

Mr. THOMAS. Yet you throw them altogether as one item.

Mr. RITTER. They are separated actually on page 129.

Mr. THOMAS. Two separate and distinct functions and the only connection between the two is that you are going to print what you finally come up with in the way of standards?

Mr. RITTER. They are actually in one organization, sir, but we set forth the costs separately because there are different work factors involved. The specifications and standards breakout is on page 128 and cataloging on page 129.

Mr. THOMAS. Then you wrap it up on page 130. In specifications and standards, you have 95 people and in cataloging, 190; and quality control, 440.

What do you mean by quality control?

Mr. RITTER. They are the inspectors and the people who work on contract administration out in the plants.

Mr. BOUTIN. It is interesting to not here, Mr. Chairman, that some contractors who have had difficulty in meeting government specifications, these quality control people, particularly in small business, have been able to help these fellows get their ducks in a row so they can produce and meet the standards.

Mr. THOMAS. Are you topheavy in any of these two fields?

Next year break this down in chronological order under "Quality control" and call them inspectors. That is what they are. Tell us what their function is. It is to go out and see that your plans and specifications come up to snuff and that is all they are doing; is that right?

In these three operations, how many people do you have? How many people do you have in standards and inspection and in procurement and supply coordination? Where is that table on employment?

Mr. TURPIN. The total, sir, for those groups you are talking about, appears at the bottom of page 130.

Mr. THOMAS. This is the complete wrap-up at the bottom of page 130?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. That is already in the record.

The figure for Federal specification standards is 95; Federal cataloging, 190; quality control, 440.

Those are your inspectors and the total is 725; but where are the rest of them? For doing these same jobs in 1963, you had 679 but the total employment throughout is 1,673. Are the rest of them going back to the stores?

Mr. TURPIN. Sir, the average employment of 673.9, the total positions is 725 in 1964 for this activity.

TOTAL FEDERAL SUPPLY EMPLOYMENT

Mr. THOMAS. What is the total number you have in the supply system? This 725 covers three activities?

Mr. TURPIN. Yes, sir. The total in the whole area would show up on the green sheet on page 140, which is the grand total of 4,145.

Mr. THOMAS. You have to go way back here to your summary table for that?

Mr. TURPIN. Yes, sir. It is back in the summary table and we present it at the beginning of the appropriation item, also.

Mr. THOMAS. This is at the very first page and it is all broken out there. It shows the increase for supply operation and supply distribution. Then your buying operations, standards, quality control, procurement policy, supply coordination, are all shown, and then you come in with the administrative operation.

What is the total employment here?

Mr. TURPIN. The total man-years under the OEFSS appropriation is 3,880.7. That is average employment for the year and then the additional employment in the FSS area financed from reimbursable sources is 506.8 or a grand total of 4,387.5.

Mr. THOMAS. I do not follow those figures.

You have your total employment of 3,553 for 1964.

Mr. TURPIN. That is in the field.

Mr. THOMAS. Then for 1964, you have a total of 4,387 as against 3,517 in 1963.

Mr. TURPIN. I did not get the figure for 1963.

Mr. THOMAS. 3,517?

Mr. TURPIN. That is correct.

Mr. THOMAS. Can you get along without that increase in personnel?

Mr. BOUTIN. Not and do the business, Mr. Chairman.

Mr. THOMAS. Where is the increase mostly needed?

Mr. BOUTIN. It is mostly in "supply operations."

Mr. THOMAS. Is it needed in your stores? Is that where the day-to-day work is done?

It is much easier to buy than it is to sell, is it not, Mr. Bean?

Mr. BEAN. Very much.

Mr. THOMAS. A group of 10 people can buy a million dollars' worth of merchandise, or they can buy $30 million?

NET ADDITIONAL ITEMS OF SUPPLY

Mr. TURPIN. I think the supply people could probably talk better on this than I, but it is not just a matter of buying more of the same items. There are additional items being introduced into the system which require additional time on the part of the buyers and also on the part of quality control.

Mr. BOUTIN. If we get too thin, Mr. Chairman, we will have recurrencies of the very thing you were talking about yesterday. If you try to do too much without an adequate staff, you do not do it well. Our production standards here are very rigid.

Mr. THOMAS. One year you will add a thousand items and then you will take out practically half of the number, and maybe more.

What would you say, Mr. Bean, is an average net increase a year in the number of items?

Mr. BEAN. Well, I have a table here on that.

In October we had 11,350 items in stock; in November we added 456, and in April we will add 251. We have gone up over 600 items in the last 3 months.

Mr. THOMAS. Out of a total of how many?

Mr. BEAN. This would go from 11,350——

Mr. THOMAS. Cataloging of what?

Mr. BEAN. This is the store stock catalog. It would go to 11,394 in a 3-month period.

Mr. BOUTIN. This is just stores.

Mr. THOMAS. What is a good horseback opinion of your net increase in your stores now of what you are taking out and putting in? Would it be 5 percent a year? What does it average a year? An item does not move and that is pretty easy to take out, but your trouble is in describing the new ones you put in?

Mr. BEAN. We took out 153 while we were adding more than 700, so the dropouts are not very great. The increase based on this experience would be about 1,200 a year, and that would be 10 percent.

Mr. THOMAS. Ten percent?

Mr. BEAN. Yes, sir. This would work out 1,200 for a full-year basis.

Mr. EVINS. All your manufacturers have new products they want to sell the Government and once you stock them, how frequently do these new items turn over? How much demand is there for them in the agencies?

Mr. BEAN. Our overall stock turnover on stores items is three times a year.

Mr. EVINS. I am talking about the new items.

Mr. BEAN. Some new items sell like wildfire and others do not do as well, naturally; but we stick very closely to staple common-use items, and that is the only way we get a three-time turnover.

Mr. BOUTIN. In the civil agency supply systems around 30,000 items a year drop out?

Mr. RITTER. There are 100,000 additional items each year and 30,000 drop out, in the total civil agencies' supply systems.

Mr. THOMAS. What?

Mr. RITTER. About a third.

Mr. THOMAS. The addition is about 10 percent?

Mr. RITTER. 100,000 per year, about 10 percent.

SERVICE DIRECTION—FSS

Mr. THOMAS. Let us get to "Service direction." This is the administrative office on page 138. Put this in the record.

(The page referred to follows:)

4. Service direction

	Amount	Average employment		
		Departmental	Field	Total
1963	$848,000	19.0	35.9	54.9
Change	+138,000	−.2		−.2
1964	986,000	18.8	35.9	54.7

HIGHLIGHT

General supervision over all programs assigned to the Federal Supply Service is provided.

This activity provides for the Office of the Commissioner, FSS, in the Central Office, Office of the Regional Director, FSS, in each of the regional offices, and penalty mail costs for reimbursement to the Post Office Department for the entire Federal Supply Service operations.

General supervision:

1962	$765,687
1963	848,000
1964	986,000

JUSTIFICATION

The increase in this activity in 1963 and 1964 is attributable to the additional payments to the Post Office Department for penalty mail costs, and additional costs for the 1962 Pay Act.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $586,000 for 55 positions, the same as 1963, distributed as follows:

	1962	1963	1964
Central office	20.0	19.0	19.0
Regional offices	35.0	36.0	36.0
Total positions	55.0	55.0	55.0
Average employment	51.2	54.9	54.7

Other objects: $400,000 provides:

(1) $43,600 is for personnel benefits, including $38,100 retirement contributions, $3,600 health benefits, and $1,900 group insurance.

(2) $302,900 for communications, including $284,700 for postage fees.

The remainder of $53,500, or 5.4 percent of total estimate, provides:

(3) $28,000 for 966 days travel at $29 per day, and $3,000 for motor pool services.

(4) $10,000 printing; $5,500 contractual services; $7,000 supplies.

Mr. THOMAS. This shows $848,000 for 1963 and $986,000 for 1964. It shows no increase in employment but a decrease of 0.2; that is 54.9 as against 54.7. You say:

This activity provides for the Office of the Commissioner, FSS, in the Central Office, Office of the Regional Director, FSS, in each of the regional offices, and penalty mail costs for reimbursement to the Post Office Department for the entire Federal Supply Service operations.

We might take a look at the green sheet on page 139.

You have there 1 GS–18, 1 GS–17, and 13 GS–15's.

Mr. EVINS. Is that too low for Mr. Bean?

Mr. THOMAS. Yes. No question about that.

SUMMARY OF ALL FSS OTHER OBJECTS

We might put page 141 in the record. This is the summary for what—$25 million of other objects? It does not give us very much detail.

(The page follows:)

SUMMARY STATEMENT ON "OTHER OBJECTS" FOR 1964

Although amounts for obligations by objects are explained in justifications of each activity, objects other than personnel compensation are summarized

below. Of the $51 million estimate, $26,006,100 is for personnel compensation and $24,993,900 for other objects as follows:

12 Personnel benefits, $1,886,700: $1,619,200 for direct contribution to retirement fund, $164,700 health benefits, $81,800 group insurance, $10,300 FICA, and $10,700 for accident claims.

21 Travel and transportation of persons, $861,000: $682,700 for 25,215 days travel and $178,300 for motor pool services.

22 Transportation of things, $421,200: Provides for motor pool truck services, relocating warehouses, transshipment of stocks between warehouses, demurrage, merchandise returns and miscellaneous transportation charges.

23 Rent, communications, and utilities, $3,110,200: $1,899,000 for space rental and utility costs, $482,000 equipment rental, $284,700 postage fees, and $444,500 for normal telephone and teletype services.

24 Printing and reproduction, $1,736,100: $757,500 for ADP forms, order processing forms and other warehouse operating forms; $650,000 for schedules, invitations to bid, purchase documents and related forms; $135,000 for GSA stores stock catalogs; $47,200 for item identification cards; $51,000 for specifications and standards; $44,600 for Government-wide Federal Procurement Regulations; and Government-wide regular procedure and handbooks in various areas of supply management; and $50,800 for miscellaneous printing including supply management procedures, and revisions to Federal Procurement Regulations.

25 Other services, $4,188,300: For janitorial, guard, maintenance and miscellaneous services reimbursable to BM fund, warehouse relocations, contract labor and operating equipment repairs, laboratory testing and inspections, payments to commercial contractors and GSF for office equipment repair and other miscellaneous services, and contract cataloging for field installations.

25 Payment to administrative operations fund, $10,589,000: For administrative operation necessary to support this program.

25 Services of other agencies, $1,355,800: For maintenance and handling costs for inventory housed in military depots; financing GSA share of the President's Committee on Equal Employment Opportunity; laboratory testing; reimbursement to the National Bureau of Standards for tests, research and development of security equipment to comply with provisions of Executive Order 10501; cataloging services rendered by DOD; health room charges; security investigations; and other miscellaneous services.

26 Supplies and materials, $678,500: $241,500 for administrative supplies and materials; $409,000 for operating supplies; and $28,000 for other miscellaneous supplies including materials for testing, and Federal supply specifications donated to prospective bidders and other Government agencies.

31 Equipment, $167,100: For office equipment for additional employees, and for replacement of obsolete equipment.

Mr. THOMAS. Can you do anything about your "Other objects"? What are your "Other objects" costing you, altogether? Your personal compensation is about $26 million, is it not?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. What do your "Other objects" cost you? You are asking $16 million for other services.

Mr. BOUTIN. The total for "Other objects" is about $25 million, Mr. Chairman, the $16 million provides for the administrative operations fund, services of other agencies, and payments to commercial contractors.

Mr. THOMAS. $26 million is for "Compensation"; $25 million for "Other objects," but that does not quite tell the tale when it is grouped like that. One of your big items is your "Administrative operations," $10.5 million, of which $5.2 million goes to ADP?

AUTOMATIC DATA PROCESSING COSTS

Mr. TURPIN. Yes, sir; about $5 million for ADP.

Mr. THOMAS. When we get over to that, we find Brother Turpin has expanded pretty well in the last 3 or 4 years. How old are you in this field? You have a big operation and you have all of your regional offices spending about $5 million a year for processing equipment.

What is your rental? I am going on memory but it is about $2 million.

Mr. TURPIN. That is right for 1963; and $2,150,000 for 1962.

Mr. THOMAS. We will get to you later and you had better have a good explanation.

You have been going higher and higher in buying this equipment and salary costs go up at the same time; where is the savings in this?

All you have to do is get a good answer when we get to you.

Mr. TURPIN. On this item, which is one of the big ones as far as the AO services are concerned, it represents one-third of our total.

Mr. THOMAS. You hang your hat on Brother Bean's shoulder. You say that if it had not been for you, his store costs, instead of being $11.1 million would be $20.9 million.

Mr. TURPIN. Based on the cost of doing business at the time we started mechanization, that is true, sir.

Mr. THOMAS. You get your answers ready. I know that you are going to have some good ones.

Mr. TURPIN. Yes, sir.

TRAVEL AND TRANSPORTATION—FEDERAL SUPPLY SERVICE

Mr. THOMAS. You cannot do a thing about personal benefits.

That is a matter of law, but what about your "Transportation of persons," $861,000?

Of that $178,300 goes to the "Motor pool"; "Transportation of things," $421,200 provides for motor pool truck services, relocating warehouses, transshipments of stock between warehouses, demurrage, purchase and return, miscellaneous. Does the transportation service pick up the costs for this? You pay the bill and they figure out your charge?

Mr. BOUTIN. That is right.

Mr. THOMAS. What about your transportation of persons?

Mr. BEAN. Transportation of persons covers all of the people who travel. The people in "Quality control," the inspectors, are in almost constant travel status.

Mr. THOMAS. What was this item for 1962, 1963, and 1964? You set that out?

Mr. TURPIN. The travel total for "Operating expenses, FSS" was $356,003 in 1962; estimated at $561,800 for 1963; and $682,700 for 1964. For motor pool travel it was $129,384 in 1962 and is projected at $165,600 in 1963 and $178,300 for 1964.

Mr. THOMAS. It goes up substantially, does it not?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Your travel bill is understandable last year because of the fact you had an increase in travel costs by statute.

Mr. BEAN. We have an increase in the number of manufacturers that we must travel to now. We go to more locations.

EQUIPMENT RENTAL—FEDERAL SUPPLY SERVICE

Mr. THOMAS. "Rent, communications and utilities," $3.1 million of which $1.9 million is for space rental and utility costs, $482,000 for equipment rental. Who are you paying for the equipment rental?

Mr. BOUTIN. This is reimbursable to the general supply fund. It is really a depreciation amount, Mr. Chairman. We do not pay but very little rental to the outside. This is almost all internal; is that right, Mr. Bean?

Mr. BEAN. That is correct.

Mr. THOMAS. What is the nature of this equipment?

Mr. BOUTIN. Forklift equipment is the big item.

Mr. BEAN. Probably the biggest item.

Mr. THOMAS. You do not charge it here to depreciation but you take depreciation money and buy new equipment with it; is that the way you are operating?

Mr. BOUTIN. That is right, Mr. Chairman. The initial investment is in the general supply fund.

Mr. THOMAS. You depreciate it and use your depreciation to buy new equipment?

Mr. BOUTIN. That is correct; forklift trucks, battery-charging equipment for our forklift trucks, and that type of thing.

Mr. THOMAS. I thought you were in Government space in most of your warehouses, yet you have $1.9 million for rent.

Mr. BOUTIN. We are paying big rentals still, Mr. Chairman, at Atlanta, Ga.; Chicago, and at Franconia here in the Washington area.

FRANCONIA WAREHOUSE

Mr. THOMAS. What are you paying for that space in Franconia per square foot?

Mr. BEAN. 99 cents a square foot, for all costs.

Mr. THOMAS. That is in that old big building?

Mr. BOUTIN. That big one; yes.

Mr. THOMAS. Who owns that building?

Mr. BOUTIN. It is owned by Park Avenue Methodist Church in New York.

Mr. THOMAS. How many square feet are there?

Mr. BOUTIN. FSS has a total of 704,000 square feet.

Mr. THOMAS. It is a nice contract but what goes with that?

Mr. BOUTIN. They maintain the building itself.

Mr. THOMAS. What about the heat, light, and water?

Mr. BEAN. We pay for that.

Mr. THOMAS. That is a pretty nice contract; is it not?

Mr. BOUTIN. This is the one we were telling the committee about. We have an option to buy in 1965. We are going to ask the Bureau to let us request funds from the Congress to exercise the option.

Mr. THOMAS. How old is that building, 5 or 6 years old?

Mr. BOUTIN. I think it is about 10 years old.

Mr. THOMAS. It was built for GSA and you have been renting it ever since?

Mr. BOUTIN. Renting it ever since.

Mr. THOMAS. It paid itself out 2 years ago; did it not?

You had a 10-year lease and at 99 cents a square foot, you have had about a 6-year amortization period? You did not get that from the Methodist people but from a corporation?

Mr. BOUTIN. The Park Avenue Methodist Church bought it from the original investors.

Mr. THOMAS. What is the name of that outfit? You have half a dozen scattered all over the country.

Mr. MCGEE. Mr. Parr.

Mr. TURPIN. There might be a little confusion on this. That 99 cents per square foot includes all utilities and janitorial and guard services. Rent alone is 65.5 cents per square foot.

Mr. THOMAS. That is a whole lot better; is it not?

Mr. EVINS. How much have you paid out in rent so far over 10 years?

Mr. THOMAS. $7.5 million?

Mr. TURPIN. It is about $461,100 a year for the FSS portion. We have paid a total of $8.5 million, through January 1963, for all of the facility.

Mr. THOMAS. When you pay your utility and guard services, it costs 99 cents a square foot?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. How much is the building worth?

Mr. BOUTIN. The original investment was around $10 million, I believe.

Mr. THOMAS. You mean $10 a square foot for construction but with 750,000 square feet, a good price would have been $3.50 per square foot.

Mr. BOUTIN. I am informed that the present owners paid about $6.6 million in 1954 for the Franconia property.

Mr. EVINS. You paid in rent way more than the building cost?

Mr. THOMAS. Easy.

I bet that when the building was constructed the net rental cost of 65 cents a square foot was not much more than a 6-year payout.

PRINTING AND REPRODUCTION—FEDERAL SUPPLY SERVICE

What about your "Printing and reproduction" item of $1,736,100: $757,500 for ADP forms, order processing forms and other warehouse operating forms; $650,000 for schedules, invitations to bid, purchase documents, and related forms; $135,000 for GSA stores stock catalogs; $47,200 for item identification cards; $51,000 for specifications and standards; $44,600 for Government-wide Federal Procurement Regulations; and Government-wide regular procedure nad handbooks in various areas of supply management; and $50,800 for miscellaneous printing including suppply management procedures, and revisions to Federal Procurement Regulations.

Who does all of this printing for you; is this by contract?

Mr. TURPIN. All of the printing is arranged for through our printing shop. They do some of it in-house and the larger items are done by the Government Printing Office.

Mr. THOMAS. None let by private contract?

Mr. TURPIN. We purchase marginally punched continuous forms and ADP cards under GPO term contracts from commercial sources.

Mr. THOMAS. Then you have $50,800 for "Miscellaneous printing," including supply management procedures and revisions to Federal Procurement Regulations.

Do you have any of your advertising material and the forms that you have to have in this figure?

What else do you have besides your forms?

Mr. BEAN. We have some samples of that here.

Mr. BOUTIN. This is a catalog of items available through Clearfield, Mr. Chairman.

Mr. BEAN. This is a self-service depot. That catalog goes to the people in Utah and a radius of around 50 miles from there.

Mr. THOMAS. You print one of those for each one of your big regional warehouses?

Mr. BEAN. No, sir; the one for all the regional warehouses is the same all over the country. We carry the identical items in every warehouse.

Mr. THOMAS. Your catalog is vital to your operation, is it?

Mr. BEAN. Yes, sir.

Here is the national store stock catalog. We cannot do business without it.

Mr. EVINS. You just put a new jacket on for each region?

Mr. BEAN. No; the same jacket. The Clearfield catalog is a special item. The other one is not.

MAINTENANCE AND MISCELLANEOUS SERVICES

Mr. THOMAS. You have "Other services" of $4,188,300 for janitorial, guard, maintenance, and miscellaneous services reimbursable to buildings management fund, warehouse relocations, contract labor, and operating equipment repairs.

I thought you included janitorial and guard and maintenance service in your big warehouses in the 99-cent figure; are you duplicating this item here?

Mr. TURPIN. No, sir, that was for only Franconia. Most of this item is for Government-owned locations where it is done through the buildings management fund.

GOVERNMENT OWNED AND LEASED WAREHOUSE SPACE

Mr. THOMAS. How many buildings does the "Supply service" have and what part of that number is Government-owned and what part is leased?

Mr. BOUTIN. We are in 31 locations, Mr. Chairman, and of those 31, we still have 3 that are leased with the exception of several locations where we have what we call our retail stores.

Mr. THOMAS. Those are your little ones; the big ones are all Government-owned property except three?

Mr. BOUTIN. Atlanta, Chicago, and Franconia, sir.

Mr. THOMAS. Franconia is the big one?

Mr. BOUTIN. Yes, sir.

WAREHOUSE SPACE IN CHICAGO

Mr. THOMAS. Where is the warehouse in Chicago?

Mr. BOUTIN. The one in Chicago is right across the street from the old Ford plant. It is in the same complex as the Records Center.

Mr. EVINS. West Side?

Mr. THOMAS. He is talking about the big warehouse?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. There is an old military installation you took over—is that a military installation?

Mr. BOUTIN. No; this is not. The Ford plant was an Air Force plant.

Mr. THOMAS. That is Government-owned space?

Mr. BOUTIN. That is Government-owned.

Mr. THOMAS. You said a while ago, or perhaps I misunderstood you, that you were renting that space?

Mr. BOUTIN. We are renting the space Federal Supply is now occupying.

Mr. THOMAS. From whom?

Is it Government-owned?

Mr. BOUTIN. No, sir.

Mr. THOMAS. Who owns it?

Mr. MCGEE. Clearing Industrial District.

Mr. THOMAS. That was an old military installation, was it not?

Mr. BOUTIN. I doubt it ever was. This has all been built by them.

Mr. SPANGLER. The address is 7200 Leamington Avenue. It is in a new warehouse complex, fairly new.

Mr. THOMAS. Is this the one where you have to cross some railroad tracks and it is not very easy to get in and out of?

Mr. BEAN. No, sir.

Mr. THOMAS. I am mixed up on the location then.

SERVICES OF OTHER AGENCIES

What about your "Services of other agencies," $1,355,800 for maintenance and handling costs for inventory housed, in military depots; financing GSA share of the President's Committee on Equal Employment Opportunity; laboratory testing; reimbursement to the National Bureau of Standards for tests, research and development of security equipment to comply with provisions of Executive Order 10501; Cataloging services rendered by DOD; health room charges, security investigations, and other miscellaneous services.

Mr. RITTER. That is largely reimbursement which we give to the Department of Defense for the central processing of cataloging data. It is purely a service charge, no printing is involved.

Mr. THOMAS. For maintenance and handling costs for inventory housed in military depots, you set out this cost of $1,355,800, or is that the overall item cost?

Mr. BOUTIN. That is the overall item cost.

Mr. THOMAS. What do you pay for inventory housed in military depots? Do you have to make a contribution to the military where you have a little center there. That is all it is, is it not?

Mr. BOUTIN. No; for instance in Fort Worth we are in there on a permit basis from the military. We do not have to hire our own guards for the whole property. We reimburse them for part of these costs.

Mr. BEAN. That is correct.

Mr. THOMAS. That is your big depot?

Mr. BEAN. That is correct.

Mr. THOMAS. What do you pay for that?

Mr. BEAN. No charge for the building itself, just for the services.

Mr. THOMAS. Guard service, utility costs, and so forth?

Mr. BOUTIN. Yes, sir.

Mr. BEAN. Heat, janitorial, and guard services.

Mr. EVINS. Our friend from Fort Worth got a good deal on that, Mr. Chairman.

Mr. BOUTIN. GSA got a good deal.

Mr. THOMAS. Who owns that property?

Mr. BOUTIN. The Army. We also have some DMS open storage there, Mr. Chairman.

SUPPLIES AND MATERIALS—FSS

Mr. THOMAS. Supplies and materials, $678,500; $241,500 for administrative supplies and materials; $409,000 for operating supplies.

Mr. BEAN. We need operating supplies for handling our merchandise. Shipping cartons are a big part of it.

Mr. THOMAS. Administrative supplies and materials, $241,500 and then these other supplies, $409,000.

Mr. TURPIN. That $409,000 is for "Operating supplies." That would be mostly in the warehouses, as Mr. Bean indicated, for packing and crating materials. I believe those are the supplies for the people in OEFSS, the employees there.

[1] Balances of selected resources are identified on the statement of financial condition.

Mr. THOMAS. Let us take a look at "General supply fund" on page 142.

You have a deficiency coming up, do you not, for the fund? You have one for $30 million, for 1963, and you are seeking an increase here of $35 million for 1964. It is one deficiency but two increases; is that correct?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. Let us look at the status of the fund and the investment of the U.S. Government. [Reading:]

Investment of the U.S. Government in the fund at June 30, 1962, was $145,300,892, of which $129,250,000 represents direct appropriation; $593,733, capitalized surplus; $10,251,943 donated assets; and $5,346,476 retained earnings, with $141,260 deducted for long-term leave liability.

Is this accumulation of annual leave?

Mr. TURPIN. Yes, sir.

Mr. EVINS. Who donated the $10 million in assets?

Mr. TURPIN. That would come mainly from the vehicles that were taken in when the pools were established.

Mr. THOMAS. Retained earnings, as determined by General Accounting Office audit, must be paid to Treasury as miscellaneous receipts.

The payment in 1963 amounted to $5,346,476.

How do you accumulate that much money? Do all of these assets of $145,300,000 include the supplemental of $30 million you are seeking for the fund?

Mr. TURPIN. No, sir.

CASH POSITION

Mr. THOMAS. What is your cash position?

Mr. TURPIN. Our cash position as of the end of 1962 was $15.7 million. We estimate at the end of this year it will be $16.3 million. That is the working cash.

Mr. BOUTIN. And that is predicated upon the $30 million supplemental.

Mr. TURPIN. That is correct.

Mr. THOMAS. You are broke now. You are in the red $14 million. What did you do with that $145 million, Mr. Turpin?

Mr. BOUTIN. We are existing on advances, Mr. Chairman.

Mr. THOMAS. That hardly accounts for it.

Mr. TURPIN. Page 145, Mr. Chairman, sets that out pretty clearly.

Mr. THOMAS. We have already looked at that. You give us a bad picture here. You have cash customers that pay in 10 days or 2 weeks and your assets ought to be, within any given 30-day period, equal your $145 million cash you have in the till. You have no loss. You cannot have a loss unless you have a fire.

Mr. TURPIN. We have no loss and we usually try to come out as close to even as possible.

Mr. THOMAS. You have done better than that; you show a profit of $5 million. I want to commend you on that. You have some captive buyers. Mr. Bean could not be in business if he did not show a little profit.

Mr. TURPIN. Our objective is to come out less than $5 million, about $3 million.

Mr. THOMAS. We are not objecting to the $5 million. That is fine.

Mr. TURPIN. With respect to 1963, that is including——

Mr. THOMAS. Do not give us a lot of words, Brother Turpin. If you collect your bills in 10 days or 2 weeks, your cash position would be identical with the amount you started with, say, 60 or 90 days ago.

Mr. TURPIN. With respect to the cash on hand, that is to enable each of our regional offices to have cash so they can pay the vendors promptly.

Mr. THOMAS. Repeat that again.

Mr. TURPIN. The available cash on hand, working cash on hand, is what we have available for our 10 regional offices so they can pay the vendors promptly.

Mr. THOMAS. You mean to tell me you let the regional offices do the buying and paying?

Mr. TURPIN. Yes. The regional offices do all the paying for the procurements through the general supply fund.

Mr. THOMAS. Even though it is procured here by your buying staff?

Mr. TURPIN. Even where there are national contracts, purchase orders are prepared by the regional offices.

Mr. THOMAS. They buy here and it is shipped to the regional offices and the regional offices pay as they receive?

Mr. TURPIN. Yes, sir.

DISCOUNTS ON PURCHASES

Mr. THOMAS. Do you take a discount, too, Mr. Bean?

Mr. BOUTIN. Our discounts for last year were in excess of $2 million.

Mr. THOMAS. You are certainly in a position to buy for cash.

FINANCING RECEIVABLES

Mr. TURPIN. Mr. Chairman, when we get to receivables we are estimating here financing receivables only for 43 days, that is 30 days billed and 13 days unbilled.

Mr. THOMAS. Okay, 43 days. What is your discount period to your suppliers, Mr. Bean?

Mr. BEAN. I think Mr. Turpin has that information too.

Mr. TURPIN. Most of them are 20 days, sir.

Mr. THOMAS. Why cannot your customers pay in the same period?

Mr. BOUTIN. We really cannot bill it that fast, Mr. Chairman. No matter how much we refine the system, 13 days is just about the minimum, if we are to keep administrative costs down.

Mr. THOMAS. Insert pages 142, 143, and 145 in the record.

(The pages follow:)

General supply fund

1963 appropriation	$13,500,000
Proposed supplemental	30,000,000
Comparative	43,500,000
Change	−8,500,000
1964 estimate	35,000,000

GENERAL STATEMENT

"This fund finances, on a reimbursable basis, a national supply depot system and a system of ordering supplies for direct delivery to agencies. Supplies or services are sold from the fund at cost to other agencies and the District of Columbia. Related operating expenses are provided for under the appropriation 'Operating expenses, Federal Supply Service' (5 U.S.C. 630g).

"Also financed by the fund and reimbursed by the using agencies are operations of interagency motor vehicle pools established in areas of high vehicle density. * * *" (From the budget for 1964.)

This request of $35 million of additional appropriated capital, together with reliance on customer agencies for advances of $30 million is required to provide for the rapidly increasing demands from other Government agencies for goods and services financed through the fund, primarily common-use supplies and motor pool services. If GSA is to meet these demands it is essential that suf-

ficient appropriated capital be provided to insure (1) the minimum inventory necessary to meet the military issue priority system and other agency demands. (2) minimum equipment requirements to meet replacement standards and additional customer requirements, (3) minimum cash to take discounts offered and pay earnings to Treasury, and (4) to finance accounts receivable.

Investment of the U.S. Government in the fund at June 30, 1962, was $145,300,892 of which $129,250,000 represents direct appropriation, $593,733 capitalized surplus, $10,251,943 donated assets, and $5,346,476 retained earnings, with $141,260 deducted for long-term leave liability.

Additional capital of $13.5 million was appropriated in 1963 and a further necessary increase of $30 million is proposed in 1963 as an item for later transmittal to provide sufficient capital to finance increased sales during that year. Donated assets amounting to an estimated $3 million arising from (*a*) inventories transferred from DOD for commodities for which GSA is assuming supply support and (*b*) transfers of motor vehicles from other agencies upon establishment of additional interagency motor pools, will be capitalized in the fund.

Retained earnings, as determined by General Accounting Office audit must be paid to Treasury as miscellaneous receipts. The payment in 1963 amounted to $5,346,476.

APPROPRIATION LANGUAGE

"To increase the general supply fund established by the Federal Property Administrative Services Act of 1949, as amended (5 U.S.C. 630g) [$13,500,000] *$35,000,000.*

JUSTIFICATION

Capital available for 1963 and 1964 must be responsive to the increase in sales volume of $446.9 million in 1962 to $523.0 million in 1963 and $648.9 million in 1964.

The following tabulation reflects the continuous sales increase:

[In millions of dollars]

Type of sale	1962 actual	1963 estimate	1964 estimate
Stores, stock	229.6	267.3	350.0
Transportation	[1] 9.2	10.7	14.0
Total stores stock	238.8	278.0	364.0
Stores direct delivery	34.8	42.0	66.0
Nonstores items	139.2	156.9	166.0
Export packing	10.7	16.5	22.0
Equipment rental	.3	.4	.5
Motor pool	20.9	24.3	25.1
Repair programs	2.2	4.9	5.3
Total	446.9	523.0	648.9

[1] Sales in 1962 have been adjusted for comparability.

It is estimated that $30 million additional appropriated capital (included as a supplemental proposed for later transmittal) will be required in 1963 and $35 million in 1964. This presupposes reliance on advances of $30 million in 1963 and 1964.

There follows a chart indicating the utilization of capital and a comparative statement of capital and financing for the general supply fund.

General Supply Fund

Comparative statement of capital and financing (summary)

[In millions of dollars]

	As of June 30			Change from 1963	Assumptions
	1962 actual	1963 estimate	1964 estimate		
A. FINANCING AVAILABLE					
1. Capital provided by appropriation:					
(a) Start of year	115.7	129.2	172.7	.....	
(b) During year	13.5	13.5	.....	.....	
(c) Additional requirement	.....	30.0	35.0	.....	Minimum appropriated capital required to support total GSF sales program of $523,000,000 in 1963 and $648,900,000 in 1964, detailed on page 143.
(d) Total appropriated	129.2	172.7	207.7	+35.0	
2. Donated assets, cumulative (nonreimbursable transfers of inventory and equipment)	10.8	18.7	21.7	+3.0	Donations of $7,900,000 in 1963 ($5,000,000 DOD inventory, $2,900,000 motor vehicles) and $3,000,000 DOD inventory in 1964).
3. Temporary advances from other agencies to be repaid in 1963	10.0	.....	.....	.....	$10,000,000 from AID must be returned; borrowed pending receipt of 1963 supplemental.
4. Total financing available	150.0	191.4	229.4	+38.0	
B. APPLICATION OF FINANCING					
1. Assets:					
(a) Working cash	15.7	16.3	20.0	+3.7	Minimum cash balance required to insure prompt payments of bills, maintain good relations with industry and take advantage of discounts offered. (Average of $2,000,000 per region.)
(b) Accounts receivable	81.3	81.7	98.1	+13.4	Accounts receivable, net, for 1964 are based on 43 days (30 billed, 13 unbilled) with consideration given to customer agencies for permanent advances. This is a progressive reduction from 51 days in 1962, 44 days in 1963, and is considered the minimum required to support sales levels projected in 1964.
Less advances	−32.9	−30.0	−30.0	.....	$10,000,000 from AID; $10,000,000 from Air Force; $2,000,000 from Navy; $8,000,000 consolidated purchase advance primarily for nonstores items.
Net accounts receivable	48.4	51.7	68.1	+13.4	

(c) Inventories	94.8	120.7	144.4	+23.7	
In depots	88.9	109.7	130.4	+20.7	Depot inventories are based on annual stock turn of approximately 3 times.
Transfer from DOD	.....	5.0	8.0	+3.0	
In transit	5.9	6.0	6.0	.....	
(d) Equipment, net	36.5	42.9	47.9	+5.0	Purchase of equipment at minimum level to meet replacement standards and to provide for additional customer demands for sales of supplies and motor pool services.
(e) Other assets	0.9	0.9	0.9	.....	
(f) Total assets	190.3	232.5	278.3	+45.8	
2. Deduct:					
(a) Accounts payable	34.9	38.0	45.8	+7.8	Accounts payable are based on 20 days, considered to be the maximum level if discounts are to be taken.
(b) Unfunded leave liability	0.1	0.1	0.1	.....	
(c) Retained earnings	5.3	3.0	3.0	.....	Estimated retained earnings are projected at the minimum level and will be deposited to miscellaneous receipts to Treasury.
(d) Total deductions	40.3	41.1	48.9	+7.8	
3. Total financing applied, net	150.0	191.4	229.4	+38.0	

Mr. THOMAS. You have some appropriation language here to increase the general supply fund established by the Federal Property and Administrative Services Act of 1949. You had $13,500,000 last year, you estimate you will need $30 million additional appropriated capital, to be proposed as a supplemental, in 1963, and you want $35 million in 1964.

The capital available for 1963 and 1964 is broken down on page 143.

AUTOMOBILE INVESTMENT

What about your automobiles? What part of your capital assets do you have tied up in automobiles? I have a feeling that the reason you are going up in this capital every year is for automobiles.

How do you amortize the automobiles in your motor pool?

Mr. BOUTIN. Depreciation is based on a 6-year useful life for automobiles.

Mr. THOMAS. For your own motor pool you have two or three figures. One place you set out 10,000 you are going to buy this year and in the table it is around 2,000.

Mr. TURPIN. I will give you the investment in motor vehicles. For 1964 the net is $40.7 million. That was acquisition cost less depreciation.

Mr. THOMAS. Is that for the motor pool?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. You pay for that in 10 days, or 20 days, or 30 days?

Mr. TURPIN. Our objective on paying our vendors is 20 days.

Mr. THOMAS. How long will it take you to amortize those automobiles? That is where some of your increase in capital is going, after all. What will be your investment in automobiles this year?

Mr. TURPIN. $40.7 million is projected for 1964. This year it is $37.9 million.

Mr. THOMAS. Take 1964, $41 million. From your system of bookkeeping, when will you get that back? That all goes in your motor pool under your jurisdiction?

Mr. TURPIN. Yes.

Mr. THOMAS. When will you get it back?

Mr. TURPIN. Our depreciation up to this point has been based on 6-year useful life for automobiles. The depreciation is recorded as a cost each month, and this cost is passed on to the using agency in the rate charged for service.

Mr. THOMAS. So it will take you 6 years to get that $40 million back through the depreciation route?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. And that accounts for that $35 million, does it not?

Mr. TURPIN. No, sir. Could I mention really what we need that additional $35 million for?

Mr. THOMAS. You have $41 million for automobiles.

Mr. TURPIN. That is the cumulative net investment.

Mr. THOMAS. I am asking what will be your additional capital outlay for 1964 for automobiles?

Mr. TURPIN. $2.8 million.

Mr. THOMAS. That is quite different, then. You will amortize that $2.8 million over 6 years.

COMPONENTS OF GENERAL SUPPLY FUND REQUEST

Mr. TURPIN. Yes, sir. But of the $35 million appropriation request it comes out about this way: $20.7 million is for investment in additional inventories in order to handle the new business. Only $13.4 million of the increase is related to the receivables.

Mr. THOMAS. That goes back to your stores stock, then?

Mr. TURPIN. Yes, sir; for inventories. For receivables, it is based on total general supply fund sales.

Mr. THOMAS. A very small portion of it is for automobiles; $2.8 million is for automobiles and what is the increase in stores stock?

Mr. TURPIN. $20.7 million.

Mr. THOMAS. Is it that much?

Mr. TURPIN. That is out of appropriated capital. There is an additional transfer from DOD of $3 million or a total of $23.7 million inventory increase in 1964.

Mr. EVINS. You have taken a depreciation on the automobiles turned over to you?

Mr. BOUTIN. Yes, sir.

DONATED ASSETS

Mr. EVINS. These donated assets you keep the same every year.

Mr. BOUTIN. It is cumulative to date.

Mr. EVINS. I should think they would depreciate.

Mr. TURPIN. They do, sir, but they are recorded initially as an increase in capital, as an asset.

Mr. BOUTIN. We show this as the source of capital.

Mr. TURPIN. The amount capitalized is recovered, though, through depreciation.

Mr. THOMAS. After 6 years it is cash. Is that the way it works?

Mr. TURPIN. Yes, sir.

GENERAL SUPPLY FUND CAPITAL

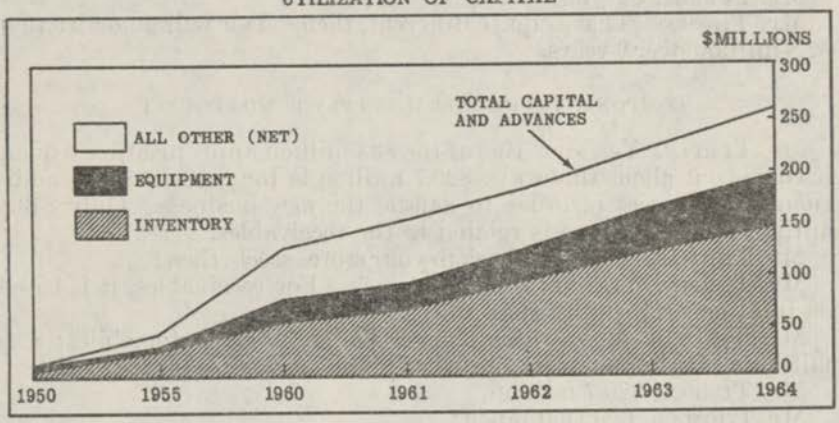
Mr. THOMAS. This chart on page 144 tells the tale. Let us put that in the record.

KANSAS STATE UNIVERSITY LIBRARY
OCT 7 1963
MANHATTAN, KANSAS

(The page follows:)

GENERAL SUPPLY FUND

UTILIZATION OF CAPITAL



(MILLIONS OF DOLLARS)

FISCAL YEAR	CAPITAL (APPROP. AND DONATED)	ADVANCES END OF YEAR	UTILIZATION OF CAPITAL & ADVANCES				
			INVENTORY	EQUIPMENT	WORKING CASH	RECEIVABLES	PAYABLES ETC.
1950	10.1	—	7.2	0.6	10.9	11.8	-20.4
1955	45.1	0.6	26.7	2.6	4.3	24.1	-12.0
1960	104.1	23.1	55.5	22.2	15.0	56.0	-21.5
1961	125.5	28.8	66.3	26.3	38.5	49.6	-26.4
1962	140.0	42.9	94.8	31.4	15.7	81.3	-40.3
1963	191.4	30.0	120.7	43.8	18.0	81.5	-42.6
1964	229.4	30.0	144.4	48.8	20.0	95.1	-48.9

Capital - Assumes supplemental appropriation of $30m in 1963 and new appropriation of $35m in 1964

Advances- Both permanent and temporary; considered as offset against receivables

Inventory Level - Minimum required to handle sales. Sales projection of $296.4m in 1963; $364.0m in 1964; assumes 3.0 stockturn

Equipment - Primarily for motor pools (23,726 vehicles -1962) and warehouse operating equipment

Receivables - Based on 43 day cycle - 30 days billed and 13 days unbilled; considered delinquent after 30 days.

NEED OF CAPITAL TO REPAY ADVANCES

Mr. THOMAS. The tables on pages 145 and 146 are very interesting but they are too long to put in the record.

Mr. EVINS. Mr. Chairman, they are asking for $30 million in the supplemental appropriation and they show more in accounts payable than they are asking for in the supplemental appropriation.

Mr. TURPIN. That is accounts payable based on our paying bills in 20 days.

Mr. Chairman, you said we are probably in bad shape this year because we do not have the supplemental yet. We are in a bad way and the only way we are able to have enough cash to pay our bills is from getting an additional advance of $10 million from AID, which is a temporary cash advance.

Mr. THOMAS. From AID?

Mr. TURPIN. Yes, sir, which we are committed to repay just as soon as we are able to do so.

Mr. THOMAS. Why did you get an advance from them?

Mr. TURPIN. Well, we do quite a bit of business with them and we are really in a predicament to handle the business with the capital that we have.

PROCUREMENT AND PROPERTY REHABILITATION FOR AID

Mr. THOMAS. How much business do you do with AID?

Mr. TURPIN. Will you give me the total figure, Mr. Bean?

Mr. THOMAS. What is the nature of the business you do with AID?

Mr. TURPIN. We procure items in this country for shipment overseas and also the rehabilitation program.

Mr. THOMAS. Which is larger?

Mr. BOUTIN. $50.7 million is what we will do with them this year and on the excess property there is a limitation at acquisition cost of $45 million.

Mr. THOMAS. What is that again?

Mr. BOUTIN. We are going to do $50.7 million of business with them this year but on the excess there is a limitation of $45 million at acquisition. So the rehabilitation of that $45 million in acquisition would not be close to the cost for rehabilitation.

Mr. THOMAS. I think I have a figure in mind that your entire rehabilitation is less than $1 million for them, $900,000, something like that?

Mr. BOUTIN. Mr. Barron, what will you do for them this year?

Mr. THOMAS. 97 or 98 percent is for procurement of new merchandise to be shipped overseas. Your rehabilitation is less than $1 million?

Mr. BOUTIN. What is the total rehabilitation for AID expected to be in 1963?

Mr. BARRON. $6.2 million for first half, an estimated $15 million for the year at acquisition cost.

Mr. THOMAS. I am not talking about acquisition cost, your expense in handling the rehabilitation of merchandise you let them have?

Mr. BARRON. It is estimated at $204,000 in fiscal year 1963.

Mr. THOMAS. What is the rehabilitation cost on repair facilities for AID?

Mr. BARRON. At Cheli the operating cost for fiscal 1962 was just over $42,000.

Mr. THOMAS. What is it for 1964?

Mr. BARRON. We are planning on a projection of doubling the current 1963 volume, sir.

Mr. THOMAS. What would that be?

Mr. BARRON. $64,000 if our projections are correct.

Mr. THOMAS. Let us take a look at utilization and disposal service.

FUNCTIONS OF THE SERVICE

Put page 159 in the record.
(The page follows:)

FUNCTIONS PERFORMED BY THE UTILIZATION AND DISPOSAL SERVICE

This service performs all functions of GSA with respect to the utilization of excess and disposal of surplus real and personal property, and the rehabilitation of personal property.

Basic operations are financed from two sources: (1) an annual appropriation, to be derived from proceeds of sales, for all force account activities and (2) a permanent authorization, also funded from proceeds of disposals for certain real property activities carried out under contractual arrangements, including services of appraisers, brokers, and auctioneers.

In addition, GSA operates on a reimbursable basis, on behalf of the Agency for International Development, a small minor-repair facility at former Cheli Air Force Base near Los Angeles, Calif. Selected items of excess property, generally vehicular or electrical, destined for use in the foreign aid program, are checked for operability, minor repairs are made, the items are painted, where necessary, and are then readied for overseas shipment. During the past year property originally acquired at a cost of $0.8 million was processed.

FUNCTIONS PERFORMED BY UTILIZATION AND DISPOSAL SERVICE

Mr. THOMAS. This is well worth reading:

This service performs all functions of GSA with respect to the utilization of excess and disposal of surplus real and personal property, and the rehabilitation of personal property.

Basic operations are financed from two sources: (1) an annual appropriation, to be derived from proceeds of sales, for all force account activities—

Maybe we had better look at that language again when we review it—

and (2) a permanent authorization, also funded from proceeds of disposals for certain real property activities carried out under contractual arrangements, including services of appraisers, brokers, and auctioneers.

In addition, GSA operates on a reimbursable basis, on behalf of the Agency for International Development, a small minor-repair facility at former Cheli Air Force Base near Los Angeles, Calif. Selected items of excess property, generally vehicular or electrical, destined for use in the foreign aid program, are checked for operability, minor repairs are made, the items are painted, where necessary, and are then readied for oversea shipment. During the past year property originally acquired at a cost of $0.8 million was processed.

You have an administrative cost of $420,000 taking care of that material that originally cost $800,000?

Mr. BOUTIN. The total labor cost was $33,115, material and overhead $9,272 in fiscal 1962, a total of $42,387.

Mr. THOMAS. The acquisition cost was $800,000?

Mr. BOUTIN. Yes, sir.

NEW OBLIGATION AUTHORITY AND AVERAGE EMPLOYMENT

Mr. THOMAS. Put the tables on page 160 and 161 in the record along with the general statement on page 162.

(The material referred to follows:)

UTILIZATION AND DISPOSAL SERVICE

Summary of new obligational authority and average employment

	New obligational authority		Average employment					
			Total		Central office		Field	
	1963	1964	1963	1964	1963	1964	1963	1964
A. NEW OBLIGATIONAL AUTHORITY AND RELATED EMPLOYMENT								
Operating expenses, "Utilization and disposal service":								
1. Real property	$3,887,600	$4,143,000	164.6	173.6	38.6	38.6	126.0	135.0
2. Personal property	3,904,500	4,385,700	417.4	445.5	61.2	61.2	356.2	384.3
3. Service direction	486,900	507,300	49.6	49.9	22.1	22.0	27.5	27.9

Total employment, "Utilization and disposal service"	-------	-------	667.0	705.2	121.9	121.8	545.1	583.4

[1] Represents employment involved in the property rehabilitation function, directly financed by GSA, and organizationally responsible to the utilization and disposal service.
[2] Funds available not considered new obligational authority in budget schedules.

Summary reconciliation of 1964 estimate to comparable amounts for 1963

1963 appropriation in annual act	$8,500,000
Proposed supplemental due to pay increase	270,000
Transfer from "Operating expenses, FSS"	370,000
Comparative total for 1963	9,140,000
Increase in 1964:	
Real property workload arising from phasing out military installations	172,400
Protection and maintenance for new accessions of complex high-value properties pending disposal	83,000
Further expansion of the utilization screening process estimated to increase by $35 million the volume of personal property put to further Federal use	200,500
Operation of the sales function of all civil agencies assumed by GSA on a phased basis beginning late in 1961	130,000
Rehabilitation of greater volume of personal property, including in-use and GSA-acquired excess, and under the AID program	150,700
Service direction	20,400
Administrative operations	103,000
1964 estimate	10,000,000

Analysis by activities

Activities	1963	Increases	1964 estimate
1. Real property	$3,887,600	$255,400	$4,143,000
2. Personal property	3,904,500	481,200	4,385,700
3. Service direction	486,900	20,400	507,300
4. Administrative operations	861,000	103,000	964,000
Total	9,140,000	860,000	10,000,000

1963 appropriation	$8,500,000
Transfer	370,000
Pay act supplemental	270,000
1963 Comparative	9,140,000
Change	860,000
1964 estimate	10,000,000

GENERAL STATEMENT

"This appropriation, derived from proceeds from the transfer of excess property and the disposal of surplus property, provides for all utilization and disposal functions of the General Services Administration with resect to excess and suplus real and personal property and the rehabilitation of personal property to be performed by the 'Utilization and disposal service,' except fees of auctioneers, brokers, etc., which are financed through a special account.

"Increases for 1964 provide for further emphasis on reuse or prompt disposal of existing real and personal property to obviate new capital and procurement outlays. Income from disposal activities in 1962 was $72.2 million, and is estimated to increase to $80.5 million in 1963, and $87 million in 1964.

"Fair value of personal property received from other appropriations or funds without cost for use by GSA is as follows: 1962, $12,000, 1963, $14,000; and 1964, $9,000." (From the budget for 1964.)

The estimate for 1964 includes $526,000 for increased pay costs as a result of the Federal Salary Reform Act of 1962. The total estimate of $10,000,000 represents an increase of $860,000 over 1963 financing, including $255,400 for real property activities, $481,200 for personal property activities, and $123,400 for service direction and administrative operations. A consolidated summary of workload, costs, and proceeds relating to this appropriation is shown on the following page.

APPROPRIATION LANGUAGE

"For necessary expenses, not otherwise provided for, incident to the utilization and disposal of excess and surplus property, *and rehabilitation of personal property*, as authorized by law, [$8,500,000] *$10,000,000*, to be derived from proceeds from the transfer of excess property and the disposal of surplus property."

Addition of the phrase "and rehabilitation of personal property" is to clarify and restate the authority transferred from Federal Supply Service to the Utilization and Disposal Service to rehabilitate personal property, including in-use as well as excess and surplus personal property. Included in the total request are funds for administrative expenses of personal supervising the rehabilitation program.

Mr. THOMAS. This is a good breakdown for 1963 and 1964, along with the employment.

Real property goes from $3.8 to $4.1 million; personal property goes from $3.9 to $4.3 million; service direction goes from $486,000 to $507,000; administrative operations goes from $861,000 to $964,000. The total for 1963 is $9,140,000 against $10 million this year.

Here are your jobs on the opposite side. For this year you have a total of 631, that is for 1963, against 669 for 1964.

You set out funds available not considered new obligational authority in budget schedules. And you show total employment for 1963, 667, against 705 for 1964.

The revolving fund under the General Supply Fund represents employment involved in the property rehabilitation function, directly financed by GSA, and organizationally responsible to the Utilization and Disposal Service.

EFFECT OF REORGANIZATION

How old is this new setup now?

Mr. BOUTIN. This is just about a year and a half old.

Mr. THOMAS. Is it working any better than the old setup?

Mr. BOUTIN. 1,000 percent better, Mr. Chairman, in the dollar income and improvement in utilization.

Mr. THOMAS. What did you add in your new setup you did not have before?

Mr. BOUTIN. We reorganized so that all this process of screening and handling real property and related personal property was brought together.

Mr. THOMAS. You have real property, personal property, and what else? Then you have service direction charged right to it?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. And you put your automobiles in the transportation service. Where were they before?

Mr. BOUTIN. Federal supply.

Mr. THOMAS. You took them from Federal Supply and put them under transportation?

Mr. BOUTIN. Yes.

Mr. THOMAS. So Federal Supply has been decreasing rather than increasing?

Mr. BOUTIN. As to that type of activity, that is true. Dollarwise, they are up.

Mr. THOMAS. What does that do to Federal Supply?

Mr. BOUTIN. It has gotten them out of the utilization and sales of personal property; it has gotten them out of rehabilitation; it has gotten them out of the motor pool; and it has gotten them out of the emergency stockpile activity for DHEW and DOD.

Mr. THOMAS. So what you did was cut Federal Supply about in half and made a new unit, Utilization and Disposal Service?

Mr. BOUTIN. We took utilization and disposal of personal property from Federal Supply but we took utilization and disposal of real property from Public Buildings.

Mr. THOMAS. Who is the distinguished gentleman who had that before?

Mr. BOUTIN. Mr. Moody.

Mr. THOMAS. You made a chief counsel out of him. You took him out of the real estate business and made a chief counsel out of him overnight.

Mr. BOUTIN. A good one, too.

Mr. THOMAS. How is that reorganization working out, Mr. Administrator?

Mr. BOUTIN. It is working out, I think, especially well. One of the problems we had before, for example, if we had a surplus plant Federal Supply was looking after the personal property and Public Buildings the real property. Now both are seen through one set of eyes and we think it is an improvement.

Mr. THOMAS. The cost has gone up and that is all I know I can go by. Here is another internal reorganization and the cost goes up. Is that not the ultimate test?

Mr. BOUTIN. No, I would say you have to measure it against the direct cash income to the Treasury and the indirect income to the Treasury through better utilization, which means somebody is not going out and buying something.

Mr. THOMAS. In 1963 the cost was $9,140,000. For 1964 it is $10 million. So there is an increase of $860,000.

Does your schedule for 1963 include all the activities included for 1964?

Mr. BOUTIN. Yes, it does.

Mr. THOMAS. Where is the saving?

Mr. BOUTIN. Increased utilization and increased sales. Part of the cost is the pay act cost which we would have been subject to anyway, and the increased cost is due to the increase in properties turned over to us by other agencies.

TRANSFER OF PROPERTY REHABILITATION FUNCTION

Mr. THOMAS. There is a very good table on page 161. You have an item of $370,000 "Transfer from operating expenses, Federal Supply Service." Which items do you transfer? Who got it?

Mr. BARRON. This is property rehabilitation which was transferred from Federal Supply to Utilization and Disposal Service.

Mr. BOUTIN. That was in Federal Supply before and we brought it into the Utilization and Disposal Service.

Mr. THOMAS. This $370,000 is not all rehabilitation?

Mr. BARRON. This $370,000 transfer representing property rehabilitation was accomplished in 1963 and therefore it appears in this reconciliation.

Mr. THOMAS. Where is it in 1964?

Mr. BARRON. That is the rehabilitation subactivity cost for 1964.

INCREASES IN 1964

Mr. THOMAS. Let us look at 1964. You show "Real property workload increases arising from phasing out military installation, $172,400."

Did you incur that cost by virtue of your new authority? In the new Executive order you got jurisdiction over some military property you did not have before?

Mr. BOUTIN. No, sir. The only thing the order did is that for military installations, which are off military reservations, we have the right and authority to prescribe the utilization.

Mr. THOMAS. You always had that authority, but under the new order you have authority to rehabilitate and reassign it?

Mr. BOUTIN. The minute it comes in our inventory the rehabilitation was vested in GSA.

Mr. THOMAS. What I have in mind is this: Say the Army transfers to you a building. Do the other agencies have an opportunity to come in and claim a part of it?

Mr. BOUTIN. They always did.

Mr. THOMAS. The new order did not change that?

Mr. BOUTIN. It did not change it at all.

Mr. THOMAS. "Protection and maintenance for new accessions of complex high-value properites pending disposal, $83,000." This is your increase.

"Further expansion of the utilization screening process estimated to increase by $35 million the volume of personal property put to further Federal use, $200,500."

"Operation of the sales function of all civil agencies assumed by GSA on a phased basis beginning late in 1961, $130,000."

"Rehabilitation of greater volume of personal property, including in-use and GSA-acquired excess, and under the AID program, $150,700."

Is this all by contract?

Mr. BARRON. No, sir: it is not. Part of it is through the Army. Most of it is through the Army and some through Federal prisons and GSA Force Account, or by contract.

Mr. THOMAS. Then you have an increase in "Service direction" of $20,400; and an increase in "Administrative operations" of $103,000. That makes up the difference between the $9,140,000 and $10 million.

You show an analysis by activities. Real property shows an increase of $255,400, making a total of $4,143,000 for 1964; personal property shows an increase of $481,200, making a total of $4,385,700; service direction shows an increase of $20,400, making a total of $507,300; and administrative operations shows an increase of $103,000, making a total of $964,000. So that balances out the $860,000 difference.

INCREASED PAY COSTS

You say the estimate for 1964 includes $526,000 for increased pay costs. Now you are looking for a supplemental for pay costs of $270,000. Does that mean you absorbed the difference between $526,000 and $270,000?

Mr. TURPIN. No, sir. The total cost was $275,000 for the pay increase. We are absorbing $5,000 of that for 1963.

Mr. THOMAS. I am talking about 1964. You do not have a supplemental for 1964 but you have one for $270,000 for 1963?

Mr. TURPIN. Yes.

Mr. THOMAS. What did you absorb in 1963?

Mr. TURPIN. $5,000.

Mr. THOMAS. Out of a total cost of $275,000?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. You did not work at it very hard, did you? You are not absorbing any for 1964?

Mr. TURPIN. Only to the extent that there is greater productivity for the employees there, but the amount of the 1964 appropriation that will go for the pay increase is $526,000.

Mr. THOMAS. The answer to my question is "No, not one penny." Off the record.

(Discussion off the record.)

APPROPRIATION ESTIMATE AND LANGUAGE

Mr. THOMAS (reading):

The total estimate of $10 million represents an increase of $860,000 over 1963 financing, including $255,400 for real property activities, $481,200 for personal property activities, and $123,400 for service direction and administrative operations.

What about this appropriation language, gentlemen?

For necessary expenses, not otherwise provided for, incident to the utilization and disposal of excess and surplus property—

That language includes just what it says? That is personal and real property?

Mr. BOUTIN. Both, yes.

Mr. THOMAS (continuing reading):

and rehabilitation of personal property, as authorized by law, $10 million, to be derived from proceeds from the transfer of excess property and the disposal of surplus property.

What part of that is appropriated funds?

Mr. TURPIN. The total amount of $10 million is appropriated but, according to the language, it is appropriated from proceeds rather than from the general fund of the Treasury.

Mr. THOMAS. Instead of the $10 million going to the Treasury, it will be used for administrative expenses?

Mr. TURPIN. Yes, sir; from an appropriation from proceeds deposited with Treasury.

Mr. THOMAS. What is to be gained by that?

Mr. BOUTIN. The source doesn't make much difference. Either it is a direct appropriation or it comes from income. The end result will be precisely the same. The request we are making is the inclusion of the words "and rehabilitation of personal property."

INCOME FROM OPERATIONS

Mr. THOMAS. Let us turn to that table on page 163 and put it in the record.

(The table follows:)

Utilization and disposal of real and personal property workload, costs, and proceeds

	1961		1962		1963		1964	
	Number of real properties	Acquisition cost	Number of real properties	Acquisition cost	Number of real properties	Acquisition cost	Number of real properties	Acquisition cost
OPERATING EXPENSES, UDS								
Utilization transfers:		*Millions*		*Millions*		*Millions*		*Millions*
Real property	122	$87.0	99	$97.0	140	$130.0	145	$140.0
Personal property		310.1		362.7		400.0		435.0
Total		397.1		459.7		530.0		575.0
Sales:								
Real property	275	413.0	260	442.0	375	550.0	385	600.0
Personal property		24.4		39.8		56.0		56.0
Total		437.4		481.8		606.0		656.0
Donations:								
Real property	203	143.0	236	191.0	260	215.0	270	225.0
Personal property		387.7		350.7		450.0		450.0
Total		530.7		541.7		665.0		675.0
Rehabilitation (personal property)		13.4		21.0		28.5		70.0
Costs:								
Real property (includes utilization, sales, donation, protection and maintenance, and payments in lieu of taxes)		*Amount* $3,259,760		*Amount* $3,403,474		*Amount* $3,887,600		*Amount* $4,143,000
Personal property (includes utilization, sales, donations, and rehabilitation)		2,915,604		3,423,835		3,904,500		4,385,700
Service direction				410,486		486,900		507,300
Administrative operations		641,700		788,300		861,000		964,000
Subtotal		6,817,064		8,026,095		9,140,000		10,000,000
Expenses, disposal of surplus real and related personal property		1,229,196		1,209,224		2,200,000		2,200,000
Total		8,046,260		9,235,319		11,340,000		12,200,000

Proceeds:								
Selling price: [1]								
Real property		71,607,605		78,901,300		85,000,000		100,400,000
Personal property		4,100,000		6,400,000		12,500,000		14,000,000
Total		75,707,605		85,301,300		97,500,000		114,400,000
Income:								
Real property		57,182,286		65,811,097		68,000,000		73,000,000
Personal property		4,100,000		6,400,000		12,500,000		14,000,000
Total		61,282,286		72,211,097		80,500,000		87,000,000

[1] Difference between income and selling price is attributable to deferred payment sales of real property.

NOTE.—In order to reduce administrative costs, detailed records accounting for individual numbers of personal properties utilized, sold, donated, or rehabilitated were not maintained. All records are based on acquisition costs as reflected above.

Mr. THOMAS. How much did we put in the Treasury over and above operating costs from personal property and how much from real property?

Mr. BOUTIN. In fiscal 1962, Mr. Chairman, we returned to the Treasury, either in cash or in receivables—because some of the sales were on credit—about $85 million; about $79 million from real property and $6 million from personal property.

For fiscal 1964 we are anticipating proceeds of $100.4 million from real property——

Mr. THOMAS. Wait a minute. Show it on the chart. It shows the transfers for 1961, 1962, 1963, and 1964 at the top. At the bottom you have income.

Mr. BOUTIN. That is the part I was on, proceeds.

Mr. THOMAS. You show real property income, 1961, $57.2 million and personal property $4.1 million. What was the acquisition cost?

Mr. BARRON. $437.4 million.

UTILIZATION TRANSFERS

Mr. THOMAS. Under utilization transfers you show for acquisition cost of real property in 1964, $140 million, and acquisition cost of personal property $435 million, a total of $575 million. You set up the number of real properties as 145, and your personal property would run up to what? No telling?

Mr. BARRON. No telling.

DONATIONS

Mr. THOMAS. Your donations always intrigue me. Look at that. Real property $225 million, personal property $450 million, making a total of $675 million. That goes to nonprofit organizations such as religious and charitable institutions, either a State or private institution so long as it is a nonprofit public institution?

Mr. BOUTIN. They have to qualify under standards set by DHEW. Some of this is airport property under FAA authority and some is civil defense for the personal property.

INCOME FROM REAL PROPERTY SALES

Mr. THOMAS. Let us take a look at the income. That is the interesting part. You have real property for this year of $57.2 million and the acquisition cost was $413 million.

Mr. TURPIN. Mr. Chairman, regarding those bottom two lines, the reason we have two of them, the selling price is related to the acquisition cost. The bottom line, income, is what was actually taken into the Treasury that year. Occasionally property will be sold on credit and paid out over several years, particularly in real estate.

Mr. BOUTIN. We sell a lot on credit.

Mr. THOMAS. So these figures mean in 1964——

Mr. TURPIN. There will be proceeds from real property of $100,400,000. That is the selling price.

Mr. BOUTIN. The rest of it would be on credit.

Mr. EVINS. Is the balance covered by an interest-bearing note?

Mr. BOUTIN. Yes, 5 percent.

Mr. THOMAS. What will you take in by way of income from real property in 1964? Your acquisition cost was $600 million.

Mr. BOUTIN. Of the $114,400,000 selling price combining real and personal property, we will collect $87 million and we will have mortgages of $27.4 million; against an acquisition cost of $656 million.

Mr. THOMAS. You will sell this year $100 million of real property? You think you will get that much for it?

Mr. BOUTIN. Yes.

Mr. THOMAS. What did it cost you?

Mr. BOUTIN. $600 million, the original investment.

Mr. EVINS. You carry the original investment price on your books?

Mr. BOUTIN. The acquisition cost.

INCOME FROM PERSONAL PROPERTY

Mr. THOMAS. And from your personal property you think you will get $14 million and the cost of that was how much?

Mr. BOUTIN. $56 million.

Mr. THOMAS. Let us see what you did in 1963.

Mr. BOUTIN. 1963 are estimated figures but on acquisition cost of real estate of $550 million and on personal property of $56 million, totaling $606 million, we anticipate proceeds of $85 million from real estate and $12,500,000 from personal property, totaling $97,500,000 with $17 million being on credit and cash for the balance.

Mr. THOMAS. You have a completed year; that is 1962.

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. That shows you will double your income from proceeds from personal property a little better than 100 percent, from $6.4 million to $14 million?

Mr. BOUTIN. Yes.

Mr. THOMAS. But your giveaway figure still remains the big one.

Mr. BOUTIN. And the utilization figure is going up all the time, which is a direct saving.

Mr. EVINS. Are the acquisition figures the exact figures it cost the U.S. Government for the properties acquired?

Mr. BOUTIN. As near exact as we can get them.

UTILIZATION TRANSFERS

Mr. THOMAS. Explain your utilization transfers, real and personal property. They are big figures, $140 million for real property and $435 million for personal property. You show no income whatsoever on that and that is big money. Where is the saving?

Mr. BOUTIN. The saving, Mr. Chairman, is that these, particularly personal property, are items that the agencies and departments would have purchased new if they had not been transferred.

Mr. THOMAS. Utilization applies only to transfers within the Federal Government?

Mr. BOUTIN. Yes.

Mr. THOMAS. It has nothing to do with transfers to public or private nonprofit organizations?

Mr. BOUTIN. That is right.

Mr. THOMAS. And your big increase is in your utilization and not in your sales, either personal or realty.

What was your utilization in 1961 in personal property?

Mr. BOUTIN. $310.1 million in personal property.

Mr. THOMAS. What did that property cost you?

Mr. BOUTIN. That is at acquisition cost.

Mr. THOMAS. What is it for 1962?

Mr. BOUTIN. $362.7 million. It is up to $400 million in 1963 and projected at $435 million in 1964.

Mr. THOMAS. It goes up a little less than 10 percent.

Mr. BOUTIN. One of the best customers, Mr. Chairman, as the years go by, for the real property will be GSA itself. Wherever one of the properties is turned over as excess to the needs of an agency, we look it over to see if we can rehabilitate it for our use instead of leasing.

Mr. OSTERTAG. Do you mean for use by GSA or some other agency?

Mr. BOUTIN. Use by GSA or for use by another agency.

LEGALITY OF DONATIONS

Mr. THOMAS. I received a letter from a distinguished constituent of mine who is a Ph. D. and he raised a very unique point. He said it was unconstitutional for GSA to give away the taxpayers' property.

Mr. EVINS. You will have to refer that to Mr. Moody.

Mr. THOMAS. Off the record.

(Discussion off the record.)

Mr. THOMAS. Are you violating the Constitution, Judge Moody?

Mr. MOODY. Not in my opinion, Mr. Chairman. I do not think there is any question about the constitutionality of this law.

Mr. THOMAS. Has it ever been raised? Have the courts ever passed on it?

Mr. MOODY. To my knowledge it has never been tested in court.

Mr. THOMAS. Here it is, A, B, and C John Public are paying money every year to buy this property and next year you turn around and give it to C, D, and E. Does my constituent have a point?

Mr. MOODY. I do not think he has a point, but it has never been tested in court.

Mr. BOUTIN. And it has been going on a long time.

Mr. MOODY. Under this act since 1949.

Mr. BOUTIN. And we had a prior act in 1944.

ACQUISITIONS OF PROPERTY

Mr. OSTERTAG. Does not the whole picture of the tremendous amount of property, both real and personal, that you find yourselves involved in the disposal or utilization of indicate a rather loose and carefree acquisition in the first place?

Mr. BOUTIN. No; I do not think it does, Mr. Congressman, particularly in the real estate. Most of the real properties we get have been used by the Federal Government for many, many years. Some of the pieces of property go back to World War I and before, some from the Civil War. These are nice ones, by the way, to figure the investment on.

Personal property changes all the time. A lot of it is scrap. Airplanes are scrap where you dispose of just metal or parts.

Mr. OSTERTAG. I am not criticizing GSA because you are merely the agency responsible for disposals, but I mean the development of so much excess property which requires disposal indicates purchases were made that were in excess of the needs.

Mr. EVINS. In the wartime they had need for it.

REAL PROPERTY

Mr. THOMAS. We will put pages 164 and 165 in the record.

(The pages follow:)

1. Real property

	Amount	Average employment		
		Departmental	Field	Total
1963	$3,887,600	38.6	126	164.6
Change	+255,400		+9	+9.0
1964	4,143,000	38.6	135	173.6

HIGHLIGHT

"This activity provides for (*a*) utilization of excess and disposal of surplus real property, including national industrial reserve properties; (*b*) protection and maintenance of excess, surplus, and national industrial reserve properties; and (*c*) payments in lieu of taxes on certain properties as required by law. The increase for 1964 is directly related to the current program of phasing out various military installations over a period of years and provides for utilization transfers of 145 properties in 1964 as compared to 140 in 1963, and sale of 385 surplus properties in 1964 as compared to 375 in 1963." (From the budget for 1964.)

Justification of the activity is made under three subactivities summarized below:

Summary of performance cost

	1962	1963	1964
(*a*) Utilization and disposal	$1,367,662	$1,697,300	$1,869,700
(*b*) Protection and maintenance	1,771,094	1,917,000	2,000,000
(*c*) Payments in lieu of taxes	264,718	273,300	273,300
Total cost or estimate	3,403,474	3,887,600	4,143,000

JUSTIFICATION

A consolidated summary of the real property activity financing, workload, and proceeds is shown on exihibit A, page 167.

(*a*) *Utilization and disposal.*—As indicated on exhibit A, the ending inventory of surplus real properties, June 30, 1964, is estimated at 248 properties costing $850 million, compared to 250 properties costing $800 million estimated for June 30, 1963, and ending inventory June 30, 1962, of 256 properties costing $765 milion.

The foregoing shows a trend of reduction in the number of properties in inventory while the volume measured in terms of acquisition cost is continuing to rise. The excess and surplus real property inventory is becoming heavily weighted with a relatively small number of high-cost industrial complexes, as illustrated by the fact that as of June 30, 1962, only 71 industrial properties were in inventory costing $788 million whereas we had 344 nonindustrial properties costing $385 million.

Total cost or estimate:

1962	$1,367,662
1963	1,697,300
1964	1,869,700

The increase for 1964 is directly related to the utilization or disposal of these industrial properties now in inventory, and to the current DOD program of phasing out various high-cost facilities over a period of years. It provides full-year financing for staff recruited in 1963 and for three realty officers and one clerk in field offices to provide sufficient support to attain the accelerated 1964 utilization and disposal program.

(*b*) *Protection and maintenance.*—Provides for the physical care, handling, protection, maintenance, and repairs of certain properties pending disposal.

Total cost or estimate:

1962	$1,771,094
1963	1,917,000
1964	2,000,000

The estimated number of properties for which protection and maintenance is provided will decline from 67 in 1963 to 63 in 1964. The 1964 estimate, however, includes several new accessions of high-value instalations involving substantial protection and maintenance.

Exhibit B, page 168, shows the protection and maintenance costs for reserve and surplus properties.

(*c*) *Payments in lieu of taxes.*—Provides for payments in lieu of taxes at the 1963 rate on certain properties as required by the act of Congress approved August 12, 1955 (69 Stat. 722), as amended (40 U.S.C. 523).

Total cost or estimate:

1962	$264,718
1963	273,300
1964	273,300

Exhibit C, page 172, lists the properties on which payments are made.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $1,500,800 for 178 positions distributed as follows:

	1962	1963	1964
Central office	40	40	40
Regional offices	121	134	138
Total positions	161	174	178
Average employment	143.1	164.6	173.6

Other objects: $2,642,200, provides:

(1) $112,600 personnel benefits, including $97,600 retirement contributions, $9,500 health benefits and $5,500 group insurance.

(2) $2,021,600 other services, including $2,000,000 for protection and maintenance of excess, surplus and reserve real properties; $9,000 to the Department of the Interior for investigations in connection with the conveying of real property for park, recreational and historic monument purposes; $12,600 for contractual services.

(3) $273,300 for payments in lieu of taxes.

The remainder of $234,700, or 5.7 percent of total estimate, includes:

(4) $90,000 for 3,333 days travel at $27 per day; $15,900 for motor pool services.

(5) $3,200 for transportation of things; $44,400 communications including $10,000 for postage fees.

(6) $42,300 printing; $28,800 supplies; $10,100 equipment.

Mr. THOMAS. Let us look at the table in the middle of page 164. This deals with real property. You show a summary of performance cost for 3 years, 1962, 1963, and 1964. That is broken down into utili-

zation and disposal, protection and maintenance, and payments in lieu of taxes.

Your utilization and disposal cost is $1,869,700 for 1964 against $1,697,300 in 1963.

For protection and maintenance you have a cost of $2 million in 1964 against $1,917,000 in 1963.

Your payments in lieu of taxes are the same in 1963 and 1964, $273,300.

Mr. OSTERTAG. Does that reflect the payments made in lieu of taxes on all Federal property?

Mr. BOUTIN. This is the total amount of payments that we, by authority of Congress, make in lieu of taxes on certain properties we handle.

Mr. THOMAS. RFC properties.

You show no cost on personal property. Why is that?

Mr. BOUTIN. It is under the next section, Mr. Chairman.

Mr. THOMAS. Here it is.

PERSONAL PROPERTY

Put page 174 on personal property in the record. Also include 176 and 177.

(The pages follow:)

2. Personal property

	Amount	Average employment		
		Department	Field	Total
1963	$3,904,500	61.2	356.2	417.4
Change	+481,200		+28.1	+28.1
1964	4,385,700	61.2	384.3	445.5

HIGHLIGHT

"This activity provides for (a) utilization of usable excess personal property, thereby obviating new purchases; (b) sale of surplus personal property; and (c) rehabilitation of personal property. The increase for 1964 provides for screening of excess inventories held by contractors with the Department of Defense and extending sales responsibility to cover the remaining civil agencies not now served. Utilization transfers at acquisition cost were $362.7 million in 1962 and are estimated at $400 million in 1963 and $435 million in 1964. Proceeds from sale of surplus personal property were $6.4 million in 1962 and are programed at $12.5 million in 1963 and $14 million in 1964." (From the budget for 1964.)

Justification of the activity is made under three subactivities summarized below:

Summary of performance cost

	1962	1963	1964
(a) Utilization and donation	$2,182,250	$2,450,000	$2,650,500
(b) Sales	949,188	1,067,700	1,197,700
(c) Rehabilitation	292,397	386,800	537,500
Total cost or estimate	3,423,835	3,904,500	4,385,700

JUSTIFICATION

(a) *Utilization and donation.*—The volume of personal property being generated excess by owning agencies declined from $6.6 billion in 1960 to $2.8 billion in 1962. In 1964, we expect to screen for further Federal use about $2 billion out of the total volume, $1 billion of which should have good potential for further Federal use and, therefore, will be fully screened under our documentation system. The additional $1 billion, estimated to have a more limited use potential, will be screened by physically reviewing owning agency records of excess property not required to be reported to GSA for screening through the regular documentation process.

In 1964, we expect the total volume of personal property put to further Federal use through GSA efforts to reach $435 million (21.8 percent of the total screened), compared to $400 million (20 percent of the total screened) in 1963. The 1964 program provides for continued utilization screening on behalf of all Federal agencies as well as continued interservice and civil agency screening of DOD property (1) having line item values of less than $3,000; (2) proposed for disposal under exchange/sale authorities (begun in 1963); and (3) located in contractors' plants (excess contractor inventory).

Notwithstanding the decline in total volume mentioned above, the volume of property put to further Federal utilization has steadily increased from $218 million in 1960 to $435 million estimated for 1964. Surplus personal property costing $450 million will be donated each year in 1963 and 1964 for health, education, and civil defense uses within the States, compared to $350.7 million in 1962. Direct cost of handling the personal property utilization program in 1964 is 61 cents per $100 at acquisition cost of property utilized, compared to 61 cents in 1963, 60 cents in 1962, and 66 cents in 1961.

The increase in 1964 over 1963 provides full-year financing of positions authorized in 1963 and for 25 additional positions in field offices (15 staff officers and 10 clerical personnel) to produce an increase of $35 million over the 1963 program.

Screening, donation, and utilization workload and unit cost follow:

	1962	1963	1964
Utilization transfers (acquisition cost, in millions)	$362.7	$400.0	$435.0
Unit cost (per $100 transferred)	0.60	0.61	0.61
Performance cost	2,182,250	2,450,000	2,650,500
Property donated (acquisition cost, in millions)	350.7	450	450
Property screened (acquisition cost, in millions):			
Property with general applicability	621.0	1,000	1,000
Property with specialized applicability	852.8	1,000	1,000
Total	1,473.8	2,000	2,000

(b) *Sales.*—Until December 1960 the surplus property sales function had been delegated to the owning agencies under regulation by GSA. Steps are being taken to integrate the total civilian agenices' sales function into GSA. This is expected to be substantially complete by the end of 1963. During 1964 the sales volume is expected to remain at the 1963 rate of $56 million at acquisition cost. Proceeds are estimated to increase to $14 million in 1964, up from $12.5 million in 1963 and $6.4 million in 1962. The percentage of return, 1963–64, is estimated to remain at 18 percent. Unit cost in 1964 is expected to increase slightly over the projected level of $8.54 in 1963, compared to $14.94 actual in 1962.

The increase in 1964 over 1963 provides full-year financing for staff recruited in 1963 to produce an increase of $1.5 million in proceeds from the sale of surplus personal property.

The acquisition cost of property sold, sales proceeds, and unit cost follow:

	1962	1963	1964
Usable property sold (acquisition cost, in millions)	$39.8	$56.0	$56.0
Proceeds (percentage of acquisition cost)	15	18	18
Proceeds from usable property (in millions)	$5.8	$10.1	$10.1
Proceeds from scrap (in millions)	.6	2.4	3.9
Total proceeds	$6.4	$12.5	$14.0
Unit cost (per $100 proceeds)	$14.94	$8.54	$8.56
Performance cost	$949,188	$1,067,700	$1,197,700

(c) *Rehabilitation.*—Personal property to be rehabilitated in 1964 is estimated at $70 million, up from $28.5 million estimated for 1963 and $21 million in 1962. Beginning in 1964 rehabilitation services will be extended to the rehabilitation of excess property acquired by the Agency for International Development under section 608 of Public Law 87-195 (the Foreign Assistance Act of 1961). This will account for $41 million of the 1964 total estimate of $70 million. The balance of the 1964 estimate, or $29 million, is attributable to in-use and GSA-acquired excess property.

Unit costs will reduce to $0.77 per $100 of acquisition cost for property rehabilitated in 1964, compared to $1.36 in 1963 and $1.39 in 1962.

Workload and performance cost data for the "Personal property rehabilitation" activity is shown below.

The increase in 1964 over 1963 provides full-year financing for staff recruited in 1963 and for 14 additional positions in field offices to produce an increase of $41.5 million in terms of acquisition cost of property rehabilitated, at an increase in savings to the Government of $37.3 million in 1964 over 1963.

Acquisition cost of property rehabilitated, the cost of rehabilitation, savings to the Government, and unit cost follow:

	1962	1963	1964
Property rehabilitated (acquisition cost, in millions)	$21.0	$28.5	$70.0
Rehabilitation cost (in millions)	4.2	7.0	11.2
Savings (in millions)	16.8	21.5	58.8
Cost per $100 at acquisition cost	1.39	1.36	0.77
Performance cost	292,397	386,800	537,500

Personnel compensation and staffing: $3,338,800 for 471 positions distributed as follows:

	1962			1963			1964		
	Department	Field	Total	Department	Field	Total	Department	Field	Total
(a) Utilization and donation program	36.0	231.0	267.0	35.0	246.0	281.0	35.0	271.0	306.0
(b) Sales program	21.0	83.0	104.0	21.0	84.0	105.0	21.0	84.0	105.0
(c) Rehabilitation program	5.0	32.0	37.0	7.0	39.0	46.0	7.0	53.0	60.0
Total positions	62.0	346.0	408.0	63.0	369.0	432.0	63.0	408.0	471.0
Average employment	58.0	321.5	379.5	61.2	356.2	417.4	61.2	384.3	445.5

Mr. THOMAS. For 1964 you want a total employment of 445, an increase of 28. You say:

This activity provides for (a) utilization of usable excess personal property, thereby obviating new purchases; (b) sale of surplus personal property; and (c) rehabilitation of personal property.

Do you actually take physical possession of this property?

Mr. BOUTIN. Some of it we do, Mr. Chairman.

Mr. THOMAS. Where do you store it after you take possession?

Mr. BOUTIN. Will you explain how that happens?

Mr. ROOS. We have two centers, one here in the former gun factory, and one in Denver. Those are the only two sales offices we have.

Mr. THOMAS. You only accumulate that property in nearby areas?

Mr. ROOS. That is right. The rest is sold on the site.

Mr. THOMAS. Why set up these two?

Mr. ROOS. Because we found in these two particular areas, because of the Federal center at Denver, all the Federal activities there, and the Federal activities here, that it was better to consolidate the sales.

Mr. BOUTIN. A lot of it is automobile sales where we can group them and get a better price.

Mr. THOMAS. Proceeds from sale of surplus personal property were $6.4 million in 1962 and are programed at $12.5 million in 1963 and $14 million in 1964.

You have an interesting table in the middle of the page.

How much do you spend in those two centers, the one in the District of Columbia and the one in Denver? Most all of that were automobiles?

Mr. BOUTIN. That is the general thing, and typewriters.

Mr. ROOS. In the District of Columbia $74,957. In Denver $25,638.

Mr. THOMAS. If you had to transport this property from all over the country——

Mr. BOUTIN. We would go broke, Mr. Chairman.

Mr. THOMAS. So you do not pay rent outside the two centers?

Mr. BOUTIN. I do not think we pay rent.

Mr. ROOS. We do not pay rent.

Mr. THOMAS. All your expense is salary?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. What does your personnel do?

PERSONAL PROPERTY REHABILITATION

You say:

> Personal property to be rehabilitated in 1964 estimated at $70 million, up from $28.5 million estimated for 1963 and $21 million in 1962. Beginning in 1964 rehabilitation services will be extended to the rehabilitation of excess property acquired by the Agency for International Development under section 608 of Public Law 87-195 (the Foreign Assistance Act of 1961). This will account for $41 million of the 1964 total estimate of $70 million. The balance of the 1964 estimate, or $29 million, is attributable to in-use and GSA-acquired excess property.

What was the figure we had awhile ago, $41 million rehabilitation for AID?

Mr. BOUTIN. Yes, estimated for 1964.

UTILIZATION PERSONNEL

Mr. THOMAS. Where are your personnel located?

Mr. BOUTIN. In each of the regional offices and here in Washington.

Mr. THOMAS. You have a total of 471.

Mr. BOUTIN. Yes.

Mr. THOMAS. In the field for 1964 you have 408 and 63 in the District of Columbia. What do these people do? The personnel is going up and up. What do they do?

Mr. BARRON. In rehabilitation, sir, or overall?

Mr. THOMAS. In this activity.

Mr. BARRON. In utilization, where we have the bulk of the people, we have the bulk of the saving through further use. They assign excess property for further Federal use by screening declarations of reported excess property and making contacts with using agencies to get further Federal utilization. We are asking for operating funds to handle utilization transfers in 1964 of property totaling $435 million at acquisition cost.

In the sales area they are engaged in the selling process.

As far as donations are concerned, that is covered in our utilization cost. The same people operate that.

Mr. THOMAS. I notice it costs 61 cents per $100?

Mr. BARRON. Yes, sir, for utilization.

Mr. THOMAS. What do the people do in utilization? That is not sales?

Mr. BARRON. That is correct. They receive reports of excess property and they prepare bulletins and circularize them.

Mr. THOMAS. It is all office work?

Mr. BARRON. And contact.

Mr. THOMAS. Any inspection?

Mr. BARRON. Yes, there is inspection and we have area utilization officers included who are out at military installations or other Federal sites.

PRINTING COSTS—PERSONAL PROPERTY

Mr. THOMAS. For printing you have $220,000 against $201,000. Is that $220,000 all for utilization?

Mr. BOUTIN. That is the total for personal property, Mr. Chairman. This includes printing of brochures, printing of catalogs——

Mr. BARRON. That is across the board. It would include bulletins on utilization.

Mr. THOMAS. Can you break it down between utilization, sales, and so on?

Mr. BARRON. The bulk goes for utilization.

Mr. THOMAS. What is the nature of your printing bill?

Mr. BARRON. For one item?

Mr. THOMAS. What do you spend for utilization on either real or personal property out of $220,000 for printing? How much do you spend on utilization?

Mr. BARRON. The bulk of it goes into these things [indicating].

These are excess property catalogs circularized on a regional basis throughout the United States.

Mr. THOMAS. How many of them are there?

Mr. BARRON. There are hundreds of them that go out as the property becomes available.

Mr. BOUTIN. I can give you a breakdown on printing and reproduction for the "Personal property activity," Mr. Chairman. The costs are $118,000 for utilization, $92,000 for sales, and $10,000 for rehabilitation.

Mr. THOMAS. How much do you spend now on donations? Do you spend any money on that for printing?

Mr. EVINS. $41 million on rehabilitation property given away.

Mr. BARRON. We do give out a bulletin but there is——

SERVICE DIRECTION—UDS

Mr. THOMAS. Your administrative expenses, $507,000 and it goes up $20,400.

You do not have any increase in jobs. You have about 50 jobs and that is general supervision. Does it take 50 people in the District of Columbia to supervise some 400 in the field?

Mr. BOUTIN. There are 22 in the District and 28 in the field for a total of 50, Mr. Chairman.

Mr. THOMAS. They all are supervisors?

Mr. BOUTIN. No, sir; regional directors and supporting staff.

PROPERTY REHABILITATION FOR AID

Mr. EVINS. What are you planning to do on this rehabilitation work for the Foreign Assistance Act?

Mr. BOUTIN. We have a memorandum of understanding we negotiated as a part of the triangular arrangement between AID, GSA, and the Department of the Army where the Army, at three installations over the country, rehabilitates primarily heavy equipment that AID can pick up from us or through us and have rehabilitated and use it for oversea aid.

Mr. EVINS. That would be a whole lot cheaper than doing it here or sending technicians out and training them over there?

Mr. BOUTIN. Very substantially cheaper.

Expenses, disposal of surplus real and related personal property

1963	$2,200,000
Change	0
1964	$2,200,000

HIGHLIGHT

"Appraisers, auctioneers, and brokers familiar with local markets are used to accelerate the disposal of surplus real and related personal property. Fees of appraisers, auctioneers, and brokers and costs of advertising and surveying are paid out of receipts, subject to a limit of 12 percent of the proceeds of all dispositions within each year (40 U.S.C.A. 485(b)). Also paid from such proceeds is the direct expense in connection with utilization of excess real and related personal property (68 Stat. 1051). Sales by both auctioneers and brokers amounted to $8.2 million in 1962 and are estimated at $12 million in 1963 and $14 million in 1964." (From the budget for 1964.)

JUSTIFICATION

Effective disposal of surplus real property is achieved by relying on use of contract realty brokers and auctioneers to supplement other disposal methods. The estimated fees of auctioneers and brokers amount to approximately 40 percent of the total requirements in both 1963 and 1964. Properties sold by auctioneers and brokers totaled 37 in 1962 and are estimated at 55 in 1963 and 1964.

Distribution of obligations by major category follows:

	1962	1963	1964
Surplus property	$1,074,653	$2,075,000	$2,075,000
Excess property	134,571	125,000	125,000
Total	1,209,224	2,200,000	2,200,000

Obligations by activity

	1962	1963	1964
Appraisers' fees and surveying	$637,811	$650,000	$650,000
Auctioneers' and brokers' fees	257,610	900,000	900,000
Advertising	313,803	650,000	650,000
Total obligations	1,209,224	2,200,000	2,200,000

A summary of the disposal workload and accomplishments financed in part from this appropriation is reflected in "Activity 1: Real Property," under "Operating expenses, UDS."

Mr. THOMAS (reading):

Appraisers, auctioneers, and brokers familiar with local markets are used to accelerate the disposal of surplus real and related personal property. Fees of appraisers, auctioneers, and brokers and costs of advertising and surveying are paid out of receipts, subject to a limit of 12 percent of the proceeds of all dispositions within each year (40 U.S. C.A. 485(b)). Also paid from such proceeds is the direct expense in connection with utilization of excess real and related personal property (68 Stat. 1051). Sales by both auctioneers and brokers amounted to $8.2 million in 1962 and are estimated at $12 million in 1963 and $14 million in 1964.

That is by statute, is it not?

Mr. BARRON. Yes, sir.

Mr. THOMAS (reading):

Also paid from such proceeds is the direct expense in connection with utilization of excess real and related personal property (68 Stat. 1051). Sales by both auctioneers and brokers amounted to $8.2 million in 1962 and are estimated at $12 million in 1963 and $14 million in 1964.

APPRAISERS' FEES

What is your average fee that you pay?

If you are going to sell $12 million, did it cost you $2.2 million for the appraisers' fees?

Mr. BARRON. We estimate the average appraisal cost for this year will be about $2,500 per contract appraisal.

Mr. THOMAS. You have a top limitation of 12 percent set by law. What do you pay? Do you pay the top 12 percent?

Mr. BARRON. No, sir. We pay contract appraisers on the basis of a fixed amount of dollars, a fixed contract price. This 12 percent is simply a maximum limitation on the total amount of proceeds of all dispositions that can be used under this authorization by statute.

Mr. THOMAS. It says that the fees of appraisers, auctioneers, and brokers and costs of advertising and surveying are paid out of receipts, subject to a limit of 12 percent. That is what the law says

and that is your basic act. Are you going to sell $12 million worth of property in 1963? Ten percent of $12 million is how much?

Mr. BOUTIN. $1.2 million.

Mr. THOMAS. What are you doing with this $1.2 million?

Mr. BOUTIN. $2.2 million is the total amount.

NATURE OF STATUTORY LIMITATION

Mr. MOODY. The 12 percent statutory limitation is really not a limitation on how much we can pay for the appraisers. That is a limitation on how much of the total proceeds can be put into this special account to use to pay appraisers, advertising, brokers, auctioneers, and surveyors.

Under the law that authorizes us to employ brokers, for example, we pay the going rate in a community.

Mr. THOMAS. You have a top limitation for all of your disposal items, excess, printing, and what not, of 12 percent.

Mr. MOODY. Yes; a limitation on the real property direct expenses which can be paid out of this fund. There is a top limitation of 12 percent on the amount of proceeds that can be used for this purpose.

Mr. THOMAS. I am asking, do you live within that 12 percent? On the face of it, you are paying what, 18 or 19 percent?

Mr. TURPIN. Mr. Chairman, if you applied that 12 percent to the $100 million disposal in 1964 that would be a top of $12 million that could be used under this authority. Under the estimate, it is only——

Mr. THOMAS. No; you say you are going to pay auctioneers and brokers $8.2 million. You are talking about what?

(Reading:)

Also paid from such proceeds is the direct expense in connection with utilization of excess real and related personal property.

Sales were $12 million, not $100 million, but $12 million.

Mr. BOUTIN. What we need here is the fee we pay as a percent of the sales price. In 1962 it was 3 percent.

Mr. THOMAS. It looks like you are spending 19 percent and that is all I am saying.

Mr. BARRON. Sir, the $12 million is the estimated amount of sales to be accomplished through auctioneers and brokers in 1963. The 12-percent statutory limitation, if applied to the estimated total proceeds of $100 million in 1964, would provide about $12 million maximum limitation.

Mr. THOMAS. Your justification does not say that.

Read the statute.

Do you have the statute here?

I remember we looked into it two or three times and it applies to your cost of brokerage fees.

Mr. OSTERTAG. Would not the 12-percent limitation for brokers and auctioneers be applicable to their sales?

Mr. THOMAS. Yes.

Mr. MORELAND. No, sir; applicable to the total proceeds which will be $100 million in 1964.

Mr. BOUTIN. On these contracts, what is your average fee in relation to income from a specific property? Do you run 4 percent or 3 percent?

Mr. MORELAND. Appraisal is one-fourth of 1 percent.

Mr. THOMAS. Do you mean your figure is wrong? It is either $100 million or $12 million. You set it out in your justification that you are going to dispose of $12 million worth of real property here in 1963 via the auctioneers and appraiser route, and so forth.

Mr. OSTERTAG. In your justification it states that sales by both auctioneers and brokers amounted to $8.2 million in 1962, and are estimated at $12 million in 1963 and $14 million in 1964.

Why is this not 12-percent applicable to the specific sales of auctioneers and brokers?

Mr. THOMAS. Read the statute, please.

Mr. MORELAND. That applies not only to proceeds realized through auctioneers and brokers——

Mr. THOMAS. Read the law. If you are right, your justification is wrong. Go ahead.

Mr. MOODY. Maybe it would be useful if I read the whole section since it is not very long.

Mr. THOMAS. Go ahead.

EXCERPT FROM SECTION 204(b), FEDERAL PROPERTY ACT

Mr. MOODY (reading):

All the proceeds of such dispositions of surplus real and related personal property made by the Administrator of General Services shall be set aside in a separate fund in the Treasury. Not more than an amount to be determined quarterly by the Director of the Bureau of the Budget may be obligated from such fund by the Administrator to pay the direct expenses incurred for the utilization of excess property and the disposal of surplus property under this act for fees of appraisers, auctioneers, and realty brokers, and for advertising and surveying. Such payments from this fund may be used either to pay such expenses directly or to reimburse the fund or appropriation initially bearing such expenses. Fees paid to appraisers, auctioneers, and brokers shall be in accordance with the scale of fees customarily paid for such services in similar commercial transactions, and in no event shall more than 12 per centum of the proceeds of all dispositions within each fiscal year of surplus real and related personal property be paid out of such proceeds under this authorization to meet direct expenses incurred in connection with such dispositions.

Then we have to account for it once each year.

PROCEEDS FROM REAL PROPERTY DISPOSALS

The point is that under this law, if our estimate of $100 million of income for real property next year is right, we would be authorized to spend up to 12 percent of the $100 million for this type of expense.

The amount that is being requested is only $2.2 million as compared to the maximum amount authorized.

Mr. THOMAS. Your language is misleading.

Mr. OSTERTAG. Mr. Moody, do you think that it was the intent of the law to make the fees applicable to all sales over and above those associated with the auctioneers and brokers and as such it should be limited to the sales in which they were associated?

Mr. MOODY. I think it was clearly the intent to apply to the total amount of the sales.

APPRAISERS' FEES

Mr. THOMAS. What do you allow for appraisers' fees—5 percent or 6 percent?

Mr. MORELAND. It is the commercial rate in the area, Mr. Chairman. It varies from sale to sale.

Mr. BOUTIN. Which average?

Mr. BARRON. $2,500 is about the average we have been paying on an appraisal.

Mr. THOMAS. I thought it was based on 5 or 6 percent of the total sale or 3 or 4 percent?

Mr. MORELAND. In the two tests we have made it runs about one-fourth of 1 percent of the proceeds for an appraisal.

Mr. OSTERTAG. Total proceeds?

Mr. MORELAND. Yes sir.

Mr. THOMAS. You are going to make a contract to begin with and you use a set of figures in the contract and you try to keep it to 1, 2, or 3 percent based upon the nature of the transaction and then you get a good piece of property involving a whole lot of money, which is easily sold, and you do not give them such a big fee, do you?

Mr. MORELAND. Ordinarily in a broker contract of that nature, Mr. Chairman, we may have a 5- or 6-percent base and then the percentage declines as the amount of the sale goes up. Again, this is commercial practice, more or less.

AUCTIONEERS AND BROKERS FEES

Mr. OSTERTAG. Perhaps I am confused or do not understand the picture, but why is a broker or an auctioneer the recipient of a fee over a sale in which he is not associated?

Mr. BOUTIN. He is not.

Mr. OSTERTAG. I thought he received the benefit of your total sales——

Mr. BOUTIN. No.

Mr. OSTERTAG. Will you clear this up for me as to the difference?

Mr. BOUTIN. On most of our sales, we handle them directly but on some sales, particularly where we have a lot of former-owner interests in housing projects where you have occupants who are interested in a particular unit they are occupying, we can get the highest income from that by using auctioneers and dividing it into parcels. That gives everybody an opportunity. Occasionally we use auctioneers where we have the type of facility we are talking about. We use brokers very, very seldom and when we do it is almost always industrial-type property that is going to be difficult to sell, and which is going to require broad contacts with industrial management groups.

However, this is very seldom and I do not think we had one this year, did we?

Mr. MORELAND. One.

Mr. OSTERTAG. What is the fee based on then?

Mr. BOUTIN. His fee is based on the value of the property assigned to him to try to sell.

If you have a property that has an appraised fair market value of $12 million, his fee is based on a percentage of that $12 million, or $10 million, or whatever it might be.

In the case of industrial brokers, their fees run from 6 percent down. In fact, we had one a while ago for 2¼ percent.

Mr. OSTERTAG. This figure of sales by auctioneers and brokers for fiscal year 1962 of $8.2 million is not correct?

Mr. MORELAND. It is correct. That represents the amount of property we have sold through that means.

Mr. THOMAS. What got me off was this 12-percent figure over there. Apparently it applies to the whole thing rather than to the fee to the broker.

Mr. MOODY. I think it would help, Mr. Ostertag, if I explain that auctioneers and brokers get a commission only on those sales they make. The 12-percent limitation is on the amount of the fund that would be available for that use and has nothing to do with how much they might get paid for any particular sale.

Mr. BOUTIN. It is based on the sale they make, that we are agreeable to.

Mr. MOODY. That is right.

Mr. THOMAS. Gentlemen, let us get some lunch and we will hear from Dr. Grover. We will try to go through the subject of records centers and spend the remainder of the afternoon on these items.

Following that we will go into stockpiling and other items and try to finish early tomorrow.

[1] Funds available not considered new obligational authority in budget schedules.

Summary reconciliation of 1964 estimate to amount for 1963

1963 appropriation in annual act	$14,000,000
Proposed supplemental due to pay increase	+438,000
Total for 1963	14,438,000
Increases in 1964:	
Federal records centers	249,800
Records management assistance	34,800
National Archives functions	88,300
Federal Register publications	33,500
Presidential libraries operations	44,800
Penalty mail	55,800
Adjustment for administrative operations costs	39,000
Other minor program adjustments	16,000
Total	562,000
1964 estimate	15,000,000

Analysis by activities

Activities	1963 adjusted	Increases	1964 estimate
1. Records management and centers	$9,603,400	$284,600	$9,888,000
2. Archives and related services	3,598,400	166,600	3,765,000
3. Service direction	541,200	71,800	613,000
4. Administrative operations	695,000	39,000	734,000
Total	14,438,000	562,000	15,000,000

1963 appropriation	$14,000,000
Pay act supplemental	438,000
1963 comparative	14,438,000
Change	+562,000
1964 estimate	15,000,000

GENERAL STATEMENT

"This appropriation provides for basic operations of the General Services Administration which deal with management of the Government's archives and records, including custody and administration of permanent records in the National Archives and other noncurrent records in Federal records centers, assistance to records management programs of Government agencies, operation of presidential libraries, and filing and publication of Federal laws and regulations. The estimate for 1964 is $562,000 more than 1963 financing, $285,000 of which is for records management assistance and records centers activities.

"In 1964 records in custody of the National Archives and Federal records centers will total 8.2 million cubic feet. Reference services will total 5.4 million.

"Fair value of personal property received from other appropriations or funds without cost for use by GSA is as follows: 1962, $85,000; 1963, $63,000; 1964, $58,000." (From the budget for 1964.)

Total employment under this appropriation has been reduced during the past 2 years. Average employment in 1961 totaled 1,832; in 1962 it totaled 1,809; and the estimate for 1963 is 1,806. An increase of only eight in average employment is requested for 1964.

The estimate for 1964 includes $841,000 for increased pay as a result of the Federal Salary Reform Act of 1962. The increase over 1963 consists of $159,000 for (*a*) additional workload in regional records centers ($45,300); (*b*) increased postage fees ($55,800), and small increases in the Federal Register, Presidential libraries and administrative operations ($57,900); and $403,000 for pay costs.

APPROPRIATION LANGUAGE

"For necessary expenses in connection with Federal records management and related activities as provided by law, including reimbursement for security guard services, and contractual services incident to movement or disposal of records [$14,000,000] *$15,000,000*."

FUNCTIONS PERFORMED BY NATIONAL ARCHIVES AND RECORDS SERVICE

Mr. THOMAS. This general language here is worth repeating [reading]:

The National Archives and Records Service promotes improved records management and disposal practices in Federal agencies, operates 16 Federal records centers, and selects, preserves, and services the permanently valuable noncurrent records of the Federal Government. It also publishes the slip laws, the U.S. Statutes at Large, constitutional amendments, Presidential documents, and administrative regulations having general applicability and legal effect; and preserves, publishes, and administers the historical materials in Presidential libraries operated by GSA.

The Archivist of the United States chairs the National Historical Publications Commission, the Administrative Committee of the Federal Register, and provides leadership to the Federal Records Council. He also chairs the National Archives Trust Fund Board which receives and administers donations for the benefit of the National Archives, and through the National Archives Trust Fund, furnishes for a fee copies of records in the custody of the National Archives.

That is a good statement.

This table on page 189 tells a good story.

This table on page 187 shows that you are seeking an appropriation of $15 million as against $14 million for last year.

I see that your employment this year is 1,814 as against 1,806 last year and then it is broken down for 1964 where you have 474 people in the central office as against 1,340 in the field.

The appropriation is broken down as follows:

"Records management and centers" go from $9.6 million to $9,888,000; "Archives and related services," $3,598,000 as against $3,765,000; "Service direction," $541,200 as against $613,000; "Administrative operations," $695,000 as against $734,000. That makes your increase in the neighborhood of $562,000, does it not?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. The detail on the increases over last year under "Operating expenses" is broken down on page 188.

Let us take a look at "Administrative expense." [Reading:]

This appropriation provides for basic operations of the General Services Administration which deal with management of the Government's archives and records, including custody and administration of permanent records in the National Archives and other noncurrent records in Federal records centers, assistance to records management programs of Government agencies, operation of Presidential libraries and filing and publication of Federal laws and regulations. The estimate for 1964 is $562,000 more than 1963 financing, $285,000 of which is for records management assistance and records centers activities.

INCREASES IN 1964

The increases for the records centers are $249,800 over last year; management assistance, $34,800; archives functions, $88,300; Federal Register, $33,500; Presidential libraries, $44,800; penalty mail, $55,800; administrative operations, $39,000; other minor program adjustments $16,000.

The biggest item is the records management for 16 centers. The next big one is archives and related services. The estimate for 1964 includes $841,000 for increased pay as a result of the Federal Pay Act.

PAY ACT COSTS

The increase over 1963 is already in the record in detail but what did the pay act cost you last year?

Dr. GROVER. Last year it was $438,000.

Mr. THOMAS. What part of that did you absorb?

Dr. GROVER. We were not able to absorb anything significant in 1963 because so much of our expenses are payroll costs. We would have had to go into a reduction in force. The pay act cost for 1964 is $403,000 more than 1963, for a total of $841,000.

USE OF EXCESS FEDERAL PERSONAL PROPERTY

Mr. THOMAS. Fair value of personal property received from other appropriations or funds without cost for use by GSA is as follows: 1962, $85,000; 1963, $63,000.

What is this item? I do not recognize it.

Mr. TURPIN. That is the value of items which the Archives and Records Service utilized from excess property.

Mr. THOMAS. Do you mean that that is the revenue from the trust fund?

Mr. TURPIN. No, sir. That is the amount of excess Federal Government property that Archives has utilized.

Mr. THOMAS. That comes about through utilization?

Mr. TURPIN. Yes, sir.

NATIONAL ARCHIEVES TRUST FUND

Mr. THOMAS. How much money do you have in your trust fund, Doctor? What is the revenue from it?

Dr. GROVER. I think we have assets of around half a million dollars. Income and expense runs about $400,000 a year, and it turns over, most of it.

Mr. THOMAS. What do you mean "turns over"?

Dr. GROVER. The reproduction funds are revolving funds.

Mr. THOMAS. Do you remember what the income is from it per year?

Dr. GROVER. What is the income?

Mr. ROBERTSON. Mr. Chairman, total receipts in the trust fund approximate $400,000 a year and the expenses are approximately $365,000 a year. There is a 10-percent markup over cost.

Mr. THOMAS. Are you constantly given additions to the trust fund in the way of gifts?

Dr. GROVER. We have had some gifts, Mr. Chairman, from the Ford Foundation and the Rockefeller Foundation but not in any great number of dollars.

Mr. THOMAS. What is the origination of property in the trust fund? Is that by statute or what?

Dr. GROVER. Yes, sir; the National Achives trust fund was set up by statute in 1941.

PURPOSE AND USE OF TRUST FUND

Mr. THOMAS. What was the purpose of it?

Dr. GROVER. It was similar to the statute governing the Library of Congress and other institutions of this sort, to accept and expend gifts for the benefit of the institution.

Mr. THOMAS. The purpose is to receive gifts and likewise to make expeditures from that?

Dr. GROVER. Yes, sir.

Mr. THOMAS. When you get a gift, does it have strings on it?

Dr. GROVER. They all come with certain strings on them.

Mr. THOMAS. Are the main strings such that you cannot spend——

Dr. GROVER. Anything except for a certain purpose.

Mr. THOMAS. The revenue from it, or what?

Dr. GROVER. Usually we have not had any capital donations. One project we have had going has to do with the publication of the documents relating to the ratification of the Constitution and the Bill of Rights. The money we have for carrying on this project was given to us by the Ford Foundation at our request. It is under the National Historical Publications Commission.

Mr. THOMAS. It is usually given with specific instructions for the use of it and is usable only for that purpose over a period of years?

Dr. GROVER. Yes, sir.

Mr. THOMAS. As far as permanent capital to the fund is concerned, the donations are not made in that fashion?

Dr. GROVER. No, sir.

RECORDS MANAGEMENT AND CENTERS

Mr. THOMAS. Let us take a look at your centers. Insert pages 190, 192, 194, and 195.

(The pages referred to follow:)

1. Records management and centers

	Amount	Average employment		
		Department	Field	Total
1963	$9,603,400	53	1,275	1,328
Change	+284,600		+5	+5
1964	9,888,000	53	1,280	1,333

HIGHLIGHT

"Records of Federal agencies which must be retained for a period of time, but are not needed for frequent reference, are brought into and administered in regional Federal records centers serving specified geographical areas. National centers at St. Louis administer the service and medical records of veterans of the armed services and records of former civilian employees of the Government, and maintain a locator file for civilians currently employed. In addition to civilian agencies, records center facilities are now furnished to the entire Naval Establishment, the Army, and Air Force at the seat of Government, and for selected Army records throughout the world.

"The workload in Federal records centers is shown in the following table:

	1962 actual	1963 estimate	1964 estimate
Regional centers:			
Records administered (millions of cubic feet)	6.64	6.88	7.08
Unit cost per cubic foot of records administered	$0.562	$0.563	$0.569
Reference services (millions)	3.11	3.11	3.11
National personnel centers:			
Reference services (millions)	1.76	1.76	1.76
Interfiling documents (millions)	3.83	4.23	4.23"

(From the budget for 1964.)

Summary of performance cost

	1962	1963	1964
(*a*) Regional records centers	$3,735,080	$3,872,300	$4,029,000
(*b*) National personnel records centers	4,595,087	4,690,900	4,784,000
(*c*) Records management assistance	864,380	915,200	950,000
(*d*) Capital outlay (equipment)	129,852	125,000	125,000
Total cost or estimate	9,324,399	9,603,400	9,888,000

JUSTIFICATION

(*a*) *Regional records centers*

	1962	1963	1964
Records administered (cubic feet)	6,640,415	6,877,329	7,077,329
Unit cost	$0.562	$0.563	$0.569
Performance cost	$3,735,080	$3,872,300	$4,029,000

A cubic foot of records administered is the work unit used to express overall workload. This unit includes (*a*) bringing records into records centers (accessioning), (*b*) destroying records in accordance with disposal regulations (disposal) and (*c*) answering inquiries based on files in custody (reference).

Workload data in cubic feet

	1962	1963	1964
Records in custody beginning of year	5,362,236	5,652,329	5,777,329
Records accessioned	740,801	675,000	725,000
Records disposed of	537,378	550,000	575,000
Records transferred in (net)	86,670	----------	----------
Workload, records administered	6,640,415	6,877,329	7,077,329

Increased funds requested for 1964 will enable regional centers to meet expanding requirements of civilian and military agencies for records center services. The increase will provide for administering an additional 200,000 cubic feet of records in 1964. The number of reference services furnished in 1963 and 1964 are expected to remain at the 1962 level of 3.1 million.

Records center operations bring about economies by curtailing in the agencies they serve the purchase of new filing equipment and acquisition of additional space. The records program in 1962 emptied for reuse the equivalent of 49,447 usable filing cabinets; 9,276 usable transfer cases; 611,219 linear feet of shelving; and cleared the equivalent of 426,210 square feet of office space and 287,731 square feet of storage and industrial space. Replacement value of the equipment released and annual cost of the space cleared totaled $4.3 million.

Based on actual operations from its inception in 1950 through June 30, 1962, the records center program has emptied for reuse the equivalent of (*a*) 578,700 usable filing cabinets, (*b*) 346,000 usable transfer cases, (*c*) 2,210,000 linear feet of shelving, and (*d*) has cleared the equivalent of 3 million square feet of office space, and 3.1 million square feet of storage and industrial space. Replacement value of the equipment released and total cost of the space cleared totaled over $42 million.

(b) National personnal records centers

	1962	1963	1964
Reference	1,763,795	1,760,000	1,760,000
Unit cost	$2.06	$2.08	$2.12
Performance cost	$3,630,119	$3,654,400	$3,732,000
Interfiles	3,835,658	4,230,000	4,230,000
Unit cost	$0.25	$0.25	$0.25
Performance cost	$964,968	$1,036,500	$1,052,000
Total performance cost	$4,595,087	$4,690,900	$4,784,000

Workload of this subactivity is measured by two work units: (*a*) number of reference services rendered, which principally is providing documents and information upon request by other agencies and by veterans, and (*b*) interfiling personnel, pay, and medical documents received from other agencies for separated civilian and military personnel and interfiling data on some 2.5 million civilians presently employed by the Government.

At the beginning of 1961 DOD turned over to GSA its Military Personnel Records Center at St. Louis. This, with the GSA operated Civilian Personnel Records Center, comprises this subactivity.

The Civilian Personnel Records Center, containing 55 million case files, furnished information or documents for reemployment purposes, service transcripts, investigations, unemployment insurance, retirement, apportionment and location of personnel, and for many other needs of the Government and the individual.

Since the initial transfer of separated civilian personnel records from the Departments of Army, Navy, and Air Force in 1951, employment at the Civilian Personnel Records Center has been reduced from 305 to an estimated average employment of 216 for 1963. While employment has been reduced 28 percent, records holdings have more than doubled by the acquisition of files from all agencies and reference services have increased from 120,000 to the current rate of 400,000 per year.

The Military Personnel Records Center maintains and services 35 million personnel and medical files of veterans who have served in the Army, Navy, Marine Corps, and Air Force. It receives on a continuing basis for interfiling records of Navy, Marine Corps, and Air Force personnel as they are separated from the services. Approximately 50 percent of the inquiries on military personnel records relate to specific adjudications by the Veterans' Administration; 20 percent to requirements of the Department of Defense; 25 percent to needs of the veteran himself; and the remainder to requirements of State and local institutions and the general public.

Nearly 70 percent of all inquiries on medical records pertain to Veterans' Administration's needs in its medical and other beneficiary programs to the veterans. These inquiries relate to claims, verification of active service for social security benefits, replacement of lost discharge certificates, verifying and issuing awards and decorations due for services, investigations, identification and burials, medical treatments, sociological research, and for many other services to veterans or their beneficiaries.

A significant reduction in employment has been made at the Military Personnel Records Center since its takeover at the beginning of 1961. Average employment in 1961 was 659; in 1962 it was reduced to 626; and it is estimated to be further reduced to 600 in 1963.

The chart on opposite page shows for each center the distribution of reference services by agencies serviced.

(c) Records management assistance

Total cost or estimate:

1962	$864,380
1963	915,200
1964	950,000

Some 13,500,000 cubic feet of records are now to be found in Federal Government offices throughout the world. This represents an investment of 2,600,000 filing cabinets, occupying over 13 million square feet of space. More than 250,000 Federal employees are required to maintain and service these records.

GSA is required by law to provide agencies with standards for the control of recordmaking, recordkeeping, and records disposal. GSA also helps by providing better and more economical practices and techniques and promoting their use. GSA staff leadership is provided in part through workshops designed to show agency supervisors how to operate less costly mail systems, more effective disposal programs, and more efficient filing, correspondence, directives and forms systems. Agencies can also learn how to take advantage of electronic technology and to automate records systems at substantial savings.

Records management surveys based on requests for assistance from the agencies themselves provide a major source of improvement. A total of 85 surveys were conducted in 1962.

In 1963 some 20 surveys will be conducted for agencies at the seat of government and about 70 surveys in the field. These will cover paperwork procedures in some Washington or field offices of every executive department, in a dozen independent agencies, and in a number of U.S. courts. Similar surveys will be conducted in 1964, with priority being given to agencies having the largest or most difficult problems.

(d) Capital outlay

Investment cost:

1962	$129,852
1963	125,000
1964	125,000

At the beginning of 1963 shelving on hand in regional records centers provided a capacity for 6,139,514 cubic feet of records. Units being acquired with NARS funds during 1963 will increase this capacity to 6,290,000 cubic feet. Holdings of the centers at the beginning of 1963 totaled 5,652,329 cubic feet. Space and shelving will be needed for many of the 1964 accessions, estimated at 725,000 cubic feet, because disposal actions (575,000 cubic feet) tend to occur during the last half of the year. Holdings on June 30, 1963, are estimated at 5,777,329 cubic feet.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $7,728,000 for 1,361 permanent positions (1,333 average employment), distributed as follows:

	1962			1963			1964		
	Department	Field	Total	Department	Field	Total	Department	Field	Total
(a) Regional records centers	12	448	460	13	443	456	13	449	462
(b) National personnel records centers	.....	842	842	.....	826	826	.....	826	826
(c) Records management assistance	41	32	73	42	31	73	42	31	73
Total positions	53	1,322	1,375	55	1,300	1,355	55	1,306	1,361
Average employment	50.3	1,292.3	1,342.6	53	1,275	1,328	53	1,280	1,333

Mr. THOMAS. How many centers do we have; sixteen?

Mr. BOUTIN. Sixteen is correct.

Mr. THOMAS. Does that include the big center in St. Louis, the Personnel Center, the medical records for veterans?

Mr. BOUTIN. That includes everything, Mr. Chairman.

Mr. THOMAS. That is the last acquisition is it?

Mr. BOUTIN. The Military Personnel Records Center.

Mr. THOMAS. In St. Louis?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS (reading):

National centers at St. Louis administer the service and medical records of veterans of the armed services and records of former civilian employees of the Government, and maintain a locator file for civilians currently employed. In addition to civilian agencies, the records center facilities are now furnished to the entire Naval Establishment, the Army, and Air Force at the seat of government and for selected Army records throughout the world.

That is in the District of Columbia, so, for all practical purposes, you have two record centers for the military; is that right?

Dr. GROVER. No, sir. The Military Personnel Records Center at St. Louis is the only one that deals exclusively with military records.

Mr. THOMAS. What service do you render here in the District of Columbia to the military?

Dr. GROVER. We render the same type of service to the military here as any other regional records center.

Mr. THOMAS. You do not give them any special treatment?

Dr. GROVER. No, sir.

CAPTURED GERMAN RECORDS

Mr. BOUTIN. The only thing that is not the same are the German Army war records. We have all of those in this region; correct?

Dr. GROVER. We have the captured German records that are gradually being restituted.

Mr. THOMAS. Did we bring them over here?

Dr. GROVER. Yes; they were brought over by the Army.

Mr. THOMAS. I thought the records you had concerned the prisoners of war you had domiciled in this country?

Dr. GROVER. We have some records of prisoners of war domiciled in this country at Philadelphia.

Mr. THOMAS. Do you intend to keep them or turn them over to the German Government,

Dr. GROVER. The records we have here are gradually being returned to the German Government but some of the records will not be returned.

Mr. THOMAS. Off the record.

(Discussion held off the record.)

INCREASED SPACE IN EXISTING CENTERS

Mr. THOMAS. Do you have any increase in square footage planned for 1964 in any of your records units?

Dr. GROVER. We will be increasing our space at Fort Worth, which we are moving into now. We will be increasing a little at Seattle. The total square footage in the regional centers will be around 2 million square feet.

Mr. THOMAS. Increase?

Dr. GROVER. No; total.

Mr. THOMAS. How much will the increase be over last year?

Dr. GROVER. The increase will not run to more than 10 percent of that.

Mr. THOMAS. It will not run that much, will it, Doctor?

Dr. GROVER. Yes, it will because of Seattle and Fort Worth.

Mr. BOUTIN. Some of this is the development of reserve space, Mr. Chairman.

Mr. THOMAS. You have millions of cubic feet of records. In 1962 you had 6.64 and the 1963 estimate is 6.88. That is certainly not a 10-percent increase in records.

Dr. GROVER. No.

Mr. THOMAS. For 1964, it goes up to 7.08 which is a very little increase.

Dr. GROVER. As the Administrator said, when you move into a facility you have to have some expansion space.

Mr. THOMAS. You have already acquired the space?

Dr. GROVER. Yes, sir.

Mr. THOMAS. Is there any additional cost added to this? This is a nice table at the top of page 192, gentlemen, on the records custody. Is this in cubic feet?

Dr. GROVER. This is in cubic feet.

Mr. THOMAS. You have 5,777,000 in custody. Those are accessions?

Dr. GROVER. Those are records in custody at the beginning of the year.

Mr. THOMAS. Records accessioned; 725,000 from 675,000.

Then your unit costs in 1962 were 25 cents?

UNIT COST DATA

Dr. GROVER. Unit costs for regional centers are shown on page 190, Mr. Chairman.

Mr. THOMAS. This is your personnel record centers?

Dr. GROVER. That is right.

Mr. THOMAS. This is 25 cents for what?

Dr. GROVER. 25 cents for interfiling papers. The reference unit cost is $2.12.

Mr. THOMAS. How does that compare with your unit cost of your 15 record centers? I believe you set it out here as $0.563 and $0.569. What is that?

Mr. BOUTIN. That is the cost per cubic foot of records administered in the regional record centers.

Mr. THOMAS. That is $0.50 a cubic foot?

Dr. GROVER. Yes, sir. There are different units of measure because of the different nature of these centers.

Mr. THOMAS. Spell that out.

Dr. GROVER. The national centers at St. Louis acquire and dispose of very few records compared with the volume handled by the regional centers. In these national centers, the main work unit is a reference service, and the interfiling of incoming documents. Those centers do handle a great many reference requests by mail and both of them together handle around 1,760,000 cases from all over the country.

Mr. THOMAS. You are referring to the St. Louis center?

Dr. GROVER. Yes, sir.

Mr. THOMAS. It is half the cost you have in your regular 15 establishments?

Dr. GROVER. I did not understand you.

Mr. THOMAS. It is half the cost, is it not?

Dr. GROVER. Yes, sir; it is.

REFERENCE SERVICES

Those two big record centers do a whale of a lot of work in the way of reference.

Mr. THOMAS. Do you set that up on a cubic foot basis, too?

Dr. GROVER. No. In the national centers we use the actual workload in terms of reference service and the interfiling of new folders and papers coming into the centers.

Mr. THOMAS. What is your unit cost in your military center? What is that based on?

Dr. GROVER. The unit cost there is based on reference services.

Mr. THOMAS. Just like it is in the other one?

Dr. GROVER. In both the national centers.

Mr. THOMAS. Why should one be twice as much as the other?

Dr. GROVER. Mr. Chairman, the unit cost in the regional centers is a cubic foot of records administered, which takes into account not only reference cases but the accessioning and disposal cost.

Mr. THOMAS. That is just what I asked you—if that was on a cubic-foot basis or a per-item basis? If it is on a cubic-foot basis——

Dr. GROVER. I did not understand you, Mr. Chairman. I am sorry.

Mr. THOMAS. Translated into purely references per cubic foot, the Veterans' Center and the Military Center will do five times as much work per cubic foot as the regional centers, will they not?

Dr. GROVER. No. The reference service costs in the regional centers will be 45 or 50 cents because it is a different kind of reference service. It is a loan service back to the originating agency. It is relatively cheap.

Mr. BOUTIN. It is really pulling files, mailing them out or duplicating them and refiling when they come back.

Dr. GROVER. That is right; whereas the national centers which have these specialized types of records, civil service employee records or military personnel records, handle all kinds of mail and questions by mail. They literally fill out millions of forms relating to veterans' benefits of various kinds. They do not send the file itself out.

Mr. EVINS. When does the Veterans' Administration transmit its records? As a matter of information, let us say you write on an insurance matter and they have the records. When do you acquire those and what kind of records do you hold from the Veterans' Administration?

Dr. GROVER. The records we keep in these regional centers are those which have become relatively inactive for one reason or another. In the insurance cases, while a claim is active, or the man is still holding a policy, the Veterans' Administration will keep it, but when the veteran gives up his policy then the Veterans' Administration will send it to us and we hope ultimately to destroy it, but they want to keep it as long as there is any chance of the veteran coming in for an old claim or a new policy.

RECORDS CENTERS EMPLOYMENT DATA

Mr. THOMAS. What is the average employment at one of your record centers? You say in St. Louis it is 626 and you hope to get that down to about 600?

Dr. GROVER. Yes, sir.

Mr. THOMAS. What is the average employment at your other 15 centers?

Dr. GROVER. The total for the other 14 centers, is 430 average employment in 1963 and in 1964 requested, 435.

Mr. THOMAS. The other 15?

Dr. GROVER. The other 14. You see, you have two national centers in St. Louis; one for military personnel records and the other for civilian personnel records.

Mr. THOMAS. They will average about 400 to each one?

Dr. GROVER. The military center has a staff of over 800 people.

Mr. THOMAS. Not now. When you took it over you had 659?

Dr. GROVER. I am sorry. It is around 600.

The civilian center has 214 and that is 814 combined, the figure I was thinking of.

Mr. BOUTIN. December 31, 1962, record center employment was 13 in region 1; 85 in region 2; and 151 in the center in region 3. The others go from 35 down to 14.

Mr. THOMAS. I did not think I recalled seeing any number like 600 or even 100 in most of your record centers.

Dr. GROVER. Only in Alexandria, Va., sir.

EMPLOYMENT IN THE DISTRICT OF COLUMBIA

Mr. THOMAS. How many do you have here in the District of Columbia?

Mr. BOUTIN. 151 in Alexandria.

Dr. GROVER. In the regional center here; yes, sir.

Mr. THOMAS. You have it set out in the table as 53 in the District of Columbia for your records management and centers. Archives is something else.

Dr. GROVER. That is in the central office.

Mr. THOMAS. That is what I am talking about.

Dr. GROVER. I am including in the central office archives, records management, Federal Register——

Mr. THOMAS. No; you have 474 for that and then you have 53 in records management.

Mr. TURPIN. That is on page 197 of the green sheets; 53 for records management assistance and overall activity supervision. That is exclusive of the record center in Alexandria.

Mr. THOMAS. Out of a total of what, 1,275, in records management in your centers?

Mr. BOUTIN. Records management and centers, we have a total of 1,361 positions projected for 1964; 1,355 in 1963.

Mr. THOMAS. You have a total of 1,333, average employment for 1964, of which 53 are in the Washington office?

Mr. BOUTIN. Yes, sir.

FUTURE WORKLOAD PROJECTIONS

Mr. THOMAS. Are you making money, Doctor?

Dr. GROVER. I think we are still making a little money, Mr. Chairman.

Mr. THOMAS. What did we use, about 7 million cubic feet for next year in all your warehouses?

Dr. GROVER. About 7 million.

Mr. THOMAS. You used the figure 13 million that you ought to have additional?

Dr. GROVER. We ought to have——

Mr. THOMAS. I mean by that, records from the various agencies.

Dr. GROVER. That ought to come from the offices to these centers.

Mr. THOMAS. Thirteen million would do and you would be in business good?

Dr. GROVER. Let us leave a few records in these offices. Particularly in Washington, and if I may reopen that subject——

Mr. THOMAS. How many of those 13.5 million cubic feet for records will be found all over the world? You say Federal records but what part of that 13.5 million do you feel you ought to have?

Dr. GROVER. I think another 3 million cubic feet. It would put records about half in the centers and half in the offices.

ECONOMY OF HAVING RECORDS IN CENTERS

Mr. THOMAS. What are these records costing the taxpayer not in your records center?

Dr. GROVER. On the basis of our actual figures for 1962, costs in the records centers on space are 10-to-1 cheaper and on equipment it is about 5 to 1. We not only economize on floor space——

Mr. THOMAS. How do you arrive at those figures?

Dr. GROVER. May I give you the figures on that?

Mr. THOMAS. Sure. That is what I am asking for.

Dr. GROVER. For 1961, in regional centers our costs, or the agency's costs, were as follows:

On records moved to us, 287,731 square feet stored at 85 cents a square foot in agency storage space came to $244,000. In addition records moved to us from 462,210 square feet of office space at $2.20 per square foot amounts to $937,000, which I think is cheap, for a total of $1,181,000. For the same quantity of records stored in our regional centers the cost to us was $101,000. That is a ratio of 10 to 1 on space.

SPACE RENTAL

Mr. THOMAS. What rent do you pay? Is all of your space Government-owned?

Dr. GROVER. No, sir. We have some leased space out at Franconia, a very small part, 125,000 square feet.

Mr. THOMAS. What are you paying for that, 99 cents.

Dr. GROVER. The same as everybody else in Franconia. I do not know.

Mr. THOMAS. That is right, 99 cents.

Mr. EVINS. Franconia is too far away?

Dr. GROVER. Franconia is about the right distance.

Mr. THOMAS. Go ahead.

Dr. GROVER. We are paying for leased space in Chicago; I think that is a high cost space, about 80 cents a square foot.

Mr. THOMAS. You still have that old big building on the waterfront in New York, the appraisers warehouse?

Dr. GROVER. We still have that old Appraisers Storage or Post Office Building at 641 Washington Street.

Mr. THOMAS. Where is your space in Chicago?

Dr. GROVER. In Chicago, it is out by the airport.

Mr. BOUTIN. Right next door, Mr. Chairman, to the Federal Supply Warehouse.

Dr. GROVER. We are getting out of the leased space in Fort Worth by moving in the general depot and that is all.

Mr. THOMAS. I do not know about your costs of 10 to 1. That sounds awfully high.

Dr. GROVER. Mr. Chairman, it is better space utilization. In offices records are kept on a ratio of 1 cubic foot of records to 1 square foot of space; that is how you will find them in filing cabinets in the offices.

Mr. THOMAS. I think the average rent of a building paying for a multiplicity of agencies will not exceed $2.75 a square foot.

Dr. GROVER. We figured it at only $2.20.

Mr. THOMAS. For each one of these agencies, the rule of thumb would be they have to set aside for records about 15 percent of the total space. What is a good rule of thumb.

Mr. BOUTIN. That would not be far off, 15 percent.

Mr. THOMAS. As far as rent is concerned, your record space would cost in the neighborhood of 90 cents to $1? Do you have any record centers where you pay in excess of $1?

Mr. BOUTIN. No, sir; Chicago and Franconia are the only two paying any rental, are they not?

Dr. GROVER. Chicago and Franconia at this point.

Mr. THOMAS. Some of the space they are in would rent for in excess of $1 a square foot though, Government-owned space. It looks to me like you have a ratio of 1, where you can really make up 3 to 1. That is not to be sneezed at. This is on space costs, but what about personnel costs?

SAVINGS IN PERSONNEL COSTS

Dr. GROVER. Because of the mass operation in the regional center, I think we will save 2 to 1 on personnel costs. I think we have proven that in the one national civilian center at St. Louis. We are handling records there——

Mr. THOMAS. Where is that worksheet on your centers other than the personnel center in St. Louis?

Mr. TURPIN. The justification on the record centers starts on page 190.

Mr. EVINS. The work load data is on page 190.

REFERENCE SERVICES

Mr. THOMAS. You show reference services. Under 1963 you have 1,760,000 which means just what you say, a reference? You are not measuring this in terms of cubic feet? You are measuring the number of individual requests for pieces of information?

Dr. GROVER. That is right.

Mr. THOMAS. What about your other centers? Where is that set out?

Dr. GROVER. All combined record centers it would be 3.1 million.

Mr. THOMAS. Do you set it out here for your others?

Dr. GROVER. Not for each center, but it is combined.

Mr. THOMAS. You have a figure here on references of 3,110,000, is that it?

Dr. GROVER. That is right.

Mr. THOMAS. How do you arrive at that figure?

Dr. GROVER. All 14?

Mr. THOMAS. What would you call a reference?

Dr. GROVER. The regional center reference is usually the loan of the record to the originating agency.

Mr. THOMAS. Let us take the one in Chicago. You are bound to have the information there, but how many people do you have in Chicago?

Dr. GROVER. Thirty-two, I believe.

Mr. BOUTIN. Twenty-eight in the records center.

Dr. GROVER. Twenty-eight, I am sorry.

Mr. THOMAS. How many references do you have in Chicago for 1962?

Dr. GROVER. I do not think I have that figure, Mr. Chairman.

Mr. THOMAS. That is about the only way you can figure comparable administrative costs, is it not?

Dr. GROVER. As between regional centers, that is the way we figure how each center is doing; that is right, but you cannot compare the reference service in the regional record centers on a cost basis with the reference service in the two national personnel record centers because they are of an entirely different kind, Mr. Chairman.

Mr. THOMAS. You have two different kinds of records in the first place?

Dr. GROVER. That is right.

Mr. THOMAS. Your people are not supposed to evaluate the information. All they are supposed to do is produce records but what is inside the records is something else. When you call one an apple and one a peach, I do not follow you there.

Dr. GROVER. So much of the reference service in St. Louis has to be handled by correspondence.

CHICAGO RECORDS CENTER

Mr. THOMAS. Let us go back to Chicago. How many people do you have there now?

Dr. GROVER. Twenty-eight.

Mr. THOMAS. How many references do you have a year there?

Dr. GROVER. I guess that that center will run about 400,000 a year.

Mr. THOMAS. How does that figure out on a daily basis for your 28 people?

Dr. GROVER. I can tell you what that is. We have a workload quota for these people. The average number of reference services in the regional centers per man-year is 12,000, a little better than 12,000.

Mr. THOMAS. About 1,000 a month?

Mr. GROVER. Yes, sir.

Mr. THOMAS. How many is that a day, Doctor?

Dr. GROVER. I am not as good a mathematician as you are, Mr. Chairman. I give up on that.

Mr. THOMAS. They are not overworked even according to your own figures, are they?

They go and pull out a file here and there and that is a reference?

Dr. GROVER. We certainly have improved their productivity in the last 10 years, Mr. Chairman, but overworked or not, when we started out it was running about 5,000 per man-year. We have it up to 12,300 and I hope that we can do even better.

RECORDS TO BE TRANSFERRED TO CENTERS

Mr. THOMAS. Are you not just about reaching your saturation point? Your figure is 3 million more cubic feet of records throughout the Government that need to be over in your custody?

Dr. GROVER. I think there are at least 1 million cubic feet right here in Washington that could go out to a center just as soon as we have the space for them.

Mr. THOMAS. Out at Franconia?

Dr. GROVER. Go into our proposed center.

AGENCIES SERVED IN WASHINGTON

Mr. THOMAS. Who is your big customer here in the District of Columbia?

Dr. GROVER. Our big customers nationwide are Defense and Treasury. They are about equal. In the regional centers, we have about 1.4 million Defense and 1.4 million Treasury.

Mr. THOMAS. You are not doing any business with the Veterans' Administration?

Dr. GROVER. They are about our fourth or fifth largest customer.

Mr. THOMAS. In each one of these record centers?

Dr. GROVER. Yes, sir. We are doing some business but not as much as we would like.

Mr. THOMAS. They are a little slow to give up those records?

Dr. GROVER. They claim they have problems with those records that occupy so much space, claim files. You have heard that story many times.

RECORDS DISPOSITIONS

Mr. THOMAS. Doctor, I am not going to say you are not putting your best foot forward, but you are overlooking one of your good points. Take your record space of one of the agencies in a period of 6 months, what happens to that cubic foot of record space?

Dr. GROVER. I think, if I understand what you are leading up to, one way of finding out whether some of these records are worth keeping or should be disposed of, is to get them into a records center and find out how much they are used.

Mr. THOMAS. That is what I am speaking about. What happens to that 1 cubic foot? Does it wind up in 6 or 8 months in one-third of a cubic foot?

Dr. GROVER. We dispose of around——

Mr. THOMAS. Half of it?

Do you dispose of a third or a fourth of it, or what is a good horseback opinion?

Dr. GROVER. It would be in those terms, less than a fourth. We bring in 725,000 cubic feet, and destroy 575,000 in a year.

Mr. JONAS. Would you yield?

Mr. THOMAS. Yes.

Mr. JONAS. How long back does the Internal Revenue Service keep income tax returns?

Dr. GROVER. Individual income tax returns for 6 years.

Mr. JONAS. Then they are destroyed?

Dr. GROVER. They are disposed of. Corporation tax returns are still being kept indefinitely. We are working with the Internal Revenue Service on those.

Mr. JONAS. Since I have interrupted you, Mr. Chairman, I think this paragraph dealing with actual operations on page 192 is right interesting showing how much space they have recovered.

What do you do with those records you take out of the filing cabinets you recover? Are they all destroyed?

Dr. GROVER. Ultimately most of them are destroyed, yes.

Mr. JONAS. You destroy them as soon as you have empty cases?

Dr. GROVER. We put them on shelves in the centers. We do not use filing cabinets in the centers except at St. Louis. Again, that is an exception. We put them in cardboard cartons and on shelves. That is cheaper. We stack them high, and that is how we get reduced space costs and much better space utilization really in the center than you would get in the office.

Mr. THOMAS. Is not Mr. Bean selling more cabinet files than he ever sold?

Mr. BOUTIN. He is selling a lot of them, Mr. Chairman.

Mr. THOMAS. We had better get Mr. Bean and the professor here together.

Mr. BOUTIN. We do get them together because the two things fit hand in glove.

Mr. THOMAS. He is saving all of these filing cabinets and Mr. Bean is buying more than he ever bought. What happens to them?

Mr. EVINS. Another agency turns them over to Mr. Barron.

Mr. BOUTIN. We rehabilitate a lot of filing cabinets. The productivity is 50 a day in the regular regional centers on references; 50 per person; per day.

Mr. THOMAS. Is that what it figures out to?

Mr. BOUTIN. Yes, sir.

SOCIAL SECURITY CASE FILES

Mr. OSTERTAG. Among the records you have under your Reference Service I see no listing of social security.

Dr. GROVER. They are in our regional records centers, social security case files by the millions.

Mr. OSTERTAG. I think that would be one of your large record items, would it not?

Dr. GROVER. Yes, sir.

Mr. OSTERTAG. Where does that show up in your chart on page 193?

Dr. GROVER. They would not be broken out. The chart on page 193 refers to the two national centers at St. Louis. The OASI records would show up in these records in the chart on page 191, record acces-

sions. In fact, part of the building up in record centers are the social security case files which have to be kept such a long period of time.

MAINTENANCE COSTS

Mr. THOMAS. Gentlemen, let us take a look at "Other objects" on page 196.

There is an item of $647,000 for rent and maintenance and record center space, and then reimbursable to the BM fund. You are only paying rent on two locations, aren't you? What are your maintenance costs? I see you have $647,000 and that is getting up into money.

Dr. GROVER. Well, it is 25 cents per square foot.

Mr. TURPIN. The maintenance costs on Government-owned space is 25 cents a square foot.

Mr. THOMAS. What is your national average?

Mr. TURPIN. Twenty-five cents.

Mr. THOMAS. Government-owned property?

Dr. GROVER. No; on our centers.

Mr. THOMAS. I understand what he said.

Mr. TURPIN. For warehouse-type space, but I will check that. I am not sure. For Government-owned office-type space it runs a a little over $1.

Mr. THOMAS. No; you used a figure of 52 cents.

Mr. BOUTIN. Fifty-two cents is an approximate figure of obsolescence that occurs.

Mr. THOMAS. No; that was your maintenance cost, not cleaning cost.

Mr. BOUTIN. I know the figure the chairman is referring to. Twenty-two cents is the figure we used in the R. & I. appropriation. That is the amount we charge per square foot per year.

Mr. THOMAS. Is that 22 cents a square foot?

Mr. BOUTIN. Twenty-two cents a square foot.

Mr. THOMAS. How can you charge 25 cents here for a records center? You do not spend 15 cents per square foot throughout these big record centers. Every time I go into one I cannot see where you moved a plank.

Mr. BOUTIN. Cleaning would be a factor here.

Mr. TURPIN. Cleaning and utilities, Mr. Chairman.

Dr. GROVER. The big cost is utilities.

Mr. TURPIN. On the records centers, we made an exact cost study of one here about 2 years ago and at that time it was running just about 24 or 25 cents. Actually, in the BM fund for costs, maintenance cost in warehouses and special-use type space, it runs 36 cents a foot.

Mr. THOMAS. What is included in that maintenance item?

Dr. GROVER. That is protection, cleaning, and electrical and heating.

Mr. THOMAS. You are covering two items and you set out what was the figure you used for cleaning for all of your buildings? What is it in Government-owned space and otherwise per square foot?

Mr. BOUTIN. 33.4 cents. No—I am wrong.

Mr. THOMAS. I do not think it was that high.

Did you say 31 cents? What was the figure you used for maintenance and repairs?

Mr. BOUTIN. Maintenance and repairs is 22 cents.

Mr. THOMAS. That is only 53 cents for all of your buildings, the big ones, the little ones, and every kind, but then you are coming here with a simple figure for your record centers and what was the figure you used, 35 cents?

Mr. TURPIN. Thirty-six cents. The 31 cents you referred to on all buildings, including office type and everything, was just the cleaning.

Mr. THOMAS. That is right.

Mr. TURPIN. We are talking about maintenance in this charge of 25 cents for the record centers, our 36 cents covers all types of warehouses, special-use space, and we are talking about cleaning, utilities, heating, and all services of that type.

Mr. THOMAS. What would it be for an office building for all of the same services?

Mr. TURPIN. The average for all of them is just under $1; 99 cents.

Mr. THOMAS. What does it include, cleaning?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Utilities?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Guard service?

Mr. TURPIN. Right, sir.

Mr. THOMAS. Cleaning, patching up and repairs?

Mr. TURPIN. No, sir. It does not include repairs.

Mr. THOMAS. What is that figure?

Mr. TURPIN. Twenty-two cents.

Mr. THOMAS. Additional?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. What would it be altogether?

Mr. TURPIN. $1.21 including those day to day maintenance repairs.

Mr. THOMAS. In the same items for your Record Centers, it costs you what, 37 or 36 cents?

Mr. TURPIN. 25 cents, sir. That does not include any repairs. It is 25 cents which includes cleaning, utilities, heat, electricity, and protection.

Mr. THOMAS. No repairs?

Mr. TURPIN. No, sir.

Mr. THOMAS. You gave us a figure awhile ago of 36 cents?

Mr. TURPIN. Yes, sir. Twenty-five cents is just for the Records Centers. The 36-cent figure I gave you was the average for all of the warehouse type and special-use type space we had. One reason the Records Centers are lower is because of the nature of their operations. They require less cleaning by the "BM" building management force.

Dr. GROVER. That is the main reason it is cheaper.

Mr. BOUTIN. Less power is required as compared to FSS.

Mr. THOMAS. As to the remainder of your "Other Objects," you have $140,000 for motor pool and commercial transportation of records, accessioning, and other commercial transportation; $70,000 for communications services; $50,000 for printing records management handbooks and guides and for reproducing administrative regulations, manuals and forms.

TRANSPORTATION OF RECORDS

What is this $140,000 for motor pool and commercial transportation of records? Do you pay for taking them from the originating agencies and transporting them to your warehouses and your Records Centers or do the agencies pay for that?

Dr. GROVER. The agencies usually pay for that. We have done it in the case of some big moves.

Mr. THOMAS. What do you charge for that?

Dr. GROVER. About $100,000 of that motor pool cost, Mr. Chairman, is the cost of motor pool vehicles used in the reference service; messengers back and forth to the departments and agencies.

Mr. THOMAS. How does that operate? Do you take care of it by the month?

Dr. GROVER. Yes, sir.

Mr. THOMAS. What does it cost a month? How many cars do you have assigned to the Chicago Record Center alone on a monthly basis?

Dr. GROVER. Not more than one to any center.

Mr. THOMAS. How does that run up to $140,000?

Dr. GROVER. This is St. Louis, so that would be——

Mr. THOMAS. Let us say 17 or 18 automobiles, if you want to do that, but how do you get $140,000 out of it?

Dr. GROVER. I only get about $100,000 for that, and about $40,000 for commercial transportation.

Mr. THOMAS. In addition?

Dr. GROVER. Yes, sir; in addition to that. This commercial transportation would be where we are moving records of ours from one place to another. For example, we just moved from the Washington Center all of the Coast Guard service records of Coast Guard personnel out to St. Louis.

Mr. THOMAS. You do not have a move like that but every once in 10 years?

Dr. GROVER. We have quite a few moves like that, Mr. Chairman.

Mr. THOMAS. This item can be reduced at least 50 percent without hurting anything or anybody, can it not?

Dr. GROVER. I do not think so.

COMMUNICATIONS COSTS—RECORDS CENTERS

Mr. THOMAS. What about your $70,000 for communications services?

Dr. GROVER. The big user, there again, is St. Louis, which has a teletype operation of the kind Mr. Evins was talking about. It runs $15,000 a year and about $35,000 for other communications costs, right from those two centers. The rest of it is divided all over the country.

Mr. THOMAS. You mean your communications in St. Louis costs $50,000?

Dr. GROVER. About $45,000. I meant $30,000.

Mr. THOMAS. Your teletype item is $15,000 and why the other $30,000?

Dr. GROVER. The other $30,000 would be telephone bills prorated to us.

Mr. ROBERTSON. That is correct—$30,000 for telephone and $15,000 for teletype.

Mr. THOMAS. Those records do a lot of talking.

How many people do you have out there?

Dr. GROVER. 816 in both centers.

Mr. JONAS. Why would you do that much telephoning? What kind of conversations would you have?

Dr. GROVER. There are a lot of extension phones the same as here in the National Archives Building, where you have extensions to avoid people running back and forth and covering a lot of space and wasting a lot of time.

Mr. JONAS. I can see why a lot of agencies would be calling you but I do not see much necessity of your calling all over the Government. They do not call you collect, do they?

Dr. GROVER. No; we have to have a telephone to take the calls.

Mr. BOUTIN. Many times you have to furnish the answers to the inquiries you get. That is a fact.

Mr. THOMAS. Not by telephone.

Mr. JONAS. You can do that with a 5-cent stamp.

Dr. GROVER. This St. Louis center does one kind of telephone business that does result in some some cost every time a veteran dies because they cannot do a thing about burial or a gravestone until they check his service in St. Louis. That is frequently handled on the telephone.

Mr. THOMAS. What about this communications item?

Dr. GROVER. I do not know what that costs. On the teletype I do not know.

MOVEMENT OF RECORDS

Mr. BOUTIN. Mr. Chairman, I would like to go back if I might to this "Motor pool and commercial transportation" item. I do not think, in deference to the good doctor, that we built a good record on this thing. We need to have funds where we can move to free up space and to accommodate records and to get like records in the same space, to have flexibility to move these records around.

We do move a lot of records when we take over records in block. We are working right now in Denver with an agency to take over 20,000 cubic feet and to move those records. We are just wasting a lot of money by leaving them where they are in office space.

Mr. EVINS. This would be commercial van trucking companies, I suppose?

Mr. BOUTIN. Largely that; yes, sir.

PRINTING COSTS—RECORDS CENTERS

Mr. EVINS. You have $50,000 for printing records management handbooks and guides, and for reproducing administrative regulations, manuals, and forms.

The people already in Government agencies are informed and you do not have to give them any more informational books, do you?

Dr. GROVER. I wish the people in Government agencies were completely informed, Mr. Chairman.

Mr. BOUTIN. The fact of the matter is that there is not a day that goes by we do not receive a request from some agency, in addition to what we generate on our own, for help in this area. Our people are

constantly putting out new records management handbooks, and developing new records management systems. We do a lot of work for Members of Congress. We come up here and set up a bookkeeping system or a records system for them.

Some of the new Senators and Congressmen in this session right now are having work done.

How many are we doing work for, eight or ten at least now?

Dr. GROVER. Eight or ten right now.

Mr. EVINS. $50,000 is a pretty expensive item to inform them, is it not?

Mr. BOUTIN. Here are some samples of the type of pamphlets they put out.

OTHER SERVICES

Mr. THOMAS. What is this $170,000 item for "Other Services" including erection of records center shelving, health room sevices, security guarding, employee security clearances, and equipment and building repairs furnished by FSS and PBS?

Dr. GROVER. I can give you a breakdown on that, if you would like.

Mr. THOMAS. Yes, let us have it, Doctor.

Dr. GROVER. $30,000 of that $170,000 is for security guarding mainly here at region 3 where we still have a great many highly classified records of the Department of Defense. We have to pay for this.

Mr. THOMAS. Out at Franconia?

Dr. GROVER. They are mainly on the waterfront down at Alexandria. $60,000 is for shelving erection throughout the country.

Mr. THOMAS. Is that an annual cost?

Dr. GROVER. It will run about that, yes, sir.

Mr. THOMAS. You have steel shelves up to the ceiling, 8 or 10 feet high. What does that cost per square foot or per cubic foot?

Dr. GROVER. To erect it costs about——

Mr. THOMAS. It is simple enough to erect it. It comes ready to be put up.

Dr. GROVER. That is right. It costs 20 to 30 cents per cubic foot to erect.

Mr. THOMAS. We have to buy more every year, is that right?

Dr. GROVER. Yes, we have to buy a little more every year.

Mr. THOMAS. Go ahead.

HEALTH ROOM SERVICES

Dr. GROVER. $20,000 is for health room services at St. Louis and the only other one in region 3.

Mr. THOMAS. What do you mean by health room services?

Mr. ROBERTSON. That is the service rendered by the Public Health Service where there are 150 or more employees.

Mr. THOMAS. That is a transfer item?

Mr. ROBERTSON. Yes.

Mr. THOMAS. They furnish the nurse and you pay them?

Mr. ROBERTSON. That is correct.

Mr. THOMAS. What do you pay there?

Mr. ROBERTSON. $16,000 in St. Louis and in region 3 it is $4,000.

Mr. THOMAS. What is the regulation? Is it where you have as many as 150 employees under one roof?

Mr. ROBERTSON. Yes

SUPPLIES AND MATERIALS

Mr. THOMAS. You have $190,000 for records center program supplies, including cardboard containers for new accessions and photographic supplies for reproduction services; and $35,000 for miscellaneous and administrative supplies and materials.

What is that?

Mr. BOUTIN. The big item there is for your cardboard containers.

Dr. GROVER. That is right. The boxes cost about $80,000 a year.

Mr. THOMAS. I remember seeing stacks and stacks of boxes we took over from the armed services. What became of them?

Dr. GROVER. We used those 5 years ago. Those boxes you probably saw in San Francisco we put to very good use.

Mr. THOMAS. Where are they now?

Dr. GROVER. Probably most were sold as waste paper with the records. It is cheaper to do that because the cardboard boxes cost 11 cents apiece and they go with the records as waste paper. They wear out rapidly.

Mr. THOMAS. Do they?

Dr. GROVER. Certainly; when you pull them back and forth. So by the time the records are ready to go they go too.

Mr. THOMAS. They all go together?

Dr. GROVER. That is right.

FURNITURE, EQUIPMENT, AND SHELVING

Mr. THOMAS. You have $50,000 for records center equipment including skids, dollies, and ladders, and for replacement of office furniture and equipment.

Then you have $125,000 for capital investment in records center shelving. You have that shelving in here twice.

Mr. BOUTIN. One is for erection and one is for the equipment itself, Mr. Chairman.

Mr. THOMAS. It will not cost you $125,000 to erect them?

Mr. BOUTIN. No. That is to buy the shelving.

Mr. THOMAS. We had an item above of $35,000 for this.

Dr. GROVER. That was to put the shelving together, to erect it in the center; $125,000 pays for the cost of the steel shelving.

Mr. THOMAS. With all your people there can't they take these prefabricated shelves and put them together? Do you have to spend $35,000 to erect them?

Dr. GROVER. As I recall we spent $60,000 for that.

Mr. THOMAS. The total for "Other objects" is $2,160,000 this year. What did it cost in 1961 and 1962?

Dr. GROVER. About the same, Mr. Chairman. It is $2,140,000 in 1963 and $2,160,000 in 1964.

SUMMARY COSTS OF RECORDS CENTERS

Mr. THOMAS. Out of a total cost of $10 million, is that what your records centers are costing you?

Mr. TURPIN. $9,888,000.

Mr. THOMAS. And you are spending $2.1 million for "Other objects"?

Mr. TURPIN. That is correct, including $600,000 for the personnel benefits.

Mr. THOMAS. Not salaries but benefits?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Take out the benefits. What does that leave?

Mr. TURPIN. That leaves $1,560,000.

Mr. THOMAS. From $10 million. It should not be more than 7 or 8 percent for a warehouse operation.

Dr. GROVER. This is not a warehouse operation. It is a cross between an office and a warehouse and I think these "Other objects" costs are reasonable based on our experience. We try to keep them down.

PREVIOUS COSTS FOR RECORDS CENTERS

Mr. EVINS. The biggest part of Government work is paperwork, Mr. Chairman. I did want to ask what the total overall cost of this operation had been over the past 5 years. It is about $10 million now. What was it the year before and the year before that?

Dr. GROVER. It has been about the same. We have taken over activities from the Defense Department. That has increased it considerably. In 1958 and 1961 we took some over.

Mr. EVINS. What have the appropriations been over the past 4 or 5 years? Can you give us a table?

Dr. GROVER. Can we insert that in the record?

Mr. EVINS. Yes.

Mr. BOUTIN. I think I can give you something that would be helpful. Since 1952 the cubic feet of record accession per man-year increased from 4,188 to 8,535. References per man-year went from 3,393 in 1953 to 12,874 in 1963. Cubic feet of records disposed of went from 5,900 to 8,900.

Mr. EVINS. We are impressed with the work. I just had in mind the dollar figures.

Mr. TURPIN. We can supply that for the record.

(The information supplied follows:)

Records management and centers—Total operating cost

1964 (estimate)	$9,888,000
1963 (estimate)	9,603,400
1962	9,324,399
1961	9,656,853
1960	9,255,273

ARCHIVES AND RELATED SERVICES

Mr. EVINS. The next item is "Archives and related services." For 1963 you had $3,598,400. For next year you are asking $3,765,000, an increase of $166,600. Insert pages 198, 199,, and 200 in the record.

(The pages referred to follow:)

2. Archives and relateds ervices

	Amount	Average employment		
		Department	Field	Total
1963	$3,598,400	408	39	447
Change	+166,600	+2	+1	+3
1964	3,765,000	410	40	450

HIGHLIGHT

"The permanently valuable records of the Government are selected, arranged, cataloged, preserved, and serviced in the Archives of the United States. Related services consist of (*a*) publication of the Federal Register and related compilations and the U.S. Statutes at Large; (*b*) preservation and servicing of historical materials in Presidential libraries; and (*c*) servicing the National Historical Publications Commission." (From the budget for 1964.)

Summary of performance cost

	1962	1963	1964
(*a*) National Archives	$2,713,731	$2,811,900	$2,900,200
(*b*) Federal Register	400,370	420,500	454,000
(*c*) Presidential libraries	294,297	366,000	410,800
Total cost or estimate	3,408,398	3,598,400	3,765,000

JUSTIFICATION

(*a*) *National Archives*

Permanently valuable records of the Government are selected, arranged, cataloged, preserved, and made available for use. Although workload is increasing no additional positions are requested for 1964. Workload items and cost of the program are set forth below.

	1962	1963	1964
(1) Agency appraisal audits:			
Number of records series appraised	4,923	----------	----------
Number of agency appraisal audits	----------	60	60
Cost or estimate	$139,250	$195,000	$200,000
(2) Preservation and reproduction:			
Pages flattened	859,139	900,000	900,000
Pages laminated	114,478	115,000	115,000
Pages microfilmed	6,667,000	7,000,000	7,000,000
Cost or estimate	$475,878	$492,000	$505,000
(3) Arrangement and finding aids:			
Items arranged	1,354,277	1,400,000	1,400,000
Finding aid entries	45,736	46,000	46,000
Cost or estimate	$745,400	$765,000	$786,000
(4) Reference:			
Number of reference services	518,503	530,000	550,000
Cost or estimate	$1,276,960	$1,279,900	$1,327,200
(5) National Historical Publications Commission	$77,243	$80,000	$82,000
Total cost or estimate	$2,713,731	$2,811,900	$2,900,200

(1) *Agency appraisal audits.*—The appraisal staff, in addition to appraising records recommended for disposal, audits and reviews the disposition program of Federal agencies and develops plans for each agency for the selective retention of its records. Identification of records of archival value is necessary to permit prompt and orderly disposal of records of temporary value.

(2) *Preservation.*—The program for repairing or filming records which are deteriorating will increase slightly in 1963 and 1964 without any increase in

staff. The quantity of material that requires repair before it can be used is being reduced gradually.

(3) *Arrangement and finding aids.*—The continuous workload of achieving control of records in the National Archives by putting them in better order and by providing guides, inventories and other finding aids necessary to their use will continue at the 1962 and 1963 levels. Special emphasis will be placed on records relating to the Civil War, State Department dispatches and correspondence, and the large volume of still-picture holdings.

(4) *Reference.*—It is estimated that the demand for reference service on records will continue to increase through 1964. The increased services will be performed without any increase in staff.

(5) *National Historical Publications Commission.*—The NHPC encourages, cooperates with, and gives limited assistance to organizations outside the Government now preparing for publication the papers of early American leaders, including Benjamin Franklin, John Adams, John Quincy Adams, James Madison, Alexander Hamilton, and Thomas Jefferson. These organizations are financed by private grants.

The Commission also compiles an annual bibliography of "Writings on American History" and general guides to archives and manuscripts in the United States. Its program is based on the report "A National Program for the Publication of Historical Documents," which has been endorsed by both the President and the Congress (S. Con. Res. 31, 85th Cong.).

(b) Federal Register

The daily Federal Register, the annual supplements to the Code of Federal Regulations, the annual U.S. Government Organization Manual, the daily slip laws, the U.S. Statutes at Large, and the annual compilation of Presidential messages and papers are published within fixed deadlines. These are continuous services. Backlogs cannot be permitted in the publication of current laws or current regulations having the force of law.

The increase of 2 positions in 1964 over 1963 provides further conversion from letterpress printing, which requires typesetting, to offset photographic reproduction in the printing of the Code of Federal Regulations. This improvement in printing technique reduces GPO costs considerably and permits publication of each volume 60 to 90 days earlier.

	1962	1963	1964
Workload data:			
Number of pages prepared for publication	43,286	44,500	46,500
Information services	17,749	18,000	18,000
Publications (pages):			
Federal Register	13,635	15,000	15,500
Code of Federal Regulations	24,290	23,500	25,000
(a) By letterpress	(19,846)	(19,000)	(18,500)
(b) By photo offset	(4,444)	(4,500)	(6,500)
U.S. Government Organization Manual	821	850	850
Slip laws	1,368	1,500	1,500
U.S. statutes	1,514	1,350	1,350
Presidential messages and papers	1,658	2,300	2,300
Total number of pages	43,286	44,500	46,500

(c) Presidential libraries

Manuscripts, books, prints, films, and other historical materials received from former Presidents Franklin D. Roosevelt, Harry S. Truman, Dwight D. Eisenhower, and Herbert Hoover, or acquired from their contemporaries, are cataloged, preserved, and serviced at the respective libraries.

	1962	1963	1964
Roosevelt Library	$112,881	$112,300	$117,000
Truman Library	94,450	108,500	112,400
Eisenhower Library	58,288	83,000	96,000
Hoover Library	28,678	62,200	85,400
Total cost or estimate	294,297	366,000	410,800

The Eisenhower Library was dedicated May 1, 1962, and the Hoover Library August 10, 1962. Exhibit rooms of both libraries are open to the public, and the Presidential papers are being processed prior to the opening of unrestricted materials for public research. It is estimated that public visitors to the exhibit rooms of all libraries will increase from a current annual rate of 375,000 to about 425,000 in 1964. Significant data applicable to the Roosevelt and Truman Libraries follows:

	Roosevelt	Truman
Holdings:		
Pages of manuscript	20,000,000	15,200,000
Volumes	30,000	27,000
Other printed items	43,000	28,000
Still pictures	74,000	8,000
Museum objects	20,000	7,000
Reference services (number)	1,100	1,200
Items furnished to searchers	7,400	7,300
Reproductions of manuscripts and photographs	16,500	11,800

Manuscripts, books, and other documentary materials have been moved into the Eisenhower and Hoover Libraries. These materials are being identified, arranged, boxed, and shelved, but statistical data are still incomplete.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $3,078,400 for 469 permanent positions (450 average employment), distributed as follows:

	1962			1963			1964		
	Department	Field	Total	Department	Field	Total	Department	Field	Total
(a) National Archives	374.0	----	374.0	374	----	374	374	----	374
(b) Federal Register	52.0	----	52.0	52	----	52	54	----	54
(c) Presidential libraries	----	36	36.0	----	39	39	----	41	41
Total positions	426.0	36	462.0	426	39	465	428	41	469
Average employment	403.4	33	436.4	408	39	447	410	40	450

Other objects: $686,000 provides:

(1) $233,100 for personnel benefits, including contribution to retirement funds; health benefits; group insurance; FICA; and awards under incentive awards program.

(2) $123,000 for program contractual services, including security guarding, and microfilming and electrostatic reproduction contracts.

The remainder of $330,500 or 8.8 percent of total estimate, provides:

(3) $12,000 for 444 day's travel at $27 per day and $1,500 for motor pool services.

(4) $15,000 transportation for accessioning records and transportation of miscellaneous items by commercial carrier and by motor pool vehicles.

(5) $56,200 communication services.

(6) $40,000 for printing guides and other finding aids to records in the National Archives, and reproduction of regulations, administrative issuances, forms, and similar materials.

(7) $94,000 for program supplies, including cardboard document containers, document restoration supplies, and photographic supplies and materials; and $14,000 for administrative supplies and materials.

(8) $40,000 for preservation, photographic and administrative equipment.

(9) $57,800 for equipment repairs and rentals, health room services, personnel security clearances, and building maintenance work orders payable to the BM fund.

Mr. Evins (reading):

The permanently valuable records of the Government are selected, arranged, cataloged, preserved, and serviced in the Archives of the United States. Related services consist of (*a*) publication of the Federal Register and related compilations and the United States Statutes at Large, (*b*) preservation and servicing of historical materials in Presidential libraries, and (c) servicing the National Historical Publications Commission.

NATIONAL HISTORICAL PUBLICATIONS COMMISSION

Tell us a little about that last one, servicing the National Historical Publications Commission.

Dr. Grover. The National Historical Publications Commission is established by law with representatives of the three branches of the Government on it—Congressman Miller serves for the House—with two appointees of the President and two people designated by the American Historical Association. It has a membership of 12. Its function is to encourage documentary publications relating to American history.

Among the major projects they are working on right now are the publication of the Jefferson papers at Princeton; the Hamilton papers at Columbia; the Adams papers by the Massachusetts Historical Society and Harvard; and the papers of Benjamin Franklin sponsored by Yale University and the American Philosophical Society. In addition, it prepares an annual bibliography published by the authority of Congress by the Government Printing Office.

Mr. Evins. That is privately financed?

Dr. Grover. The big projects are privately financed. One is being financed by the Ford Foundation.

Mr. Evins. When you use private funds are there strings to it?

Dr. Grover. Yes. For example, money donated by a foundation for publication of the Jefferson papers would have to be used for that purpose.

FEDERAL REGISTER

Mr. Evins. In your summary of performance cost you show an increase from $2.8 million in 1963 to $2.9 million in 1964. For the Federal Register you show an increase for $420,500 in 1963 to $454,000 in 1964.

Would not the sales of the Federal Register ordinarily take care of the cost; the sales to the public and the lawyers that want to see the official orders? How much do you get from the sale of the publication?

Dr. Grover. Those publications are sold by the Government Printing Office and the receipts are turned over to the Treasury. In 1963 the receipts were $346,000.

PRESIDENTIAL LIBRARIES

Mr. Evins. Do you need more guards for the Presidential libraries?

Mr. Boutin. I think we definitely need an improvement in our guarding service. Gifts have been made to former Presidents, and the libraries are almost all in outlying districts. We are making a study of it now. One of the things we will have to do is improve our guarding service, and we will have to arm our guards. We are not

doing that now. We put a watchman in a building with no protection at all. We are also looking into the possibility of using dogs. But we do want to improve the quality of protection we are giving these libraries.

Mr. EVINS. For "Other objects" you are asking for $686,600; $233,000 is for personnel benefits; $123,000 is for program contractual services. What are those, Doctor, contractual services?

CONTRACT MICROFILMING

Dr. GROVER. We are doing some contract microfilming.

Mr. EVINS. Do you not have the equipment to do that yourself?

Dr. GROVER. We do have some microfilming equipment and we do some ourselves but this refers to the microfilming of the German records the Administrator was talking about a moment ago.

Mr. EVINS. Once you have done the microfilming then you can preserve them and save a lot of space by disposing of the original records. How much space are you saving on this operation?

Dr. GROVER. On this operation, the German records we are filming will be going back to the German Government, the original records. We do not do enough microfilming to save any appreciable amount. The microfilming we do is microfilming for publication and microfilming used in lieu of laminating the documents.

Mr. EVINS. Off the record.

(Discussion off the record.)

Mr. BOUTIN. We came in last year with a request for an appropriation for a microfilming project. We are now reevaluating the whole thing to try to put a dollar fix on what benefit we would get from a real big microfilming project to save space. As I said in my opening statement, we have two new Presidential libraries in operation, the Eisenhower and Hoover Libraries.

OTHER OBJECTS—ARCHIVES

Mr. EVINS. You have $12,000 for 444 days of travel at $27 per day and $1,500 for motor pool services.

You have $15,000 transportation for accessioning records and transportation of miscellaneous items by commercial carrier and by motor pool vehicles. We discussed that earlier. Is that covered twice?

Dr. GROVER. No; this is in the National Archives and Presidential libraries.

Mr. EVINS. $56,200 for communication services; $40,000 for printing guides and other materials.

Doctor, when we want to get a copy of the Declaration of Independence or the Bill of Rights you sell them. What do you get from those sales?

Dr. GROVER. The cost of printing is paid out of a revolving fund and the sales have to come back to keep the fund revolving. That is in this $400,000 trust fund account.

Mr. EVINS. There would not be enough from the sales to have them run off on mimeograph machines?

Dr. GROVER. They are not run on mimeograph machines. They are excellent facsimiles.

Mr. BOUTIN. The cost is about $20,000 a year.

Mr. EVINS. $94,000 is for program supplies, including cardboard document containers, document restoration supplies, and photographic supplies and materials; $14,000 for administrative supplies and materials; and $40,000 is for preservation, photographic and administrative equipment. What is that item?

Dr. GROVER. That is in the National Archives, mostly. I can give you a list of what that will buy, if you like.

Mr. EVINS. $57,800 is for equipment repairs and rentals, health room services, personnel security clearances, and building maintenance work orders payable to the BM fund.

Any questions on this?

SERVICE DIRECTION, NATIONAL ARCHIVES

You are asking for an increase of $71,800 for "Service direction." You are asking for $613,000 for 1964 and you had $541,200 in 1963. Why is this necessary? Give us a few words in justification.

Dr. GROVER. $55,000 of that requested increase, Mr. Chairman, is for the increase in postage cost and the rest is for the salary increase.

Mr. EVINS. Thank you very much, gentlemen.

Mr. EVINS. We will now take up the Transportation and Communications Service.

Place in the record pages 207, 208, and 209.

(The pages follow:)

FUNCTIONS PERFORMED BY THE TRANSPORTATION AND COMMUNICATIONS SERVICE

This Service is responsible for improving management practices and providing services in the fields of transportation, communications, and other public utilities for all civilian agencies; protecting the Government's interest in rate-change cases before regulatory bodies; planning and operating an integrated civilian agencies' telecommunication system encompassing national defense uses, compatible with Defense Department systems; developing Government-wide policies and procedures for improving the overall efficiency of the operation of the Government-owned motor vehicle fleet, and operating interagency motor vehicle pools in areas of high Government vehicle density.

In addition to servicing programs assigned to GSA under Public Law 152, as amended, the Transportation and Communications Service renders transportation services, on a reimbursable basis, to the Department of Agriculture in connection with their responsibilities under the Agricultural Trade Development and Assistance Act of 1954; the Office of Emergency Planning for activities

under the Defense Production Act of 1950, as amended; and the Department of Health, Education, and Welfare and the Department of Defense with reference to transportation of medical supplies, hospital units, radiological equipment, and survival supplies.

The services rendered these reimbursable programs include the negotiation of contracts, rating and routing of shipments, issuance of shipping instructions and related shipping documents, and processing of transportation loss and damage claims.

Summary of new obligational authority and average employment

Summary reconciliation of 1964 estimate to comparable amounts for 1963

1963:	
Appropriation in annual act	$4,097,000
Transfer from "Operating expenses, FSS"	320,000
Proposed supplemental due to pay increase	200,000
Comparative total for 1963	4,617,000
Increases in 1964:	
Transportation operational services	234,000
Support for expanded Federal telecommunications system	302,000
Research and development to achieve engineering objectives for the ultimate Federal telecommunications system	150,000
Further negotiation of areawide and special utility contracts, review of rates and agency utilization practices	40,000
Regional supervision of all TCS programs	113,000
Miscellaneous minor increases including postage fees	34,000
Administrative operations in support of expanded programs	160,000
Mandatory increases attributable to the Federal Salary Reform Act of 1962	220,000
Total	1,253,000
1964 estimate	5,870,000

Analysis by activities

Activities	1963 adjusted	Increases	1964 estimate
1. Transportation services	$1,840,000	$306,000	$2,146,000
2. Communication services	1,374,000	526,000	1,900,000
3. Motor vehicle management	281,000	39,000	320,000
4. Public utilities service	125,000	48,000	173,000
5. Service direction	374,000	146,000	520,000
6. Administrative operations	623,000	188,000	811,000
Total obligations	4,617,000	1,253,000	5,870,000

Mr. EVINS (reading):

This Service is responsible for improving management practices and providing services in the fields of transportation, communications, and other public utilities for all civilian agencies; protecting the Government's interest in rate-change cases before regulatory bodies; planning and operating an integrated civilian agencies' telecommunication system encompassing national defense uses, compatible with Defense Department systems; developing Government-wide policies and procedures for improving the overall efficiency of the operation of the Government-owned motor vehicle fleet, and operating interagency motor vehicle pools in areas of high Government vehicle density.

I did not know the motor vehicle fleet was in there.

Mr. THOMAS. We have one new function, telecommunication. You have a new Commissioner.

Mr. EVINS. Mr. Commissioner, how long have you been with the General Services Administration?

Mr. CONRAD. I became Commissioner on September 18, 1961.

Mr. EVINS. What were you doing before that time?

Mr. CONRAD. I was a practicing attorney in Nebraska.

Mr. BOUTIN. Bob is not telling the whole story. He was Administrative Assistant to Governor Brook out there, who was taken ill shortly after his inauguration, and Bob really served the State of Nebraska for the Governor for about 2 years. He reported to the people every Sunday afternoon on television, met with the depart-

ment and agency heads of the State, and traveled all over. Bob has had some good experience.

Mr. EVINS. That sounds very good.

INCREASES IN ESTIMATES FOR 1964

Mr. Administrator, just looking at your table on page 209, in 1963 you had $4,617,000 and for 1964 you are asking for $5,870,000. The increases are: Transportation operational services, $234,000; support for expanded Federal telecommunications system, $302,000; and so on. Why do you not go down the list and explain these and tell us why they are necessary and tell us about some of the big cases you have had recently that have been in the news. We will be glad to listen to you.

Mr. CONRAD. The $234,000 indicated in the transportation operational services is attributable to the need we have for 29 additional positions in the Office of Transportation, in the 10 regional offices, and 9 in the central office to support the expanded FSS supply program, the accelerated stockpile disposal program, and the anticipated increase in loss and damage claims.

The $302,000 is to provide additional personnel in order to proceed with the many phases of development, engineering, and activation of the various modes of communications which will constitute the ultimate advanced Federal telecommunications system and to accomplish this within the currently planned time frame, which has been accelerated over that which we had a year ago.

The $150,000 for research and development is for the purchase of electronic test equipment, and for the testing and evaluation of varied types of data, teletypewriter, facsimile terminal equipment, and analog to digital conversion devices to assure that they will operate efficiently in the ultimate Federal telecommunications system.

The $40,000 for further negotiation of areawide and special utility contracts, and review of rates and agency utilization practices, provides for a modest increase of 5 positions, some of which would be for qualified college graduates who would be trained in this field.

REGIONAL SUPERVISION

The $113,000 for regional supervision of the transportation and communications service will provide the much needed top-level coordination of the varied programs in each regional office, and will be consistent with the regional management of other GSA activities.

Mr. THOMAS. Doctor, you are really spreading your wings. You have not had all this set up before, have you?

Mr. CONRAD. That is correct.

Mr. THOMAS. Why do you have to go out in all these regions? Most of your work has been right here. Now you are piling up administrative costs. We are for you, we think you are outstanding, but you set up a new unit here and here we go.

Mr. CONRAD. I would like to speak to that, if I may.

In the 10 regional offices, we now have regional supervision of one for every 333 people. The additional supervision or service direction item we are requesting would furnish one for each 126 people.

ESTABLISHMENT OF TRANSPORTATION AND COMMUNICATIONS SERVICE

Mr. THOMAS. How did this unit begin?

I notice you are getting into a local matter with the transit company in the District of Columbia in which the Federal Government has no more responsibility than the man in the moon. Then you are looking over telephone and power charges not only for your own agency but other agencies.

We had a motor pool setup under Federal Supply. There is nothing new about that. You have an expert on that.

The Commissioner set up a couple years ago this telecommunications system. What use do you have for somebody in all these regional offices? You will not have them delving into every State commission on transportation and utilities, I hope.

Mr. BOUTIN. Mr. Chairman, may I speak to that, please. This, actually, before Mr. Conrad came aboard, was the Transportation and Public Utility Service of GSA where we had pretty much the same structure except telecommunications, and they did not at that time have the motor pool.

Mr. THOMAS. You have not differed with anything I have said yet.

Mr. BOUTIN. I am not differing with you with the exception of maybe a few places.

This has been expanded and we can point to some real savings from this. Last year it was some $17 million in transportation management, $8.5 million in motor vehicle management, about $5 million in comparable Government communications costs, and approximately one-half million dollars from the public utilities activity. We think this was a good decision of the Congress. We brought the motor pool in here so all the transportation requirements would have one head. We started this new communications voice system on February 15 and expanded our record system to accommodate 150 million words of teletype annually as well as a data transmission capability.

GSA INTERVENTION IN RATE CASES

To give you an idea of the workload, if this goes exactly in the same ratio as the number of cases filed in State commissions and Federal agencies, last year we had 22.9 man-years used for the representation function, and 37 people involved in part time, at a total cost of $234,763.

Mr. THOMAS. In Chicago you have a big transportation center and a big regional office there. If the State of Illinois has a rate case do you intervene in each of them?

Mr. BOUTIN. No, we do not intervene in each. The yardstick is when the Government has a significant stake in the case as a consumer. We are not a public defender. We defend the interests of the Government as a consumer. We examine these cases first in the regional office and then in the central office and make a decision.

Mr. THOMAS. If a case is filed in the State of Illinois the Government is probably the biggest single user of that service?

Mr. BOUTIN. In Illinois it would be difficult to say because there are a lot of manufacturing concerns in that State, but in the Far West it

could be the biggest single user, for example where AEC has a big installation. I would say in New Mexico we are probably the biggest consumer of power, so we would have a great stake in any filings for rate increases for power. Transportation is really the biggest case load of all.

Mr. THOMAS. The U.S. Government is the biggest business in the United States—I see where General Motors is doing $11 billion a year business, but every year this Government is spending $100 billion, so it is still the biggest business in the United States. You can take this service here, starting like you are doing now, building a little setup in each of your regional offices, this could balloon into one of the biggest divisions in GSA. The basis exists for it, or a theoretical basis, at least. Any kind of utility rate case filed in any State, power, transportation, whatever it is, probably the biggest user is the Federal Government. Is this the groundwork for you to intervene in every one of them? Where will it end?

D.C. TRANSIT CASE

There is an example right here in the District of Columbia for transportation.

Mr. CONRAD. We have a pretty big stake in that. The proposal of D.C. Transit represents an increase through the elimination of tokens that would cost the Government an additional $25,000 a year.

Mr. THOMAS. Whom are you representing?

Mr. CONRAD. The Federal Government. The transportation system is used by its employees as they commute on Government business.

Mr. OSTERTAG. The Federal Government would not pay for it?

Mr. CONRAD. Yes, it would.

Mr. BOUTIN. We are talking about transportation between Government buildings while they are at work.

Mr. EVINS. The Government gives this transit company a franchise and guarantees them a return, so I think you are wise in keeping an eye on it in the District.

Mr. THOMAS. Most of the transportation between agencies in Washington is by motor pool. Less than 1 percent of your personnel do the traveling from one agency to another. Do they not all use the motor pool?

Mr. BOUTIN. If they all used the motor pool we would go broke. If an employee goes from the GSA to ICC, this is the way they would travel, take a bus.

Mr. THOMAS. Who would have occasion to go to the ICC for this unit?

Mr. BOUTIN. We would have a lot of occasion to go in from this unit to secure information.

Mr. THOMAS. The jurisdiction inside the building is dealing with waterways, railways, trucks, and buses. That will be your transportation unit. How many people in the Department go to the Interstate Commerce Commission?

Mr. BOUTIN. You probably would have 50 trips a month, would you not, Bob?

Mr. CONRAD. At least that, just in the Transportation Office.

Mr. THOMAS. Fifty trips or five people going ten times?

Mr. CONRAD. A group of people making repeated visits there.
Mr. THOMAS. And they buy tokens?

INCREASED COST TO GOVERNMENT OF TRANSIT TOKENS

Mr. CONRAD. The Agency buys tokens. The civilian side of Government buys about $100,000 of tokens a year. This proceeding now pending, by the elimination of the tokens would increase this by 25 percent.

Mr. THOMAS. I make the assertion before you get through you will spend more than $25,000 intervening.

Mr. BOUTIN. Even if we spend as much as that—and that is an observation I would not agree with—if you have long-term recurring savings from it, is it not worth it? The first saving may not be very much but after the first year you have recurring savings. Some of the electrical cases are very complicated.

Mr. EVINS. They multiply.

Mr. BOUTIN. The Alaska rate case, for example, where we are trying to get the rates lowered. The delegation from Alaska is interested and we are interested because we ship up there. I would hesitate to say how many times we have sat down with them and tried to work it out.

Mr. EVINS. Is not the D.C. Transit Co. prosperous?

Mr. BOUTIN. We see no indication otherwise, Congressman.

Mr. EVINS. Mr. Conrad, what can you tell us about the situation?

Mr. CONRAD. On the D.C. Transit case?

Mr. EVINS. Yes.

Mr. CONRAD. The Transit Company filed an application to change the rate by elimination of the tokens. The U.S. Government on the civilian side buys about $100,000 of tokens annually. The proposed change would have increased the Government's cost about $25,000 annually. Accordingly, we felt that was of sufficient interest for the Federal Government to intervene as a user of the service.

There is an auxiliary aspect of this that warrants consideration also, and that is that the Federal Government is interested in space in the metropolitan area and by the increase in the bus fare, the Transit Company's own testimony is an estimated loss of 400,000 rides annually, which would mean an increase in private transportation and that would increase the congestion downtown.

Mr. JONAS. I do not understand that response. You mean the Capital Transit Company stated unless they could get the rate increase this result would follow?

Mr. BOUTIN. It is just the other way, Congressman. If they did increase the rate the estimate is they would lose that many riders because of the increased cost.

Mr. THOMAS. Can you not rely on the local government here to take care of those items? As Mr. Conrad said, the first thing you know he will be in the parking business. He is interested in space. He spoke of a $25,000 increase annually. Suppose it is too high? Where will it stop? The next thing we know you will be in the parking space business.

Mr. EVINS. You mean you are condoning a little evil but not a big evil?

Mr. BOUTIN. We are not a Don Quixote on a white horse. We examine these things. We do not know until we get all the facts but at least we are there representing Uncle Sam.

APPLICATION TO INTERVENE IN TRANSIT CASE

Mr. JONAS. Did you not have to petition the courts several times before they let you get in?

Mr. BOUTIN. No. We applied and our application to intervene was denied by the Commission.

Mr. JONAS. Because you were too late?

Mr. BOUTIN. Because they said we had not applied in timely fashion. We took it to the court and were told if we reapplied the application would be considered to permit our intervention.

Mr. JONAS. Why were you late in applying?

Mr. BOUTIN. We do not believe we were late, and we believe the subsequent action proved they were wrong or otherwise we would not be in there.

Mr. JONAS. How long had the proceeding been pending when you petitioned to intervene?

Mr. CONRAD. Twenty-nine days.

Mr. OSTERTAG. Is the issue involved here that of $25,000 a year?

Mr. BOUTIN. This is about what we are talking about.

Mr. JONAS. How many people do you have working on this?

Mr. BOUTIN. We anticipate in 1964 we will use 26.3 man-years in this whole function of intervention countrywide, and 42 people involved part time.

Mr. BOLAND. Is not the public interest protected sufficiently by intervenors other than the GSA? As has been pointed out by some of the members, is not the interest of the Commission of the District of Columbia itself enough to protect public interest, and does not this spill over into the interests of the Government itself? All you would have to do is supply them with the information and could you not depend on them to do the job? Why are you not excess baggage as an intervenor in this instance?

Mr. BOUTIN. We get into a philosophical conflict that is not easy to answer. We have a charter that says we shall represent the interests of the Federal Government as a consumer in regulatory matters. We have followed that. We do not want to be critical of the State or Federal regulatory bodies or those in the District of Columbia, but there is no one who has the basic mission of protecting Uncle Sam—everybody else can have their own lawyers—and unless GSA, by its own action or by delegation, intervenes, I think Uncle Sam is not going to be well protected.

Mr. BOLAND. I think that is a fine statement, I applaud it, but I do think in a case like this, which is a relatively simple case, the Federal viewpoint could be just as well presented by the local people. I can understand what objection you might have to permitting Commissions throughout the United States to do this, but in an instance like this it would appear relatively simple.

Mr. EVINS. I think there is more reason for them to intervene in the District of Columbia than in some of the State cases.

Mr. BOLAND. This is a relatively simple case so far as the interests of the Federal Government are concerned and I thought perhaps the local people could present it.

Mr. JONAS. To follow this procedure to its logical conclusion you would intervene in every local municipality in the United States where the Federal Government has a building if they petitioned for an increase in light rates. You would have a right to do so?

Mr. BOUTIN. We would have the right to do so if we carried it to an absurdity. But the Government must have a significant interest, and this carries the connotation of a significant reasonable interest. In this case I think it was well justified. We have a real problem here of Federal employees going to and coming from work which is completely apart from our interests as a consumer. We have a great interest in their getting in here. There is not enough parking here. How will we maintain the National Capital and the Federal structure unless we have good means of transportation? We have gone on record as wanting to see more rapid transit at a reasonable price.

Mr. OSTERTAG. You will recall that, we discussed this matter at great length at hearings in the past and at that time there was wholesale reaction to GSA intervention.

Mr. EVINS. At that time it involved telephone rates.

Mr. OSTERTAG. There was wholesale reaction and criticism and at that time I believe there was a reasonable understanding as to how this responsibility was to be applicable and I assumed that the issue had been resolved. But, by virtue of developments here, it would seem you are back on that track again.

Mr. BOUTIN. Mr. Congressman, our procedures have not changed one iota. We examine each of these rate cases and try to make a judgment if it is in the Government interest for us to spend the time, the effort, and the money to get into it. I do not think there has been hardly any criticism—at least it has not come to my attention—of our activities. We have selected them carefully and when we have gone into a case we have gone all the way. I think in the case of the D.C. Transit our interests are significant enough that we should be in it.

Mr. EVINS. The transit company is operating under a franchise given to it by the Government with a guaranteed return. I think you are well within your rights in keeping an eye on their rate structure.

Mr. OSTERTAG. But GSA is not a regulatory agency.

Mr. EVINS. They do not claim to be.

Mr. BOUTIN. No, we are not a regulatory agency. We have no voice in the final decision made on any of these. We simply go in and present the facts as a contribution to the information that the body itself has available to make a judgment. We win some and lose some.

GSA POSITION IN D.C. TRANSIT CASE

Mr. JONAS. What is your position in the D.C. Transit case?

Mr. BOUTIN. We are in as an intervener.

Mr. JONAS. I know, but what is your contention?

Mr. BOUTIN. We have not evaluated the material at hand yet, but our general position is that the company has not filed sufficient information to justify the increase it seeks.

Mr. JONAS. How do you know you should intervene, then?

Mr. BOUTIN. If we did not intervene we would not know if we should have gone in or not because we would not have the opportunity to examine the information.

Mr. JONAS. You did not intervene, then, on the basis of information you had that indicated the proposed rate was exorbitant? You intervened to find out whether it was exorbitant?

Mr. BOUTIN. It is a question of intervening and taking a position.

Mr. JONAS. But you would not take the position the proposed rate was unfair unless you thought it was?

Mr. BOUTIN. Right now our position is the request for the increase is unjustified and the position was indirectly supported by the U.S. Circuit Court in disallowing the last rate increase made by the company.

Mr. JONAS. To what extent do you think it is unjustified?

Mr. BOUTIN. That is exactly what I was trying to say. We can take a position in any case in which a request is made for an increase in rates or an increase for service. And we intervene both ways, in favor of some and in opposition to others. We submit evidence before the regulatory body and examine evidence submitted by others to make a judgment.

Mr. EVINS. You have made a judgment that there is substantial concern as far as Government interest in this case is concerned?

Mr. BOUTIN. That is correct.

Mr. BOLAND. And your intervention has to be timely or you cannot be an intervener.

Mr. BOUTIN. That is right. Once a case is started it is too late.

Mr. OSTERTAG. Is it not fair to say that your intervention is based as much on indirect use as it is on direct use? In other words, the increase of about $25,000 a year in cost to the Federal Government, direct expense, is not the whole reason?

Mr. BOUTIN. It is not the whole reason in this particular case, that is correct. Normally it is strictly a dollar and cents question or it may be one of service.

Mr. OSTERTAG. But you did not say that in the first instance.

Mr. BOUTIN. It goes both ways but we think in and of itself the $25,000 is a significant factor in the overall picture of what this company is going to ask for rates.

In all this function in transportation and communications, the representation function is minute in dollars expended and number of people involved and number of positions. In this service, the amount requested for this function is about 3 percent of its total requested appropriation. This is very small. It has not grown. We have a group of highly qualified technical people to help us make these judgments. They do not devote full time to this in many instances but they have the competence and are called in to work in these interventions.

Mr. JONAS. You have not taken the position so far that the requested rate increase is out of line, you have not made that determination yet and you will not make a determination on that until you get in the hearing and hear the facts. Is that correct?

Mr. BOUTIN. Our position right now on the information we have is that the requested increase is not justified.

D.C. RATE INCREASE REQUESTED

Mr. JONAS. What is the requested increase?

Mr. BOUTIN. The requested increase is to do away with the token so it will be a straight 25-cent fare rather than five tokens for $1, which reduces it to 20 cents. Is that right?

Mr. CONRAD. That is absolutely correct.

Mr. EVINS. It used to be a dime when I came to Washington and now it is a quarter.

Mr. JONAS. We recognize that upward trend in costs in Congress by giving a salary increase almost every other year since I have been here. The cost of living has gone up in every field. I do not hold any brief for the transit company, I do not know any of the people involved. My interest is in knowing what procedure you follow. That is the basis of my questions.

Mr. OSTERTAG. Aside from the *Transit* case in the District of Columbia we have certain Federal agencies that are regulatory bodies and control or regulate rates. Do you intervene in interstate or federally controlled rate cases?

Mr. BOUTIN. Yes; we intervene in cases before the Interstate Commerce Commission, the Federal Communications Commission, Federal Power—I do not know about Federal Trade.

OPERATING EXPENSES, TCS

Mr. EVINS. Let us take a look at "Operating expenses." Put page 210 in the record.

(The page referred to follows:)

Operating expenses, Transportation and Communication Service

1963 appropriation	$4,097,000
Transfers	+320,000
Pay act supplemental	+200,000
Comparative	4,617,000
Change	+1,253.000
1964 estimate	5,870,000

GENERAL STATEMENT

"This appropriation provides for improving management of transportation, communication, and public utility services in all civilian agencies, protecting the Government's interests in cases before regulatory bodies, and for providing assistance to civilian agencies in each of these specialized fields. Fair value of personal property received from other appropriations or funds without cost for use by GSA is as follows: 1962, $2,000; 1963, $1,000; and 1964, $1,000" (from the Budget for 1964).

In addition to activities previously financed by this appropriation the "Motor vehicle management" activity was transferred from the Federal Supply Service to the Transportation and Communication Service during 1962.

The estimate for 1964 is $5,870,000 as compared to financing of $4,617,000 for 1963. The increase of $1,253,000 includes $306,000 for increased transportation services to other Government agencies as well as to the expanding FSS program within GSA; $526,000 for support of the Federal telecommunications system including research and development; $188,000 for normal administrative operations in support of the expanded program; and $233,000 for other activities. The estimate for 1964 includes $420,000 for increased pay costs as a result of the Federal Salary Reform Act of 1962.

Representation activities are expected to be maintained at about the same level as in 1962 and 1963. The representation function consists of (1) negotiations with carriers and utility companies concerning consumer considerations of the Government, and (2) formal participation in contested rate cases. Every effort is made to discuss new rate proposals with industry before filing. It is anticipated that preliminary rate structure negotiations will minimize the number of contested rate proceedings in which GSA will participate on behalf of the Government.

APPROPRIATION LANGUAGE

"For necessary expenses of transportation, communications, and *other* public utilities management and related activities, as provided by law, including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), at rates not to exceed $75 per diem for individuals, [$4,097,000] *$5,870,000*."

Explanation of appropriation language

Addition of the word "other" is necessary to provide coverage for public utilities besides communications which is a public utility and cited separately in the present language.

Mr. EVINS (reading):

This appropriation provides for improving management of transportation, communication, and public utility services in all civilian agencies, protecting the Government's interests in cases before regulatory bodies, and for providing asssistance to civilian agencies in each of these specialized fields.

You are requesting an increase of $1,253,000. The increase includes "$306,000 for increased transportation services to other Government agencies as well as to the expanding FSS program within GSA; $526,000 for support of the Federal telecommunications system including research and development; $188,000 for normal administrative operations in support of the expanded program; and $233,000 for other activities. The estimate for 1964 includes $420,000 for increased pay costs as a result of the Federal Salary Reform Act of 1962."

TRANSPORTATION RATE CASES

You have been operating over there several years for about a $4 million level and this year for the first time you go over $5 million, $5,870,000. How many rate cases in transportation have you entered into during the past year?

Mr. BOUTIN. As of the end of December we had 56 cases pending. During the first 6 months we entered 11 and we concluded 9, leaving a total of 56 pending.

Mr. EVINS. Where were these new 11 cases instituted?

Mr. BOUTIN. The bulk of this increase, of course, is in the communications function that we did not have heretofore. We started it last year in a very small way. That is where most of this difference in money is. There is some small increase in the administration of transportation management where, for example, an agency will call us and want us to arrange transportation by rail or by boat to point of delivery for them. For example the Bureau of the Mint may want us to arrange for the transportation of gold bullion from the mint.

Mr. EVINS. The largest portion of your increase is for transportation for various agencies of Government?

Mr. BOUTIN. To assist them in the transportation. A large part is in the GSA itself where we now have delivered prices so we have to arrange the transportation of the items and handle claims resulting from the transportation. That is a load we did not have before last July 1.

RATE CASES BEFORE ICC

Mr. EVINS. You filed 11 new cases. Where were they filed and what did they involve generally?

Mr. CONRAD. Most of the cases were before the Interstate Commerce Commission. There were four before the Federal Maritime Commission and one transportation case before the Georgia Public Service Commission.

Mr. EVINS. Tell us about the general nature of those before the Interstate Commerce Commission.

Mr. CONRAD. One case before the Interstate Commerce Commission involved the question of increased rates in the Central States territory where they were increasing the class rates 5 percent and the commodity traffic rates 7 percent. The Commission ordered an investigation in May 1958 and began a study on January 23, 1959. Request was granted to withdraw the emergency rates. In 1962 the examiner's report was filed recommending discontinuance of the proceedings.

Mr. EVINS. You intervened because you thought there was a substantial element of increased cost to the Federal Government?

Mr. CONRAD. As a user of that service.

Mr. EVINS. And this one you say was withdrawn?

Mr. CONRAD. That is correct; on August 3, 1962.

Mr. EVINS. How much do you estimate you saved in that case? If the rate increases had gone into effect how much would it have cost the Government?

Mr. CONRAD. I have been advised the additional cost would have been at least $67,000.

CASES BEFORE THE MARITIME COMMISSION

Mr. EVINS. What about the cases before the Maritime Commission? Tell us generally what was the nature of your intervention there.

Mr. CONRAD. One of the cases involved the Atlantic and gulf ports. It was an investigation of general practices and was strictly a rulemaking proceeding to determine the extent to which the Commission would regulate.

Mr. EVINS. What was the result of the case?

Mr. CONRAD. As of January 1, 1963, that case is awaiting the examiner's assignment of further hearings.

GEORGIA RATE CASE

Mr. EVINS. What is the nature of the case in Georgia?

Mr. CONRAD. I will ask Mr. Miller to reply to that.

Mr. MILLER. In that particular case the Commission had taken actions resulting in the cancellation of a contract which GSA had with a motor carrier to transport the household effects of a large number of Government employees of the Department of Health, Education, and Welfare.

We made this contract under an advertised-bid procedure. We appeared in this proceeding to defend the principle of making contracts

of this type by advertising procedures and rates different from those regulated by the Georgia Public Service Commission. There were a series of appeals all the way to the U.S. Supreme Court which resulted, a few weeks ago, in a decision by the U.S. Supreme Court that this type of contract is proper and lawful.

Mr. EVINS. You entered into a contract with X transportation company to haul certain employees of the Department of Health, Education, and Welfare?

Mr. MILLER. That is right.

Mr. EVINS. What would be the nature of this type of transportation?

Mr. MILLER. These employees were being transferred from the Savannah area and the Atlanta area. They were employees of the Communicable Diseases Laboratory now located near Atlanta.

Mr. EVINS. The transportation company wanted to cancel the contract?

Mr. MILLER. They were put under pressure by the Georgia Public Service Commission to do so.

Mr. JONAS. What?

Mr. MILLER. The carrier canceled the contract on the basis of a contention of the Georgia Public Service Commission that the contract made with us was in violation of Georgia law.

Mr. EVINS. The Supreme Court did not hold in that area but affirmed the validity of the contract?

Mr. MILLER. Yes, sir.

Mr. OSTERTAG. Would the gentleman yield?

Mr. EVINS. Yes.

REASON FOR GSA REPRESENTATION

Mr. OSTERTAG. You have been discussing certain cases involving matters before a Federal agency. What is the real principle of the General Services Administration as a representative of the Federal Government, as a user or consumer representing the Federal Government before the Federal Government?

Mr. BOUTIN. Strictly as an agency representing the interests of the Federal Government as a consumer. The regulatory body itself has to do with the rates as they apply to everyone. We represent the Government the same as if United States Steel or other company had an interest. They would have a lawyer in on the case speaking for their interests to develop information for the regulatory body, on which they base a decision.

Mr. OSTERTAG. You mean the Federal Government as a regulating agency?

Mr. EVINS. As a consumer.

Mr. OSTERTAG. What constitutes the reason or need for the Federal Government to represent the Federal Government before another Federal agency to right a wrong?

Mr. BOUTIN. The responsibility of the regulatory agency is not to represent the Federal Government as an operating entity but the Federal Government as an agent for the people of the country and for all of the users be it telephone, electricity, or whatever it is. All we do is to represent the interests of the Government as an operating entity the same as General Motors, United States Steel, Union Car-

bide, or anybody else in that this is the effect that this will have on our costs, and these are the reasons we feel that this action is justified or is not justified.

We enter both ways.

On the Telpak rates of A.T. & T., we intervened in behalf of and in support of A.T. & T. Bethlehem Steel, I think, was another one. We intervened in behalf of A.T. & T. but on another one we may be right across the table from A.T. & T.

Mr. JONAS. Why would you intervene in behalf of A.T. & T. in that case?

Mr. BOUTIN. Because we have a great interest in this and because this is a vehicle we use to reduce costs in communications for the Federal Government to a great extent.

Mr. JONAS. Do you intervene to keep the rates up?

Mr. BOUTIN. No; this actually was a voluntary rate reduction for the large users.

Mr. JONAS. You intervened to oppose that?

Mr. BOUTIN. No; we intervened in favor of it.

Mr. OSTERTAG. You did that because, as a consumer, you would be affected by it?

Mr. BOUTIN. Because, as a consumer, it was in our interests; significantly so.

Mr. OSTERTAG. Would most of these cases involve what might be termed discriminatory rates or practices which would involve the Federal Government as compared with other consumers?

Mr. BOUTIN. Not necessarily but it could be.

We have had instances when that has been so.

Maybe, Malcolm, you can cite one or two.

Mr. MILLER. One instance of a discriminatory rate is where we paid a higher rate to a warehouse a short distance outside of Topeka which was considerably higher than the rate to Topeka, Kans. We obtained about $175,000 reparations from the railroads as a result of that.

That is actual cash collected back from the carriers.

Mr. BOUTIN. I would like to point out, too, that a substantial amount of our workload here relates to the SAGE cases where we were instructed by the Congress that we should represent the Government in all of these cases, not anyone else, not the Department of Defense, but the GSA should undertake the task.

Mr. OSTERTAG. Mr Administrator, I am merely trying to determine the principle by which it is necessary for the Federal Government to be represented before a Federal agency with regard to rate cases. The Federal Government itself through these agencies establishes these agencies.

Mr. BOUTIN. One of the things——

Mr. OSTERTAG. I am trying to get at the principle of the same Government being involved in two different ways.

Mr. EVINS. Is not the answer to that, my colleague, to say, "Why have a GAO?" "Why have a GAO if one agency of the Government could check upon another agency of the Government?"

Mr. BOLAND. The answer is that these regulatory bodies do not represent the Federal Government as such. In a sense the regulatory body does represent the public interest but it is not the province of the ICC or the FCC or the regulatory bodies to represent the Federal Gov-

ernment per se with the result you have to have some of them representing Federal interests before regulatory bodies, and that is why GSA does it.

Mr. BOUTIN. That is correct.

DECISION ON GEORGIA RATE CASE

Mr. JONAS. I would like to ask a question about this Georgia case.

Did the Supreme Court hold that it was legal for the Department of Health, Education, and Welfare to make a conntract with a carrier for the transportation of persons and property at rates lower than the regulated rates as prescribed by the Georgia Public Service Commission?

Mr. MILLER. Yes, sir. Except that the contract in that particular instance was made between GSA and the carrier on behalf of the Department of Health, Education, and Welfare.

Mr. JONAS. What was the basis of the Court's decision?

Did the Court hold that because the Federal Government was involved the Georgia Regulatory Commission had no jurisdiction?

Mr. MILLER. That is correct, sir. It was an interference with our Federal Government procurement policy.

Mr. JONAS. The holding then was to the effect that with respect to the Federal Government in transportation matters, the Georgia Public Service Commission has no jurisdiction over rates?

Mr. MILLER. I do not think the decision went that far. It did go so far as to say that if the Federal Government exercised its procurement powers by way of advertised bidding procedures, that exercise of power to establish charges through the advertised bidding procedure was not subject to regulation by the Georgia Public Service Commission.

Mr. JONAS. That is pretty far-reaching as a decision, is it not?

Mr. MILLER. Yes, sir.

Mr. JONAS. That would affect rates all over the United States, would it not?

Mr. MILLER. Yes, sir.

Mr. JONAS. And would affect the right of State regulatory agencies to control rates applicable to the Federal Government, would it not?

Mr. MILLER. This decision is merely one in a series of decisions. The first one of these decisions was made in 1958 involving a contract between the Department of Defense and a carrier in California.

The Georgia case was merely an affirmation of the principle decided in the California case.

Mr. JONAS. Thank you.

COMMUNICATIONS PROGRAM

Mr. EVINS. Mr. Administrator, you pointed out that the greatest portion of the increase is for transportation services to other Government agencies. Tell us about this increase of $526,000 for telecommunications. Why is it necessary and required?

Mr. CONRAD. We are requiring this additional amount, Mr. Evins, in order that we can accelerate the communications program which we started a year ago.

Mr. BOUTIN. Let me interrupt to say that this increase is only a very small part required to accelerate the implementation of phases 2, 3, and 4. Thus far, we have implemented only phase 1. Forty-three major metropolitan areas and satellite communities around them have been implemented and now we are looking toward connecting 300-plus communities for not only voice transmission but record, facsimile, and data transmission. It relates almost directly to the additional service that is going to be provided in the regions. These people will almost exclusively be engineers to keep the system operable, to improve the system as we go along, to look for ways to save money, to consolidate switchboards where we can reduce operating costs, and go into automated equipment, centrex, and items like that.

Mr. EVINS. We discussed this telecommunications system earlier. Do you envision a reduction of commercial communications services when this is fully implemented and installed and operated?

Mr. BOUTIN. When this is fully implemented and in operation, Congressman, we expect we will have a savings of anywhere from $15 to $27 million a year over comparable costs to the Government for inferior service right now.

Mr. EVINS. I do not know about inferior service.

Mr. BOUTIN. Inferior by comparison; yes, sir.

For instance, under this system you can direct——

Mr. EVINS. Under all budgets, yours as well as others, they indicate that all communication costs normally are on the increase. This is on the increase, too, and I think that you can show a reduction in expenditures otherwise at a later date?

Mr. BOUTIN. Yes, sir. We will be able to stabilize it overall in the bill to the Government.

Mr. EVINS. You have $233,000 for "Other activities."

What other activities? And what do they include?

Mr. BOUTIN. I am lost as to what page you are on.

Mr. EVINS. Page 210, in the middle of the page.

You are asking for $233,000 for "Other activities."

We discussed the pay item and that is in the third paragraph.

Mr. TURPIN. I believe, Congressman, that this $233,000 is the total increase of items for motor vehicle management, public utilities service, and service direction.

Mr. EVINS. Motor vehicle management?

Mr. TURPIN. Yes, sir.

This is the third, fourth, and fifth items.

Mr. BOUTIN. That is exactly right.

Mr. EVINS. You have a language change set out at the end of the page.

Mr. THOMAS. This has already been gone into pretty thoroughly.

TRANSPORTATION SERVICES

Mr. EVINS. Mr. Reporter, put pages 212 through 218 in the record.

(The pages follow:)

Operating Expenses, TCS

1. Transportation services

	Amount	Average employment		
		Department	Field	Total
1963	$1,840,000	69.2	125.3	194.5
Change	+306,000	+7.3	+12.7	+20.0
1964	2,146,000	76.5	138.0	214.5

HIGHLIGHT

"Plans and procedures for improving transportation practices and operations in civilian agencies are developed; reasonable rates are negotiated with carriers; the Government's interest as a user is protected in proceedings before regulatory bodies; and contracting officer procurement assistance, rates, routing, and related srevices are supplied to executive agencies." (From the budget for 1964.)

Transportation services are performed under three subactivities as follows:

Summary of performance cost

	1962	1963	1964
(*a*) Transportation management	$374,748	$435,300	$462,800
(*b*) Rate and routing service	884,900	957,600	1,097,800
(*c*) Contract administration	446,535	447,100	585,400
Total cost or estimate	1,706,183	1,840,000	2,146,000

Justification

(*a*) *Transportation management*

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Total cost or estimate	$374,748	34.2	$435,300	38.4	$462,800	38.4

This request is for the agency assistance and seminar-workshop training programs. There is no increase in positions for this subactivity, the funding increase being primarily attributable to the Federal Salary Reform Act of 1962. With the completion by the regional staff of 1800 initial visits to civilian agencies field offices by the end of 1963, and the anticipated disclosures of many additional areas in which agency assistance and seminar-workshop training programs will be required to achieve maximum efficiency and economies in transportation operations of the respective agencies, this activity will have developed an impetus which must be encouraged and continued if GSA is to accomplish its objectives of improving the performance level of civilian agency personnel in the area of transportation management.

Demand for the training program is illustrated by the fact that in 1962, the 69 seminar-workshops conducted were attended by approximately 1281 employees from 273 different offices of the various agencies. In 1963, 111 such seminars and workshops are planned.

It has been demonstrated over the years that the agency assistance program is the vehicle which induces civil agencies to avail themselves of GSA experience in the utilization of economical and efficient transportation facilities and services with resulting economies in procurement and other operational programs of the Government agencies.

All handbooks, guides, and instructional material now published, and to be published in the future, will be in need of revision and updating. The constant change in transportation and in the law affecting transportation makes it just as important that these issuances be kept up to date as it that they be issued in the first instance.

In 1964 it is planned to develop and publish the following:

1. Federal Procurement Regulations, part 22, Transportation.
2. GSA Regulations title 1, chapter VII: Personal Property Management.
3. General Services Procurement Regulations, chapter 5, part 22, Transportation.
4. TCS Procurement Regulations, chapter 5D, Transportation.
5. A Government-wide Transportation Management Desk Reference Handbook.

The request also provides for the development and implementation of a passenger transportation management program, an area of potential savings which has heretofore been largely neglected.

(b) Rate and routing services

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Total cost or estimate	$884,900	92.5	$957,600	95.9	$1,097,800	104.1

	1962	1963	1964
(1) Information services	105,700	106,000	121,000
Unit cost	$6.88	$7.11	$7.14
Performance cost	$726,700	$753,200	$864,500

This subactivity provides the specific technical transportation information required in the execution of agency programs. It requires interpretation and application of freight tariffs and other schedules of charges; selection and utilization of specific carriers, their terminals, and other facilities; detailed knowledge of accessorial and other services and their charges; and other information with respect to all modes of transportation necessary to efficient traffic management and other transportation operations related to procurement, warehousing, stockpiling, and supply distribution programs. When this information is supplied and properly applied it results in the avoidance of unnecessary transportation expenditures.

The estimate for 1964 provides for a 14-percent increase in workload expected to be generated by the greatly accelerated FSS supply support to DOD, the expanded disposal program in connection with the stockpile of strategic and critical materials and the programs of other agencies. Included in performance costs for 1963 and 1964 are $34,600 and $65,000, respectively, attributable to the Federal Salary Reform Act of 1962. Excluding these mandatory costs, the unit costs would have been $6.78 in 1963 and $6.61 in 1964, the reduction in the basic unit cost resulting from increased productivity.

	1962	1963	1964
(2) Negotiations	250	320	360
Unit cost	$633	$639	$648
Performance cost	$158,200	$204,400	$233,300

Negotiations are conducted with carriers, and before carriers' committees and conferences to secure the best and cheapest transportation. This requires continuous technical and economic research and various kinds of analyses. They

include technical rate studies and evaluations, the development of statistical data and economic and cost studies. Traffic surveys, economic studies, and other information derived through automatic data processing provide a part of the basic study material utilized in negotiations and other types of traffic management. Studies utilized in negotiations are also used as background material in representation cases conducted before regulatory bodies.

The estimate for 1964 provides for increased activity in an area in which it is the responsibility of GSA to insure that all representation conducted on behalf of the Federal agencies before regulatory bodies on transportation matters is preceded by every possible and practical negotiation effort. Included in performance costs for 1963 and 1964 are $7,400 and $14,000, respectively, attributable to the Federal Salary Reform Act of 1962. Excluding these mandatory costs, the unit costs would have been $616 in 1963 and $609 in 1964.

(c) Contract administration

	1962		1963		1964	
	Amount	Average employees	Amount	Average employees	Amount	Average employees
Total cost or estimate	$446,535	65.8	$447,100	60.2	$585,400	72

	1962	1963	1964
(1) Contract referrals	2,179	2,000	2,000
Unit cost	$29.47	$30.70	$31.70
Performance cost	$64,223	$61,400	$63,400

Appropriate coverage of the transportation and traffic management aspects requires review and comment with respect to each referral of a transaction involving contracting by DMS, or other program operators, for such purposes as procurement, upgrading, relocation, sale, or transfer to other agencies. These efforts provide the Government with an opportunity to obtain the best possible contract price and avoid unnecessary operating and administration costs that would be incurred by inappropriate or inadequate contract terms and conditions.

Included in performance costs for 1963 and 1964 are $3,000 and $5,000, respectively, attributable to the Federal Salary Reform Act of 1962. Excluding these mandatory costs, the unit cost would have been $29.20 in both years.

	1962	1963	1964
(2) Contracts	622	650	650
Unit cost	$81.20	$80.31	$82.62
Performance cost	$50,504	$52,200	$53,700

Contracts for transportation or related services are utilized to cover requirements where existing rates are considered higher than necessary or existing services are deemed inadequate.

Special or unusual movements are involved, necessitating the development of detailed specifications tailored to meet the needs of the individual requests initiated by the primary program operators.

In 1962 there were 228 such contracts executed in the central office and 394 in regional offices for a total of 622. These included 194 movements of silver coin and 5 movements of gold bullion, having a total value of approximately $1.4 billion for the Bureau of the Mint; 11 movements of precious stones and precious metals, valued at approximately $28 million, for Defense Materials Service; 18 contracts for ocean freight forwarder services at the principal U.S. ports for use by Government agencies as they may require; and 394 contracts executed in the regional offices principally for local drayage and office relocation services for various Government agencies.

Included in performance costs for 1963 and 1964 are $2,500 and $4,000, respectively, attributable to the Federal Salary Reform Act of 1962. Excluding these mandatory costs the unit cost would have been $76.46 in both years.

	1962	1963	1964
(3) Shipments processed	74,550	75,000	85,000
Unit cost	$3.75	$3.69	$3.73
Performance cost	$279,398	$276,800	$317,100

One of the principal functions of this activity is to provide technical assistance and transportation services to all GSA programs and to all executive and civilian agencies. These services encompass worldwide movements, survey of ocean markets, charter party agreements, tank car leases, air charter contracts, marine insurance, customs clearances, export licenses and import permits, administration of Public Law 664, and routing of traffic.

This activity more than pays its way each year in terms of savings to the Government. For example, in 1962, it coordinated and arranged for ocean movements of DDT under the AID program to India, Vietnam, Indonesia, Thailand, and Brazil in accordance with Public Law 664, and effected savings of $520,691.

Another example was the saving of $554,793 resulting from negotiations for rates on urea from U.S. ports and five charters from Japan to East Pakistan.

Increase of five positions in the field is to keep pace with anticipated increased workload expected to be generated by the accelerated stockpile disposal program, the expanded supply support to DOD, and by increase in the AID programs.

Included in performance costs for 1963 and 1964 are $18,000 and $27,700, respectively, attributable to the Federal Salary Reform Act of 1962. Excluding these mandatory costs, the unit costs would have been $3.45 in 1963, and $3.40 in 1964, the reduction resulting from increased productivity.

	1962	1963	1964
(4) Claims evaluated	1,660	1,720	4,600
Unit cost	$31.57	$32.97	$32.87
Performance cost	$52,410	$56,700	$151,200

As a result of the conversion of the FSS supply program to a "delivered price" basis, GSA will be required to handle all loss and damage claims previously the responsibility of customer agencies. Increase of 10 positions in the field is to provide an additional position in each regional office to cope with this workload. Included in the performance costs for 1963 and 1964 are $2,500 and $7,300, respectively, attributable to the Federal Salary Reform Act of 1962. Excluding these mandatory costs, the unit costs would have been $31.50 in 1963, and $31.28 in 1964, the reduction resulting from increased productivity.

The change in method of shipment of FSS stores items from FOB origin to FOB destination has put the responsibility for processing claims for such shipments on TCS. Because the change is recent, it is difficult to determine the extent to which it will increase the claim load. Present indications are, however, that the increase will be substantial. Moreover, considerable investigation will be necessary to process such claims. Since customer agencies have not properly annotated discrepancies, are slow in notifying GSA of loss or damage and in giving sufficient information, time required for processing, will be greatly extended. In addition to the increase in time for processing, damage claims predominate and require more time and effort to process than claims for loss.

Many of the claims of FSS stores are of the concealed damage type which require different handling than for claims where damage is visible externally and in which there is no warehouse storage between initial origin and ultimate destination. Because of their nature, protests from carriers will be more frequent on concealed damage claims and the load of disputed claims will be increased in greater proportion to those presently handled.

This is another activity which more than pays its way. In 1962 recoveries amounted to $172,929 compared to costs of $52,410.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $1,835,000 for 226 permanent positions, distributed as follows:

	1962			1963			1964		
	Department	Field	Total	Department	Field	Total	Department	Field	Total
(a) Transportation management	18.0	17.0	35.0	21.0	18.0	39.0	21.0	18	39.0
(b) Rate and routing service	30.0	66.0	96.0	29.0	68.0	97.0	38.0	70	108.0
(c) Contract administration	25.0	43.0	68.0	21.0	40.0	61.0	21.0	58	79.0
Total positions	73.0	126.0	199.0	71.0	126.0	197.0	80.0	146	226.0
Average employment	70.1	122.4	192.5	69.2	125.3	194.5	76.5	138	214.5

Other objects: $311,000 provides:

(1) $138,000 for personnel benefits, including $119,000 retirement contributions, $12,000 health benefits, and $7,000 group insurance.

The remainder of $173,000, or 8.1 percent of total estimate, provides:

(2) $32,700 for approximately 1,211 days travel at $27 per day and $8,900 for motor pool travel.

(3) $33,000 general telephone, $7,000 long distance and $6,500 teletype.

(4) $31,700 for printing special management improvement materials and other miscellaneous printing.

(5) $16,800 for contractual services.

(6) $24,600 for normal office supplies, $1,500 for operating supplies, and $4,500 for technical publications.

(7) $4,000 replacement of obsolete equipment.

(8) $1,800 miscellaneous transportation costs.

Positions by grade and average employment

Communication Services

Mr. Evins. We will now turn to Communications Services and place in the record the justification statement on pages 219 through 226.

(The pages follow:)

2. Communications services

	Amount	Average employment		
		Department	Field	Total
1963	$1,374,000	79.8	37.0	116.8
Change	+526,000	+14.8	+18.6	+33.4
1964	1,900,000	94.6	55.6	150.2

HIGHLIGHT

"Plans are developed for a Federal communications system for general and national defense use, compatible with Department of Defense communications systems. Studies of equipment utilization, service, rates and economic factors are made, contracts negotiated, and management and control of operations are provided." (From the budget for 1964.)

Communication services are performed under 5 subactivities as follows:

Summary of performance cost

	1962	1963	1964
(a) Voice programs	$305,400	$517,200	$668,500
(b) Record programs	475,670	498,000	723,000
(c) Special programs	168,000	194,000	317,000
(d) Circuit management	40,700	113,500	121,800
(e) Negotiation and representation	33,700	51,300	69,700
Total cost or estimate	1,023,470	1,374,000	1,900,000

JUSTIFICATION

Under this activity is the responsibility for planning, designing, establishing, and administering a new unified Federal Telecommunications System which will connect some 8,000 Government offices in approximately 1,750 cities and towns in the 50 States, Puerto Rico, and the Virgin Islands. Extensive use will be made of direct distance dialing, utilizing multichannel routing with switching centers strategically located so that messages can bypass probable target areas.

The system will be compatible with DOD communications systems; will incorporate the latest developments in automation; and will be capable of rapid expansion as required. It will provide for the increasing and diversified communications requirements, striving at the same time to minimize increased costs while meeting these demands. No interruption of existing telecommunications operations of GSA will take place during the transition period.

Actual operation of the system will be financed through the Federal Telecommunications Fund which was established by Public Law 87-847 approved October 23, 1962.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
(a) Voice programs	$305,400	29.7	$517,200	44.3	$688.500	57.1

The objective of the voice grade circuit switching program of the Federal telecommunications system is to enable personnel in each Federal agency office to communicate directly on a machine-to-machine or station-to-station basis with any other civil agency office in the Nation. The system will provide day-to-day service as well as incorporating features which would be necessary in emergency situations. Among these features are:

1. Twenty-four hour daily operation;
2. Automatic alternate routing of calls in the event of circuit overload, interruption, etc.;
3. Employment of strategically located and/or hardened switching centers;
4. Interconnection capability with military systems;
5. Customer long distance dialing;
6. Capability to transmit voice, encrypted traffic, data, facsimile, teletype, and similar transmission requirements.

The overall voice program is divided into two principal areas:

Telephone switchboard consolidation.—This subprogram aims at consolidating, on a local level, existing telephone switchboard requirements wherever technically and economically feasible. Approximately 350 metropolitan areas are susceptible to local consolidation. Completion of initial consolidations are scheduled for the latter part of 1964. The program will provide overall economy and improve efficiency at the local level through the elimination of duplicate switchboards, operating personnel, etc. As of October 31, 1962, consolidations in 31 cities had eliminated 218 operator positions and resulted in recurring annual savings to the Government of $340,000.

Nationwide circuit switching system.—This subprogram is concerned primarily with providing interconnection facilities between and among the metropolitan areas. Through the use of shared circuit and automatic switching facilities, a substantial improvement can be made in the utilization of personnel and quality of service available to subscribers. Some of these improvements are:

1. Improved efficiency obtained through the availability of multichannel facilities between switching centers and the capability of direct distance dialing at substantially reduced costs per call.
2. Reliability obtained through multiple and alternate routing between areas and utilization of hardened and dispersed switching centers.
3. Versatility through capability to interconnect with commercial and military facilities and ability to utilize a variety of terminal equipments such as: telephone, teletype, data, online cryptographic service, facsimile, etc.

Initial cutover to this nationwide circuit switching system (phase I) will take place in February 1963 in 42 metropolitan areas. This will be extended to an estimated 308 additional metropolitan areas in 1964.

The amount requested for 1964 will provide for:

1. Increased technical inspection throughout the country to assure maximum service to FTS customers following implementation of phase I of the voice grade circuit switching system in 42 cities. This will include detailed traffic studies, onsite alterations of the system, and necessary directory changes.

2. Planning for expansion of the FTS voice system to remaining areas, with appropriate consideration of emergency requirements, and further changes in the systems to permit automatic inward and outward dialing by all subscribers.

3. Cost analyses and periodic sampling of traffic volumes in order to maintain adequate flat rate billing system and also to confine facilities to the minimum required for operation of the system.

4. Planning for the integration of record communications facilities and the voice grade switching system.

5. Increased emphasis on planning and engineering of radio facilities for new Federal buildings, and on the review of Government-owned microwave systems to assure maximum utilization and lowest costs.

6. Additional manpower to review all governmental radio systems, including both fixed and mobile facilities which will eventually be integrated with the FTS voice and record systems.

7. Increases in the ordering of services, circuits, and equipment; inventorying of equipment; development of rates, billing and collection procedures; and in general planning for the financial stability of the system; all generated by expansion of the system.

Included in the estimate for 1964 is $50,500 attributable to the Federal Salary Reform Act of 1962.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
(b) Record programs	$475,670	31.7	$498,000	41.7	$723,000	52.8

This program is designed to satisfy the record communications requirements of all Federal civil departments and agencies with a common unified system which will provide efficient and economical machine-to-machine service for transmission of information by means of data, teletypewriter, facsimile and other transmission media, while at the same time providing message processing capability required for peak period traffic loads, time zone differences, machine code and language translation, and processing of multiple address messages.

The system is being designed to permit the Government to take full advantage of new techniques and advances in the communications art.

Objective of this program is to provide a system to become operational in fiscal year 1965. Implementation of the system is on a phased basis which permits comprehensive planning, engineering, and system operations on a gradually increasing scale until the unified FTS has been achieved. Activity in the record communications area is identified below under the following major activities:

(*a*) Planning, engineering, and operation of the expanded GSA record communications network.

(*b*) Planning, engineering, and operation of the FTS advanced record system.

(*c*) Integration of circuit switching with the FTS advanced record system.

(NOTE.—The nomenclature "advance record system" is used herein to identify a high capacity digital signaling, transmitting, circuit and message switching network).

As a result of expanded governmental program activities, teletypewriter and data traffic increased by approximately 20 percent from 52,500,000 textwords in 1961 to 63 million, in 1962, and the present volume indicates a further 20 percent increase in 1963, or a traffic of 75 million textwords.

In order to meet increasing demands on the system pending implementation of the ultimate FTS in 1964–65, action has been initiated to enlarge the system by addition of manual tape relay centers in Dallas, Tex.; New York City, N.Y.;

Atlanta, Ga.; Chicago, Ill.; Kansas City, Kans.; San Francisco and Los Angeles, Calif. This upgrading is now in progress and will double the capacity of the system and provide greater flexibility. In addition, six manual relay centers are planned for installation outside of known target areas, and will provide a limited emergency capability for all agencies.

Card transmission facilities (transceivers) have been installed in the 10 GSA regions and will be operated on a common-use basis for all agencies. A share of the capacity of these systems will be utilized by GSA in connection with the military supply system.

The evaluated FTS advanced record system approach, which was developed during 1962, is now being amalgamated with all agencies' present and future day-to-day and emergency requirements in order to arrive at the overall system configuration.

Refinement of these requirements into a properly designed adequate and flexible advanced record system, capabable of economical expansion or reduction, is subdivided into three major categories: terminal equipment subsystem; transmission subsystem; and relay center subsystem.

Detailed and comprehensive planning and engineering must be completed in all of the above areas prior to preparation of specifications and award of any contracts. Government advantages to be realized through the FTS are directly dependent upon correct evaluation of each subscribers requirements. These requirements are the basis for hardware selection and the preparation of switching program routines. To further amplify the scope of the tasks confronting TCS, the projected size of the advanced record system in 1965 is expected to exceed 2,000 teletypewriter subscribers, and approximately 200 data transceiver subscribers. The area of coverage of this system will make it the largest and most economical privately operated record communications system in the United States.

Programing efforts which must be completed prior to award of a contract to any supplier include, among other items, message switching routines, speed and code conversion techniques or routines, language conversion programs, message control programs, alternate routing programs, and many others.

In the message routine alone, an analysis must be made of the routing procedures presently employed by all agencies and the military, in order to construct the most appropriate compatible program.

Specifications which are produced must provide detailed requirements for technical control and test facilities, crytographic security requirements, and methods for combining message processing centers with circuit switch systems and with military message processing centers.

The amount requested for 1964 will provide for:

1. Formulation of plans for phasing the existing system into the ultimate FTS record communications system.

2. Maximum utilization of the phase I FTS voice grade circuit switch system for record purposes to carry a traffic load expected to reach 150 million text words and data in 1964, which would saturate the present up-graded teletype system.

3. The peak level of activity connected with the addition of an advanced record system to the FTS. This includes technical evaluation of bids, and ultimate selection of contractor; constant liaison with both contractor and commercial carriers to assure proper engineering and installation; constant review of agency requirements during this crucial period for appropriate incorporation into both the circuit switch and the message processing projects; close coordination and control of site acquisition and preparation, and provision of power, etc.; supervision of design and construction of all switching center programs and routines; perfecting and publication during this period of phasing plans and acceptance tests; development and publication of operating and routing instructions; and field training of more than 6,000 teletypewriter operators prior to the cutover of the first phase of the system by the end of 1964.

4. Increases in the ordering of services, circuits and equipment; inventorying of equipment; development of rates; billing and collection procedures; and in general planning for financial stability of the system; all generated by expansion of the system.

5. One hundred thousand dollars to continue and intensify research and development programs previously initiated in order to provide for more rapid data transmission requirements, matching of transmission characteristics for subscriber data transmission equipment, technical plans for integration of customer

terminal equipment into circuit switching and message processing centers, and to conduct tests of new equipment and techniques. The funds will be used to purchase electronic test equipment and for any necessary nonpersonal services contracts.

Included in the estimate for 1964 is $47,000 attributable to the Federal Salary Reform Act of 1962.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
(c) Special programs	$168,000	11.2	$194,000	16.7	$317,000	22.6

This subactivity consists of the Communications Security (COMSEC) program and the emergency program.

The COMSEC program is oriented toward the accomplishment of two primary objectives, which are:

1. The creation and maintenance of an effective COMSEC program for the civil agencies, which, by virtue of coordinated and consolidated efforts, will provide a high level of communications security protection in keeping with the objectives of the U.S. COMSEC plan, and meet the security communications requirements of the civil agencies; and

2. A consolidation in GSA/FTS of Civil Agency COMSEC procurement, equipment servicing, and other COMSEC areas of activity under a single-manager concept, in order to conserve funds, talent, and effort to the maximum extent possible.

The overall goal of the emergency program is to insure that the FTS will remain operable in the event that any portion of the normal system is disabled or destroyed. On the existing system it is planned to accomplish this program by providing additional switching and circuitry facilities on an engineered standby basis. This will also require the preparation and distribution of procedures and instructions necessary to operate these emergency facilities. As the ultimate FTS is developed, it will be the responsibility of this program to insure that necessary emergency features are incorporated.

The amount requested for 1964 will provide for:

1. The establishment of four additional COMSEC maintenance depots, making a total of five.

2. Additional COMSEC support for the emergency programs of all civil departments and agencies.

3. Testing and evaluation of ancillary equipment, both terminal and switching, will be expedited to assure proper physical, cryptographic, and transmission security of the system. Included for this purpose is $50,000 to be used for purchase of test equipment and for any necessary nonpersonal services contracts.

4. Increased emphasis to satisfy the requirements for incorporating several emergency features into the present system at the earliest possible date, and for providing these features in the new system as it is developed. These features include circuit restoration priorities, and selection of alternate and diverse routing for selected critical circuitry.

Included in the estimate for 1964 is $20,500 attributable to the Federal Salary Reform Act of 1962.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
(d) Circuit management	$40,700	3.9	$113,500	9.8	$121,800	10.5

The identification of common geographical areas where civil Government agencies have a community of interest has clearly demonstrated that the Government can obtain better service and greater economies in the procurement of communications circuits under multiple tariff offerings of the commercial carriers. Ordering of circuits by individual agencies directly from the commercial carriers without coordinating with the requirements of other agencies reduces both service and potential economies. In order to obtain more efficient service for the Government, GSA has initiated the practice of centralized circuit procurement at the same time permitting each agency to maintain operational control over its communications facilities.

Shortly after the initiation of this program, the commercial communication carriers filed a tariff, generally known as "TELPAK," which provided even greater economies to the Government where centralized circuit procurement was utilized.

The goal of this circuit management program is to provide civil departments and agencies with the most economical and efficient communications service through centralized circuit ordering. At the same time, it provides the Government with such essential emergency survival features as multiple circuit routings, the bypassing of probable target areas, and circuit restoration priorities for civil agencies. The latter are not subject to preemption by the military except under mutually predetermined conditions.

Negotiations are now underway with the Department of Defense for a joint effort in the circuit procurement area to obtain maximum economies to the Government.

Approximately $30 million annually is spent by civil agencies for circuits. Through centralized procurement advantages of circuit management it is estimated that $7 million savings annually will eventually result for all civil agencies.

During 1962, TELPAK activity was directed toward combining GSA and NASA circuits into 29 TELPAKS. In 1963 this is being extended to all civil agencies having circuit requirements. Growth during the year is expected to be from 29 TELPAKS to approximately 250, and fom 2 participating agenices to about 30.

The amount requested for 1964 will provide for:

1. Continuing fiscal and administartive management of 250 TELPAKS, to meet increased requirements by the agencies for diversified circuit requirements and to resolve complex circuit engineering problems during 1964.

2. Fiscal and administrative management for the circuit management program which will continue to increase in activity as the system is expanded. There will be increased activity in the ordering of services, circuits, and equipment; in inventorying of equipment; in development of rates; in billing and collection arrangements for the using agencies; and in planning for financial stability of the program.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
(e) Negotiation and representation	$33,700	3.4	$51,300	4.3	$69,700	7.0

The rapid increase in Government communications requirements for both civilian and military agencies, as well as complexities associated with a constantly changing communications art, together with the introduction of additional technological cost factors, demand increased activity by GSA in the negotiation of areawide and special service communications contracts and in the representation field. The proposed staffing is required for the preparation of appropriate testimony in matters pending before Federal and State regulatory bodies as well as for the necessary negotiation capability. Representation services are also provided the Department of Defense in proceedings relating to semi-automatic ground environment system, SAGE.

The amount requested for 1964 will provide for:

1. Further activity in the congressionally directed intervention in SAGE cases in individual States and continued participation in cases initiated in 1963 such as transoceanic private line rates, SCAN, Western Union general investigation, NASA interconnection rate case, and Pacific T. & T. investigation by the California Commission.

2. GSA undertaking formal action to challenge the propriety of rates in seven areas and considering formal action in five others.

3. Participation in a rate case involving the 300-type key system for FAA.

4. Constant revision of rate and tariff filings with Federal and State regulatory bodies to insure consideration of the interest of the Government as a user of communications services. The staffing of the negotiation and representation activity must be of sufficient depth and quality in order to accommodate all requests for rate and negotiation assistance from all departments and agencies of the Federal Government.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $1,414,000 provides for 162 permanent positions as shown below:

	1962	1963	1964
(a) Voice programs	34.0	47.0	61.0
(b) Record programs	36.0	45.0	57.0
(c) Special programs	14.0	1.80	25.0
(d) Circuit management	5.0	10.0	12.0
(e) Negotiation and representation	4.0	5.0	7.0
Total positions	93.0	125.0	162.0
Average employment	79.9	116.8	150.2

Other objects: $486,000 provides:

(1) $106,000 for personnel benefits, including $92,000 retirement contributions, $9,000 health benefits and $5,000 group insurance.

(2) $150,000 for pilot model testing and research, $100,000 of which is contractual services and $50,000 for purchase of equipment.

The remainder of $230,000, or 12.1 percent of total estimate, provides:

(3) $100,000 for approximately 3,704 days travel at $27 per day and $9,000 for motor pool travel.

(4) $5,000 for transportation costs incident to shipment of equipment.

(5) $10,000 for general telephone, $2,000 for long distance and $1,000 for teletype; $8,000 for rental of equipment.

(6) $30,000 for printing of special management improvement materials and other miscellaneous printing.

(7) $25,000 other contractual services.

(8) $10,000 normal office supplies; $1,000 for operating supplies; $2,000 for technical publications.

(9) $27,000 for additional requirements and the replacement of obsolete equipment.

Mr. EVINS. You mentioned again the salary increase act and you are asking for $526,000 increase for Communications Services which has been discussed.

There is a lot of text on this item.

MOTOR VEHICLE MANAGEMENT

We will put pages 228 and 229 in the record.

(The pages follow:)

3. Motor vehicle management

	Amount	Average employment		
		Department	Field	Total
1963	$281,000	12.9	12.5	25.4
Change	+39,000		+2.0	+2.0
1964	320,000	12.9	14.5	27.4

HIGHLIGHT

"Governmentwide policies and procedures are developed for improving the overall efficiency of the operation of the Government-owned motor vehicle fleet, and assisting the various Federal agencies with motor equipment management." (From the budget for 1964.)

JUSTIFICATION

Total cost or estimate:

1962	$223,048
1963	281,000
1964	320,000

The need for accelerating the program involving GSA motor vehicle management responsibility is reflected in the growth of the Federal motor vehicle fleet from approximately 238,000 units in 1962 to an estimated 254,000 in 1963 and 264,000 in 1964. These represent general and special purpose motor vehicles in the United States and exclude tactical and construction equipment, and all motor vehicles overseas.

During 1962, two studies of agencies' managerial and operational policies and methods were completed, bringing to 11 the number of completed studies. Implementation of agreed-to-recommendations will bring savings in equipment investment of about $1.6 million, and in annual operating costs of $1.8 million by the elimination of management deficiencies such as: low utilization of vehicles (sedans operating 1,222 miles to 2,100 miles per year); over-milage vehicles costing excess maintenance of ½-cent per mile; 1½- to 2½-ton trucks operating where ½-ton pickup would have performed the transportation requirement; military-type equipment being used at double the operating cost of commercial-type equipment; manufacturer's warranty being ignored; inaccurate management reports (shop labor shown as $823,000 when actual cost was $2,500,000); and no preventive maintenance program.

A motor vehicle warranty and acceptance guide issued in 1962 resulted in a savings to the Government of approximately $500,000. Also, a new preventive maintenance program was tested in two interagency motor pools and proved so successful that the program is being placed in operation in all interagency motor pools, and will be made available to all agencies in 1963. Procedural and operational guides were issued covering (a) chassis lubrication of Government motor vehicles; and (b) Standard form 97, certificate of release of motor vehicles.

This activity also spearheaded the State-Armed Forces-Federal traffic safety workshops. It sponsored, with industry and interagency representatives, five Interagency Motor Equipment Advisory Committee meetings for improving motor equipment and driver training.

During 1963, agencies will be assisted at field locations in adopting the new preventive maintenance program for motor vehicles. Federal agencies will be provided with a modern driver evaluation and improvement program designed to assist agencies in taking action to correct driver mental attitude, physical defects, and poor driver habits. State safety coordinators will be aided in setting up safety workshops to promote defensive driving within the States. Activity is also programed to issue the following guides: (*a*) battery care and warranty; (*b*) motor vehicle cooling systems; and (*c*) driver evaluation and improvement program. Technical assistance will be furnished to industry and Federal agencies in providing the information necessary in developing motor equipment required to meet the Government transportation requirements.

Five Interagency Motor Equipment Advisory Committee meetings will be sponsored with industry and interagency representatives. Liaison will be maintained with Federal agencies, States, and local governments on safe operation of the Federal fleet.

During 1964, it is planned to continue the development of Government motor vehicle safety programs, including preparation and publication of driver-improvement pamphlets and brochures, updating, and promulgating driver training programs, relating such programs to determining training needs, and meeting these needs by the study of evaluations of sociological research and human engineering in a motor vehicle accident-prevention program. Management technicians will continue to study Federal agencies' motor equipment management to assist in reducing operating costs and in increasing management efficiency. It is planned to emphasize and expand managerial assistance to agencies by the preparation and issuance of guides for motor vehicle operation maintenance, and management, which will contain the most modern industry and commercial fleet management practices.

The motor vehicle safety program will be based on a four-point program: (1) safe operating equipment; (2) driver training; (3) driver testing; and (4) centralized accident data, which is in accordance with the President's highway safety program.

Of the $39,000 increase reflected in this estimate, $12,000 is attributable to the Federal Salary Reform Act of 1962.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $225,000 provides for 28 permanent positions as shown below:

	1962			1963			1964		
	Department	Field	Total	Department	Field	Total	Department	Field	Total
Total positions	12.0	8.0	20.0	13.0	15.0	28.0	13.0	15.0	28.0
Average employment	11.3	7.6	18.9	12.9	12.5	25.4	12.9	14.5	27.4

Other objects: $65,000 provides:

(1) $18,500 for personnel benefits, including $16,100 retirement contributions, $1,400 health benefits, and $1,000 group insurance.

The remainder of $46,500, or 14.5 percent of total estimate, provides:

(2) $30,000 for approximately 1,111 days travel at $27 per day and $1,200 for motor pool travel.

(3) $1,800 communications; $10,000 printing.

(4) $1,500 supplies and materials and $2,000 other services.

Public Utilities Services

Mr. Evins. Mr. Reporter, put pages 231 and 232 on Public Utilities Services in the record.

(The pages referred to follow:)

4. Public utilities services

	Amount	Average employment		
		Department	Field	Total
1963	$125,000	10.9	----------	10.9
Change	+48,000	+4.3	----------	+4.3
1964	173,000	15.2	----------	15.2

HIGHLIGHT

"Negotiations are conducted with public utilities companies on behalf of executive agencies and technical assistance is rendered in connection with regulatory proceedings." (From the budget for 1964.)

JUSTIFICATION

Total cost or estimate:

1962	$131,699
1963	125,000
1964	173,000

The limited resources available for this activity have been applied mostly to negotiation and representation activities where there exists a potential for accomplishments which can be measured in dollars. In 1962, GSA participated in three formal utility rate proceedings in which decisions have not yet been rendered. Avoidance of rate increases or refunds in these cases may be as much as $600,000.

In 1962, 6 contracts were negotiated or renegotiated, 700 rate or billing reviews were made, and 2 special Government rates were negotiated. In addition, exhibits and testimony were sponsored in two formal rate proceedings.

A substantial backlog still exists in the field of areawide contracts. Of the 120 cities with a population of 100,000 or more, GSA has electric contracts in only 35 cities, gas contracts in 24, steam contracts in 10, and water contracts in 4. Generally, representation services are also provided to the Department of Defense in public utility cases.

The increase of five positions in Central Office requested for 1964 is for the negotiation of additional areawide and special contracts, for further reviews of rates and agency utilization practices, and statistical analyses of billings and rates. Because of the limitation on the availability of experienced utilities specialists it is planned to fill several of the additional positions with qualified college graduates who will be trained in this field.

Estimate for 1964 includes $13,000 attributable to the Federal Salary Reform Act of 1962.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing:
$146,000 for 17 permanent positions, all in central office
Other objects:
$27,000 provides:
(1) $11,000 personnel benefits including $9,500 retirement contributions, $900 health benefits, and $600 group insurance.
The remainder of $16,000, or 9.2 percent of total estimate, provides:
(2) $5,600 for approximately 207 days' travel at $27 per day.
(3) $200 for transportation of things.
(4) $2,700 for communications services.
(5) $1,500 for printing.
(6) $3,400 contractual services.
(7) $2,300 normal office supplies.
(8) $300 replacement of office equipment.

Mr. EVINS. What does this include, Mr. Conrad?

Mr. CONRAD. These are services performed by the Public Utilities Division in behalf of all civilian agencies of the Government as well as the military in connection with the management and utilization of public utility services, water sewage, steam, electricity, and all of the other items of public utility services, in addition to communications.

Mr. BOUTIN. One example of this Government-wide activity is the work done for PBS in connection with the big building in New York where we will negotiate for a water rate to supply that building, and by getting a bulk rate we can save a great deal of money.

Service Direction

Mr. Evins. We will take up service direction and the summary material.

Mr. Reporter, put pages 234 through 237 in the record.

(The pages follow:)

f. Service direction

	Amount	Average employment		
		Department	Field	Total
1963	$374,000	21.1	7.4	28.5
Change	+146,900	+.8	+10.5	+11.3
1964	520,000	21.9	17.9	39.8

HIGHLIGHT

Increased responsibilities in the regional offices resulting from the transfer of communications and motor equipment program to Transportation and Communications Service, and the growing demands for services in these areas as well as in transportation and public utilities, make it essential that this activity be extended to the regional offices. The 10 positions are for 3 regional directors and 7 secretaries. The other regions are being staffed in 1963 by reducing employment in program operations.

Total cost or estimate:

1962	$176,361
1963	374,000
1964	520,000

Estimate for 1964 includes $39,000 attributable to the Salary Reform Act of 1962.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $428,000 for 42 permanent positions, distributed as follows:

	1962	1963	1964
Central office	18.0	22.0	22.0
Regional offices		10.0	20.0
Total positions	18.0	32.0	42.0
Average employment	14.2	28.5	39.8

Other objects: $92,000 provides:

(1) $32,000 for personnel benefits, including $27,800 retirement contribution, $2,700 health benefits, and $1,500 group insurance.

(2) $19,700 postage fees.

The remainder of $40,300, or 7.8 percent of total estimate, provides:

(3) $18,000 for approximately 620 days travel at $29 per day, and $1,000 motor pool travel.

(4) $5,300 communications services.

(5) $6,000 for printing.

(6) $6,000 contractual services.

(7) $4,000 normal office supplies.

Positions by grade and average employment

Grade	Actual, 1962			Program, 1963			Request, 1964

SUMMARY STATEMENT OF "OTHER OBJECTS" FOR 1964

Although amounts for obligations by objects are explained in justifications of each activity, objects other than personnel compensation are summarized below. Of the $5,870,000 estimate for 1964, $4,078,000 is for personnel compensation and $1,792,000 for other objects as follows:

12 Personnel benefits, $305,500: $264,400 for direct contribution to the retirement fund; $26,000 health benefits; and $15,100 group insurance.

21 Travel and transportation of persons, $206,400: $32,700 for approximately 1,211 days travel at $27 per day in connection with transportation activities; $100,000 for approximately 3,704 days travel at $27 per day in connection with communications activities; $30,000 for approximately 1,111 days travel at $27 per day for motor vehicle management activities; $5,600 for approximately 207 days travel at $27 per day in connection with public utilities activities; and $18,000 for approximately 620 days travel at $29 per day for general supervision and administration of all TCS programs; $20,100 for motor pool services.
22 Transportation of things, $7,000: $5,000 for transportation of equipment in connection with pilot model testing program; $2,000 for miscellaneous transportation costs.
23 Rents, communications, and utilities, $97,000: $8,000 for rental of equipment; $69,300 for normal telephone and teletype services; $19,700 for postage fees.
24 Printing and reproduction, $79,200: For printing special management improvement material and other miscellaneous printing.
25 Other services, $133,000: $100,000 in conjunction with installation and testing of pilot model program; $16,000 for moving and maintenance services reimbursable to BMF, and repair services to GSF. Balance for miscellaneous other contractual services.
25 Payments to administrative operations fund, $811,000: For administrative operations necessary to support the program.
25 Services of other agencies, $20,200: For health room costs and security investigations.
26 Supplies and materials, $51,400: $42,400 for normal office supplies, $2,500 operating supplies, and $6,500 for technical publications.
31 Equipment, $81,300: $50,000 for pilot model equipment; balance for replacement of obsolete equipment.

Mr. EVINS. Any questions?

Mr. OSTERTAG. In this general activity, is it not fair to say that your increase over 1963 of approximately $1.2 million is primarily due to the wage increase and increase in personnel?

Mr. BOUTIN. Almost exclusively. The small item for research and development would be the addition to that.

Mr. OSTERTAG. If I figure correctly, you have a total increase of 71 over last year in personnel?

Mr. CONRAD. Eighty-one, sir.

Mr. THOMAS. Gentlemen, we will see you in the morning at 10 o'clock.

FRIDAY, FEBRUARY 22, 1963.

DEFENSE MATERIALS SERVICE, GENERAL SERVICES ADMINISTRATION

WITNESSES

BERNARD L. BOUTIN, ADMINISTRATOR
WILLIAM P. TURPIN, ASSISTANT ADMINISTRATOR FOR FINANCE AND ADMINISTRATION
MAURICE J. CONNELL, COMMISSIONER
JOHN G. HARLAN, JR., DEPUTY COMMISSIONER
GEORGE K. CASTO, ACTING ASSISTANT COMMISSIONER, OFFICE OF MATERIALS MANAGEMENT
LOUIS BROOKS, ASSISTANT TO DIRECTOR OF FINANCIAL MANAGEMENT, OFFICE OF FINANCIAL MANAGEMENT
JAMES P. DURKIN, ASSISTANT GENERAL COUNSEL, OFFICE OF EMERGENCY PLANNING
WILLIAM N. LAWRENCE, CHIEF, RESOURCES AND ANALYSIS DIVISION, OFFICE OF EMERGENCY PLANNING

SUMMARY OF DEFENSE MATERIALS FUNCTIONS

Mr. THOMAS. Let the committee come to order.
This morning we will consider Defense Materials Service.
Mr. Reporter, include in the record pages 238 and 239.
(The pages follow:)

FUNCTIONS PERFORMED BY THE DEFENSE MATERIALS SERVICE

The Defense Materials Service is responsible for administering the national and supplemental stockpiles of strategic and critical materials, and Defense Production Act and other industrial raw materials and machine tool programs. These programs provide reserves of such materials and industrial equipment for use in an emergency or expand essential production of items needed for an emergency. Specifically, this Service—

Procures for, maintains, and manages the national stockpile and administers Defense Production Act metals, minerals, and machine tool expansion programs pursuant to Office of Emergency Planning policy and program directives;

Administers the national industrial equipment reserve for use of defense-supporting industries in an emergency, in accordance with Department of Defense directives and policies;

Provides technical advice, storage, and other services to the Commodity Credit Corporation, Department of Agriculture, in connection with acquisition of strategic or other materials under the CCC barter program, and maintains and manages these materials after transfer to the U.S. supplemental stockpile by CCC;

Administers the lead-zinc mining stabilization program, which provides for stabilization payments to small domestic producers of lead and zinc for the calendar years 1962 through 1965 pursuant to delegation from the Department of Interior;

Operates civil defense depots and provides other services in connection with medical, radiological, and engineering supplies and equipment for the Office of Civil Defense, Department of Defense, and the Public Health Service, Department of Health, Education, and Welfare; and

Provides storage and other services to the Department of Defense under the civil defense shelter provisioning program.

The national stockpile, supplemental stockpile, and national industrial equipment reserve programs are financed through the appropriation "Strategic and critical materials." The Defense Production Act programs are financed under the Defense Production Act borrowing authority, and all other programs are financed by transfers of funds from other agencies to GSA.

Defense Materials Service

Summary of new obligational authority and average employment

Pay act supplementary	+100,000
1963 comparative	18,100,000
Change	+10,045,000
1964 estimate	28,145,000

GENERAL STATEMENT

Organization and operations.—"The Defense Materials Service acquires and administers national stockpile inventories pursuant to the Strategic and Critical Materials Stock Piling Act, and has custody of the supplemental stockpile established by the Agricultural Trade Development and Assistance Act of 1954. Programs are administered in accordance with guidelines established by the Office of Emergency Planning. This Service also administers the inventory of machine tools and industrial manufacturing equipment established under the National Industrial Reserve Act of 1948. The Department of Defense makes selections for the reserve and provides program guidance.

"The 1964 obligational program of $28.1 million is to provide $1.2 million for new material acquisition and upgrading of existing materials required to meet stockpiling objectives, $22.2 million for inventory management and rotation of material subject to deterioration, $1.5 million for national industrial equipment reserve activities, and $3.2 million operating expenses. Increases in 1964 are provided for all activities except national industrial equipment reserve."

Status of acquisition program.—"In arriving at requirements to meet stockpile objectives, all U.S. Government inventories of strategic materials in GSA custody are taken into account. Data below reflect the extent to which national stockpile objectives as of June 30, 1962, are provided: (*a*) from financing under the Strategic and Critical Materials Stock Piling Act, and (*b*) under all U.S. Government programs involving strategic materials.

"Maximum objectives are valued at $4,299 million. June 30, 1962, prices have been used."

Status of acquisition—Material in inventory and on order

[In millions of dollars]

	1962 actual		1963 estimate		1964 estimate	
	National stockpile	All Government programs	National stockpile	All Government programs	National stockpile	All Government programs
In inventory: Maximum objectives	3,909.9	4,266.0	3,912.5	4,275.0	3,913.2	4,293.6
On order: Maximum objectives	1.9	8.3		17.9		
Total maximum objectives	3,911.8	4,274.3	3,912.5	4,292.9	3,913.2	4,293.6
Balance to be acquired: Maximum objectives	387.2	24.7	386.5	6.1	385.8	5.4

"Fair value of personal property received from other appropriations or funds without cost for use by GSA is as follows: 1962, $78,000; 1963, $262,000; 1964, $242,000." (From the budget for 1964.)

Program by activities

	1962	1963	1964
1. Acquisition of materials:			
(a) New materials	$1,048,586	$750,000	$750,000
(b) Upgrading materials	415,469	250,000	500,000
Total acquisition of materials	1,464,055	1,000,000	1,250,000
2. Inventory management:			
(a) Rotation of materials (gross)	13,410,754		7,096,000
(b) Storage of materials	11,741,045	11,020,000	12,877,000
(c) Disposal of materials	687,498	1,382,000	2,211,000
Total inventory management	25,839,297	12,402,000	22,184,000
3. National industrial equipment reserve: Transportation, processing, and storage (gross)	1,821,023	1,621,000	1,521,000
4. Operating expenses:			
(a) Service direction	345,385	438,800	460,000
(b) Program	1,532,883	1,704,200	1,770,000
(c) Administrative operations	929,300	934,000	960,000
Total operating expenses	2,807,568	3,077,000	3,190,000
Total obligations	31,931,943	18,100,000	28,145,000

The estimate for 1964 includes $375,000 for increased pay costs as a result of the Federal Salary Reform Act of 1962.

Relationship of other programs to the Strategic Materials Activity.—In addition to its functions under the S. & C. M. Act, GSA has responsibility for contract administration and/or custody of inventory for defense material programs under the Defense Production Act of 1950, as amended, and the Agricultural Trade Development and Assistance Act of 1954.

Defense Production Act

This act authorized financial assistance to assure expansion of production capacity and of material supply, including stockpiling, necessary for our defense. Materials procurement requiring a long-term contract and lead time of more than a year were contracted for under DPA rather than directly from stockpiling appopriations.

As one of the inducement for expanding production, most contracts provided a guaranteed market for the production from expanded facilities. As a result of reductions in civilian, military and stockpiling requirements, much of the production was delivered to GSA and is being held as DPA inventory.

Progress has been made in disposing of materials in this inventory primarily by sales to other Government agencies and industry and steps are being taken to increase and accelerate the disposal program wherever this can be accomplished without undue effect on the market or detriment to the Government's interest.

Current and projected status of DPA inventory follows:

[In millions]

	Actual, 1962	Estimate, 1963	Estimate, 1964	Estimate, 1965
Inventory, beginning of year	$1,484	$1,500	$1,489	$1,464
Deliveries during year	57	28	9	4
Subtotal	1,541	1,528	1,498	1,468
Sales:				
To industry	25	4	3	3
To other Government agencies	13	26	25	25
Total sales	38	30	28	28
Profit or loss (−) on sales	−3	−9	−6	−6
Inventory, end of year	1,500	1,489	1,464	1,434

Based on the above deliveries, cash requirements for 1962 through 1965 are as follows:

[In millions]

	Actual, 1962	Estimate, 1963	Estimate, 1964	Estimate, 1965
Cumulative net expenditures, beginning of year	$2,058	$2,069	$2,119	$2,194
Deliveries during year (GSA)	57	28	9	4
Treasury interest (GSA)	4	53	102	117
Other expenditures, net (all agencies)	−50	−31	−36	−23
Cumulative net expenditures, end of year	2,069	2,119	2,194	2,292
Add working cash requirement	10	5	3	
Total financing required	2,079	2,124	2,197	2,292
Available under borrowing authority and appropriation	2,209	2,209	2,209	2,209
Balance	+130	+85	+12	−83

The Strategic and Critical Materials appropriation language now in effect and requested without change for 1964 provides for the transfer at fair market value of either DPA inventory materials or excess materials in the national stockpile to contractors as payment for upgrading national stockpile materials.

Agriculturel Trade Development and Assistance Act

This act provides for barter or exchange of surplus agricultural commodities for strategic materials.

Based on an agreement entered into on August 18, 1955, GSA advises CCC on prices and other technical matters involved in acquisition of strategic materials and performs or contracts for inspection, handling, transportation, and maintenance in storage of these materials.

Materials acquired under the barter program are transferred to the supplemental U.S. stockpile periodically as provided by section 206(a) of the Agricultural Act of 1956. Acquisition cost of strategic materials in the CCC and supplemental U.S. stockpile inventories as of June 30, 1962, is as follows:

Commodity Credit Corporation	$99,869,800
U.S. supplemental stockpile	[1] 1,141,123,200

[1] Includes $27.5 million transferred under Public Law 84–733.

These inventories, and the barter program as a potential source of supply, are taken into consideration in completion of stockpile objectives.

No funds are provided under the S. & C. M. appropriation for reimbursement to CCC for cost of materials transferred. However, expenditures for custody of the supplemental U.S. stockpile are included in these estimates under the inventory management activity.

In addition to the above active programs, GSA acquired a separate tin inventory costing $9.5 million representing that portion of the FFC transfer under Public Law 84–608 which was excess to objectives and therefore not included in the national stockpile. GSA has disposed of this inventory.

PROCUREMENT OF JEWEL BEARINGS

Mr. THOMAS. You are only going to procure one item and that is what?

Mr. BOUTIN. Jewel bearings, Mr. Chairman.

Mr. THOMAS. Do we have some maintenance and repair money in this budget for that?

Mr. BOUTIN. In our supplemental, Mr. Chairman.

Mr. THOMAS. We haven't got to that yet?

Mr. BOUTIN. No, sir.

PROGRAM FOR 1964—STRATEGIC MATERIALS

Mr. THOMAS. Look at this table on page 239. It tells the tale. You want to spend about $1,250,000 next year for acquisition of new materials as against $1 million this year. It is for that one item, jewel bearings.

You have inventory management here, $22,184,000 in 1964 against $12,402,000 this year. The other items we will keep separate. We will take a separate look at those.

The acquisition of materials under employment, you set it up as none. Inventory management shows 205 in 1963 and 210 for 1964, an increase of about 5 positions.

The table on 240 shows the increase. Your appropriation last year was $18 million. You have a supplemental pending of $100,000 for pay increase. Your entire bill goes up to $28,145,000, which is a net increase of about $10,045,000 in round figures.

Look at your breakdown in the middle of page 240.

Upgrading of materials increases $250,000 over this year. Storage of materials increases $1,857,000; disposal of materials, $829,000; and operating expenses, $113,000.

With that in mind, let's take a look at the second paragraph on 241. (Reading:)

> The 1964 obligational program of $28.1 million is to provide $1.2 million for new material acquisition and upgrading of existing materials required to meet stockpiling objectives, $22.2 million for inventory management and rotation of material subject to deterioration, $1.5 million for national industrial equipment reserve activities, and $3.2 million operating expenses. Increases in 1964 are provided for all activities except national industrial equipment reserve.

We will go into that item later.

Give us a rundown on the status of the stockpile without going into your tables. The tables are in the record but give us a narrative form. Turn it over in your mind, how we can avoid putting up 1 penny of fresh money. I have a plan in mind but I want to see what you have in mind as to how we can do it. We don't want to hurt anything or anybody or any program. But with critical materials growing out of everybody's ears and with at least twice as much as we need under any stretch of the imagination to satisfy our national needs, I can't see why it is wise to appropriate $28 million in fresh money.

The table on 242 is quite revealing. You have the program by activities, your acquisition of materials, your upgrading, your inventory management. That is your biggest cost of $22 million.

What is the status of the program? First, we are cognizant of the appropriating language with regard to rotating materials. If it is mandatory that you replace materials then it would have to be appropriated funds of one kind of another.

ITEMS TO BE ROTATED AND PROCEEDS DERIVED IN 1964

You are going to rotate what in 1964?

Mr. BOUTIN. Two items, abaca and sisal. The other items are all upgrading.

(The following was subsequently submitted for the record:)

This might be made clear that there are receipts from the rotation program. We estimate that $5,693,000 will be derived from rotation sales in 1964, and be deposited in the Treasury.

ACQUISITION COST AND MARKET VALUE OF STOCKPILE

Mr. THOMAS. Tell us about the stockpile and where we stand.

Mr. CONNELL. The acquisition cost of the stockpile is $8,777,367,500.

Mr. THOMAS. You set that out in your tables very well. Put your finger on it. That is under inventory?

Mr. CONNELL. And also the market value of those materials is $7,579,157,600.

EXCESS MATERIALS

The excess materials on hand are $4,364,014,800 and the market value of those materials is $3,269,397,500. We have reached our objectives for all the materials with the exception of 11, and we have 12 excess materials that make up most of these.

Mr. THOMAS. At this point in the record detail the 12 excess materials, how much you have and how much you really need for the stockpile. Also tell how much we are going to add to the stockpile this year and what is its source.

Mr. CONNELL. The maximum objective stockpile for aluminum is 1.2 million short tons. The quantity of excess is 769,986 tons. The acquisition cost of that was $389,686,700 and the market price of that is $346,493,700.

Mr. THOMAS. How much loss is that on aluminum alone?

Mr. CASTO. On the total excess it would be a loss of $43,193,000.

Mr. THOMAS. That doesn't quite tell the tale on aluminum. Let's finish that tale and then you can take up the other 11.

Are all your contracts for aluminum completed yet?

HARVEY ALUMINUM CONTRACT

Mr. CONNELL. No, sir. As of December 31, 1962 we have one outstanding contract for aluminum with the Harvey Aluminum Co. and estimated deliveries from that contract total 49,975 short tons. The amount of money involved is $21.6 million.

Mr. THOMAS. How much a ton?

Mr. CASTO. $450 a ton.

Mr. THOMAS. What is the market value on today's market?

Mr. CASTO. That is the market value today. It is deliverable to us at market value and that is the market value.

Mr. THOMAS. Have you tried to renegotiate this contract? You don't need the aluminum by any means, do you?

Mr. CONNELL. No, sir, we do not need the aluminum.

Mr. THOMAS. Have you tried to renegotiate this contract?

Mr. CONNELL. We have internally tried to renegotiate the contract.

Mr. THOMAS. What about externally?

Mr. BOUTIN. I would guess we have talked to the Harvey people at least 50 times in the past year alone. We have been able to get out of some of the provisions of the contract. We were able to get them to get their banks securing their mortgages to agree to give up the

guarantee of the Federal Government to the tune of about $14 million. We also got them to agree to go ahead and finance a new facility in the Virgin Islands without the Government guarantee, where we were subject to $21 million.

Mr. THOMAS. Who is going to own those facilities when this contract is terminated? How did it come into existence? It was through a DPA loan.

Mr. BOUTIN. That is correct, sir.

Mr. THOMAS. Who is going to own the facilities when the contract is completed?

Mr. BOUTIN. Harvey is going to own them.

PHILOSOPHY OF THE HARVEY CONTRACT

Mr. THOMAS. Roughly, what was the thinking behind the contract, how was it worked out?

Mr. BOUTIN. The basic philosophy of the contract was to develop additional aluminum supply facilities.

Mr. THOMAS. That wasn't peculiar to Harvey alone. You had several other aluminum contracts.

Go ahead and spell out the philosophy of the contract.

Mr. CASTO. The Harvey contract was entered into on the third phase of expansion of production of——

Mr. THOMAS. What we are interested in is the philosophy behind the contract. What was that philosophy? You needed aluminum?

Mr. CASTO. That is correct.

Mr. THOMAS. The aluminum people came to you and said, "If you will build a plant where we can amortize it over a period of time by taking so many tons, we will do it?"

Mr. CASTO. That is correct.

Mr. THOMAS. It was a free ride for the aluminum people?

Mr. CASTO. No question.

Mr. THOMAS. When you finish buying the aluminum and they finish paying for the plant by their sales to you, all you have is the aluminum and they have the plant free? Is that what it amounts to?

Mr. CASTO. That is exactly what is amounts to.

VALUE OF HARVEY PLANT

Mr. THOMAS. What is the estimated value of the plant? How long will it take you to complete the contract, a year and a half or what?

Mr. CONNELL. November of next year.

Mr. THOMAS. What will be the replacement value or the market value of the plant in November of next year?

Mr. CASTO. Well, it would be a guess pure and simple, but I would guess $55 million.

Mr. THOMAS. What did the plant cost to begin with?

Mr. CASTO. Aproximately $51,500,000 to begin with.

Mr. THOMAS. All right, go ahead now.

DPA BORROWING AUTHORITY

Mr. CASTO. It was a DPA contract entered into September 13, 1955.

Mr. THOMAS. That is back-door spending and the Congress never had one iota of authority. Congress divested itself of the authority by voting the back-door spending.

What unused authorized obligation is left in your DPA spending now?

Mr. CONNELL. At the end of 1964 I believe it is $12 million, sir.

Mr. THOMAS. What is it as of January 1, 1963?

Mr. CASTO. Total DPA?

Mr. THOMAS. The unobligated authorized borrowing power from your DPA funds. What was it to start with?

Mr. HARLAN. It was $2.1 billion, Mr. Chairman. As of December 31 the available balance for borrowing is $114,215,000.

Mr. THOMAS. On January 1, 1963?

Mr. HARLAN. Yes, sir.

Mr. THOMAS. And you say at the end of 1964 it will be $12 million. What are you spending that money for?

Mr. HARLAN. The Harvey contract——

Mr. BOUTIN. Isn't a lot of it going into interest?

Mr. HARLAN. A lot of it is going to interest.

Mr. THOMAS. How many unfilled contracts do you have left, Harvey, Hanna, who else, that is nickel?

Mr. HARLAN. We have the contract with Freeport in Cuba but that is inactive.

Mr. BOUTIN. Harvey and Hanna are the only two active contracts, Mr. Chairman.

COST OF AMERICAN FACILITIES IN CUBA

Mr. THOMAS. What happened to Freeport, didn't they lose their property just like General Services Administration?

Mr. BOUTIN. Yes.

Mr. THOMAS. That cost $85 million when Mr. Castro grabbed your plant.

Mr. BOUTIN. Actually, the value of all the assets of the Federal Government held by GSA that were taken over by Castro and the amount we will claim, is going to be closer to about $135 million.

Mr. THOMAS. How much did your nickel plant alone cost? How much did you have tied up in that alone?

Mr. BOUTIN. That is the nickel plant plus inventory on hand plus mining equipment away from the premise. The plant itself is how much?

Mr. TURPIN. $67.9 million is the net book value.

Mr. THOMAS. What did it cost Freeport?

Mr. BROOKS. Their cost ran over $100 million in their facilities, both in Cuba and Louisiana.

Mr. CASTO. Freeport was a little over $101 million.

OTHER HARVEY COMPANY PLANTS

Mr. EVINS. Where is Harvey building this other aluminum plant outside the United States?

Mr. BOUTIN. That is an alumina facility and it is in the Virgin Islands, the Island of St. Croix. They are also, I understand, building another additional plant in Mississippi or Tennessee.

Mr. CASTO. Tennessee.

Mr. BOUTIN. And of course they bought the Harvey plant, the extrusion plant in Michigan from us for $3,626,100.

EXCESS MATERIALS

Mr. THOMAS. You touched on one excess material, aluminum. Go ahead with the others.

Mr. CONNELL. Chromite metallurgical, the maximum stockpile objective is 2,700,000 short tons. Quantity in excess is 2,626,789. The acquisition cost is $300,630,100 and the market value of that is $213,141,900.

Mr. THOMAS. Insert the remainder of the list in the record at this point.

Mr. CONNELL. Yes, sir.

(The information supplied follows:)

Summary of excess materials as of Dec. 31, 1962—Excess inventories

Commodity	Unit	Maximum stockpile objective	Quantity	Acquisition cost	Market value	Excess by program [1]			1 year consumption quantity	Excess in terms of consumption
						SCM quantity	DPA quantity	Supplemental and CCC quantity		
Aluminum	Short ton	1,200,000	769,986	$389,686,700	$346,493,700		769,986		2,000,000	5 months.
Chromite-met	do	2,700,000	2,626,789	300,630,100	213,141,900	1,098,985	532	1,527,272	700,000	3½ years.
Cobalt	Pound	19,000,000	77,908,455	169,004,900	116,862,600	57,847,933	18,983,504	1,077,018	9,000,000	8¼ years.
Copper	Short ton	1,000,000	133,230	75,447,900	83,236,400	8,351	113,430	11,449	1,600,000	1 month.
Diamond stones	Carat	18,000,000	6,556,217	80,245,700	83,919,500			6,556,217	3,500,000	2 years.
Lead	Short ton	286,000	1,099,631	313,236,700	219,926,200	764,370	7,262	327,999	1,021,000	1 year.
Manganese-met	Short dry ton	6,800,000	3,020,022	215,819,700	186,449,900			3,020,022	1,946,000	1½ years.
Nickel	Pound	323,000,000	123,434,700	108,703,700	94,007,100	11,354,431	112,080,269		220,000,000	6 months.
Rubber	Long ton	750,000	287,438	222,266,200	189,709,100	287,438			480,000	8 months.
Tin	do	185,000	162,290	392,766,100	403,517,800	154,785		7,505	80,000	2 years.
Tungsten (w)	Pound	50,000,000	111,226,496	395,256,300	119,256,200	53,842,775	52,904,383	4,479,338	12,000,000	9 years.
Zinc	Short ton	178,000	1,401,907	392,114,900	322,438,600	1,078,012		323,895	1,200,000	1 year 2 months.
Total, 12 materials	do		9,711,544	3,055,178,900	2,378,959,000					
Total, all other specification excesses	do		9,842,830	736,758,100	651,493,600					
Total, specification grades	do		19,554,374	3,791,937,000	3,030,452,600					
Nonspecification grades	do		3,401,738	395,529,800	141,898,500					
Nonobjective materials	do		248,051	176,548,000	97,046,400					
Total, excess, all inventories	do		23,204,163	4,364,014,800	3,269,397,500					

[1] Detail by commodity is for specification grade materials with objectives.

NOTE.—Of the total excesses, the supplemental stockpile and CCC inventories account for 14.3 million short tons with an acquisition cost of $1,082,148,800 and a market value of $955,245,200.

Mr. THOMAS. Put pages 246 and 247 in the record.
(The pages referred to follow:)

1. Acquisition of Materials

	Amount
1963	$1,000,000
Change	+250,000
1964	1,250,000

HIGHLIGHT

Covers costs of new materials for the national stockpile and of upgrading existing materials to higher use forms in accordance with Office of Emergency Planning directives, including necessary transportation and handling expenses. Comparative costs are as follows:

	1962	1963	1964
(*a*) New materials	$1,048,586	$750,000	$750,000
(*b*) Upgrading materials	415,469	250,000	500,000
Total, cost or estimate	1,464,055	1,000,000	1,250,000

JUSTIFICATION

Strategic and critical materials in all U.S. Government inventories in GSA custody and on order for such inventories are taken into account in determining the amounts of materials to be procured or upgraded for the national stockpile.

Strategic and critical materials are those materials required for essential uses in war emergency, the procurement of which in adequate quantities, quality and time is so uncertain that prior provision for the supply thereof is necessary.

Quantitative objectives are established after study of the estimated availability of U.S. production and imports as against the requirements for the materials in time of emergency for military, atomic energy, defense-supporting and essential civilian needs.

Two stypes of objectives have been established for all stockpile materials: (a) basic objectives, which assume partial dependence during an emergency on areas beyond North America and comparably accessible areas, and (b) maximum objectives, which provide a higher degree of security by completely discounting emergency supply from distant overseas sources.

Materials from foreign sources needed to meet remaining stockpile requirements are expected to be acquired through the Department of Agriculture barter program. Under existing statutes and policies, such materials are transferred to the supplemental stockpile without reimbursement from this appropriation.

No funds are included in this estimate for reimbursable transfers from other Government inventories.

(*a*) *New materials.*—Procurement of strategic and critical materials for national stockpile objectives is limited to jewel bearings in 1963 and 1964. This was also the only item procured in 1962.

"Costs of direct acquisition of materials, including transportation and handling expenses, are as follows (in thousands of dollars):

New materials:

1962 actual	1,049
1963 estimate	750
1964 estimate	750"

(From the budget for 1964.)

The 1964 estimate includes $700,000 for procurement of jewel bearings and $42,000 for accessorial transportation costs and $8,000 for handling costs, the same as in 1963.

"Based on national stockpile objectives and the proposed budget, the status of the 76 materials now on the stockpiling list is as follows:

Materials on hand and on order (June 30, 1962, actual)

	National stockpile, maximum objectives	All Government programs, maximum objectives
Percent completed:		
100	49	65
90 to 99	9	6
75 to 89	4	1
50 to 74	5	3
25 to 49	6	0
Under 25	3	1
Total	76	76

Materials on hand and on order (June 30, 1964, estimated)

	National stockpile, maximum objectives	All Government programs, maximum objectives
Percent completed:		
100	49	71
90 to 99	9	4
75 to 89	4	0
50 to 74	5	1
25 to 49	6	0
Under 25	3	0
Total	76	76"

(From the budget for 1964.)

(*b*) *Upgrading materials.*—"Stockpile materials are upgraded to more usable forms in order to provide a minimum readiness inventory of materials in forms suitable for immediate use to meet the initial surge of demand and abnormal conditions of intensive mobilization. Payment for all processing costs will be made by transfer of excess materials to contractors. The estimate covers only transportation and handling costs involved in upgrading." (From the budget for 1964.)

The general policy providing for a minimum readiness inventory of upgraded forms is set forth in Defense Mobilization Order V–7, revised, issued by OEP. Materials are upgraded only to such a degree as not to impair flexibility of use, and all upgrading is within stockpile objectives which have been established by OEP after interagency advice and consultation. Materials in the stockpile inventory are upgraded only when the cost thereof is less than the cost of new materials.

Mr. THOMAS. We have already noted that the only ones we are going to buy to the tune of $1,250,000 are jewel bearings. This table on 247, materials on hand and on order, that is following out the detailed information on the 12 oversupplied items.

ITEMS IN STOCKPILE

There are 76 items in the stockpile. You are going to reduce some by taking cotton out, is that correct? Are there any more?

Mr. BOUTIN. Cotton is the ony thing we have taken out.

Mr. CASTO. That is correct. We have completely disposed of a number of individual items which are no longer on the list.

Mr. BOUTIN. By sale rather than by transfer.

Mr. CASTO. That is correct.

UPGRADING OF MATERIALS

Mr. THOMAS. On the question of upgrading here, this is worthy of mention. [Reading:]

In 1963 and 1964 planned upgrading will include blister copper to oxygen-free copper, columbite-tantalite ores and concentrates to columbium and tantalum metals and to columbium and tantalum carbide powders, castor oil to sebacic acid, and crude opium to morphine alkaloid.

What is the value after you spend this money?

MORPHINE

What are you going to do with the morphine?

Mr. CASTO. The morphine is upgraded from a crude opium state into its first usable form. You can go in any one of several directions to your various opiates.

Mr. THOMAS. What is the life of that morphine after you upgrade it?

Mr. CASTO. The morphine alkaloid is more readily storable than the crude opium.

Mr. THOMAS. What is the life of it?

Mr. HARLAN. It is indefinite. I do not think it has ever been tested really.

Mr. THOMAS. How much do you have in the stockpile and what do you need? Tell us what it costs. How do you measure morphine, ounces or what?

Mr. CASTO. Pounds of morphine content within total crude.

We have a maximum objective of 172,800 pounds. We have an inventory of 193,577 pounds.

Mr. THOMAS. You are going to refine it. What are you going to get out of it in terms of pounds now?

Mr. HARLAN. We are going to refine 163,500 pounds of crude into 18,000 pounds of alkaloid.

Mr. THOMAS. Is that usable then by doctors?

Mr. HARLAN. Yes. It will be made into doses from that.

Mr. THOMAS. What does it cost to refine a pound of it?

Mr. CASTO. $52 a pound is the conversion cost.

Mr. THOMAS. Who does this for you?

Mr. CASTO. There are three processors who are capable in the United States of upgrading crude opium into morphine alkaloid.

Mr. THOMAS. Who would they be?

Mr. CASTO. They are Penick, Merck, and Mallinkrodt. Those are the three.

Mr. HARLAN. The value of this material will be increased as a result of this upgrading by $840,000.

Mr. THOMAS. How do you arrive at a price for these contracts, competitive bid?

Mr. CASTO. Yes. We go out on the basis of an informal solicitation of proposals and develop it to the maximum extent.

Mr. THOMAS. What about the big drug manufacturers?

Mr. CASTO. Merck is the largest of all the opium processors.

Mr. THOMAS. Not Lilly?

Mr. CASTO. No, sir. He has the largest of all capacities for conversion.

Mr. THOMAS. On your acquisition here your other objects include $482,000 for transportation, $68,000 for contractual services, and $700,000 for new materials.

COPPER

What about blister copper? What do you mean by "blister copper"? I have seen these large slabs with little bumps in them.

Mr. CASTO. That is blister copper.

Mr. THOMAS. You are going to take the blisters out?

Mr. HARLAN. Yes.

Mr. THOMAS. What is the status of your copper? Is that one of your 12 surpluses?

Mr. HARLAN. Yes, sir.

Mr. THOMAS. Why spend this fresh money on it?

Mr. HARLAN. We have a subobjective for oxygen-free copper, Mr. Chairman, which is a highly specialized variety of copper used for electronic purposes which has not yet been fulfilled, so we are taking material——

Mr. THOMAS. Well, you have got twice as much copper as you need anyway. Why spend a fresh dollar on any of it? It is not going to deteriorate, is it?

Mr. HARLAN. No, sir; we are not increasing the amount of copper, we are just changing the form of the copper.

Mr. THOMAS. I understand that, but I asked you why spend one nickel to refine it when you have in the stockpile twice as much copper as you need.

Mr. CASTO. We are proposing to take from the stockpile excess materials and pay the cost of refining the upgrading of all of these materials into finished form. The only thing we are asking for in the form of new money is for transportation of these materials.

Mr. BOUTIN. Transportation and handling.

PAYMENT IN KIND

Mr. CASTO. We endeavor wherever feasible to actually negotiate the payment of transportation by a payment in kind, also using excess materials.

Mr. THOMAS. At this point in the record let's get one point clear. From where are you taking this material? Is it the national stockpile?

Mr. CONNELL. Yes, sir.

Mr. THOMAS. Under the law don't you have to replace what you sell?

Mr. CASTO. We would use D materials for the payment in kind.

Mr. THOMAS. What is that?

Mr. CASTO. We would use materials from the Defense Production Act inventory for the payment of the processing cost.

VALUE OF ALL STOCKPILES

Mr. THOMAS. What is the Defense Production Act stockpile worth?

Mr. CASTO. We have 113,430 tons of copper in the DPA inventory with an acquisition cost of $63,521,000.

Mr. THOMAS. As a matter of fact, you have three stockpiles, do you not?

Mr. CONNELL. Four, sir.

Mr. THOMAS. What is your fourth one?

Mr. CONNELL. CCC.

Mr. THOMAS. As of today what is the value of that stockpile?

Mr. CONNELL. $61,404,800 is the acquisition cost. The market value is $58,525,700.

Mr. THOMAS. What is the value of the CCC material that you will put in fresh during the fiscal year 1964?

Mr. CONNELL. We estimate in fiscal year 1964 about $100 million.

Mr. CASTO. Not in copper, no.

Mr. THOMAS. I have a figure of $2 billion when you put it all together. What is that figure? You set it out in here. All of the CCC materials?

Mr. CONNELL. All of the supplemental, sir?

Mr. THOMAS. That is right. What is your figure?

Mr. CONNELL. $1,229,593,100 is the acquisition cost of the supplemental. The market value was $1,105,986,600.

Mr. THOMAS. For the year 1964 what will be the acquisition cost of that new material that you acquire from CCC?

Mr. HARLAN. It is estimated at $85 million.

Mr. THOMAS. Is that all?

Mr. HARLAN. Yes.

Mr. THOMAS. That comes from surplus commodities?

Mr. HARLAN. Yes.

Mr. EVINS. When you speak of $8.7 billion does that include all four of the stockpiles?

Mr. CASTO. Yes, sir.

Mr. BOUTIN. One of those, however, is simply a transitional stockpile until it gets to the supplemental inventory.

Mr. CASTO. The CCC is an agricultural holding program only until it is incorporated into the supplemental stockpile.

Mr. EVINS. If you move it around enough, paying for the transportation with surplus commodities, you can reduce your stockpile if you keep it on the move.

INVENTORY MANAGEMENT

Mr. THOMAS. We will look at the inventory management and may I read two paragraphs on page 255? Put pages 251, 253, 255, and 256 in the record.

(The pages referred to follow:)

2. Inventory management

	Amount	Average employment		
		Department	Field	Total
1963	$12,402,000		205.8	205.8
Change	+9,782,000		+5.0	+5.0
1964	22,184,000		210.8	210.8

HIGHLIGHT

"Covers costs of maintaining materials in the national and supplemental stockpiles so that they will be available for immediate use in an emergency, including rotation, storage, special preservation, and disposal of materials no longer required for stockpile objectives.

"The acquisition cost of these inventories is as follows (in millions of dollars):

	1962 actual	1964 estimate
National stockpile	6,049.6	5,700.2
U.S. supplemental stockpile	1,141.1	1,427.6
Total national and supplemental	7,190.7	7,127.8"

(From the budget for 1964.)

Justification of the activity is presented under three subactivities summarized below:

Summary of performance cost

	1962	1963	1964
(a) Rotation of materials (gross)	$13,410,754		$7,096,000
(b) Storage of materials	11,741,045	$11,020,000	12,877,000
(c) Disposal of materials	687,498	1,382,000	2,211,000
Total cost or estimate	25,839,297	12,402,000	22,184,000

JUSTIFICATION

(a) *Rotation of materials*

"Perishable materials in the national stockpile are rotated when their usability becomes impaired for essential emergency requirements. Cordage fibers are the only materials to be rotated in 1964." (From the budget for 1964.)

Materials in the stockpile are rotated and replaced with fresh materials only when inventories do not exceed stockpile objectives. When inventories of perishable material exceed stockpile objectives, the materials are disposed of as authorized by the Office of Emergency Planning. In disposing of such materials, sales priority is given to the quantities of materials which have deteriorated to a point otherwise requiring rotation in order to maintain the quality of the stockpile inventory of these materials.

Rotation sales and costs are as follows (in thousands of dollars):

	1962 actual	1963 estimate	1964 estimate
Gross replacement costs of materials rotated	$13,411		$7,096
Rotation sales	10,355		5,693
Net cost to Government	3,056		1,403

Gross replacement costs include the cost of new materials, transportation, and handling.

Receipts from rotation sales are deposited in the Treasury pursuant to the Independent Offices Appropriation Acts for 1961 and subsequent years. Similar language is included for 1964. Since rotation receipts are not available, the appropriation request must cover gross replacement costs.

Research by GSA has indicated that the rotation cycle can be increased from 5 to 7 years for abaca and from 7 to 9 years for sisal with resultant savings in rotation costs. Accordingly, the 1964 estimate is based on the 7-year cycle for abaca and 9 years for sisal. No rotation is being undertaken in 1963 because funds were not appropriated for this purpose.

Rotation sales and costs for 1964 are as follows:

	Quantity (pounds)	Sales price		Replacement cost		Net cost	
		Per unit	Total (in thousands)	Per unit	Total (in thousands)	Per unit	Total (in thousands)
Cordage fibers:							
Abaca	19,772,000	$0.2385	$4,716	$0.2915	$5,764	0.0530	$1,048
Sisal	8,250,000	.1185	977	.1615	1,332	.0430	355
Total, 1964			5,693		7,096		1,403

(*b*) *Storage of materials*

"Strategic and critical materials were stored at 208 locations as of June 30, 1962, utilizing approximately 24 million square feet of closed storage; 66 million square feet of open storage; and 2 million barrels of tank storage. The number of storage locations was reduced to 173 as of August 1, 1962, due to the transfer of surplus cotton to the Department of Agriculture. Materials in the national and supplemental stockpile totaled approximately 40.7 million tons on June 30, 1962, and it is expected that approximately 3.5 million tons a year will be added to the supplemental stockpile in 1963 and 1964. Distribution of storage costs is as follows (in thousands of dollars):

	1962 actual	1963 estimate	1964 estimate
Recurring storage costs	10,031	9,582	9,806
Nonrecurring storage costs	1,673	1,098	2,000
Relocation transportation and handling	37	340	1,071
Total cost or estimate	11,741	11,020	12,877"

(From the budget for 1964.)

Workloads and unit costs for these operations are explained below.

(1) *Recurring storage costs.*—Covers costs of operating all GSA storage depots, including two military facilities being taken over by GSA in 1963 and one military facility planned to be taken over in 1964. Operating costs at GSA depots cover day-to-day maintenance, fire protection, security guarding, utilities, and supply management personnel. This item also includes reimbursement to DOD for storage at military facilities, and storage costs at industrial plant sites, commercial warehouses, and miscellaneous leased sites. Increase in 1964 over 1963 provides for storage of additional quantities of materials transferred to the supplemental stockpile from the CCC barter program, offset in part by decreases in storage costs as a result of disposals and relocation of materials to effect long-term savings.

(2) *Nonrecurring storage costs.*—Covers repair, alteration, and improvement of Government-owned storage facilities, including warehouses and tank farms; preparation of open area storage sites; repackaging of materials in long-term containers; protective coverings for ore piles; storage aids; handling equipment; reconditioning and preservation of containers; rehabilitation of sprinkler systems and other fire protection facilities. Funds available in 1963 are sufficient only for top priority projects, so the increase in 1964 provides for essential projects carried over from 1963.

(3) *Relocation transportation and handling.*—Covers costs of inland transportation and necessary handling involved in relocating materials in order to conform to Office of Emergency Planning storage criteria or to effect savings in long-term storage costs. Estimate for 1964 includes $115,000 for relocation and dispersal of miscellaneous materials to avoid excessive risks from attack damage, as directed by OEP. Also includes $956,000 for relocating materials which will avoid expenditure of more than this amount for repairs at one storage facility and also will result in future annual savings of $483,000 in recurring storage costs.

(c) *Disposal of Materials.*—Covers handling and transportation expenses incurred in connection with the disposal of materials no longer required for stockpile objectives.

[In thousands of dollars]

Total cost:	
1962 actual	688
1963 estimate	1,382
1964 estimate	2,211

"Disposals on a commitment basis from the national stockpile in 1962 totaled approximately $47.7 million for about 150,000 short tons of materials, including rubber, coconut oil, magnesium scrap, quinine, palm oil, and silk waste.

"As of June 30, 1962, a total of over 700,000 short tons of excess materials in the national stockpile was available for disposal under approved disposal plans. The estimates for transportation and handling expenses incurred in effecting disposals are based upon projected disposals of $113 million in 1963 and $138 million in 1964. They do not, of necessity, take into consideration changes in stockpile policy which may result from studies currently being made by the executive branch and the Congress." (From the budget for 1964.)

The chart on opposite page shows comparative disposal figures for 1959 through 1964 on a sales-commitment basis, showing acquisition cost and sales value.

This subactivity covers the Government's expenses for handling materials planned for disposal. Transportation costs also are included for estimated disposal sales of rubber and cordage fibers. Prices received by the Government include such transportation for these materials, but by statute all receipts from sales of national stockpile materials are covered into the Treasury as miscellaneous receipts. The appropriation request, accordingly, must provide for all expenses involved in disposal sales.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $1,272,800 for 212 permanent positions, an increase of 4 over 1963. Provides for supervision and operation of warehouses and storage facilities.

	1962	1963	1964
Total permanent positions (all field)	203.0	208.0	212.0
Average employment, permanent positions	191.6	205.0	210.0
Average employment, temporary positions	16.3	.8	.8
Total average employment	207.9	205.8	210.8

Other objects: $20,911,200 provides:

(1) $94,800 personnel benefits, including $77,500 retirement contributions, $11,300 health benefits, $2,000 group insurance, and $4,000 FICA.

(2) $2,961,500 transportation of things, including $560,500 under the rotation program and $1,600,000 under the disposal program; balance of $801,000 to conform materials pattern to civil defense storage criteria as well as to effect savings in long-term storage costs.

(3) $11,287,100 contractual services, including $2,957,000 for services of other Government agencies, and $8,330,100 for storage, handling, space preparation, etc., at GSA and commercial locations.

(4) $6,526,400 supplies and materials, including $6,451,400 under rotation program, and $50,000 for operating supplies under storage program for such items as containers, pallets, dunnage, etc.; and $25,000 operating equipment.

The remainder of $41,400 includes:

(5) $6,000 for 222 days' travel by regional depot supervisory personnel at $27 per day; and $12,000 motor pool services.

(6) $20,000 communications; $2,000 rents and utilities; and $1,400 printing.

Mr. THOMAS. Let me read a paragraph from page 255:

Relocation transportation and handling: Covers costs of inland transportation and necessary handling involved in relocating materials in order to conform to Office of Emergency Planning storage criteria or to effect savings in long-term storage costs. Estimate for 1964 includes $115,000 for relocation and dispersal

of miscellaneous materials to avoid excessive risks from attack damage, as directed by OEP. Also includes $956,000 for relocating materials which will avoid expenditure of more than this amount for repairs at one storage facility and also will result in future annual savings of $483,000 in recurring storage costs.

NUMBER OF STORAGE LOCATIONS

How many locations are you using for your storage and how are they generally located?

Mr. CONNELL. We have 170 locations.

BASIS FOR MOVING STOCKPILE MATERIALS

Mr. THOMAS. Why move this material around when you once get it in the warehouse or storage location?

Mr. HARLAN. We have two basic reasons for moving the materials, Mr. Chairman. One of them is to improve the strategic location of certain of our materials.

Mr. THOMAS. What is your yardstick—who is here from OEP?

Mr. CONNELL. Mr. Lawrence and Mr. Durkin, sir.

Mr. THOMAS. Heretofore you have been wanting to store all these materials close to the consuming area. We have pointed out to you time and time again that when you go in one of these big industrial areas and that city is blown up, your stockpile is blown up with it.

Have you changed your policy now and dispersed any of it, getting it out of the heavy consuming areas?

Mr. LAWRENCE. Not particularly, sir. In certain areas, certain storage sites where we have determined the potential loss is greater, we have attempted to move certain commodities out.

Mr. THOMAS. Who does that guessing for you? How do you determine it? You are guessing like everybody else, are you not? You cannot come up with an infallible yardstick, can you?

Mr. LAWRENCE. We use a system of damage analysis which is based on the best intelligence we can get from the Department of Defense, sir.

Mr. THOMAS. Then it is a question of judgment based on that.

Mr. LAWRENCE. Yes, sir.

PROCEDURE FOR DISPOSAL OF MATERIALS

Mr. THOMAS. This is worthy of repetition. [Reading:]

Disposals on a commitment basis from the national stockpile in 1962 totaled approximately $47.7 million for about 150,000 short tons of materials, including rubber, coconut oil, magnesium scrap, quinine, palm oil, and silk waste.

Just what is the law now on disposition of materials in the national stockpile?

Mr. CONNELL. Disposing of materials in the national stockpile?

We must go to Congress—we develop a disposal plan from a directive of OEP. We have concurrence of other agencies. We go to the Congress and testify as to the materials we want to dispose of.

Mr. THOMAS. Under the law you can't dispose of anything in the national stockpile without an act of Congress dealing with the specific item; is that correct?

Mr. CONNELL. If it is obsolete, sir, we do not.

Mr. THOMAS. With the minor exception, and that is rotation. You mean you are disposing of it because it is deteriorated or overage and you have to replace it; is that right?

DISPOSAL PLANS

Mr. CONNELL. Yes, sir.

Mr. THOMAS. You sold $47.7 million worth in 1962. Why don't you sell more?

You state two or three times in your justification, and it is not necessary for me to read your exact language, that it depends upon the market, our oversea allies and other things, but it all ends up you still don't sell any appreciable amount. You sold less than $50 million worth last year in 1962.

Mr. OSTERTAG. What have you done to gain the approval of Congress for disposal of these materials?

Mr. CONNELL. We have several disposal plans before the Congress right now.

Mr. OSTERTAG. What are you pressing for?

Mr. CONNELL. Cadmium is one.

Mr. HARLAN. We had 14 approved by the Congress last year.

Mr. THOMAS. What were they besides rubber?

Mr. HARLAN. There were vegetable tannins, miscellaneous cobalt and copper items. It included some fibers. Also molybdenum.

Mr. THOMAS. Why don't you get into some of the big items, won't the market stand it?

Mr. HARLAN. We believe now, Mr. Chairman, that by doing some long-range planning for disposals—not just packaged jobs—that we can come up with a plan which everybody will be able to approve and live with which will enable us to move some quantities.

Mr. THOMAS. Are we correct in our understanding that Canada has just about disposed of its stockpiled critical materials?

Mr. HARLAN. That is correct.

Mr. THOMAS. Is our understanding correct that England has disposed of all of her materials about a year or a year and a half ago?

Mr. CONNELL. Yes, sir.

Mr. THOMAS. Why can't we get rid of some of these surplus items?

Mr. CONNELL. In the Executive Stockpile Committee, the OEP, being the Chairman of that Committee—the report was approved by the President. We recommended to that Committee long range plans, legislation, and it is at the point now where they are looking into that recommendation.

Mr. THOMAS. We have been looking for 5 years. We have been straining our eyes for the past 5 years looking and looking and looking, and nothing and nothing and nothing is done. What is the reason?

AUTHORITY FOR DISPOSAL

Mr. HARLAN. We are trying to get some new legislation which will untie our hands so we can start to move on this material.

Mr. THOMAS. How much involved is the State Department in this disposal plan?

Mr. HARLAN. They have to approve disposals.

Mr. THOMAS. Why?

Mr. BOUTIN. There is a change there, Mr. Chairman. There has been a revision of DMOV–7 which is a disposal regulation whereby now the State Department, Interior Department, Commerce Department, which are the three most directly concerned with the exception of OEP and GSA, where these departments no longer have a veto on disposal. We coordinate with them. They can raise an objection but the umpire now is OEP speaking for the President. They can't simply say, "Well, we veto it" and that is it, the plan is dead. That no longer is in existence.

Mr. THOMAS. May I read this paragraph on page 255, gentlemen. It is worth keeping in mind.

As of June 30, 1962, a total of over 700,000 short tons of excess materials in the national stockpile was available for disposal under approved disposal plans.

Was it disposed of?

Mr. OSTERTAG. That means you already had authority?

Mr. THOMAS. Was it disposed of?

Mr. CONNELL. No, sir.

Mr. THOMAS. (Continuing reading):

The estimates for transportation and handling expenses incurred in effecting disposals are based upon projected disposals of $113 million in 1963 and $138 million in 1964. They do not, of necessity, take into consideration changes in stockpile policy which may result from studies currently being made by the executive branch and the Congress.

Who in the Congress?

Mr. BOUTIN. The Symington committee, Mr. Chairman.

Mr. THOMAS. Have they brought out anything this committee hasn't brought out time and time again for 5 or 6 long years?

Mr. BOUTIN. No, the evidence that has been brought out there is almost exactly what has been brought out before this committee.

ADDITIONAL DISPOSAL AUTHORITY

However, we now have a firm directive from the President indicating that he favors legislation that will enable the disposal of the materials that are in excess of our needs without seriously disrupting the market. Senator Symington's committee is working on legislation with OEP, GSA and others, which I hope will be introduced shortly.

Mr. OSTERTAG. This reference to the statement just read by the chairman which among other things says, "under approved disposal plans," does that mean you merely have plans but not the authority?

Mr. BOUTIN. This means we have the internal plans within the executive branch and these are either pending before Congress or are ready for submission to Congress.

Mr. OSTERTAG. That is what I am trying to get at. When you say "approved disposal plans" you mean plans for which you need authority to execute.

Mr. BOUTIN. Some of them, in fact, may already be approved.

Mr. CONNELL. Yes, sir.

Mr. OSTERTAG. But nothing has happened as a result of it.

Mr. BOUTIN. Yes, there has. If you will look at the chart on page 254 you will note the increase in disposal forecasts from all stockpiles for $69 million in 1961, $87.5 million in 1962. A total of $140 million is forecasted for this year and $158.6 million for fiscal year 1964, not

taking into consideration the additional authority that we hope will come from Congress.

Mr. OSTERTAG. In connection with the point the chairman has been making, it is not quite clear to me as to your plans. Is it to broaden or liberalize the authority so that you will not be required to go directly to the Congress in each instance in order to dispose of certain strategic materials? You have a number of cases pending for specific authority to dispose of materials now, do you not?

Mr. CONNELL. Yes, sir.

Mr. BOUTIN. Yes, we do.

Mr. OSTERTAG. Cadmium is one, is it not?

Mr. CONNELL. Yes, sir.

Mr. OSTERTAG. You will remember Mr. Administrator, that you and I discussed this matter some time ago.

Mr. BOUTIN. That is correct.

INDUSTRY NEED FOR MATERIALS

Mr. OSTERTAG. Here is a case as I see it where industry is desperate for this material and it is affecting the economy in many places. I know of one or two plants that will be forced to reduce their working operations and place people in an unemployed status just because of their inability to obtain a sufficient supply of this material.

Mr. BOUTIN. Another good example recently was because of the shipping strike, two plants that I know of in Rhode Island, and there were others elsewhere, were going to have to close down because they couldn't get crude rubber and we have rubber running out of our ears. We were able to get a directive, working with OEP so that we are able to use the next month's sales or sales from within the next 12 months and keep them going. But there is very little flexibility as it stands right now. This 6 months waiting period, for instance. By the time 6 months is over the emergency is over.

STATUS OF LEGISLATION

Mr. OSTERTAG. What can be done to expedite this important matter?

Mr. BOUTIN. I am hoping that legislation is going to be presented very shortly. Bill, how far along is the legislation?

Mr. LAWRENCE. I think work on it is virtually finished, so it is about ready.

Mr. BOUTIN. One of the big things too, is the commingling of these inventories which would save an awful lot of money and bookkeeping. Now you have to keep everything separate within these four inventories and it just doesn't make very much sense, that we can see. Either we need it or we don't need it.

Mr. THOMAS. Let's look at 256, gentlemen. Here are your other objects on inventory management. This is already in the record. We have an increase of about five jobs. We have an item for transportation of things under the rotation program; shipments from one point to another. Most of these items are stored outdoors. They are big, heavy items. You have copper, aluminum, cobalt, and magnesium.

National Industrial Equipment Reserve

Look at your industrial reserves. Put pages 258, 259, and 260 in the record.

(The pages referred to follow:)

3. National industrial equipment reserve

	Amount	Average employment		
		Department	Field	Total
1963	$1,621,000		158.4	158.4
Change	−100,000		−7.4	−7.4
1964	1,521,000		151.0	151.0

HIGHLIGHT

"The reserve of Government-owned machine tools and other industrial manufacturing equipment authorized by the National Industrial Reserve Act of 1948, consists entirely of items selected by the Secretary of Defense from lists of such property declared excess to the needs of the three military departments and other executive agencies.

"Items in the national industrial equipment reserve are intended primarily for expansion in an emergency of defense-supporting industries such as manufacturers of ball bearings, gears, tools and dies, and machine tools. Each of the military departments also maintains a reserve of production equipment for current and mobilization requirements of direct military contractors and producers specifically designated as mobilization suppliers.

"In accordance with Department of Defense estimates for total selections for the national industrial equipment reserve from excess declarations of production equipment, budget estimates are based on selection rates of 1,000 items in 1963 and 800 items in 1964.

"During 1961 and 1962 the Department of Defense authorized and General Services Administration entered into 12 and 38 loan agreements, respectively, with vocational schools for equipment in the national industrial equipment reserve where such loans are in the interest of national defense." (From the budget for 1964.)

Comparative costs are as follows:

Transportation, processing, and storage:

1962	$1,821,023
1963	1,621,000
1964	1,521,000

JUSTIFICATION

Transportation, processing, and storage: Covers nonrecurring costs of loading, transportation, handling, processing, and testing of tools for long-term storage, and recurring storage costs.

More detailed identification of cost categories follows:

(1) Transportation costs cover transportation of equipment from locations at time of selection to NIER processing and storage centers.

(2) Loading costs include skidding and loading on common carriers of equipment at plants or depots where located at time of selection.

(3) Material handling includes handling of new selections, handling of leased items in and out, handling of equipment within facilities, transfers, and disposals.

(4) Processing includes analytical testing of operating condition of equipment and preparation for long-term storage.

(5) Machinery upkeep includes operation of dehumidification systems, periodic equipment inspection and reprocessing of equipment to extent necessary.

(6) Building maintenance includes maintenance and upkeep of storage facilities.

Analysis of inventory changes and workload costs for 1962–64 are shown on the following page.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $916,500 for 152 positions, a decrease of 8 positions from 1963. Covers personnel at preservation depots engaged in the care and preservation of industrial equipment scheduled for entry into the national reserve.

	1962	1963	1964
Total positions (all in field)	113.0	160.0	152
Average employment	106.6	158.4	151

Other objects: $604,500 provides:

(1) $69,500 personnel benefits, including $60,200 retirement contributions, $6,300 health benefits, $1,000 group insurance, and $2,000 FICA.

(2) $100,000 for movement of equipment selections from contractors' plants to GSA facilities, as well as between NIER depots.

(3) $262,000 principally for services performed by other Government agencies and other contractual services.

The remainder of $173,000, or 11.4 percent of total estimate, provides:

(4) $3,000 for 111 days travel at $27 per day by regional depot supervisory personnel and $13,000 motor pool services.

(5) $62,000 for utilities and rental of equipment and facilities; $5,400 communications; $300 printing.

(6) $81,800 for supplies for program operations.

(7) $7,500 for purchase of specialized processing and testing equipment.

National industrial equipment reserve—Performance and comparative costs, 1962–64

	1962 actual			1963 program			1964 estimate		
	Number of units	Unit cost	Total cost	Number of units	Unit cost	Total cost	Number of units	Unit cost	Total cost

NATURE OF NATIONAL INDUSTRIAL EQUIPMENT RESERVE

Mr. THOMAS. You are acting as an agent for the Department of Defense here, are you not?

Mr. BOUTIN. Yes.

Mr. THOMAS. What is the acquisition cost of that stockpile?

Mr. BOUTIN. $92,162,505.

Mr. THOMAS. How many different pieces of equipment are there and where are they located?

Mr. BOUTIN. 9,329 tools, in several locations.

Mr. CONNELL. Burlington, N.J.; Dixon, Ill.; and Marietta, Ga.

Mr. THOMAS. You have three big locations?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. How many pieces of equipment, 9,300?

Mr. BOUTIN. 9,329 was the total inventory, sir. We have added a net of 160 since June 30——

Mr. THOMAS. The reserve of Government-owned machine tools and other Government equipment authorized by the National Industrial Reserve Act of 1948 consists entirely of items selected by the Secretary of Defense. You folks are just custodians?

Mr. CONNELL. Yes, sir.

Mr. THOMAS. In accordance with the Department of Defense estimates the total selection of national industrial reserve from excess declarations, budget estimates are based on selection rates of 1,000 items in 1963 and 800 items in 1964? You only have 1,000 items now and you are going to add 864?

Mr. CONNELL. No, we have over 9,000, sir.

Mr. HARLAN. That is right.

Mr. THOMAS. How many of those do you take in and out? How many times a year do you have to move these items? Do you have any information on that?

Mr. HARLAN. Yes, sir. We estimate we are going to ship out 750.

Mr. THOMAS. Every time you put one in and every time you take it out you have a tremendous expense. Does the Department of Defense pay the transportation costs to your warehouse?

Mr. HARLAN. No.

Mr. THOMAS. You pay it all in here?

Mr. HARLAN. This budget covers it. Four hundred of those 750 tools are going out to the school programs.

Mr. THOMAS. I was just going to read that.

In 1961 and 1962 the Department of Defense authorized General Services to enter into 12 and 38 loan agreements, respectively, with vocational schools for equipment in the national industrial equipment reserve where such loans are in the interest of national defense.

It is not a gift, it is a loan?

Mr. HARLAN. That is correct.

Mr. OSTERTAG. You loan the tools?

Mr. CONNELL. Yes, sir.

Mr. BOUTIN. They have to maintain them and we run periodic inspections on them every 6 months.

Mr. THOMAS. Transportation, processing and storage, $1,821,000 for 1962, $1,621,000 for 1963, and $1,521,000 for 1964. It goes down a little bit.

How many employees do you have listed here? Do you do any maintenance on these properties? Heretofore you have testified that you oil it and spray it.

Mr. HARLAN. Yes, sir.

Mr. BOUTIN. Actually, when it comee in to us we go over the piece of equipment completely and bring it right up to top operating efficiency and then put it into storage and then it periodically is gone over to make sure it is kept in that condition.

Mr. HARLAN. It is carefully gone over. Tolerances are measured and everything.

STORAGE AND MAINTENANCE OF EQUIPMENT

Mr. THOMAS. What is the storage place in Illinois?

Mr. CONNELL. Dixon, Ill.

Mr. THOMAS. Where are the other ones?

Mr. CONNELL. Burlington, N.J., and Marietta, Ga.

Mr. THOMAS. That is Government storage?

Mr. CONNELL. They are all in Government storage; yes, sir.

Mr. THOMAS. Did you spend some money on that building in Illinois 2 years ago?

Mr. HARLAN. Yes.

Mr. EVINS. It looks like the Department of Defense which has so many competent servicemen, that they could maintain this machinery and equipment. They know best how to operate it and where they want to use it. Why do they turn it over to you to get extra personnel to maintain their equipment for them?

Mr. HARLAN. The National Industrial Equipment Reserve Act provides we will take care of the reserve. It is a reserve to handle the requirements for tools for defense supporting industries in the event of an emergency.

Mr. BOUTIN. I would also like to point out, Mr. Congressman, that under this program we had a contractor doing this work for us at Marietta. Last July 1 we did not renew the contract and went force account and are saving between $60,000 and $65,000 a year.

Mr. EVINS. They are doing it under force account and maintaining the machinery because the law requires them to.

Mr. THOMAS. Very well, go ahead.

Mr. OSTERTAG. It is not clear to me as to this industrial equipment reserve. These are tools and equipment stored as a result of the buildup during the wartime period?

Mr. BOUTIN. These are tools that are in standby in case of a national emergency. In case of a national emergency they could be moved into necessary plants almost overnight for production to meet the emergency.

Mr. OSTERTAG. Doesn't it constitute tools and equipment that had been formerly used, or is it something new?

Mr. BOUTIN. These are all used pieces of equipment and these new items Mr. Harlan testified to are largely from defense plants that are being closed out, turned over to us for disposal and certain tools are selected.

Mr. OSTERTAG. That is what I had in mind.

Now, isn't there a considerable degree of obsolescence or no value in connection with much of the stockpile?

Mr. BOUTIN. No; they are very carefully selected by the Department of Defense so that they are tools that would have an immediate use in the event of an emergency.

Mr. HARLAN. They are all general purpose tools. They don't change very much.

Mr. OSTERTAG. They are not exactly tools that would be used with regard to production of weapons, for example, that have long since gone out of existence.

Mr. BOUTIN. General purpose tools.

OPERATING EXPENSES

Mr. THOMAS. Let us take a look at the operating expenses here. Put pages 263 and 264 in the record.

4. Operating expenses

	Amount	Average employment		
		Department	Field	Total
1963	$3,077,000	102.0	110.5	212.5
Change	+113,000	−1.5	−2.0	−3.5
1964	3,190,000	100.5	108.5	209.0

HIGHLIGHT

"Covers all expenses at the central and regional office levels for administering programs financed under this appropriation head including the Defense Materials Service and the integrated staff offices of General Services Administration. The change in total workload in 1964 from 1963 will be limited, with staffing and related expenses holding at minimum requirements." (From the budget for 1964.)

Costs of this activity are reflected in three areas summarized below and discussed in further detail hereinafter.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
(a) Service direction	$345,385	29.5	$438,800	33.8	$460,000	34.0
(b) Program	1,532,883	173.4	1,704,200	178.7	1,770,000	175.0
(c) Administrative operations	929,300	(1)	934,000	(1)	960,000	(1)
Total operating expenses	2,807,568	202.9	3,077,000	212.5	3,190,000	209.0

[1] Employment for administrative operations is shown under the AO fund.

JUSTIFICATION

(a) *Service direction.*—General direction over all programs assigned to the Defense Materials Service is provided by the Commissioner and his immediate staff, including the office of the Deputy Commissioner. Supervision is provided in Botson, New York, Washington, D.C., Atlanta, Chicago, and Dallas by DMS regional directors responsible for carrying out program operations in these areas of major stockpile activities.

The employment requested represents the staff required to provide adequate direction, planning, control, and management of DMS programs.

EXPLANATION OF DISTRIBUTION BY OBJECTS (SERVICE DIRECTION)

Personnel compensation and staffing: $393,100 for 34 positions distributed as follows:

	1962	1963	1964
Central office	19.0	21.0	21.0
Regional offices	14.0	13.0	13.0
Total positions	33.0	34.0	34.0
Average employment	29.5	33.8	34.0

Other objects: $66,900 provides—

(1) $29,500 personnel benefits, including $25,600 retirement contributions, $2,000 health benefits, and $1,900 group insurance.

(2) $7,000 postage fees for all DMS activities. The remainder of $30,400, or 6.6 percent of total estimate, includes:

(3) $10,000 travel based on 370 days at $27; and $700 motor pool services;

(4) $400 transportation; $6,500 communications; $2,100 printing;

(5) $2,400 supplies; $5,800 other services; $2,500 equipment.

(*b*) *Program.*—Covers all other personnel and related expenses of DMS at the Central and Regional Office levels for programs financed under "Strategic and critical materials." Provides overall project administration and materials management including acquisition, ungrading, qualitative maintenance, storage, inspection, rotation, and disposal of strategic and critical materials; and management of the national industrial equipment reserve.

Staff requirements and other expenses are as follows:

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
(1) Office of Materials Management	$993,131	112.6	$1,093,400	115.7	$1,126,200	111.5
(2) Office of Storage Management	539,752	60.8	610,800	63.0	643,800	63.5
Total cost or estimate	1,532,883	173.4	1,704,200	178.7	1,770,000	175.0

Mr. THOMAS. This shows the top management people. You have an employment of 209 next year against 212 this year. [Reading:]

Service direction: General direction over all programs assigned to the Defense Materials Service is provided by the Commissioner and his immediate staff, including the office of the Deputy Commissioner. Supervision is provided in Boston, New York, Washington, D.C., Atlanta, Chicago, and Dallas by DMS regional directors responsible for carrying out program operations in these areas of major stockpile activities.

In service direction you have 21 people in the central office and 13 in the regional offices for a total of 34.

Where are the green sheets? You have one GS–18, one GS–17, and four GS–16s. In your Other Objects at page 268 you show $282,900 of which $111,500 is personnel benefits including $96,400 retirement contributions, $15,100 health benefits, and $4,600 group insurance. You have $72,000 for travel based on 2,666 days travel at an average of $27 per day and $17,300 for motor pool services.

I do not know why you are going to do so much printing and binding here.

SUMMARY OF OTHER OBJECTS OF EXPENSE FOR STRATEGIC MATERIALS

Your summary data gives a little detail on your "Other objects" but it is quite meager. Put that page 271 in the record.

(The page follows:)

SUMMARY STATEMENT ON "OTHER OBJECTS" FOR 1964

Of the $28,145,000 obligation program for 1964, $4,069,500 is for personnel compensation. The remainder of $24,075,500 is for other objects as follows:

12 Personnel benefits, $305,300: Includes contributions to retirement fund, $259,700; health benefits, $30,100; group insurance, $9,500 and employer's FICA, $6,000.

21 Travel and transportation of persons, $134,000: Travel rates vary among the several activities due to nature of duties, differences in modes of travel, duration of trip, etc. Amount includes $91,000 for 3,370 days regular travel at average of $27 per day; and $43,000 for motor pool services.

22 Transportation of things, $3,545,900: For transportation of new and upgraded materials delivered to stockpile; relocation of materials from temporary or indefinite to more permanent storage facilities; sales under approved disposal plans; and movement of NIER items.

23 Rent, communications, and utilities, $131,400: $64,000 for fixed charges of supplementary space required by warehousing, inspection, and industrial equipment activities; and $67,400 for telephone, teletype service, postage meter rentals, etc.

24 Printing and reproduction, $20,000: $4,200 for special procurement and stock level forms; $3,100 for manuals, regulations, etc.; $5,100 for bulk printing and bills of lading, classification guides, shipping and receiving manuals, and instructions pertaining to inventory management activities; $3,100 for various special reports required by program officials and other interested agencies; $2,100 for reproduction of forms and reports; and $2,400 for miscellaneous printing and reproduction.

25 Other services, $8,545,600: $7,000 for tests and analyses performed by facilities other than GSA; $4,000 for repairs to office machines and equipment; and $11,000 for miscellaneous services including health room services and security investigations. Remainder is for commercial warehousing and handling contracts, expenses connected with rotation and disposal sales, upgrading program, and miscellaneous accessorial costs.

25 Payment to administrative operations fund, $960,000: For administrative operations necessary to support this program.

25 Services of other agencies, $3,093,000: Largely for reimbursement to DOD for custody of materials and equipment at military depots.

26 Supplies and materials, $7,297,400: Includes $6,451,400 under rotation program, $700,000 under acquisition program, $50,000 under inventory management, $81,800 under NIER program, and $14,200 for office supplies.

31 Equipment, $42,900: Primarily for handling, testing, and processing equipment under the inventory management and industrial equipment activities.

Mr. THOMAS. Thank you, gentlemen.

[2] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1961, $2,000 (1962, adjustment −$1,000); 1962, $11,000; 1963, $2,000; 1964, $2,000.

Mr. THOMAS. Let us take up "Salaries and expenses," Office of the Administrator.

This area of the budget covers programs which are not delegated to any of the six services.

Put page 272 in the record and this table on 273 and 274, and the table here on 274 really breaks it down.

(The page referred to follows:)

FUNCTIONAL STATEMENT FOR GENERAL ITEMS

This area of the budget covers programs which are not delegated to any of the six services of the agency since they are agencywide, of special nature, or consist of unified services to all GSA operations and other agencies and commissions.

Included are items covering (1) The Administrator and his top assistants, financed by the appropriation "Salaries and expenses, Office of Administrator": (2) pensions, office staff and facilities for former Presidents financed by "Allowances and Office Facilities for Former Presidents"; (3) refund and rebate payments due World War II contractors financed by "Refunds under Renegotiation Act"; (4) the integrated staff organization which provides all customary financial, administrative, legal, and other staff services for all programs of GSA, financed by deposits or reimbursements from the benefiting appropriations and funds to the "Administrative Operations Fund"; (5) the unified automatic data processing (ADP) service which provides optimum automation to program paperwork, also financed through the "Administrative Operations Fund" by reimbursements from appropriations for programs serviced; (6) the liquidation of certain assets of the Reconstruction Finance Corporation and the Smaller War Plants Corporation financed by proceeds from such liquidation; and (7) operation of printing and duplicating plants financed by reimbursements to the "Working Capital Fund."

General items—Summary of new obligational authority and average employment

	New obligational authority		Average employment

Summary reconciliation of 1964 estimate to amounts for 1963

1963 appropriation in annual act	$1,350,000
Proposed supplemental appropriation for Pay Act increases	58,000
Total for 1963	1,408,000
Increases in 1964:	
Pay Act increases:	
Executive direction	18,900
Legislative information	9,200
Business services	13,900
Subtotal	42,000
Additional assistance to business concerns and the public interested in Government procurement and disposal	50,000
1964 estimate	1,500,000

Analysis by activities

Activities	1963 estimate	Increases	1964 estimate
1. Executive direction	$641,300	$18,900	$660,200
2. Legislative and information services	224,000	18,200	242,200
3. Business services	542,700	54,900	597,600
Total	1,408,000	92,000	1,500,000

Mr. THOMAS. He had last year $1,350,000 and he wants to increase it a little next year to $1,500,000.

The estimate for fiscal year 1964 includes $100,000 for increased pay. That is about all your increase, isn't it?

Mr. BOUTIN. Yes, sir.

Mr. THOMAS. You feel the Administrator is entitled to tools to work with.

The green sheet at page 278 shows 1 representative in each of your 10 regions.

Mr. BOUTIN. In each one, plus a secretary.

EXECUTIVE DIRECTION

Mr. THOMAS. Put page 276 in the record.

(The page follows:)

1. Executive direction

	Amount	Average employment		
		Department	Field	Total
1963	$641,300	29.4	21.3	50.7
Change	+18,900	−.4	−.3	−.7
1964	660,200	29.0	21.0	50.0

HIGHLIGHT

Policy direction and coordination of all programs of the Administration are provided by the Administrator and Deputy Administrator aided by a small central office staff, and by a regional administrator in each of the 10 regional offices. A Board of Contract Appeals performs specialized review of appeals from decisions of contracting officers.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Distribution by subactivity:						
(a) Immediate Office of Administrator	$158,164	14.0	$167,900	15.5	$171,900	15.2
(b) Board of Contract Appeals	139,767	11.7	145,600	11.9	153,400	11.8
Subtotal	297,931	25.7	313,500	27.4	325,300	27.0
(c) Field supervision [1]	322,734	23.5	327,800	23.3	334,900	23.0
Total cost or estimate	620,665	49.2	641,300	50.7	660,200	50.0
Distribution by location:						
Departmental	326,478	27.3	339,500	29.4	352,700	29.0
Regional	294,187	21.9	301,800	21.3	307,500	21.0

[1] Component with regional counterpart.

JUSTIFICATION

The staff in the immediate Office assists the Administrator with particular emphasis on (1) coordination of all major GSA programs and (2) performance of top policy assignments.

The Board of Contract Appeals acts as the representative of the Administrator in hearing, considering, and determining actions of GSA regarding appeals from decisions by contracting officers or other officials of GSA on disputed questions involving the award and administration of contracts.

The field supervision staff provides direction and coordination of field activities, decentralized contact with the public and other Government agencies, and evaluation of the effectiveness of GSA operations at this level. The functions are performed by a regional coordinator in the central office, and by the regional administrators in the regional offices.

Estimate for 1964 provides for continuing the 1963 employment level.

Legislative and Information Services

Mr. Thomas. Insert page 279 in the record. This is legislative and information services.

(The page referred to follows:)

2. Legislative and information services

	Amount	Average employment		
		Department	Field	Total
1963	$224,000	19.2		19.2
Change	+18,200	+0.8		+0.8
1964	242,200	20.0		20.0

HIGHLIGHT

Legislative and information services are performed under the direction of the Assistant Administrator. This Office advises and assists the Administrator and all other principal officials of GSA concerning congressional relations and legislative affairs, and in the formulation, development, and presentation of the legislative program of GSA. It also directs GSA information programs, including dissemination of all informational releases, and provides technical assistance and advice to GSA officers on all aspects of information.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Distribution by subactivity:						
(a) Legislative liaison	$100,782	8.5	$114,800	9.9	$121,200	10
(b) Information	81,514	7.4	109,200	9.3	121,000	10
Total cost or estimate (all departmental)	182,296	15.9	224,000	19.2	242,200	20

JUSTIFICATION

The legislative liaison staff develops the legislative program of GSA; reviews all statements prepared for presentation to Congress, supervises preparation of proper and prompt answers to all congressional inquiries, and maintains liaison with other Federal agencies and departments concerning congressional and legislative matters.

The information staff develops, coordinates, and disseminates on an agency-wide basis, informational data which will assist the business public including trade, manufacturing, and industry groups in transacting business with GSA. Objective is to assist private business and the public, and to enable GSA to discharge its responsibilities.

Estimate for 1964 provides for continuing the 1963 employment level.

EXPLANATION OF DISTRIBUTION BY OBJECTS

Personnel compensation and staffing: $205,000 for personal services distributed as follows (all departmental):

	1962	1963	1964
(a) Legislative liaison	9.0	10.0	10
(b) Information	8.0	10.0	10
Total positions	17.0	20.0	20
Average employment	15.9	19.2	20

Other objects: $37,200, of which $14,700 is for personnel benefits, including $13,300 retirement contribution, $900 health benefits, and $500 group insurance.

The remainder of $22,500, or 9.3 percent of total estimate, provides:

(1) $2,500 for approximately 80 days travel in connection with congressional affairs and liaison with Government agencies.

(2) $3,500 communications; $10,000 printing.

(3) $1,000 other services; $4,000 supplies and materials; and $1,500 equipment.

ALLOWANCES AND OFFICE FACILITIES FOR FORMER PRESIDENTS

Summary reconciliation of 1964 estimate to 1963 funds

1963 appropriation in annual act	$320,000
Proposed transfer to "Operating Expenses, Public Buildings Service" due to pay increases	−10,000
Appropriation (adjusted)	310,000
Decrease in 1964: Allowances and pensions	−10,000
1964 estimate	300,000

Analysis by activities

Activities	1963 adjusted	Decrease	1964
1. Allowances and pensions	$85,000	$10,000	$75,000
2. Office staff and facilities	225,000		225,000
Total	310,000	10,000	300,000

1963 appropriation	$320,000
Transfer	−10,000
Comparative	310,000
Change	−10,000
1964 estimate	300,000

GENERAL STATEMENT

"This appropriation provides for allowances, office staff, furnished space, mailing privileges, communications, and office supplies and materials for three former Presidents." (From the budget for 1964.)

The 1964 estimate reflects a $10,000 reduction in requirements for allowances and pensions.

APPROPRIATION LANGUAGE

"For carrying out the provisions of the Act of August 25, 1958 (72 Stat. 838), [$320,000] *$300,000: Provided* That the Administrator of General Services shall transfer to the Secretary of the Treasury such sums as may be necessary to carry out the provisions of sections (a) and (e) of such Act."

JUSTIFICATION

1. *Allowances and pensions.*—$75,000. Provides for three former Presidents at $25,000 per annum. The $75,000 will be transferred to the Secretary of the Treasury who is responsible for making the payments under Public Law 85–745.
2. *Office staff and facilities.*—$225,000. These items are paid for directly by GSA. The staff is selected and compensation fixed by each former President who also specified the location of office space and is consulted as to equipment and furniture requirements. Provision is made for postage fees, local and long-distance telephone service, telegraph and cablegram; office supplies and materials; and miscellaneous services.

Mr. OSTERTAG. Under "Allowances and office facilities for former Presidents," the 1963 appropriation is $320,000 and estimated for 1964 is $300,000.

Mr. BOUTIN. The difference is brought about by the deaths of Mrs. Wilson and Mrs. Roosevelt. That is why we have that $20,000 reduction.

Mr. OSTERTAG. The allowances and pensions, that is $75,000 which provides for three former Presidents and $25,000 is the amount for each per annum; $75,000 will be transferred to the Secretary of the Treasury who is responsible for making the payments under Public Law 85–745.

Office facilities, $225,000.

In other words, there is an overall decrease of $20,000 in this activity. Under "Classification by objects"—

Mr. BOUTIN. We can give a complete breakdown here of the cost for each of the presidential offices if it would be helpful, Congressman.

Mr. OSTERTAG. It might be well if you give us that.

Mr. BOUTIN. Yes. Mr. Turpin can give it to you.

Mr. TURPIN. The $225,000 total for services other than the pensions is broken down as follows: President Hoover, $78,900, President Eisenhower, $85,600, President Truman, $60,500. That is in total, if the committee wishes—I can break it down into personnel compensation, benefits, transportation of things, et cetera.

Mr. OSTERTAG. I do not know that we need complete detail unless you have it handy where we might insert it in the record at this point.

Mr. TURPIN. Yes, sir.

Mr. BOUTIN. We would be happy to do that.

(The information requested follows:)

[1] Includes capital outlay as follows: 1962, $195,000; 1963, $175,000; 1964, $173,000. Excludes adjustments of prior year costs of −$8,000.

[2] Selected resources as of June 30, are as follows: Unpaid undelivered orders, 1961, $223,000 (1962 adjustment, −$23,000); 1962, $285,000; 1963, $385,000; 1964, $485,000.

Mr. OSTERTAG. Now we turn to the administrative operations fund.

Mr. THOMAS. This is Mr. Turpin's fund. How many lawyers do you have?

Mr. MOODY. As of December 31, which is the last date I have, we have 122 people in the office. I have 72 lawyers and 50 nonprofessional as of right now, or as of December 31.

Mr. OSTERTAG. This involves your automatic data processing service, does it not?

Mr. TURPIN. This first item does not, Mr. Chairman. It is the customary staff services provided for all operations of GSA, including all the six services. It includes all of the financial management, including the accounting, audit, credit and finance, budget activities, all of the personnel management activities, including the recruitment, classification, and employee relations. It also includes the manpower utilization activity. This is a small group of people, a maximum of six right now, planned for eight, which will be working with each of the services in developing precise standards of productivity, for all of our activities and jobs in an effort to improve the productivity.

It also includes items of management services, our messenger, mail and file activity, our compliance activity, and personnel security. Also included is our procedures group which handles the development and publication of regulations and procedural releases for the General Services Administration.

Mr. Congressman, if I could just summarize very briefly, the increase of $1,853,700 under this activity. Of this total, $488,700 is directly related to the pay act increase, leaving a net increase of $1,365,000. Excluding the General Counsel's Office it represents an increase in average employment of 130 employees, most of whom are in the regions.

Mr. THOMAS. Mr. Ostertag, will you yield for one question?

Mr. OSTERTAG. Yes, sir.

Mr. THOMAS. May I suggest you put this table 291 in the record. It tells in detail what your estimate was in 1963 as against 1964.

(The table follows:)

ADMINISTRATIVE OPERATIONS FUND—PART I: CUSTOMARY STAFF SERVICES

Summary reconciliation of 1964 estimate to 1963 funds

A. LIMITATION ITEMS

1963 limitation in annual act		$11,400,000
Proposed for later transmission	$200,000	
Proposed pay act supplemental	511,300	
		711,300
1963 estimate (limitation)		12,111,300
1964 changes from 1963:		
Increased Pay Act costs		+488,700
Support for expanded programs as follows:		
PBS—Government-owned and leased space, and related services	$80,000	
PBS—Repair and improvement of Government-owned buildings	200,000	
FSS—Sales of common-use commodities	881,000	
TCS—Transportation and public utility functions and communication services	90,000	
UDS—Utilization and disposal of real and personal property	70,000	
Net effect of all other operatinng program changes	44,000	
		+1,365,000
Total estimate for 1964 (limitation)		13,965,000

B. EXCLUDED FROM LIMITATION

1963 allocations and reimbursements	2,733,000
1964 Changes from 1963:	
Increased Pay Act costs	+92,000
Decreased in various programs, net	−99,000
Total estimate, 1964 (nonlimitation)	2,726,000

Analysis by activities

Activities	1963 adjusted	Decreases	Increases	1964 estimate
Customary staff services:				
(a) Included in limitation:				
Finance and administration	$10,964,300		$1,640,700	$12,605,000
Legal services	1,147,000		213,000	1,360,000
Total	12,111,300		1,853,700	13,965,000
(b) Excluded from limitation:				
Finance and administration	2,480,200	$114,800	80,600	2,446,000
Legal services	252,800		27,200	280,000
Total	2,733,000	114,800	107,800	2,726,000

Mr. THOMAS. You go up in the neighborhood of $1.8 million for customary staff services under limitation. Your activities under limitation were to the tune of $11.4 million in 1963 and you want to go to about $14 million. That does not include ADP and that is about $5.8 million in 1963 and goes to about $6.6 million in 1964. Would it be wise to put that under limitation, too? You have grown rapidly. Your ADP is, for all practical purposes, only 4 years of age. You have gone from nothing up to around $6 million. Rental alone is $2 million. Where is your saving by virtue of that annual expenditure of $5 million for the last 3 years? Personnel costs are up and ADP costs are up. You can hang your hat on Mr. Bean's shoulder.

AUTOMATIC DATA PROCESSING

Mr. OSTERTAG. Under page 290 you set forth the statement "However, for accounting convenience ADP is financed through this fund instead of through a separate revolving fund."

Mr. TURPIN. That is correct.

Mr. OSTERTAG. The chairman has raised a point.

Mr. TURPIN. On the ADP activities, Mr. Chairman, it is true that the cost of the ADP function as such has gone up but we just went into the computer activity, after but a small beginning in 1958 and 1959. This is a field which is just developing, not only in GSA but in industry as a whole. Sir, I would like to say if we did not make use of the computers, which we are now doing, it would have been difficult, and I am convinced more costly, to handle the increased operation that we have under the supply program.

Mr. THOMAS. What is your total employment?

Mr. TURPIN. The estimate for 1964 for all the customary staff services is 1,880, including legal.

Mr. THOMAS. What was this for 1963?

Mr. TURPIN. 1,730. That is in customary staff services, excluding the ADP.

Mr. THOMAS. 1,880, this year against what last year?

Mr. TURPIN. 1,880 proposed for 1964 against 1,730 for this year for customary staff services.

ADP COSTS RELATED TO FEDERAL SUPPLY

Mr. THOMAS. What part of that is assigned to the Federal Supply Service?

Mr. TURPIN. On the customary staff services, excluding ADP, it is one-third, or 33 percent related to the supply operation. For the ADP activity it is presently 75 percent related to the supply operation and that is because in applying our ADP applications to the supply operation——

Mr. THOMAS. What part of supply is not under limitation and due to your ADP?

Mr. TURPIN. Sir——

Mr. THOMAS. Is that over and above your 1,880? We are referring to employees.

Mr. TURPIN. The 1,880 for fiscal 1964 and 1,730 for fiscal 1963 cover customary staff services excluding ADP.

Mr. THOMAS. What is in addition to it? How many do you have in ADP?

Mr. TURPIN. 512, sir, but if I could, Mr. Chairman——

Mr. THOMAS. How many did you have in 1963 in ADP?

Mr. TURPIN. 468, but I would like to point out on the ADP side the line items for example, which is a good measure of the ADP workload insofar as the supply operation, was 4 million in 1960, the estimate for 1964 is 8.4 million, more than double; also the unit cost per hundred dollars of sales for the ADP is $1.37 in 1964. The cost for the customary staff services is $1.54, making a total for all of the AO activities, customary srevice, and ADP of $2.91. The cost has decreased from a high of $3.52 in 1957, and $3.36 in 1960 to $2.91 estimated for 1964.

Mr. BOUTIN. Of course, the fact of the matter is, Congressman, that unless we had this ADP equipment in its present state, with common language for all of the computers and its standardized performance we could not operate at all. You could not do it on a manual basis. It would be absolutely impossible.

COMPARISON TO INDUSTRY ACCOUNTING

Mr. TURPIN. Mr. Chairman, comparing our accounting operations with industry, there was an article in the American Management Association publication in the June issue which we refer to at the top of page 294. This is merely an indicator of the relationship of the accounting people to the total employment in these organizations. Of the 254 companies that were identified, there was 49,750 in the accounting field related to a total employment of 1,250,000, or percentagewise there was 3.9 percent in accounting for manufacturing industries, and 5.4 percent for all other companies. Our actual ratio in GSA was 2.6 percent for 1962. Under the estimates that are now before the committee, it would come down to 2.54 percent in 1964, so we are even showing an improvement over what we had in 1962.

Most of this increase, excluding ADP, in the customary staff services is for the regional offices in the accounting activity and in the personnel activity and that is where the load hits us, particularly the accounting workload for the supply operation. The increased volume of business means more invoices to pay, and more billings to process. In that connection, we show a continual improvement in the cost for handling billings and in the cost for handling our vouchers.

GSA RATIO OF PERSONNEL EMPLOYEES

In the personnel field there is a standard which was established under the Independent Offices Appropriation Act, of 1 personnel employee to 135 employees in an agency. GSA's ratio for 1963 is 1 personnel person to 201 employees in the agency, and under the estimate before the committee for 1964 it will spread to 1 to 206. In the personnel field we are not doing the kind of job we should. We are developing a lot of backlogs. The Civil Service Commission in its inspections has been critical of us in several areas where we are not maintaining the standards we should.

We find a large percentage of personnel in our key positions in GSA who will be retiring in the next 4 or 5 years; we do not have adequately qualified people who are being developed to step in. This is one area which we would like to improve a great deal. As a matter of fact, the Administrator has insisted that we do a better job in this area, but we do need some increase in our personnel managament in order to accomplish it.

Customary Staff Services

Mr. Ostertag. Under the administrative operations fund it breaks down into two parts as I see it, the customary staff services and then the finance and administration legal services.

Under customary staff services here again you have an increase of $1,606,500, as between 1963 and 1964.

Total field employment is increased by 103 and the total department increase is 27 but you have an overall increase in fiscal 1964 to 1,725 of which 1,192 employment would be in the regions. That is under justification page 297.

Mr. Turpin. Yes, sir. That just relates to the financial management.

Mr. Ostertag. Finance and administration.

Mr. Turpin. Yes, sir.

Mr. Chairman, under the customary staff services we have four offices: Office of Financial Management, Office of Management Services, Office of Manpower Resources, and Staff Direction; the last mentioned is my immediate office with counterparts in each of the regions.

That plus legal is the total for the area. The other part of the administrative operations, under that next tab, is the automatic data processing.

FINANCE AND ADMINISTRATION

Mr. Ostertag. We will insert in the record, pages 297, 298, and 300, and also pages 308, 309, and 310.

(The pages follow:)

Customary Staff Services

1. Finance and Administration

	Amount	Average employment		
		Department	Field	Total
1963	$13,444,500	505.5	1,089.5	1,595.0
Change	+1,606,500	+27.2	+102.8	+130.0
1964	15,051,000	532.7	1,192.3	1,725.0

HIGHLIGHT

On May 8, 1962, the Office of Administration and the Office of Comptroller were combined under an Assistant Administrator for Finance and Administration with three major components: (1) Office of Financial Management, (2) Office of Management Services, and (3) Office of Manpower Resources.

Finance and administration services are performed in the central office and in each of the 10 regions. Principal subactivities of the three offices and staff direction are discussed in detail in the justifications that follow:

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Distribution:						
(a) Financial management	$7,504,954	961.3	$8,136,000	1,004.0	$8,991,000	1,085.0
(b) Management services	2,650,097	318.3	2,741,300	317.0	3,136,000	338.0
(c) Manpower resources	1,777,070	210.9	2,066,600	233.0	2,394,000	261.0
(d) Staff direction	415,308	36.7	500,600	41.0	530,000	41.0
Total cost or estimate	12,347,429	1,527.2	13,444,500	1,595.0	15,051,000	1,725.0
Distribution by location:						
Departmental	4,815,413	481.1	5,293,000	505.5	5,864,200	532.7
Regional	7,532,016	1,046.1	8,151,500	1,089.5	9,186,800	1,192.3

(A) FINANCIAL MANAGEMENT

Financial services for all GSA programs are provided under this activity. This includes all phases of budget administration; accounting and reporting; credit extension and financial analyses; conduct of audits; accounting, billing, and collection operations. Government-wide inventories of real property are developed and assistance is provided other executive agencies with property accounting systems.

Financial services are performed in the central office through 5 principal subactivities with operations of all except audit extending to each of the 10 regional offices.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
1. General supervision	$72,306	5.6	$208,300	171.5	$291,800	24.0
2. Accounting and reports management	50,51,054	716.6	5,408,000	743.5	5,954,000	807.5
3. Audit	957,665	92.6	1,016,000	93.0	1,132,400	98.0
4. Budget	945,559	96.3	1,002,600	100.0	1,083,400	103.0
5. Credit and finance	478,370	50.2	501,100	50.0	529,400	52.5
Total cost or estimate	7,504,954	961.3	8,136,000	1,004.0	8,991,000	1,085.0
Distribution by location:						
Departmental	2,599,050	247.8	2,770,100	255.0	3,012,500	268.0
Regional	4,905,904	713.5	5,365,900	749.0	5,978,500	817.0

1. General supervision

Overall direction and coordination of financial management for all programs of GSA are provided by the Director of Financial Management in the central office, and by a counterpart in each of the 10 regions.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Distribution by location:						
Departmental	$25,502	2.0	$42,000	3.5	$52,600	4.0
Regional	46,804	3.6	166,300	14.0	239,200	20.0
Total cost or estimate	72,306	5.6	208,300	17.5	291,800	24.0

Increase of 6.5 man-years reflects full year utilization of 1963 staffing.

2. Accounting and reports management

All accounting and related management functions are performed as follows:

Departmental

Formulates, designs, prescribes, and installs all GSA accounting and financial reporting policies and systems; develops and maintains a system of management reports for use of Administrator and other management officials with emphasis on analysis of performance against annual plans, goals, unit costs, etc.; reviews financial systems and reports for continuing effectiveness and for management purposes to ascertain continued adherence to prescribed systems; maintains personal day-to-day liaison with Service and staff operating personnel to assure that reported data is currently useful, meaningful and essential; prepares recurring consolidated and special reports; reviews and approves selected financial information prepared by GSA services for outside release and inclusion in governmentwide reports; develops in cooperation with GAO, governmentwide property accounting and reporting systems in executive agencies and prepares comprehensive governmentwide annual inventory report; and performs periodic management surveys and analyzes survey findings and submits recommendations to increase operational effectiveness and efficiency in accounting and reporting operations.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Total cost or estimate	$775,010	72.0	$854,000	78.0	$894,000	81.0

Regional operations

Provides for payment of invoices, examining, certifying, and scheduling of vouchers processing of bills and accounting documents, payrolling of employees, the reconciliation of accounts, and financial reports.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Distribution:						
(*a*) Supervision	$248,170	28.2	$339,000	33.5	$387,000	39.0
(*b*) Invoice payments	1,482,906	236.7	1,543,000	243.0	1,751,000	270.8
(*c*) Employee accounts	415,231	65.9	436,000	68.0	450,000	68.0
(*d*) Accounting	2,129,737	313.8	2,236,000	321.0	2,472,000	348.7
Total cost or estimate	4,276,044	644.6	4,554,000	665.5	5,060,000	726.5

(*a*) *Supervision.*—Field supervision is provided for all operational functions of Accounting and Reports Management Division in each of the 10 regional offices. The staffing includes the regional directors of financial management, secretaries, reports management analyst, and accounting trainees in the 10 regional offices.

The 1964 increase of 5.5 man-years reflects further emphasis on the analysis and review of financial data and program reports required by regional and central office management.

(*b*) *Invoice payments.*—Consists of examining, certifying, and scheduling of vouchers and invoices for payment.

The tabulation and graph on opposite page illustrates the increased efficiency in processing vouchers during the period 1957 through 1962 with estimates for 1963 and 1964. The number of vouchers processed per man-year has increased from 2,350 in 1957 to 4,665 in 1962; the estimates for 1963 and 1964 project in excess of 5,000 vouchers per man-year, the greatest output at the lowest unit cost in GSA history. Increase of 27.8 man-years is needed in 1964 to insure prompt payment to suppliers and to prevent backlogs, excessive use of overtime, lost discounts, or substandard examination processes.

(c) *Employee accounts*—Provides for payrolling of all GSA employees. The following illustrates improvements in payroll productivity and unit costs since 1957.

Year	Employees payrolled	Payroll man-years	Unit cost per employee payrolled	Average number employees payrolled per man-year	
				Number	Percent change from 1957
1957	26,694	97.0	$16.79	275	
1958	27,331	95.4	17.96	286	4
1959	27,938	81.8	16.53	342	24
1960	28,202	72.0	14.31	392	43
1961	29,180	67.8	14.49	430	56
1962	30,774	65.9	13.49	467	70
1963 (estimated)	33,509	68.0	13.01	493	79
1964 (estimated)	36,831	68.0	12.22	542	97

The 1964 estimate anticipates a workload increase of 10 percent from 1963; however increased efficiency and further application of ADP methods is contemplated and no increase in man-years is requested.

(c) *Paperwork management programs.*—The continuous development and administration of an internal directives system for the agency provides a media for the efficient communication, to all affected elements of the agency, of program policies, opertaing procedures, and information. In addition, the control and operation of an external issuance system provides an official link from GSA to officials of other agencies whose duties involve operating relationships with GSA programs.

The analysis, control, and development of GSA forms and GSA-sponsored standard forms facilitates the accomplishment of GSA programs by providing efficiently designed forms for the recording, transmission, and retention of information.

The records management program develops standards and criteria to assure that up-to-date, efficient methods are used in the creation, filing, retrieval, and ultimate retirement or disposal of GSA records. This aids in the efficient operation of work stations throughout GSA and helps reduce requirements for filing equipment and office space.

(C) MANPOWER RESOURCES

This activity highlights the manpower program of GSA by placing under unified direction (1) the comprehensive personnel management program; (2) agencywide coordination of the fair employment program; (3) the manpower utilization program for development of production standards; and (4) the GSA institute program to make available to employees of other agencies training and instructional materials dealing with those areas within GSA's Government-wide responsibilities.

94926—63—pt. 1——92

Services of manpower resources are performed in the central office through all 5 subactivities with only personnel services performed in each of the 10 regions.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Distribution:						
1. General supervision	$57,050	5.0	$76,800	6.0	$79,300	6.0
2. Personnel	1,684,791	203.2	1,871,300	217.5	2,134,200	240.8
3. Fair employment	35,229	2.7	47,600	3.5	60,000	4.0
4. Manpower utilization	0	0	48,300	4.0	79,300	7.0
5. GSA institute	0	0	22,600	2.0	41,200	3.2
Total cost or estimate	1,777,070	210.9	2,066,600	233.0	2,394,000	261.0
Distribution by location:						
Departmental	552,450	56.6	717,400	69.5	829,500	77.2
Regional	1,224,620	154.3	1,349,200	163.5	1,564,500	183.8

1. General supervision

Overall direction and coordination for all manpower programs of GSA are provided in the central office by the Director and his assistants.

No increase in employment is contemplated in 1964 over that of 1963.

2. Personnel

A comprehensive personnel program is conducted to accomplish high standards of employee performance; develop a career service to attract and retain qualified employees; continuously evaluate methods and procedures used in recruitment, job classification, training, and processing to provide more economical and efficient agency services. Functions performed include recruitment, placement, training, classification, wage administration, incentive awards, counseling, and the provision of employee relations services.

	1962		1963		1964	
	Amount	Average employment	Amount	Average employment	Amount	Average employment
Distribution by location:						
Departmental	$460,171	48.9	$522,100	54.0	$569,700	57.0
Regional	1,224,620	154.3	1,349,200	163.5	1,564,500	183.8
Total cost or estimate	1,684,791	203.2	1,871,300	217.5	2,134,200	240.8

Workload in personnel management is increasing at a very rapid rate in 1963 and 1964 over 1962. The ratio of personnel employees involved in servicing all GSA employees is much higher than the Independent Offices Appropriation Act standard of 1 to 135 and in spite of modest funding increases in 1963 and 1964, this adverse ratio continues to increase.

Due to the complexity of the GSA organization, it is a continuing problem to recruit and retain qualified professional personnel to assure efficient exercise of GSA's responsibilities under law. An orderly flow of younger capability and training of incumbents, where appropriate, are essential to enable GSA to operate effectively within its limited resources.

Additional funds of $47,600 in central office and $215,300 in the regional offices for 1964 are only sufficient to meet the most urgent demands upon the personnel management area. These additional resources will be applied: (1) To training for the purpose of increased employee proficiency, (2) a very modest recruitment effort among university students for career fields of interest to GSA and, (3) provide minimum staffing to deal with employee relations matters including appeals from adverse actions under Executive Order 10987.

A total of 23.3 additional man-years is requested of which only 3 will be central office, the balance of 20.3 being applied to the 10 regions for the personnel management program in 1964. Workload is as follows:

	1962	1963	1964
Wage schedules issued	189	195	198
Job standards issued	6	11	14
Employment actions	32,190	37,500	40,000
Co-op work-study plans		16	20
Board of examiner applications rated	7,365	7,625	8,250
Noncompetitive actions reviewed	1,150	1,250	1,375
Management interns trained		15	20
Career development programs	2	7	11
Incentive awards	4,245	4,900	5,200
Adverse action appeals	490	550	750
Employees serviced	30,774	33,509	36,831
Personnel	161.2	166.5	178.8
Overall personnal ratio [1] (1 to 135 in Independent Offices Appropriation Act)	1:191	1:201	1:206

[1] Excludes man-years devoted to training, incentive awards, and boards of examiners.

Increased productivity is projected for 1964 in the personnel management program by reducing the time required to process classification actions, reducing the turnover rate of GSA personnel, and generally streamlining procedures in order to improve services to the agency.

3. Fair employment

No increase in employment is contemplated in 1964 despite an anticipated increase of 300 contract compliance reports resulting from expanded activities of the President's Committee on Equal Employment Opportunity. The increase of $12,400 represents full-year financing of one analyst who was only partially financed in 1963, and provides for additional travel in connection with the increased contracts compliance program.

4. Manpower utilization

The manpower utilization activity is designed to plan, develop, and coordinate the overall GSA program for increasing employee productivity. Technical consultant advice and assistance is provided to the GSA services and staff offices in the establishment of production, performance, and work standards based upon objective engineered and statistical data, and in the determination of manpower needs in terms of measured employee productivity for use in projecting resources and manpower requirements for program planning and budgetary purposes. Training is given to technical and supervisory employees in the services and staff offices in the operation and use of appropriate productivity measurement systems.

The increase of $31,000 provides for two additional employees, and will permit the assignment of a manpower utilization analyst to each major organizational element in GSA.

5. GSA institute

This budget will finance four positions in 1964, from the administrative operations fund as the focal point for the GSA Institute program to provide professional guidance for and coordination of all GSA efforts in providing training and instructional materials to augment the skills of employees of other agencies, thereby strengthening the business operations and management of the Federal Government. This program contributes to the implementation of section 2 of the Federal Property and Administrative Services Act of 1949, as amended, to provide for the Government an efficient system of procurement, property management, records management, and administrative services. It also aids in carrying out the intent of the Government Employees Training Act of 1958, to promote economy and efficiency in Government operations by "the building and retention of a permanent cadre of skilled and efficient Government employees, well abreast of scientific, professional, technical, and management developments both in and out of Government."

Additional financing will be provided to the extent necessary by recovering costs from participating Government agencies for specific training provided under the institute in ratio to the number of their participants.

Mr. THOMAS. Take a look at the green sheets. Page 312 is the summary for customary staff services, finance, and administration. That tells the tale pretty well.

Mr. OSTERTAG. Still under "Administrative operations," you have the green sheet which shows again the administrative operations. Note the figure of 1,725 as against 1,595 for full-time average employment.

Mr. TURPIN. For comparison of 1964 with 1963 it would be 1,725 average employment against 1,595 average employment. This excludes legal.

Mr. BOUTIN. In positions there is a total increase of 81, Congressman.

OTHER OBJECTS OF EXPENSE—CUSTOMARY STAFF SERVICES

Mr. TURPIN. Page 322 reflects all of the other objects for the customary staff services of the administrative operations fund. The explanation is on page 321.

Mr. OSTERTAG. This is a general overall "Other objects," which gives us the picture, among other things, other objects, $2,223,300, of which $1,083,000 is for personnel benefits, including contributions to the retirement fund, health benefits, group insurance and FICA, travel and transportation of persons; $267,000, including $22,500 by travel for the motor pool and 9,074 travel days; $45,000 for shipping charges for equipment and records.

Mr. TURPIN. Under "Transportation of things," there is an increase from $35,400 to $45,000. The chief reason for that increase is our proposal for relocating 13 of our auditors in 1964, and that is just about what it will cost us to handle their transfer of household goods.

Mr. THOMAS. $286,500 is for communications services, and yet on the green sheets it shows the total of $284,500.

Is that the difference between that $2,000 for other equipment rentals?

Mr. TURPIN. That is correct, sir. It shows $286,500, which is the sum of the $284,500 and the $2,000.

Mr. THOMAS. Mr. Ostertag.

Mr. OSTERTAG. Printing and reproduction is up about $10,000. Why is that?

Mr. TURPIN. Sir——

Mr. OSTERTAG. That totals $185,600, as compared with $175,200 for 1963.

Mr. TURPIN. That is correct, sir. It is up about $10,000. Actually, our experience this year, as of December 31, for our printing bill was $105,000. The $185,600 is really less than our going rate for this year.

Mr. OSTERTAG. Personnel compensation is $14,467,000 as compared with $12,854,000 for 1963.

Mr. TURPIN. Yes, sir. That is based on an increase in average employment from the 1,730 to the 1,880, which includes all of the staff areas, financial management, management services, manpower resources, personnel, and also the legal office.

AUTOMATIC DATA-PROCESSING SERVICES

Mr. OSTERTAG. Under page 323, we have administrative operations, automatic data-processing services. A summary of the 1964 estimates over 1963 fund is listed. We will insert pages 323 through 327 in the record at this point.

(The pages referred to follow:)

AUTOMATIC DATA-PROCESSING SERVICES

Summary reconciliation of 1964 estimate to 1963 funds

1963 Allocations and reimbursements	$5,841,700
1964 Changes from 1963:	
Increased Pay Act costs	+133,100
Support for new and expanded programs as follows:	
FSS-sale of common use commodities	508,000
TCS-Transportation and public utility functions and communications services	60,000
Net effect of all other operating program changes	48,200
Subtotal	+616,200
Total ADP estimate for 1964	6,591,000

Analysis by activities

Activity	1963	Decrease	Increase	1964 estimate
1. Finance and administration	$5,841,700	----------	$749,300	$6,591,000

1. Finance and administration

		Average employment		
	Amount	Department	Field	Total
1963	$5,841,700	73.0	395.0	468.0
Change	+749,300	+5.0	+39.0	+44.0
1964	6,591,000	78.0	434.0	512.0

HIGHLIGHT

The automatic data processing activity of GSA is a responsibility of management services in GSA. It controls the planning, design installation, and operation of all ADP systems and equipment used for GSA's programs.

The automatic data processing program had its beginning in 1952, when the volume of business in the Federal supply program began to rise and it became evident that we could no longer depend on manual recordkeeping for handling the large volumes of paperwork involved in inventory control, purchasing, selling, and shipping merchandise from our depots.

Initially, data processing was performed on punched-card equipment. The first FSS order processing system was pilot tested in Atlanta in 1952 and was gradually extended to all regional offices. Simultaneously, other systems were programed for machine application. The systems covered such areas as cost, budgetary and property accounting, buildings management, repair and improvement, and defense materials inventories.

In 1955, it became evident that the punched-card equipment would become saturated and we would have to move into computer operations to handle major workload increases. Accordingly, a small-scale computer was installed and a supply order processing and inventory management system was pilot tested in one region. The system was successful; and, because of the many benefits it produced for the Federal Supply Service, it was extended to four additional regions by 1961. The machines were also used for other applications such as payrolling, bill of lading preparation, and maintenance of budgetary accounting.

Beginning in 1960 and on a continuing basis there has been a substantial step-up in GSA's supply support activities to DOD. FSS stores warehouse sales increased from $145.5 million in 1959 to $229.6 million in 1962. Also, in October 1961 the DOD announced its intent to adopt milstrip (military standard requisitioning and issue procedure), effective on July 1, 1962.

The expected benefits to DOD from adoption of milstrip were reported to the President by the Secretary of Defense in a memorandum dated July 5, 1962, which read in part as follows:

"(*b*) Standardization of requisitioning procedures: At present, 16 different forms and systems are used throughout the Department. This results in rewriting 280,000 requisitions each day when 1 service buys from another. On July 1, 1962, all services and DSA will adopt the same system. The value of time saved is $20 million per year. In addition, procurement action will be accelerated."

Implementation of milstrip by DOD was contingent, in part, on the ability of GSA to modify its ADP systems in time to start accepting milstrip requisitions on July 1, 1962. Accordingly, a crash program was started whereby GSA acquired new computers for its 10 regional offices and developed and programed a new FSS order processing and related accounting system for these machines. The conversions from existing equipment were accomplished on schedule and the new systems were operating successfully on July 1, 1962.

EQUIPMENT CONFIGURATIONS

During 1963 and 1964 we will operate 10 ADP installations utilizing 9 small-scale card-oriented computers and 1 medium-scale tape-oriented computer in region 3 as well as offline electric accounting machine units. Based on long-range projections of the volume of business to be handled by the various GSA operating programs, it now appears that the present ADP equipment will soon become saturated in several regions and that tape-oriented equipment will be needed at that time. We are now in the process of developing long-range systems specifications and plan to issue them by the end of fiscal year 1963. The specifications will enable computer manufacturers to submit proposals for equipment to handle our projected workload. New equipment will probably be available for installation in fiscal year 1965, consequently only a minor increase in cost for equipment rental is included in this budget.

JUSTIFICATION

For accounting convenience, the ADP program is handled within the administrative operations fund instead of through a separate revolving fund. Detailed timekeeping and cost records are maintained to show the staff and machine time used for each program area. The ADP activity services all programs and appropriations of GSA as well as small commissions and agencies on a reim-

bursable basis. The sources of financing for the program in 1962, 1963, and 1964 are shown in the following tabulation:

Sources of financing	1962		1963		1964	
	Equivalent man-years	Performance	Equivalent man-years	Financing	Equivalent man-years	Estimate
Operating expenses, PBS	53.8	$578,655	60.8	$761,000	60.7	$781,000
Repair and improvement, PBS	7.2	77,365	8.1	101,000	7.9	102,000
Operating expenses, FSS	261.3	2,811,790	350.8	4,374,700	388.2	4,997,000
Operating expenses, UDS	6.7	71,560	7.3	92,000	7.3	94,000
Operating expenses, NARS	3.0	32,565	4.9	61,300	5.4	70,000
Operating expenses, TCS	9.2	98,910	4.1	51,200	8.7	112,000
Strategic and critical materials, DMS	7.3	78,548	5.7	71,500	5.6	73,000
Sites and expenses, PBS	2.3	24,788	4.5	56,200	4.5	57,500
Additional court facilities	.5	4,864				
Expansion of defense production	1.5	15,945	1.2	15,300	1.2	15,600
Buildings management fund	9.3	100,152	8.2	102,100	8.1	104,300
Interagency motor pools	10.0	108,483	9.2	114,700	9.2	118,800
Construction services fund	1.0	10,405	.8	10,200	.8	10,400
Lead and zinc stabilization			.4	5,100	.9	10,200
Office of Emergency Planning	.3	3,284	1.0	13,200	1.2	16,000
Commodity Credit Corporation	.3	3,738	.9	11,200	1.0	12,500
Other sources	.1	1,027	.1	1,000	1.3	16,700
Total	373.8	4,022,079	468.0	5,841,700	512.0	6,591,000

The estimate for 1964 includes $254,000 for increased pay costs as a result of the Federal Salary Reform Act of 1962.

It will be noted from the above tabulation that the primary source of financing is the "Operating expenses, FSS" appropriation. The Federal Supply program is the largest mass paperwork operation in GSA and has been mechanized to the extent feasible at this time. A distribution of machine and man-hours utilized for each major program area in fiscal 1962 follows:

Program area	Machine-hours used		Man-hours used	
	Number	Percent of total	Number	Percent of total
Real property management, PBS:				
A. Real property, general	5,145	1.1	19,486	2.7
B. Buildings management	66,605	14.0	111,747	15.6
C. Repair and improvement	5,450	1.1	9,828	1.4
D. Public buildings projects	1,356	.3	5,550	.8
E. Construction services	1,812	.4	2,079	.3
Personal property management, FSS:				
A. Federal supply, general	1,383	.3	7,061	1.0
B. Supply distribution	327,122	69.0	480,708	67.2
C. Civil defense warehousing	594	.1	676	.1
Records management, NARS	2,667	.5	6,428	.9
Utilization and disposal, UDS	8,205	1.7	13,800	1.9
Additional court facilities	827	.2	8,785	1.2
Transportation and communications:				
A. General	6,694	1.4	9,496	1.3
B. Interagency motor pool	20,521	4.3	21,781	3.0
Defense procurement, DMS:				
A. Strategic and critical materials	7,946	1.7	14,206	2.0
B. Defense production	623	.1	3,126	.4
C. Commodity Credit Corporation, barter program	610	.1	763	.1
Other programs	176		216	.1
Leave			92,171	[1] (11.4)
Staff operations	17,512	3.7	[1] (67,737)	
Total	475,248		807,907	

[1] ( ) Nonadd.

	1962		1963		1964	
	Amount	Man-years	Amount	Man-years	Amount	Man-years
Distribution:						
Planning and development (departmental only)	$650,381	63.0	$926,000	73.0	$1,036,500	78.0
Regional operations	3,371,698	310.8	4,915,700	395.0	5,554,500	434.0
Total cost or estimate	4,022,079	373.8	5,841,700	468.0	6,591,000	512.0

The objective of the ADP program is to automate, whenever practical, the paperwork operations of all major GSA programs on a uniform, national basis, provided significant management benefits can be realized. To date, benefits have been realized by GSA program managers from automation and in many instances an increased capability has been aided by ADP, allowing increased workload to be processed at a reduced unit cost with increased productivity and manpower utilization.

An example of marked improvement in cost of doing business where automation has played a significant role is found in GSA's supply program: the cost per $100 of FSS warehouse shipments (stores stock sales) during the last 10 years decreased from $9.11 in 1952 to $4.82 in 1962 for a net decrease of $4.29. During the same period workload increased 258 percent and costs were on the rise due to several pay raises, inflation, and other factors. If the 1962 workload were processed under procedures in operation in 1952, obligations for warehouse sales would have been $20,916,560 instead of $11,069,452. A substantial part of these savings is attributed to automation of the related paperwork. Similar benefits have been realized in processing of certain accounting documents.

	Accounting documents		
	Number	Man-years	Average per man-year
1957	1,162,632	544.9	2,134
1962	1,900,800	313.8	6,057
Change	+738,168	−231.1	+3,923

Mr. THOMAS. That about wraps it up, Mr. Ostertag.

Mr. TURPIN. With the ADP equipment that we now have, we estimate that our saturation point will be reached about October 1964. This means that we must have more capable equipment in use by 1965. Because of the long leadtime for procuring ADP equipment, we are working with the Supply Service in developing new procedures for handling the greater volume of supply operations and determining what the long-range equipment requirements will be.

Mr. THOMAS. What about the machine the Comptroller General criticized? Are you going to keep that?

Mr. TURPIN. No, sir.

Mr. THOMAS. What rent are you paying on that machine?

Mr. TURPIN. We have not had that, Mr. Chairman, since last March.

Mr. THOMAS. You got rid of it?

Mr. TURPIN. Yes, sir.

Mr. THOMAS. Does that wrap it up, Mr. Ostertag?

Mr. OSTERTAG. Yes, sir.

REPAIRS, IMPROVEMENTS, AND CONSTRUCTION FINANCED FROM ARA FUNDS

Mr. JONAS. Before you close, would you permit me to ask one question?

Mr. THOMAS. Yes.

Mr. JONAS. GSA is currently engaged in repair and improvements to certain public buildings, post offices, and other public buildings in the country under funds provided by the Area Redevelopment Administration under the accelerated public works program; is that correct?

Mr. BOUTIN. The only part that we are playing right as of this minute, sir, in this program is for the Post Office which had funds allocated under the accelerated public works from ARA and these in turn were turned over to us with specific projects to accomplish.

Mr. JONAS. I think we ought to have a list in the record of those projects that are being financed out of those funds.

Mr. THOMAS. Yes. That will be helpful. You might complete your list and give a list of all the projects and the cost figures that you act as agent for all the other agencies of Government. Of course, that is charged in your buildings management fund, but as Mr. Jonas suggests, set out these under area development, these you operate as a transfer fund and give the total in a table showing the dollar value.

Mr. BOUTIN. Would you like to have the new construction as well as repair and improvement?

Mr. THOMAS. Yes.

Mr. BOUTIN. We will break it down by category.

MOTOR POOL SAVINGS

Mr. JONAS. There is only one other thing I would like to have when they correct the record. I notice in the motor pool management section they did not do as they usually do, make some claims about how much savings that motor pool operation is entitled to credit for.

I wish you would put a table in when you see the record to show that, with the chairman's permission.

Mr. BOUTIN. We will be happy to.

(The information requested follows:)

Estimate, fiscal year 1963—Comparative interagency motor pool statistics

Interagency motor pools			Reported by agencies for the survey period (including additional consolidations from date of determination)				Cost per mile adjusted by BLS-CPI [1] to Dec. 31, 1962	Actual under pool system, 1st half, fiscal year 1963 projected for 1 year				Comparison agencies reported versus pool actual			
Region	Pool	Location	Number of vehicles required	Total miles traveled (millions)	Average miles per vehicle years	Cost per mile (cents)		Number of vehicle years	Total miles traveled (millions)	Average miles per vehicle year	Cost per mile (cents)	Increased miles traveled (millions)	Average miles per vehicle year increase	Savings per mile (cents)	Total savings (dollars)

		Plus 4 motor pools which operated a portion of fiscal year 1962 for an estimated 1,139,000 miles, at an estimated savings of 2.61 cents per mile													29,728
		Total savings													8,298,862

[1] Bureau of Labor Statistics, Cost Price Index.

NOTE.—Attention is invited to the fact that agencies requirements for vehicle services from the pool have increased 36.5 percent over prior-to-pool requirements. By increasing vehicle utilization 26 percent the motor pool system was able to furnish this increased mileage with 5,556 less vehicles than would have been required by the agencies to travel the same miles prior to pooling.

Estimate fiscal year 1963—Comparative interagency motor pool statistics

Interagency motor pools			Reported by agencies for the survey period (includes additional consolidations from date of determination)				Cost per mile adjusted by BLS-CPI [1] to Dec. 31, 1962	Actual under pool system for 1st half, fiscal year 1963 projected for 1 year				Comparison agencies reported versus pool actual			
Region	Pool	Location	Number of vehicles required	Total miles traveled (millions)	Average miles per vehicle-year	Cost per mile (cents)		Number of vehicle years	Total miles traveled (millions)	Average miles per vehicle-year	Cost per mile (cents)	Increased miles traveled (millions)	Average miles per vehicle-year increase	Savings per mile (cents)	Total savings (dollars)

		Plus 1 motor pool operating a portion of the year for an estimated 1.891 million miles, at an estimated savings of 1.99 cents per mile													37,631
		Total estimated savings													9,459,519

[1] Bureau of Labor Statics, Consumer Price Index.

NOTE.—Attention is invited to the fact that agencies requirements for vehicle services from the pool have increased 49.6 percent over prior-to-pool requirements. By increasing utilization 28.5 percent the motor pool system was able to furnish this increased mileage with 6,973 less vehicles than would have been required by the agencies to travel the same miles prior to pooling.

ESTIMATE OF PROJECTS TO BE FINANCED BY ARA AND FUNDS OF OTHER AGENCIES

Mr. BOUTIN. I did not fully answer your question, Mr. Congressman. This week, we had GSA testify also before the Public Works Committee of the House asking for authorization for 86 projects that would be submitted, if approved by the Congress, to ARA for the purposes of funding.

Mr. JONAS. What I would like to have is a delineation between funding made in our bill and repairs and new building construction that is financed out of ARA funds.

Mr. BOUTIN. We will give you a complete breakdown of funding by source so that you will have a complete picture.

What we have now, by the way, under ARA transferred from the Post Office is very small.

(The information supplied follows:)

Small public building construction projects being considered for funding under the accelerated public works program, ARA (submitted to the Public Works Committees on Feb. 11, 1963, for approval)

Project	Estimated cost
Alabama:

KANSAS STATE UNIVERSITY LIBRARY OCT 7 1963 MANHATTAN, KANSAS

Projects to be undertaken by GSA in fiscal year 1963, for other departments and agencies to be financed by appropriation transfer

	Estimated cost
Department of Health, Education, and Welfare (total)	$45,952,109
Food and Drug Administration: Beltsville, Md.: Construction, animal laboratory building	1,730,000
Gallaudet College, Washington, D.C. (total)	1,323,200
Landscaping the campus	50,000
Renovation and repair, existing buildings (residences 2, 3, and 7, and relocation Health Center)	100,000
Equipping, classroom and laboratory building	45,000
Construction, Art Center	656,700
Construction and equipping, addition to Speech and Hearing Center	271,500
Construction, 2 preparatory dormitories	200,000
Howard University, Washington, D.C. (total)	4,708,509
Completion of construction and equipping, physical education building for men	311,709
Modernization, power plant facilities (additional funds)	600,000
Construction, women's dormitory No. 7	2,000,000
Construction, classroom building No. 2	1,796,800
Public Health Service (total)	30,158,400
Mobile, Ala.: Construction, shellfish laboratory (additional funds)	10,000
College, Alaska: Design, regional water pollution control laboratory	190,000
Athens, Ga.: Design and construction, water pollution control laboratory, PHS	2,380,000
Lawrenceville, Ga.: Construction, animal holding and breeding facilities, CDC	2,086,000
Atlanta, Ga.: Construction, communicable disease center	9,914,000
Baltimore, Md.: Planning for gerontology research facility, NIH	565,000
Bethesda, Md.:	
Design, mental-neurology research facilities, NIH (additional funds)	24,000
Design, National Cancer Institute, NIH (additional funds)	48,000
Design, extension to Biologics Standards Building, NIH	350,000
Design, general office building extension, NIH	350,000
Construction, National Library of Medicine, NIH (additional funds)	233,000
Design, master utilities extension, NIH	448,000
Poolesville, Md.: Construction, animal farm facilities, NIH	4,869,000
Hamilton, Mont.: Construction, Rocky Mountain laboratory (additional funds)	10,400
Ada, Okla.: Construction, Water Pollution Control Laboratory	2,000,000
Corvallis, Oreg.: Construction, Water Pollution Control Laboratory	2,000,000
Puerto Rico: Design, National Institutes of Health Perinatal Laboratory	60,000
Kingston, R.I.: Design and construction, Northeast Marine Water Quality Laboratory	1,715,000
Providence, R.I.:	
Construction, Shellfish Laboratory (additional funds)	20,000
Design, Middle Atlantic Water Pollution Control Laboratory	180,000
Design, Midwest Water Pollution Control Laboratory	240,000
Design, Northeast Regional Water Pollution Control Laboratory	220,000
Design, construction, Midwest Fresh Water Quality Laboratory	2,246,000
St. Elizabeths Hospital, Washington, D.C. (total)	8,032,000
Extension and modernization of administration building (additional funds)	37,000
Construction and equipment, treatment building (Rehabilitation Center)	6,735,000
Replacement of 4 oil-fired burners, hospital building	350,000
Installation, sprinkler system in hospital building	865,000
Engineering study, plumbing and related facilities	45,000

Mr. THOMAS. Are there further questions? If not, we want to certainly thank all of this distinguished group. You have been very helpful to us and very patient. Your information has certainly been more than adequate. We want to thank our very genial Administrator, Mr. Boutin, for his courtesy, Mr. Knott, Deputy Administrator, Mr. Griffin, Assistant Administrator, and certainly Mr. Turpin has been outstanding; the general counsel, Mr. Moody, is always helpful, and we want to thank Mr. Daly, the Commissioner of Public Buildings Service, and his very able assistant, Mr. Schmidt. The Federal Supply Service would in no manner be complete without our very able and genial friend, the Commissioner, Mr. Bean. He has been worth a lot to the Government. We wish you well, as well as your very able assistant, Mr. McGee. Mr. Barron is undertaking a new spot, Commissioner for Utilization. We wish him well. He has a big job on his hands. He is really going after it.

Of course, we have our old standby, Dr. Wayne C. Grover, the Archivist of the United States, and his assistant, Mr. Bahmer. We always welcome Dr. Grover and his crowd.

In transportation and communications, Mr. Conrad is a very able and distinguished gentleman. He has a tough job. We know he will do it right. From the Defense Materials Service, Commissioner Connell is always of assistance, as well as Mr. Harlan. Thank you all. Good luck to all of you. Please come back to see us.

Mr. OSTERTAG. May I add one further comment, Mr. Chairman? Mr. Administrator, I want to pay tribute to you for the apparent fund of knowledge you have about this business of General Services.

Mr. BOUTIN. Thank you, sir.

Mr. OSTERTAG. It is a tremendous operation, and for one who developed an intimate and close and working knowledge of the many functions and operations and programs and activities as you have, I think it is a credit to you and to the Government.

Mr. BOUTIN. Thank you very much.

Mr. BOLAND. May I add I agree with my colleague, Mr. Ostertag. This is typical Yankee ingenuity, ability, and resourcefulness. Our new colleague could not be here. He is a New Hampshire citizen. I am sure he would have enjoyed listening to you and the manner in which you conduct this vast agency, which, as the chairman pointed out at the start of the hearings, is one of our real favorites.

Mr. THOMAS. Thank you all very much.
