94.0	Change in selected resources	−542	196	
99.0	Total obligations	17,852	19,174	21,271

PERSONNEL SUMMARY

Total number of permanent positions	1,569	1,616	1,659
Full-time equivalent of other positions	11	13	13
Average number of all employees	1,458	1,470	1,543
Average GS grade	8.9	9.1	9.1
Average GS salary	$10,185	$10,848	$11,103

Mr. EVINS. The committee will come to order.

We have with us this morning a very distinguished group from the Federal Communications Commission. The Chairman, Mr. Hyde, is getting a little seniority; Mr. Bartley, well and favorably known; Commissioner Robert E. Lee; the distinguished Commissioner Cox will be here; Mr. Lee Loevinger, well and favorably known for his great work in the antitrust field as well as with the Commission; Jim Wadsworth, Commissioner, and Mr. Nicholas Johnson, Commissioner.

Mr. Bernard Strassburg is the Chief, Common Carrier Bureau, and Mr. Cowan is Assistant Chief. George S. Smith, Chief of Broadcast Bureau and his assistants Wallace Johnson and Richard Franz, and Mr. Plummer is the Chief of Field Enginering. John R. Evans is Assistant Chief of the Field Engineering Bureau; Mr. James Barr is the Chief, Safety and Special Radio Services; and Mr. Vernon A. Spring is his Assistant Chief.

Mr. Watkins is Chief Engineer and Mr. Geller is General Counsel. Mr. Paglin is the Executive Director, Mr. McKinley is his deputy, Mr. Kahn is the Chief, Management Information Division, and Mr. Solan is the Budget Officer.

Mr. Chairman, we are always pleased to hear you and you may proceed as you wish. I believe you have a statement.

General Statement

Mr. Hyde. Mr. Chairman and members of the committee, it is a pleasure for me, my colleagues, and members of the Commission's staff to be here today to discuss with you the programs and financial requirements of the Federal Communications Commission. Our estimates for fiscal year 1969 call for a total budget of $21,271,000. This is an increase of $2,097,000 over fiscal year 1968. Of this amount, almost $1 million represents increases to our appropriation required by pay costs resulting from legislation, costs to maintain our present staff, and the transfer to us of budgetary responsibility for emergency communications functions.

At the outset, let me say that we in the Commission fully realize that this request represents an increase at a time when all agencies are being urged, perhaps more strongly than ever before, to hold down budget estimates and to curtail spending in every way possible. We believe, however, that the mission and responsibilities of this agency are essential to the overall national security and well-being of the Nation, and believe that our estimates have been held to the lowest level consistent with the national interest.

The expansions in the communications industry over the past 20 years, which are cited in our justifications, are phenomenal. To cite just a few:

In 1948 we had only 119,000 licensed stations in our Safety and Special Radio Services; today we have 1.7 million;

In 1948 we had 3,163 AM, FM, and TV stations; today we have over 7,600;

In the common carrier field the growth in plant investment of the Bell system alone rose from 6.3 billion to 38.4 billion in the last 20 years. During this same period, revenues collected by the carriers for services subject to our regulatory jurisdiction have increased from about 650 million to almost 4.5 billion, an increase of roughly 600 percent.

This rate of growth in the communications industry is expected to continue into 1969 and future years. It may be surprising, but staff increases for the Commission since 1948 have amounted only to about 10 percent. I might add at this point that the growth of the services I have mentioned, and others which I have not mentioned, has not just meant that we are being confronted with additional applications to process. More than that, as these services grow they bring more complex engineering, economic, legal, and social problems which, in practically every instance, means that applications demand increased staff effort.

Mr. Evins. I think it is a compliment to the staff of your Commission that you have only grown 10 percent, whereas industry has grown 600 percent. It is a very efficient staff.

Mr. Hyde. I am sure that observation is going to give encouragement to a very hard pressed staff. Thank you very much.

New Developments in Industry

While we expect these services to continue to thrive, I do not want to dwell on them alone. I want to call your attention to some of the other dramatic changes that we are now witnessing and the new services to be regulated. We now have communication satellites, tran-

sistorized international cables, cable televisions, and the use of computers in communications to name a few. These developments are already with us, but they are still in their infancy and, as a result, it appears that the Commision will continue to be confronted with increasingly difficult and time-consuming policy and regulatory problems for the foreseeable future. Problems will be generated by these developments which will require that we be capable of more intensive planning and analysis and that we be provided with the resources necessary to obtain the most capable staff assistance available for these purposes.

POTENTIAL FUTURE DEVELOPMENTS

These recent changes are not the end of the line. We believe we are at the doorway to many more technological innovations which will have a very significant impact on our way of living and on the economy of this country. I am referring now to some of the things experts predict will be available in the near future, such as: "picturephone," facsimile reproduction of newspapers and magazines, merchandizing via communications media, among others. That is not designed to be an exclusive statement.

NEED FOR PLANNING

With respect to any of the items I have mentioned, old and new, the Commission has a vital role to play in insuring that they are used most effectively in the interest of the Nation as a whole. For this reason, it is most important that this Commission, possibly more so than other agencies which are regulating industries that are not undergoing such revolutionary changes, have the ability to do long-range planning. There is an emphasis in the Government today to have agencies do more in anticipation of future needs. While we recognize that long-range planning may be more difficult in this industry because of its rapid changes, we also recognize that this fact alone makes it more imperative that we do more along these lines, and we are budgeting accordingly.

NEED FOR RESEARCH

An inevitable consequence of long- or short-range planning in the FCC is the need for research. Research must be undertaken in scientific, economic, social, and other technical fields in order that we may properly evaluate the feasibility of new proposals and developments; their relationship to, or impact on existing services; their long-range potential; their value in relationship to available space in the radio spectrum; other means of providing comparable services; the benefits to accrue to the public as a whole, and at what cost; the impact on the national economy and the national welfare and I should say the national defense, and various other considerations.

The Commission has submitted a research and policy studies program to the Bureau of the Budget for its review and coordination. The Commission's plan is designed broadly because we believe the nature of the problems in communications, today and in the future, must be considered in relation to one another and over a broad span of time and technological development. We hope to achieve a program which will draw upon the best talents and abilities of the Commis-

sion's staff, outside contractors, and others in the Government and non-government community who are engaged in communications work.

STATUS OF RESEARCH AND POLICY STUDIES

Mr. EVINS. When you speak about having submitted this research and policy study to the Bureau of the Budget, if I might interrupt, is this your long-range plan?

Mr. HYDE. I am referring to the studies that were provided for in our 1968 budget. We have had numerous conferences on this subject; we have consulted some very eminent experts in the field. We are proceeding with coordination through the Bureau of the Budget.

Mr. EVINS. Has the Bureau of Budget approved what you have recommended?

Mr. HYDE. It has not, but we think approval is just in the offing.

We anticipate that a significant portion of the time devoted to the Commission's research and policy studies program, in the first year at least, will concern the nature and scope of the program for the development of long-range policy. In other words, we are going to be studying how you go about this business of long-range policy.

Nevertheless, there are certain issues before the Commission which require short-term resolution. The currently outstanding Notice of Inquiry dealing with the interrelationship of computers with communications is an example of a major problem which must be dealt with expeditiously. Another problem requiring the immediate undertaking of long-range research concerns the congestion in the land mobile radio services. We cannot delay proceeding with these urgent matters; but in so doing, we are mindful that solutions to these problems must be integrated within the content of the long-range program to assure their effective ultimate resolution. It is for this reason that these pressing problems have been included within the purview of the long-range program.

We believe that our initial effort in research and policy studies will materially assist us in providing data essential to the resolution of certain immediate problems. Of perhaps even greater importance, we anticipate that this program will identify future issues whose breadth and complexity will require extended study to assure that the problems raised by these new developments may be effectively resolved in the public interest. Accordingly we are asking $400,000 more for this program in fiscal year 1969 to maintain the momentum of this effort.

COMMISSION ACTIONS TO RELIEVE LAND MOBILE CONGESTION

With respect to the increasing congestion in the land mobile radio services, particularly in the principal metropolitan areas of the country, the Commission has made considerable progress during the current fiscal year toward finding solutions and has other actions under way which are expected to be completed before the end of this fiscal year. However, we also have a number of major possible actions under study which will carry over not only into fiscal year 1969, but probably into fiscal year 1970, and perhaps beyond. I am sure to allocate the frequencies is going to be a continuing function.

On February 9 of this year, less than 2 weeks ago, we completed action on an important rulemaking proceeding which has resulted in the addition of approximately 165 new communication channels for use by the public safety, industrial, and land transportation radio services. The frequencies are in what we call the 450–470 MHz band, which is a part of the radio spectrum suitable for land mobile use in cities. Among other things, the action gives specific recognition to police communication requirements by giving law-enforcement agencies access to 36 new channnels, of which 20 have been allocated exclusively for use by police departments.

I think you will recognize that this is recognition of the need for bolstering up our police effort.

The 450–470 MHz decision was made possible by recent technical improvements in radio equipment performance so that the width of existing communication channels can be reduced to one-half their present value, with little or no impairment in the quality of service. We call this "channel splitting." Other beneficiaries of our action include, for example, the small businessman, the airline industry, the central station protection industry (or burglar alarm business), fire departments, and others. We reserved some channels for possible future use in connection with the highway safety program and are maintaining liaison with the Department of Transportation to determine how these frequencies may best be used. We also reserved some channels for possible radio teleprinter development and shortly will open a proceeding on teleprinter possibilities and requirements. Further action on channel splitting for the communication common carriers, utilizing the 450–470 MHz band, is also under consideration currently.

Some time ago, the Commission established and Advisory Committee for the Land Mobile Radio Services under the chairmanship of Commissioner Cox. This committee was established to study various possible ways in which the land mobile services could improve their use of the spectrum space already allocated to them and thereby reduce some of the current congestion problems. The committee submitted its final report to the Commission in late November 1967, and the report is being studied with care not only within the Commission, but also by many other interested persons. As a matter of fact, the report has gained rather extensive attention, some of it quite controversial. A number of the recommendations of the committee already have been carried out, and others will be implemented as the work on specific recommendations is completed. The Commission's decision to proceed with its most recent channel-splitting action (450–470 MHz) stems in part from the work of the committee. Similarly, a further step toward interservice sharing, in accordance with the committee's recommendations, has been ordered into effect. Recommendations that we make procedural changes have been partially implemented; others will be considered as appropriate.

A number of additional proceedings affecting the Land Mobile Service have either been completed recently or are in progress. In the context of the overall land mobile problem, these proceedings might be considered minor, but they are of great importance to the people directly affected. For example:

(*a*) A number of additional frequencies have been established exclusively for radio paging purposes. The private system phase

of this proceeding has been completed, but the communication common carrier portion of the problem drew so many conflicting comments that it has not yet been completed.

(*b*) Several frequencies were established for specialized uses, such as load shaving in the electrical utilities industry; the remote control of locomotives in industrial switchyards, and the remote control of certain specialized equipment used by the petroleum and logging industries.

(*c*) Action has been taken to increase the security of surveillance communications by law enforcement agencies, consistent with the President's program for a general attack on the increase in crime.

POSSIBLE USE OF TV FREQUENCIES

Despite the progress outlined above, much remains to be done to alleviate land mobile congestion. Several additional measures already have been undertaken and are in various stages of study or consideration, while others are scheduled to be started when we have the resources to undertake them. For example, more than a year ago, the Commission decided to investigate the feasibility of the sharing of VHF–TV channels by the Land Mobile Radio Services. With extensive participation by industry, this project has been active during the past year, and it is estimated that the final report, with its conclusions and recommendations, should be available by the end of the year. When the entire report becomes available, the Commission will have to decide what action it wishes to propose to the public, if any, with respect to implementation. If this plan of interservice sharing is practical at all, it probably will pose difficult administrative and legal problems which will require a considerable time to resolve. If you sense the debate that is developing between the broadcasting industry and the mobile, you will sense what I mean by indicating there will be legal problems.

Some time ago, the Commission established another group composed of most of its senior staff officials to study the feasibility of using some of the UHF–TV channels to solve land mobile frequency shortage problems. Three separate alternatives have been investigated in this area by staff working groups, composed of the Commission's best engineers. Results of these investigations have been reported to the Commission and now are under review.

They were under review last week and will be under further review in the next few days when we can schedule such a meeting.

The Commission has had a series of private—nonpublic—meetings to discuss the various alternatives. The next step, expected to be taken in the near future, is to instruct the staff on what they should do next. It may be that a majority or a unanimous Commission will decide to seek advice from the public as a next step. This would be either by a notice of inquiry or by a notice of proposed rulemaking. A further complication is that persons interested in TV broadcasting from space satellites believe that a number of the UHF–TV channels should be reserved now for space broadcasting in the future. This represents additional competition for valuable spectrum space. Additionally, a group of land mobile users is having a study made by a firm of engineering consultants to see if some television space can be made available to the land mobile services without damage to our television allocations.

PERSONNEL COMPENSATION INCREASES

With respect to personnel compensation, we are requesting an increase of $1,441,352. I would like to explain to you the specific purposes and reasons for this increase:

PAY LEGISLATION

First, we have an additional requirement for $196,413 to cover the cost of the recent pay legislation. This amount is necessary to pay the higher salaries for a full 12-month period instead of 10 months, as in fiscal year 1968.

MAINTENANCE FISCAL YEAR 1968 STAFF

Second, $377,270 is required to maintain our staff at the fiscal year 1968 level. By this I mean the cost of periodic-within-grade increases and the cost of salaries for 261 workdays in 1969 as compared with 260 in 1968. This 1 extra day amounts to approximately $60,000. There are also promotions, of a routine nature, for employees who were hired as trainees or at entrance professional levels who will be moved up the training ladder at regularly scheduled periods.

FUNDING EMERGENCY COMMUNICATIONS FUNCTIONS

Third, we have, for the first time, a request for $296,064 for full funding of our emergency communications activities. These activities have previously been funded, at the same dollar level, by OCD and OEP. However, the Commission is firmly convinced that emergency planning in communications is not something that is related solely to military emergencies. It is a continuing requirement of the industry for natural disasters such as earthquakes, floods, and tornadoes, as well as manmade disasters such as explosions, blackouts, fires, and a whole gamut of other extraordinary circumstances which are unpredictable but are certain to occur. If our communications systems can be planned to operate in these situations, these same emergency procedures and systems can be used in military emergencies or national crises. I also should add that the Communications Act and Executive Order No. 11092 place responsibility on the Commission to carry out emergency planning in the field of communications.

STAFF INCREASES

Fourth and last, we have $571,605 requested for staff increases. This increase would provide 73 man-years of employment; or a 5-percent increase over our fiscal year 1968 level.

With your kind indulgence, I would like to discuss briefly a few of these staff increases. First, I would like to say that we are not proposing to undertake any new programs in fiscal year 1969. It is true that we expect to have to handle many new or unique problems within our existing programs, but we will have no new programs as such.

I am saying that with this reservation: If there should be some exciting new technological development in communications there of course could be some demand upon us.

INCREASE IN BROADCAST AREA

In the broadcast area we are requesting an additional 9.5 man-years of employment: a 3-percent increase. This increase is essential if we are not to fall further behind in our application processing and hearing work. The Commission feels very strongly that larger backlogs should not be permitted to build up to create even greater delays in deposing of these matters. These matters are increasing in both number and complexity, require more time to handle, and thus, necessitate an increase in staff.

COMMON CARRIER INCREASES

Similar difficulties exist in the common carrier field where we are requesting an increase of 11 man-years. This increase is primarily in the domestic rate regulation area but does provide small increases in the application processing unit of domestic radio services, and for international and satellite communications. With respect to domestic rate regulation, we feel that a more informed and orderly resolution of ratemaking problems would result from the application of recent developments in economic and computational techniques, including the use of econometrics, linear programing, and the use of computers. To accomplish this and to apply such techniques on a continuing basis requires that fact-gathering and reporting practices of common carriers be so designed as to complement and support the Commission's needs. To implement this program, a small staff increase is proposed. We also have need for additional staff assistance in our inquiry in docket No. 16979 into the regulatory and policy problems presented by the interdependence of computer and communications services and facilities.

I think I would like to interpolate a bit here.

Early in our comprehensive investigation of the Bell systems, and even before that in connection with our investigation of the telegraph industry, we had need for more comprehensive current information about the telephone business. We make calls upon the telephone companies for information and they undertake to provide it. The problem was that we had not developed procedures, and they had not developed methods adequately to give that to us with the immediacy that we think is appropriate to the tempo of the times. So what I am talking about here is the provision of procedures both in our own shop on the design of them and in the businesses of the carriers, in which we of course would have considerable interest, to give information on a current basis.

Mr. EVINS. Industry is always very cooperative with the Commission?

Mr. HYDE. The regulated industry is cooperative. But we have learned a lot in our comprehensive investigation, as I am sure they have. They will agree that more expeditious techniques are needed to supply needed information.

INCREASE FOR FIELD ENGINEERING BUREAU

Earlier I cited some figures on the growth of the number of authorized stations now in operation. I would like to now elaborate on

some of these figures for the purpose of illustrating the impact of this continued growth on our field activities. Records show that, as recently as 1958, we had only 447,000 authorized stations utilizing 1.4 million transmitters. At the end of June 1967, we had 1,673,000 authorized stations utilizing 6 million transmitters. Let me repeat those figures: 447,000 stations growing to 1,673,000 and 1.4 million transmitters growing to 6 million in less than 10 years. In contrast, the Commission's field staff, which must monitor, inspect, and investigate complaints of interference among these stations has increased only 9 man-years during this same period; that is, from 390 to 399 employees.

We believe this lack of manpower in this crucial area has hurt the effective use of the radio spectrum and has resulted in an increasing percentage of violations. This is proven in the relatively few stations we are able to inspect and monitor.

What I am saying there is that inspections, when we can make them, indicate that the stations have been operated with little apprehension of their being detected.

At the present time, for lack of manpower, we are eliminating some 3,000 scheduled monitoring watches per year and are compelled to close down our monitoring stations during those watch periods. Because of pressures of other work, we have also cut back the time we have been able to devote to the investigation of interference complaints and broadcast station inspections. We could very effectively use significant increases in our field operations but because of overall budgetary constraints, we are restricting our request to 7.3-man-year increase for interference investigations and broadcast station inspections. I think that is very, very cautious in view of the demand on staff.

NEED FOR TECHNICAL EQUIPMENT

Field activities have not suffered from a shortage of manpower alone; there is an urgent need for replacement or modernization of technical equipment. Many items of equipment such as receivers, meters, and frequency measuring devices in both our field installations and our laboratory are over 20 years old. In fact, we feel that at least 50 percent of all equipment in our field installations has reached the point where it should be replaced. We have tried to maintain a replacement schedule calling for $300,000 a year for field operations, but we have been unable to keep to it. Again in fiscal year 1969, for economy reasons, our request is being held to $183,000, the same as fiscal year 1968.

COMMUNITY ANTENNA SERVICE

I would like to turn now to the community antenna television service. This is our newest major regulated service. As you are aware, CATV systems receive and amplify the transmissions of one or more TV stations and redistribute the signals by cable to private homes or places of business for a fee. Some signals may be distributed several hundred miles from the originating stations.

Latest industry figures indicate that there are now close to 2,000 systems operating, serving 3,000 communities and approximately 10 million people. At the same time, there are almost 1,900 additional systems that have local franchises but are not yet in operation, and

approximately 2,350 applications pending with local authorities for franchises to serve an additional 1,300 communities.

The Commission's rules provide that no new system may go into operation in any of the top 100 television markets except upon a showing made in evidentiary hearing and approved by the Commission that such a distribution of signals would be in the public interest. It is estimated that 275 to 300 petitions of this type will be filed with the Commission in fiscal year 1968 and an equivalent number in fiscal year 1969. Increased filings also are anticipated in requests for special relief from the Commission's rules and in the institution of compliance proceedings. We have built up a small staff to handle the workload that is continuing to increase in this service, but we must ask for more funds for these activities in fiscal year 1969.

In conclusion, our fiscal year 1969 estimates provide for the Commission's future and expanding role in long-range planning and research and for our crucial and immediate needs stemming from the continual growth of current services. We have not taken these budget increases lightly and, after a searching review of our programs, feel that the increases proposed are in the national interest, despite the overall budgetary situation.

We would now be pleased to answer any questions you may have with respect to our programs or estimates.

I would make this one further observation that I feel that this is truly a conservative estimate considering the tremendous growth in communications.

Mr. Evins. Thank you, Mr. Chairman. That is a very fine statement. It is very comprehensive.

We are impressed with the growth of the communications industry. There are more radios than ever, more stations than ever, and more televisions. I believe you said about three out of five families now have color television and there are more televisions than there are telephones.

What I am trying to say is, we can see the tremendous growth of the communications industry all over.

Mr. Hyde. That is right.

BASIS FOR BUDGET PROJECTIONS

Mr. Evins. Are you projecting your budget just on the growth of the industry or are you projecting your budget on the workload of the Commission?

Mr. Hyde. It is a combination of both, Mr. Chairman. We are putting more emphasis on planning for the future as we did last year than had been the practice for many years before that. There are very rapid technological developments and there are very rapid developments in service concepts which point up the need for better planning.

Mr. Evins. Your budget has grown too, as you recognize, over the years. In 1959 it was $8.9 million, in 1960 it was $10.5 million, and this year is the highest budget I believe ever in the history of the Commission. Up to $19 million in 1968, and this year is $21.271 million. So the budget of the Commission is also increasing.

Mr. Hyde. It is. I have tried to point out, and I believe that I have, that the increase in budget, in personnel, is not in the same ratio by any means as the increase in the development of communications facilities.

Mr. EVINS. Do any of the Commissioners have any observations on the growth of industry or any other comments they want to make?

Mr. HYDE. Commissioner Bartley is our next ranking Commissioner. He is a veteran and has observed the growth. I am sure he can give you some observations.

Mr. BARTLEY. I can probably just go back and tell you what Commissioner Webster told me when I first went on the Commission: "You will find out two things. It is the shortest 7 years you ever saw and every year you think it is going to get a little easier, but it is not. Just more and more.

Mr. EVINS. A full-time activity, I know.

Mr. LOEVINGER. I might volunteer a few comments.

BUDGET COMMENTS—COMMISSIONER LOEVINGER

Mr. EVINS. Commissioner Loevinger.

Mr. LOEVINGER. I think the significant figure is that which appears in the graph on page 6 in the proposed budget. Prices keep going up, salaries keep going up, there is a process called inflation I have never thoroughly understood, and I am happy to leave it to the President's Economic Advisers. But what we are really dealing with here is manpower and what this shows is the relationship between our work and our manpower. The salaries, after all, are set by Congress. We do not control those.

For a given number of men we pay out what you tell us to pay out. So it is not the dollars that are significant but the men, and this shows the relationship between men and work.

The second comment is this: I have been on the Commission for 5 years now. From time to time I have passed comments, some laudatory and some not so laudatory, of the operation and work of the Commission. I have said before this committee on prior occasions that I thought sometimes we spend too much time worrying about broadcasting as such, particularly about broadcast programing, which I consider to really be very little of our business for a number of reasons, including the first amendment.

I think that today the Commission is doing more work in coming to grips with its basic statutory mandate as well as with the basic communications problems of the country better than it has at any time during the period of my observation and experience on the Commission. It is partly due to the Commission itself.

I think a good deal of credit is due to the Chairman, Rosel Hyde. This is something he cannot say but I can. I think we are really dealing with basic and important problems today in a more realistic sense than at any time in my experience on the Commission; this is a factor that should be, and I am sure is, of concern to this committee.

WORKLOAD AND STAFF INCREASES

Mr. EVINS. Very good.

Your average employment is up about 35 percent from 1957 to 1967, a 10-year period. Your applications received are up about 94 percent, and applications disposed of are up 106 percent. So the Commission is really active in disposing of the applications received. It is a very impressive chart.

Commissioner Lee.

Mr. LEE. I have nothing to volunteer, Mr. Chairman. I am always happy to come up here and renew old acquaintances, but I have learned not to volunteer too much.

Mr. EVINS. You always have a wealth of information.

Commissioner Wadsworth has not arrived yet, nor has Commissioner Cox.

Commissioner Johnson, do you have a comment?

BUDGET COMMENTS—COMMISSIONER JOHNSON

Mr. NICHOLAS JOHNSON. I would have just a brief statement, Mr. Chairman.

I think in terms of the budgetary analysis of an agency like the FCC, the significant distinction between our programs and those of many other agencies is that we are not engaged in expenditure of public funds for major programs. That is to say, we are not subsidizing industry in the sense that the Maritime Administration is. We are not engaged in major purchases in the sense that the Defense Department is.

The economic significance of what it is we are doing is in the private sector, in a multibillion-dollar telephone company, communications satellites, private microwave systems, land mobile radio, and the American broadcasting industry.

And there is something of a multiplier effect in the significance of the budgetary allocations to the FCC.

If we do our job badly, it is seen not in terms of the thousands of dollars that are involved in the particular program at the FCC, but rather in terms of the hundred million or billion dollar impact on the national economy. I think it is useful, for me at least, to think of our budget in those terms and it may be for you as well.

I would add only one brief second comment, and that is the significance, in my judgment, of the research and policies study program on which Chairman Hyde has taken such very constructive and creative leadership during the past year and the Bureau of the Budget has seen fit to endorse. I think within that program lies the solution to many of the problems that have been on my mind and I think have been on the minds of you gentlemen as I have heard your views expressed at these hearings and upon the record during the past year.

Mr. EVINS. Very good.

Commissioner Cox, do you have any comment?

Mr. COX. I am sorry to be late. Since I did not hear what went before, I do not think I have anything to add. I will be happy to answer any questions.

Mr. HYDE. If I may suggest to Commissioner Cox, the question is what the workload situation of the Commission is, what is its challenge at this time and do we need the funds we have asked for here.

Mr. COX. That is rather leading.

Mr. EVINS. You are asking for support.

BUDGET COMMENTS—COMMISSIONER COX

Mr. COX. I have no hesitancy in saying our workload is growing and that we are having great difficulty in keeping up with it as we

would like to—and as I am sure Congress would like us to. I think the challenges which the Commission faces are more difficult, perhaps more interesting but certainly more complicated in the aggregate, I think, than we have faced since I have been associated with the Commission. We have a great many extremely important policy decisions to reach and implement in the immediate future, and I wholeheartedly concur in the need for the funds we are seeking.

Mr. EVINS. Very good.

STATUS OF TECHNICAL RESEARCH STUDIES

Mr. GIAIMO. I have just some general questions at this point.

You asked for $300,000 last year for study, of the spectrum allocation, did you not?

Mr. HYDE. Yes.

Mr. GIAIMO. How much of that money did you get last year? I do not recall a figure.

Mr. HYDE. The total for research including the spectrum——

Mr. GIAIMO. Was there not one item of $300,000 for spectrum allocation that you asked for?

Mr. SOLAN. Yes, and there was $150,000 for the citizens band and $150,000 for economic studies.

Mr. GIAIMO. In addition to the $300,000?

Mr. SOLAN. Yes, totaling $600,000.

Mr. GIAIMO. How much did Congress give you of the $300,000?

Mr. SOLAN. $300,000.

Mr. GIAIMO. For how long a period was that?

Mr. SOLAN. One year.

Mr. GIAIMO. Are you asking for any more in that area?

Mr. HYDE. We are asking for $400,000 for research.

Mr. GIAIMO. Total research?

Mr. SOLAN. One million total.

Mr. GIAIMO. I am getting confused now. Let's address ourselves to just the spectrum allocation study. How much money did you get last year?

Mr. HYDE. The Congress authorized a total of $600,000 which included $300,000 that you mentioned.

Mr. GIAIMO. Right.

Mr. HYDE. We are asking in this budget for $400,000 additional for research but not limited to mobile service.

Mr. GIAIMO. I see. So the $300,000 you got last year was limited to land mobile, was it not?

Mr. HYDE. I do not believe it came out with that limitation, but it was clearly intended that we should invest substantial parts in land mobile. There is no question about that.

Mr. GIAIMO. Did you?

Mr. HYDE. We have. I must say this: We do not have our policy research program underway. It is under review at the Bureau of the Budget now but we have invested substantial amounts of Commission efforts of our overall funds in the land mobile problem. And we expect as soon as we get Budget Bureau clearance to invest $600,000 in this overall allocation to the policy problems.

Mr. LOEVINGER. Is it not the case that the money was first frozen

by Congress and then by Executive order and it cannot in fact be spent or committed until the plans for its expenditure have been approved by the Budget Bureau?

Mr. GIAIMO. This is what I am trying to get at.

Mr. LOEVINGER. These are now pending at the Budget Bureau and in effect the money has not yet been released.

Mr. GIAIMO. That is what I wanted to know. In other words, you really have not spent it yet?

Mr. LOEVINGER. That is right. We have not gotten it yet.

Mr. GIAIMO. Have you been able to start your studies?

Mr. HYDE. All we have been able to do is make preparation for the studies. That is all.

Mr. GIAIMO. What concerned me, if you had already spent it I wanted to know the result of the expenditure. We are where we were a year ago then; is that not right?

Mr. HYDE. So far as putting money out for contractual studies in this area, we are where we were a year ago. But I would hasten to add that insofar as working on the land mobile problem, we are a long ways ahead of where we were a year ago.

ACTIONS IN LAND MOBILE AREA

Mr. GIAIMO. Are you really?

From your own statement on page 6, you say approximately 165 new communication channels for use by the public safety, industrial, land transportation radio services have been made available. That is not very much when, by your own statement, you tell us that you get about 20,000 applications a month.

Mr. HYDE. We get about 40,000 a month in all safety and special services. But these are shared services for the most part. In the land mobile and particularly in the case of police, it is about a 200-percent improvement in the position of the police service.

Mr. GIAIMO. It may be so in the position of the police services but your public notice, May 3, 1967, you say with nearly 3 million transmitters in service and new applications coming in at the rate of almost 20,000 per month, the land mobile growth rate is such as to produce a severe congestion in the large metropolitan areas.

I do not see the substantial increase or gain or advancement.

Mr. LOEVINGER. There are many stations on one channel; 165 channels is 165 channels in every community, and they are shared channels. So this may be thousands of stations. It is not 165 additional stations, but 165 channels which may mean many thousands of stations.

Mr. GIAIMO. I understand that.

Mr. EVINS. Since last year the Commission has approved 165 more channels. I thought Mr. Giaimo would commend the Commission for action in this area. This has relieved the pressure somewhat.

Mr. GIAIMO. I have a great deal of affection for the Commission and the Commissioners but I am not about to commend them in the area of land mobile service.

Mr. HYDE. Let me assure you we do not regard this action which you have mentioned here as solving the problem by any means. We do think it is a very significant improvement. We do think it will take care of the congestion for perhaps a couple of years. The congestion, by the

way, is pretty well concentrated in the larger cities. Within that time we hope to do something far more comprehensive.

Mr. Cox. The users themselves, I think, agree that the relief afforded by the 450 megacycle splits will take care of their foreseeable needs, even in the major metropolitan areas, for about 2 to 3 years.

Mr. Giaimo. That is not what the users tell me, Commissioner Cox. From what I understand and what we discussed here last year, we were going to have a long-range study and a short-range study to try to do something about spectrum allocation in this critical area, and part of the solution, and in my opinion a minor solution, at the time was to try to gain some spectrum space by the technique of pulling the width of channels down to a lesser amount.

Mr. Hyde. That is right.

Mr. Giaimo. I suspect that is how you accomplished the 165 new communications channels.

Mr. Hyde. It is. We made some adjustments as between citizens' radio and mobile.

Mr. Giaimo. These frequencies are all to be found, as you say, in the 450 to 470 megacycle band?

Mr. Hyde. Megahertz. Either term will do.

Mr. Giaimo. Is that not already in the band allocated to land mobile?

Mr. Hyde. Yes.

Mr. Giaimo. So all you have done is to have worked within the land mobile band and by contraction I suppose you have been able to get some technical advances and further use of the spectrum.

Mr. Hyde. That is correct.

USE OF TV FREQUENCIES BY LAND MOBILE

Mr. Giaimo. If you recall at this time last year we also discussed what you were doing about looking at the large UHF area which starts at 470, I believe, and what are we doing about trying to find some additional space in there at the lower portion which would be from 470 on up, channels 14 through 20, which I understand is what the industry has been asking you to do.

Mr. Hyde. We have done extensive work in this area through the resources of our present staff. We have had rather comprehensive studies prepared by our in-house talent. We have before the Commission the preliminary reports which we are currently discussing. There are several possible ways suggested for further development.

Our next step in this area will be to try and make a judgment as to what seems to be the best way to do it and then to concentrate on that. We will undoubtedly get out some form of public notice inviting participation of industry and interested parties generally.

I must tell you, Mr. Congressman, that this has taken longer and has proved more complex than I thought it would be when I talked to you last year at budget time, but there has been a tremendous amount of work invested in it.

Mr. Giaimo. The only point I want to make at this time in reference to your general statement, and you can correct me if I am wrong, is when we synthesize and boil down what you have said here about the

minor accomplishments in this area of land mobile radio which you admit are minor, much remains to be done.

What you are saying is the small amount of gain you may have made is from the same process you spoke about last year; namely, channel splitting or reduction in the presently existing land mobile band. So in effect you have not said anything about what you have done or contemplate doing to really tackle this problem and find some real-location of the spectrum.

Mr. HYDE. It is true we have not completed any actions looking toward interservice sharing such as broadcasting and mobile services.

Mr. GIAIMO. Exactly.

Mr. HYDE. But we do have some studies well advanced looking into these possibilities. This is a very difficult matter to resolve.

Mr. GIAIMO. I do not want to belabor this, but I want to make this point. What I infer is, these small gains they are talking about have been done within the presently existing area allocated to land mobile space and have been accomplished by channel splitting which they mentioned last year, and nowhere in the statement do I read of any significant progress in reallocation of part of the spectrum presently assigned to the UHF area.

Mr. COX. Pages 8 and 9, Mr. Congressman. It says:

> The Commission established another group composed of most of its senior staff officials to study the feasibility of using some of the UHF-TV channels to solve land mobile frequency shortage problems.

I think this is an essential first step toward any course that we might take in this area. At the same time we have been doing this with our own staff, we have invited and encouraged participation by the industry. They have organized, I think it is called the Allocations Research Council, made up of some of the principal participants in the Land Mobile Advisory Committee, and have retained a leading engineering consulting firm to make a study of the UHF allocation to see what they could come up with in the way of constructive suggestions.

We have not yet either reallocated or authorized the sharing, which is a possible alternative, of any UHF spectrum space, but we have been making enough moves in that direction that the broadcasters are a little upset and are themselves now organizing to conduct some research of their own to see if they can find other alternative means, or if they can perhaps dispute with the land mobile users across-the-board.

Mr. EVINS. We will go into this in more detail in the budget.

COLLECTION OF FEES

Mr. JONAS. To what extent does the Commission collect fees from the public? What is the total amount?

Mr. HYDE. About 4 million annually. It goes into the general fund.

Mr. JONAS. I understand. I want to get the amount.

Mr. HYDE. Four million.

Mr. JONAS. When has this schedule of fees been revised?

Mr. HYDE. There has not been a general revision. I think there have been only minor changes since it was established.

Mr. JONAS. When was it promulgated?

Mr. SOLAN. March of 1964, I believe March 17.

Mr. JONAS. Is the Commission giving any consideration to making a change?

You are quick to point out that costs increase everywhere else. What consideration has the Commission given to this subject?

Mr. HYDE. We do not have a specific study underway. The subject has been mentioned only recently. It has been mentioned in connection with our examination of citizens' bands as being one way of perhaps bringing some serious purpose into that service.

Mr. JONAS. In general to what activities do these fees apply?

Mr. HYDE. They apply to all except to educational and public safety.

Mr. JONAS. For example?

Mr. HYDE. Government services and education are exempted.

Mr. JONAS. That would merely impose another burden on another unit of Government. I am thinking in terms of fees charged to commercial operators.

Mr. HYDE. There is a fee in each class of service.

Mr. JONAS. How much? What is the charge? Give us a little description of the extent to which these fees are handled.

Mr. HYDE. May I give you a schedule.

Mr. JONAS. We are talking now in terms of very valuable rights.

Mr. HYDE. Right.

Mr. JONAS. This budget, as the chairman pointed out, is doubling every few years. From what you say we can expect a continuing increase?

Mr. HYDE. That is right.

Mr. JONAS. One of these days it will be up to the point where it is a real burden.

Mr. HYDE. Mr. Congressman, I would be pleased to supply you a schedule of fees charged.

Mr. JONAS. Would you put that in the record; I would like to see the schedule.

Mr. HYDE. If you wish, I would be pleased to get you a breakdown of the fees collected.

Mr. JONAS. I would like to have a statement from the Commission showing how the fee schedule is formulated. Is it just an arbitrary figure?

Mr. HYDE. I would answer it this way: When the policy of collecting fees was adopted, the schedule was designed as a filing fee arrangement rather than an effort to collect an amount equivalent to the Commission's budget.

Previous to the establishment of this schedule, the Commission had generally thought that user-fee matters should be an overall Government policy. The Commission pretty generally stayed away from it although there was a notice of proposed rulemaking looking toward the establishment of fees in 1953.

We issued such a proposal and it was opposed vigorously in the Senate. I cannot recall the attitude in the House, but Senator Johnson's committee took a dim view of the whole matter. It was then

abandoned. In 1964 this present policy was established. At that time I think there was more general Government support for it.

Mr. BARTLEY. It was Senator Ed Johnson.

Mr. HYDE. Senator Ed Johnson.

SCHEDULE OF FEES FOR APPLICATIONS

Mr. JONAS. Let us have a schedule put in the record.

Mr. HYDE. Yes, sir.

(The schedule follows:)

SUBPART G—SCHEDULE OF FEES FOR APPLICATIONS FILED WITH THE COMMISSION

AUTHORITY: §§ 1.1101–1.1119 issued under sec. 501, 65 Stat. 290; 5 U.S.C. 140.

GENERAL INFORMATION

§ 1.1101 Authority.

Authority for this Subpart is contained in Title V of the Independent Offices Appropriations Act of 1952 (5 U.S.C. 140) which provides that any service rendered by a Federal agency to or for any person shall be performed on a self-sustaining basis to the fullest extent possible. Title V further provides that the head of each Federal agency is authorized by regulation to prescribe such fees as he shall determine to be fair and equitable.

§ 1.1103 Payment of fees.

(a) Each application, filed on or after January 1, 1964, for which a fee is prescribed in this subpart, must be accompanied by a remittance in the full amount of the fee. In no case will an application be accepted for filing or processed prior to payment of the full amount specified.Applications for which no remittance is received, or for which an insufficient amount is received, may be returned to the applicant.

(b) Fee payments accompanying applications received in the Commission's Offices in Washington, D.C., or in any of the Commission's field offices, should be in the form of a check or money order payable to the Federal Communications Commission. The Commission will not be responsible for cash sent through the mails. All fees collected will be paid into the United States Treasury as miscellaneous receipts in accordance with the provisions of Title V of the Independent Offices Appropriations Act of 1952 (5 U.S.C. 140).

(c) Receipts will be furnished upon request in the case of payments made in person, but no receipts will be issued for payments sent through the mails.

(d) Except as provided in §§ 1.1104 and 1.1105, all fees will be charged irrespective of the Commission's disposition of the application. Applications returned to applicants for additional information or corrections will not require an additional fee when resubmitted.

[*§ 1.1103(d) amended eff. 1–3–66; I(63)10*]

§ 1.1104 Return or refund of fees.

(a) The full amount of any fee submitted will be returned or refunded, as appropriate, in the following instances:

(1) Where no fee is required for the application filed.

(2) Where the application is filed by an applicant who cannot fulfill a prescribed age requirement.

(3) Where the application is filed for renewal without reexamination of an amateur or commercial radio operator license after the grace period has expired.

(4) Where the applicant is precluded from obtaining a license by the provisions of section 303(l) or 310(a) of the Communications Act.

(5) Where circumstances beyond the control of the applicant, arising after the application is filed, would render a grant useless.

(b) Payments in excess of an applicable fee will be refunded only if the overpayment exceeds $2.

[*§ 1.1104 as adopted eff. 1–3–66; I(63)–10*]

§ 1.1105 General exceptions.

(a) No fee is required for an application filed for the sole purpose of amending an authorization or pending application (if a fee is otherwise required) so as to comply with new or additional requirements of the Commission's rules or the rules of another Federal government agency affecting the authorization or pending application; however, if the applicant also requests an additional modification or the renewal of his authorization, the appropriate modification or renewal fee must accompany the application. Fee exemptions arising out of this general exception will be announced to the public in the orders amending the rules or in other appropriate Commission notices.

(b) No fee is required for an application filed by an alien pursuant to a reciprocal radio licensing agreement.

(c) No fee is required for any application or request for an STA or waiver.

[*§ 1.1105 as amended eff. 1–3–66; I(63)–10*]

SCHEDULE OF FEES

§ 1.1111 Schedule of fees for Radio Broadcast Services.

(a) Except as provided in paragraph (b) of this section, applications filed in the Radio Broadcast Services shall be accompanied by the fees prescribed below:

	AM	FM	TV	Translator	Auxiliary
Application for construction permit for new station	$75	$75	$150	$10	[1] $30
Application for major change	75	75	150	[2] 10	[1] 10
Application for renewal or assignment of license or transfer of control, exclusive of FCC form 316 applications (where more than one broadcast station license is involved, the application must be accompanied by the total amount of the fees prescribed for each license so involved)	75	75	150	10	[1] 30
Applications filed on FCC form 316 (where more than one broadcast station license is involved, the application must be accompanied by the total amount of the fees prescribed for each license so involved)	30	30	30	No fee	No fee
Application for construction permit to replace expired permit, FCC form 321	30	30	30	10	[1] 30
Application for modification other than a major change	30	30	30	No fee	[1] 10
Application for change of call sign for broadcast station		$30 in all services.			
All other applications in the broadcast services (excluding television translator applications not specified above)		[1] $30 for each application.			

[1] With respect to applications for remote pickup broadcast stations authorized under subpt. D of pt. 74 of this chapter, one fee will cover the base station (if any) and all the remote pickup mobile stations of a main station, provided the applications therefor are filed at the same time.

[2] For determining when a translator application is required to be accompanied by a fee under this section (though not for other purposes in the translator or other broadcast services), "major change" is defined to include only a change in the output frequency of the translator.

(b) Fees are not required in the following instances:

(1) Application filed by tax exempt organizations for the operation of stations providing noncommercial educational broadcast services, whether or not such stations operate on frequencies allocated for noncommercial educational use.

(2) Applications in the AM service requesting only authority to determine antenna power by direct measurement.

(3) Applications filed for covering licenses in the Auxiliary Broadcast Services.

[*§ 1.1111 as amended eff. 1–3–66; I(63)–10*]

§ 1.1113 Schedule of fees for Common Carrier Services.

Applications filed for Common Carrier Services shall be accompanied by the fees prescribed below:

Domestic Public Land Mobile Radio Service [1]

Application for initial construction permit or for relocation of a base station (including authority for mobile units, blanket dispatch station authority,[2] and standby transmitters without independent radiating systems [3 4])	$75
Application for initial construction permit or for relocation of a dispatch station,[5] control station or repeater station [4]	25
Application for modification of construction permit or license for base station, dispatch station, control station or repeater station at an existing station location	10
Application for renewal of license for base station	25
Application for renewal of license for dispatch station, control station or repeater station	10
Application for license, modification of license, or renewal of license for individual mobile stations	5

Rural Radio Service

Application for an initial construction permit or for relocation of facilities [4]	10
Application for modification of construction permit or license	10
Application for license for operation of a rural subscriber station at temporary-fixed locations	10
Application for license or modification of license for individual subscriber stations	5
Application for renewal of license	5

Point-to-Point Microwave Radio Services

Application for construction permit or for modification of construction permit to add or change point(s) of communication or to increase service to existing points of communication or for relocation of facilities [4]	30
All other applications for construction permits or modification of construction permits (no fee required when filed as part of a modification application requiring a $30 fee)	10
Application for license for operation of a station at temporary-fixed locations	30
Application for modification of license	10
Application for renewal of license	5

Local Television Transmission Service

Application for construction permit or for modification of construction permit to add or change point(s) of communication or to increase service to an existing station location or for relocation of facilities [4]	30
All other applications for construction permits or modification of construction permits (no fee required when filed as part of a modification application requiring a $30 fee)	10
Application for license for operation of an STL station at temporary-fixed locations	30
Application for license for operation of a mobile television pickup station	30
Application for modification of license	10
Application for renewal of license	5

[1] In this service each transmitter at a fixed location is a separate station notwithstanding the inclusion of more than one such station on a single authorization or under a single call sign.

[2] When included as part of a base station application, a request for blanket dispatch station authority made pursuant to the provisions of § 21.519(a) of this chapter does not require an individual application or fee. A request for such dispatch station authority filed separately from a base station construction permit application requires an application for modification of license and an appropriate fee.

[3] An application for a standby transmitter having its own independent radiating system requires the same fee as a base station application.

[4] No additional fee will be charged for applications for license to cover a construction permit unless there is a modification or variation of outstanding authority involved. In that event the appropriate fee for modification is applicable.

[5] This fee applies to any request for dispatch station authority not made pursuant to § 21.519(a) of this chapter.

INTERNATIONAL FIXED PUBLIC RADIOCOMMUNICATIONS SERVICES

International Fixed Public Station:	
Application for an initial construction permit for a new station or an additional transmitter(s) at an authorized station [4]	100
Application for construction permit for a replacement transmitter(s) at an authorized station (no fee will be charged for application for modification of license to delete transmitter(s) being replaced if both applications are filed simultaneously)	50
Application for change of location of an authorized station	100
Application for modification of license	10
Application for renewal of license	75
International Control Station:	
Application for an initial construction permit for a new station or an additional transmitter(s) at an authorized station [4]	30
Application for construction permit for a replacement transmitter(s) at an authorized station (no fee will be charged for application for modification of license to delete transmitter being replaced if both applications are filed simultaneously)	10
Application for change of location of an authorized station	30
Application for modification of license	10
Application for renewal of license	10

OTHER RADIO APPLICATIONS

Application for assignment of an authorization or transfer of control (a separate $10 fee is required for each call sign covered by the Application)	10
All other Common Carrier Radio applications	10

COMMON CARRIER NONRADIO APPLICATIONS

Applications by Communications Common Carriers for Authorization to Own Stock in the Communications Satellite Corp	10
Section 214 Applications by Telephone Co	50
Section 214 Applications by Telegraph Co	10
Cable Landing License Applications	100
Section 221 Applications	50
Interlocking Directorate Applications	10
Tariff applications to change charges or regulations on less than statutory notice	10
All other Common Carrier nonradio Applications	10

[*§ 1.1113 as amended eff. 1–3–66; I(63)–10*]

§ 1.1115 Schedule of fees for Safety and Special Radio Services.

(a) Except as provided in paragraph (b) of this section, all formal applications filed in the Safety and Special Radio Services shall be accompanied by the fees prescribed below:

Applications in the Amateur Radio Service:	
For initial license, including new class of operator license, and for renewal of license	$4
For modification of license	2
Request for special call sign pursuant to § 97.51	20
Applications in the Citizens Radio Service:	
For Class A station authorization	10
For all other classes of stations in the Citizens Radio Service	8
Applications for Radio Station Authorizations for Operational Fixed Radio Stations for which frequencies above 952 Mc/s are requested:	
For construction permit	30
For modification of authorization	10
Applications for Common Carrier Public Coast Stations in the Maritime Radio Services:	
For initial construction permit	50
For modification of authorization	10
Applications for renewal only for which FCC Form 405–A or 405–B is prescribed	4
All other applications filed in the Safety and Special Radio Services	10

(b) Fees are not required in the following instances:

(1) Applications filed in the Police, Fire, Forestry-Conservation, Highway Maintenance, Local Government, and State Guard Radio Services.

(2) Applications filed by governmental entities in any of the Safety and Special Radio Services.

(3) Applications filed by the following in the Special Emergency Radio Service: Hospitals, Disaster Relief Organizations, Beach Patrols, and School Buses, and non-profit Ambulance Operators and Rescue Organizations.

(4) Applications filed in the Disaster Communications Service.

(5) Applications for ship inspections pursuant to the Great Lakes Agreement, the Safety of Life at Sea Convention, and Parts II and III, Title III, of the Communications Act of 1934, as amended.

(6) Applications for Novice Class license in the Amateur Radio Service, applications for amateur stations under military auspices, and applications filed in the Radio Amateur Civil Emergency Service (RACES).

(7) Operational Fixed Microwave Applications filed for Closed Circuit Educational Television Service.

(8) Applications for Civil Air Patrol Stations, Aeronautical Radionavigation Stations and for Aeronautical Search and Rescue Stations.

(9) Applications for license to cover construction permit.

[*§ 1.1115 amended in I(63)-10; (a) amended eff. 8-1-66, I(63)-12*]

§ 1.1117 Schedule of fees for commercial radio operator examinations and licensing.

(a) Except as provided in paragraphs (b) and (c) of this section, applications filed for commercial radio operator examinations and licensing shall be accompanied by the fees prescribed below:

Applications for new operator license:

First-class license, either radiotelephone or radiotelegraph	$5
Second-class license, either radiotelephone or radiotelegraph	4
Third-class permit, either radiotelephone or radiotelegraph	3
Restricted radiotelephone permit	2
Application for renewal of operator license	2
Application for endorsement of operator license	2
Application for duplicate license or for replacement license	2

(b) No fee need accompany an application for a verification card (FCC Form 758-F) or for a verified statement (FCC Form 759).

(c) Whenever an application requests both an operator license and an endorsement the required fee will be the fee prescribed for the license document involved.

[*§ 1.1117 as amended eff. 1-3-66; I(63)-10*]

§ 1.1119 Experimental Radio Services (other than Broadcast).

Fees are not required in the case of applications filed in the Experimental Radio Services (other than Broadcast).

APPEALS OF COMMISSION DECISIONS

Mr. JONAS. I have only one other general question.

Do any of your major decisions receive universal approval by the contestants? Do you satisfy them all?

Mr. HYDE. No. The issues in which the FCC deals, seem to be the kind that generate differences of opinion, some of them pretty sharp. I would say this: There are many situations in which we must make decisions where you would have to concede that reasonable people might have different views. Our decisions generally do not have to do with what is right or wrong but are rather in the realm of judgment or discretion.

EXPEDITING COMMISSION DECISIONS

Mr. JONAS. That being so, and I suspected that would be the answer, has the Commission given any consideration to the advisability of

speeding up its own decisionmaking process with the understanding that you are not going to satisfy everybody, regardless of what the decision is? Why not go ahead and make one instead of studying it ad infinitum?

Mr. HYDE. If there is one policy that I have supported as strongly as it is within my power to do so, it is to get decisions made.

Mr. JONAS. You might as well. What is the use studying something from now on forever; you are going to have to make a decision. The thing that worries me, and maybe I am wrong, but I get the impression from your statement that you are just constantly and continuously studying these problems and never make a decision.

Mr. HYDE. Congressman, I think our record is better than that.

Mr. JONAS. Let me call your attention to page 9. You tell us that sometime ago the Commission established a group to do something. They made three separate alternative suggestions. They have been reported to the Commission and the Commission is going to decide some of these days what to instruct the staff to do next.

Mr. HYDE. We will probably decide to do that next week.

Mr. JONAS. When was this "sometime ago"?

Mr. HYDE. Shortly after our previous meeting with you folks here.

Mr. JONAS. About a year ago?

Mr. HYDE. That is right.

Mr. JONAS. When were the three alternatives investigated?

Mr. HYDE. They have been investigated.

Mr. JONAS. When were the results made known to the Commission?

Mr. HYDE. Since the first of this year.

Mr. COX. Less than a month ago.

Mr. HYDE. Yes.

Mr. JONAS. Maybe you are on the target on this but that is a rather general statement that does not give us much information as to how fast you are moving.

Mr. HYDE. I would like to give you a more specific one. Commissioner Cox made a review recently.

Mr. JONAS. While he is doing that, let him discuss the illustration on page 8. More than a year ago you say the Commission decided to make an investigation. That was made, and now by the end of this year the results should be available. That is 2 years.

Mr. HYDE. That has to do with sharing of VHF channel.

Mrs. JONAS. I understand, but does that take 2 years to make a decision?

Mr. HYDE. Yes, it does.

Mr. EVINS. In your justification, Mr. Chairman, you state that you have two or three lawsuits pending in the U.S. Supreme Court on certiorari.

Mr. HYDE. That is right.

Mr. JONAS. If you are going to get a lawsuit, you might as well face it and get it behind you.

Mr. HYDE. Yes, sir.

Mr. JONAS. Most of these cases that are contested are going to be contested in the courts anyway. I am just raising the question. I am not a Commissioner. I don't know how much time it takes but it seems to me that there is delay after delay and we might as well go ahead and face this issue, make a decision.

Mr. HYDE. There has not been any refusal of the Commission to face up to the issues in this area. It has taken time to get the engineering factual background before us.

Mr. BARTLEY. Field tests.

Mr. HYDE. It is necessary to make field tests to observe the operation. I would include this in engineering studies.

This thing has not dragged at all. I am sure that if you were to——

Mr. GIAIMO. Would you yield at this point?

Mr. JONAS. Just 1 minute.

I am not pointing out these two particular things. It is the impression I get from people who write me. Why does it take so long to get some decision made?

Mr. HYDE. There was——

DECISION ON LAND MOBILE USE OF TV FREQUENCIES

Mr. GIAIMO. Would you yield?

Is it not so, Mr. Chairman, that to get back to what Mr. Jonas said, the time has come to really make some decisions on this knotty problem?

I am not an expert here, but the way I see it, it is not really a question of engineering or further studies. It is a basic question of a conflict between the use of the space in this particular instance he is talking about. And naturally, I assume the UHF people are violently opposed to your making a decision in this area, but you have got to make these knotty decisions as to what is best for the public interest.

Mr. HYDE. Congressman, we have made the decision in principle to undertake a study of how to use space in this area. The problem of how to use it, what part of it, under what conditions, whether geographic sharing or whether it should be removal of stations off the air is a very complex one.

Mr. GIAIMO. The time of decision has arrived. In fact, I think it is passed.

Mr. HYDE. We are not procrastinating in that at all. We are moving just as fast as the nature of the problem will permit. I think this will be apparent as we get the papers before you.

Mr. GIAIMO. Except in answer to Mr. Jonas' question, general questions concerning the material on page 9 of your statement about establishing a group to study, you really told us this same thing last year. Now the year has passed and we are still studying it.

Mr. HYDE. Not really. Last year I told you we were prepared to study the feasibility of UHF questions and we are doing it.

EDUCATIONAL TV WORKLOAD

Mr. MARSH. How much additional load is being placed on the Commission because of the number of increased applications of educational television stations?

Mr. HYDE. There is not a great volume in that area. Educational TV is a matter of great interest to us. We do have a specialist in that area, Dr. Hilliard. We have had to give considerable attention to policy developed in this area. We were called upon to submit comments on the President's recommendation for Public Broadcasting Corporation.

Mr. HYDE. We do not have a high volume of applications such as we do in other services.

Mr. MARSH. Will the Public Broadcasting, ETV arrangement, will that in any way increase your workload?

Mr. HYDE. Yes; there will be some increase but not in the kind of volumes that we are talking about when we mention mobile services.

Mr. MARSH. You do not foresee a large increase in costs because of that?

Mr. HYDE. No. Not a real large one. No.

Mr. MARSH. One question off the record.

(Discussion off the record.)

Mr. MARSH. Back on the record.

I would like to say we appreciate the cooperation of the Commission working out the problems on the educational television station when this ran into a problem in the Shenandoah Valley.

Mr. HYDE. There will be some increases in the filing of educational applications if Congress should appropriate additional funds for matching grants. This in the past has stimulated an increase.

FEE SCHEDULE

Mr. WYMAN. Mr. Chairman, in the table that you put in the record in response to Mr. Jonas' request for rates that were set up, as I understand it, in 1964, did this table involve an increase over previous rates?

Mr. HYDE. This was the first. This table represents the establishment of a filing fee schedule. We did not have a charge prior to that time.

Mr. WYMAN. Did you participate in the deliberations that led to the structure of rates that were imposed in that table?

Mr. HYDE. I did, sir.

Mr. WYMAN. How much of a percentage of costs to a given applicant for a license, or for a major action by the FCC, would a filing fee involve in relation to his legal fees and other fees?

Mr. WYMAN. It would be one-hundredth of 1 percent?

Mr. HYDE. I do not have a percentage. We did not calculate a relationship there, but I can tell you that a fee of $150 or $10 is going to be a rather low charge in relation to other costs.

Mr. WYMAN. It would be very, very small?

Mr. HYDE. It would.

Mr. WYMAN. Does the Commission have an opinion with regard to fee schedules? Does the Commission think Congress should impose a fee schedule that is somewhat more relastic and perhaps pick up a half of the cost of appropriations annually to the FCC?

Mr. HYDE. I am not prepared to answer that question. We have not discussed it for that purpose.

Mr. JONAS. You can do that without congressional action?

Mr. HYDE. He asked me, did the Commission have a viewpoint as to whether or not a higher level of charges should be made.

Mr. WYMAN. I am not trying to put you in the middle at all. I understand from what you said that you started this in 1964. You did not particularly want to get into it and you thought perhaps if Congress felt that higher fees should be charged, then Congress ought

to act. I am asking you, do you think Congress ought to act to increase these fees?

Mr. HYDE. I would think that Congress might very properly make the policy here if there is to be any change in the basic concept.

Mr. WYMAN. Do you think the fees could be increased by action of Congress or by action of the Commission without damage to the industry?

Mr. HYDE. I believe we have it within our discretion to change the fee schedule which we promulgated under our present authority.

Mr. WYMAN. I understand that and I agree with you. Do you think it could be done so as to produce more revenue for the Commission without damage to the industry?

Mr. HYDE. That is one of the problems. It would not produce any more revenue for us. We get none of these fees. I think some changes could be made without damage to the industry.

Mr. WYMAN. I know, but it all comes out of the same place, the taxpayers. The fees go into the general fund?

Mr. HYDE. I would like to have that $4 million we collect in addition to our budget.

Mr. JONAS. You mean reduce it by that.

Mr. HYDE. That is not the way I put it.

Mr. JONAS. I do not believe you did.

Mr. BARTLEY. Mr. Chairman, I am a little bit confused about what the fee schedules could be under the existing law. They are supposed to be geared to the cost of processing.

Not to the value of the service. Congress could do something about that. The limitation, as I understand it, is that it is limited to the cost of the processing itself.

Mr. JONAS. Would you yield?

We cannot do anything about that. We are not a legislative committee. We just raise the question for discussion.

Mr. BARTLEY. Mr. Thomas kept telling me that he legislated this.

Mr. HYDE. I think he did in 1952.

NEW TECHNOLOGICAL DEVELOPMENTS

Mr. WYMAN. I would think as an observation, Mr. Chairman, that it might be possible to relate the charges imposed to some other factors than merely reflection of the filing costs administratively. We are trying to find enough money to meet the cost of the war and everything else right now.

Be that as it may, Mr. Chairman, just two other questions.

You said in your statement that you were at the doorway to many more technological innovations that will have a very significant impact on our way of living and on the economy of this country. You have me fascinated. Tell us something about that.

SATELLITES FOR DOMESTIC PURPOSES

Mr. HYDE. Yes, I would like to mention one of them.

What should be the use of satellite technology for domestic purposes? There are tremendous questions here. Should we authorize present carriers to use the satellite technology? Should we authorize the nonprofit corporation, such as the Ford Foundation plan? There

are many possibilities in this technology, all of which will raise social and economic questions for study. This is probably the most exciting one that is in the offing. We do have an investigation as to what should be the use of satellites in domestic purposes. We have a policy insofar as international communications are concerned. It is provided in the Satellite Communications Act of 1962. Pursuant to that, you know, Comsat was organized. Then Comsat in conjunction with other countries established what is known as intelset, an international consortium. There are a lot of questions, such as should domestic communications by satellite be provided by Comsat, by other carriers, or through some agency connected with the international group.

Mr. WYMAN. Are there other things that do not relate to satellites in space that are startling in themselves?

OTHER POSSIBLE FUTURE COMMUNICATIONS USES

Mr. HYDE. There are. Communications statesmen or perhaps prophets are envisioning the possibility of having each home a sort of a communications center, or having a center in the home, that would provide facilities to do your banking, marketing, deliver your newspaper, provide your access to current movies, provide access to television as is now the fact with the community antenna.

Mr. WYMAN. How do you get that newspaper in there? It comes in how?

Mr. HYDE. In a machine, facsimile. As a matter of fact, some years ago we did authorize what was called facsimile broadcasting. It was a bit cumbersome and never exploited, but now with improved techniques, engineers see the possiblity of delivering at your home a facsimile of a page that would be prepared at some central office.

Mr. WYMAN. If you wanted to permanently retain this in the home, there would be a printer as part of this equipment?

Mr. HYDE. Even a more convenient device than that has been suggested, perhaps the convenience of having equipment there to record the message in your absence, make it available to you when you come in.

Another application of storage and retrieval would be that of having a signal transmitted with the news broadcast which would activate your tape recorder to record it so that when you came back you could play the tape through your television set and see it at a time convenient to you.

REVIEW OF CATV REGULATIONS

Mr. WYMAN. The CATV regulations that you have promulgated do not deviate from your statutory authority; do they?

Mr. HYDE. All of our regulations are based on our authority subject to review by the court.

Mr. WYMAN. I know that.

Mr. BARTLEY. Some of us don't think so.

Mr. LOEVINGER. There is some dispute about that, considerable litigation.

Mr. WYMAN. That is all, Mr. Chairman.

Mr. EVINS. Mr. Talcott, any general questions?

COLLECTION OF FEES

Mr. TALCOTT. With regard to the fee schedule that you are going to submit, I would like to have some comparative fee schedule. How much does CBS pay for their license compared with a little operator of a license in a small town?

Mr. HYDE. Our schedule will include a breakdown giving the charges for all classes of stations. The network you mentioned, CBS, does have individual stations which are subject to this fee schedule. They will be indicated by the document that has been requested.

Mr. COX. The fees are in fact the same for WCBS in New York as they are for the station in Glendive, Mont.

Mr. TALCOTT. I think we should be interested not only in the amount of revenue that we can obtain for financing Government costs, or the costs of your commission, but the fees should be fair and equitable.

Mr. BARTLEY. We attempted that, Mr. Chairman.

I attempted that at the time the fee schedule was put in and would have recommended that the fee for radio broadcasting and television be based on their own valuation through their rate card, whatever the rate card said. The legal opinion was that we could not do that.

AUTHORITY FOR COLLECTION OF FEES

Mr. WYMAN. Would you yield there?

I read from the statute:

> It is the sense of Congress, and so forth, in respect to your rates, title 5 says that you shall prescribe therefore such fee, charge, or price, if any, as he shall determine, in case none exists, or redetermine in case of an existing one to be fair and equitable, taking into consideration direct and indirect costs to the Government, value to the recipient, public policy, and so on.

Mr. BARTLEY. As I recall it, the Budget Bureau ruled out the use.

Mr. HYDE. There was a difference of opinion among the Commissioners at the time the policy was established. The rules that were promulgated did represent a compromise in which the filing fee concept was basic rather than some relationship to earnings or revenue.

Mr. WYMAN. If you had a renewal fee in a station that really bloomed, shouldn't that renewal fee be increased proportionately?

Mr. HYDE. There are some tremendous policy questions involved in the question that you put there. Should the Commission undertake to establish itself as a tax authority? Should we presume to assess some charge against earnings? Rather, we stayed in the area of the filing fee concept. If you are going into this other area that you mentioned, I would think it would be something that ought to be reviewed by Congress.

My colleague, Commissioner Johnson, wants to discuss this subject.

Mr. EVINS. Commissioner.

Mr. JOHNSON. Thank you.

Since each of you has raised the question of filing fees, it seemed to me perhaps worthwhile to indicate there is some divergence of view on the Commission.

It is not uncommon for television stations in large markets to be transferred for, say, $20 million. The industry across the board is earning some $3 billion a year—taking this in as revenues. They are indi-

vidually paying license fees, I think, of roughly $33 a year. It is not simply a small part of their operating costs, it is de minimis. They do not see it at all. They spend far more than that on coffee in the executive suite. The telephone company is now taking in some $13 billion a year. The land mobile radio users, who are paying some $2 a year in license fees, claim to be contributing billions of dollars to the gross national product and I am sure they are in terms of value of radio to them.

My own view is that the user fee principle is eminently sound and there is simply no justification whatsoever for making the taxpayer pay the cost of running a regulatory commission like the FCC, or other comparable commissions, most of the activities of which go to service the industry.

The kinds of services provided by the Field Engineering Bureau, for example, would have to be provided by the broadcaster at his own out-of-pocket expense or by the industry or by some trade association were it not for the existence of the FCC. The budget of the agency is relatively small. I spent more on a single ship as Maritime Administrator than we spend here in a year in all activities of the FCC. I think that to take these multimillion-dollar industries and fail to assess them enough to pay this very modest budget of this agency is a very difficult fiscal decision to justify to the American taxpayer.

Mr. WYMAN. Mr. Talcott, if you will yield.

In New Hampshire, for example, we pay for our public utility regulatory commission out of charges on the regulated companies. The whole thing, assessments. I heartily agree with the statement the Commissioner just made, Mr. Chairman. I hope the legislative committee will do something about that.

SECURITY AND PROTECTION OF COMMUNICATIONS SYSTEMS

Mr. TALCOTT. Just one other question.

What do you do about security precautions? In the city of Washington for instance, a saboteur with 10 bombs could probably put out the whole communications system, telephone, radio, television, and all. Do you have any jurisdiction over the security of the communications system in the cities of our country?

Mr. HYDE. There is extensive planning in this area. We have a member of the Commission who has a special assignment in defense matters.

Mr. TALCOTT. This is not just defense. This is a Dr. Martin Luther King or Stokely Carmichael civil disorder matter—not them particularly but local saboteurs that could for one purpose or another seriously interrupt our whole communications system. It might occur at a time of national defense but it could occur entirely independently of foreign attack.

Mr. HYDE. There is considerable activity in this business of preparing against emergency in relation to all services. The telephone companies, for instance, do make provision for switching outside of the center. They do have the switching centers hardened, as they are called. That means protected against explosives.

In the mobile services, I mentioned it in my statement here—we cooperate in providing an allocation of frequencies which will permit

the police officer to change channels and thereby, we hope, make it more difficult for the unauthorized listeners to follow him.

Mr. TALCOTT. Your answer then is that you do have some jurisdiction?

Mr. HYDE. We do have some jurisdiction.

Mr. TALCOTT. You are aware of the serious problem?

Mr. HYDE. We are. As a matter of fact, this consideration was one of the reasons why although the time may have seemed long, we did push this improvement in police allocations as expeditiously as we did. We wanted to provide as expeditiously as we could against the challenges that are always coming up in these times.

Mr. TALCOTT. I have no other questions now.

METHOD FOR ASSESSING FEES

Mr. EVINS. Mr. Chairman, with respect to the fees charged by the Commission, the Federal Deposit Insurance Corporation and the Comptroller charge banks for examinations. The examination fee is based on the size of the bank. If it is a big bank they charge more, with a smaller bank it is less. Do you charge fees for inspection?

Mr. HYDE. I think we have a small one for ship inspections.

Mr. EVINS. Ship inspections only?

Mr. PLUMMER. Yes, sir.

Mr. JONAS. Nothing for broadcast station inspection?

Mr. HYDE. No charge.

Mr. EVINS. Your inspections are limited.

Mr. HYDE. That is right.

Mr. EVINS. You spot check and do not cover the waterfront.

Mr. HYDE. We couldn't.

Mr. BARTLEY. I think the only fee charged for ship inspections is for overtime services when it is necessary for the convenience of the ship; otherwise I think they are free.

Mr. PLUMMER. That is right.

Mr. EVINS. I think the Commission may want to look into this matter of revising and updating its fee schedules.

REDUCTIONS UNDER P.L. 90–218

Mr. Chairman, what about the 2-percent and 10-percent law that was passed in the closing days of last year; how did this affect the Commission?

Mr. SOLAN. We were reduced $462,000.

Mr. EVINS. How many unfilled jobs does the Commission have at this time?

Mr. SOLAN. We have about 30 that are unfilled now. We will have to attrition down about another 15 or so to live within the funds available after the reduction.

FUNDING OF EMERGENCY COMMUNICATIONS ACTIVITIES

Mr. EVINS. In your budget for 1969 you are asking for 43 more positions. I note 21 transfers. Tell us about the 21 transferred from the Office of Emergency Planning and Office of Civil Defense; are you taking over these jobs from them?

Mr. HYDE. Yes, sir.

Mr. EVINS. You are taking over the services and functions.

Mr. SOLAN. We supplied the manpower but now we are having to fund it.

Mr. LOEVINGER. We have had the men and manpower. There will be no change of manpower, personnel, or of function. It is simply a bookkeeping change in method of getting funds.

Mr. EVINS. We appropriate money to the Office of Civil Defense and the Office of Emergency Planning and they give the money to you to do the job?

Mr. LOEVINGER. Yes, sir. I have been supervising the people who have been doing the work. They have been doing it as a part of the Commission function.

Mr. EVINS. Is it your view that the corresponding reductions should be made in the other two agencies?

Mr. JONAS. I do not remember any reduction in OEP's budget for this.

Mr. SOLAN. OEP did not fund anything last year.

Mr. JONAS. Was this in last year's budget, same item? Why do you emphasize it this year?

Mr. LOEVINGER. As a matter of fact, we lost OEP financing last year and had to take funds out of something else. Otherwise we would have an activity which was simply being dropped which we couldn't do. We could neither stop paying salaries to employees of many years' standing, nor abandon a function that was imposed on us by executive order and statute.

It came out of other funds.

FISCAL YEAR 1968 TRANSFERS FROM OEP AND OCD

Mr. EVINS. How much was transferred to the Federal Communications Commission last year by the Office of Emergency Planning?

Mr. LOEVINGER. OEP. None. OCD gave us what?

Mr. SOLAN. $320,000.

Mr. EVINS. How much?

Mr. SOLAN. $320,000 from OCD.

Mr. EVINS. When was this executive order issued imposing this responsibility?

Mr. LOEVINGER. Early 1960's. 1961 or 1962.

Mr. EVINS. Have you been performing it as a delegated agency over the years?

Mr. LOEVINGER. Yes, sir.

STATUS OF A.T. & T. INVESTIGATION

Mr. EVINS. What is the status of the A.T. & T. investigation? This has been underway several years with a lot of public interest in it.

Mr. HYDE. The first phase had to do with a determination of or definition of the rate base, and overall rate of return.

We also after the first notice undertook to resolve the matter of separations or allocations of revenue requirements as between interstate and intrastate. We completed the first phase.

Mr. EVINS. When was the study initiated?

Mr. HYDE. In the fall of 1965. October 1965.

I might say, Mr. Chairman, that considering the size and scope of this and even in the light of projections of how much time was going to be taken, the Commission handled it with remarkable expedition. I think it was 21 or 22 months from the time the hearings began until we had a decision.

Mr. EVINS. You are looking at the rate base. What was the result of your investigation of the rate base structure?

Mr. HYDE. I will have to supply you the text of it. I cannot give you the figure here. We did establish a policy in this area for the first time in the regulatory history of the Commission. We did for the first time establish on a hearing basis a rate of return, a range of 7 to 7½ percent on the rate base as determined by the Commission. We resolved a number of long-pending issues.

Mr. EVINS. You established and announced a rate of return.

Mr. HYDE. Right.

Mr. EVINS. Beside the rate of return, what else has the Commission determined in this investigation?

Mr. HYDE. We made a ruling on the matter of separations. Actually we have at the same time issued a notice of rulemaking to take a further look at some aspects of that. We do have a presently operable separations policy. The further second phase of the study is underway. I cannot give you an estimate as to when we will conclude it, but I expect that we will follow through on that just as we did on the first phase.

UNOBLIGATED FUNDS IN FISCAL YEAR 1968

Mr. EVINS. What about your unobligated balances, if any?

Mr. HYDE. We are in the red right now.

Mr. EVINS. No carryover?

Mr. HYDE. No carryover.

Mr. EVINS. This has all been very interesting. You want 43 more jobs and about $2 million more. Let us go over these statements here. The budget reflects great concern that sufficient resources be provided. This has been the problem for years. You state that communication technology is undergoing dynamic changes. The dramatic increase in the radio and television industry was pointed out. There has also been a sudden growth of community antenna television service.

All of this supplements the Commissioner's fine statement. The day-to-day workload continues to grow at a rapid pace. Hasn't this always been the case?

Mr. HYDE. It has.

COMPUTER COMMUNICATIONS POLICY

Mr. EVINS. Then you state that a far-reaching inquiry into the relationship between computers and telecommunications has been initiated, and the Commission must also be given sufficient resources to implement the findings of this study.

Would it not be pertinent to let Congress take a look at the findings and then decide inwhat area you should proceed?

Mr. HYDE. Mr. Chairman, there may be some areas where legislation might be required. Our study comprehends the need for studying Com-

mission regulatory policy within our present statutory authority and also the possibility of making recommendations to Congress.

RESEARCH AND POLICY STUDIES

Mr. EVINS. In your "Other objects" section, in connection with your studies, this is one of the main things that you are interested in. More funds for this purpose.

Mr. HYDE. That is one page 128.

Mr. EVINS. Pages 128 and 129.

In 1968 the Commission requested and was granted funds to initiate major research and policy studies. Numerous independent groups have recommended more research programs requiring millions of dollars annually. How much does the Commission envision, if all of its studies are implemented, this would cost?

Mr. HYDE. We are asking for an additional $400,000 which would mean an investment of $1 million under our figure.

Mr. EVINS. The second phase would be $1.010 million. The Commission is presently engaged in developing long-range research and policy studies to define the major problems. You have not even defined the major problems.

Mr. HYDE. We have done considerable work in this area. We are now discussing it with the Budget Bureau.

Mr. EVINS. You picture these things that Mr. Wyman mentioned; picture telephones, facsimile reproduction of newspapers and magazines, electronic mail delivery, and merchandising via communications media. Is industry studying these things?

Mr. HYDE. Yes, sir.

Mr. EVINS. They are proposing these matters.

Mr. HYDE. They are, indeed; but I do take some satisfaction in the fact that the Commission initiated this study on the relationship of communications and computers before any other agency and before there was any general recognition of it by the industry.

Mr. EVINS. With all the expertise the Commission and the industry have, are you not able to come up with the answers to these problems without separate appropriations for more studies and reports?

You have not defined the problem.

Mr. HYDE. No. Mr. Chairman, you have combined two elements in that observation of yours. The task of analyzing the materials being submitted to us pursuant to our notice of inquiry under the computers inquiry would be a challenge to one of your better research organizations. Your observation about our research program in general, one of the things that we learned when we began to make plans to take advantage of the resources that have allowed us is that the business of conducting a research program was a highly specialized thing in itself.

Mr. EVINS. When we appropriate for this, are you going to let a contract to private industry to come up with a report for you?

Mr. HYDE. It won't be quite as simple as that. We are going to have to monitor and give direction and scope to this thing. We were well aware that if we started to just fund separate studies such as this one on computers and communications, we could very well have dissipated our money in several directions without getting the kind of overall

policy development that we need. That is one of the reasons why it has taken a little longer than might seem at first to be necessary.

Mr. EVINS. Isn't the Office of Telecommunications making studies in this area also?

Mr. HYDE. I think the fact that they are making their studies in this area is one of the reasons why the Budget Bureau is very much interested in looking at studies proposed by each of the agencies having any jurisdiction in the area. I think they expect to do a coordinating service there. I am speaking of the Budget Bureau.

Mr. EVINS. Place this text on research contracts in the record at this point, pages 128, 129, and 130.

(The pages follow:)

CONTRACTUAL RESEARCH STUDIES

In fiscal year 1968, the FCC requested, and was granted, funds to initiate a continuing major research and policy studies effort. Numerous independent groups have recommended a communications research program requiring millions of dollars annually. In the first year of the FCC's program, the Commission felt that $610,000 would be adequate for an initial survey of research needs and for meeting immediate problems which have been previously discussed with the Appropriations Committees of the Congress. Once the program is more fully defined, of course, its execution may well require many times that amount. As a second year's effort, the Commission is requesting $1,010,000 (an increase of $400,000).

The Commission is presently engaged in the development of a long-range research and policy studies program. The principal objectives of this program include the definition of major problems currently before the Commission and the anticipation of major issues which will develop in the future as an outgrowth of the rapid developments in technology. This program also will provide the Commission with appropriate data on alternative courses of action which could be taken effectively in resolving complex regulatory issues before they become imminent crises. The accommodation of new developments into the national communications structure involves difficult choices—difficult because the fixing upon one or more promising alternatives must generally be accomplished, like all useful planning, well before results flowing from experiences are available.

Communications experts predict that within the next few decades, it will become possible and perhaps commonplace to have in the home or office (in addition to television and radio sets), picturephone, facsimile reproduction of newspapers and magazines, electronic mail delivery, merchandising via communications media, and the means for electronic access to computers. Also, practically instantaneous reproduction and exchanges of documents between persons separated by many miles, and even continents. Data processing experts anticipate that there will be an increasing link between bulk data transmission and computers, e.g., man-to-computer communications in the nature of inquiry and response (credit checks, airline reservations, branch banking, stock quotations, etc.), information retrieval (library files, reference material, etc.), and computer-to-computer communications.

With these new developments, there may be fundamental changes in the methodology and techniques of affording communications service to the public, and in other aspects of communications technology. Until quite recently, the principal means of rendering this service have been the terrestrial facilities, both cable and microwave. With the advent of CATV systems, cable distribution of television and radio signals is becoming increasingly widespread. International communications by satellite is already in being and there are proposals pending before the Commission for a domestic satellite system or systems. Moreover, it appears that new distribution techniques may be developing in the microwave fields, using frequencies above 10 gigacycles. In addition, non-Government laboratories are investigating a radio pole line concept which also would use frequencies above 10 gigacycles for high-capacity microwave service via short hop (2 to 5 miles) repeaters atop metal poles approximately 70 feet tall. The development of coaxial cables with greatly expanded capacity over present cables also is underway. Significantly, too, there shortly may be developed millimeter waveguides with very high communications capacity. Also, work is presently under-

way looking toward the development of communications by laser beams, whose capacity is expected to be even greater. The critical significance of the latter two techniques in the context we are now considering is that these new forms do not require use of the valuable radio frequency specrtum, thus freeing this resource for other needs.

Major advances in electronic technology are certain to have a far-reaching impact upon our communications plant. While our communications requirements are thus certain to multiply, the radio frequency spectrum which must be used to carry much of these communications is limited.

Our long-range concern is with all types of communications and with the impact of developing technology, the extent to which distributional means alternative to radio (microwave and broadcast) might be employed, the resultant economies of spectrum utilization and alternative allocations of released frequencies, the comparative economics and technology of the various modes of communication, the availability of components for the newer modes, and the desirability of competition versus nonduplication of facilities. If the Commission is to be in a position to make the long-sighted decisions which these extremely difficult and complex matters will require, it is absolutely essential that it have the financial resources to permit the conduct of extensive research studies into the numerous and intricate scientific, economic, and social aspects of problems associated with new developments in communications technology. Research studies should be accomplished well in advance of the actual introduction to the public of such new developments.

It is our belief, and that of others who have studied the matter, that any expenditures on research and planning in the telecommunications field will be returned many times over to the American people and their Government in increased gross national product and the taxes it produces. There are also untold intangible benefits such as improved service, and safety for the general public.

An increase of $5,000 is requested for security investigations to cover the additional staff, including the emergency communications activities previously funded from other sources.

Expenditures in all other areas will be held to the fiscal year 1968 level except for a minor increase for other miscellaneous contractual services.

EMPLOYMENT INCREASE

Mr. EVINS. This ties in with what the chairman has requested.

Positions are increased by 43-plus, including 21 transferred. Then you show an increase of 74 employees.

Mr. SOLAN. In average employment. Increasing employment of the existing staff would bring the average employment level up without adding new positions, keeping the positions filled.

Mr. EVINS. You have not had to let any employees off, have you?

Mr. SOLAN. We had to leave positions vacant.

Mr. EVINS. You still have some vacancies now. How many at this time?

Mr. SOLAN. We have about 30 now and must let 10 to 15 more go unfilled.

Mr. EVINS. Thirty unfilled jobs at this time?

Mr. SOLAN. Right.

Mr. EVINS. I believe the chairman asked us to come in for a full committee meeting at a quarter to twelve. Suppose we suspend until 1:15.

AFTERNOON SESSION

Mr. EVINS. The committee will come to order. We will resume our hearings with officials of the Federal Communications Commission.

SUMMARY OF INCREASES

This morning we had a rather general discussion of the overall problems. This afternoon we will take a look at the specifics of the budget. The summary of increases is shown I believe on pages 7 through 14.

We will place these pages in the record.

(The pages follow:)

SUMMARY OF INCREASES

Personnel compensation	$1,441,352
Pay increase legislation	196,413
Maintenance of fiscal year 1968 staff	377,270
Activities previously funded by other agencies	296,064
Employment increases for fiscal year 1969	571,605

Personnel compensation increases by activity

I. Commissioners:

Pay increase legislation	14,165
Maintenance of fiscal year 1968 staff	13,714
Periodic step increases and one extra days' salary in fiscal year 1969.	
Employment increases for fiscal year 1969---1 man-year	8,000

Although no new postitions are proposed, a slight increase in employment will result from a reduction in the time professional staff positions will remain unfilled.

Total	35,879

II. Broadcast activity:

Pay increase legislation	30,717
Maintenance of fiscal year 1968 staff	77,895
Periodic step increases, 1 extra day's salary in fiscal year 1969, and promotions for trainee-level employees.	
Employment increases for fiscal year 1969--9.5 man-years	110,759

Only 1 new position is proposed for the broadcast activity. This increase will be used to simplify the present AM rules structure opening the door for more economical station operation and application processing. Lengthy rules will be condensed and clarified to prevent misinterpretation. While no additional positions are proposed in any other area, it is proposed to increase average employment time by 4.2 in the application processing area, 3.3 in the hearing area and 1 in the education and research area by reducing the period of lapse on vacant positions. It is anticipated that these increases will prevent backlogs from increasing further and possibly permit some reductions.

Total	219,371

III. Common carrier activity:

Pay increase legislation	22,383
Maintenance of fiscal year 1968 staff	53,858
Employment increases for fiscal year 1969--11.3 man-year	118,073

The 11.3 man-year increase proposed for this activity is to be spread throughout the various program areas. For instance, 2 man-years will be used to develop new procedures in the ratemaking process utilizing recent developments in economic and computational techniques. A 1.5 man-year increase will

be assigned to assist in the handling of the inquiry into the regulatory and policy problems presented by the interdependence of computer and communication services and facilities. Similar small increases are explained in the common carrier section of this document.

Total	$194,314

IV. Safety and special radio activity:

Pay increase legislation	17,038
Maintenance of fiscal year 1968 staff	33,567
Employment increases for fiscal year 1969, 5 man-years	57,469

The entire increase proposed for this activity will be assigned to regulatory functions, with particular emphasis on the land mobile radio services. This additional effort will be devoted to the exploration and implementation of methods to increase the use of frequency space now available to these services through channel splitting, geographic or other sharing, and through other operating techniques. The feasibility of sharing VHF and UHF television space also will be investigated. Less than 1 additional man-year of effort will be assigned to regulatory work in the aviation and marine services.

Total	108,074

V. Field engineering activity:

Pay increase legislation	49,100
Maintenance of fiscal year 1968 staff	93,397
Employment increases for fiscal year 1969, 7.3 man-years	76,278

In fiscal year 1967, the percentage of broadcast stations inspected during their license term was only 51 percent. Because of the increase in the number of stations, the increase requested is necessary merely to maintain the present relatively low percentage of inspections, 4 man-years.

The number and complexity of interference investigations has been steadily increasing over the past 5 years. This is to be expected in view of the technological expansion, population increases, and the increasing number of transmitters on the air. The public, industry, and Government demand relief from this interference. Such relief can be provided only by an increase in staff resources devoted to investigating severe cases of interference, 3.3 man-years.

Total	218,775

VI. Research and planning in communications technology:

Pay increase legislation	13,624
Maintenance of fiscal year 1968 staff	24,053
Employment increases for fiscal year 1969, .4 man-years	4,180

This increase of less than 1 man-year will be utilized in the frequency management area.

Total	41,857

VII. Citizens radio services activity:

Pay increase legislation	12,526
Maintenance of fiscal year 1968 staff	16,698
Employment increases for fiscal year 1969, 2.9 man-years	30,302

This small increase in staff will be utilized almost entirely in efforts to reduce the disregard for the Commission's rules in these services. During fiscal year

1968, and again in fiscal year 1969, we will have a small field staff devoted to citizens service enforcement activities. The proposed staff increase will be used almost exclusively in the handling of enforcement cases referred for the imposition of sanctions and related activities. Less than one-half man-year of the increase will be used in rules and other regulatory work in these services.

Total ---------- $59,526

VIII. Community antenna TV activity:

Pay increase legislation ---------- 12,807

Maintenance of fiscal year 1968 staff ---------- 8,533

Employment increase for fiscal year 1969, 8.5 man-years ---------- 88,816

Community antenna television is the newest major service to come under Commission regulation. There are now 1,800 systems operating. 1,800 additional local franchises authorized but not yet in operation, and about 2,200 applications for franchises pending in approximately 1,200 cities. The Commission requires that a local franchise be obtained before it will accept any filing under its rules. With the large number of franchises already granted or pending, it is inevitable that the Commission's workload will be exceedingly heavy in fiscal year 1969. Staff limitations in fiscal year 1968 will necessitate the carrying over of many applications and petitions into fiscal year 1969. We propose staff increases of 2.5 man-years for processing applications and petitions and 6 man-years for the heavy hearing workload that is anticipated.

Total ---------- 110,156

IX. Support activities:

Pay increase legislation ---------- 24,053

Maintenance of fiscal year 1968 staff ---------- 55,555

Emergency communications activities previously funded by other agencies, 21.5 man-years ---------- 296,064

These activities have heretofore been financed through reimbursements from other agencies and are not, therefore, increased costs to the Government. Such activities do not relate to actual war, imminent or threatened war and conditions of international tension alone. They apply to other emergency conditions such as earthquakes, tornadoes, hurricanes, floods, fires, and so forth. If systems are developed to operate under the latter conditions they will function under war conditions. These responsibilities are placed on the Commission by the Communications Act and Executive Order 11092.

Employment increases in fiscal year 1969, 6.1 man-years ---------- 77,728

These estimates contain funds to finance a planning staff (4 man-years) for the Commission. This staff will review and coordinate program memoranda for submission to the Bureau of the Budget; coordinate Commission programs in research; initiate and conduct special studies; prepare projections of economic and other long-range effects of far reaching Commission inquiries and rulemaking matters.

An increase of 2.1 in average employment also is proposed for the increasing workloads in the Office of the General Counsel.

Total ---------- 453,400

Personnel benefits	$59,548
Other obligations	596,100
21. Travel and transportation of persons	55,000

The largest single item of increase is $25,000 for emergency communications activities now being funded through this budget. An increase of $14,200 is proposed for field engineering activities which have been deferred because of budget limitations in fiscal year 1968. Each other increase (shown on page 125) amounts to $4,000 or less.

22. Transportation of things	3,000

This increase covers only the addition of emergency communications activities.

23. Rents, communications and utility services	97,100

In 1969 the Commission will be required to pay an additional $60,000 in telephone service costs due to our move to a new building.

Mail costs will be $11,100 higher due to recent mail rate increases and an added $17,000 for emergency communications activities.

Teletypewriter costs will increase $4,000 due to rate increases.

An added $5,000 is requested for rental of quick-copy machines and other labor-saving devices.

24. Printing and reproduction	7,200

No increase is being requested for printing in fiscal year 1969 except to cover printing for emergency communications activities now to be funded from this appropriation.

25. Other services	407,500

In fiscal year 1968 the FCC requested, and was granted, funds to initiate a continuing major research and policy studies effort. The principal objectives of this program include the definition of major problems currently before the Commission and the anticipation of critical issues that will develop in the future as an outgrowth of the rapid developments in communications technology. This program will provide the Commission with appropriate data on alternative courses of action which could be taken in resolving complex regulatory issues before they become imminent crises. In the first year of this program $610,000 was provided. As a second year's effort, the Commission is requesting $1,010,000 (an increase of $400,000).

An additional $5,000 is required for security investigations and $2,500 for miscellaneous contractual services.

26. Supplies and materials	3,200

This small increase will provide necessary supplies for new employees.

31. Equipment	21,300

This increase will permit the procurement of replacement office machines and furniture which had to be deferred in fiscal year 1968 for budgetary reasons.

32. Land and structures	20,000

In fiscal year 1968 a number of grounds improvement and safety projects at our monitoring stations had to be cancelled. We hope to be able to complete this work in fiscal year 1969.

PERSONNEL COMPENSATION INCREASES

Mr. EVINS. Mr. Chairman, you indicate that $196,413 will be required for the pay act increases.

Mr. HYDE. Yes, sir.

Mr. EVINS. You lay this responsibility to the Congress.

Mr. HYDE. We do.

Mr. EVINS. Can you absorb some of it?

Mr. HYDE. Not under the conditions under which we are operating. I wish we could.

Mr. EVINS. Were you able to absorb some in 1968, and how much?

Mr. SOLAN. $462,000.

Mr. EVINS. Maintenance of the staff, you show an item of $377,000. What is that?

Mr. HYDE. That relates to the statutory increases.

Mr. EVINS. Activities previously funded by other agencies. We talked about this this morning.

Mr. HYDE. We did and I think it was pretty well described by Commissioner Loevinger.

Mr. EVINS. You have done the work, you have the personnel, and the appropriations have been transferred to you.

Mr. HYDE. That is correct.

Mr. EVINS. Employment increases, $571,000. Are those your own?

Mr. HYDE. We are responsible for those.

Mr. EVINS. This is $1,441,000 for pay increases and promotions.

Mr. HYDE. Right.

INCREASES BY ACTIVITY

Mr. EVINS. We will not ask any questions about the Commissioners. The pay increase of the broadcast activity is $30,000.

Mr. SOLAN. That is right.

Mr. EVINS. And statutory increases, $77,895.

Mr. HYDE. Right.

Mr. EVINS. We notice on page 8, only one new position is required in the AM rules structure area. You say while no additional positions are proposed in other broadcast areas, we do propose to increase average employment time by 4.2 in the application area, 3.3 in the hearing area, and 1.0 in the research field, for a total increase of $219,371.

"Common carrier activity" pay increases are $22,383. Here you have an 11.3 man-year increase in the common carrier activity.

"Safety and special radio activity" is broken down to pay increases of $17,038, within-grade promotions, $33,567, and employment increases, $57,469. You say that this additional effort will be devoted to the exploration of methods to increase the use of frequency space by splitting channels, geographic, or other sharing, and through other operating techniques.

Is it possible to transfer some of your personnel between divisions?

Mr. HYDE. We do; but not as much as might seem possible in theory. They do tend to become specialized and even though we would wish the employees to get more general training, the priorities of work in each one of these places, and we do not have any that are really lacking in things to do—there is not as much opportunity for transfers as might seem possible.

Mr. EVINS. In the field engineering you are asking for an increase of 7.3 man-years, and a total increase of $218,775. You point out that the broadcast stations inspected during their license term—that is 3 years; is it not?

Mr. HYDE. Yes.

Mr. EVINS. Was 51 percent.

Mr. HYDE. That is all.

Mr. EVINS. You state that because of an increase in the number of stations, the increase requested is necessary merely to maintain the present relatively low percentage of inspections.

Mr. HYDE. That is right.

Mr. EVINS. How long does it take to inspect a station? You go in and you have nice carpeting and a good reception with pretty music.

Mr. HYDE. It varies. If I may, I would have Mr. Plummer answer that.

Mr. EVINS. Tell us what you do.

Mr. PLUMMER. First, let me say that is not the door we come through, the pretty carpeted one. We go out to the plant in a stone house somewhere to inspect the transmitting equipment and we do get back into that plush carpet area to look at the log. We have to look at the logkeeping, we have to see if all the meters are read right and agree with the logkeeping. We make some technical measurements. We can spend all the way from 3 hours to about a day.

Mr. EVINS. You do not charge them anything for giving them this inspection?

Mr. PLUMMER. No.

Mr. EVINS. Do you write up a report and say this is an excellent station?

Mr. PLUMMER. I wish they were all excellent.

Mr. EVINS. What do you find in these inspections?

Mr. PLUMMER. We find that in a certain percentage of them there are some basic violations of the rules, like they do not have an operator on duty sometimes an improper operator, sometimes they do not have the transmitters——

Mr. EVINS. If an operator goes out to get coffee while the record is playing, is there anything wrong with this?

Mr. PLUMMER. If he has a license there should be a licensed operator on duty all the time according to the act.

Mr. EVINS. Are most of the stations well operated?

Mr. PLUMMER. First let me say my boys have authority to not inspect the stations that they think are good stations.

Mr. TALCOTT. You do not investigate until you have a complaint, do you?

Mr. PLUMMER. Yes. We routinely inspect broadcast stations. As we say, 51 percent the last 3 years.

Mr. EVINS. How often do you go in, once every 3 years?

Mr. PLUMMER. Once every 3 years unless there is some special problem where it has been a bad station and we have to go back for reinspection or receive a request from the Broadcast Bureau to inspect something because of complaints. This is 51 percent of the stations inspected in a 3-year period. So in any one year it is a third of that 51, 17 percent inspected in 1 year.

Mr. EVINS. You said you do not look at the good ones. How do you know they are good, if you do not look?

Mr. PLUMMER. Our inspectors know that from experience. If you inspect a station three or four times and find everything is all right, the next time you are going through the town if you have limited time, that is the one you skip.

Mr. EVINS. If you find X station does not have an operator on, you advise him by letter. He puts an operator on and you do not see him again for the next 3 years.

Mr. PLUMMER. That is right.

Mr. EVINS. What else do you find?

Mr. PLUMMER. We find improper logkeeping, improper technical operation, they do not have the transmitter adjusted right. In some cases we find improper radiation in the directional antenna. Occassionally excess power.

BROADCAST LICENSE RENEWAL

Mr. EVINS. Do these radio franchises have to be reviewed every 3 years?

Mr. HYDE. They do on all of these matters.

Mr. EVINS. How many have not been recertificated?

Mr. HYDE. I cannot give you an immediate answer to that but I will be pleased to supply it. There are a significant number of stations that fail of renewal.

I may say where revocation proceedings have been inaugurated and licenses have been canceled; in other instances it becomes a matter of hearing on renewal.

Mr. EVINS. What about occasions where you approved a franchise for an operator, and his competitor does not want him in the field? You say since you previously bought and sold a radio station, you have been trafficking and we are going to cut you off the air. If for sufficient reasons you did not grant him a license in the first place, probably well and good. But if you take it away from him after he is certificated and operating, then are you not taking away property rights?

Mr. HYDE. There have been several instances where this question of trafficking has come up on application for a new permit or increase or improvement in facilities, but I do not know of any instances where we have undertaken to revoke a license.

Mr. EVINS. You take a man's business away from him after he has investments.

Mr. HYDE. I know of no instances where we initiated such an action.

Mr. EVINS. You have some matters in court now, I believe.

Mr. HYDE. There can be different interpretations of how the matter arises, but the question of trafficking will usually come up on an original application.

I might say the competition in the field and resistence of established stations against the development of new ones does not generate a lot of our work. We frequently get a protest against a transfer or a new grant by someone who is in business who does not want a competitor.

Mr. EVINS. Is this not a reversal of the Commission's previous decision?

Mr. HYDE. Yes.

Mr. EVINS. You give him a license to operate. A competitor began to feel the competition and you looked back in the record and found he previously had an interest and his partner forced him out or he sold it. Then you reverse your position and say we will take it way from him.

Mr. HYDE. I do not believe we reverse our position in that sense.

Mr. EVINS. You granted it to him first and then you took him off the air. Is that not a reversal?

Mr. HYDE. I do not know if you have a particular case in mind.

Mr. COX. I think the court required us to do that in one case where we had considered a charge of trafficking, and the majority had decided they would make the grant in any event. But this was a new station.

Mr. HYDE. This would be an appeal.

Mr. COX. The existing station appealed our grant to the man they charged with trafficking, and the court of appeals indicated——

Mr. EVINS. What constitutes trafficking? When a man is in business he is allowed to sell out if he gets a fair profit, is he not?

Mr. HYDE. That is a nice question. How to make a determination as to whether it is an investment or a speculation—trafficking—it is difficult. We have a rule which is designed to prevent trafficking or speculating in permits. It is our ruling against transfers within 3 years of a grant. Even that has its exceptions where the grantee has become insolvent or near insolvent or reasons of health. It is designed to prevent speculation.

Mr. EVINS. Actually, the Commission, once they certificate them, wants to see them successful?

Mr. HYDE. That is right.

COURT REVIEW OF COMMISSION ACTIONS

Mr. EVINS. And as these issues arise, then they have access to the courts?

Mr. HYDE. That is correct. And the law as construed by the courts does give a competitor a certain standing to oppose an application in our agency and to appeal to the courts. If he can show that his financial interests are going to be hurt, he has standing to oppose a new grant and to appeal in case we should make a grant.

Mr. EVINS. How many cases have you certificated a radio operator and within a short period of time taken him off the air?

Mr. HYDE. I think it would be a very, very low number, if any. I cannot recall a single case now.

Mr. JONAS. May I ask the General Counsel a question?

Are these cases de novo in the court or is the court bound by the finding of fact?

Mr. HYDE. Could I answer that? Mr. Geller is out. The review of the Commission decision, in general, is limited to questions of law.

Mr. JONAS. You find the facts and the court is bound by the facts if there is evidence to support your findings?

Mr. HYDE. Yes, sir. Of course the court may find legal error in the procedures, failure to give a hearing, failure to recognize standing. But, in general, a review of our decision is on questions of law. The court is not supposed to substitute their judgment on questions of policy. On questions of fact, there may be a question whether there was adequate evidence to support our finding.

Mr. COX. In collection of forfeitures, there is trial de novo; it is not by appeal. If a licensee or permittee does not pay voluntarily, we have to persuade the Department of Justice to institute proceedings in the district court, and that is tried de novo.

Mr. JONAS. You have to go to court to put him off the air?

Mr. Cox. No; this is to collect forfeitures where we have imposed a fine, perhaps for a violation Mr. Plummer's inspectors discovered.

Mr. HYDE. This is for repeated violation of rules.

Mr. Cox. Yes.

Mr. EVINS. We will not belabor the matter, but in one case, it has been called to my attention, they were on the air, had a large investment, were operating, and the Commission issued an order to stop broadcasting as of a certain date.

Mr. HYDE. I do not have the particular case in mind, but it could develop this way: that we would make a grant, thought it was sound and proper to do it, and on appeal we could be required to reverse our action. I think the circumstance that has come to your attention must be one of that kind. I know of no case where the Commission on its own initiative——

Mr. EVINS. There have not been many cases in which the Commission has ordered them to stop broadcasting after they have been in business with a large investment.

Mr. HYDE. No, sir.

Mr. EVINS. This is rather severe.

Mr. HYDE. This is capital punishment.

OTHER INCREASES BY ACTIVITY

Mr. EVINS. Research and planning. You are asking for a total increase in this activity of $41,857.

Citizens radio activity. We discussed this this morning. You want 2.9 more man-years, or an increase of $59,526. You indicate that you are setting up a staff devoted to citizens' service enforcement activities. Is this what Mr. Plummer was just now discussing?

Mr. HYDE. Not specifically.

Mr. EVINS. He was talking about the field engineering a while ago. Is this not citizens' service?

Mr. HYDE. It is, sir. He did mention broadcasting, but he does have to make these investigations of violations in the citizens' band as well.

COMMUNITY ANTENNA ACTIVITY

Mr. EVINS. CATV: You want a $110,156 increase for this. There are, you say, 1,800 systems and 1,800 additional local franchises which are authorized but not yet in operation. How much work does this place on the Commission?

Mr. HYDE. It puts a very substantial burden on it. It is a phenomena of the new technology, new service concept.

Mr. EVINS. You cannot do much until the courts hand down their decision in these cases. You have two, I believe, in the Supreme Court.

Mr. HYDE. That is correct, Mr. Chairman. We do believe that resolution of these legal questions——

Mr. EVINS. What are these?

Mr. HYDE. Copyright infractions.

CATV JURISDICTIONAL QUESTION

Mr. EVINS. And whether or not the Commission has jurisdiction. Is there a division in the Commission? Some feel you do, and others question it.

Mr. HYDE. That is right. The cases in court involve the question of copyrights and the Commission's jurisdiction.

Mr. EVINS. When do you expect these two cases to be resolved?

Mr. SLOSBERG. Arguments are next month. When the Court will render its decision is unknown. It will be in June, normally.

Mr. EVINS. If they resolve the jurisdictional question for the Commission, you would be in position to proceed much faster in settling matters now in limbo.

Mr. HYDE. I believe when they settle the jurisdictional question we will be absolved of the task we have undertaken or will have a firm legal position on which we can regulate more effectively.

Mr. EVINS. A major broadcast network sends out a telecast and CATV picks it up and sends it to a remote area. What is the jurisdictional question? It is all in interstate commerce, is it not, unless you pick it up in Alaska and discharge it in Alaska.

Mr. HYDE. Yes, and we have asserted jurisdiction based upon our general powers to regulate communications in interstate commerce.

Mr. LOEVINGER. The case in the court involves an antenna system that picks up a station broadcasting in the same State, transmits the signal by wire to homes within that State. It neither uses over-the-air transmission nor receives out-of-State signals. There are some of us who believe in this circumstance the Commission does not have jurisdiction.

Mr. COX. All of those signals, of course, before they were broadcast from Los Angeles were transmitted interstate from New York.

Mr. HYDE. You can see this is a very complicated field in which there can reasonably be a substantial difference of opinion.

Mr. EVINS. If the matter originated in Alaska and completed in Alaska, that would be intrastate, but if part of it originated outside of the State, regardless of the different method or techniques of transmission——

Mr. HYDE. I will put it this way. I do not think any two of them are alike.

REGULATION OF RATES OF CATV SYSTEMS

Mr. EVINS. Who then regulates the rates and the profits for the developing CATV industry?

Mr. HYDE. To the extent there is any regulation attempted, it is in the State. We have not attempted any.

Mr. WYMAN. Is there any regulation attempted within the States?

Mr. COX. Connecticut and Nevada. Of course a great many cities and counties, in granting franchises, have specified a rate and have indicated that if the rates are to be increased the franchise holder would have to come back and at least notify them. But they do not regulate in the sense of trying to relate revenues to investment in the conventional public utility sense.

Mr. WYMAN. Has the State pattern been in the form of the traditional public utility regulation?

Mr. COX. In both States it has been done by the public utility commission and they are, I assume, proceeding in the customary way.

CATV COPYRIGHT QUESTION

Mr. EVINS. On the matter of infringement, does the Commission envision this would be a case for the courts every time as to the degree and extent of infringement?

Mr. HYDE. We believe not. We believe there ought to be some amendments to the copyright law to take cognizance of this new development. We have cooperated with the Registrar of Patents in devising possible ways. Legislation is pending that has that purpose of finding an appropriate way to handle it under copyright law. In the meantime, there was a decision in the *Fortnightly* case which held community antennas were subject to copyright liability. This is now on appeal to the Supreme Court of the United States.

Mr. EVINS. This is a big new field and much of it is undecided until the court decision.

Mr. HYDE. Yes.

INCREASES FOR SUPPORT ACTIVITIES

Mr. EVINS. Support activities. You are asking for an increase of $453,400; $24,000 for pay increases, $55,500 for within-grade promotions, emergency communication activities from other agencies, $296,000, and then you have employment increases, $77,700, for a total of $453,000.

Again, these executive orders were issued years ago. This is not a new duty.

Mr. SOLAN. We have not been funding it though.

Mr. HYDE. This is the matter we discussed this morning.

NEED FOR PLANNING STAFF

Mr. EVINS. What is the Budget Bureau function with respect to these four or five new jobs you are asking on page 12?

Mr. HYDE. This is for planning. This is really one of the significant improvements we hope to make. This is looking toward more effective planning at leadership level.

Mr. EVINS. This is a job for assisting you in your planning of your special studies.

Mr. HYDE. Right, sir.

OTHER OBLIGATION INCREASES

Mr. EVINS. Rents are up $97,000. Mail costs, $11,000. Printing is up $7,200, and other services, $407,000. Is this your new studies?

Mr. HYDE. Yes.

CONTRACT STUDIES

Mr. EVINS. In the first year $610,000 was provided, but this has not been released by the Budget Bureau.

Mr. HYDE. That is right. But I want to state again that we have been studying how best to use these funds, anticipating that they will be released.

Mr. EVINS. Is it your feeling that if the Budget Bureau releases the funds, you will be ready to let the contracts, and before the year is out you could spend the other $400,000?

Mr. HYDE. We would expect to let contracts under this allowance of $600,000, which, by the way, only became available late last year. I mean under the appropriation, it is still not available from the Budget Bureau.

Mr. EVINS. Can you spend more than a half million in a year?

Mr. HYDE. I do believe that if we are going to do a job of the scope we need, we had better have an allowance in these dimensions.

LAND AND STRUCTURE ESTIMATES

Mr. EVINS. Can the purchase of the land and structures and the new equipment wait another year in view of the budgetary crisis and Vietnam?

Mr. HYDE. I would hope you would not ask us to defer it another year. Actually, we have had to curtail our expenditures for equipment this year.

CHARTS ON ACTIVITY COSTS

Mr. EVINS. We will take a look at the tables on pages 15, 16, and 17. We will place these three in the record.

(The pages follow:)

COMMON CARRIER INCREASE

Mr. EVINS. Common carrier, your average employment is up 11. You are completing your investigation of A.T. & T. What are you going to use these new people for in your common carrier activity?

Mr. STRASSBURG. I believe there is just an increase in the average employment. As far as positions are concerned, I do not feel it is an increase.

Mr. HYDE. That is right. But the need for increase in average employment relates not to the telephone investigation, Mr. Chairman, but to other activities, such as the nominal increase to keep up with the growing application file that we are getting in domestic, public, mobile, and land services.

Mr. EVINS. What do you mean, keep up with the applications?

Mr. HYDE. There is a constant, growing increase in number and difficulty of handling applications filed by common carriers for radio facilities, both point to point and mobile. As I say, they are increasing in number, in volume, and the interference problem is becoming more complex, which takes obviously more time to process and resolve.

STAFF ADDED FOR A.T. & T. INVESTIGATION

Mr. JONAS. I thought you added some people for the telephone investigation.

Mr. HYDE. Yes; a year ago we did add some people.

Mr. JONAS. How many?

Mr. HYDE. I do not recall. Actually, in the investigation, sir, we did not do much outside recruiting. We have been using existing staff. For the most part, we have been using about 20 people full time, or almost full time, of the existing staff.

As the other activities continue to grow, however, to that extent there has been very normal staff increases in the past year or two, but nothing of great significance attributable to the telephone investigation.

Mr. JONAS. Assuming that the workload in every other activity remained constant, you could eliminate some people since that investigation is practically over?

Mr. HYDE. I would say no, sir, because the telephone investigation consumes, in effect, a great number of our day-to-day activities. We always have personnel required for giving attention to the regular ratemaking problems that arise on a day-to-day basis by new filings by carriers, all of which have to be treated by personnel.

Mr. JONAS. I understand that is required to be handled by your regular personnel. Where are these special investigators that made the investigation upon which your hearing was based, and since the hearing has been concluded, the first phase of it?

Why do you not have a surplus of people?

Mr. HYDE. The point is we did not have a great increase for the purposes of the investigation.

Mr. JONAS. Fifteen?

Mr. HYDE. I do not think so.

Mr. STRASSBURG. We have 35 people assigned to the investigation, but they were not hired——

Mr. JONAS. Who did what they would have been doing if they had not been on this special case?

Mr. STRASSBURG. They were dealing with activities which are, as I said before, now encompassed by the investigation, such as, we have people who deal constantly with the problem of allocation which is very much cost allocation work, and jurisdictional separation issues which are very much involved in the telephone investigation. Instead of doing these things in the normal course of their activities which consist of joint studies with the State commissiones, which goes on on a regular basis, this is being done in the framework of the investigation now and has been done in the framework of the investigation.

Now that we are finishing that phase of the proceeding, many of these people are shifting over to the current issues in the investigation, the second phase of the investigation dealing with rate structure principles and the classification and allocation of costs among individual classes of service. So that I do not think, even should the investigation cease, it is going to mean we have 15 people who are surplus. Absolutely not.

EFFECT OF INVESTIGATION ON OTHER COMPANIES

Mr. JONAS. At any rate the decision finally in that case regarding rates will apply throughout the industry?

Mr. HYDE. Throughout the industry.

Mr. COX. Just the Bell.

Mr. HYDE. Any business with interstate telephone business. This is an investigation of Bell, but when we fix rates for their charges——

Mr. JONAS. General Telephone, for example.

Mr. STRASSBURG. General Telephone does concur in many of the interstate rate schedules of the Bell System. To that extent those rates we fix for Bell affect the charges collected by General Telephone in its territory.

Mr. JONAS. It will not require a separate investigation for every operator?

USE OF A.T. & T. INVESTIGATIVE STAFF

Mr. HYDE. We do not anticipate a new and separate investigation.

I would like to give a further reply about the question as to what happens to people that are engaged in the comprehensive investigation after that is completed.

When we undertook the normal proceeding to investigate A.T. & T., we did not start a new activity, we had actually carried on a continuing investigation of them from month to month, and annually we would usually have an informal conference.

In the case of the investigation we undertook a formal proceeding and the same people that had theretofore worked in the conference procedure were engaged in the formal hearing.

Mr. LOEVINGER. This may be irrelevant and may be irreverent, but it stimulates an observation that long bothers me.

Congress issues a very broad and quite ungeneralized mandate to regulate telephone rates, to regulate broadcasting in certain respects, sets up a commission. Then the Commission gets a lot of pressure from some group. Some committees in Congress, as this Commission is now getting from the Commerce Committee because it is, according to some of the members, not regulating enough, not being tough enough in looking at all of the details of the transactions that go on. On the

other hand, you come to the Appropriations Committee and they say, "Well, what do you need all of these people for, why are you engaged in all of these activities?" There are, I hope the members realize, inconsistent pressures emanating from Congress itself.

Mr. EVINS. We recognize that, Mr. Commissioner. We think you have excellent judgment and you are always looking at the public interest. You should keep the public interest in mind and decide whether or not you should proceed against this giant industry. The Commission should not be too concerned about a little pressure; they should be concerned with their statutory authority and the public interest.

Mr. LOEVINGER. We are concerned with something else.

The real decisions I think are being made here because when you decide how many people there shall be and what level you effectively determine activities.

Mr. EVINS. Does there always have to be a higher budget to be able to discharge your public interest responsibility?

Mr. LOEVINGER. No, sir; I do not say it does.

COMMUNITY ANTENNA TV

Mr. EVINS. Community Antenna Television, item 8. You go up 13 jobs since last year and you go up 29 jobs since 1967. Still these cases are pending in the courts and you really cannot proceed. You want 57 jobs in 1969 and you are still waiting for the court decision.

Mr. HYDE. We are doing the best we can in the meantime.

COMPENSATION COSTS BY ORGANIZATIONAL UNIT

Mr. EVINS. We will place the tables in the record and place the Commission's report in the record.

(The pages follow:)

BROADCAST ACTIVITIES

Mr. EVINS. We will look at the big division, broadcast activity. This includes AM and FM broadcasting, visual service (television), and several related auxiliary services. You need one more person, from 22 to 23, to draw up some more rules and standards.

You say in 1945 there were six television stations and less than a thousand radio stations. Today there are 750 television stations with over 6,000 radio stations on the air. Ninety-four percent of all homes have television; almost one out of every five has color television. People have television when they do not have a——

Mr. HYDE. Bathtub.

Mr. EVINS. Or do not have telephones. But the fact that there is this increased dimension is impressive.

Mr. HYDE. It is.

Mr. EVINS. Over the years broadcasting (particularly television) has accounted for an ever-increasing proportion of advertising expenditures. In 1957 radio and television accounted for less than $2 billion out of a total of $10 billion in total volume of advertising. In 1967 radio and television will account for almost $4 billion in advertising expenditure out of a total of about $17.5 billion.

In 1967 individuals will have spent over $5 billion for radio and television sets. In 1957 the amount spent by the public for these items was less than $2 billion.

We had a little testimony here the other day that they had a 100-percent mark-up on some of the sales.

These increases in advertising expenditures and consumer expenditures in broadcasting are substantially greater than the advances in the economy as a whole during the same period. During the last 10 years while the gross national product increased about 75 percent, advertising and consumer expenditures in broadcasting increased about 100 percent.

You say there are 140 educational televisions in 2,000 schools throughout the country. What is your instructional television fixed service, ITFS?

INSTRUCTIONAL TV FIXED SERVICE

Mr. HYDE. Commissioner Lee will give you a very nice exposition of that.

Mr. EVINS. Mr. Lee.

Mr. LEE. This is a few bands of frequences that the Commission made available for educational television. It is a point to point service and designed only for in-school training.

Mr. EVINS. Intrastate?

Mr. LEE. No; not necessarily. It's short range. It permits the school to use up to four channels at one time. We think it will replace the traditional educational station for in-school training and the so-called off-the-air educational station will be devoted to the type of thing they are talking about in the public——

Mr. GIAIMO. Is it between schools in the cities?

Mr. LEE. At a central point.

For example, in New York at the Empire State Building they are sending out these programs to 600 or 700 individual school buildings at the same time on four channels.

Mr. EVINS. The Commission allows all of the schools of Connecticut to receive it?

Mr. LEE. Yes, sir; they can receive it pretty well in Connecticut.

Mr. TALCOTT. Who runs this station?

Mr. LEE. This must be a duly incorporated educational body, a school system.

Mr. TALCOTT. So a high school system in New York City could devise the program and then Connecticut, for example, would be stuck with the New York high school program?

Mr. LEE. Not necessarily. It is not designed for Connecticut. You can receive it in certain sections.

I am sure in Connecticut there are applications either granted—I doubt if anything is on the air, but Hartford has shown some activity.

GROWTH OF BROADCAST STATIONS

Mr. EVINS. We will place this chart in the record on page 24. It shows you that the number of broadcast stations goes up from 4,000 to over 10,000. And the chart on the next page, 25, shows you that the personnel increase for the Commission is about 43 percent and the increase in the authorized stations is 108 percent. You have been going up pretty well with them until 1967.

(The pages follow:)

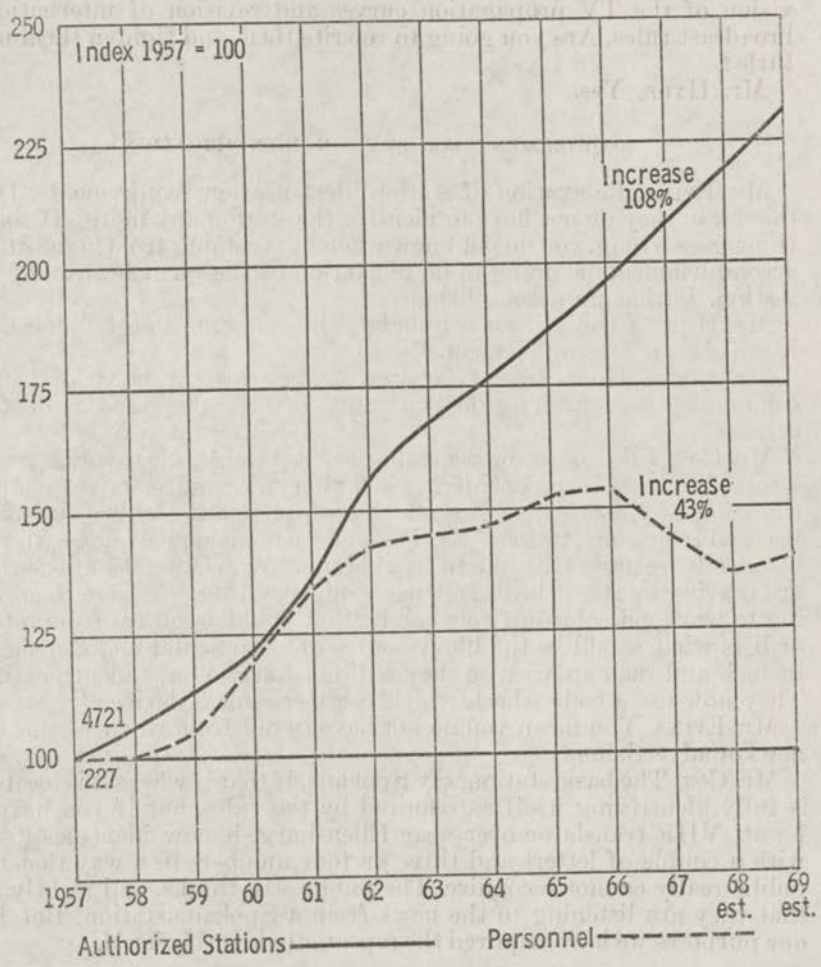
NUMBER OF AUTHORIZED BROADCAST STATIONS

	1960	1961	1962	1963	1964	1965	1966	1967	Estimate, 1968	Estimate, 1969
AM	3,581	3,757	3,886	3,997	4,061	4,097	4,153	4,224	4,257	4,307
Commercial FM	912	1,092	1,191	1,207	1,371	1,565	1,744	1,951	2,151	2,350
Educational FM	181	199	209	238	257	272	302	344	384	424
Commercial TV	653	650	654	666	668	689	735	787	845	895
Educational TV	64	67	79	91	107	125	144	183	225	270
Translators	302	704	1,483	1,716	1,913	2,023	2,187	2,352	2,500	2,648
Total	5,693	6,469	7,502	7,915	8,377	8,771	9,265	9,841	10,362	10,894

The following table shows the growth in the number of authorized stations compared with the increases in personnel engaged in broadcast activities since 1957:

Fiscal year	Number of authorized broadcast stations	Broadcast activity personnel
1957	4,721	227
1958	5,018	228
1959	5,405	239
1960	5,693	272
1961	6,469	306
1962	7,502	324
1963	7,915	330
1964	8,377	334
1965	8,771	347
1966	9,265	344
1967	9,841	324
1968 (estimate)	10,362	320
1969 (estimate)	10,894	319

The chart shown below depicts graphically the increase in authorized stations compared with personnel engaged in broadcast activities.



NOTE: The absolute figures on which the above chart is based are shown on page 24.

Mr. HYDE. We did mention processing these applications has become more complex and difficult. Please bear that in mind, too.

Mr. EVINS. In 1961, you had almost as many personnel as you had increase in radio stations.

Mr. HYDE. There certainly has been some recognition of the increasing workload.

SCHEDULED BROADCAST RULES WORK

Mr. EVINS. They are better trained and more knowledgeable. They should be able to process them faster.

Significant accomplishments in 1968 and 1967. You point these out. The last one says, accomplishments anticipated in 1968 include revision of the TV propagation curves and revision of international broadcast rules. Are you going to rewrite them and tighten them up a little?

Mr. HYDE. Yes.

REQUIREMENT FOR STATION IDENTIFICATION

Mr. EVINS. Relaxation of station identification requirements. Does this mean they do not have to identify the station any more? If something goes wrong, you do not know where it is coming from? One of the accomplishments is going to be relaxation of the identification of the station. Is that an accomplishment?

Mr. HYDE. I think if we can make it less onerous and still effective, it will be an accomplishment.

Mr. EVINS. How can it be onerous? They point with pride to the community station. Why do you want to relax the rule on identification?

Mr. COX. I do not know what that refers to unless it involves translators. We have been considering relaxing the requirements for identification of these translators which simply repeat the broadcasts of licensed television stations. Mr. Plummer has some problems with this because his people still like to be able to know what station it is they are hearing in case it is off frequency or something. We have been trying to work out some device whereby they could ascertain from tables or lists what would be the likely source of a particular channel signal in such and such an area, so they will not have to have identification. They now use a code wheel, which is a mechanical device.

Mr. EVINS. You mean you do not have to tell from whence came the news or advertising?

Mr. COX. The basic station, say Spokane, if that is where it is located, is fully identifying itself as required by the rules, but if you have a 1-watt VHF translator over near Ellensburg, it now identifies itself with a couple of letters and three or four numbers in a way that the public really cannot recognize. The public still thinks, and rightly so, that they are listening to the news from a Spokane station. But for our purposes we have required the repeater to identify itself.

REVISION OF MULTIPLE OWNERSHIP RULE

Mr. EVINS. Revision of multiple ownership 1-percent rule. What is that?

Mr. HYDE. The problem here is generated by the fact that stocks of many broadcast entities are held by investment trusts, by investment groups, and if you applied the multiple ownership strictly you would have an ownership of too many broadcast interests in one group. What we are striving to establish here is a rule which will prevent concentrations of ownership but at the same time not make a big issue.

NEWSPAPER OWNERSHIP

Mr. EVINS. You do not want a newspaper to own radio stations or a radio station to own newspapers?

Mr. HYDE. Not without our knowing about it.

Mr. EVINS. How far can a small-town newspaper go in acquiring and controlling radio stations and therefore having a monopoly on all of the news?

Mr. HYDE. The policy has generally worked this way: If there is a contest for an assignment, if there are alternate choices available to the Commission, they would in principle try to make a decision that would lead to diversity in the ownership of mass media communications. But there are quite a few instances when, although the frequency has been available for years, 20 years, let's say, and no one else applies and the local weekly newspaper proposes to put an FM station on the air, the majority of the Commissioners, judged by some actions, would probably say it is better to have a station, even though the local weekly runs it, than not to have it. Some other Commissioners feel this sets a bad precedent.

Mr. JONAS. You do not have to get down in the little weeklies. You have an example right here in the city of Washington. Two of them, do you not? Do not both newspapers own stations?

Mr. HYDE. The Star operates WMAL and the Post operates WTOP; that is correct.

Mr. JONAS. How did they get those things?

Mr. HYDE. The Post acquired its first radio station by purchase, subject to approval of the Commission.

Mr. JONAS. Was that contested?

Mr. HYDE. No.

Mr. JONAS. Nobody else wanted it or could afford it?

Mr. HYDE. We do not have an opportunity to consider alternate applications in assignment cases. I recall they applied for assignment of license or transfer of control of an AM station. They later went into the TV business and I think in that case they made an initial application.

Mr. EVINS. More news is generated and emanates from around here than any place I know. I think we have a lot of competition.

Mr. JONAS. In the morning newspaper field in Washington?

Mr. HYDE. I get my news off the radio.

Mr. GIAIMO. In the case of these stations you are talking about that are owned by newspapers, they do come up for relicensing every 3 years; do they not?

Mr. HYDE. At least every 3 years. They would be open for challenge.

Mr. GIAIMO. They would be open for challenge?

Mr. HYDE. They would.

Mr. GIAIMO. In fact, I suppose at times it has been challenged.

Mr. HYDE. There have been a few instances where an existing operation has been challenged by a new one.

Mr. EVINS. The question always uppermost in the minds of the Commission should be, does it serve the public interest?

Mr. HYDE. Yes, sir.

Every time we issue a decision, it is in the public interest. It says so in our legal form.

RESEARCH AND EDUCATION DIVISON

Mr. EVINS. Research and education. This activity is concerned with the study of social and economic factors affecting broadcast com-

munications, and the compilation of data on the condition and the status of the broadcast industry. Don't you know the status? It has grown to astronomical proportions.

Mr. HYDE. It is constantly changing and we have to keep conversant with it.

Mr. EVINS. Here is the fairness doctrine shown on page 28. You want to give the Democrats and Republicans fair treatment on the air.

Mr. HYDE. Yes, sir.

Mr. EVINS. We Democrats think we are not on the air enough and the Republicans think we get too much time. During the past several years the Commission has engaged in a growing number of proceedings requiring expert statistical assistance. Everybody is satisfied with this rule, are they not?

Mr. HYDE. No. However, no one can object in principle to the proposition that stations ought to be fair in treatment of issues of public significance.

IMPACT OF ALL-CHANNEL LEGISLATION

Mr. EVINS. Another matter is the probable course of UHF development in the light of all channel legislation. Tell us about this.

Mr. HYDE. We do have the all-channel legislation, as you know. The major objective of that was to provide a wider basis for the television industry. Absent the use of the UHF channels, we would have a system built on 12 channels only. UHF adds 73 channels, offers the prospect of a diversified competitive system, and I can tell you that since the passage of the all-channel law and its implementation by our rules, there has been a rapid increase in the distribution of all-channel sets. Some of this has been generated by the new interest in color. People would be buying new sets to get color and they would also get all-channel reception. This has encouraged a number of applications for permits to builld UHF stations.

Mr. EVINS. You are seeing an increased use of UHF?

Mr. HYDE. We are.

COMPLAINTS AND COMPLIANCE ACTIVITIES

Mr. EVINS. Regarding compliance and complaints, you say that your investigating and enforcing functions are a large part of the Commission's public relations activity in the broadcast field. These complaints must be answered.

What is the nature of these complaints?

Mr. HYDE. Of course, the complaints will come in many, many forms.

Mr. EVINS. This is your answering service.

Mr. HYDE. It is really our answering service. Some of the letters will raise questions of very serious concern. We will ordinarily direct them to the licensee and get his response to it. Others will be less significant.

Mr. EVINS. Do they come from competitors or the public?

Mr. HYDE. Listeners and viewers for the most part. We do get complaints from competitors sometimes about alleged violations of rules and perhaps anticompetitive practices.

Mr. EVINS. What can the Commission do and what has it done regarding quality of programing?

Mr. HYDE. Such a writer would be asked to address his comments to the licensee or the sponsor. If the letter seemed to be a complaint of some real base, we would send it to the licensee and ask him to give it his attention.

I might say just a letter of inquiry is a bit of a sanction which will sometimes get results.

Mr. EVINS. Will the Commission say that the quality of television programs has increased over the past several years?

Mr. HYDE. The answer to that question would vary according to the subjective judgments of whoever the viewer might be. The programs I look at are better ones according to my views.

Mr. EVINS. You pick only ones you like.

Mr. HYDE. That is right.

Mr. JONAS. If you cannot do much about the program, why have you kept up all of this monitoring?

Mr. HYDE. Our monitoring is really technological monitoring to guard against violations of technical rules and also to detect unauthorized operation. We do not monitor programs as such. There may be an exception to that where we have complaints of a broadcast that would violate the law such as the law against lotteries or to investigate fraudulent advertising, but this would be the exception. Section 326 of the act prohibits the Commission from censoring programs.

Mr. EVINS. What has the Commission done, if anything, regarding the quality of programs?

Mr. HYDE. We have adopted new renewal license application forms which set out a procedure which applicants are expected to follow. Specifically, he is expected to study his community and find out what can be done to improve or to satisfy the needs of that community.

And he is expected to present a plan related to that investigation in a way designed to satisfy the needs he has discovered.

This is how the problem is handled in the licensing function. We also attempt to perform our business in a way that will be conducive to a competitive system. In that connection, the Commission unanimously supported the concept of a public television corporation with the thought that this would give the impetus to education stations, would provide another alternative to listeners. We would expect a good educational station would be a spur to the commercial and commercial to educational stations.

Mr. EVINS. Is it the majority view of the Commission that the programing quality of television is better than it was a decade ago?

Mr. HYDE. It is better than it was a decade ago.

Mr. EVINS. Does not the Commission do something regarding compliance other than just referring the letter to the broadcast industry?

Mr. HYDE. On the matter of compliance?

Mr. EVINS. Don't you set up the standards when the licensing is up for renewal?

Mr. HYDE. Renewal licenses are checked against proposals and promises on which he obtained his last previous application.

Mr. WYMAN. You ordered some free time within a year or so for the W. E. DuBois Club on a complaint?

Mr. HYDE. We had a complaint under the fairness doctrine and after some considerable study we issued a notice to the station, I think WHN New York, saying that under the fairness doctrine we believed there should have been an opportunity for a reply by the DuBois Club. I should not undertake to give the Commission's reason from memory like this. I would be glad to supply you a copy of the ruling.

Mr. EVINS. Supply that for the committee.

(Note: The information was supplied to the committee.)

Mr. WYMAN. Was that a unanimous decision?

Mr. HYDE. No, it was not. Commissioner Lee disagreed with the views of the other commissioners.

Mr. WYMAN. But it was 6 to 1?

Mr. HYDE. I believe that is right. The Commissioners can tell me.

(The Commission's Public Notice on this matter follows:)

WHN, NEW YORK, N.Y., ORDERED TO MAKE TIME AVAILABLE TO DUBOIS CLUBS FOR RESPONSE TO EDITORIAL

Storer Broadcasting Co., Inc., licensee of radio station WHN, New York, N.Y., has been notified by the Federal Communications Commission that it must make time available to the DuBois Clubs of America for a reply to an editorial attacking the organization.

William M. Kunstler, attorney for the DuBois Clubs, had complained to the Commission that Storer had refused a request for time to answer announcements describing the DuBois Club as "Marxist," "Red," "founded * * * and controlled by American Communists" and "foremost among the activities currently directed against our young people * * *."

Storer contended that the announcement was "factual in nature * * * was based on official government source material * * *" and "does not discuss a matter * * * reasonably subject to controversy, or one as to which there are significant opposing viewpoints."

The Commission, in a letter to the licensee, stated that the announcement constituted a personal attack and under the fairness doctrine, the DuBois Clubs must be notified and given an opportunity to respond.

The Commission points out that the controversial issue here is whether the DuBois Clubs are established and used by the Communist Party of the United States to "subvert the minds of American youth." Storer contends that its statement is not controversial since it reflects statements made by the Attorney General and the FBI in a petition filed before the Subversive Activities Control Board. The DuBois Clubs are legally contesting the action. The Commission states that "As we have stressed in other similar areas, the truth or falsity of the attack is not a matter for determination by this Commission * * * the licensee cannot aver that the attack is true and therefore there is no need to let the public hear the other side; that rather the other side must be given an opportunity to reach the public, which will thus be in a position to make its judgment on this issue which the licensee chose to present as one of importance to his audience."

Action by the Commission, January 31, 1968; by letter. Commissioners Hyde (chairman), Cox, Loevinger, Wadsworth and Johnson; with Commissioner Bartley concurring in the result and Commissioner Lee disenting and issuing a statement (attached).

Letter by the Commission is attached.

JANUARY 31, 1968.

WARREN C. ZWICKY, ESQ.,
Vice President and Washington Counsel, Storer Broadcasting Co.,
Washington, D.C.

DEAR MR. ZWICKY: This is in reference to your letter of July 31, 1967, commenting on the May 19, 1967, fairness complaint filed by Mr. William M. Kunstler on behalf of the W. E. B. DuBois Clubs of America.

The editorial broadcast by Storer Broadcasting Co. on February 25, 1967, stated, inter alia: "The Communist Party of the United States is waging an intensive campaign to subvert the minds of American youth. Foremost among the activities currently directed against our young people is the new Marxist youth organization known as the DuBois Clubs of America founded at a special meeting in California dominated and controlled by American Communists. The Reds mispronounce their group, boys club instead of the DuBois Clubs to deliberately deceive prospective members * * *."

Mr. Kunstler's letter of October 11, 1967, to the Commission asserts "unequivocally that the entire editorial insomuch as it pertains to the DuBois Clubs is untrue." Mr. Kunstler also asserts that the editorial raised the issue of "whether youth groups in general are Communist dominated and controlled" and that the editorial "casts suspicion on all youth groups in general." We can find nothing in the editorial attacking any youth group other than the DuBois Clubs. The argument that because the DuBois Clubs of America is alleged to be "foremost among the activities directed against our young people" by the Communist Party, other "youth groups" are likewise implicated, is not persuasive.

Mr. Kunstler has also stated the issue raised in the editorial as whether the DuBois Clubs are "Communist dominated and controlled." Exception was taken by Storer to this statement of the issue on the ground that it is "not responsive to the broadcast" because the term "dominated and controlled by American Communists" was applied only to the alleged "special meeting" at which the DuBois Clubs of America was founded. But the clear thrust of the editorial is to characterize the DuBois Clubs as a Communist organization, against which the American public, and particularly American youth, should be on guard.

This constituted a personal attack upon the DuBois Clubs. Under established Commission policies, where a personal attack occurs in connection with the discussion of a controversial issue of public importance, the person or group so attacked is to be notified and given a reasonable opportunity to respond. Public notice of July 1, 1964, page 10420. The controversial issue of public importance here is whether the DuBois Clubs is an organization established and used by the Communist Party of the United States to subvert the minds of American youth. Storer believes that it is, and therefore deemed it important to alert its listeners to this danger. The DuBois Clubs denies that it is a Communist organization and seeks an opportunity to present its side.

Storer, while conceding that the question is a difficult one, urges that the statements in its editorial are not controversial within the meaning of the fairness doctrine because they reflect statements made by Attorney General Katzenbach and the Federal Bureau of Investigation, particularly those made by the Attorney General in his March 4, 1966, verified petition filed with the Subversive Activities Control Board (SACB). Storer urges that "the contrary viewpoint of an organization which has been governmentally identified as Communist established, dominated, and controlled, is not a significant opposing viewpoint within the meaning of that doctrine."

The DuBois Clubs is contesting the validity of any action by the SACB. In effect, Storer's argument is thus that if a mayor were indicted for embezzlement, it could editorially condemn the mayor on this ground, and need not afford time for response, since the allegations in the indictment suffice to take the matter out of the controversial area. As we have stressed in other similar areas, the truth or falsity of the attack is not a matter for determination by this Commission. The short answer is that in these circumstances the licensee cannot aver that the attack is true and therefore there is no need to let the public hear the other side; that rather the other side must be given an opportunity to reach the public, which will thus be in a position to make its judgment on this issue which the licensee chose to present as one of importance to his audience..

At the risk of going over well plowed ground, we think that the latter point should be amplified. We have stressed that our holdings, from the *Editorializing Report*, 13 F.C.C. 1246, 1947–48 (1948) to the recent *Pacifica* decision (36 F.C.C. 147, 149 (1953)), and *KTYM* decision, 4 F.C.C. 2d 190 (1966), appeal pending, *Anti-Defamation League* v. *Federal Communications Commission*, case No. 20770 (C.A.D.C.), have sought to promote the fullest possible robust debate on public issues. We recognize that it may be urged that our action here is inconsistent with the above objective—that it will inhibit Storer and other licensees from present-

ing such robust points of view as the editorial in question. We do not believe that it will do so.

If a licensee determines that it serves the public interest to broadcast or permit to be broadcast a personal attack on some group or person, including public officials, we believe that he will do so, and will not be deterred by the consideration that there will be a right of reply. The premise of the contrary position is that the licensee is willing to alert his audience concerning an important issue, only if he can be sure of doing so in a one-sided manner; that he does not trust the public to hear both sides and then make up its mind. But as the courts have noted in first amendment cases (e.g., *Associated Press* v. *United States*, 326 U.S. 1 (1944)), this Nation has staked its all on the proposition that the public should be given the opportunity to hear the fullest, most wide open debate on public issues. Responsible broadcasters recognize this, and when they have covered such issues, take steps to persent the other side. (See *Hearings Before the Communications Subcommittee of the House Interstate and Foreign Commerce Committee*, 88th Cong., 1st sess., p. 87; *Letter to WEAL*, FCC 64–744, July 29, 1964.) It is our experience over the years of operation in this area that there has been no indication of inhibition of robust debate by our fairness policies; indeed, such debate has been increasing, not declining, during the last 7 years when the personal attack principle was being developed and brought specifically to the notice of all licensees (e.g., Public Notice of July 26, 1963, FCC 63–734).

Even assuming that there were an inhibiting factor, which has not been demonstrated, we believe that it could affect only a few, and that the vast majority of broadcasters, acting responsibly in the public interest, will follow these fairness precepts and will continue the trend which we observe toward more and more "robust, wide-open debate." Of the few who might be inclined to present an attack or an issue only if they can do so in a one-sided manner, most will, we believe, adjust to the necessity of affording the public an opportunity to hear both sides. A decision to avoid presenting controversial programing altogether because of the requirement of fairness would be clearly inconsistent with the obligation "under this chapter to operate in the public interest and to afford reasonable opportunity for the discussion of conflicting views on issues of public importance" (Communications Act, sec. 315(a), 47 U.S.C. sec. 315(a)). Finally, we cannot properly obtain a contribution to public debate by adopting the concept that the public airwaves may be restricted by the licensee solely to the presentation of views which he espouses or with which he agrees. Such a course is inconsistent with the act (sec. 315(a)) and its underlying concept that the broadcaster, for the duration of his license, has the preferred position of determining the material to be presented over his frequency and thus must act as a public trustee. We believe, therefore, that even assuming some minor inhibiting factor, the fairness principles, including our action here, affirmatively promote, rather than hinder, the above-quoted policy objective in KTYM, and are "essential to insure 'the maintenance of radio and television as a medium of free speech and freedom of expression for the people of the Nation as a whole "Editorializing Report," 13 F.C.C. 1246, 1248)'" (KTYM, supra, at p. 217).

Your letter points up the "careful and good-faith consideration" given by Storer to the matter, and that "it welcomes the Commission's views." We recognize that such consideration was given. We hold, upon the basis of the foregoing, that time should be made available to the DuBois Clubs of America for reply reasonably related to the attack in the editorial; namely that the DuBois Club is a "Marxist" or "Red" group, "founded at a special meeting in California dominated and controlled by American Communists," which is "foremost among the activities currently directed against our young people" by the Communist Party of the United States in "an intensive effort to subvert the minds of American youth," and which mispronounces its name "boys club instead of the DuBois Clubs to deliberately deceive prospective members." (See letter to WALG, 4 R.R. 2d 277).

By direction of the Commission.

BEN F. WAPLE, *Secretary.*

DISSENT BY COMMISSIONER ROBERT E. LEE

I strongly support the Commission administration of the so-called fairness doctrine. I believe it to be the right of every citizen to receive all sides of controversial issues. I depart from this support in this case, however, since I believe that

a degree of judgment must be exercised at some point. As far as I am concerned, the definition of a controversial issue of public importance does not include the issue of communism (3 RR 2d 175) nor of atheism (5 RR 2d 263) as we have previously held. The fairness doctrine ends at the international border and I would not take the responsibility of turning the microphone over to those who would advocate the overthrow of the Government by other than the democratic process.

We cannot look with equanimity upon those whose words or actions have already left in their wake, a trail of violence. "Overthrow of the Government by force and violence is certainly a substantial enough interest for the Government to limit speech. Indeed, this is the ultimate value of any society, for if a society cannot protect its very structure from armed attack, it must follow that no subordinate value can be protected." *Dennis* v. *United States* 341 U.S. 494.

In this case the W.E.B. DuBois Club has been labeled by responsible Government sources as being a creation and the invention of the Communist Party. It is not necessary to list the lengthy documentation of this conclusion but I find it persuasive.

Suffice it to say that the "indictment" of the organization was made on March 4, 1966, when the Attorney General petitioned the Subversive Activities Control Board to order the DuBois Club of America to register as a Communist-front organization pursuant to the provisions of the Internal Security Act of 1950. The petition was buttressed by an affidavit documenting the evidence. The clubs went to court alleging the unconstitutionality of the Internal Security Act of 1950. The court refused to enjoin the Attorney General; however, it did grant a stay of hearing until the appeal could be heard in the Supreme Court.

It is my understanding that hearings before the board are scheduled in New York within a matter of weeks. Under these circumstances the Commission would now give them the airways to help fight their case. If the Commission would not deny the right to the airways, would it not at least be prudent to take no action pending the outcome of litigation. To provide them air time at this time seems to me to be an overdose of tolerance. Is the neo-Nazi political party to be next?

EFFECT OF TV ON VIOLENCE

Mr. GIAIMO. Bearing in mind that the Government cannot and should not censor, one of the areas of great concern—and I am curious as to what the Commissioners' views or thoughts on this may be or what kind of work or studying you may be doing concerning this—one of the great concerns we are facing in our urban problems, as you know, is the charge which is repeatedly made by many people that television is making a substantial contribution to violence because of the sensationalism involved and because of the swiftness with which television can and does cover a newsworthy item such as a riot. And more and more we hear concern expressed that television is not contributing toward a solution of this problem but is actually inflaming it.

I am wondering what, if anything, the Commission has done in this area to study it, to look at it, perhaps to make suggestions of some type.

Mr. HYDE. We, of course, are aware of the comment that has been made on this subject, that some folks have suggested in the interest of getting the news story a station may have cooperated in the projection of a riot situation. We have been rather concerned about the possibilities that if we undertake to investigate the dissemination of news and distribution of news, that our position as licensing authority would make that to look like an untoward interference in dissemination of news.

Now, since there are other agencies undertaking an investigation of this, we have thought as the licensing authority it would be best if we lend such assistance as might be required of us but let this matter of investigating dissemination of news to these other agencies.

There is the Commission on Civil Disorders, which is giving a substantial attention to this and I believe there is a Senate committee that is also studying it.

ACCURACY OF NEWS REPORTING

Mr. EVINS. I received a call one night from a respected judge. He said:

I just looked at a television report on the war in Viet Nam. The newsman said a whole division was wiped out. My son is a lieutenant in that division. I called the Pentagon and they said "We have no list of any officers having been killed at all."

The television report said,

The division was wiped out.

This is inaccurate reporting.

Mr. HYDE. There are occasions when we are sorely tempted to abandon our principles against Government censorship of news or opinion.

Mr. EVINS. One of the prime objectives of the Commission is to promote competition.

Mr. HYDE. That is right.

Mr. EVINS. Perhaps with this all viewpoints will be promoted.

Mr. HYDE. The public will be given an opportunity to choose. I grant you that this is not as good an answer as we might wish for.

Mr. GIAIMO. It is not. It is not a question of competition. The dull person does not make news. The inflammatory person does.

Mr. HYDE. Hasn't this always been a problem of the press?

Mr. GIAIMO. Yes. I do not know the answer at all. I am just curious as to whether your Commission has concerned itself with this.

Mr. LOEVINGER. I have personally concerned myself with this. I have made some investigations and I think there are some examples of very bad performance by television, and by radio. There have been examples of excellent performance by television. There is one famous example in San Francisco where a television station is credited with having prevented a riot, as apparently a riot was getting underway. At the request of the mayor, one station made arrangements to cancel its amusement program for the afternoon and broadcast a baseball game thought to be very attractive to the men who might riot, and by putting on the baseball game they are credited largely with preventing a riot. However, in my judgment it is not the business of the FCC to pass judgment on any of these things. I have made an attempt to analyze the diversity of news sources, and the diversity of broadcasting news sources today is vastly greater than the diversity of print news sources. In fact, it is greater than the diversity of print news sources have ever been in this country.

The maximum number of daily papers we had in this country was somewhere around 3,000. We are now down to around 1,700, whereas the diversity of broadcasting sources is considerably greater than that. I think that the abuses in news reporting is part of the price that we have long since decided to pay for a free press and free discussion. I personally am persuaded it is worth the price.

Mr. LEE. I did a little research in that area. I made a speech at Notre Dame recently in which in effect I detailed some of these examples that you mentioned. I cautioned them.

As the judge said:

We are not about to be censors, but their obligation is to report the news, not to make it.

I would like to send copies of it to the members, if I may.

Mr. EVINS. We would be delighted to have that.

(The information follows:)

REMARKS OF COMMISSIONER ROBERT E. LEE, FEDERAL COMMUNICATIONS COMMISSION CONFERENCE HELD AT THE CONTINUING EDUCATION CENTER AT THE NOTRE DAME UNIVERSITY, SOUTH BEND, IND., JANUARY 24, 1968

RESPONSIBILITIES OF STATIONS IN NEWS PRESENTATION

A network commentator, covering the 1964 convention, spotted a civil rights demonstrator who had prostrated herself on the convention floor. He told the control room director, who replied that it would be a few minutes before he could put him on the air. When the commentator asked the woman how long she planned to remain there she raised her head slightly and asked "How long would you like?" The responsible judgment of what constitutes news is most demanding on the TV news media. I believe this requires something more than a beard and a guitar. Are they looking for news or viewers? I think you should look for news.

"When people see it on TV they are experiencing it for themselves," said Fred W. Friendly, one-time head of CBS News and now professor of Columbia University Graduate School of Journalism. "It must be true, the viewer feels because he is seeing it. We cannot tamper with that trust or we will lose everything." NBC issued a directive last summer stating that no newsman is to arrange, modify, stage, schedule, or reenact a news event. I believe most radio and TV stations now have similar instructions or an operating policy.

Like all rules, there are exceptions which require responsible judgment. Clearly there would be no problem when a presentation to an honored guest is reenacted. But should a newsworthy person be asked to walk fast or slow to better cover a demonstration in the background? What if background music or applause is added to a program? Consider the cameraman who missed filming a hoodlum demonstrator throwing a rock through a window. Fortunately the broadcaster has already answered most of these questions and presents the event unchanged as it happened. This responsibility assumed by broadcasters is no accident; it is their direct recognition of the right of free speech granted by our Constitution, which right has repeatedly been reaffirmed by the courts, the Communications Act and the rules and policy of the Federal Communications Commission.

The freedom enjoyed by the broadcast news media is not absolute. It is difficult at best to focus on a human being or event which presupposes that an initial decision has tentatively been made and that this particular person or event is newsworthy. TV coverage even though entirely complete and accurate can, because of lighting, camera angle and other technical factors, completely distort the news. Thus there is the responsibility of reporting pictorially, what was said or done, without technical distortion.

In this and other respects, the broadcast media is at a disadvantage with the print news media. The print media enjoys the luxury of evaluating the newsworthiness of a President's statement or other important event after it has occurred rather than carrying them as they occur. Consider coverage of an automobile race, live on TV. Normally you would expect to film the skill of the drivers with possibly the main event bring an interview with the winner. But what if the main event is a tragic and painful death? The TV newsman here must make an instant decision which balances the public's right to know consistent with good taste and the modes of the times.

When TV seeks to cover an important national figure, conditions may apply which would not appply equally to the print news media. Recently this entire matter was brought to the public's attention when Richard S. Salant, president of CBS news, frankly told viewers that an interview with the President had been subject to some degree of control from the White House. TV coverage may often involve the power of some degree of veto as a predetermined condition of the interview.

There are also situations in which the very nature of TV coverage require the newsman to be conversant in either local, national or international affairs. On-the-spot radio or television news coverage may inadvertently jeopardize a delicate local, national, or international situation. A delay in reporting such an event may properly be indicated. I do not classify this as censorship. It simply reflects responsible self-discipline in making judgments based on a great deal of experience and professional integrity on the part of the newsman.

TV has an added hardship in that it serves both as a news reporting medium and platform for various political views. Unlike the editorial section of a newspaper or magazine, the TV viewer is not always able to emotionally or intellectually distinguish between the two. TV bears a responsibility in news presentation which is greater than any other news media before in our history. Mistakes have been made and will be made in the future. However, the broadcast news media on the whole has met, in my opinion, and dealt with each new challenge as it appeared. This has been accomplished through the broadcasters' self-imposed code. This responsible approach is the only way the forward-looking responsible broadcaster maintains the rights granted him by our Constitution and the corresponding duty which any right involves.

We now have a new factor to deal with. This is the ETV station and the support it will receive from the newly created and as yet unfunded Public Broadcasting Corp. I believe that the proper acceptance of the ETV station can bring a new dimension to both the commercial and ETV stations.

Network and locally originated news has matured and, in my opinion, performs a very, very good job. I see no reason why ETV stations under the Public Broadcasting Act should compete in the area of regularly scheduled hard news. The ETV station can perform a worthwhile service in analyzing the news, panel shows and editorials in depth.

I recognize, of course, that there is no such proscription in the enabling legislation and as a matter of fact, the Carnegie Report which is the catalyst of the Public Broadcasting Act makes much of the contribution that they may make in the area of live news. On reflection, I merely indicate my concern with such programing not because I would not trust the integrity of the PBC broadcaster but rather because I believe live news may carry the appearance of bias from a Government sponsored corporation. Unhappily, human nature is such that bias is defined as that with which one disagrees.

As I read the debate on the Public Broadcasting Act of 1967, however, I am struck with the legislative intent of not creating competition to the existing broadcast structure but rather to provide a new and exciting choice to the discriminating audience.

With the Board of Directors appointed by the President and the use of Government funds, it is difficult indeed to look at ETV as a completely non-Government function.

Actually, in this area of financing ETV broadcasting, I believe that significant financial contributions from commercial stations may result in substantial benefits to all parties, including the public. I have considered various proposals for Government and private support, including the excise tax of 2 to 5 percent on new TV set sales and charitable contributions by commercial broadcasters, private industry and various foundations.

I feel that industry support of ETV should properly be considered a business expense of the commercial broadcaster. I have from time to time attempted to create a dialog on an idea I have had. I might as well try it on you. All broadcast stations are licensed to serve in the public interest. This has been interpreted as including a concern with the type of programing that a proposed station intends to "air" to "serve the needs of the community."

The concern of the Commission with programing vis-a-vis a prohibition against censorship has been a complex administrative problem. It seems to be resolving itself into a deep concern with the expertise of the licensee in the programing area. The Commission concern is to insure that the licensee is indeed an "expert" in the needs of the community and how these needs are being served by competing

media. When analysis shows him a void that he can fill his programing schedule, he files his proposal with his application. The Commission properly quizzes its licensees as to what they have done to make themselves "expert" and having reached affirmative judgment, largely relies on the programing proposals submitted by the applicant. Thus, it becomes the licensee's "promise" against which is measured his "performance" at renewal time at a later date. One caveat. It would be unrealistic for the Commission to bind the licensee to his precise promise for a 3-year license period. New media enters the market, the effect of which the licensee analyzes to determine what, if any, programing changes he should make to tailor his so-called "void." After notification to the Commission, this amends his original proposal. Thus we have, for example, stations which program all news, religion, ethnic, advertising and music. This presupposes that the licensee survey has shown the totality of other broadcasting media provides the community with well-rounded programing.

The basic problem with commercial broadcasting today is the intense competion for a small amount of broadcast time. There are only 18 hours at most in the full broadcast day. Actually, given our living habits, there are only 3 or 3½ hours—usually from 7 to 10:30 p. m.—when most adult human beings find it convenient to watch television. The broadcasting networks and broadcasting stations are in enormous competition simply to deliver the largest possible audiences during this time segment. With the exception of the 7 o'clock news programs on some stations, the general public generally has no choice but to watch the mass appeal programs. At the risk of being inconsistent with my previous remarks, I might say that on Sunday night even the news programs are somewhat curtailed. Moreover, only a minute or two can usually be given on the news programs to, say, a major report on a very basic issue—a report to which even the small newspapers would give a thousand words and which would be reported in full in some newspapers and magazines. In brief, on most evenings the average citizen who wishes to be better informed or to stretch his mind a bit or even dip into the best in our culture has no opportunity to do so—he is deprived of choice.

The educational station in a service area is a part of the media that the licensee analyzes. To the extent that the educational station is airing special interest viewing, it may not be necessary for the commercial station to carry as much of this type programing as might otherwise be necessary to meet the needs of the community.

Thus it seems to me, the commercial station has a selfish motive in insuring the continuation of a viable educational station, and limiting his obligation to carry programs that he cannot sell. By appropriate encouragement, he might be persuaded to undertake an annual contribution to the station, in his budget, to insure that the educator stays on the air for a full program schedule. Under this reasoning, he should be able to charge off such contributions as a business expense. To this extent both the responsible commercial and educational TV station serving the same community can better allocate their prime time evening hours. For example, the commercial station could provide greater depth in its regular hard news coverage realizing that the in depth analysis need not be provided because this is the function of the adequately financial ETV station. As a matter of fact, on a current basis, there is a possible marriage between commercial and ETV television stations. (I hope one or the other will not get pregnant.) ABC has already announced that does not intend to cover the Republican and Democratic Conventions from gavel to gavel. I do not see why all networks could not cooperate and financially support the ETV coverage from gavel to gavel. The networks would then be free to monitor the entire conventions and select for presentation what they choose. Also any member of the public, would have a choice to view the entire proceedings over ETV.

A commercial station can, of course, make a tax deductible charitable contribution to an educational station. However, I find that revenue regulations limit tax deductible charitable contributions of all kinds to 5 percent of the companies' taxable income and this could be a limiting factor in the amount the commercial station could contribute to the educational station. If my reasoning is sound, it follows therefore that support should be given to a proposal to regard these contributions by commercial stations to educational stations as a business expense. The presentation of news over broadcast media has now become one of the public's primary sources of news. They want more of it and they want the details which are not possible with headline or capsule news presentation. They also want to know what the other fellow thinks.

One of the matters you will be discussing in this National Television News Conference is a new element, public opinion polling. Regardless of the judgments you may reach on the merits of television polling, I welcome the broadcasters use of new methods to inform the public. From what I can observe, the public opinion is not without problems. Students could have a ball loading the results. They can have one group repeatedly call in with a "yes" vote and another group with a "no" vote. This not only distorts the public's view but also may deny the vote to someone with a genuine interest in the issue. It is also possible for special interest pressure groups to alert their membership and insert an unknown loading factor. Many other statisticals inaccuracies can creep into such polls.

Time magazine in its October 20, 1967, issue cited an example of one city having inconsistent votes on related questions and that one station discontinued its poll when 82 percent of the listeners indicated they believed poll results invalid. In essence, the question is "Do broadcast polls or poll results constitute news?" The broadcaster is aware of the problems and his response is an automatic caution signal.

The broadcast industry has and must in the future assume responsibility for the news it presents. Our system will simply not permit or tolerate news to be presented under the auspices of the Government. Yours is the responsibility to accurately report the news. We both have a responsibility to make sure this right is not diluted. This requires a great deal of mature commonsense.

If your judgment is to program these polls, so be it. I would caution disclaimers as to results and I would certainly coordinate closely with your local telephone company to insure that local communications are not jammed, particularly those involving safety of life and property. There have been some specific examples of this problem.

Mr. EVINS. I think that you can exercise a salutary influence on the industry.

Mr. HYDE. I believe this group organized by the President to make a study in this area is going to be very helpful.

FORFEITURES OF LICENSES

Mr. EVINS. Forfeitures of licenses. Have you done much in this area?

Mr. HYDE. We do a very sizable amount of that. I suppose almost weekly there will be a notice of forfeiture for what are found to be willful or repeated violations of rules or regulations. These usually relate to technical performance, failure to have an operator on, and so forth.

Mr. EVINS. Page 29, significant accomplishments. More than 59,000 complaints, comments, and inquiries on broadcast matters were received last year. Also, 159 notices of apparent liability for monetary forfeiture were issued.

Mr. HYDE. Yes, sir. That is the initial notice.

Dependent on the response, we assess the fine or we do not.

APPLICATION WORKLOAD

Mr. EVINS. Short-term licenses were granted to 10 stations, four license renewal applications were designated for hearing, and revocation proceedings were instituted against two stations.

Here is a table on your application processing personnel and applications received.

Place this table in the record.

(The chart follows:)

The following table shows the increase in the number of applications received in the broadcast services compared with the personnel authorized for application processing activities:

Fiscal year	Applications received for processing	Application processing personnel
1957	9,721	103
1958	10,361	106
1959	12,019	119
1960	12,647	120
1961	15,522	122
1962	15,571	139
1963	14,565	124
1964	15,761	132
1965	16,924	143
1966	17,999	146
1967	18,290	140
1968 (estimate)	19,377	137
1969 (estimate)	21,073	141

HEARINGS

Mr. EVINS. Place pages 35 through 39 in the record.
(The pages follow:)

HEARINGS

This activity encompasses all adjudicatory proceedings involving applications for new and changed facilities, applications for renewal of licenses, revocation proceedings and other matters pertaining to broadcast services.

Increase requested: Positions, 3.3 A.E.

No additional positions are proposed. The increase reflected above is to maintain the existing staff. The increase in employment level will result from a reduction in the period of time that positions will be unfilled.

BROADCAST BUREAU

In adjudicatory proceedings involving broadcast matters, the Broadcast Bureau participates at all three levels of administrative adjudication, namely, before the hearing examiners, before the Review Board, and before the Commission. The Broadcast Bureau participates in all these cases and in all of their phases, except for the strictly comparative phases not involving engineering or a comparison of the relative needs of competing communities. As of the end of calendar year 1967, there was a total of 163 broadcast cases in various stages of adjudication. In fiscal year 1969 it is anticipated that this number will increase by nearly 10 percent, in view of the increase from 250 (in fiscal year 1968) to 268 (in fiscal year 1969) in the number of broadcast applications expected to be designated for hearing. As indicated below, an increase in workload is also estimated by each of the three levels of administrative adjudication before which the Broadcast Bureau appears.

Notwithstanding an anticipated increase in workload, the Broadcast Bureau is not requesting an increase in authorized personnel for fiscal year 1969, nor does it anticipate any increase in actual employment. Continuation of the presently authorized staff is requested. This is an extremely modest staff for an anticipated caseload of 180 cases.

HEARING EXAMINERS

It is estimated that during fiscal year 1969 approximately 115 AM applications will be designated for hearing, as compared with 110 in fiscal year 1968 and 105 in fiscal year 1967. In addition, there will be carried into fiscal year 1969 from the current fiscal year at least 100 AM applications (chiefly for new facilities and major changes in existing facilities), concerning which hearings will be in progress or the hearing records will be closed awaiting the preparation of initial decisions by the hearing examiners; and it may reasonably be expected that about 12 AM applications will be remanded to the hearing examiners (by the Commission and the Review Board) for further hearings and the preparation and issuance of supplemental initial decisions. The number of AM renewal applications to be designated for hearing during fiscal year 1969 is expected to be substantially higher than in fiscal year 1967 and somewhat higher than in fiscal year 1968. For the most part, renewal hearings are conducted in the communities in which the stations involved are located and are usually protracted. It would appear that at least 50 percent of these AM applications will be involved in comparative hearing proceedings.

Approximately 80 FM applications are expected to be designated for hearing during fiscal year 1969, as compared with 74 in fiscal year 1968 and 69 in fiscal year 1967. In addition, it is probable that some 50 FM applications with hearings in progress or closed records will be carried into fiscal year 1969 from the current fiscal year, and there will undoubtedly be several remands from the Commission and the Review Board for further hearings and the issuance of supplemental initial decisions. Approximately 50 percent of the total number of FM applications here involved will require comparative consideration.

Approximately 73 TV applications are expected to be designated for hearing during fiscal year 1969, as compared with 66 in fiscal year 1968 and 59 in fiscal year 1967. In addition, at least 60 TV applications in hearing status will be carried into fiscal year 1969 from the current fiscal year, and it is likely that there will be several TV applications remanded for further hearings and the issuance of supplemental initial decisions. Undoubtedly, the hearings on a substantial number of these TV applications will be extensive and large records will be made. Renewal hearing proceedings in the TV service invariably are time consuming and bitterly contested.

REVIEW BOARD

The actual average employment figures reveal that, operating with a staff substantially below previous levels due to the unavailability of qualified replacement personnel, the Review Board devoted 24 man-years to broadcast activities during fiscal year 1967. To reduce the time for the disposition of appeals from initial decisions to 6 months, the Board will utilize during fiscal year 1969 the four employees authorized for this purpose by the Commission (budget policy meeting. May 31, 1967). For fiscal year 1969, the Board allocates 25.3 man-years for broadcast activities.

Based on the man-years required to reduce the time for the disposition of appeals from initial decisions to 6 months, and to provide for proper handling and considerable increase (32 percent over earlier estimates) in standard broadcast applications actually designated for hearing in fiscal year 1967, the Board has planned an increase of 1.7 man-years over the fiscal year 1968 estimate. Similar slight increases were planned in the man-years devoted to reducing the time required for action on initial decisions in FM and TV preceedings. Thus, the Board's 7.7 man-year-figure for TV cases in fiscal year 1969 was a conservative estimate based on the actual average employment figure of 6.3 man-years for 1967 (when 59 TV applications were designated for hearing) considered in relation to reliable estimates that the number of such applications designated for hearing would increase in fiscal year 1969. Due to budgetary restrictions, however, the following average employment figures are assigned to the Board: AM 15 man-years, FM 3.6 man-years, TV 6.7 man-years.

OPINIONS AND REVIEW

The Office of Opinions and Review continues to receive a substantial flow of AM cases resulting from remands necessitated by court decisions, in addition to the renewals and revocations designated for hearing with which it is charged. Applicants continue to test Review Board decisions by the appeal route, adding to the workload of this office which must review these appeals and submit them to the Commission. The Commission's recent modifications of its AM rules, such as the go-no-go and clear-channel rules, and its policy statements on comparative criteria and on principal city-suburban community service, have resulted in increased appeal activity. These same rule changes and policy statements have also increased the flow of petitions for reconsideration of hearing designation orders seeking grants without hearing, which are reviewed and presented to the Commission through this office. With the loading impact of CATV on the hearing processes this petition workload has been increasing and is expected to continue to increase. In addition, the Commission has directed oral hearing, in lieu of evidentiary formal hearings in certain AM cases, requiring extensive preparations, and it is anticipated that such oral arguments in lieu of evidentiary hearings will continue to be used wherever there is no substantial factual issue requiring evidentiary hearing.

Until all novel questions relating to the interpretation of the revised FM rules utilizing tabular assignments have been determined by the Commission, it is anticipated that appeals will be taken by unsuccessful applicants to the full Commission from Review Board decisions. The revised FM rules have also

resulted in an increase in the number of petitions to the Commission requesting reconsideration of its hearing designation orders and grants without hearing, which are presented to the Commission by this office. With the loading impact of CATV on the hearing processes the petition workload has been increasing and is expected to continue to increase. Under the delegations this office continues to handle renewal and revocation proceedings. In addition, the usual flow of appeals from Review Board actions in interlocutory matters is expected to continue.

The substantial workload for the Office of Opinions and Review in TV matters is expected to continue. Many comparative TV cases turn upon such narrow determination that an appeal to the Commission, requiring presentation through this office must be anticipated. Appeals granted by the Commission require preparation by this office of summaries for oral argument as well as the drafting of Commission final decisions. The flow of appeals from Review Board actions in interlocutory matters is expected to continue. Under the delegations this office is charged with the responsibility for handling all TV renewal and revocation proceedings. It is also called upon to handle cases where reopening of the records has been necessitated by court decisions. This office must also present to the Commission petitions seeking reconsideration of hearing designation orders and grants without hearing, and must prepare referenced material for such oral arguments as may be held at the Commission's direction. With the loading impact of CATV on the hearing processes the workload of petitions in connection with TV new and changed facilities is expected to increase.

NETWORK STUDY

Mr. EVINS. Network study. This activity keeps the Commission currently informed of the policies and practices engaged in by the radio and television network organizations to the extent necessary for the Commission to develop and maintain an adequate regulatory program.

This responsibility encompasses review, analysis, advice, and recommendations regarding relevant information on policies and practices engaged in by the network organizations, insofar as such policies and practices impinge upon the ability of station licensees to operate in the public interest.

What consideration, if any, has been given to allocating a percentage of network time to small business advertisers?

Mr. HYDE. I do not have a study on that subject.

Mr. EVINS. Tell us what you know about this. You have three of them, have you not?

Mr. HYDE. Yes, sir. There are three big networks. There are three big TV networks and three big AM networks—there are four radio networks.

Mr. EVINS. Three big television networks?

Mr. HYDE. Right. Generally speaking, as you have observed, the kind of advertising you will see on them will be national advertising. The advertising of sponsors who have a national market. The same stations may place a big importance on their local advertising, can carry advertising in their respective communities, in addition to carrying the national network.

Mr. EVINS. Does the Commission know which stations compose the networks?

Mr. HYDE. We do.

REGULATIONS ON ADVERTISING

Mr. EVINS. What do you do with regard to standards or rules on advertising?

Mr. HYDE. We have a series of regulations directed to the stations.

Mr. EVINS. How often do they come on the air?

Mr. HYDE. There used to be what were known as options for station time, which we thought gave the network too much control over what the local station could carry. We outlawed such options. Under the arrangements permitted under network contracts, which may not continue more than 2 years, stations generally get what are called first refusals. If they pass, the network is free to take the network program to another station if they wish. This is the type of regulation in this area and, as I say, they are directed to licensees.

Mr. EVINS. Does the Commission set a limit on the number of products that can be advertised in a period of time?

Mr. HYDE. No, we have not.

Mr. COX. We have addressed inquiries to stations to check their commercial policy if it exceeds certain levels. If a radio station tells us that it proposes to devote more than 18 minutes in an hour to commercials as a general matter, our staff will write them a letter inquiring as to justifications for this.

Mr. EVINS. You can do more than write them a letter; can't you call them in before the Commission.

Mr. COX. We have one case now in hearing, I think, in which, along with some other issues, we have raised a question about the commercial practices of the station.

Mr. EVINS. You have to listen to five commercials before you get to the news.

Mr. HYDE. That is particularly true in the very late hours, is it not?

Mr. BARTLEY. Six o'clock.

Mr. EVINS. If you merely write them a letter, they will not do anything about it.

Mr. HYDE. I would not dispose of it that way. There is an industry code. There are certain standards which stations propose in their renewals.

Mr. EVINS. What do you do, tell them to let the small station have a little time for station identification?

Mr. HYDE. That is right. They are required to identify their station within certain limits.

Incidentally, one time when the Commission proposed we might ease this identification requirement so as to avoid the necessity of making it, we did not find a single taker. They want to make that identification so that they can also make a mention of their sponsors at the same time. I do not think that is an unreasonable position to take.

PUBLIC HEARING ON ADVERTISING TIME

Mr. EVINS. Have you ever had a public hearing on the amount of advertising time?

Mr. HYDE. Yes, sir; we have had a public hearing on that.

Mr. EVINS. When was that?

Mr. HYDE. This was while Mr. Henry was Chairman.

Mr. COX. 1963. This was not with respect to a particular station; this was industrywide.

This involved the network and stations affiliated with them—largely the latter.

REGULATION OF NETWORKS

Mr. EVINS. Do you do anything in addition to writing them a letter?

Mr. HYDE. We do more than that. We do such things as adopt regulations to prohibit option time. That is the most significant regulation of recent times, but there are other things that we do.

Mr. COX. We ruled that one of the network's compensation method was illegal—a full-forcing system requiring its affiliates to carry more programs than they otherwise would. Our staff has been in liaison with the congressional staffs who have been studying network advertising discounts, and actually those practices have now been substantially eliminated. This removed one objection of small businessmen, small businesses, that the biggest businessmen were getting a break in the rates they paid.

Mr. HYDE. I think that was a very significant accomplishment.

CIGARETTE ADVERTISING

Mr. EVINS. Does the Commission contemplate any regulation or advice regarding cigarette advertising in view of another Commission's warning and also in view of the public health warnings?

Mr. HYDE. We are limited, of course, by the provisions of the Cigarette Labeling Act.

As you know, we did rule that the fairness doctrine applied to cigarette advertising. We are being sued for doing that, and one of the complaints is that we are violating the Cigarette Labeling Act.

Mr. EVINS. The Commission is being sued?

Mr. HYDE. Yes.

Mr. EVINS. I had not heard about that.

Mr. HYDE. It is an appeal. That is a suit, in my opinion. Perhaps I should have used a better term.

COMMON CARRIER ACTIVITIES

Mr. EVINS. Let us look at the common carriers.

Let us place in the record pages 43 through 55.

(The pages follow:)

III. COMMON CARRIER ACTIVITY

This activity covers the regulation of the rates, services and practices of communications common carriers which furnish interstate or foreign telephone or telegraph service for hire to the public by wire, radio or space communication, and the licensing of all radio used in common carrier communications including intrastate communications.

The function is accomplished through the Common Carrier Bureau and its field offices and those segments of hearing examiners, opinions and review, and dockets division of the Office of the Secretary and the review board which deals with common carrier hearing matters.

FINANCIAL REQUIREMENTS

	1967 actual	1968 estimate	1969 estimate	Increase

Regulation of interstate and foreign communications common carrier services by the Commission is essential to the public interest to insure basically the establishment and maintenance of (1) adequate services and facilities to meet all reasonable demands for expenditious and efficient communication, and for the purpose of national defense; (2) reasonable rate levels for the communication services; and (3) rational rate structures, including nondiscriminatory rate, classifications, regulations, and practices for the services of common carriers.

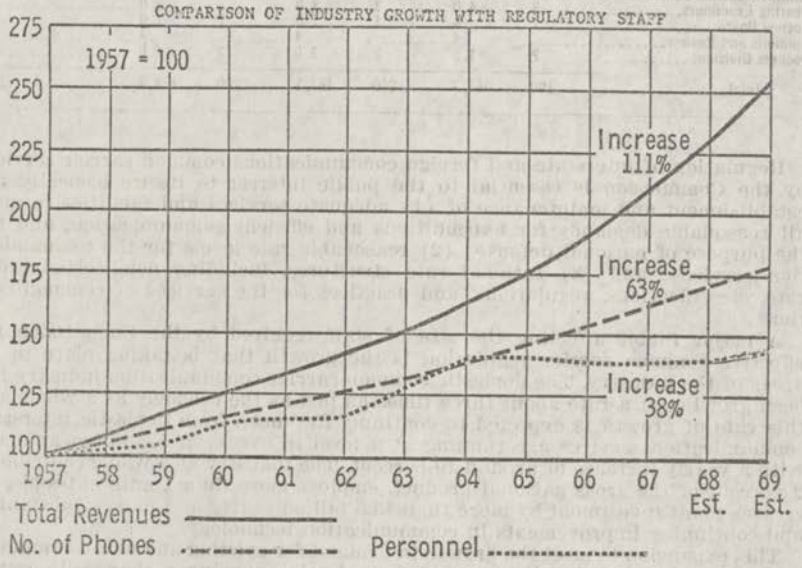
A major factor affecting the size of staff required by the Commission for effective common carrier regulation is the growth that is taking place in all areas of the industry. The domestic common carrier communication industry has been growing at a rate about three times as fast as the economy as a whole and this rate of growth is expected to continue. Revenues from domestic interstate communication services are running at a level in excess of $3 billion annually with a yearly increase of around 10 percent. The industry as a whole contributes 2 percent of the gross national product, employs more than 1 million people, increases plant investment by more than $3.5 billion yearly and makes substantial and continuing improvements in communication technology.

This expansion to meet the growth in demand for existing and new communication services is attended by new and revised price structures, changes in cost of service characteristics which underlie the different service, increased competition between carriers and a high rate of construction of wire and radio facilities which must be authorized by the Commission. Moreover, dynamic changes in communication technology and methods are creating new policy, ratemaking, licensing, and other regulatory problems in both the domestic and international fields.

The following table shows the increases in telecommunication revenues and number of telephones in service compared with the personnel engaged in common carrier regulation:

Fiscal year	Total revenues	Number of telephones	Common carrier personnel
1957	$6,964,000,000	63,847,000	115.4
1958	7,458,000,000	66,873,000	118.6
1959	8,144,000,000	70,819,000	119.3
1960	8,714,000,000	74,329,000	130.5
1961	9,255,000,000	77,473,000	132.9
1962	9,871,000,000	80,965,000	133.2
1963	10,543,000,000	84,443,000	149.1
1964	11,356,000,000	88,786,000	162.7
1965	12,174,000,000	93,660,000	162.4
1966	13,362,000,000	98,788,000	159.6
1967	14,698,000,000	103,727,000	159.2
1968 (estimated)	16,168,000,000	108,914,000	160.7
1969 (estimated)	17,785,000,000	114,359,000	172.0

COMMON CARRIER ACTIVITY - 3



The absolute figures on which the above chart is based can be found on page 44.

1. *Domestic rate regulation.*—This activity relates to the regulation of tariff charges, regulations, practices and classifications applicable to domestic interstate telephone and telegraph service. The allocated manpower requirements for Commission hearings related to this activity is included herein.

PERSONNEL REQUIREMENTS

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Telephone	41	36.7	41	37.0	41	38.5	.....	1.5
Telegraph	6	5.8	7	5.8	7	6.3	.....	.5
A.T. & T. rate investigation	35	31.9	35	32.4	35	34.4	.....	2.0
Total	82	74.4	83	75.2	83	79.2	.....	4.0

The purpose of this activity is to regulate the charges and tariffs applicable to domestic interstate telephone and telegraph service so as to protect the estimated 180 million or more people in the United States who use such service and who pay in excess of $3 billion a year for interstate communications service, (1) from exploitation through unreasonable or unjust rate levels, pricing practices, or monopoly profits, and (2) from unfair discriminatory treatment of any single user, or class of users, or any locality in the rate structures, classifications, subclassifications, regulations, or practices that are or may be applied by the regulated carriers to such service.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL 1967 AND THOSE FORECAST FOR FISCAL YEAR 1968

Basic determinations made as to major components of the overall rate base and reasonable rate of return allowable on such rate base for the total interstate operations of the nationwide Bell System telephone companies.

Rate reductions amounting to $120 million a year ordered on basis of the above determinations.

In fiscal year 1968, the Commission is expected to act on proposals:

To require modification of tariff restrictions on interconnection of customer-provided devices and communications facilities to the nationwide exchange and message toll network.

To rule on a number of other pending formal rate and tariff cases involving a variety of important questions that will affect nationwide communications services.

Hearings will be held to resolve major problems concerning jurisdictional separations of interstate and intrastate facilities, the proper rate relationships among the principal classes of Bell System service, and the propriety of amounts claimed for other components of the rate base and operating expenses.

Increase requested: 4.0 A.E.

A principal handicap to expedited, informed and orderly resolution of ratemaking problems is inability to develop or acquire from the industry relevant and meaningful financial, operating, cost and demand data. Neither industry nor the Commission is now making use for regulatory purposes, to the extent possible, of recent developments in economic and computational techniques, including the use of econometrics, linear programing and electronic computers as an aid and support for rational ratemaking. The use of such techniques and the data base they would provide would materially enhance regulatory judgments with respect to determinations of rate of return, revenue requirements, rate structures, investment rates, etc., all of which are integral parts of the ratemaking process. In view of the ever-increasing complexities of ratemaking, it is essential that these modern techniques be fully utilized. To accomplish this requires that the Commission staff be in a position to apply such techniques on a continuing basis; and that the fact-gathering and reporting practices of the common carriers be so designed as to compliment and support the Commission's needs in these respects. Estimated manpower required in fiscal year 1969 to develop and implement this program, 2 man-years.

To handle requirements of the inquiry on the regulatory and policy problems presented by the interdependence of computer and communications services and facilities—1.5 man-years. The rapid development of computer technology with its direct relevance to communications has presented an immediate requirement for a broad scale study to determine the extent of the interrelationship between computers and communications in order to assure the orderly development of the computer industry and promote the applications of its technologies in such fashion as to serve the needs of the public effectively, efficiently and economically. It is anticipated that, because of the breadth of the issues, the economic interests concerned, and the possible far-reaching effects which could result from the inquiry, voluminous filings will be received which will consist of complex economic accounting, enginering and legal discussions with a diversity of views and opinions. All of this will require detailed analysis leading to the formulation of policy which will affect the socioeconomic development of our society.

Increased attention to domestic telegraph rate regulation is required because of the company's entrance into new fields, the offering of new and sophisticated telegraph services, possible TWX acquisition and to carry out the recommenda-

tions contained in the Commission's telephone and telegraph committees report in the domestic telgraph inquiry regarding promotional pricing, .5 man-year.

2. *Domestic service regulation.*—This activity relates to the regulation of the wire and radio transmission practices of communications common carriers who provide the public with interstate or foreign telephone, telegraph, video, and facsimile services for hire. The allocated manpower requirements for Commission hearings related to this activity are included herein.

PERSONNEL REQUIREMENTS

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Telephone	5	4.4	5	4.4	5	4.8	.....	0.4
Telegraph	6	6.4	7	6.3	7	6.9	.....	.6
Total	11	10.8	12	10.7	12	11.7	.....	1.0

Since virtually the entire social, economic, and business structure of this Nation is heavily dependent upon the availability of public communications services being provided by the domestic common carriers, it is important to insure the continuity of such vital services under reasonable rates and conditions. To this end, it is necessary to keep their activities under constant surveillance in connection with proposed mergers, acquisitions of properties, extensions and reductions in service, and the uses progressively being made of new techniques and engineering advancements in the communications art.

Close liaison by the Commission's staff with the general public and the carriers is necessary in resolving any service difficulties which the public may encounter because of transmission deficiencies or in connection with the business practices of the carriers providing such service.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL YEAR 1967 AND THOSE FORECAST FOR FISCAL YEAR 1968

During 1967, 706 telephone company projects were considered and authorized, involving $280.2 million for wire facilities and $134.7 million for microwave facilities. Because of continued plant expansion by the telephone industry to meet public demands for communications services, increased application filing is expected in fiscal 1968.

Approximately 350 public service complaints against the telephone companies were resolved through liaison with the carriers and with the various State regulatory bodies during 1967, and handled approximately the same number of telegraph service complaints.

Authorizations were granted to Western Union Telegraph Co. to extend or supplement its transmission system by additional construction of some 733,000 channel miles in its own microwave system, and through the leasing of approximately 572,000 channel miles from Bell Telephone System Co. during 1967.

The Commission granted some 300 applications filed by Western Union to reduce the hours of service at public telegraph offices and authorized the company to discontinue 200 telegraph agency offices, upon finding that, because of small traffic load involved and availability of alternate facilities, the public convenience and necessity would not be adversely affected.

In June 1967, the Commission advised Western Union that, because of the further deterioration of its speed of telegraph service, it was expected to improve such service to meet its own announced speed of service objectives by the end of the calendar year 1967. During the ensuing 2 months, substantial improvements have been noted, which are to some measure attributable to the surveillance program of the Commission's staff and the close liaison with Western Union officials relative to service improvements.

The Commission also has modified internal procedures to facilitate processing of applications and reduce the time required for staff action.

Increase requested: 1.0 A.E.

The rate of expansion of the communications services during 1967, which is reflected above, and the complexities of problems connected therewith are expected to increase during 1968. To do a more effective job of regulation, it is necessary that the staff handling such functions be increased. Specifically, the additional positions are required for the review of cost and usage estimates of common carrier facilities in connection with the processing of applications, and to handle emergency communications functions assigned the Bureau.

3. *Domestic radio regulation.*—This activity relates to the licensing and the operational regulation of the domestic common carrier radio services, including point-to-point microwave radio service; local television transmission service; the domestic public land mobile radio service; rural radio service; the developmental radio serice, and the joint performance of such functions with the aviation and marine division of the safety and special radio services bureau in connection with the rendition of public radio services through land, maritime and aeronautical stations. The allocated manpower requirements for Commission hearings related to this activity is included herein.

PERSONNEL REQUIREMENTS

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Domestic radio	35	31.8	39	32.8	39	34.8	.....	2.0

This activity is significantly vital to the public and national interests because of the increasing use and reliance of the domestic common carriers on radio. Included within this activity are:

Detailed engineering analyses looking to the establishment of the most desirable routes and the most efficient utilization of the scarce-frequency spectrum, both microwave and VHF;

Updating of technical rules and regulations to keep pace with dynamic communications technology;

Enforcement of compliance with the regulations and relevant statutes;

Processing of applications requesting new or modified facilities in the domestic common carrier radio services.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL YEAR 1967 AND THOSE FORECAST FOR FISCAL YEAR 1968

A substantial reduction in the application backlog.

Completion of rulemaking which extends the license period for domestic land mobile radio service and rural radio authorizations from 3 to 5 years.

In fiscal year 1968 further reductions in application backlogs and in time required for application processing are expected.

Issuance of rules directed toward increasing utilization of certain common carrier frequency bands.

Increase requested: 2.0 A.E.

The increasing importance of the common carrier radio services and rapidly advancing communications technology demand prompt staff consideration and action on applications. Backlogs, if permitted to accumulate, create internal processing problems, delay essential services to the public, and often result in financial hardship to applicants. Our current goal is that each properly completed application shall receive staff action within a period of 90 days after filing with the Commission. The present staff complement is not adequate to meet this goal.

The rapid expansion of CATV systems has resulted in increased application filing for CATV microwave links. More and more, these applications are creating policy, legal, technical, and economic problems.

With the advent of satellite system earth stations sharing the same frequencies used by domestic microwave systems, there is an ever-increasing need for detailed engineering analysis of applications to assure against mutual interference. Moreover, as the public demand for common carrier radio services continues to

outstrip the availability of usable radiospectrum, new facilities must be added to areas which are already crowded with facilities where existing radio services are entitled to protection against harmful cochannel electrical interference and consideration of claims of adverse economic impact. This condition requires more penetrating analysis of applications from engineering and legal viewpoints and is resulting in a greater number of hearing cases.

The increased Commission, Government and industry activity in study programs related to frequency congestion, including those portions of the spectrum assigned to common carriers demands greater participation by professional staff members engaged in domestic radio regulation.

4. *Accounting Regulation.*—This activity relates to the regulation of accounting in the broad sense of that term. It involves the development, amendment, and interpretation of accounting and records-retention rules; preparation of financial and operations reporting rules; the preparation and publication of financial and operations statistics from reported data; and enforcement of observance by carriers of the Commission's rules for accounting, records preservation, and reporting.

PERSONNEL REQUIREMENTS

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Systems	3	2.9	3	2.7	3	3.1	.....	0.4
Compliance	14	11.8	14	11.5	14	12.8	.....	1.3
Statistics	2	1.7	1	1.5	1	1.8	.....	.3
Total	19	16.4	18	15.7	18	17.7	.....	2.0

This activity is important and necessary because effective rate regulation depends in substantial measure upon accurate, uniform, and informative accounting and reporting. Accounting regulations must be designed to serve not only the needs of the Commission but also those of State regulatory agencies and of the carriers themselves. Adequate and timely reports are required to provide a continuing flow of data on current operations of carriers. Accounting regulation, to insure its effectiveness, requires the policing of the accounting and reporting actually being performed by carriers in order that there may be assurance that the prescribed requirements are being observed. In addition, continuous research is necessary as an aid to keeping accounting and reporting requirements in step with the constant changes in the expanding communications industry.

There are approximately 50 domestic telephone carries with annual revenues of $1 million or more subject to the Commission's accounting rules. There is a limited amount of continuous review of the accounts of the overseas communications carriers.

The Commission faces a challenging situation in exercising its authority over the Communications Satellite Corp. The accounting of Comsat is fully as involved and difficult as any other aspect of the satellite regulatory field.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL YEAR 1967 AND THOSE FORECAST FOR FISCAL YEAR 1968

During the past year our systems of accounts were amended to remove references to plant types and items no longer in use or of such diminishing significance as no longer worthy of specific mention. The systems at the same time were modernized by adding references to new matters now significant.

The accounts of Communications Satellite Corp. were brought to a conventional basic of profit and loss reporting.

In fiscal year 1968 we plan to review the rules governing accounting for employee benefits with the idea of incorporating into our rules the acceptable recommendations of the American Institute of Certified Public Accountants for accounting for pensions throughout the commercial world.

The matter of computing interest costs for accounting purposes when borrow-

ing is done with debt securities carrying with them options to purchase equity securities may become one demanding Commission action in the next year or two.

There is an increasing amount of joint ownership of utility plant in the communications industry. We expect to consider the most efficient and economical approaches to accounting for such jointly owned plant. We will coordinate our studies with industry and electric utility regulatory bodies, both directly and through our participation in the activities of the Committee on Accounts of the National Association of Railroad and Utilities Commissioners.

The overseas record carriers are applying, on a test basis, a plan which has been devised for uniform allocation of investment, operating costs, and revenues among the several communication services offered. When this plan is perfected we expect to incorporate it into our prescribed accounting rules.

Increase requested: 2.0 A.E.

The increase requested is a nominal one. It is anticipated that the A.T. & T. rate hearing will point to areas where limited-scope, spot accounting studies should be made. The increase would give us a minimum amount of added flexibility to make such accounting investigations.

5. *International and satellite communications.*—This activity relates to the regulation (licensing, ratemaking, etc.) of all common carrier communication services, by all telecommunication media between the United States and overseas points (both foreign and interstate). It also includes regulation, including policy formulation, with regard to satellite communications within the contemminous United States. The allocated manpower requirements for Commission hearings related to this activity are included herein.

PERSONNEL REQUIREMENTS

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Rate regulation	18	14.3	20	14.4	20	15.5	.....	1.1
Service regulation	24	17.0	26	17.3	26	18.4	.....	1.1
International affairs	1	1.0	2	1.0	2	1.1	.....	.1
Total	43	32.3	48	32.7	48	35.0	.....	2.3

Efficient, adequate, and economical telecommunications between the United States and overseas points are an integral factor in the maintenance and improvement of commercial, social, and diplomatic relations, as well as in the support of defense activities of the United States. Commercial and social relations with overseas points is almost entirely dependent, and diplomatic and defense communications activities heavily rely on commercial common carrier communications. Their importance is emphasized by the recent formation of a Presidential committee to consider international and satellite communications.

Overseas commercial telecommunication services have been increasingly characterized by a tremendous growth in demand and radical changes in technology; that is, satellite communications, which are posing novel regulatory problems. It is essential that the Commission be in a position to promptly and effectively formulate and implement carefully considered policies and actions to intelligently guide developments most conducive to the public interest.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL YEAR 1967 AND THOSE FORECAST FOR FISCAL YEAR 1968

The U.S. international carriers which provide services to the U.S. Government and to the general public have, through measures taken by the Commission, significantly reduced rates for service between the United States and overseas points. This has been made possible by establishment of composite rates for satellite and cable facilities which take into account lower costs for satellite facilities. It is expected that, within the near future, further substantial reductions will be made for communication service.

The carriers are, at the same time, continuing work under Commission aegis, on studies designed to show costs of specific services, so that more detailed analysis can be made of rate levels and structures.

The Commission presently has rates of the Communication Satellite Corp. under formal investigation, and will similarly investigate rates of other carriers should such action be necessary.

The Commission adopted a revised interim policy for the ownership and operation of earth terminal stations. The policy provides that Comsat and other international carriers will jointly own and operate U.S. earth terminal stations in agreed percentages.

The Commission resolved the controversy relating to applications filed to provide service between the United States, and Puerto Rico and beyond by alternative facilities. Applications were filed to establish an earth terminal station in Puerto Rico and an application was filed for the laying of a transistorized cable between the United States and Virgin Islands. The Commission authorized construction of an earth terminal station under its revised policy and authorized the laying of the transistorized cable. The authorizations were conditioned in such manner as to promote the orderly use of both facilities.

An application was processed and granted for the laying of a cable between the Virgin Islands and the Dominican Republic.

It is anticipated that legislation may be introduced in Congress during fiscal year 1968 providing for merger of U.S. international carriers and that such legislation would require that a requisite for such merger would be a finding by the Commission after hearings that such merger is in the public interest. Such a proceeding undoubtedly would be a complex one, requiring the attention of a number of staff members.

Increase requested: 2.3 A.E.

Additional legal and engineering staff are essential to meet the requirements of policy and other decisions in rates and facility regulation and to meet the need for necessary work in preparation for the review and renegotiation of the interim international agreements for the global satellite system which will take place in calendar 1969. The Commission is required to insure competition in procurement of additional satellite facilities and to insure that small business concerns have an opportunity to participate in such procurement. These increased procurement actions will require employment of additional manpower.

Generally, as indicated above, the public interest in an efficient and modern communication system will require, in view of the sharply increased activity in the field and major decisions facing the Commission, augmented staff capable of handling the workload in an expeditious and intelligent manner. While more efficient use of presently authorized personnel will assist in this, a conservative increase in staff, as requested, will still be necessary to fulfill program objectives.

In the international and satellite fields, dynamic advancements continue to be made in both submarine cable and satellite technology, and in the public and Government demands for new and expanded services. One of the most significant policy areas which must be resolved in the near future relates to the appropriate mix of cable, satellite, and other facilities.

There is every indication that the competitive struggle between cable, radio, and satellite will continue to intensify. If the public is to be assured the availability of an international telecommunications system which makes the most efficient and economic utilization of each of these modes, we must make comprehensive analysis and determination on a long-range basis of the technological, economic, and operational constraints and consideration that should govern our licensing actions. Licensing policy should be fashioned accordingly so that the public interest in efficient and economical communications services and the policies and objectives of the Satellite Act and Communications Act may be fully realized. Any such policy should then be continually reexamined and revised in light of new technological developments.

Policy formulations are also required with respect to the use of satellite communications in the handling of traffic (television and other) between points on the mainland United States. The Commission has instituted an inquiry into the matter, and a policy announcement by the Commission must be drafted.

GROWTH OF TELEPHONE INDUSTRY

Mr. EVINS. The total revenue of the communications industry has gone up from about $7 billion in 1957 to, 11 years later, $16 billion. Estimated for 1969, $17,785 million. That is a big industry. The number of telephones has gone up from 63 million to 114.5 million.

The growth that has taken place is phenomenal. The staff has gone up 38 percent.

It is a great industry and they spent a lot of money on research. If the railroads and others would follow the research pattern of the telephone industry, they would make strides and advances. I commend the telephone industry for their advances.

Mr. HYDE. Chairman Evins, as you may know, in 1953 there were ceremonies at the White House when they put the 50 millionth telephone on General Eisenhower's desk. It was only 13 years later, last fall, when a similar ceremony was held to put the 100 millionth telephone on President Johnson's desk. The rate of growth has been tremendous.

SIGNIFICANT ACCOMPLISHMENTS

Mr. EVINS. You list some of your significant accomplishments here in 1967 and in 1968. Hearings will be held to resolve major problems of interstate and intrastate facilities and the proper rate relationship between the practical classes of Bell System service.

I believe you said one of your investigations has been underway since 1960 and has been completed?

Mr. HYDE. Right.

Mr. EVINS. Was that in 1965?

Mr. HYDE. That was 1965; the beginning date. Actually, that is when the notice went out.

SEPARATE CORPORATIONS

Mr. EVINS. They are now forming separate corporations.

Did the Commission take judicial notice of that?

Mr. HYDE. We have. I do not believe that is as a result of our investigation.

Mr. EVINS. What is the purpose of breaking up?

Mr. HYDE. I believe it is because business got so large in those areas they needed a division for management purposes.

Mr. STRASSBURG. Southern Bell developed something in size over a 10-year period. For management purposes, they are breaking up in two separate companies. It won't affect jurisdiction, rate structure, or anything.

RATE REDUCTION

Mr. EVINS. Rate reduction amounted to $120 million a year.

Mr. HYDE. Yes, sir.

Mr. EVINS. Has that been decreased?

Mr. HYDE. The new rates are in effect.

Mr. STRASSBURG. $20 million.

Mr. HYDE. A substantial part are in effect.

Our reductions in an indirect sense were greater than that. We also absorbed some additional revenue requirements from intrastate.

Mr. EVINS. Increased attention to the domestic telegraph rate regulation is required because of the companies.

Is A.T. & T. interested in this new field?

TWX SERVICE

Mr. HYDE. A.T. & T. does have a TWX service. Western Union, as you probably know, has hopes and in fact has discussed the possibility of acquiring this record service from them with the thought of developing a comprehensive national TWX system. The two companies are discussing such a possibility.

Mr. EVINS. You do not consider this too serious, Mr. Chairman, when you recommend only 0.5 of 1 man-year increase?

Mr. HYDE. Yes, this is important but we are constrained all through here in our requests. One thing before we leave the common carrier business is this study of the relationship between computers and communications. This is a highly significant undertaking. I would be glad to leave you a copy of our notice on that because it is one of the more significant undertakings in the communications field.

MESSAGE SERVICE

Mr. EVINS. The Commission granted 300 applications filed by Western Union to reduce the hours of service, and authorized the company to discontinue 200 telegraph agency offices.

How does the message get through?

Mr. HYDE. The telegraph company makes arrangements for telephone agencies for delivering them by telephone. They consolidate offices.

Mr. EVINS. I hope the Commission will insist on service rather than——

Mr. HYDE. We do have a continuing surveillance on their efficiency of service.

Mr. COX. Where these offices are closed, a showing is made that through substitute service from a nearby office—with added personnel there—they still hope to maintain their standard of delivery within 70 minutes.

UNIFORM ACCOUNTING

Mr. EVINS. You want to increase from 15 to 17 jobs in accounting. This activity is important because effective rate regulation depends on accurate uniform accounting and reporting. Accounting regulations must be designed to serve not only the needs of the Commission but also the State regulatory agencies.

Mr. HYDE. The Commission has been given the responsibility for prescribing accounting rules, used for both jurisdictions.

Mr. EVINS. Are you approaching uniform accounting?

Mr. HYDE. We do have uniform accounting rules now, but we have to modify them.

Mr. EVINS. You say there are approximately 50 domestic telephone companies. This is on page 52. That is with annual revenues of $1 million or more, subject to the Commission's accounting.

Mr. HYDE. In that classification, yes. That is with revenues of that size.

Mr. EVINS. Are they all subject to the Commission's accounting rules?

Mr. HYDE. Yes, sir.

Mr. EVINS. What does a small business company do subject to the Commission's jurisdiction; they are subject to State regulation, are they not?

Mr. HYDE. They are.

Mr. EVINS. If they go across State lines, say from Kentucky to Tennessee, do they have to file forms with the Federal Communications Commission?

Mr. HYDE. We have certain allowances for the smaller companies.

Mr. STRASSBURG. If they do it over their own facilities. If they have their own facilities which cross State lines, they then would be fully subject to the Commission's regulations. Most companies, most of the small companies engaged in interstate service only through physical connection with another company, and as such they are subject to very few requirements of the Federal jurisdiction.

Mr. EVINS. Is there any jurisdiction over the telephone cooperatives now that they are getting larger?

Mr. HYDE. I believe it would be exactly the same as regards the others.

Mr. STRASSBURG. That is right.

Mr. HYDE. Other independents.

SATELLITE COMMUNICATION

Mr. EVINS. A significant accomplishment in 1967 was the conventional reporting of the Communication Satellite Corp.

Mr. HYDE. The Commission had a number of competing applications for earth stations, for cable licenses in the Southeast. We have had problems with respect to their systems of accounts but I would say the outstanding regulatory accomplishments would be the resolution of the policy with respect to ownership of earth stations, the development of appropriate conditions for the construction of the Caribbean cable.

FIFTH TRANSATLANTIC CABLE

Mr. EVINS. The Commission recently announced the proposal for an additional trans-Atlantic cable.

Mr. HYDE. What happened in this case—it is the fifth one, Mr. Chairman—TAT 5 it is called. What the Commission has done is after a study in concert with the State Department, Defense Department——

Mr. EVINS. Did the Satellite Corporation want this additional transatlantic cable?

Mr. HYDE. No. At least there were informal protests against it. I may say that as soon as we learned that negotiations were being undertaken by the carriers with European correspondents, we convened conferences at our place, invited representatives of State, Director of Telecommunications management, to confer with us. We later had conferences with the telephone company and COMSAT about it. There has been a continuing study of this matter. The meetings between the American carriers and the foreign carriers were deferred once. On the other occasions they met without signing papers. But now as a result of these studies, the Commission has issued a notice which says

in substance we will entertain an application for cable-handling licenses subject to some very specific conditions.

These conditions are designed to prevent the development or the construction of this new cable from being a deterrent to the further prosecution of our effort to develop a global satellite system.

There are many relevant considerations.

Mr. EVINS. The press says the FCC indicated yesterday that it look would favor on a bid to run a fifth cable across the Atlantic to Europe despite the objections of the Satellite Corporation.

The FCC also notified A.T. & T. and others that they must meet these conditions. A cable in service by the first quarter of 1970. Agreements by the participants to cut user rates by 25 percent.

Agreement that the cable and satellite system would each approach capacity utilization.

You put some standards in there?

Mr. HYDE. Yes, sir. A principal one is this: There must be a division of the traffic to complete the fill on an even basis. What I mean is, the 720-circuit cable would get the same percentage of fill as would a 5,000 capacity INTELSET for the satellite system. As you can see by those ratios, this is certainly not incompatible with the development of the satellite system. I might say that we also have to take into consideration in this connection the foreign relations implications, interest of the foreign administrations which will be participating in having the diversity of cable and satellite. European interests that are involved in this project have a very substantial influence in INTELSET.

Mr. EVINS. The Commission will determine the mix, percentage, and the amount?

Mr. HYDE. That is right.

Mr. EVINS. Between the various competing methods of communication?

Mr. HYDE. Yes. We pretty well indicated what it would be.

Mr. EVINS. Very well.

NOTICE ON TRANSATLANTIC CABLE

Mr. HYDE. I have the full notice which the Commission issued in this.

Mr. EVINS. Place the notice in the record for accuracy.

Mr. HYDE. Right.

(The notice follows:)

COMMISSION WILL ENTERTAIN APPLICATIONS FOR FIFTH TRANSATLANTIC TELEPHONE CABLE

The Commission today advised A.T. & T. and the interested international telegraph carriers by letter that it would be appropriate for them to apply for authorization for a 720 circuit, transistorized cable between United States and Spain (TAT 5) provided certain conditions are met. At the same time, the Commission advised Comsat that it expected that company to continue to press forward promptly with plans to install and operate a global system with large-capacity, high-quality satellites to effectuate the goals of the Communications Satellite Act and the Interim International Agreements entered into between United States and some 60 foreign nations.

The applications for the cable authorizations must satisfy the following conditions:

(a) Assurances that the cable would be in service by the first quarter of 1970.

(b) Conclusion of agreements for reduction of at least 25 percent in rates between United States and countries using TAT 5.

(c) Conclusion of arrangements for proportionate fill of the cable and satellites on a schedule which would assure that each of these facilities would reach a 100 percent fill at approximately the same time.

In its letter to Comsat, the Commission advised that company that its statement with respect to TAT 5 did not indicate that any particular ratio of cable facilities to satellite facilities should be maintained in the future. Instead, it was based entirely upon an analysis of current circumstances. Any future proposals for additional cable facilities would be considered on their own merits in the light of then existing conditions.

The TAT 5 proposal involves a cable to be laid between Rhode Island and southern Spain and which, with appropriate microwave and other cable connections, would provide direct service to Portugal, England, Italy, and other European points reached through these countries. The cable will be a modern transistorized one of the type authorized between the continent of United States and Puerto Rico. The economies inherent in this cable will make possible the rate reductions set forth above which A.T. & T. indicated it expected to negotiate with its foreign correspondents. At the same time, to meet the burgeoning demand for conventional facilities, as well as intercontinental television and in the data field, Comsat and its partners in the international consortium will proceed with plans to construct very high capacity satellites which are expected to go into service early in the seventys. In order to insure appropriate use of each of these media the Commission included the requirements for proportionate fill in its letter to A.T. & T.

Before adopting the letters, the Commission considered voluminous data from A.T. & T., the international carriers and Comsat regarding projected traffic volumes, existing and proposed facilities designed to meet requirements, the time when the facilities could reasonably be expected to be available, costs, revenue requirements and potential for rate reductions, the views of other agencies of Government and those of interested foreign entities insofar as they were available. The Commission was of the opinion that its action was fully consistent with the expressed goals of the United States for the creation of a global satellite communications system as expeditiously as possible and urged Comsat to continue its current program looking toward the establishment of advanced systems to implement the goal of global service via satellite as promptly as possible.

The Commission stressed that it has reached no final decision on this matter and could not appropriately do so until there has been consideration of the application itself and any developments subsequent to its filing, particularly with respect to the earliest possible establishment of the global commercial communications satellite system.

Actions by the Commissions, by letters, February 16, 1968. Commissioners Hyde (Chairman), Bartley, Lee, Cox, Loevinger, Wadworth with Commissioner Johnson dissenting and issuing a statement.

Safety and Special Radio Services

Mr. Evins. Safety and special radio services.

There is a lot of interest in this, licensing, safety, and special radio services.

You want an additional increase in personnel from 168 to 170. You state that prior to World War II there were some radio operators of this nature by ship at sea and some police departments. Now there are 800,000 stations licensed in the safety and special radio services.

There is a chart on page 58 which shows the increase there. Licensed stations goes up 124 percent and you only have a 6-percent increase in personnel.

How does the Commission regulate a local police or fire department; you grant them the facility and the right to use their equipment.

Mr. Hyde. That is right.

Mr. Evins. But once they have gotten it, you do not do much with respect to regulating it, do you?

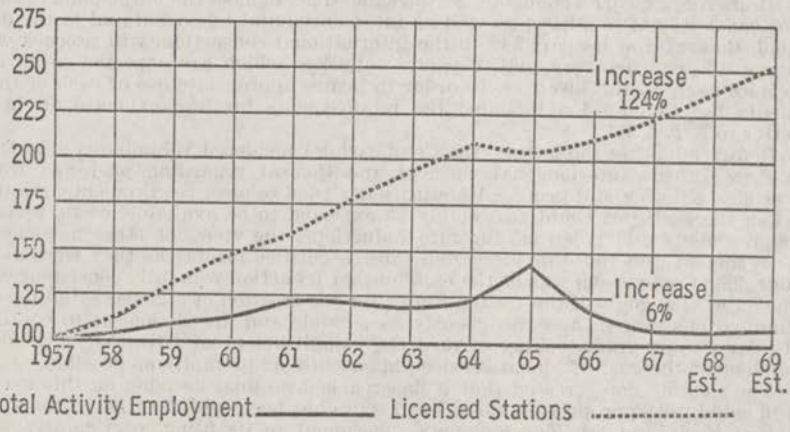
Mr. HYDE. No, we do not. There are certain rules. This is a specialized service. Actually there is no real problem of discipline. It has been a long, long time since we had one. I do remember one instance in which as a hearing examiner I conducted a hearing on a renewal application of a police department station.

Mr. EVINS. You break this down for aviation service: 0.5 man-year increase, and for marine service there is a small increase. For public safety service there is an increase. For industrial service there is an increase. Land transportation service, there is an average employment increase. You do not do much work there, do you, Mr. Chairman?

Mr. HYDE. You know, I am getting overwhelmed as you read and describe them to me.

Mr. EVINS. We will place this chart on page 58 in the record.

(The chart follows:)



Mr. EVINS. You say, "the Commission's workload in these services increases with the number of stations to be regulated. The number of licensed stations has increased at a far more rapid rate over the past 10 years than our employment levels." The Chairman is overwhelmed with work in this area?

Mr. HYDE. I have not given up.

Mr. EVINS. Some of the most urgent proposed new uses would extend radio for highway safety purposes and to more aggressively combat crime in the urban areas. You have updated your script there.

I hope that you can accomplish safety on the highways and combat crime in the streets. We all agree with you. We are all for you and commend you.

UHF BAND FOR LAND MOBILE SERVICES

Mr. GIAIMO. On this point on this page, the third paragraph there, you say in the land mobile area investigations were started to determine feasibility of determining frequencies by sharing UHF and VHF frequencies by reallocating. That is what we were talking about earlier. Then you go on to tell about your progress in the channels splitting and 450 to 47 megacycle range. Let me preface that by saying, going back to last year's hearings, you will recall we had a lengthy discussion on this problem and the mandate of the Congress in that

area is rather clear as evidenced by the Select Small Business Committee, which Chairman Evins also chairs, where they said they wanted to take some immediate action in this spectrum allocation.

Can you tell us now what you are doing specifically in the UHF spectrum area, the lower portion of it particularly, the portion from 14 to 20, which the land mobile people tell us is the desirable area to do some work in. As I understand it, the costs could be rather prohibitive if you went into the higher portions of the UHF spectrum? What are you doing in this lower portion?

Mr. HYDE. We have undertaken very extensive studies of how best to accomplish a sharing arrangement. I think that you will agree that undertaking such a program, we should do it with minimal costs to broadcast services and minimal dislocation to any public use. We have three courses which have been studied pretty substantially. We are not certain at the moment which one or which combination of them would best accomplish our purpose. In doing this we have studied possible rearrangements of UHF stations, and the possibility of simply taking advantage of the absence of stations in certain areas. We have to give consideration to the manufacturing problems that would be generated if we used frequencies in different ranges in different metropolitan centers. I can tell you that the resolution to go ahead and provide for increased use of the UHF band has been made. We are not procrastinating about whether we should or not. We are undertaking to study how best to do that, having in mind the problems of the manufacturer, the chracteristics of the frequencies, the problem of accommodating such stations as are on the air, and such stations as are applied for in specific applications.

I assure you that this is not just a delaying tactic. It does represent a serious effort to handle this problem in the most orderly and advantageous way.

Mr. GIAIMO. I understand that. You understand our concern or my concern and the concern of many members; that we have been hearing this now for year after year and we have to be able to report to many of our colleagues who ask. What progress has been made since last year? Last year I think it was on page 1193.

At that time you indicated to us that you would have some word for us as to the possibility of some reallocation of the lower portion of the UHF band.

Mr. HYDE. I must tell you that I was more optimistic at the time I was here as to how much time it would take.

Mr. GIAIMO. Fine.

Mr. HYDE. I was ready then to recognize that we must make some additional provision for mobile services. I was ready to recognize then that perhaps the most promising area would be in the UHF allocation. There is a vast amount of spectrum space involved there.

Mr. GIAIMO. What happened last year to lessen your optimism?

Mr. HYDE. I have found as I get involved in this with the help of the engineers and the economists, that it is easier to make a promise such as I made to you here than to carry it to fruition. I do represent to you that we have followed through on this conscientiously and we have made good progress. We do believe that the provision that we have made for increased mobile services in the channel-splitting technique

will give us a little latitude in time to pursue these other methods. They are underway.

Mr. GIAIMO. It is not just this committee that is concerned about this.

Mr. HYDE. I understand Mr. Dingell is going to inquire into that.

Mr. GIAIMO. I must say it seems like we are going backward. I felt better last year than I do today as far as finding some solution.

Mr. HYDE. No. I promise you that we will undertake it. We have undertaken it, but unfortunately have not been able to get out a definitive rule. The nature of the study and the complications of it have made it impossible to have the answer this early.

REARRANGEMENT OF UHF CHANNELS

Mr. GIAIMO. You mentioned earlier that one of the phases of this that you were studying was the rearrangement of UHF channels.

Mr. HYDE. That is right.

Mr. GIAIMO. You mentioned the absence of certain stations. Have you given any thought to any type of a freeze where these stations are not actually being used or where there is an absence of allocation?

Mr. HYDE. I believe that we are going to be able to proceed with rulemaking before there could be any serious change in the present allocation. I think a freeze would not be necessary.

SHARED FREQUENCIES

Mr. EVINS. Mr. Chairman, how do you go about this, on a first-come-first-served basis?

Mr. HYDE. In the granting of these licenses?

Mr. EVINS. In the granting of these new land mobile grants, frequencies, licensing of additional stations. Is it ordinarily on the basis of the time the application is filed?

Mr. HYDE. Yes, sir. But let me hasten to add that they are not mutually exclusive. You do not have the same problem in most services that you have with broadcast stations where one gets a grant and the other is out. In a typical case these are shared uses and in many instances the uses are coordinated.

Mr. GIAIMO. The problem is not conflict between the users of the land mobile type frequencies, but the conflict is to try and get them some more of this space which we claim should be taken from the lower portion of the UHF?

Mr. HYDE. The major problem at this time is to find some additional space; that is right.

Mr. COX. The problem in the public safety area, where essentially the grants are exclusive in a limited area, is interference in adjacent areas. That is, if you are licensing a channel to a police department in Burbank, Calif., no one else in that area can use that frequency, but they may get interference from someone down toward San Diego.

In the business, manufacturing, and special industrial services, they are not exclusive. As the Chairman said, the problem there is that once you have licensed 65, 75, or so users on a channel, depending on the number of mobiles they have in their fleet, you get to a point where the efficiency of the use is impaired. Then you either are going to have to

come up with additional spectrum eventually or—and this is being urged by some other interests—you may have to revise your eligibility requirements to set some priorities as to the kind of businesses that ought to be allowed to use radio. Thus far we have been using very broad priorities. If you cannot qualify for one of the tighter user groups, you will end up, certainly, either in the business radio service or ultimately in the citizens band.

Up to this point, we have been following a policy that anybody who has the requirement to reach a vehicle by radio could get some sort of a license to do so. Some of these frequencies are very badly crowded.

Mr. GIAIMO. I know they are. That is why I am constantly talking about this problem. I hope that you are not suggesting that you are going to restrict or narrow it.

Mr. Cox. We have not proposed anything of this sort. I am simply reporting that the broadcasters, for instance, when the discussion gets around to actually taking frequencies from the UHF allocation. they raise questions as to whether we can soundly go ahead in perpetuity licensing mobile radio to everyone who comes along, regardless of the degree of their need.

Mr. GIAIMO. I understand that.

Mr. Cox. We have proposed no restrictions.

Mr. GIAIMO. My concern is that we are dealing with a substantial contribution to America's economy here. We are not talking peanuts. We are talking, as I understand it, in excess of $20 billion, if the figures used last year were correct. Something has got to give. This uses up less than 5 percent of the entire spectrum allocation.

Mr. Cox. One of the alternatives that the chairman referred to that we are studying very seriously would be a sharing of the UHF spectrum by land mobile users. This is what he referred to as the absence of assignments. If in Chicago, or Los Angeles, or New York, wherever a need exists, particular UHF channels are not in use either in those communities or immediately nearby, then we have some reason to believe that you could fit in very substantial land mobile operations on those channels without interfering with their long-range use in the television service, if and when a need for licensing projected stations arises.

Mr. GIAIMO. That would be the case in a State like Connecticut or New York. I have a map here which shows channel 14 out of Boston which is the only UHF, as I understand it, licensed in channel 14 in that area. This entire Connecticut and part of New York area would be available if it were——

Mr. Cox. One of the committees that was working on this had considered this sort of thing expressly, and they submitted to us some maps very much like this one you have there, showing that they had developed certain distance factors. They were satisfied that you could allocate a land mobile channel up to certain contours drawn around the existing station allocations. There are, in every one of the top 25 markets where this problem substantially exists, openings where you could fit in land mobile operations on these shared channels.

OPPOSITION TO SHARING LOWER BAND OF UHF

Mr. GIAIMO. One of the complaints that you hear from many people, and I would like to hear your comments on this, is that there is a great deal of opposition to this taking some of the lower band of the UHF spectrum. Is there opposition from the broadcasters?

Mr. HYDE. There is opposition to it. Before the Commission will make any changes in allocations, it will have to give public notice and it will have to give opportunity for comment by anyone who is interested in the decision to be made. Of course, before we can invite comment we have to design a plan of approach that can give scope and direction to the comment. That is the stage that we are in now. I think that if you will just bear with us a little while longer we will have a public proceeding going.

Mr. EVINS. The Commission sets it out very well here. Let me read this.

Without adequate regulation the legitimate users of radio communications, be it public safety as in marine, aviation, police and fire; business and industrial as in trucking, railroads, taxi cabs or commercial enterprises; broadcasting as in radio and television, all will become vulnerable and be plagued by increasing communications interference which will progress with inevitable certainty from noticeable to annoying to destructive. This leaves the question, "Should entrepreneurs who use radio communications in furtherance of business ventures which directly reflect in the gross national product, or John Q. Citizen who depends on mass media communications such as radio and television for keeping abreast of world events as well as entertainment, be deprived of the service in which they have invested?

Mr. HYDE. Our task is to provide an appropriate division here. We shall do that in the public interest just as quickly as we can.

Mr. EVINS. In some cases you can give more band facilities and in others the public interest may be affected.

Mr. GIAIMO. I am in favor of what you are saying. It has been since 1947, since we have had change in spectrum allocation and we have been continuously hearing about the studies. We in Congress are most impatient to hear from you definitively.

Mr. HYDE. I am reporting tangible, real work.

FIELD ENGINEERING

Mr. EVINS. You are very vigorous.

Here is the increase in the number of transmitters and number of stations. The number of stations goes up from 377,000 to 1,920,000. You are asking that the staff be increased by eight more in the Bureau of Field Engineering. Then you state these figures do not include 49 positions which are included in a separate section of your 1969 budget for the Citizens Radio Service. Overall, Mr. Chairman, with the Citizens Radio Service and Field Engineering, how many new jobs are you requesting to clear up this congestion?

Mr. HYDE. I think that I had nine people aside from what has been asked for.

USE OF COMPUTER

Mr. EVINS. Mr. Chairman, what uses are you making of the computer?

Mr. HYDE. We are making tremendous use of that computer.

Mr. EVINS. How is it being used?

Mr. HYDE. It is being used effectively. As a matter of fact, let me give you a little statement on that. The computer has been in operation for 4 years. Its initial cost, including auxiliary equipment, was $992,800. At the present time we have 54 employees assigned to data processing.

Mr. EVINS. Operating the computers?

Mr. HYDE. Yes, sir. The computer processes 40,000 station and operator applications per month, prepares licenses on a high-speed printer, and maintains information on 1,380,000 licenses. These are some of the achievements through use of the computer. Elimination of application backlogs in the citizens, amateur, marine, and aviation services.

Mr. EVINS. Mr. Chairman, if you want to, put that list in the record.

Mr. HYDE. Let me do that. It is really impressive.

Mr. EVINS. Highlight a few of them there.

Mr. HYDE. All right. We have reduced the backlog in these services I mentioned from 90 days to approximately 21. That is, improved service.

Data on land mobile services, frequency assignments are on computer tape for ready access. Since you asked me to put in some of the more outstanding ones, in connection with our study of possible use of UHF channels for mobile purposes, we made some analyses which would have taken us 18 engineering man-years or $275,000 to complete. These have been done in just a matter of a few weeks. There are other areas where we expect we can make good use of the computer. We are exploring this as expeditiously as we can.

Mr. EVINS. It is a very highly technical field. The computer is a useful device?

Mr. HYDE. I do not believe that we could perform our task now without access to the computer.

COMPUTER SAVINGS AND PROGRESS

Mr. EVINS. This statement may be included at this point in the record.

(The statement follows:)

COMPUTER PROGRAM—SAVINGS AND PROGRESS

INTRODUCTION

The computer has been in operation in the Commission for 4 years. Its initial cost, including auxiliary equipment, was $992,800. At the present time we have 54 employees assigned to the data processing division operation with an annual payroll of $420,000. The computer processes 40,000 station and operator applications per month, prepares licenses on a high-speed printer, and maintains information on 1,380,000 licenses.

Significant achievements of the computer in improving Commission operations are as follows:

Elimination of applications backlogs in the citizens, amateur, marine, and aviation services; delays in issuing license have been reduced from 90 days and over to approximately 21 days;

Data on land mobile services frequency assignments are on computer tape for ready access;

Provision of additional service to the public in the marine and aviation services of notifying licensees in advance of the expiration date of their licenses. (This is a great help to the public, and it expedites the whole licensing renewal process.)

Provision of complete and up-to-date information on licensees to Commission field offices for use in monitoring, inspection and surveillance purposes;

Automatic selection of UHF television channel assignments; and

Provision of engineering computations for AM, FM, and VHF–TV services.

SAVINGS

Although it is difficult to assess precisely the savings achieved by the computer, estimates for those program areas cited above are as follows:

Annual saving of 45–50 man-years, or $250,000, in the application processing and licensee information system;

A saving of $100,000 in contractual computer services to make analyses of land mobile services frequency assignments:

A saving of 18 egineering man-years, or $275,000, in the development of a UHF television channel assignment plan, and an annual saving of $25,000 to maintain the plan; (see attached Broadcast Bureau statement)

An estimated annual saving of 6 man-years, or $75,000, in providing engineering computational products.

PROMISING AREAS FOR COMPUTERIZATION

Systems and programing development work are going on at the present time for adaptation of the computer to

An index/reporting system for Commission decisions, reports, et cetera;

An FM chanel selection and assignment plan;

Property record accounting; and

Commission payroll and associated financial reporting.

Other areas identified for study and possible mechanization are:

Land mobile frequency assignment plan;

The processing of land mobile services applications;

Maintenance of ledger accounts on a cost basis by object class and Commission program; and

Activity time and cost reporting system.

The tangible savings in manpower made possible by the computer are comparatively small when compared with the intangible benefits which cannot be measured directly in dollars. In early 1966, the Commission adopted a revised UHF television assignment plan. The revision was necessary to provide a fourfold increase in the number of TV channels allocated for educational TV broadcasting. Jamming this many additional allocation requirements in a TV allocation plan required a careful examination of each contemplated assignment so as to achieve the highest degree of efficiency in the use of each channel.

Maximum efficiency is approached in an allocation plan if each chosen assignment has the least impact on the pool of channels available for assignment in a given area. Thus, if there are 20 channels from which an assignment may be chosen in a given city, each must be tested to find the one that has the least impact on the pool of assignments not only in the city under study but also in all other cities in the area out to as much as 205 miles from the city under study. It is estimated that to develop such a plan by manual methods would require the full time of an expert TV allocations engineers for 18 years. Since the efficiency of an allocation plan is also influenced by the place in the United States where you start, if a dozen possible starting places were studied for comparison, this would have taken the engineer 12 x 18 years or a total of 216 years to complete. Naturally, no such effort was possible prior to the advent of the computer and allocation plans were created manually by simply assigning the first channel that would work in a given city. With the expertise developed over many years of working with allocation plans, some manually developed plans came within 10 percent of being as efficient as computer derived plans. This sounds close but the 10 percent of channels that were missed might mean the difference between having a needed channel in a particular city and no assignment at all. The computer in a matter of approximately 10 hours per plan, was able to develop and compare 12 possible UHF allocation plans in 120 hours which would have required 216 years by manual means.

In the matter of the continuing work of the Commission, additional TV channel assignments requested in petitions are selected by the computer in a matter of minutes whereas by manual means each would require from several hours to

several days of an expert engineer's time. This means that the Commission can act more expeditiously on petitions with the result that we have no "backlog" of petitions for new UHF channels. In addition, we are faced with the problem of creating a new educational FM channel assignment plan, again faced with the need for maximum efficiency. We expect to accomplish this by means of the computer within approximately 6 months. By manual means the adoption of the plan would be delayed 1 or 2 years or we would just try to live with the first plan developed without assurance as to its efficiency.

The Commission was recently faced with the problem of determining the impact of reallocating some of the UHF television channels to the land mobile services. A manual study of this impact would have taken several years and the results would have been inconclusive because of questionable efficiency of replacing the deleted channels. The computer was able to simulate the deletion of these channels and to select replacements in the most efficient manner in a matter of a few hours.

JUSTIFICATION MATERIAL

Mr. EVINS. Let us put in pages 66 through 69.
(The pages follow:)

V. FIELD ENGINEERING ACTIVITY

The field engineering activity provides services and assistance to the general public, Government agencies, and industry. Among its responsibilities are the enforcement of laws and regulations, the resolution of radio interference, the examination and licensing of radio operators, the processing of applications pertaining to painting, marking, and placement of antenna structures, and furnishing direction-finding aid in connection with ships and aircraft in distress.

FINANCIAL REQUIREMENTS

	1967 actual	1968 estimate	1969 estimate	Increase
Personnel compensation	$3,533,146	$3,691,124	$3,909,899	$218,775
Personnel benefits	256,035	269,524	282,347	12,823
Other obligations	719,029	718,398	757,820	39,422

[1] These figures do not include 49 positions (46 man-years) which are included in a separate portion of the 1969 budget request dealing with the Citizens Radio Service.

The Field Engineering Bureau provides an enforcement service which protects the multibillion-dollar public investment in radio communications. This investment consists not only of the vast quantities of equipment and facilities devoted to communications but includes, as well, the infinite value of the scarce

radio frequency spectrum. The latter will lose its value if frequencies allocated within its boundaries cannot be effectively used because of congestion and disruptive radio interference. This situation is in fact occurring and we know that the value of many frequencies assigned for public safety, health, local governments, and industrial usages is being diluted by increasing congestion in the spectrum generated in large measure by improper operations. The more the radio spectrum is used, the more important is the rigid observance of Commission rules and regulations. Otherwise, spectrum pollution will occur producing unnecessary waste of this vital national resource. Rules and regulations are meaningful only when they are followed. In order to obtain acceptable levels of conformance to its rules, the Commission has maintained an enforcement function in the Field Engineering Bureau.

Without adequate regulation the legitimate users of radio communications, be it public safety as in marine, aviation, police, and fire; business and industrial as in trucking, railroads, taxicabs, or commercial enterprises; broadcasting as in radio and television, all will become vulnerable and be plagued by increasing communications interference which will progress with inevitable certainty from noticeable to annoying to destructive. This leaves the question, "Should entrepreneurs who use radio communications in furtherance of business ventures which directly reflect in the gross national product, or John Q. Citizen who depends on mass media communications such as radio and television for keeping abreast of world events as well as entertainment, be deprived of the service in which they have invested?

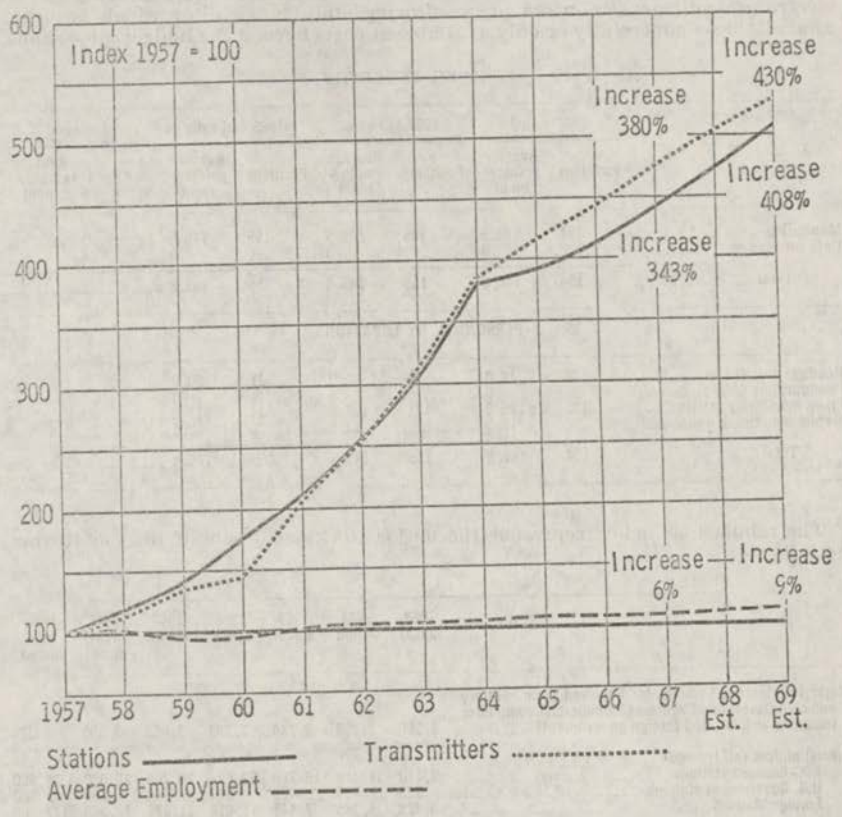
Adequate enforcement of the usage of the radio spectrum is directly proportional to adequate manpower. Enforcement is a hard, unglamorous, oftentimes thankless task which can be accomplished only through the continuing diligent application of manpower in sufficient quantity to produce the desired control in the areas concerned.

The following presentation by the Field Engineering Bureau, based on manpower, experience, and statistics, depicts the manpower necessary as a start, to provide the user public with service for which it has paid and to which it is entitled.

Since the workload of the Field Engineering Bureau is directly related to the number of authorized stations and transmitters, the following table is provided to show the growth in both the number of stations and transmitters as compared with the staff of the Field Engineering Bureau.

Fiscal year	Number of stations	Number of transmitters	Average employment
1957	377,838	1,273,498	377.0
1958	446,888	1,407,264	390.0
1959	517,291	1,728,947	347.5
1960	663,172	1,818,029	360.2
1961	784,350	2,663,475	380.4
1962	951,990	3,225,782	385.6
1963	1,154,338	3,983,446	384.4
1964	1,444,400	4,948,063	394.9
1965	1,485,470	5,304,699	406.1
1966	1,563,746	5,646,320	396.3
1967	1,673,743	6,087,266	399.3
1968 (estimate)	1,800,000	6,400,000	405.0
1969 (estimate)	1,920,000	6,750,000	412.0

The following chart portrays graphically how much more rapidly the number of stations and transmitters has increased than the staff of the Field Engineering Bureau which has responsibility for the field enforcement activities of the Commission.



Note: The absolute figures on which this chart is based are shown on the preceding page.

MONITORING

Mr. EVINS. We have a section here on monitoring.
Place pages 70 through 74 in the record.
(The pages follow:)

1. Monitoring

The radio monitoring function requires observations and measurements of radio and other electromagnetic emission to detect and correct violations of laws, regulations, and treaties, and thus provide a vital part of overall regulation of the communications industry. Unauthorized radio stations and sources of interference including radiations from industrial, scientific and medical noncommunications equipment, are located by direction-finding processes. Direction-finding aid is given to distressed planes and ships in the national search and rescue program.

Since violations, radio interference, and distress cases exist or arise at all hours and on weekdays, weekends, and holidays alike, the monitoring function is a never-ending, 24-hour requirement if the public is to be served effectively.

Frequency usage and operating data are collected to aid the Commission in allocations and other regulatory functions. Engineering studies and programs furnish special information, such as propagation characteristics of different frequencies, needed for allocation and regulation. These engineering programs also pertain to design, construction, installation, and maintenance of special electronic equipment required by monitoring stations, some of which is either unavailable commercially or only available at costs beyond the budget allocations.

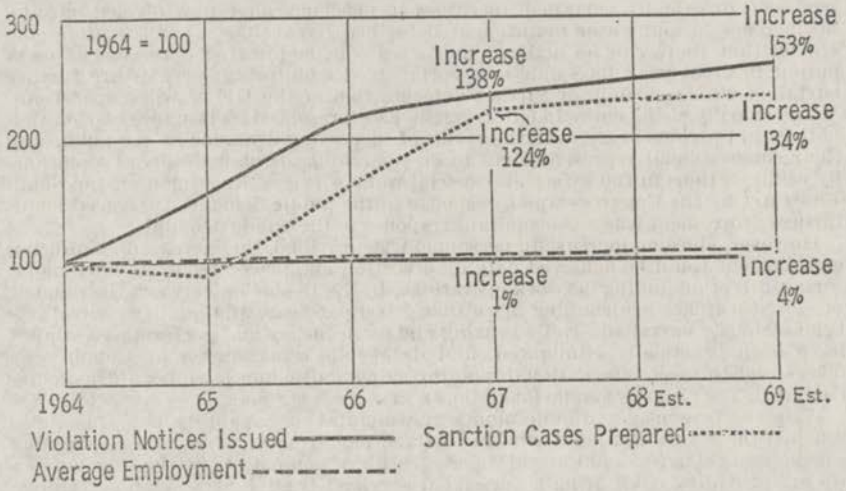
[1] These figures include warning and supplementary notices in addition to notices of actual violations.

The following chart shows the relationship between average employment and work products (all services) as reflected in violation notices and sanction cases processed. Statistics shown begin with the first full year of Monitoring Systems Division operation. (The Monitoring Systems Division was established as a result of reorganization near the end of fiscal year 1963.)



The following figures reflect the statistics supporting the above chart. (Includes Citizens Radio Service.)

Fiscal year	Violation notices issued	Percent increase over base year 1964	Sanction cases processed	Percent increase over base year 1964	Average employment	Percent increase over base year 1964
1964	7,315		160		160.4	
1965	11,212	+53	235	−10	160.8	
1966	16,161	+121	424	+63	161.7	+1
1967	17,378	+138	585	+124	162.5	+1
1968 (estimated)	18,000	+146	600	+131	166.5	+4
1969 (estimated)	18,500	+153	610	+134	166.5	+4

Significant Accomplishments in Fiscal Year 1967 and Those Forecast for Fiscal Year 1968

Violation notices issued for on-the-air violations in all FCC-licensed radio services (excluding class D citizens) increased approximately 5½ percent during the past year over the previous year, from 11,690 to 12,370.

Unlicensed operation of radio transmitters is becoming a serious problem. In fiscal year 1967, monitoring operations found 2,294 stations operating without a license (excluding class D citizens). More than 93 percent of these unlicensed stations were found on frequency bands above 30 mc./s by mobile monitoring units in geographical areas beyond reception range of the fixed monitoring stations. If unlicensed operation of radio transmitters is permitted to go unchecked, it is the first step toward loss of governmental control and failure to meet regulatory responsibility. The next step is frequency jumping with its attendant flaunting of governmental frequency allocating authority. The inevitable result is that chaos spreads from one radio service to another and the public suffers. Moreover, these developments indicate inefficient and wasteful utilization of the spectrum. Com-

plaints from the user public of severe interference, wanton and otherwise, are becoming more bitter and more frequent.

License revocation warnings for repeated violation of the Rules increased during the past year over the previous year by 33 percent from 1,215 to 1,613 (class D citizens excluded).

All nonessential activities have been eliminated, quality control on the DF net has been drastically curtailed, increases in efficiency have now leveled off, and no increase in manpower is anticipated for fiscal year 1968. It is therefore concluded that there can be little or no increase in monitoring enforcement work output in fiscal year 1968 unless essential fixed monitoring services are further curtailed with concomitant further deterioration of the DF network operations.

The sharply rising curve in enforcement, as represented by issuance of violation notices in previous years, was the result of increasing demands by the public and their congressional representatives to do something about widespread violations by radio stations in the safety and special radio services. Enactment of the Small Fines Act by the Congress was a response to the public demand. Increased monitoring enforcement was a concomitant response to the public demand.

However, since no increase in personnel was provided, the increased monitoring enforcement could be achieved only by diverting manpower from the fixed-monitoring/direction-finding network operations. In the 18-station network the number of closed watches are running more than 3,000 per year, and quality control has been seriously curtailed—radio bearing and fix accuracy and performance studies have been practically eliminated, and data collection for use by Commission offices and to meet international monitoring commitments have been drastically curtailed. The Commission no longer has a first-class DF net.

With the presently available manpower, monitoring capability has practically reached the saturation point, and in the land mobile services (which is receiving considerable congressional attention as a result of complaints by the user public) we are providing monitoring enforcement service to only a very small percentage of the country. The explosive growth of the radio communications industry since World War II has simply run away from our enforcement capability.

Sanction cases are violation files which, after assembly and critical review in Washington, appear to warrant administrative or punitive sanctions against repetitive and/or willful violators. These cases are referred to the legal divisions of the Commission's service bureaus for legal action. It is again stressed that, although progress has been made during fiscal 1967, it was possible to produce referral cases on only about half of the potential cases. The other half were filed without action because of lack of manpower to perform the necessary processing and review functions.

Because of the necessity for continued economy, no increase in personnel is being entered for monitoring in this budget request for fiscal year 1969. Since we cannot now meet both the fixed monitoring/direction finding and mobile monitoring workloads with the present staff, we will not be able to meet any additional work requirements or increases in present workloads.

Mr. EVINS. Significant accomplishments in the field of monitoring. Monitoring operations found 2,294 stations operating without a license.

What is done to stop these types of operators?

Mr. HYDE. Notify them to get off the air.

Mr. EVINS. Mr. Plummer found 2,294 stations operating without a license.

Mr. HYDE. He puts them off the air.

Mr. EVINS. More than 93 percent of these unlicensed stations were found on frequency bands above 30 mgs by mobile monitoring units in geographical areas beyond reception range of the fixed monitoring stations. They were crowding the frequencies unlawfully.

Mr. HYDE. Yes, sir. This does point up the need for an effective enforcement arm because if it can be found that an operator can go undetected this invites more of the same.

Mr. EVINS. Violation notices issued for on-the-air violations in all radio licenses increased 5½ percent, from 11,690 to 12,370.

INSPECTIONS

Mr. EVINS. Place page 74 in the record, and pages 76 and 77.
(The pages follow:)

2. *Inspections*

The Commission requires that operation of radio stations by its licensees comply with particular rules of the Commission as well as international treaties and regulations. One part of the Bureau's enforcement program is to make such determination through the process of inspections. Inspections serve several purposes in that in addition to determining compliance with the rules and regulations, there are a number of occasions during which the inspecting engineer is of assistance to the licensee by answering questions dealing with the regulations governing the particular service. A third purpose served is that the inspecting engineer collects nontechnical and engineering data which is furnished to other bureaus and offices of the Commission to assist in rulemaking and spectrum management. An official notice of violation is issued to a licensee when violations are discovered. Proposed sanction actions are initiated by the Bureau, if violations are determined to have been willful or repetitive.

The multibillion-dollar telecommunications industry is based on efficient administration by the Commission. Such administration is supported, in large measure, by promulgation and enforcement of rules. Efficient spectrum use vitally depends upon stations complying with these rules. Inspections are performed to determine whether stations are, in fact, in compliance with the rules and if not, to initiate action toward compliance by such stations. Failure to inspect would result in an increasing number of stations failing to comply with the rules and ultimately lead to a chaotic situation in the communications industry with a fallout effect on important governmental communications.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL YEAR 1967 AND THOSE FORECAST IN FISCAL YEAR 1968

To assist the Commission in meeting its regulatory responsibilities, engineers of the Commission's Field Engineering Bureau made over 14,000 inspections of stations licensed to operate in 45 authorized radio services.

Although the total number of inspections represents a small fraction of the total stations licensed by the Commission, this sampling serves to identify critical areas in need of closer enforcement supervision and allows the FCC to retain some little control by making the licensee aware that an unscheduled inspection may be imminent.

Approximately 2,000 inspections of stations in the broadcast services were made during the fiscal year. 1250 of these were extensive inspections made prior to the renewal of the station authorization to determine whether the station was being operated in accordance with the Commission's rules. A prime area involved in these inspections was the equipment performance and measurements data required with respect to each licensee to insure that the station was transmitting a signal of acceptable quality. Violation notices were issued for failure to meet the technical equipment performance standards established by the rules governing the broadcast services and each licensee was required to respond by furnishing proof that his station had been brought into compliance with the rules, thereby affording the public a signal meeting quality standards.

During the year the Commission issued 74 notices of apparent liability, based on inspections, against broadcast stations. The forfeitures assessed totalled $66,500.

Field engineers made over 3,500 inspections aboard vessels which were required by act, treaty, or international agreement to have radio equipment aboard which meets minimum requirements considered necessary to enhance safety of life and property at sea. As a result of these inspections, 2,232 violation notices were issued and in many cases the master of the vessel was warned that the ship should not leave port before the equipment discrepancy was corrected. Should a vessel sail with equipment not meeting the required standards, the operating company and the master are exposed to severe penalties provided in the Communications Act. A substantial contribution to safety of life and property at sea was made by this enforcement effort.

Included in these inspections were 81 vessels recalled from "mothballs" to augment the merchant fleet in order that shipping requirements to Vietnam

could be met. The poor condition of many such vessels compounded inspection problems. Nineteen post-marine disaster inspections were conducted as a part of a continuing study to determine the efficiency of telecommunications equipment in averting or diminishing the possibility of a disaster at sea.

The engineers in charge of the FM–TV mobile enforcement units, in addition to fulfilling enforcement responsibilities, have rendered considerable assistance to licensees entering the field of stereo broadcasting. Data collected during inspections have revealed operational techniques that can be furnished licensees, enabling them to provide quality stereo broadcasts to the public during the developmental stage.

During 1967, there were over 12,000 inspections made of stations in the other-than-broadcast services. More than half of this number were inspections of stations in the public safety and industrial radio services. Inspections of stations in these services serve to reduce interference problems by enforcing observance of rule requirements, thus enabling licensees to provide a more efficient communications system.

Increase requested: 4 a.e.

Broadcast licenses are issued for a period of 3 years. In fiscal year 1967, the percentage of broadcast station inspections during the license terms was 51 percent. Because of the increase in the number of broadcast stations, an increase of 4 a.e. is requested even to maintain the present relatively low percentage of inspections.

NEED FOR INSPECTIONS

Mr. EVINS. You state about 2,000 inspections of stations in the broadcast services were made during the fiscal year; 1,250 of these were extensive inspections made prior to renewal of the station authorization to determine whether the station was being operated in accordance with the Commission's rules.

What happened in these 1,250 cases?

Mr. PLUMMER. As I said before, we turned up discrepancies in the technical field, like antennas out of adjustment, control operations not right. They may not have the proper operator on. In some cases the towers are not painted or lighted properly.

Mr. HYDE. I think it would be appropriate to mention what the procedure is on a routine discrepancy.

Mr. PLUMMER. The first step, routine discrepancy, we issue a discrepancy notice, form 793, to a licensee that says he has these discrepancies. He then has a chance to fix them up and come back to us with a satisfactory answer. Sometimes the answer is not satisfactory, and then we have to go back a second time. On basic ones, where they have no operators on duty, then we turn it over to the Broadcast Bureau for forfeiture.

REASONS FOR FORFEITURES

Mr. EVINS. During the year, the Commission issued 74 notices of apparent liability against broadcast stations and the forfeitures assessed totaled $66,500. What would be the type of case?

Mr. HYDE. Failure to have a properly licensed operator on duty, operation with excess power. Operation beyond the hours prescribed in license.

This is a notice of apparent liability. They have a chance to answer it and explain it, perhaps explain why they should not be assessed a fine. Sometimes this will result in lowering of the fine. Sometimes, not too often, it will mean a cancellation of it. Generally speaking, when there has been cause for issuance of notice, there will be a fine of some amount.

RESEARCH AND COMMUNICATIONS TECHNOLOGY

Mr. EVINS. We will turn to research and communications technology. This activity includes planning, development of information in theoretical and experimental areas for long-range and immediate use regarding improved communications techniques. Do prospective broadcasters submit to the Commission for exhibit and display the type of equipment they are going to use?

Mr. HYDE. Yes, sir.

EQUIPMENT STANDARDS

Mr. EVINS. Do you license or approve the equipment?

Mr. HYDE. We do have certain standards which must be satisfied. A good deal of this equipment now is manufactured under established standards. We inspect a—I don't want to use prototype in the way it is used in the manufacturing process—but we will approve a given one. Then we will be in a position to approve all others bearing that same type.

Mr. EVINS. What level of research does the Commission expect to reach in the next year?

Mr. HYDE. We are going to put the emphasis on policy research rather than technological research. We need to add resources in order to keep up with the technical research carried on in the many big laboratories in the country.

Mr. EVINS. In 1967 you had $1,374,000 for research. Last year we gave you $1,719,783. Next year it is estimated to be $2,450,000. It increases substantially each year. The activity relates to the delineation of future needs.

Mr. HYDE. We have discussed that.

Mr. EVINS. The Commission's conference activities included preparation for 42 international conferences (29 multilateral and 13 bilateral meetings). This is shown on page 94.

EMPLOYMENT ON RESEARCH PROGRAM

Mr. GIAIMO. Since you are putting such emphasis on research and spectrum planning analyses here, I notice that your positions figure is 17 for 1969. You are down from what you had in 1967, where you had 18. In other words, you have fewer people working on it now than you had 2 years ago.

Mr. HYDE. We do expect to get contract assistance in our research program. As a matter of fact, that way we have access to the kind of personnel that we just can't keep on our payroll.

We do expect to set up a planning group within our agency to monitor, but the manpower itself and the numbers we will have to have will have to be obtained through these research centers which have access to the kind of talent we need.

Mr. EVINS. Personnel does not increase, but your appropriation increases substantially. Is this to be done by contract?

Mr. HYDE. Yes.

REALLOCATION OF SPACE ABOVE 13.2 GC/S

Mr. GIAIMO. On page 91 you say additional rulemaking procedure is expected to be initiated concerning a possible reallocation of spectrum space above 13.2 gc/s. That is way up. What is it?

Mr. HYDE. They call that gigacycles or gygacycles. There is debate on pronounciation.

Mr. WATKINS. It is 13,000.

Mr. GIAIMO. That is really not feasible for the average use, is it?

Mr. HYDE. Not average, but Mr. Watkins can give you some uses that are possible.

Mr. WATKINS. There is considerable competition for the space but there is need for fixed point-to-point service and it is under very active consideration for communication satellites.

Mr. GIAIMO. That does not help our planning concerning land mobile.

Mr. HYDE. No.

JUSTIFICATION MATERIAL

Mr. EVINS. Place in the record 88 to 98.

(The pages follow:)

VI. RESEARCH AND PLANNING IN COMMUNICATIONS TECHNOLOGY

This activity includes planning and directing broad programs to develop information and data in the theoretical and experimental areas for long range and immediate use regarding new and improved communication techniques and equipment, advanced phases of terrestrial and space communications, and radio wave propagation; advising and representing the Commisson in frequency allocation and usage matters, both nationally and internationally, collaborating and advising in the formulation of technical requirements of the rules and regulations of the Commission. Also included in this activity are type approval and type acceptance of equipment, adminstration of the rules relating to the operation of radio frequency devices, and performance of rule-making functions relative to the Experimental Radio Services.

1. Spectrum planning and research

This activity relates to the evaluation of present uses and delineation of future needs, formulation of plans for meeting these needs, and study of potentially useful concepts and techniques. This includes examining and analyzing the electromagnetic spectrum to insure selection and allocation of proper bands to the separate services to provide the maximum future expansion and accommodation compatible with current needs.

Spectrum planning and research	18	17	17	15.5	17	15.5		

One of the prime responsibilities of the FCC is to optimize the utilization of the non-Government electromagnetic frequency spectrum in the national interest.

The allocation and use of this great national resource have been growing at an enormous rate in the past several years. In the United States, for example, recent studies indicate that more than 80 percent of today's spectrum uses have come into being in the short period since World War II, and that the part of the gross national product derived from manufacture and use of radio equipment is estimated at $20 billion per year.

From the beginning, there has been a shortage of space for ever-increasing numbers of stations and new services in radio communication. Added to this is the rapid increase in numbers of operating licenses and in the new kinds of systems being devised to provide additional services.

In view of the use of established radio services and the development of new services, a sound doctrine for dealing with current and future problems must be planned and administered. The present crisis in attempting to resolve the land mobile frequency allocation problem may be attributed, directly or indirectly, in whole or in part, to an inability to devote adequate resources to spectrum planning.

Spectrum planning and research are essential to the orderly assignment of frequencies to the many services, all of which are competing for space in a spectrum that is rapidly becoming overcrowded.

Increased emphasis has been placed on long-range planning for the use of the radio spectrum. Various Government and non-Government studies of the spectrum have been initiated. Added attention was called to this activity recently by the President in his message to Congress which provided, among other things, for the establishment of a high level task force to make a comprehensive study of communications policy.

New emphasis should be placed on the Commission's proposed spectrum study program. In order to make more efficient use of the spectrum and to avoid chaotic radio interference conditions, the Commission will require more information about the ways in which interference is caused, the practical effects of interference and methods of reducing interference, so that criteria for proper spectrum management can be developed.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL YEAR 1967 AND THOSE FORECAST FOR FISCAL YEAR 1968

Spectrum occupancy studies were made in Chicago to obtain information primarily on the land-mobile channels in that area. Measurements were also made in the Washington-Baltimore area. These studies combined with previous and later studies show gross inequalities in utilization of various portions of the spectrum. It is expected that spectrum occupancy studies will be made in other areas during 1968. In addition, HF measurements will be made to indicate the effect of the rising sunspot numbers and other factors, such as expanded cable and satellite communications on the use pattern of the HF spectrum.

Phase I of the Precipitation and Off-Path Scatter Investigation (POPSI) has been completed. Valuable data representing over 3,000 operating hours were

accumulated, and this preliminary study is designed to act as a basis for a statistical treatment of the effects of man-made and natural phenomena on the joint use of spectrum space by satellite and microwave communications systems. Phase II will be continued in 1968 with the activities transferred from the coast to an inland area. This extension of research activity will add immeasurably to the value of the original data. More sophisticated techniques will enable us to assign values to some of the unknown meteorological parameters in the problem. For instance, we are now able to measure the signal transmitted and received, but are unable to determine why the signal fluctuates in strength. We need to know what is happening "up there." We know what the signal strength is and if it can be determined what meteorological conditions cause the variations in it, we can extrapolate this information to any area in which the meteorological conditions can be determined.

A report was issued on the development of VHF and UHF propagation curves for TV and FM broadcasting. These refined the curves and methodology required in applying terrain correction factors for increased accuracy in prediction.

Propagation curves designed to improve prediction are expected to be developed in the following areas in 1968:

Land mobile—These will prove invaluable to businesses and municipal services using this particular service.

Maritime service—These curves will provide a valuable safety factor for small boat operators.

An intensive study was made to evaluate various multiplexing techniques for use to increase the communications capacity of the land mobile channels. A report on this study will be published in 1968.

In 1967 an acoustical model of radio frequency propagation was developed and has been used in several studies concerning the effect of fading on the communications services. Further development and use is anticipated in 1968 and ensuing years.

A study was made to provide more precise criteria for interference in the microwave radio relay services, whereby an increased number of such systems can be licensed in a given region without interference. This would increase the utilization of the spectrum by permitting more systems to be installed in a given area within the already overcrowded bands. A report is expected to be issued in 1968.

It is anticipated that rulemaking will be initiated looking toward the provision of spectrum space for broad-band, specialized communication purposes. In addition, a rulemaking proceeding is expected to be initiated concerning the possible reallocation of spectrum space above 13.2 Gc/s (upper part of the spectrum now almost entirely unused by Commission licensees).

A study has been made concerning the usage of regular broadcast facilities for a national emergency warning system in lieu of one requiring separate spectrum assignments, as well as a study of the simultaneous use of broadcast facilities for emergency teletype circuits.

2. Frequency management

This activity may be described as a management effort directed toward optimizing the efficiency of spectrum utilization. This entails an equitable distribution of the usable radio spectrum between radio services found to be in the public interest and the establishment of criteria for the operation of individual systems to insure the accommodation of the maximum volume of use within a given service; with a minimum of harmful interference within and between services. Effective frequency management requires a continuing review of the Table of Frequency Allocations to meet the changing needs of existing services and to accommodate new services and uses of radio as they develop. This in turn requires comprehensive assignment records, usage analyses and the prompt application of technological advances.

PERSONNEL BY ACTIVITY

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
International allocations and agreements	17	16.5	16	15.2	16	15.2	----------	----------
National frequency usage	17	16.4	19	17.6	19	18.0	----------	0.4
Frequency records	18	17.9	16	15.7	16	15.7	----------	----------
Total	52	50.8	51	48.5	51	48.9	----------	.4

This activity encompasses efforts to obtain the most effective use of the radio spectrum in the national interest, within the framework of international treaties and agreements. Since the radio spectrum must be shared by all of the hundreds of thousands of U.S. radio stations, both Government and non-Government, the avoidance of chaotic interference requires close and careful advance coordination. Effective frequency management on a national basis requires, as a basic tool, usable records of all frequency assignments made by the FCC (non-Government) and of Government assignments made by the DTM. Emphasis must be placed on providing for satellite communications, mobile radio, microwave systems for both common carrier and private uses, development of UHF and CATV.

Because the propagation of radio signals is not obstructed by national boundaries, the orderly use of the spectrum requires extensive international coordination. First, there must be international agreement on the allocation of frequency bands and, in some instances, on the use of specific frequencies or channels. Without this, harmful international interference between radio stations of different countries would reach chaotic proportions. For example, the pilot of an aircraft on an international flight would find it difficult if not imposible to have good radio communication with countries along his route.

International coordination of individual frequency assignments has also been found necessary to avoid widespread interference between countries. As coordination cannot completely preclude international interference, effective procedures must be established to achieve the resolution of interference when it occurs. The rapid resolution of interference to radio-communications is particularly important in cases where safety of life and property is involved and where vital international circuits have been disrupted.

Without proper representation at international conferences on frequency usage, it would be impossible to protect the Nation's interests, and the United States would be unable to maintain its present position in world communications.

SIGNIFICANT ACCOMPLISHMENTS IN FISCAL YEAR 1967 AND THOSE FORECAST FOR FISCAL YEAR 1968

From extensive studies during the past 2 years, proposed criteria have been prepared for reliability and use of frequency diversity in the microwave radio relay services. After considering public comments received in 1968, it is planned to complete the promulgation of appropriate criteria.

In an effort to relieve the increasingly serious proximity interference problems occurring at crowded antenna sites, the Commission worked with representatives of the Departments of Agriculture and Interior, and arrived at a mutually acceptable set of procedures whereby Commission applicants are required to effect prior coordination with the Forest Service and the Bureau of Land Management when proposing to install or modify transmitting facilities on lands, especially high mountain sites, administered by those agencies.

Continuing extensive efforts were made during the year to alleviate the shortage of frequencies available to the land mobile services involving a multiplicity of approaches, both immediate and long range. By the adjustment of certain band edges in the 150.8 to 162 megacycles per second band, seven 30 kilocycles per second channels were made available to the services in what previously had been unassignable spectrum space; more assignable channels were created in the 450 to 470 megacycles per second band by cutting the channels in half, and the

Commission proposed a reallocation of that band, requesting public comments on the subject. It is expected that a reallocation of this band will be completed in 1968. Extensive work will continue to be directed toward alleviating the shortage of frequencies available to the land mobile services.

New procedures were developed to expedite the clearance of frequencies for Government contractual projects for experimental purposes. In the case of research operations related to space communications via satellites, it has been found expedient to require the applicants in the experimental services to conduct surveys related to potential interference with existing microwave communications services. This has worked to expedite frequency clearances and reduce FCC manpower requirements.

The Commission's conference activities included preparation for 42 international conferences (29 multilateral and 13 bilateral meetings) and substantial followup work is required on many of the conferences. Of major importance were a number of international sessions in preparation for the International Telecommunication Union (ITU), World Administrative Radio Conference (WARC) which was convened in Geneva on September 18, 1967, to consider maritime mobile and related matters. A major effort will be involved in implementation of the provisions adopted at this conference.

The Commission participated actively in the International Radio Consultative Committee (CCIR) plenary meeting, convened in Oslo. This conference resulted in CCIR actions which removed previous basic conflicts with FCC technical policy on single sideband and selective calling system plans.

During the year, 907 new cases of harmful international interference were opened and 665 cases closed; 48,244 monitoring observations were processed, and 43,840 of these were submitted to the International Frequency Board (IFRB); over 12,500 reports of infractions to the international radio regulations by foreign stations were forwarded to foreign administrations under procedures provided by those regulations; 87,507 non-Government frequency assignment actions were processed; 1,119 international broadcasting schedules were notified to the IFRB; other notifications, including those for stations in the Radio Astronomy and Space Services, totaled 7,533.

In 1967, maintenance of the frequency records for most of the radio services was transferred from punchcards to a computer tape. It is expected that the conversion of frequency records will be completed in 1968.

3. Communications technology

This activity includes specification of methods, systems, techniques and equipment for communications, involving investigating, testing, and analyzing equipment and developments in all phases of electromagnetic communications, spectrum utilization, and theoretical and applied studies on specific communications problems. Also included are the knowledge and limited capability to build transmitters, receivers, transmission lines, antennas, and terminal equipment, and to organize and operate complex systems composed of these elements to provide communications services.

PERSONNEL BY ACTIVITY

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Technical studies	19	18.5	19	17.6	19	17.6		
Experimental radio services	5	5.0	5	4.9	5	4.9		
Equipment characteristics	12	11.4	11	10.4	11	10.4		
FCC equipment standardization and development	6	5.2	6	5.5	6	5.5		
Total	42	40.1	41	38.4	41	38.4		

The Communications Act of 1934, as amended, charges the FCC with the broad responsibility of promoting new uses of radio in the public interest. This responsibility is reflected by promotion of more efficient spectrum usage through developments in technology. Toward this end, studies are conducted to encourage the development and expeditious application of improved radio-communication equipment and techniques. For example, the amount of spectrum space required for

the transmission of a given amount of information can be reduced through higher frequency stability, advanced modulation techniques and improved receiver selectivity. Further technological advancements in millimeter wave equipments to operate in the high end of the allocated radio spectrum may lead to the practical application of such equipment in frequency bands which are now all but unused, thereby making available a greatly increased communication capacity.

The development of new radio services is essential to meet the increasingly diverse needs of our expanding economy and to avoid impeding progress in activities for which communications are necessary.

The development of new and improved technology is essential to cope with the increasing congestion of the radio spectrum and to minimize interference to the many important users of radio.

Technical studies are required to obtain the maximum benefit from continuing developments in communication satellite technology.

In order for this country to keep pace with other countries in developing and standardizing new and improved communications techniques, we must endeavor to extend FCC technical policies to international acceptance insofar as practicable. Otherwise, we must accept conflicting policies developed by other countries on which international agreement has been reached, in which case our radio services and communications equipment industry would be adversely affected both technically and economically.

Significant Accomplishments in Fiscal Year 1967 and Those Forecast for Fiscal Year 1968

A notice of proposed rulemaking has been issued providing for moving low power communication devices (chiefly 100 milliwatt walkie-talkies) out of the band which they presently share with the citizens radio service to a new band higher in the spectrum. This is one step toward correcting the interference situation existing in these services.

It is expected that tests will be completed to determine whether it is feasible to share the use of TV channels with the land mobile services, however, further time will probably be required in the analysis of the test data.

Studies indicate that the problems of frequency stability and frequency standardization have progressed to the point where this factor no longer poses a problem to the implementation of very precise frequency control of TV stations to reduce interference between stations or to permit assignment of more stations. It is anticipated that this office may be involved during 1968 and 1969 in evaluation of expanded operations of this type.

This office participated in many measurement standardization programs during 1967, and is presently participating in a program of standardization of TV and other oscillator radiation measurements with the Electronic Industries Association (EIA), Institute of Electrical and Electronics Engineers (IEEE), and International Special Committee on Radio Interference (CISPR). A program for international comparisons of field strength measurements under the International Scientific Radio Union (URSI) is presently being headed by this office.

Extensive work will be required in the analysis of the forthcoming report of the Joint Technical Advisory Committee (JTAC) on electromagnetic compatibility, including studies concerning the practical applicability of its recommendations. This area of research is expected to enable an increased use of available spectrum space through analysis of mutual interference sources, with a view toward alleviating their deleterious effects.

Studies and recommendations concerning technical criteria for subscription TV systems were made in 1967. A notice of proposed rulemaking has been issued and, upon receipt of comments, technical standards will be written.

Recommendations for rules and technical standards for type acceptance of transmitters for use in class D citizens radio stations were completed in 1967. It is anticipated that new rules for this purpose wil be finalized in 1968. We hope this will improve the state of compliance with citizens service rules.

During 1967, technical standards were adopted for split channel land mobile equipment in the 450–470 mc./s band. In 1968, this office will be actively engaged in development of technical standards for community antenna TV systems (CATV), for the purpose of promulgating rulemaking in this matter.

It is anticipated that proposed rules to split marine VHF channels and specify new technical standards for equipment will be finalized in 1968.

Promulgation of rulemaking is anticipated for a comprehensive revision and updating of the rules concerning equipment type acceptance tests. New test conditions and procedures will be established for single sideband and other types of equipment not previously covered.

Much work was performed in the Special International Committee on Radio Frequency Interference which is striving to develop uniform measurement procedures and limits for interference.

During 1968 it is planned to issue new regulations in the Commission's rules governing radio frequency-stabilized arc welders, and to amend the rules to provide for radio frequency radiation from diathermy and miscellaneous equipment at microwave frequencies. Until now, use of microwave frequencies by industrial, scientific and medical (ISM) equipment has been permitted on a noninterference basis only without a specific radiation limit.

It is expected that a comprehensive technical report on eavesdropping and bugging will be prepared to provide information and to alert the public on techniques, practices and countermeasures.

Radio equipment lists have been transferred from the old IBM system to the computer. Parts A, B, and C of the list are being combined into one document which will result in more prompt issuance of the list and a saving in manhours for its preparation.

Certifications attesting compliance with the Commission's rules were reviewed and accepted on 2,176 different models of radio receivers (mostly FM and TV); 58 certifications on different models of industrial heaters; and four certifications on ultrasonic equipment; 1,182 formal and 185 informal applications for experimental licenses were processed during the year; 2,200 bulletins were distributed containing information regarding operation of low-power transmitters, and carrier current systems.

SUBSCRIPTION TV

Mr. EVINS. You state in your justification that studies and recommendations concerning technical criteria for subscription TV systems were made in 1967.

Mr. HYDE. They were.

Mr. EVINS. A notice of proposed rulemaking has been issued and upon receipt of comments standards will be written. What is the outlook for subscription TV?

Mr. HYDE. We have been asked by the House Committee on Interstate Commerce to defer action on that until they could examine the problem.

CITIZENS' RADIO SERVICE

Mr. EVINS. Very good.

We will take a look at the citizens' radio service.

Mr. SOLAN. This has been in the Commission for some time. This is a separate activity. We have broken it out as a separate activity.

Mr. EVINS. Broken out as a separate activity from a former division.

Mr. SOLAN. Part from field engineering and part from safety inspection.

Mr. EVINS. So you set up a new division from those two?

Mr. SOLAN. It is not a new organization, it is part of the Safety and Inspection Bureau.

Mr. EVINS. It is a new section in the Bureau?

Mr. SOLAN. Right.

Mr. EVINS. It has the same personnel?

Mr. SOLAN. Right.

It is expected to go from 40,000 licenses in 1958 to 850,000.

You state the rapid growth of the citizens' radio service has also generated many regulatory problems. Open disregard for the Com-

mission's rules, particularly by operators of the class D stations. What kind are they?

Mr. BARR. Most popularly known, of which there are some 800,000, relatively low power stations operating in the 27-megacycle band.

VIOLATIONS OF CLASS D STATIONS

Mr. EVINS. The open disregard of the class D stations has become so widespread that the usefulness of this device to the public has been seriously impaired. These rule violations, which include operation of radio as a hobby, use of unauthorized frequencies, overpower, obscene and profane language, and a lack of station identification, constitute a significant threat to the Commission's ability to carry out its statutory responsibility to regulate the use of the radio spectrum in the public interest.

You do not want to relax that rule, do you?

Mr. HYDE. We do not. We want to maintain citizens band as a communications service, if possible.

Mr. EVINS. Then you state that because of the seriousness of the problem in 1967 you created a task force to study the problem. In 1968 the budget requested funds to conduct a pilot enforcement program.

Why would you have a pilot enforcement program? If you know of the total disregard of your rules and regulations, you should have already made that determination.

Mr. HYDE. Our problem is how best to deal with this. One possible way, of course, would be to abandon the effort and close out the service.

Mr. EVINS. If you found a serious defect here, would you propose to have a pilot enforcement program?

Mr. HYDE. That is right. We are endeavoring to find out if by putting more emphasis on enforcement we can get better enforcement in this field. We are doing this in a limited area.

Mr. EVINS. You are going to use the same personnel in this that you use in the other bureau?

Mr. HYDE. Right.

FEES COLLECTED

Mr. EVINS. You point out, and Mr. Jonas earlier this morning alluded to it, page 101:

> It should be noted that the filing fees collected from citizens radio applications and paid into the U.S. Treasury during fiscal year 1967 greatly exceeded the cost of the entire citizens radio service program. During fiscal year 1967, $1,425,130.42 was collected in filing fees while the cost of the program for this service during the same period was only $687,623.

Mr. HYDE. Yes.

Mr. EVINS. In view of the violations of the rules and orders of the Commission, you might consider the rescheduling of some of your fees.

Mr. HYDE. We have given some thought to that, Mr. Chairman.

Mr. EVINS. Two rulemaking proceedings were initiated which should ameliorate the enforcement problem. The first would require that citizens radio equipment be type accepted, thus insuring that minimum technical standards are met. The second would remove the

operation of millions of low-power, unlicensed transmitters (walkie-talkies) from the citizens radio frequencies. Since the walkie-talkies are not subject to the same regulations as citizens radio stations their operation complicated the citizens radio enforcement program.

You have already adopted two rules which you say will solve the problem.

Mr. HYDE. Will help to solve the problem.

Mr. EVINS. It is going to ameliorate the enforcement problem.

Mr. WYMAN. We do not need to have a permit from you to operate a walkie-talkie, do we?

Mr. HYDE. Not under the low-power limit we have.

CITIZENS RADIO WORKLOAD

Mr. EVINS. You show the workload on 102 and the application received were 223,761 in 1967. Applications pending at end of fiscal year 1969, 6,600. So you must be able to handle these cases rather rapidly.

Mr. HYDE. Yes.

Mr. EVINS. The chart on 103 shows you the citizens radio service workload. Applications received in 1964 went to a peak and then it dropped down. What caused that peaking in 1964?

Mr. BARR. We instituted the fees and they came in ahead of time and then it dropped.

Mr. EVINS. You want 13 positions for the pilot enforcement program. You have already issued your rules on how to ameliorate the situation.

Mr. HYDE. The problem has not been resolved. We think we have made some improvement.

PILOT ENFORCEMENT PROGRAM

Mr. EVINS. Place in the record 105 and 106.

(The pages follow:)

As noted previously the pilot enforcement program which will be underway during fiscal year 1968 will be compiled and studied to form the basis for budget estimates to be submitted for fiscal year 1970. No further man-year increase is being requested for the Field Engineering Bureau for the Citizens Radio Service above the fiscal year 1968 level, pending evaluation of these programs.

However, it is expected that there will be a substantial increase in enforcement referrals in fiscal year 1968, particularly in view of the pilot enforcement program. A substantial number of cases referred in fiscal year 1968 necessarily will be carried into fiscal year 1969. This, coupled with the continued utilization of the pilot enforcement program staff which will be retained during fiscal year 1969, will require a 2.5-man-year increase to handle the increased citizens radio enforcement cases referred for the imposition of sanction and related clerical activity.

CATV

Mr. EVINS. Let's look at the other items. CATV we have talked about.

Mr. TALCOTT. I would like to ask a few questions before we leave CATV. I am a bit concerned about, what appears to me, an attitude of the Commission to stifle CATV. I have some information that there was an increase in CATV stations or systems in 1964 of about 250, in

1965–66 by about 300, but in 1966–67 only 50. This is when you issued your first and second reports and orders?

Mr. HYDE. Yes.

DEVELOPMENT OF CATV

Mr. TALCOTT. It seems to me that your announcements that you are going to study CATV or regulate CATV and that you are "seriously concerned" about many of the activities of CATV such as origination of programs, advertising, copyrights, and others, has had a very serious dampening effect on CATV.

Mr. HYDE. I am aware of the fact that the effort of the Commission to regulate this area has had an impact upon the speed of development of it. I must tell you that the regulation we have undertaken is designed to provide an accommodation between two industries which have not been able to find accommodation themselves.

Mr. TALCOTT. It appears to me that you are trying to protect the original industry, the broadcasting industry.

Mr. HYDE. I think we are not. That is not our attitude. I am saying that as reflecting majority opinion. Certain Commissioners feel that our regulations are onerous; others I believe feel that perhaps the course we have taken is not as stringent as it ought to be.

I believe that an analysis of the program we have followed would show a reasonable middle course here. We started out at one time to require that community antenna give 15-day protection to local stations as to the showing of network shows or films which would normally come through the station. We reduced that to 1-day protection. Our rules do require that the community antenna carry the local station. I would urge on you that it is a fair compromise pending the decision by the court.

Mr. EVINS. These are competing resources which the Commission is trying to make available to the public.

Mr. HYDE. We are trying to make it possible for the public to have the benefit of both services.

Mr. EVINS. I think I see one of the Commissioners shaking his head.

NONREGULATION OF CATV

Mr. LOEVINGER. I do not agree. I think the concern could be much ameliorated if we did not regulate CATV. Everything Chairman Hyde has said about CATV we have done is quite correct. What is significant is that he omitted in the hundred largest markets we have effectively prohibited CATV and in all the lower markets we have established a system by which we nominally permit it, and in fact permit anybody who wants to, in this particular market, come in and prohibit it by simply filing a paper without making any real showing at all.

Certainly I think the suggestion of Congressman Talcott——

Mr. TALCOTT. I would just as soon be out of this argument now.

Mr. LOEVINGER. I think what has happened is that the Commission has discouraged CATV and I think this is probably inhibiting some of the possibilities of using spectrum space. It certainly is not helping any, and CATV by and large does not use spectrum space as broadcasting does. CATV is not a substitute for broadcasting; but it could be a very effective supplement that I think would enable many more

people to get many more services without an increases in the amount of spectrum space that would otherwise be required.

CATV ON THE AIR VERSUS WIRED SYSTEM

Mr. Cox. I think we ought to set the record straight on that point, Mr. Chairman.

Unless you are contemplating a system which totally replaces over-the-air broadcast stations, with a system in which the program, the first time it is originated, is placed on a cable and never leaves the cable, you are going to have some spectrum use. If you have CATV systems in every community where they have been applied for, you would not reduce the need for a single television station, because they depend on the television stations for the bulk of their programs.

If you are talking about going over to a completely wired system, then you would have the possibility of freeing up some spectrum for other use. But in our tests of channel 6 sharing here in Washington we found that you could run land mobile base stations on channel 6 here and it did not interfere with the cochannel stations in Philadelphia and Richmond. However, it did interfere with the wired systems in motels, hotels, apartment houses, and schools where they are converting channels 20 and 26 down to channel 6. The wired system, even though it theoretically uses no spectrum, if it receives such interference from a substitute use of the spectrum as to give intolerable interference to the viewers, you may not be able to use the spectrum anyway.

Mr. GIAIMO. But that is a technical engineering problem; is it not?

Mr. Cox. It would be very, very expensive to reengineer existing systems or sets. I think, looking ahead, you would probably be able, at not too great expense, to manufacture sets which had sufficient shielding internally to protect it against this interference. But the existing sets, including the most modern sets in use in apartments and schools and motels, do receive interference if you have a base station operation within 2 or 3 miles.

WIDER CATV SERVICE

Mr. GIAIMO. But would you not arrive at the result Commissioner Loevinger suggests? I assume he suggests that you would reduce the number of local stations broadcasting over the air if they were replaced by a CATV operation. Is that not what you are suggesting?

Mr. LOEVINGER. Whether or not we will reduce the number of local stations I think is highly questionable at this point, but what we will be able to do is give everybody in the country very full service, the equivalent of broadcasting service.

Today there are many cities that have one, two, three or four channels which could have as many channels as New York City. Every place can have the same number of channels as New York City without increasing the present use of the spectrum.

Mr. EVINS. CATV that has been approved to date is largely for remote areas, is this correct?

Mr. HYDE. Yes.

Mr. EVINS. And not in the highly concentrated areas where there are existing facilities?

Mr. HYDE. Mr. Loevinger stated it correctly when he said our procedures have certainly prevented the development of service in the top hundred markets, but in other markets they have been progressing.

It is true that our regulations are a damper. I would have to concede that.

Mr. TALCOTT. We in our area are included in one of your so-called "top hundred markets" but we are in fact not in that market at all.

Mr. HYDE. I would urge that industries concerned here have not begun to solve the problem, and I think that you must concede it is appropriate for the Commission in the interim to try to find a middle ground.

Mr. TALCOTT. Between now and March 12 when your hearings are before the Supreme Court—you do have a couple of pretty important hearings before the Supreme Court regarding CATV, do you not?

Mr. HYDE. Yes.

COPYRIGHT CASE

Mr. TALCOTT. The copyright case and the one on whether you have jurisdiction over CATV to do what you are doing now.

Mr. HYDE. That is right.

Mr. TALCOTT. If in the copyright case the court held that CATV was responsible for copyright infringement, you would not need your first and second reports and orders. Am I not correct?

Mr. HYDE. We have urged the Congress by legislation to exempt the community antennas for liability for carrying the local station.

Mr. TALCOTT. I am pretty sure there will be some consideration for copyright infringement or compensation.

Mr. HYDE. We have also urged that Congress would provide the right to license them in areas outside the local communities.

Mr. TALCOTT. But if there is some judicial or legislative agreement that there should be some payment for use of copyright materials, then you could get out of the CATV business, could you not?

Mr. HYDE. I believe our problem will have been eased substantially. It is possible there will be some aspects of it that will give us regulatory responsibility, but I expect that when the copyright business is settled that our task will be eased considerably.

Mr. TALCOTT. Would it be all right to withhold any appropriations to your Commission for CATV purposes until after the Supreme Court decision?

Mr. LOEVINGER. Then none of them will get authorized.

LOCAL CATV OPERATION

Mr. TALCOTT. As I understand, there are many CATV station franchises by the local governing bodies that are now stymied. They cannot get a license from you to operate.

Mr. COX. They can operate in those communities and carry the signals that are locally available. They cannot import distance signals—that is signals from stations not providing service—without

either asking for waiver from the Commission, or going through a hearing to determine whether the public interest is affected.

Mr. WYMAN. Is not the problem with the CATV stations that when they pick these up on cable and put them out, you lose the selectivity of viewing desires of comparability between stations that ordinarily prevails out in the hinterland?

I happen to live in a type of marginal area and we have recently had cable available to parts of the area. What has happened is that all of a sudden all of the channels are almost equally sharp on the screen and the net result of that has been to put the local channel in a kind of doghouse because it cannot afford to carry as good programs as the Boston channels do. Before cable you used to be able to get the local channel real sharp and the others not too well so you would often choose the sharper picture.

If this condition is a fact are you not going to need regulatory authority? There is going to be tremendous economic impact from CATV.

NETWORK CONTROL OF PROGRAMS

Mr. HYDE. The point is network affiliation agreements copyright rights have not served to control the distribution of the program as between the network affiliates and the community antenna. I would expect that with the copyright rights of the local station who gets its programs from the network established that this principle would tend to control who shows the network program in this particular area.

Mr. COX. I think, Congressman Talcott, if Congress enacts legislation, or, if the court decided it and this was altered, this will significantly affect the details of what we have to do.

But I think we will still have a responsibility in this area, and since we have never gotten the staff in this field that we have needed all along, because of the stringencies of the war and so on, I would think that we are going to need the people we are asking for here simply to dispose of pending business and of the foreseeable developments in CATV that would still be within our jurisdiction.

Mr. TALCOTT. Are some of the amendments that you have been adding recently to your rules and regulations relating to both CATV and the microwave system, CIRS I guess, intended to reduce the number of new application so that you can protect this so-called spectrum problem or so that you will not be so bothered with it?

Mr. HYDE. I expect there will be as many views on that as there are commissioners here, but I would hold to my previous statement that they are designed to provide a fair accommodation.

Mr. TALCOTT. Then we are getting back to the copyright thing.

As soon as we can arrive at some fair payment to the originating station, then the principal problem about which you are concerned, the economic impact upon originating stations, will no longer be a problem.

Mr. HYDE. I will be very glad to have this matter settled in the market through competition at such time as we can have conditions of fair competition.

COURT DECISION ON JURISDICTION OVER CATV

Mr. TALCOTT. What if the court would decide on March 12 that you did not have jurisdiction over CATV?

Mr. HYDE. I think there would be urgent need for legislation.

Mr. TALCOTT. Then you would not need any money?

Mr. HYDE. No, we would not.

COST OF REGULATION OF TV COMMERCIALS

Mr. TALCOTT. How much money do you spend in your budget in regulating the commercials on TV?

Mr. HYDE. We do not have any allocation of funds for the regulation of commercials on TV.

Mr. TALCOTT. You are concerned about the regulation of commercials on CATV; are you not?

Mr. HYDE. Not really

Mr. TALCOTT. Do you mean that they are free to advertise as much as they want? There must be some regulation.

Mr. COX. We know that some systems in fact do sell commercial time. This has not been a general practice, and as long as they are simply repeating broadcast programing and originating only things like time and weather and a stock ticker or a news ticker, they really have had no great need to sell commercials to help defray the cost. They have projected the possibility that if they are subjected to copyright liability and, therefore, are cut off from distant signals under copyright law, they may then have to originate filmed programing for which they have bought the rights and, as an alternative to raising their rates to their subscribers, they might like to sell commercials.

The Commission has not resolved this matter. I am sure there are some communities where the sale of commercials would have no impact whatsoever on broadcast operations. There has been some concern on the part of broadcasters in areas where they do operate, and where the CATV system is building basically on the use of their programs for the cable operator's profit, that to permit him to start from that base and then to use that as a foundation for competing with them for the purchase of programing would be unfair.

But the Commission has not resolved that. We have in this recent CARS proposal and associated rulemaking suggested we want to explore the question as to whether a very limited usage of microwave for the relay of originated programing should be with associated commercials or not.

BROADCAST STATION PROFIT SYSTEM

Mr. TALCOTT. Then you are concerned about the economic impact by CATV upon the original broadcasting station. Do you ever look into the profit system of the original broadcasters?

Mr. COX. Yes.

Mr. TALCOTT. What is their profit situation?

Mr. COX. It varies. Of course the claims of impact which led the Commission, after having sort of overlooked the problem for some 14 years to adopt rules in this area came essentially from broadcasters in smaller markets. Now those stations by and large are profitable, but they were not making the enormous profits of the stations in bigger

markets. They were, therefore, in a far more vulnerable position in the event they suffered significant fragmentation of their audience.

Mr. TALCOTT. If you are concerned about the profits of the small stations, why do you prohibit the new stations in metropolitan areas where they are not likely to be interfering with the little station but only with the big profitable station?

Mr. COX. The concern, there is with new stations coming on the air.

For instance, if a cable system were allowed to operate without restriction in Philadelphia and were to import four signals from New York City, they would compete directly with the same kind of programs, and therefore be addressing themselves to the people essentially interested in that kind of program in Philadelphia, as are now being provided by three or four independent UHF stations in Philadelphia.

Now those stations would find that an already limited audience—which varies from 12 to 18 percent, depending on the figures you happen to get—they would be required to split that audience two ways and, what is still important, those stations I believe—Commissioner Lee is here, he can correct me—I believe that most of those are still operating in the red, with possibly one exception.

We believe that it is in the public interest for the people of Philadelphia and the surrounding areas to have available to them, not just the three network services free, but the four independent signals as well. And then if people can devise systems with due regard to copyright, and they get additional choice, fine. But we do not want to see the interest of some people in getting distant signals have the result of either eliminating existing services or blocking the development of future services that would provide an advertiser-supported service for everyone.

Mr. LOEVINGER. In fact, we refused to authorize a 6-month experiment in Philadelphia that has designed and proposed for the express purposes of finding out whether the assumptions on which Mr. Cox relies corresponds to any facts.

It was proposed that there be two systems set up together with a control group rigorously controlled, subject to before and after service, and the Commission by vote of four to three refused to permit the experiment to be instituted to obtain the facts. So this is purely an assumption of those wishing to limit existing services and expansion of future services.

Mr. HYDE. I would almost say this has developed into a Commission meeting.

Mr. TALCOTT. In making my remarks at the beginning, I just gave you an opportunity to get together. I think we have some interest in their appropriations depending upon the two Supreme Court decisions, Mr. Chairman.

Mr. EVINS. I read here the Commission has determined it had jurisdiction over all CATV systems, that it would not be in the public interest for CATV to remain unregulated.

Then they repeat the program to integrate it into a national television structure in a compatible atmosphere while promoting, without unduly impairing, standard television and broadcast services.

Mr. HYDE. That is right.

Mr. EVINS. That is the policy of the Commission.

I note that in 1967 you had 28 employees for this service; 1968, 44, and 1969 you asked for 57, 13 more. You have gone up from 28 to 57 in 2 years.

There is an indication of this sophisticated technology. Operating systems go up from 1,300 in 1964 to 1,930 systems presently in operation.

Number of persons served goes up from 4 million to 10 million.

How is a franchise different from a system? You have 1,930 systems and 1,860 franchises.

Mr. SCHILDHAUSE. Those are not built.

Mr. HYDE. This is municipalities and States.

Mr. EVINS. We will place in the record pages 107 through 117.

(The pages follow:)

VIII. COMMUNITY ANTENNA TV

Community antenna television (CATV) systems receive and amplify the transmissions of one or more TV broadcast stations and then redistribute the signals by cable to private homes or places of business of those who subscribe to the service for a fee. The coaxial cables used to distribute the signals to subscribers may carry up to 12 or more different signals (channels or programs) on different frequencies.

The Commission's regulatory program with respect to CATV is designed to integrate CATV into the national television structure so as to promote maximum television service while insuring that CATV performs its role without unduly impeding standard television broadcasting services.

Community antenna television (CATV) systems have arisen in response to the public demand for improved television service. Generally their purpose has been to bring television to communities not served by the television stations because of remoteness or terrain, to offer television service to areas not enjoying it, and to provide good quality reception of color and other signals in other instances.

CATV systems receive and amplify the transmissions of one or more TV broadcast stations, then redistribute the signals by cable to private homes or places of business which subscribe to the service for a monthly fee. While early CATV systems usually offered 3 to 5 channels of television, the newer systems generally have 12-channel capacity, and an even greater number of channels is proposed for the near future. Signals may be distributed at considerable distances (several hundred miles) from the originating stations.

Latest industry figures indicate that there are now more than 1,900 systems operating, serving some 2,800 communities, about 1,860 additional systems or franchises granted but not in operation, and about 2,300 applications for franchises are pending in approximately 1,300 cities.

In most communities the systems are locally franchised; the Commission takes no action respecting the franchising. Distribution facilities are usually located on electrical or telephone utility poles and easement to public ways are often obtained from the local municipalities. The Commission has not exercised authority with regard to initial franchising, rate regulation and related matters. This matter is still being given Commission and congressional consideration.

The development of the CATV industry affected the allocation of television service established by the Commission in the exercise of its statutory authority and responsibility. The Commission concluded, after lengthy rulemaking procedures, that CATV systems may have an adverse economic impact upon local stations, particularly those which would be independent UHF stations. The Commission determined that it had jurisdiction over all CATV systems and that it would not be in the public interest for CATV to remain unregulated. The regulatory program with respect to CATV is designed to integrate it into the national television structure in a compatible atmosphere.

The rules call for the carriage of programs of stations placing a grade B or better contour over the communities of the systems and 100-watt translator stations in a certain priority, and provides for same day non-duplication of programs. No CATV system located within the predicted grade A contour of the 100 largest American Research Bureau (ARB) ranked television markets shall provide new service to subscribers which would extend the signals of a TV station beyond its grade B contour except upon a showing made in evidentiary hearing and approved by the Commission that such extension would be consistent with the public interest, and specifically the establishment and healthy maintenance of television broadcast service in the area. A request for evidentiary hearing is to be filed after the CATV system has obtained any necessary local franchise for operation or has entered into a lease to use facilities. The rules also provide for waiver of such hearing.

No evidentiary hearing is required for proposed CATV systems or operations located in markets below 100 in the ARB rankings or outside the grade A contour in the top 100 markets. However, the Commission will entertain on an ad hoc basis petitions from interested persons (*a*) concerning the carriage of distant signals by CATV systems and (*b*) for other relief under the rules. The Commission also indicated that cease-and-desist procedures will be employed where violations of its rules have occurred.

CATV today is a significant and growing part of the communications scene, engaging a broad range of governmental and private interests. Available indicators attest that the tempo of sophisticated growth is increasing as technology and human ingenuity combine. For example, in terms of sheer numbers, the following chart underlines the rapid growth of the industry:

	1964	Present [1]
Operating systems	1,300	1,930
Number of persons served	4,000,000	10,000,000
CATV franchises outstanding	750	1,860
Franchise applications pending	925	2,300

[1] Approximate.

Analysis of the form 325 information report indicates a growing trend toward increasing capacity for origination of local programing. Additionally, available industry data indicates that approximately half of the franchised nonoperating systems are in the major television markets.

In assessing the importance of CATV and its proper role in the Nation's communication structure, the following matters, among others, are being given consideration: the effect of CATV on the present broadcast structure, the implications of CATV growth for spectrum management, the public interest questions arising from an interconnected transcontinental microwave network designed to serve CATV systems, and the potential for subscription television as one of many future services within the capacity of CATV. Cable television merits consideration for its capacity to provide improved signal reception, its ability to multiply local outlets of television programing, to relieve the present shortage of frequency space, for its usefulness in an emergency communications system, and for its potential for additional services beyond the transmission of television signals. In recognition of the growing potential of CATV, the Commission is committed to encouraging and developing this potential, consistent with their other responsibilities, so as best to serve the public interest.

A special CATV task force, having an independent status and with the functions and organizational rank of a bureau, was created by the FCC in 1966. The purpose of the task force is to advise the Commission in CATV matters such as those discussed above, to implement rules and procedures, and to expedite the processing of applications and pleadings. The community antenna relay services (CARS) has been established by the Commission, in addition, for private mircrowave facilities serving CATV systems. This service also is the responsibility of the task force.

Several appeals going to the overall question of the Commission's jurisdiction and authority as asserted in the first and second reports have been consolidated for consideration by the U.S. Circuit Court of Appeals for the Eighth Circuit. Briefs were filed and oral argument was held in October 1967. Additionally, a decision by the U.S. Circuit Court of Appeals for the Ninth Circuit also involves questions as to the Commission's jurisdiction over CATV. The U.S. Supreme Court has granted certiorari. It is anticipated that oral argument will be heard early in 1968.

Historically, CATV systems have not paid licensing fees for the distribution of copyrighted television program material to their subscribers. In a suit commenced by a copyright holder for infringement of copyright by a CATV system, the U.S. District Court for the Southern District of New York conducted a trial and heard argument initially on the primary question of applicability of the copyright law. The court decided that CATV transmission of copyrighted television programs constituted copyright infringement. This decision was affirmed on appeal to the U.S. Court of Appeals for the Second Circuit. The U.S. Supreme Court has granted certiorari. It is anticipated that oral argument will be heard early in 1968.

Also, there is pending before Congress in the form of proposed legislation, a 10-year study relating to the overall revision of the U.S. copyright laws. This extremely complex legislation proposes, among other things, to make the copyright law specifically applicable to CATV systems and would impose different degrees of liability upon CATV systems under varying circumstances. It is reasonable to assume that the eventual outcome of the pending litigation and legislation will have a substantial impact upon CATV system operation. In the Commission's processing of matters relating to CATV, it seems reasonable to expect that it generally will proceed as it has in the past pending a copyright resolution. There is a good possibility that cease-and-desist proceedings relating to the top 100 markets and carriage and nonduplication generally may increase as the backlogs and consequent delays become more substantial.

1. Processing applications and petitions

This activity requires staff to process all CATV applications and related petitions up to the point of designation for hearing; also to handle correspondence and inquiries from Congress, industry, and the public with respect to the new CATV rules and regulations.

	1967 actual		1968 estimated		1969 estimated		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Personnel requirements	19	13.0	23	22.0	27	24.5	4	2.5

The following table shows the number of applications and petitions actually disposed of in fiscal year 1967 and estimated to be disposed of in fiscal years 1968 and 1969, as well as an estimate of the number that will remain pending at the end of fiscal year 1969.

	1967 actual	1968 estimate	1969 estimate	Estimate pending end of fiscal year 1969
(1) Top 100 market petitions (requests for evidentiary hearing or waiver under sec. 74.1107)	100	100	100	500
(2) Common carrier and business radio microwave applications (petitions to deny, petitions for waiver in renewals and routine of all applications)	59	55	50	30
(3) CARS microwave applications (professional analysis, including related petitions to deny)	20	50	60	100
(4) Petitions for special relief	130	193	175	200
(5) Institution of compliance proceedings (i.e., show cause orders, etc.)	20	35	40	75
(6) Notifications	60	125	125	750

Increase requested: 4 positions, 2.5 average employment

The processing of applications and petitions in fiscal year 1969 will generally be similar to that of fiscal year 1968. While the backlog in categories 2 and 3 above show substantial numbers, the task force has generally been able to dispose of these matters within 90 to 120 days after they have been filed. Our energies therefore will be focused on those matters which have been on file in excess of 120 days.

The top 100 market petitions involve the Commission's major market policy, the most important aspect of the CATV regulatory program. Substantial financial commitments have been and are being made by CATV entrepreneurs attempting to establish new systems and expand existing systems. As the delay increases in producing income, pressure will be generated to commence operations. Additionally, local interest in obtaining this service is evidenced by the increasing number of new franchise applications being made to and granted by local governing bodies.

Delay in receiving the franchised service and the local revenues generated by the grant of such franchised operations, causes increasing dissatisfaction and pressure from local governing bodies and potential subscribers. The time required to process these applications is expected to increase because of the increasing complexity of the factual situations as proposed CATV operations move into the major market areas. And, as Commission actions continue in this area, the arguments and rebuttals presented, along with detailed economic studies, will become increasingly sophisticated. The backlog in this area is increasing and is substantial not only in terms of numbers but also in terms of the substantial lengths of time (up to a year or more) that many of these matters have been on file.

The backlog respecting petitions for special relief will also be significant because a substantial number of those petitions will have been on file for more than 90 days. The workload in this area includes requests (a) by CATV systems asking for relief from the Commission's operating rules, (b) by television stations asking for greater relief than is afforded by carriage and nonduplications, (c) and by television stations seeking to prohibit otherwise permissible CATV system operations. Action in these areas must be prompt since they affect operating CATV systems and television stations which are suffering or may suffer financial harm. They also affect CATV systems which are imminently ready to commence operations, substantial preparation and investment having already been undertaken.

It is anticipated that the institution of compliance proceedings will require the major portion of the time of the additional staff proposed for fiscal year 1969. It is necessary that Commission action in this area be prompt since delay in prosecuting violations of the rules would encourage similar violations of the rules by others. Further, the Commission's task in obtaining compliance would become difficult if there were delay since unlawful actions permitted to continue are difficult to roll back. We expect the backlog of show cause orders to increase substantially in fiscal year 1969.

2. Rulemaking and research

This activity involves the basic rulemaking for this new service designed to integrate CATV into the national television structure so as to promote maximum television service while insuring that CATV performs its proper role.

	1967 actual		1968 estimate		1969 estimate		Increase	
	Positions	Average employment	Positions	Average employment	Positions	Average employment	Positions	Average employment
Personnel requirements	2	1.0	4	2.8	4	2.8	----------	

These activities are important in several respects. Continuing and proposed proceedings inquire into broad policy matters respecting (*a*) the continuing changing nature of communications and (*b*) new specialized communications developments, particularly those of a broadband nature, using large amounts of the radio spectrum, an example of which is CATV. There are proceedings designed to inquire into proposals for possible changes in existing Commission policy and rules governing the initiation and operation of CATV systems. Further inquiries and studies will relate, among other things, to ownership interests and cross-ownership interests in CATV systems, the signals carried, the number of subscribers, and other operational features of the CATV industry.

Increase requested: positions, average employment

The following rulemakings are illustrative of policy issues which have already come to the Commission's attention as requiring consideration and are expected to culminate in fiscal years 1968 and 1969. However, as the Commission's experience in this area grows, it is expected that there will be additional inquiries and rulemakings attempting to deal with the new and changing facets of this evolving new industry. Resolution of most of these proceedings, and particularly the more complex ones, cannot, without additional resources, be expected during fiscal year 1969.

The inquiry into the changing nature of communications and new specialized communications developments of a broadband nature is for the purpose of providing the most efficient and effective nationwide communications service possible. All bureaus of the Commission are interested and are taking part in these matters.

The rulemaking inquiry into the developing patterns of ownership of CATV systems particularly relates to public-interest question arising from ownership and control of CATV systems by Commission licensees in other communication services and to the problems inherent in such cross ownership and will include comments on the Commission's present rules and policies relating to multiple ownership, duopoly, concentration of control and diversification of the mass media. Also, a part of this inquiry is a determination as to the continued updating of the CATV information report form.

The information contained in the CATV information report form is being summarized and the data are being compiled and analyzed. The information should form a basis for suggestions as to indicated courses of action by the Commission in connection with CATV operations.

There is an inquiry reexamining our policy concerning the role to be assigned to translator stations in the Commission's national television policy. An extensive survey is being made of the potential problems in the translator field. This inquiry may well also affect CATV policies and rules.

There is a proposed amendment regarding the carriage of television signals which would have the effect of allowing a CATV system in a community within the predicted grade B contours of any television station in an ARB-defined

market (as opposed to a market defined by a grade A contour) to carry the signals of any other operating station assigned to a community in that area. The purpose of the proposal is to lessen the technological disadvantages now incident to UHF stations and to ease the administrative burden in considering waiver requests.

A further proposed amendment to the present rules would exclude educational television stations from the top 100 market hearings and permit CATV systems to carry educational television signals beyond the stations' grade B contours without first requesting an evidentiary hearing. This would lighten the Commission's administrative burden.

There is an inquiry into the underlying policy of the Commission respecting carriage and nonduplication of television signals. It may lead to modification of the present policy and existing rules. This should also ease the administrative burden which results from these policies.

In some of the above activities the Data Processing Division as well as the task force, will be involved in the analysis of information obtained in the proceedings.

3. Hearings

This activity involves all types of hearings—show-cause proceedings: trials ordered on top 100 market petitions; proceedings to deny microwave applications; and trials of petitions for special relief.

Office of Opinions and Review.—The Commission has directed that CATV proceedings be expedited. Yet other caseloads show no sign of slackening, and this office is trying diligently to keep current on CATV adjudicatory cases. The man-year requirement for CATV is increasing substantially during fiscal year 1968 and will increase even more markedly during fiscal year 1969. At the present time (December 1967) 25 CATV proceedings are in the process of being heard by hearing examiners and the rate of designation of new hearing proceedings far exceeds the rate of disposal of old ones. Between 50 and 75 additional evidentiary proceedings will be designated for hearing before the end of fiscal year 1968. Judging by recent experience, this office must expect at least one—and usually more than one—petition for reconsideration of every CATV designation order; a not inconsequential workload.

In the typical CATV cease-and-desist proceeding the Commission directs that the record be certified to it, and thus to this office, without the preparation of examiner's initial decision. Since the Commission has not delegated to the Review Board the task of issuing final decisions in CATV evidentiary cases, the digests of hearing records, exceptions to initial decisions and supporting briefs, preparation of summaries for oral argument and drafting of final decisions in each of these cases will necessarily devolve upon this office.

While CATV cases vary in complexity, the average length of time which will be required for a junior or intermediate grade attorney to process one of these CATV evidentiary cases after the last pleading is filed will vary from six weeks to three months. Moreover, a GS–14 or GS–15 supervisory attorney will have to spend about two to three weeks on the same case and the Chief must spend several days on it.

In view of the foregoing analysis it is apparent that if there are no radical changes in statutes, rules or policies affecting CATV hearing cases (and no such changes appear imminent), this office cannot hope to remain reasonably current with its caseload during fiscal year 1969 unless its present staff is doubled.

Broadcast Bureau.—The Broadcast Bureau will participate in the increasing number of hearings, devoted to CATV problems, which are forecasted for fiscal year 1969. Four additional positions are required to enable the numerous and complex hearings anticipated in the CATV area to be handled effectively and expeditiously. This is especially true in the so-called top 100 markets which represent the first 100 markets as ranked by ARB, where a maximum of television stations are located and where the greatest CATV activity has been experienced. The issues in these cases are necessarily sophisticated because of the interrelationship of the CATV industry with the broadcasting industry and common carriers. Sufficient staff are essential to perform this function.

Support Activities

Mr. Evins. Your support activities include budget, personnel, data processing and office services.

Jobs go up 27.

Emergency communications

Mr. Hyde. Twenty-one. That is emergency communications.

Mr. Evins. Twenty-one is the transfers?

Mr. Hyde. Right.

Mr. Evins. In prior years this was financed by transfers from OCD and OEP. Why the change at this time?

Mr. Hyde. I guess that is the answer, it was not our idea.

Mr. Evins. The executive order is quite old. It is not a current one. You state here the purpose of this is to insure the establishment of nongovernmental communication.

Mr. Hyde. I do believe that since it is a planning for emergency as well as military necessity, it is appropriate for us to do it.

Other workloads

Mr. Evins. You want to index the FCC reports. Have you done that?

Mr. Hyde. Yes, to some degree. We are well on the way.

Mr. Evins. Twenty-seven more jobs in the other supporting services. Your other objects we touched on this morning with the special study.

Mr. Hyde. Yes, sir.

Mr. Evins. You think now is the time for these special studies, Mr. Chairman?

Mr. HYDE. I do.

Mr. EVINS. Mr. Chairman, we think that you have a very important Commission and one of the very interesting Commissions. What, if any, cost analysis studies has the FCC made on the subject of subscription television as it relates to the public interest?

Mr. HYDE. We had a committee of Commissioners make a very comprehensive report. They submitted recommendations on it. Subsequent to this there were hearings on the House Committee of Interstate Commerce. As I indicated earlier, they were going to make a study and asked us to defer for 1 year from the time of that request. Since that time we have been fully occupied with other duties.

Mr. EVINS. It is apparent that you have many duties. You are a very important Commission, and we wish you good luck and success.

Mr. HYDE. We appreciate the attention that you have given our budget. I note that you have made a very thoroughgoing examination of it and I welcome it.

Mr. EVINS. This is our process. Thank you, gentlemen.

Mr. HYDE. Thank you, Mr. Chairman.

MONDAY, FEBRUARY 26, 1968.

FEDERAL HOME LOAN BANK BOARD

WITNESSES

JOHN E. HORNE, CHAIRMAN OF THE BOARD
MICHAEL GREENEBAUM, MEMBER OF THE BOARD
ROBERT L. RAND, MEMBER OF THE BOARD
SIMON H. TREVAS, EXECUTIVE ASSISTANT TO THE CHAIRMAN
HARRY S. SCHWARTZ, ADVISER TO BOARD, AND DIRECTOR, OFFICE OF RESEARCH AND HOME FINANCE
ALAN JAY MOSCOV, GENERAL COUNSEL
LAWRENCE M. WALTERS, DIRECTOR, OFFICE OF EXAMINATIONS AND SUPERVISION

Mr. EVINS. The committee will come to order. We have with us this morning our friends of the Federal Home Loan Bank Board. Mr. John E. Horne is the distinguished Chairman of the Board. Mr. Michael Greenebaum is a member of the Board. Mr. Rand is a member of the Board. Mr. Trevas is the Executive Assistant to the Chairman, and Mr. Harry Schwartz is the Adviser to the Board. Mr. Alan Moscov is the General Counsel. Mr. Lawrence M. Walters is the Director of the Office of Examination. Walter J. Brown is the Deputy Director of Examination, Mr. Jerry Worthy is the Director of the Federal Savings and Loan Insurance Corporation. That is a big corporation and has about $135 billion worth of protection. Mr. Lyndon R. Day is the Director of the Office of Federal Home Loan Bank Operations. Clarence S. Smith is Director of the Office of Applications. Mr. Robert F. Quigley is the Comptroller, Mr. Callahan is the Budget Officer, and Mr. Grady Perry is Assistant Secretary for Congressional Liaison.

We are always pleased to hear you, Mr. Chairman, and you may proceed as you wish.

GENERAL STATEMENT

Mr. HORNE. Thank you very much, Mr. Chairman and other committee members.

Mr. Chairman and members of the committee, my associates and I appreciate the opportunity to appear before you today in support of our fiscal 1969 budget requests. Also, I wish to take this opportunity to thank you, Mr. Chairman, and the members of your committee for your objective consideration of the Board's needs in connection with our previous budget submission.

As I have done each year, Mr. Chairman, I wish to depart from my testimony for a moment because I think it is helpful to this committee for me to give résumé of what we have done during the year, the problems we see in the industry, and the progress we have made in solving problems of the past.

I think it enables you better to understand this $145 billion industry which finances in excess of two-fifths of all of the past year homebuilding that is done in America.

SAVINGS INFLOW ON 1967 OPERATIONS

When we last appeared before this committee I reported that we had just completed one of the most trying years for the Board in the wake of the very tight money situation in 1966 and intense competition from commercial banks for savings. Nevertheless, I mentioned that savings inflow had improved considerably toward the end of 1966 and into 1967.

Assessing it in light of developments following my testimony in February 1967, we might describe the change in early 1967 from that

of 1966, as a substantial improvement for the better in the economic environment facing the savings and loan industry. Monetary policy had eased, and interest rates had declined. Savings flows into savings and loan associations were rebounding sharply from the depressed levels of 1966.

The impact of improved savings flows upon mortgage and housing activity was not immediate, as might be expected. Some builders were slow to recognize the changed conditions in the mortgage markets, and for those who did understand the changed condition, it took time for them to gear up their construction plans. Associations were also understandably cautious about committing new funds before the improvement in cash flow could be considered as more than temporary. Under these circumstances, associations used some of their improved cash flow to replenish their liquidity that had been drawn down sharply in 1966. They also reduced their advances outstanding from the Federal home loan banks from the peak level of $7.3 billion in July 1966 to a current level of $4.4 billion.

INCREASE IN MORTGAGE LENDING

However, as savings inflows continued to improve, associations reentered the mortgage market on a large scale and, by May of 1967, mortgage loan commitments outstanding rose above the year-ago level. At the end of 1967, mortgage loan commitments were $3 billion, about double the level at the end of 1966.

With the increase in loan commitments, mortage lending began to rise sharply. For 1967 as a whole, savings and loan associations added about $7½ billion to their mortgage portfolios compared to only slightly above $4 billion in 1966. With other type lending institutions actually reducing their investments in home mortgages, savings and loan associations played a very crucial role in supporting the mortgage market and in making possible a sharp recovery in housing starts. Forty-eight percent of the total increase in home mortgages for the year as a whole was absorbed into portfolios of savings and loan associations.

I believe, Mr. Chairman, that is about the highest percentage that has been reached during the history of the savings and loan industry.

However, 1967 did not produce as much of an increase in total mortgage volume, as savings and loan activity would suggest. Interest rates on long-term securities began to rise again in the spring of 1967 as new securities flotations rose to record levels. As a result, certain other lending institutions shifted to other types of loans or investments.

The result has been to cause many other lending institutions to pursue a cautious commitment policy with respect to mortgage loans, especially on homes. Accordingly, savings and loan associations again have found themselves the focus of pressures in the mortgage market. This is the reason why, as noted above, associations accounted for almost half of the home mortgage acquisitions in 1967. This was possible because associations continued to attract a relatively large volume of savings for 1967, despite unfavorable monetary developments later in the year. Thus the net savings inflow was $10.7 billion for 1967 compared to $3.7 billion in 1966.

I might also, for clarification, state that these figures include the dividends on savings that were already in the association, and simply were kept by the savers in their accounts for the most part.

ESCALATION IN INTEREST RATES

Yet sharp rises in interest rates in 1967, exceeding the peak rates of 1966 in most cases have once again raised the specter of disintermediation. While associations have so far been spared a repetition of the events of 1966, savings inflows have tapered off, and in some cases rather sharply, in recent months. With the economy now growing more rapidly and with monetary policy bearing the major share of anti-inflationary economic policy, a further decline in savings inflows could well be in the offing with serious consequences for the mortgage and housing markets.

We are hopeful that the regulations setting maximum interest and dividend rates will continue to maintain the equilibrium in competition between commercial banks and savings and loan associations and prevent a drastic shift of funds that might drain funds sharply away from the mortgage market—as occurred in 1966. We should be spared the dangers of rate escalation and of a serious squeeze on the earnings of associations such as developed in 1966. Yet we are aware existing regulations can never eliminate altogether the difficulties that will arise for savings and loan associations if money markets continue to tighten appreciably, and these regulations would become increasingly ineffective should interest rates on open market instruments that compete with savings accounts rise from present levels.

Mr. JONAS. Do you mind being interrupted there?

Mr. HORNE. No, sir.

Mr. JONAS. Does this mean that you are opposed to the legislation now pending to increase these limits?

Mr. HORNE. I am not sure I know what you mean.

Mr. JONAS. You are not involved, but the VA and FHA are.

Mr. HORNE. I see what you are talking about.

Those are interest rates you are talking about. No, sir; I am not opposed to it, for the very simple reason I must confess, I have had a change of mind about it over the past few years because interest rates have seemingly reached a level at which they are going to remain, if not go higher. And I think the FHA and HUD and VA are simply facing facts when they realize the 6-percent rate——

Mr. JONAS. The savings and loan institutions are supporting this?

Mr. HORNE. That is right, sir. And I am not opposed to lifting the rate that has been recommended. It is simply facing facts.

Mr. JONAS. If one is realistic, you have to face the facts as to competition. You cannot keep interest rates down arbitrarily.

Mr. HORNE. That is right.

Mr. JONAS. And just in part of the economy while somebody else bids up the money.

Mr. HORNE. Yes, sir. And while I do not want to go too far astray from my testimony, except as you may wish me to, there are nine States I believe which have usury rates of 6 percent and I believe that in those States they are going to have to face the facts, as you have just pointed out, that we are having to face here.

Mr. JONAS. Thank you.

LIQUIDITY POSITION OF FEDERAL HOME LOAN BANK SYSTEM

Mr. HORNE. We are aware of these possible problems. Indeed, ever since the events of 1966, we have explored various means of coping with any new tight money situation so as to prevent or ameliorate serious consequences for the mortgage and housing markets. In the immediate future, the present high level of mortgage loan commitments held by associations should provide a cushion for the mortgage market. In addition, we have had some success in encouraging associations to improve their own liquidity above legal requirements as a temprorary buffer against any serious dropoff in savings flows. By the end of 1967, partly I think because of the Board's encouragement, insured savings and loan associations had increased their liquidity by $2.6 billion over the low point of 1966.

As a matter of Board policy, too, the Federal Home Loan Bank System itself has been maintaining a substantial cushion of liquidity to provide funds for advances to associations, if needed, and reduce the need for immediate recourse to the private securities market, hardly a very dependable source of funds during a tight money period. To build up this pool of liquidity, the System has been rolling over most of its maturing consolidated obligations despite the sharply reduced need for advances by associations in 1967.

The result is that the System currently has liquidity of $1.8 billion. While the funds available to the System would still not be sufficient to meet the total gap in mortgage funds that would arise from a repetition of the events of 1966, it should provide a considerable cushion.

In addition, we have lengthened the maturities of our consolidated obligations to the extent possible, so as to be less at the mercy of future adverse market conditions.

Of course, as we lengthen these securities, Mr. Chairman, we pay a little bit more for the money.

As a result of these various actions, we are now in a better position than we were in 1966 to meet a new money crunch and to provide maximum support to the mortgage market.

CURRENT PROBLEMS FACING SAVINGS AND LOAN ASSOCIATIONS

Now I want to turn briefly to the problems that associations are currently facing. Last year, I noted the large volume of delinquent loans or foreclosed real estate in the portfolios of certain associations that had engaged in overly easy lending practices in earlier years and that represented a heritage of the overbuilding and some unsound practices that characterized the early 1960's. I also noted the earnings squeeze which in 1966 was aggravated by higher dividend rates but with relatively little new funds available for associations to invest in higher yielding mortgages.

These problems are still with us in varying degrees. Recent data actually show some increase in delinquent loans and foreclosed real estate in the portfolios of associations despite a welcome decline in new foreclosures. Furthermore, many associations continue to have an inadequate or thin margin of earnings available for reserves after payment of dividends to their savers. Without dividend rate regulations, these associations would be in a more difficult situation. I cite these

problems because they create continuing need for close surveillance on our part of savings and loan associations. The industry as a whole is in good condition but there are enough individual exceptions to provide us with plenty of work and concern.

In that connection, we are aware that insured savings and loan associations are still operating in a strongly competitive market, and we do not anticipate any easing in this regard in fiscal year 1969. Also, with a continuing squeeze on earnings resulting from the cost of money, we must be mindful of the temptation to make high-risk, high-rate loans to generate more income. The Board, of necessity, must constantly review and be ever alert to such developments which might possibly adversely affect these institutions.

STATUS OF EXAMINATION PROGRAM

Examinations of savings and loan institutions were maintained on a current basis in fiscal year 1967 and the first half of fiscal year 1968. We intend to maintain our examinations schedule for the balance of fiscal year 1968 and fiscal year 1969 on the same basis. In addition to such regular examinations, special examinations must be conducted promptly and effectively when required without retarding the regular examination program. Thirty such special examinations have already been commenced in fiscal year 1968. Forty-seven appraisal assignments have already been completed during the first half of fiscal year 1968. This is more than half of those conducted for all of fiscal year 1967.

NEW EXAMINATION PROGRAM FOR AFFILIATES OF INSURED ASSOCIATIONS

A relatively new and growing field in the area of examinations is that involved in the examination of affiliates of insured savings and loan associations. In the first half of fiscal year 1968, 39 examinations of affiliates of insured institutions were made and 200 more such examinations are planned for the balance of the fiscal year. It is estimated, also, that examinations of 500 affiliates will be made during fiscal year 1969.

With the passage of the Financial Institutions Supervisory Act of 1966, Board examiners were empowered to make examinations of the affairs of all affiliates of insured institutions necessary to disclose fully the relationship between such institutions and their affiliates, and the effect of such relations upon these institutions.

Mr. EVINS. If I might interpret, Mr. Chairman, this new law empowered the Board to make examinations not only of the Federal savings and loan institutions but their affiliate institutions.

Mr. HORNE. Yes, sir.

Mr. EVINS. And these may be in some instances large banks.

Mr. HORNE. It could be.

Mr. EVINS. In instances where banks control the Federal savings and loan associations, might you be making examinations of the banks also?

Mr. HORNE. I doubt, Mr. Chairman, if we get into banks.

Mr. EVINS. What if they have a substantial interest?

Mr. HORNE. We might examine them but more likely we would work with the FDIC or Comptroller of the Currency or Federal Reserve Board.

Mr. WALTERS. We have not encountered that yet and I think certainly, as we always do, we would cooperate and coordinate with the FDIC.

Mr. EVINS. Does this impose a larger responsibility and burden upon you??

Mr. HORNE. Yes, sir; it does.

Also, as you point out, these could include construction companies, insurance agencies, and a variety of affiliates.

The authority thus granted imposed on the Board's Office of Examinations and Supervision responsibility for developing techniques and disciplines in the conduct of the examination of affiliates different from that involved in the examination of savings and loan associations. Having developed these special skills that Office is now in a position to step up its affiliate examination schedule for fiscal year 1969 to the number previously indicated. Fortunately, many of the techniques developed for the examination of affiliates will be pertinent to the recently acquired responsibilities of the Board for the examination and regulation of savings and loan holding companies under the Savings and Loan Holding Company Amendments of 1967 (Public Law 90-255).

As you gentlemen no doubt know, that bill was signed by the President last week and immediately became effective.

In our examination and supervisory program, emphasis continues to be placed on prevention of trouble. Attention is directed to deficiencies in policies, practices and procedures which require close scrutiny and continuous supervisory attention to effect correction. Availability of authorities under the Financial Institutions Supervisory Act of 1966 has proven its value in dealing effectively with developing problems. The effectiveness of the powers granted is not measurable solely in terms of numbers of actions formally initiated pursuant to its provisions. The mere existence of the authority set out in the Supervisory Act exerts an influence on the stance of the supervisor on the one hand, and receptiveness of the supervised on the other.

We anticipated this would take place when we asked Congress for this legislation, and it is developing as we anticipated.

Our experience has been that the influence generated by this statutory authority frequently leads to early resolution of potential dangers.

ACTIVITY OF PROBLEM CASES IN 1967

As I have informed this committee in previous appearances, the Board keeps a detailed ready-reference record of developments in those institutions which are of some degree of supervisory concern. A considerable portion of the Board's time is consumed in dealing with problem cases of varying degrees of seriousness. I am happy to report a decline in the number of associations with signals of potentially dangerous proportions as well as some abatement, over-all, of very serious problem cases. The Act of 1966, as I have indicated, is beginning to be felt. I feel sure that the Holding Company Act signed Wednesday, February 14, will contribute further to the health of the

industry generally if we can recruit the personnel, qualitatively and quantitatively, essential to its effective administration.

It would be premature to feel satisfied, but what has been accomplished does strengthen our confidence and resolution to pursue vigorously our program of preventive supervision. While it is recognized that the techniques and procedures involved in preventive supervision, consume much time, this time expenditure is offset by savings gained in well managed institutions. For this reason, we have been able to date to meet our responsibilities in this area without requesting additional positions in the Office of Examination and Supervision.

During calendar year 1967, the Federal Savings and Loan Insurance Corporation became financially involved in the affairs of five problem associations which had savings capital of approximately $30 million. By contrast, during 1966, the Corporation became financially involved with twelve such associations which had savings of about $446 million. Each of these five cases in 1967 was solved by merging the problem institution into a sound association with the Corporation agreeing to make a contribution in the amount of the losses to be incurred. The losses to the Corporation are estimated to be in the range of $2 million. In addition, the loss estimate on one case from a previous year was increased by $2 million for total estimated 1967 losses of about $4 million, as opposed to estimated losses in 1966 of approximately $33 million. Of this latter amount, $21 million is applicable to 1966 cases, $12 million to prior years.

While 1967 was a relatively good year with reference to losses and financial involvement, to avoid misleading you we should point out that there are a number of problem insured institutions which may require FSLIC involvement in the near future. Also, as of December 31, 1967, the Corporation had 29 active cases representing problem associations with which it has been financially involved in contributions, loans, purchases of assets or receiverships over the past six years. On the positive side, the Corporation's reserves available to cover losses amounted to more than $2 billion at the end of 1967.

Mr. JONAS. Does the situation still exist that these problem cases are concentrated in identifiable sections of the country?

Mr. HORNE. Yes, sir, pretty largely, and are the same sections I have so identified in the past.

Mr. EVINS. Proceed, Mr. Chairman.

PROGRESS REPORT ON STUDY OF SAVINGS AND LOAN INDUSTRY

Mr. HORNE. Last year I reported to this Committee the actions of the Board in appointing an advisory panel and a director of research to undertake a study of the savings and loan industry, as authorized by Public Law 89–426, approved May 13, 1966. I also informed the Committee that a contract had been signed with the University of Pennsylvania providing for the study at a cost of $400,000, and naming Professor Irwin Friend of that university as director. $100,000 of the authorized $500,000 for the study was retained by the Board to cover contingencies and publication costs, and expenditures directly related to the study.

I should like to note briefly the progress made since then. A professional staff of 21 persons was assembled from various universities by Professor Friend. The full staff was not completed until April

1967. However, substantial preliminary work was performed on the study even before this. In the last report, filed on November 3, 1967, Professor Friend stated that some of the authors had developed extensive preliminary working papers and that almost all the others had started research on their topics. It is still too early to be able to state what conclusions will emerge from the study, but we are eagerly awaiting the completion. The study is scheduled for completion by December 1968, and I hope to be able to submit to this Committee with our fiscal 1970 budget submission the recommendations of this group, which may or may not be met, of course.

I will be surprised if it is entirely completed by 1968.

Mr. BOLAND. What are some of the things you are looking into?

Mr. HORNE. The study will look into the soundness of the industry as a whole, into our own operations at the Board level, what recommendations should be made, that is, where the industry can be improved and also improve the soundness of our operations. It is the supervision and the soundness or unsoundness of the practices in which the industry engages that we are concerned about.

You might remember I explained in early 1965, that the President asked that such a study be undertaken from outside sources, and then we asked Congress for the authority, which Congress has granted.

Mr. JONAS. Will some of the research be performed in the field?

Mr. HORNE. Yes, sir; some of it will be. Also, even though people not connected with the industry are actually doing the research, we helped to make possible a liaison between industry members and this committee so they would feel free to go to industry members for whatever information or comments they might wish to make.

Mr. EVINS. We gave you the authority for the study and funded it for a half-million dollars. Is this going to be an academic study or a hard-nose practical business study?

Mr. HORNE. I hope it ends up being a hard-nose study. That is what we have asked for.

RELATION OF STUDY TO PENDING LEGISLATION

Mr. BOLAND. Does this study have any connection with the legislation now pending before the Rules Committee with respect to savings and loans?

Mr. HORNE. I think only very remotely. The opposition is trying to tie them closely together.

Mr. EVINS. Is that what they are talking about when they mention the study at the Wharton School of Finance and ask that the request be deferred on the legislation until the study is completed and recommendations are made?

Mr. HORNE. Yes, sir; this is what the opposition is asking be done. To be perfectly honest with you, I think this is a delaying tactic.

Mr. EVINS. When is the report scheduled to be completed?

Mr. HORNE. It is scheduled for completion by December 1968.

Mr. EVINS. Proceed.

DEVELOPMENTS WITH RESPECT TO NEW HEADQUARTERS BUILDING

Mr. HORNE. As you may recall, I also reported last year on the progress made by the General Services Administration in the acquisi-

tion of a site for the construction of a suitable headquarters building in the District of Columbia, authorized by Public Law 89–754. All that we could report then was that the Board had reviewed several available sites recommended by the General Services Administration and had authorized the GSA to select an architect to conduct feasibility studies of these sites in relation to the Board's needs.

On the basis of such feasibility studies the General Services Administration concluded that a site adjoining Judiciary Square was the most desirable location for the building. On the basis of all available information the Board concurred in that view. For the benefit of the committee we have prepared a sketch of the site.

The sketch shows over toward the left where the present building is located, and then on to where the new building will be located.

Mr. EVINS. The site location has been determined, and agreements are underway. These plans are rather well firmed up; is that correct?

Mr. HORNE. That is correct.

Mr. EVINS. Tell us again how much is the building going to cost?

Mr. HORNE. Congress authorized $13.2 million at the time, for the land and the building.

Mr. EVINS. Is it contemplated that any other Government agencies will be housed in the building other than the Board?

Mr. HORNE. No, sir. However, the building will be designed for future growth of the Board and any excess space would be available for GSA rental purposes until it is needed.

Mr. EVINS. Fine, Mr. Chairman.

Mr. HORNE. A matter of concern in the selection of any site was its proximity to public transportation, particularly to the new subway system. Personnel of the Board frequently work into the late evening, including our secretaries and typists. One needs only to read the daily newspapers to appreciate my concern. The first subway station to be erected in the District of Columbia will be the Judiciary Square station and an entrance to that station will directly abut the Fourth Street side of the proposed FHLBB building.

It was necessary for the GSA to obtain the approval of the National Capital Planning Commission for the site. I kept the chairman informed of some of the difficulties encountered in that connection, but on October 12, 1967, the Planning Commission finally approved the site. The GSA informed us that on January 17 the Department of Justice had filed an action for the acquisition of the site, and the Board, at the request of GSA, deposited $4,350,000 for acquisition of the land and the cost of site studies.

At page 39 of our budget justification, further details concerning the acquisition and related matters are set out. But briefly for fiscal 1969, we estimate that up to $1.5 million may be needed for payment of architectural, engineering, and related services and costs. As I have previously testified, the funding for the building will be accomplished by a loan from the 12 Federal home loan banks repayable within 25 years. Advances to cover expenditures will be obtained as needed. Actual construction is, however, not anticipated before some time in fiscal year 1970. I shall continue to keep this committee informed of developments as they occur.

LEGISLATIVE PROGRAM

With the recent enactment of the Savings and Loan Holding Company Amendments of 1967, the remaining items for the Board's legislative programs for 1968 involves unfinished business rather than new proposals. Hearings on an administration measure transmitted by the Board providing for the creation of Federal savings institutions were held last July 1967. By the Subcommittee on Bank Supervision and Insurance of the House Committee on Banking and Currency. Hearings before the full committee were held in October 1967 on this legislation, which was supported by the Board and the Administration and by both the savings and loan and mutual savings bank industries. This is the bill, Congressman Boland, to which you made reference a few moments ago, sir. Subsequently, a clean bill, H.R. 13718, was reported favorably by that committee, and it is now in the Rules Committee.

Mr. JONAS. Right at this point could you give a short statement as to what this bill does?

PURPOSE OF H.R. 13718

Mr. HORNE. What this bill does primarily, Congressman Jonas, is increase to some degree but far, far short of what commercial banks can lend, the lending authority of the savings and loan institutions to put themselves somewhat more in keeping with the lending authority that is already enjoyed by mutual savings banks in those 18 or 20 States in which mutual savings banks are allowed to be chartered.

Also, this bill, if passed by Congress, would authorize existing Federal savings and loan associations to convert to the new type of institutions. The primary purpose of this additional lending authority is to provide more flexibility and more viability to the savings and loan industry so that in times of excessive inflow of money they do not have the temptation they presently have to go out and make unsound loans but could place their money in short-term instruments that could be turned over and rolled out, and this money could then be put into the housing market when there is a shortage of money as there was in 1966.

Mr. JONAS. How will they resist the temptation to invest their surplus in high yield paper and thereby diminish the opportunity to lend for house construction?

Mr. HORNE. We think from the experience of the mutual savings banks we need have no real fear there. But if there should be written into this law a requirement that a certain percentage—and the bill says 60 percent—be invested in residential mortgages, this would result in keeping money available for housing. I have heard rumors to the effect there may be amendments offered when it gets to the House floor that this be increased to 75 percent.

Mr. BOLAND. What is it now?

Mr. HORNE. It is 60 percent in the bill.

Mr. BOLAND. What do you permit them now—80 percent?

Mr. HORNE. As a practical matter, associations do keep about that percentage in mortgages.

But here again, Congressman Jonas, from the direct experience I have had sitting in this job, and the observations I have made, I am

of the opinion that this legislation would provide for a more stable industry, and that it would in the long run, over the long haul, through the peaks and valleys provide for more money for the housing industry.

And I would point out sir, in this regard, that the commercial banks have requested and have been granted by Congress, without opposition from the savings and loan industry, more and more liberal authority to get into the housing mortgage lending field. It would seem to me, not only would this legislation provide a more stable saving and loan industry and a mortgage industry, but also from an element of fairness it would indicate that there are some things in a limited way——

Mr. BOLAND. What is wrong with the stability of the savings and loan industry now?

I have been sitting here for many years and you have been bragging about it as long as I have been sitting here.

EFFECT OF H.R. 13718 ON STABILITY OF SAVINGS AND LOAN INDUSTRY

Mr. HORNE. What has happened in several regards is simply this: In the early sixties when the industry had an excess of funds, these institutions could not put their funds any place else.

Mr. BOLAND. Has this hurt them very much?

Mr. HORNE. Yes.

Mr. BOLAND. Has it hurt their growth?

Mr. HORNE. What happened in the early sixties has not hurt their growth. What I am getting at, they were reluctant to cut down on their savings and they took the excess savings for which there was not a housing market need and put it in questionable or unsound real estate investments which have now come back to plague us. This is one thing that happened.

In 1966 they did not have the short-term lending authority I am talking about. If they had the authority they could have under this bill rolled out and they would have gone back into the housing market.

So to this degree it hurt the industry. It also hurt the homebuilding industry in that the homebuilding industry and small businesses particularly in times of tight money, as we had in 1966, are the ones that almost immediately feel the burden of the stringencies of tight money. This legislation would help to prevent that situation, particularly as it regards housing.

Mr. JONAS. I cannot see how you can prevent an association, unless it is tied down by the law on its reserve, from electing if it has a surplus of funds to put those funds in commercial loans that will pay 8 or 9 percent instead of putting them in homebuilding loans that will pay 6.

Mr. HORNE. At the time when they have the excess money you speak of, Congressman, that they cannot put in, or should not put into homebuilding, because there is no need for it, they would put the money in other investments. The law would limit what they could invest in.

I would be glad to supply a list of what they can invest in. I can also supply you a list with many of the kinds of loans which commercial banks make which this bill would not authorize for these new institutions. They would be very limited as to the percentage and as to type of investments they can put their money in.

Mr. GIAIMO. Are you talking about the proposed legislation?

Mr. HORNE. Yes, sir.

Mr. GIAIMO. Is it not so, that the reason that we get periods of shortage of money in the mortgage market is because, with increased interest, and with increased diversity in the type of investment, it is more profitable for lending institution to put its money into almost any of these other activities rather than mortgages?

Mr. HORNE. No, sir; this is not the only reason. There may be many reasons.

May I ask, Mr. Chairman, that Mr. Schwartz elaborate further on some of the points I have made?

Mr. EVINS. Go ahead.

LIBERALIZATION OF INVESTMENT POWERS

Mr. SCHWARTZ. I think there is merit to your view, Congressman, but I think what the Chairman is pointing out is that in 1966 the associations were not in as good a position to compete for funds as they might have been had they had broader investment power in the early sixties.

Instead of pressing hard on the mortgage market, as they did then, and putting their assets entirely in long-term, fairly low yielding mortgages, the present bill would have permitted a more balanced portfolio, with more short-term assets and perhaps a higher average rate of return. They would have been able to compete better and supply more funds to the mortgage market in a 1966 type situation.

This is really the essential point of the liberalization of the lending power. It is not as big a liberalization as it seems when you first look at it.

It does not permit them to get far outside the residential market, but in the portion not now locked into the residential markets they are given broader investment authority.

Mr. GIAIMO. I understand that point, but you are suggesting that there is a surplus of money above that which is needed for the mortgage market.

Mr. SCHWARTZ. At times.

Mr. GIAIMO. All right. But the evidence which comes to me, quite frankly from many people in the construction industry and elsewhere, is that there is not this surplus. I understand, for example, here in Washington they are paying 2 and 3 points. This does not suggest availability of money.

Mr. HORNE. You are perfectly right in your analysis of today. But in the early sixties, if this legislation had been available, the savings and loan industry could have done nationwide what the mutual State savings bank people were able to do in certain States.

For example, in 1966 the mutual State savings banks, because they did have the lending authority we are talking about in this bill, rolled into the mortgage market considerably more money than they had on previous occasions because there was a need in 1966 for this additional money. But when there was not a need, they had put their money in the same kind of investment we are suggesting in this bill, that federally chartered savings institutions be allowed to invest in.

Mr. GIAIMO. Let me make myself clear. I am not opposed to this

legislation. I am trying to make up my mind as to which way to go. I am a bit familiar with banking, however, because my father happened to be president of a commercial bank and my observations of the banking industry in the United States, particularly the commercial banks which have all of these powers which some of these other institutions need—my observations of the history of banking is that banks, as they got broader powers, tried to get consistently greater returns on their money, which meant going out of the mortgage market and into these more attractive types of investments which give you a much greater yield than the mortgage interest gives you.

I am concerned that by opening the door to Federal savings and loans we may be penalizing the mortgage market.

Mr. HORNE. Congressman, I understand and appreciate completely your concern and this has happened in the commercial banking area in spite of the liberal provisions that Congress has granted them to get into the mortgage market. But we have several things to go by here.

In the first place, we are not giving the savings and loan industry anywhere near the lending authority that the commercial banks have.

Mr. GIAIMO. But you are opening the door.

Mr. HORNE. Only so far as the mutual savings banks have shown from experience that they do the same things that I am talking about—that is, they have invested in these short-term loans which they roll out of and get back in the mortgage market when there is a shortage of mortgage money.

CONTROL OF INVESTMENTS

Mr. GIAIMO. How would you force them to get back into the mortgage market rather than into the attractive investments, the installment loans and many of these other loans which yield more than 7 percent?

Mr. HORNE. Because of the limited areas in which they get into when they need to, and do not need to put it in the mortgage market, but which they can roll out of and get back into mortgage lending without any great difficulty.

Also, the limit set in the law below which they cannot fall so far as mortgage money is concerned. It is lower than under existing law but there still is a limit set. I do not know what Congress will or will not do, but I will not be surprised to see this 60 percent in the law go up to 75 percent.

Let me make two other points too if I may, sir. Today about one out of every eight homes bought is a mobile home and yet the savings and loan associations cannot even invest in mobile homes, but commercial banks can.

Mr. GIAIMO. Those are installment loans, are they not?

Mr. HORNE. Some of them are, but many of them are paid for over a period of time.

Mr. GIAIMO. But on an installment loan interest basis rather than a regular mortgage type of loan.

Mr. SCHWARTZ. That is correct.

Mr. GIAIMO. And is it not so that the interest on the installment type loan is much more than on the mortgage loan?

Mr. SCHWARTZ. Yes, sir.

Mr. GIAIMO. Therefore, it is much more attractive for a lending institution to get into that and thereby penalizing the mortgage market?

Mr. HORNE. But numberwise——

Mr. GIAIMO. May he answer that?

Mr. SCHWARTZ. Yes, sir; but I come back to the point I was trying to make before. If you say to the principal line of institutions, namely the savings and loan associations, that you cannot augment your income beyond that which is permitted by mortgages, then in a tight money period when you have to compete hard for funds as in 1966 or even today, they cannot get much of a flow of savings. So even if you tell them they have to put 100 percent of their inflow in the mortgage market this is not helpful if the flow disappears as it all but did in 1966. On the other hand, 60 or 75 percent of a larger flow is really meaningful.

Mr. GIAIMO. So we can understand—and again I want to stress I am not opposed to this because I think I understand some of the problems.

Mr. SCHWARTZ. Yes.

COMPETITION FOR SAVINGS IN TIGHT MONEY PERIODS

Mr. GIAIMO. Are you saying in order to make savings and loans type institutions attractive to savings depositors, you have to give them a competitive return on their deposits?

Mr. SCHWARTZ. Particularly in tight money periods.

Mr. GIAIMO. And therefore you have to find ways of making greater earnings so you can give them a greater interest rate; is that the theory?

Mr. SCHWARTZ. In tight money periods that is absolutely true, Congressman. In the easier money periods during the fifties and the early sixties, the savings and loan associations were offering a rate that the average saver could not ignore because the market just was not as competitive. Now we can see what happened in January. There was an outflow of almost $200 million and I think it is entirely associated with people not putting money into savings and loan associations or withdrawing money to get into open market securities because of a higher yield.

Mr. EVINS. Would not the Board do well to tighten up on some of these losses which are going up to $32 million with 29 problem cases? Do you not think this is where you ought to direct some of your action at this time?

Mr. HORNE. This legislation, Mr. Chairman, to which you referred gives us exactly the power to do what you suggest.

Mr. EVINS. We have given you some new powers, but have you exercised them to any great extent?

Mr. HORNE. It takes some time after the power is given to get it underway, but we are having some very good results from the Financial Institutions Supervisory Act of 1966. The holding company bill was just signed February 14.

Mr. EVINS. Are you getting more mergers to keep them from going under?

Mr. HORNE. Yes, sir.

Mr. EVINS. As Mr. Boland points out, I do not know of any industry in America that has had a more rapid growth than the Federal savings and loan industry.

Mr. HORNE. Some of the problems we have today arose during a period when money came in so rapidly when they did not need it for housing, for sound housing, and the associations had no other places to put their money.

Mr. JONAS. What did they put it in?

Mr. HORNE. Risk investments, risky real estate, and later on, had to take back real estate.

Mr. EVINS. Proceed with your statement.

ENDORSEMENT BY NATIONAL ASSOCIATIONS OF HOMEBUILDERS

Mr. HORNE. The National Association of Homebuilders who would be among those that would be most concerned about the danger you have expressed, Mr. Giaimo, and a concern which I share—and this is the reason they have endorsed this measure. I do want to say, however, that in endorsing it, they ask that the limit be raised from 60 to 75 percent, but they did endorse it.

Mr. GIAIMO. Let me say for the record finally that I probably will support this legislation because of the theory that it will make the savings and loans more competitive but I am concerned that there be a limitation on how much activity they participate in outside of the mortgage market because, they are now financing practically 50 percent of the available mortgage money.

Mr. HORNE. This past year it went as high as 48 percent.

Mr. GIAIMO. And that is a substantial factor and we must be concerned with it.

Mr. HORNE. I am in agreement with you, sir. I share your concern and I think the bill plus the proper administration by the Board will go a long way toward alleviating the dangers which you and I both are concerned about.

Mr. EVINS. Complete your statement if you will.

Mr. HORNE. We believe that the legislation would provide a more modern and viable system of thrift institution that would combine the best features of mutual savings and loan associations and mutual savings banks. Each institution would be required to be a Federal home loan bank member and to be insured by the Federal Savings and Loan Insurance Corporation (whose name would be changed to Federal Savings Insurance Corporation), except that mutual savings banks existing on the date of enactment and insured by the Federal Deposit Insurance Corporation could retain that insurance on conversion into the new type of institution.

Legislation which permits the Board to regulate dividend rates paid by savings and loan associations expires on September 21, 1968. Upon the basis of our experience to date, the Board is confirmed in its view that such authority, on a standby basis, should be available to the monetary and regulatory authorities.

I appreciate this opportunity to make this yearly review with you of developments in the savings and loan industry and in the Board.

1969 BUDGET REQUEST

Coming now to the budget estimates for fiscal 1969, the Agency's budget is a business-type budget in 3 parts, set out as follows:

Unit	Positions	Estimate
Board and staff Offices	373	$5,088,000
Office of examinations and supervision	953	14,396,000
Federal Savings and Loan Insurance Corporation	20	340,000
Total	1,346	19,824,000

It provides for an increase in overall employment over the current fiscal year of only 17 positions, all of which are in the Board and staff offices. No increase is requested in the number of positions in the Office of Examinations and Supervision but funds will be needed to fill existing positions in that office on a full-year basis, since it is estimated that workload requirements in fiscal 1969 will increase 20 man-years over the current fiscal year.

COMPARISON WITH 1968 BUDGET

The budget estimates for fiscal 1969 provides in the aggregate for an increase in funds over the current fiscal year of $1,249,000. Of the increase, $469,000 is in the Board and staff offices; $746,000 is in the Office of Examinations and Supervision, and $34,000 is in the Federal Savings and Loan Insurance Corporation. Percentagewise, there is an overall increase in positions of 1.3 percent and in funds of 6.7 percent. The 6.7 percent includes increased costs resulting from the Postal Revenue and Federal Salary Act of 1967 (Public Law 90–206).

Of the increase requested of $1,249,000, only $85,000 is required for the 17 new positions. The balance of the increase is to cover personal services and benefits for authorized personnel under the last budget, and for contractual services, supplies, and equipment. Of the requested increase, $431,000 is needed to pay for statutory within-grade increases and for increased pay costs authorized by Public Law 90–206. Another $432,000 is needed to fill current year positions on a full year basis.

The remaining $301,000 increase is in personnel benefits, contractual services, supplies, and equipment. This would be broken down as follows: $67,000 is required for increased travel expenses anticipated in connection with the increase of 16 man-years in examining savings and loan institutions; $84,000 is required for personnel benefits, and the balance of $150,000 is needed to pay for space and utilities, printing and reproduction, support services, and supplies. These increases are offset by $8,000 additional reimbursements estimated to be collected in fiscal 1969.

You may wonder about that small amount. As I have said before, we have an agreement with AID by which they compensate us for, so far as a couple of people are concerned. This is where this $8,000 would come from, if it comes.

As the figures submitted indicate, the increase in our estimates for fiscal 1969 over our 1968 authorization is due substantially to built-in

increases over which we have no control and to filling positions on a full-year basis.

It is my sincere judgment that, consistent with our statutory responsibilities, the budget estimates submitted represent the minimum amount necessary to carry out our functions effectively.

INCREASES IN STAFF

I have previously indicated that we are seeking 17 new positions. Since nine of these positions are requested to serve the needs of two of the Board's offices, I should like to explain to the committee the special problems of these two offices.

One of these offices is the Office of Applications headed up by Mr. Clarence Smith. We are requesting two financial analysts, grade GS–12, and two clerical employees for that Office. Through it are channeled every type of application coming to the Board, and by a series of developments to which I shall briefly allude, the work and scope of duties of that Office have greatly expanded. Several types of applications handled by that Office are becoming increasingly complex. New procedures have been adopted to assure equitable treatment of all parties. Most recently, additional duties of a significant nature have been assigned to the Office.

NEW WORKLOAD IN OFFICE OF APPLICATIONS

A few examples may be helpful. During the past 2 years, insured associations have been giving increased attention to mergers. To discharge adequately its responsibilities in passing on mergers, the Board, after considerable study, adopted in early 1967, a detailed policy statement covering the areas to be analyzed in connection with mergers, and the criteria to be applied in considering such applications. For the Board to pass upon mergers, it is essential that the analysis be comprehensive and cover many areas of concern. Although several offices of the Board are involved, the primary responsibility for analysis, coordination, and submission of recommendations to the Board falls on the Office of Aplpications. Additionally, during the year, the Board decided to entertain applications for mergers of permanent stock institutions into mutual associations. Such applications had been deferred since 1963. If anything, such applications are even more complex than the usual merger applications, all of which have added to the work of this Office.

During the year, the Board approved a new procedure for the processing of applications for insurance by State-chartered institutions designed to afford equitable treatment to all parties. This new procedure imposes on the Office of Applications the duty of complying substantially with all procedural steps, including the scheduling of hearings, participation by analysts in public hearing procedures, and preparation of formal notification of decisions.

Among other new duties assigned to that Office were those authorizing the processing of applications for two new types of facilities, mobile branches and service corporations. By regulation, the Board has authorized the establishment of mobile facilities by Federal associations in communities not warranting full-scale branch operations.

Processing applications for such facilities involves all the intricacies and details of processing an application for a branch office, including public notification, the scheduling of hearings, and detailed analyses of such applications for Board consideration.

As a result of congressional action, Federal associations were authorized to participate in so-called service corporations. The Board published regulations approving service corporations performing certain specified functions, and for proposed service corporations performing other functions, special Board approval, upon application, is required. A policy statement of the types of functions which it is contemplated that service corporations may perform has been published after considerable study of the matter. The processing of applications under the service corporation regulations, and compliance with the policy statement of the Board, falls in large part on the Office of Applications. Also, that Office has the responsibility for testing the criteria established, evaluating new types of functions proposed for such corporations, and recommending changes to the Board.

To help the Office of Applications cope with these activities and responsibilities, it is essential that it be permitted to obtain the needed personnel. The importance of adequate personnel in this area cannot be stressed too greatly. The Board, in the final analysis, has to rely on the content and quality of the reports and recommendations prepared in that Office in making important and significant determinations.

STAFFING PROBLEMS FOR OFFICE OF FHLB OPERATIONS

The Office of Federal Home Loan Bank Operations is another of the offices whose staffing problems are a matter of special concern to us. This is the Office that coordinates and supervises the operations of the 12 Federal home loan banks, whose assets of $7.1 billon are double those of 5 years ago. By way of comparison, the present staff of 15, including six clerical employees, has been increased by only four employees during that 5-year period. Even more significant than the increase in assets, has been the marked increase in the degree of complexity in the day-to-day supervision of the 12 banks. Five more positions for this Office consisting of two systems accountants, one financial analyst, and two clerical employees, have been requested to meet the workload requirements for fiscal 1969.

While Mr. Lyndon R. Day, the Director of that Office is present to answer any questions concerning his area of responsibility, the Board has in the last few years involved itself deeply in developing policy for the guidance of the bank system in the extension of credit to its members. My earlier remark concerning the buildup in liquidity in the bank system to provide a cushion for credit in the event the mortgage market should again become tight, is a further illustration of Board concern in this area.

The eyes and ears of the Board, so to speak, in carrying out and policing such policies, is the Office of Bank Operations.

That Office has the responsibility of advising the Board whether there has been conformity by the respective banks with all Board policies relating to credit, and whether the evaluation procedures for the determination of credit worthiness are carried forth in the prescribed manner. In short, there has been a shift from a quantitative

to a qualitative policy in the extension of bank credit, and as a consequence, the review and supervision of bank operations has become a more complex and detailed operation.

I am informed by Mr. Day, that with all of the many duties assigned to his Office, he has been unable to take employees away from their assigned tasks to develop further procedures and recommendations to the Board to carry out more effectively bank operations to meet the increasing demands upon the bank system. For example, the addition of two system accountants at grades 12 and 11 would enable that Office to study the detailed operations of each of the 12 banks and develop standardized accounting and operating procedures. The payoff by the addition of these two positions would be coordinated activity of the 12 banks, improved efficiency of operations, better supervisory control mechanisms, and more reliable and prompt information to the Board.

There is an urgent need, also, to undertake an immediate study of the corporate management of the regional banks, ranging from the variety of officers and duties assigned to such officers to a comprehensive analysis of the functions of each board of directors. We think such a study should encompass not only procedural matters, but also substantive matters to which directors' deliberations should be directed. This study should also consider the variety of committees and duties assigned to them by the several banks. The more efficient the corporate organization of these banks, the more effective their operations. To do this, we need an additional person, a financial analyst, grade GS–13, to make a comprehensive study and evaluation, and to make recommendations to the Board, including some kind of unifying qualitative standards. The addition of such an employee, would in our view, not only improve the organization of the 12 banks, but provide an understudy to the present financial analyst, GS–14, to give management depth in a highly sensitive area.

PERSONNEL NEEDS IN OTHER BOARD OFFICES

While I have taken the time to comment in some detail on the needs of these two particular offices, I do not mean to suggest that the remaining eight positions requested are in any manner not worthy of serious consideration. It seems to me that the justifications set out in our budget estimates explain amply the need for the other eight new positions requested. Our staff officials who accompanied me here today would be pleased to answer any of your inquiries in respect to any of their operations, personnel requests, or any other matters of interest to you. I want to make clear that in the preparation of our budget estimates the needs of each office and division were evaluated most carefully and our submission represents the minimal amount we feel necessary to do the job entrusted to us.

I wish to thank you gentlemen for having afforded me this opportunity to discuss our personnel needs.

Mr. EVINS. Thank you, Chairman Horne. That is a very comprehensive statement. It is a good report on the problems, on your growth, and on your needs.

Mr. Chairman, you indicated that the 12 banks have grown to $7.1 billion in assets, double what it was 5 years ago. I would think with

such growth there certainly should be adequate and proper supervision, but then elsewhere in jour justification you say that although the banks have the authority to borrow from the Treasury, that they have never exercised that authority. You have statutory authority for the banks to draw on the Treasury when needed, but throughout the years they have never exercised that authority; is that correct?

Mr. HORNE. That is right.

GROWTH OF FEDERAL HOME LOAN BANKS

Mr. EVINS. Where do the banks raise this money for this $7 billion growth?

Mr. HORNE. Most of it has come from having gone to the market and sold paper, consolidated obligations, to make advances to their member institutions.

Mr. EVINS. Can each bank sell additional stock?

Mr. HORNE. We do it this way—it is not stock that I am speaking of now. It is money that we raise in the market, like the Treasury raises on its bonds in the market. We in our 12 banks, in turn, loan to their association money to get into the housing market or to meet certain withdrawal demands.

Mr. EVINS. Can an individual bank increase its capital structure or do they all increase simultaneously in the same amount?

Mr. HORNE. It varies in accordance with the needs of the members of the particular bank involved.

Mr. EVINS. According to the region?

Mr. HORNE. The region; yes.

Mr. EVINS. Is it done by two methods: selling to the savings and loan associations and public subscriptions?

Mr. HORNE. Well, that is true to this extent. Every member of each of these 12 banks has to be a stockholder and the member does buy stock in the bank, and that amount of stock is determined by the amount of residential mortgages the member has. So as its mortgage holdings increase, its stock contribution or stock purchases will increase.

Mr. EVINS. Have the loans brought about the growth in the banks?

Mr. DAY. The increase in capital stock does not finance very much of our operation at the present time. We are dependent almost entirely upon the open market for the sale of consolidated obligations of the 12 Federal home loan banks. We go to the market every month for varying amounts of funds in order to provide the moneys to make advances to our members.

Mr. HORNE. As a matter of fact, of this $7 billion assets we are speaking of, $4.4 billion of it is in the form of advances.

Mr. EVINS. When the Federal home loan banks were started in 1932 the Government advanced funds, but now the Government's interests have been fully paid off.

Mr. HORNE. Yes, sir.

Mr. DAY. By 1951: $125 million.

FLOW OF SAVINGS INTO SAVINGS AND LOAN INSTITUTIONS

Mr. EVINS. Mr. Chairman, you spoke earlier about the money inflow being down. How do you build up the money inflow into the banks, Mr. Day?

Mr. DAY. May I pass on that, Mr. Chairman, as being outside of my area?

Mr. HORNE. The money inflow is down and the savings and loan associations dropped off pretty sharply in the last month or so, although it has not reached near the intensity that it did in 1966. One thing that is happening is that we have had a tighter money situation. And we do not know how severe disintermediation is going to be. These institutions get that money from three different sources. Primarily they get their money from people who come in from the street and open up savings accounts.

Mr. EVINS. They advertise extensively in the press and on television.

Mr. HORNE. Yes, sir.

Mr. EVINS. Do you restrict the amount of their offers for new accounts?

Mr. HORNE. We restrict them to items that do not cost more than $2.50 that they can offer a person who is opening up a new account.

Mr. EVINS. A loan association can attract more capital into it.

Mr. HORNE. This is one of the techniques they use to induce people to open up savings accounts with them. Now, as people who are saving money or people who have already put money into these associations see sources where they can use this money and get a bigger return, naturally some of them do so regardless of what that investment might be. This is one of the reasons why this savings inflow has dropped.

Mr. GIAIMO. You were starting to detail the three sources.

Mr. HORNE. Yes. One source is off of the street. Another source is people who have savings there and, as they receive dividends, they frequently keep those dividends in the associations. The third source is borrowing from our 12 banks. We at the Board level will go to the market and sell paper as we clear it through the Department of the Treasury, just as the Treasury will sell its own paper. We make estimates as to how much money we need based on inquiries that we made to the 12 banks and inquiries that they in turn have made of each of their members. Based on this total composition of need, then we go to the Department of the Treasury and ask for permission to go to the market and sell paper to raise money. Other agencies such as banks, the Farm Credit Administration, about nine Government agencies in total, do this sort of fundraising in the market.

FACTORS AFFECTING RECENT DECLINE IN SAVINGS

Mr. GIAIMO. Can you enlighten us on the factors which bring about this restriction in mortgage savings in the last month or two?

Mr. HORNE. Mr. Schwartz could do that perhaps in more detail. Part of it is the tightening of money. Do you have some comments on that?

Mr. SCHWARTZ. Yes. Through the summer of last year, the flow of savings to the mutual savings banks and the savings and loan associations was very favorable. In the fall it began to taper off. In the last quarter it dropped off very sharply. In January it was quite unsatisfactory.

At the same time, once you began to get this decline in savings in the early fall, that is when your interest rates began to rise when the pressures on banks and insurance companies for additional commercial loans began to grow. The insurance companies and commercial banks have been shifting further away from the home loan market; the savings and loan associations and mutual savings banks were somewhat less able, as a result, to take care of the demand. You have had an increasing tightening of the market since late summer and it has become particularly pronounced in the last couple of months. The savings and loan associations have kept their forward commitments at an alltime high despite this decline in savings because, I suspect, that they expect the programs that the chairman mentioned which the bank system is maintaining, to help them to meet this.

The Board has not discouraged them from maintaining this high level of commitments. Nevertheless, the savings and loan associations and mutual savings banks together have somewhat more than 50 percent of the market, but with the other part collapsing on top of them they face a very difficult situation.

Mr. GIAIMO. Are the CD's playing a role in the tightening of the money situation this time?

Mr. SCHWARTZ. Not so much the CD's. I think most of it is nonbank, nonsavings and loan type investments. In some areas we are running into difficulties not with the CD's but with the golden passbook account. Where the associations do not have the income to take advantage of all the tools the Board has provided, the commercial banks come in with a golden passbook and are able to attract funds away from the association. It has not reached the dimensions that it did in 1966 but this is one of the problems that confronts them.

USE OF GOLDEN PASSBOOK BY COMMERCIAL BANKS

Mr. GIAIMO. Would you explain what the golden passbook is?

Mr. SCHWARTZ. It is really a device that gives the banks a legitimate way to avoid the 4-percent ceiling on passbooks. The golden passbook provides——

Mr. GIAIMO. A time deposit?

Mr. SCHWARTZ. You get a time deposit open account subject to 90 days' notice and you get 5 instead of 4 percent.

Mr. HORNE. They have very intelligently or shrewdly called it a passbook because the S. & L. passbooks most often, with few exceptions, bears 4½ or 4.75. So the banks call theirs a passbook at 5 percent. So the saving public is not always or is seldom sophisticated enough to know the difference. So he buys a so-called passbook at a bank which is really a CD, called by another name.

Mr. GIAIMO. That is what I was going to say. Isn't that golden passbook really a CD?

Mr. SCHWARTZ. It has one characteristic difference from a CD. In the CD you have a fixed term of 3 months, 6 months, or 9 months.

Here it is an open-ended deal. You put the money in and you have to give 90 days' notice to withdraw. The penalty for withdrawal is really minimal if you wait until after an interest date because any interest that has been credited or paid to you, you cannot be penalized. So if you come in, let's say, on April 5 and you have received a dividend credit or an interest credit on March 31, you give up 5 days' interest. It is a little bit more flexible in that regard than the CD. Also, the banks put somewhat higher limits on CD's than they put on the golden passbook for reasons best known to themseles. They argue that there is a cost differential here. In any event, this is one of the problems but it is not the most significant problem.

Mr. HORNE. It is spotty.

Mr. SCHWARTZ. It is clear that the loss in savings in January that the savings and loan associations had was not accompanied by a comparable growth in the golden passbook. It was in the larger accounts which were likely to go to the open market.

Mr. EVINS. Does the Board know what the reason is for these large losses in January?

Mr. JONAS. Where did the money go?

Mr. SCHWARTZ. The money went into the open market to buy short-term Government securities, long-term Government securities or corporate bonds.

Mr. HORNE. You see, one of the things that we and the banks have to worry about, so far as savings inflow is concerned, are corporate issues or other areas for investment other than in banks or savings and loans.

Mr. JONAS. Didn't the Treasury issue some notes paying 5.7 percent recently?

Mr. SCHWARTZ. Yes.

MARGIN OF LIQUIDITY IN BANK SYSTEM

Mr. EVINS. What is the margin of liquidity in the bank system? You testified some time ago on that. Is the margin proper?

Mr. HORNE. From a liquidity standpoint, we think so; yes, sir. We have to think of liquidity and also of reserves. From a liquidity standpoint both within the associations themselves and with the bank system, we are in a better condition by far than we were at the beginning of 1966.

Mr. EVINS. Very good.

Mr. HORNE. The associations, as the money inflow began to be favorable in 1967, along with the housing drop that occurred in 1966 which had not yet recovered were able—and they took our advice, fortunately—to improve their liquidity position beyond the level demanded by the statute. So this is where we get the approximately $2.6 billion in liquidity. That is beyond the 7-percent liquidity that we require under the statute. Then we have in the system on top of that, the other figure that was mentioned, the $1.8 billion. Now, that is the liquidity within the 12-bank system, where by rolling over money as the paper came due, we built up liquidity to $1.8 billion.

Mr. EVINS. The report this year is that the institutions and banks generally are in a more liquid position than they were a year ago.

Mr. HORNE. Yes, sir.

Mr. EVINS. Last year it was rather dour and distressing.

Mr. HORNE. Yes, sir.

Mr. EVINS. But you give a sounder report this year.

Mr. HORNE. That is right. What bothers us are the matters I explained earlier.

Mr. EVINS. We commend you for coming out of the hole into a more healthy climate within a year.

INFLOW OF SAVINGS IN JANUARY

Mr. JONAS. You may have answered this before. On a seasonally adjusted basis, what was the net savings inflow in January?

Mr. SCHWARTZ. If you take it on a seasonally adjusted basis it would amount to $4.8 billion per year.

Mr. JONAS. That compares with $10.7 billion in 1967 and $3.7 billion in 1966.

Mr. SCHWARTZ. Yes, sir. We hope to do a little bit better than 1966.

Mr. JONAS. Closer to 1966 than 1967?

Mr. SCHWARTZ. Yes, sir.

Mr. HORNE. Yes, sir. This also includes the dividends that were left in, that many of the savers left in.

Mr. JONAS. Frankly, I don't see how the savings and loan industry expects to continue to attract savings, or the savings banks either, when you can, as was already said buy a Government note, a U.S. Treasury note that will pay 5¾ percent interest.

Mr. SCHWARTZ. We are fortunate that not all people have the same taste or have the same range of choice.

Mr. JONAS. Or the sophistication.

Mr. SCHWARTZ. Well, there are people who are large investors who have small savings accounts in savings and loan associations or in banks that they add to willly-nilly simply because it is their quick, ready money for various things such as vacations or major purchases.

Mr. JONAS. I would like to keep interest rates as low as possible. I have always been a borrower. I am a heavy borrower now. I don't like to pay more interest. But at the same time, if I have to have some money I am not going to quibble too much over paying the going rate of interest.

With the Federal Government setting the pace and increasing rates of return on Government securities, I don't see how you can hope to hold these homebuilding institutions and savings and loan institutions down.

Mr. HORNE. We are in a dilemma, and you put your finger on one of our dilemmas. As the Federal Government raises money it also has to meet the market demand, even Treasury, because when the corporate issues, like United States Steel, go into the market——

Mr. JONAS. This thing feeds on itself.

Mr. HORNE. To some degree, yes. Now, this is the position we are in, this is one reason we would like to have more flexibility, which I spoke of earlier, when we were discussing H.R. 13718.

Mr. JONAS. If you could pay more interest on savings, that would help solve your problem.

Mr. HORNE. Our dilemma now is that if we don't meet the competition elsewhere we don't have the inflow that we need and we even have

an outflow. But, on the other hand, if we raise the rates so that they do meet competition, because investments of savings and loan associations are in long-term mortgages and frozen in for a long period of time, it puts them in more of a profit crunch. So if they don't raise the rates they don't get the savings, and if they do raise the rates they may operate in the red. This is one of our real problems, one of our serious problems.

Mr. EVINS. Mr. Chairman, Congress has given you new legislation and new authority. Does your counsel or you want to capsule for the record just what these authorities are?

Mr. HORNE. Yes, sir.

CEASE-AND-DESIST AUTHORITY

Mr. EVINS. We gave you some injunctive authority, cease-and-desist authority.

Mr. HORNE. Prior to 1966 the only real supervisory authority we had over a State-chartered, federally insured association was either persuasion or to put it out of business by canceling the insurance. Believe me, to have to wait until you have to reach the stage of canceling insurance is a long, tedious road and the institution could be completely ruined by that time. Insofar as federally chartered associations were concerned the situation was equally difficult. So in 1966 you gave us what we call intermediate authority. We can issue cease-and-desist orders and we can remove, under certain conditions—very restricted conditions, more restricted than we asked—but we still can do it under certain restricted conditions, replace directors or management that is ruining an association. Additionally, you required that when a change of directorship or ownership takes place, or a change of management takes place, that we have to be advised about it. This is what you did, briefly, in 1966. The bill that you just passed in 1967——

HOLDING COMPANY LEGISLATION

Mr. EVINS. The Holding Company Act?

Mr. HORNE. Yes. The Holding Company Act was signed February 14. That bill primarily enables us to get at the holding company itself. Heretofore, even though the Federal Reserve Board has had supervisory authority over bank holding company operations, we have not had supervisory authority over savings and loan holding companies. You gave us the authority in this new bill to examine savings and loan holding companies, to have them report to us information which we seek. You gave us the authority to have some control over how they have been using their subsidiary associations in the past, also over conflict of interest and self-dealing. You also gave us authority to restrict the degree to which they can go out and get involved in heavy debt, then make their insured subsidiary savings and loan associations carry that debt. One of the biggest problems we have had with savings and loan holding companies is that they have ruined their associations by making them carry indebtedness incurred in a speculative manner by the holding company itself. In other words, you have a holding company controlling a satellite savings and loan institution which also controls other satellites of different types, but when the holding company gets into difficulty, in order to carry its debt, it milks

this satellite savings and loan association. You gave us authority under this new act to put many restraints in the manner in which holding companies have been doing these things in the past.

Mr. EVINS. Is that restraint imposed on the savings and loan association?

Mr. HORNE. It is imposed on the holding company itself.

Mr. EVINS. You have not had much experience or activity in that field, though you have the power?

Mr. HORNE. We have the power now to get into it.

Mr. EVINS. When were you given the power to make affiliate investigations?

Mr. HORNE. That was done in 1966.

Mr. EVINS. To what extent have you exercised this authority?

Mr. HORNE. As I explained in my testimony, we examined, I believe, 39 already and we plan to examine approximately 200 more in the remainder of this fiscal year.

Mr. EVINS. What is the nature of your affiliate companies?

Mr. HORNE. Insurance companies, construction companies, title companies, escrow companies.

Mr. TREVAS. The things that sort of feed into a savings and loan operation.

Mr. EVINS. Do you find any instance in which Federal banks have influence or control, or common directors?

Mr. HORNE. Yes, sir; we have instances of that. We control that to the best that we can. We don't find a great degree, numberwise, of instances of abuse Mr. Chairman, but we have found some.

Mr. EVINS. There is nothing in the act to prevent you or preclude you from investigating in this area.

Mr. HORNE. No, sir; and we are doing it.

Also let me emphasize here that when we have found something that is going on between an association and a bank, so far we have had no difficulty at all getting the cooperation from the bank regulatory authorities.

Mr. BOLAND. You anticipate examining 500 affiliates in the 1969 budget. How many affiliates are there?

Mr. WALTERS. I don't think anyone really knows.

Mr. BOLAND. Would it be in the thousands?

Mr. WALTERS. No. We are guessing roughly a thousand or two, but this is all guesswork. We just don't know based on the present definition of an affiliate. We are looking into it in connection with each examination. It will probably be a year or so before we know how many affiliates there are under the present definition.

Mr. BOLAND. That is a pretty good ratio, 500 to 1,000 examinations, if you say there are about a thousand.

EXPIRING DIVIDEND REGULATION AUTHORITY

Mr. EVINS. You made reference to the dividend regulation authority expiring. Tell us about the mechanism of regulating dividends.

Mr. HORNE. We had the benefit of some previous experience by the Federal Reserve Board in its Regulation Q authority that was of some help. But in 1968—you gave it to us in 1966 and it was renewed for one year in 1967, and we will be asking that it be renewed.

Mr. EVINS. You have had it in operation for about 1 year.

Mr. HORNE. Since September of 1966, sir. I am trying to answer your question as succinctly as possible. We have far more difficulty in applying this than the banks have had because when we got the authority there were so many patterns that had already been established all over the country, from California clear on across to all areas of the country, that when we move toward a uniform rate, which the banks have always had, we had to do it moderately.

Mr. EVINS. You cannot have a uniform dividend rate. Some institutions are very profitable and they can declare a big dividend. Others are marginal and it is not sound, maybe, to declare a large dividend.

Mr. RAND. It is a ceiling.

Mr. EVINS. You have a ceiling?

Mr. HORNE. It is a ceiling which we set. You can go below that ceiling, and some do. We have set a ceiling applicable to all, but it varies from one part of the country to another.

Mr. JONES. Are you talking about interest?

Mr. HORNE. They call it dividends in the savings and loan associations but it is analogous to the interest on savings paid by banks.

Mr. JONAS. So you would have to pay that whether the institution is in bad shape or not?

Mr. HORNE. That is one of our problems.

Mr. JONAS. That is a liability that is insured, is it not?

Mr. HORNE. Let me tell you an interesting thing about that. So far as savings and loan associations are concerned, it is an anticipated payment. For all practical purposes it does work out as being a requirement that has to be met.

Mr. EVINS. Since some of the people allow their dividends or interest to be reinvested in their accounts, it is not all paid out.

Mr. HORNE. But it still has to be credited, paid by the association, whether paid directly to the saver or credited to his account.

Mr. GIAIMO. Technically, under the law, it is not obligatory that the association pay the interest because it is dividends in a savings and loan such as is the case with a participating mutual holder.

Mr. TREVAS. Exactly.

Mr. HORNE. You are correct in your analysis. This is the reason we use the word "anticipated" rate.

Mr. JONAS. I don't quite understand. I thought that was a liability of the institution just as the principal is.

Mr. GIAIMO. No. It is not.

Mr. JONAS. Doesn't the institution obligate itself for that?

Mr. GREENEBAUM. Not until it earns it.

Mr. GIAIMO. It is like a dividend you get in any mutual venture, such as a mutual insurance policy, where the rate is determined by the earnings of the company. Isn't that the theory?

Mr. HORNE. Yes, sir.

Mr. GIAIMO. That is what distinguishes it from pure interest.

Mr. HORNE. Yes, sir. But I want to stress again that for all practical purposes it is treated as an obligation and is paid.

Mr. JONAS. If an institution folds and you have to take it over, you the insuring corporation, is it a liability that you have to pay?

Mr. HORNE. It is not always a liability to pay the dividend, but it is to pay the principal.

PARTICIPATION IN HOUSING NEEDS FOR SLUM AREAS

Mr. EVINS. How does the Federal savings and loan association plan to participate in solving the lower income housing needs in the slum areas?

Mr. HORNE. Mr. Chairman, that is a good question, a very good question. I frankly don't have the complete answer. We are giving it a lot of careful study. We have to keep in mind at least two requirements when we urge the savings and loan industry—which I think it can—to make investments in this area. We have to keep in mind that the money they put into these areas would be underwritten the same way that other private industry money is usually underwritten, and that is by FHA or some other form of Government insurance, VA for example. We have to bear in mind that the money they put into these areas draws to a reasonable degree an income that is greater than what they have to pay for the money that they put into these areas.

Mr. EVINS. These are high risk areas, and the soundness of your system might be in jeopardy.

Mr. HORNE. Unless we carry through on at least these two positions that I have expressed, then your statement, sir, is correct. The Board has refrained, and I think wisely so, from encouraging associations to get into these areas unless the loans do meet these two requirements, for fear that the risk would be greater than the insurance corporation or the individual associations themselves could bear. But within these two areas I think that we are going to be able to participate in these housing programs for the underprivileged. Put it this way, we are working closely with the housing authorities.

Mr. EVINS. To make a contribution and to participate in financing, as much as possible?

Mr. HORNE. Yes, sir; yes.

POSITIONS SHOWN IN BUDGET FOR 1968 AND 1969

Mr. EVINS. Mr. Chairman, regarding your appropriation and your employment, the figures in your budget and that of the President do not jibe completely. In 1968 you are asking for 356 jobs and the budget showed 335.

As an average, you are stating 338 and the budget showed 324. In other words, the budget was less in 1968 than you requested and received. Now, the budget for 1969, according to your justification you are asking for 373 jobs, an increase of 17, while the budget says 351, which is an increase of 16. So you are not far apart, but your figures do not jibe.

Mr. CALLAHAN. May I comment on that, Mr. Chairman?

Mr. EVINS. Yes.

Mr. CALLAHAN. The difference between the 356 and the 335 which you referred to in 1968 represents 21 positions in our reimbursement program. These positions are involved in the AID program which the chairman referred to, and in our printing and reproduction plant, where services are performed on a reimbursable basis, primarily within the Board itself but, nonetheless, they are in an advance and reimbursement schedule. These positions by Bureau of the Budget instructions are shown in a separate schedule.

As I said, the 335 and the 21 would make the 356 positions that we are referring to in our overall schedules for 1968. In 1969 the same thing applies, we have 351 in the basic limitation and 22 in the advances and reimbursement schedule. So this would make up the total of 373 positions requested.

ESTIMATES FOR OFFICE OF INTERNATIONAL HOME FINANCE

Mr. EVINS. You have an Office of International Home Finance.
Mr. CALLAHAN. Right.
Mr. EVINS. Five jobs?
Mr. CALLAHAN. Five.
Mr. EVINS. You estimated $63,000 in net salaries.
Mr. CALLAHAN. Yes.
Mr. EVINS. Are these to assist AID in encouraging homebuilding in South America?
Mr HORNE. Yes, sir.
Teaching them also how to set up savings and loan associations and thrift institutions.
Mr. EVINS. Can't they come here and help our balance of payments by learning our system here?
Mr. HORNE. That is what they do.
Mr. TREVAS. A great deal of it does come to the Board.
Mr. EVINS. Is this expenditure outside of your limitation?
Mr. CALLAHAN. It is outside the limitation we have asked for.
Mr. TREVAS. We get reimbursed.
Mr. HORNE. We get money from AID, but it is counted in as part of our budget.
Mr. EVINS. When was this office set up?
Mr. HORNE. It was set up in 1965.
Mr. EVINS. We are asking all the agencies to see if they can make any contribution, even minor, in the balance-of-payments situation. Have you an outflow of money in your budget?
Mr. HORNE. No, sir.
Mr. TREVAS. No, sir.
Mr. CALLAHAN. No, sir.

POSITIONS REQUESTED FOR 1969

Mr. EVINS. For 1969 you have budgeted for 373 jobs and the budget is for 351, which is a difference of 22.
Mr. CALLAHAN. Twenty-two positions are in the advances-and-reimbursement schedule.
Mr. EVINS. Now, for 1969 you budgeted for 351 jobs and you estimated average employment of 343.
Mr. CALLAHAN. In addition to the 351 positions, 22 other positions are shown in the advance-and-reimbursement schedule. The average employment figure of 343 includes 6 man-years which represent temporary and summer employment.
Mr. EVINS. In your examinations, the budget shows an increase of jobs over what you are showing. On the other figures the budget is lower, but in this figure the budget shows more, 869, whereas you are asking for 864.

Mr. CALLAHAN. We are speaking there of man-year requirements.

Mr. EVINS. In the Examination Section?

Mr. CALLAHAN. Yes. The 864 represents man-year requirements out of a total of 953 positions.

Mr. EVINS. For 1969 you are asking in examinations for 953 jobs and the budget shows the same, but the man-years is different.

Mr. CALLAHAN. The man-years would be 884.

Mr. EVINS. The budget shows 889.

Mr. CALLAHAN. The difference between the 884 and 889 represents temporary and summer employment. In other words, this difference is the equivalent of full-time employment of temporary employees and students who are employed by the Board in its summer program.

STAFF OF FSLIC

Mr. EVINS. Mr. Chairman, when I was looking over your Federal Savings and Loan Insurance Corporation budget I was impressed by the fact that you have insurance protection of $135 billion, and you have about 19 jobs. That is the biggest insurance company in the world for the number of employees running it.

Of course, we know a few years ago you had a staff and you transferred them all under the Administrative Department. They draw on the services, bookkeeping, accounting, and other resources of the Federal Home Loan Bank Board staff.

Mr. HORNE. You are exactly right, sir. That is a very important point. I would like to, if I may, brag about Mr. Jerry Worthy and his staff.

Mr. EVINS. The biggest insurance company in the world for the least number of employees.

Mr. HORNE. Your explanation is to the point. That is the reason they do not have to have lots more people.

Mr. EVINS. You have them covered up.

Mr. HORNE. No, sir. If they need legal help, for instance, they go to Mr. Moscov; if they need the services of Mr. Day, they go to him, and if they need the services of the others——

Mr. EVINS. But if you need money you come to Congress.

Mr. HORNE. Yes, sir. We come to Congress and ask for permission to spend the money that the system generates. No public funds at all are involved, not one penny.

Mr. EVINS. It is a pretty good insurance company. You have a lot of friends and resources to draw upon.

Mr. HORNE. Well, it is. It makes, I think, for a better operation and at less cost.

Mr. EVINS. You are asking for a $34,000 increase for the insurance corporation. And you say this is because of the Pay Act?

Mr. HORNE. Yes, sir.

INCREASE IN FUNDS FOR BOARD

Mr. EVINS. You are asking for a $461,000 increase for the Board. Part of that is the Pay Act and part is for new employees.

Mr. HORNE. A great part of it is the Pay Act, sir. You see, only $85,000 is required for the new positions; 17 new positions we are asking for.

Mr. EVINS. The balance is the Pay Act costs.

Mr. JONAS. I was going to ask about that. I noticed this in your statement. However, that would not be more than an average salary of around $5,000.

Mr. TREVAS. First of all, we figure on six-tenths of a year basis. It is going to take us time to recruit these people.

Mr. JONAS. You don't expect to put them all on?

Mr. TREVAS. The Bureau doesn't even allow us to.

Mr. JONAS. On an annualized basis it would be more than that because your average salary is higher than that.

Mr. HORNE. This amount would be more if they had hired these people. Their payment later on down the road would be more. But for this fiscal year, this is what we are talking about.

INCREASE IN SYSTEM MEMBERSHIP

Mr. JONAS. Is it correct that you don't expect to bring in more than five new institutions into the system in 1969?

Mr. HORNE. Five new institutions?

Mr. JONAS. That is your estimate.

Mr. HORNE. Yes.

Mr. JONAS. How did that compare with last year? Is it running around five per year?

Mr. SMITH. We have a schedule in here showing the increase.

Mr. JONAS. Is this more or less than the average?

Mr. SMITH. Of course, what affects that figure so much is the number of mergers. These are net figures. The fact that there is an increase of five or 15, it could have been 20 or 25 new associations entering into the business, but we lose some because of consolidations and withdrawals from membership in the bank system.

Mr. JONAS. When I saw that five figure I began to wonder why you needed more people.

Mr. SMITH. Mergers is one of our big operations, one of the most difficult applications we have.

Mr. HORNE. Also this has a bearing: we are having to do more things—now, I am not being critical, I am in favor of the Administrative Procedure Act and the further revelations being required, which we are being required to make under the laws recently passed by Congress—but this does increase our workload in meeting the requirements of disclosure, requirements of making available to the public information that Congress tells under the new act we should make available.

Mr. EVINS. The Federal Home Loan Bank Board is a Government corporation, it is self-sustaining. You use your own revenues, which come in from examinations of institutions. So you have an administrative expense and a nonadministrative expense. Your administrative expense is for the Board and its staff. The nonadministrative relates to the examination of your institutions. Is that correct, Mr. Chairman?

Mr. HORNE. Yes, sir.

ORGANIZATION CHART OF FEDERAL HOME LOAN BANK BOARD

Mr. EVINS. Gentlemen, take a look at the organization chart No. 1 and the page 162. These will give you a picture; 162 is near the back.

The organization of the Home Loan Bank Board is shown on those sheets. The Chairman has an assistant and there are assistants to the other Board members, and an executive assistant to the Chairman. Then you have the office of the Federal home loan bank operations which supervises the Federal home loan banks. There are 12 of those.

Mr. HORNE. Yes.

Mr. EVINS. Then this chart on page 162 shows your district offices. Do these correspond with your 12 banks?

Mr. HORNE. Yes, sir; these are the 12 banks.

Mr. EVINS. Boston, New York, Pittsburgh, Greensboro, Cincinnati, Indianapolis, Chicago, Des Moines, Little Rock, Topeka, Los Angeles, and Spokane. You have a lot of activity on the west coast. You have two offices out there.

Mr. TREVAS. San Francisco and Los Angeles.

Mr. HORNE. Los Angeles is really a branch office of San Francisco.

Mr. EVINS. The two main functions are the Office of Examinations and Supervision, and the Savings and Loan Insurance Corporation—well, there are more than two but you mentioned those two.

Mr. HORNE. Yes, sir. We also have another main function. Our other main function is the chartering of associations and working with the mergers which Congressman Jonas referred to earlier.

STATEMENT OF SOURCES AND APPLICATION OF FUNDS

Mr. EVINS. Take a look at the table on page 3. This is how the funds are applied. Now, the administrative expenses go up from $4,686,000 to $5,153,000. Just a few years ago it was $4,100,000.

Your nonadministrative expense goes up from $11,801,000 to $13,401,000. This is for examinations. All of this is the use of funds received as fees for examinations.

Mr. HORNE. Yes, sir.

Mr. EVINS. Then you show conservatorships, you estimate nearly $1 million, actually $794,000.

Mr. TREVAS. By law, these are nonadministrative funds out of earnings. You cannot anticipate them in advance.

Mr. EVINS. You have an increase in Treasury cash of $769,588. Tell us about this.

Mr. CALLAHAN. Mr. Chairman, this is our estimate of the additional cash we expect to have on deposit with the Treasury at yearend.

Mr. EVINS. This is funds on deposit with the Treasury.

Mr. CALLAHAN. Right; an increase, one yearend over the other.

Mr. EVINS. Two years ago it was $158,000.

Mr. CALLAHAN. Right. This is the result of estimating payments for expenses incurred and the receipt of collections on examination fees and other sources of revenue that we have.

Mr. EVINS. Look down here to "Funds provided by financing." You go down from $5,200,000 to $1,500,000. That is a substantial drop.

Mr. CALLAHAN. This is the money we estimate we will require as advances from the Federal home loan banks in connection with acquisition of a site and related costs for the new building.

Mr. JONAS. You have already drawn down that $5 million?

Mr. CALLAHAN. $4,350,000 has been drawn down.

Mr. EVINS. You have a miscellaneous item under "Income" of $5,000, up from $3,000.

Mr. CALLAHAN. The $5,000 represents fees that we collect from individuals for mortgage release instruments issued by the Board for the former Home Owners' Loan Corporation.

Mr. EVINS. The assessments go up from $3.9 million in 1967 to $6,132,000 in 1969. Have you had a revision of the amount of fees or does this represent more work and more examinations?

Mr. CALLAHAN. No. The Board presently is charging $78 as a fee. This is estimated to be continued through 1969.

Mr. EVINS. You have had that for several years.

Mr. CALLAHAN. Yes, sir.

AVERAGE LENGTH OF EXAMINATIONS

Mr. EVINS. How long do these examinations take, on an average?

Mr. WALTERS. They vary. On page 147 it shows that in 1967 the State-chartered associations averaged 23 days.

Mr. EVINS. What about your federally chartered institutions?

Mr. WALTERS. Thirty-seven days. You see, we have joint examinations on the State-chartered institutions in which State examiners participate, which accounts for the lower figure.

Mr. EVINS. It takes a month to examine an institution?

Mr. WALTERS. One man, yes, sir; or 37 man-days. Now, we do put in crews of maybe four, up to seven men, that might be there for 1 week. This represents the total man-days.

Mr. EVINS. I was just trying to get an impression as to how long it takes to make an examination of an institution. If you send in a team, it will take about a week.

Mr. WALTERS. That is right. It might take 2 to 3 weeks. We try to cut down on the number because we think it is more efficient to have fewer men in the crew rather than have too many trying to do the job at the same time.

COST OF EXAMINATION PROGRAM

Mr. EVINS. Now, from another point of view, the nonreimbursable expense excluding depreciation, cost of examining savings and loan associations, goes up from $11,755,000 to $13,401,000. Tell us about this cost of examining savings and loan associations.

Mr. CALLAHAN. This is the money that is requested in the nonadministrative limitation for the Office of Examinations and Supervision for the conduct of their examination program.

Mr. EVINS. This is the amount you want to commit to examinations?

Mr. CALLAHAN. Right. The $11.7 million represents actual expenses last year; the $12.7 million and $13.4 million represent estimated expenses for the next 2 years.

Mr. EVINS. On page 5 you show current liabilities, $3,472,000. What is the nature of these current liabilities?

Mr. CALLAHAN. This involves all of the bills the Board has, such as accrued salary expense, personnel benefits, utilities, travel expense, and any of our operating expenses.

Mr. EVINS. Unpaid bills of the Board?

Mr. CALLAHAN. Unpaid bills, operating expenses.

Mr. EVINS. You have cash with the Treasury of $2,500,000 and you owe $3,400,000, so you lack about $1 million cash to pay all those bills.

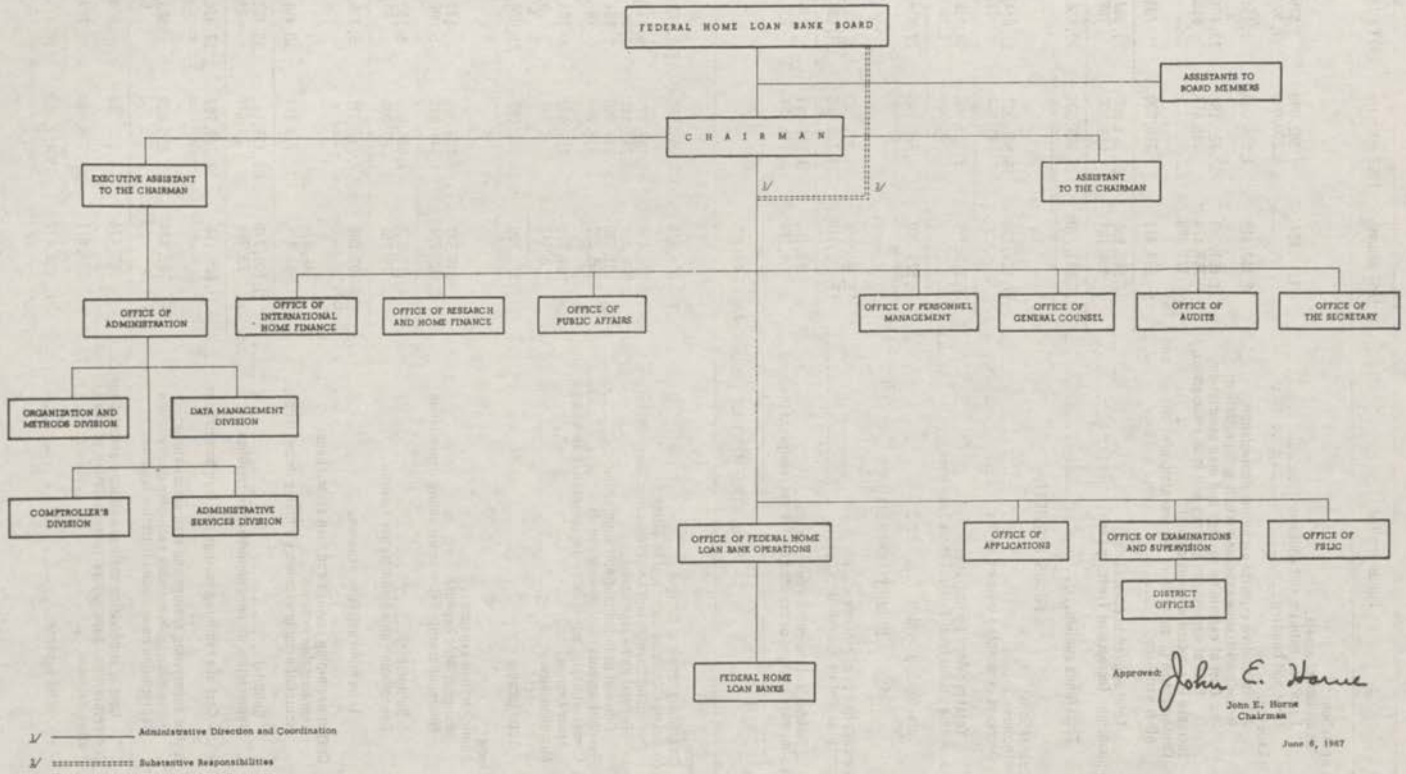
Mr. CALLAHAN. By the same token, you will notice we have a little better than $2 million in receivables.

Mr. EVINS. Very good.

ORGANIZATIONAL CHART AND FINANCIAL STATEMENTS

We shall place these statements in the record.

ORGANIZATIONAL CHART



Approved: John E. Horne
John E. Horne
Chairman

June 6, 1967

CHART A

A. STATEMENT OF SOURCES AND APPLICATION OF FUNDS

Funds applied	1967 actual	1968 estimate	1969 estimate
To operations:			
Acquisition of assets:			
Furniture, fixtures, and equipment	$117,824	$82,000	$75,000
Land and building		5,200,000	1,500,000
Expense:			
Administrative expense excluding depreciation	4,112,318	4,686,000	5,153,000
Nonadministrative expense excluding depreciation:			
Cost of examining savings and loan associations	11,801,749	12,725,182	13,401,230
Cost of supervising savings and loan associations	767,474	895,818	963,770
Increase in selected working capital	171,380		
Conservatorship, supervisory representative in charge, and other expenses	394,811	716,000	794,000
Total applied to operations	17,365,556	24,305,000	21,887,000
To financing: Increase in Treasury cash	158,164	618,506	769,588
Total funds applied	17,523,720	24,923,506	22,656,588
FUNDS PROVIDED			
By operations:			
Income	17,523,720	19,581,002	21,084,588
Decrease in selected working capital		142,504	72,000
Total provided by operations	17,523,720	19,723,506	21,156,588
By financing: Loan from Federal home loan banks		5,200,000	1,500,000
Total funds provided	17,523,720	24,923,506	22,656,588
BUDGET EXPENDITURES			
Funds applied to operations	17,365,556	24,305,000	21,887,000
Funds provided by operations	17,523,720	19,723,506	11,156,588
Net budget expenditures	−158,164	4,581,494	730,412
The above are charged or credited (−) to net receipts of the fund	−158,164	4,581,494	730,412

B. STATEMENT OF INCOME AND EXPENSE

Income:			
Examining fees and charges	$10,618,325	$10,953,150	$11,163,668
Assessments for services and facilities:			
Federal Savings and Loan Insurance Corporation	3,928,406	5,169,355	6,132,185
Federal home loan banks	2,079,424	2,251,447	2,461,135
Office of examinations and supervision	303,189	347,050	381,600
Reimbursements from other accounts	195,822	139,000	147,000
Conservatorship, supervisory representative in charge, and other income	394,811	716,000	794,000
Miscellaneous	3,743	5,000	5,000
Total income	17,523,720	19,581,002	21,084,588
Expense:			
Administrative expense:			
Reimbursable expense	149,547	139,000	147,000
Nonreimbursable expense excluding depreciation	3,962,771	4,547,000	5,006,000
Subtotal	4,112,318	4,686,000	5,153,000
Depreciation on administrative facilities	79,751	80,000	82,000
Total administrative expense	4,192,069	4,766,000	5,235,000
Cost of examining savings and loan associations:			
Reimbursable expense	46,275		
Nonreimbursable expense excluding depreciation	11,755,474	12,725,182	13,401,230
Subtotal	11,801,749	12,725,182	13,401,230
Depreciation on nonadministrative facilities	23,369	23,610	24,840
Cost of examining savings and loan associations	11,825,118	12,748,792	13,426,070
Cost of supervising savings and loan associations:			
Nonreimbursable expense excluding depreciation	767,474	895,818	963,770
Depreciation on nonadministrative facilities		5,390	6,160
Cost of supervising savings and loan associations	767,474	901,208	969,930
Conservatorship, supervisory representative in charge, and other expense	394,811	716,000	794,000
Total expense	17,179,472	19,132,000	20,425,000

B. STATEMENT OF INCOME AND EXPENSE—Continued

Funds applied	1967 actual	1968 estimate	1969 estimate
Assessments and fees in excess of expense	344,248	449,002	659,588
ANALYSIS OF DEFERRED AND UNDISTRIBUTED CREDITS			
Deferred and undistributed credits, beginning of year	360,385	704,633	1,153,635
Deferred and undistributed credits, end of year	704,633	1,153,635	1,813,223

C. STATEMENT OF FINANCIAL CONDITION

	1966 actual	1967 actual	1968 estimate	1969 estimate
ASSETS				
Cash with Treasury	$986,593	$1,144,757	$1,763,263	$2,532,851
Accounts receivable	1,553,104	1,746,358	1,939,000	2,087,000
Inventory: Supplies	16,886	16,327	18,000	18,000
Other: Postage meter	7,920			
Fixed assets:				
Land and building			5,200,000	6,700,000
Furniture, fixtures and equipment, net	697,668	712,372	685,372	647,372

Deferred and undistributed credits	360,385	704,633	1,153,635	1,813,223
Total liabilities	3,262,171	3,619,814	9,605,635	11,985,223

PROGRAM HIGHLIGHTS

Mr. EVINS. This is the 35th anniversary of the Federal Home Loan Bank System. You say that the number of members in 1967 was 4,985 and you estimate it will go up to about 5,000 in 1969. A member is not only a federally chartered institution but may be State-chartered or another type institution.

Mr. TREVAS. Yes. Some mutual savings banks.

Mr. EVINS. How many of them are there?

Mr. DAY. Forty-nine.

Mr. EVINS. You want legislation for the Federal savings and loan associations to have the advantages of the mutual savings banks, basically?

Mr. HORNE. That is basically what H.R. 13718 would provide for.

Mr. EVINS. Assets of all the member institutions are estimated to be $167,500 million.

Mr. HORNE. By the way, the committee may be interested in knowing that we have one insurance company that is a member.

Mr. EVINS. That was mentioned.

Mr. HORNE. Membership is made available by law to insurance companies, although very few of them are.

Mr. GIAIMO. Why is there a decrease in the number of savings and loan associations?

Mr. TREVAS. Because of mergers.

Mr. HORNE. This credit bind that we have been in in the past 2 years is bringing about a great deal of interest in merger applications and has resulted in quite a few mergers. In other words, a lot of the small and even some of the big ones that have not been run soundly or have not used the wisest operation procedures are being merged out of existence.

Mr. EVINS. Let us recess for lunch and come back at 1:15.

AFTERNOON SESSION

NUMBER AND ASSETS OF MEMBER INSTITUTIONS

Mr. EVINS. We will resume our hearings on the budget justification for the Federal Home Loan Bank Board.

Mr. Chairman, you tell us in your statement that the combined resources of the member institutions totaled last year over $145 billion, and in fiscal year 1967 the saving and loan members made home loans amounting to $14.6 billion.

Mr. HORNE. Yes, sir.

Mr. EVINS. They made a $6 billion gain in 6 months; $145 billion is combined resources at June 30 and the figure estimated for December 31, $151 billion. That is a $6 billion increase in resources in 6 months.

Mr. HORNE. That is counting savings and everything.

Mr. EVINS. That is a pretty good gain.

Mr. HORNE. Also, as I pointed out, Mr. Chairman, the savings inflow, counting dividends and all, in 1967 amounted to $10.7 billion, for the total.

Mr. EVINS. All Federal savings and loan associations are required to be members and you say at June 30, 1967, there were 2,055 privately owned, local, mutual institutions operating under charter and supervised by the Board.

Mr. HORNE. Yes, sir. These are federally chartered associations or State mutual.

Mr. EVINS. Then you say the number of insured institutions as of June 30, 1967, was 4,488. Their combined assets were about $133.1 billion. What is the difference between the 4,488 and 2,055 shown in the preceding paragraph?

Mr. HORNE. The 2,055, Mr. Chairman, are the federally chartered associations that automatically are insured. The remainder making up the difference between 2,055 and 4,488 are State-chartered associations, but also federally insured.

Mr. EVINS. They are all insured, but the first group are those federally chartered.

Mr. HORNE. Yes, sir.

And then the combined assets of both the groups amount to $133.1 billion.

Mr. EVINS. I had the impression earlier that there were more Federal institutions than there were State.

Mr. HORNE. No, sir. I think the total amount of assets leans a little bit toward the Federals, but numberwise there are more State.

Mr. EVINS. There is no requirement that the State institutions be insured by the Federal Savings and Loan Insurance Corporation, but they may avail themselves of it if they desire.

Mr. HORNE. Yes, sir. And there are quite a few numberwise, not dollarwise, or savingswise or assetwise, but there are quite a few numberwise that do not have insurance of accounts.

Mr. MOSCOV. There are some States which require insurance as a condition of operation, California being one of them.

Mr. EVINS. The number, size, and business activities supervised by the Board continues to increase. Your figures on page 8 show that.

Assets at June 30 are up $5.3 billion, but the loans made during the year were down from $22.3 billion to $14.6 billion or down 34.5 percent.

Mr. HORNE. This is connected with two developments, Mr. Chairman. The drop there, one is the drop in the flow of savings of the savings and loan associations in calendar year 1966, which, as we have pointed out, was quite big. And then in 1967, even though the flow returned to a good level, the cessation of homebuilding that occurred in 1966 required several months to reconstitute itself, so to speak.

Mr. EVINS. The assets of all of the associations are up and the number of loans last year were down.

Mr. HORNE. Yes, sir.

Mr. EVINS. You show on the first table the 4,935 associations, which is less than the 4,999 of the previous year; 64 less.

Mr. HORNE. That is primarily, sir, because of the growth of mergers or sick associations we handled in several ways.

As I pointed out earlier, some of them we paid off, some of them we merged.

Mr. EVINS. Overall, the number of institutions is down about 64 from the preceding year?

Mr. HORNE. Yes, sir.

JUSTIFICATION MATERIAL

Mr. EVINS. We will place in the record pages 6 through 10.

(The pages follow:)

PROGRAM HIGHLIGHTS AND OUTLINE OF FUNCTIONS—FEDERAL HOME LOAN BANK BOARD

PROGRAM HIGHLIGHTS

[Dollar amounts in millions]

Federal Home Loan Bank System	1967 actua	1968 estimate	1969 estimate
Members (June 30):			
Number	4,985	4,990	5,000
Assets	$145,836	$156,500	$167,500
Savings (shares)	$127,045	$137,300	$148,100
Mortgage loans	$122,955	$132,400	$142,300
Insured	4,488	4,520	4,555
Regional banks: Advances outstanding	4,302	4,600	5,600

Outline of functions

The Federal Home Loan Bank Board supervises and regulates the Federal Home Loan Bank System, the system of Federal savings and loan associations, and the Federal Savings and Loan Insurance Corp., created to serve the American public through the media of savings and loan associations, cooperative banks, and other financial institutions engaged in the encouragement of thrift and economical homeownership.

These three components are described as follows:

Federal Home Loan Bank System.—The Federal Home Loan Bank System, through its 12 regional Federal Home Loan Banks, strategically located throughout the country, provides a permanent credit reserve for eligible thrift institutions of the savings and loan type. The Federal Home Loan Banks advance funds to these member institutions to meet withdrawal demands as well as seasonal and expansionary needs for additional home-mortgage funds. Through the use of interbank deposits, the System maintains an adequate flow of home loan funds into every locality. October 15, 1967, marked the 35th anniversary of the opening of the regional banks.

The regional banks, the stock of which is owned by their member institutions, do not deal directly with individuals. The great majority of the members are

savings and loan associations, also known sectionally as building and loan associations, cooperative banks, and homestead associations. Included also in the membership of the Federal Home Loan Bank System are 49 mutual savings banks.

The importance of the Federal Home Loan Bank System is indicated by the fact that at June 30, 1967, the combined resources of its member institutions totaled over $145 billion (the December 31, 1967 figure is estimated at approximately $151 billion). In fiscal year 1967 its savings and loan members made home loans amounting to $14.6 billion.

Located in most cities, suburban areas, and towns throughout the United States, the System's member institutions serve over 53 million people including savers, investors, and home-loan borrowers.

Federal savings and loan associations.—The creation of Federal associations was authorized by Congress in 1933 to provide additional local thrift institutions for people to place their savings and/or obtain loans to finance their homes. In their charter and form of organization Federal associations embody the most modern practices developed by savings and home-financing institutions during their 136-year history in this country.

All Federal savings and loan associations are required to be members of the Federal Home Loan Bank System and to carry insurance of their savings or share accounts with the Federal Savings and Loan Insurance Corp.

At June 30, 1967, there were 2,055 privately owned, local, mutual institutions operating under charter, examination and supervision by the Federal Home Loan Bank Board. Their combined resources at June 30, 1967, were $72.1 billion. Federal savings and loan associations are in operation in every State, in the District of Columbia, and in Puerto Rico.

Federal Savings and Loan Insurance Corp.—Created in 1934, the Federal Savings and Loan Insurance Corp. insures, up to $15,000 each, savings or share accounts in approved savings and loan associations and similar institutions. Insurance of savings has been an important factor in stimulating the flow of savings into thrift and home-financing institutions. These savings are used largely for the financing of homes. The number of insured institutions at June 30, 1967, was 4,488; their combined assets were $133.1 billion.

All insured institutions are members of the Federal Home Loan Bank System.

INTRODUCTION

The Federal Home Loan Bank Board is primarily a regulatory and supervisory agency in the savings and home-financing field. It also issues charters for Federal savings and loan associations, insures savings or share accounts in Federal savings and loan associations and in approved State-chartered savings and loan or building and loan associations, and associations of the savings and loan type.

The 1969 budget estimates of the Federal Home Loan Bank Board, the Office of Examinations and Supervision, and the Federal Savings and Loan Insurance Corporation are based on the need for maintaining all operations in a current status giving full consideration to the complex problems arising from changing economic conditions and the increased competition for savings among financial institutions.

The number, size, and business activity of the institutions supervised by the Board continue to increase. The following table relating to member savings and loan associations shows the number, assets, loans made during year, and net inflow of new savings at June 30, 1966, and June 30, 1967; it also shows the increases over 1966 in dollar and percentage terms:

[Dollar amounts in billions]

Description	Fiscal 1966	Fiscal 1967	Increase over 1966	
			Amount	Percent
Number of member S. & L. associations at June 30	4,999	4,935	−64	−1.3
Assets at June 30	$130.8	$136.1	$5.3	4.1
Loans made during year	22.3	14.6	−7.7	−34.5
Net inflow of new savings	6.3	7.6	1.3	20.6

As indicated, the number of member institutions decreased by 64 over the number recorded at June 30, 1966. Assets showed an increase of $5.3 billion over June 30, 1966, and net inflow of new savings showed an increase of $1.3 billion over fiscal year 1966. Loans made during fiscal year 1967 showed a decrease of $7.7 billion over loans made during fiscal year 1966. The number of loans made by member institutions in fiscal year 1967 represented over 43 percent of the Nation's home financing.

SUMMARY OF AGENCY EXPENSES

The budget programs of the Federal Home Loan Bank Board including the Federal Savings and Loan Insurance Corporation are presented as business-type budgets.

The budget estimates for 1969, the revised estimates for the current fiscal year, and actual expenses for fiscal 1967 are summarized in the following two tables:

COMPARATIVE SUMMARY OF POSITIONS AND MAN-YEARS

Unit	1967 actual		1968 estimate		1969 estimate	
	Positions	Man-years	Positions	Man-years	Positions	Man-years
Board and staff offices	354	296.8	356	337.6	373	359.2
Federal Savings and Loan Insurance Corporation	19	14.4	20	17.6	20	19.6
Office of Examinations and Supervision	953	832.7	953	864.0	953	884.0
Total	1,326	1,143.9	1,329	1,219.2	1,346	1,262.8

COMPARATIVE SUMMARY OF EXPENSES

Unit	1967 actual	1968 estimate	1969 estimate
Administrative expenses:			
Board and staff offices	$4,042,522	[1] $4,627,000	$5,088,000
Federal Savings and Loan Insurance Corporation	245,059	[2] 306,000	340,000
Subtotal	4,287,581	4,933,000	5,428,000
Nonadministrative expenses:			
Office of Examinations and Supervision	12,546,317	13,650,000	14,396,000
Total	16,833,898	18,583,000	19,824,000

[1] Includes $87,000 for increased pay costs supplemental.
[2] Includes $8,000 for increased pay costs supplemental.

SUMMARY OF BOARD AND STAFF OFFICES EXPENSES

The 1969 estimates of administrative expenses of the Board and staff offices, the revised estimates for the current fiscal year, and actual expenses for 1967 are summarized in the following table:

Description	1967 actual	1968 estimate	1969 estimate
Positions	354	356	373
Man-years	296.8	337.6	359.2
Personnel compensation	$3,041,807	$3,520,400	$3,861,000
Personnel benefits	217,261	262,600	292,000
Total, personal services and benefits	3,259,068	3,783,000	4,153,000
Contractual services and supplies	846,250	896,000	992,000
Acquisition of capital assets	86,751	87,000	90,000
Total gross expenses	4,192,069	4,766,000	5,235,000
Reimbursements from other accounts	−149,547	−139,000	−147,000
Total net expenses	4,042,522	4,627,000	5,088,000
Estimated savings	367,478	0	0
Proposed supplemental due to increased pay costs (Public Law 90-206)	0	−87,000	0
Actual, authorization, and estimate	4,410,000	4,540,000	5,088,000

As shown, the Federal Home Loan Bank Board requests authority to expend $5,088,000 for administrative expenses of the Board and its staff offices in fiscal 1969.

The estimate reflects an increase in personnel of 17 positions and 21.6 man-years over the current fiscal year, and an increase in funds of $461,000 over the estimated expenses for the current fiscal year.

Of the increase in funds, $340,600 is in personnel compensation, $29,400 in personnel benefits, $96,000 in contractual services and supplies, and $3,000 in acquisition of capital assets. These increases, however, are offset by $8,000 additional reimbursements estimated to be collected in fiscal year 1969.

STAFF REQUIREMENTS

Mr. EVINS. Your staff requirements are shown on page 9. As you testified earlier, you are asking for 17 more jobs.

Mr. HORNE. Yes, sir.

Mr. EVINS. From 1,329 to 1,346.

Administrative expenses are up and supervision is up. How much is the total increase again?

Mr. CALLAHAN. $1,249,000.

Mr. EVINS. Of the increase in funds, $340,600 is in personnel compensation, $29,400 in personnel benefits, $96,000 in contractual services and supplies, and $3,00 in acquisition of capital assets. These are offset by $8,000 additional reimbursements estimated to be collected in fiscal year 1969.

REIMBURSEMENTS

Reimbursement is shown on page 131. This is $75,000 from the Agency for International Development to cover the estimated annual costs to be incured by the Board for providing AID with technical service training and other functions performed by the Board in connection with foreign assistance programs dealing with savings and home financing in foreign countries.

You testified that there is no balance-of-payment problem involved here.

Mr. TREVAS. Not from our agency because we get reimbursed for anything.

Mr. EVINS. You give them information and service, and bill them about $75,000?

Mr. TREVAS. That is right. Most of that is right here.

Mr. EVINS. We will place in the record page 131 at this point along with pages 11 and 12, other expenses.

(The pages follow:)

REIMBURSEMENTS FROM OTHER ACCOUNTS

	1967 actual	1968 estimate	1969 estimate
Agency for International Development	$51,722	$67,000	$75,000
Department of Housing and Urban Development	17,576	0	0
Federal Savings and Loan Insurance Corporation	12,108	9,000	9,000
Office of Examinations and Supervision	56,532	63,000	63,000
Miscellaneous	11,609	0	0
Total	149,547	139,000	147,000

The estimate represents reimbursements to the Board of the cost of printing, reproduction, and related services furnished by the Printing and Reproduction Section of the Administrative Services Division to the units of the Board.

The estimate also provides for reimbursement to the Board of $75,000 from the Agency for International Development to cover the estimated annual costs to be incurred by the Board for providing AID with technical support services, training and other functions performed by Board personnel in connection with foreign assistance programs dealing with savings and home financing in foreign countries.

OTHER EXPENSES AND SOURCES OF FUNDS

Personal services and benefits.—The need for the 17 positions requested is set out in the departmental justifications of the following offices and divisions: Office of Public Affairs (1); Office of the General Counsel (2); Office of Audits (1); Office of Personnel Management (1); Office of Federal Home Loan Bank Operations (5); Office of Applications (4); Administrative Services Division (2), and Data Management Division (1).

All other expenses.—The increase of $99,000 in all other expenses is in the items of travel and transportation of persons $10,000; rent, communications, and utilities $37,000; printing and reproduction $14,000; other services $29,000; services of other agencies $2,000; supplies and materials $4,000, and equipment $3,000. Review and analyses of these items together with justification of the need for the increases will be found beginning on page 121.

Reimbursements.—A table showing reimbursements to the Board for services rendered will be found on page 131.

Sources of funds

The funds used to pay the administrative expenses of the Board are derived from the following sources:

Source	1967 actual	1968 estimate	1969 estimate
By assessments upon:			
Federal home loan banks	$1,455,308	$1,631,135	$1,793,520
Federal Savings and Loan Insurance Corporation	2,284,025	2,648,815	2,912,880
Office of Examinations and Supervision (FHLBB)	303,189	347,050	381,600
Total funds	4,042,522	4,627,000	5,088,000

Distribution of the 1969 expenses among the three sources shown is based upon the following formula: The Insurance Corporation will pay 25 percent of the administrative expenses of the Board as a direct charge for services rendered by the Board staff offices and divisions in its behalf. The remainder of the administrative expenses will be distributed by assessment as follows: 10 percent to the Office of Examinations and Supervision, 43 percent to the Insurance Corporation, and 47 percent to the banks. The percentage for the Office of Examinations and Supervision is based on past experience. The respective percentages for the Insurance Corporation and the banks are based on the ratio of the membership of each one to the combined membership of the Insurance Corporation and the bank system at June 30, 1967.

MEMBER INSTITUTIONS

Mr. EVINS. The chart on page 13 shows you that the member institutions increased from 3,698 in 1946 to an estimated fiscal 1969 number of 5,000. Dollarwise it goes up from $9.4 billion to $167.5 billion. Total assets for June 1967 reflect an increase for the fiscal year of $7.5 billion or 5.4 percent.

They are expected to increase by $10.7 billion during the current year and to reach $167.5 billion, an estimated increase of 14.9 percent in 2 years.

In the last 5 years membership increased by 119, or 2.4 percent, and assets increased by $59 billion, or 68 percent. So, Mr. Chairman, these tables all show a phenomenal growth.

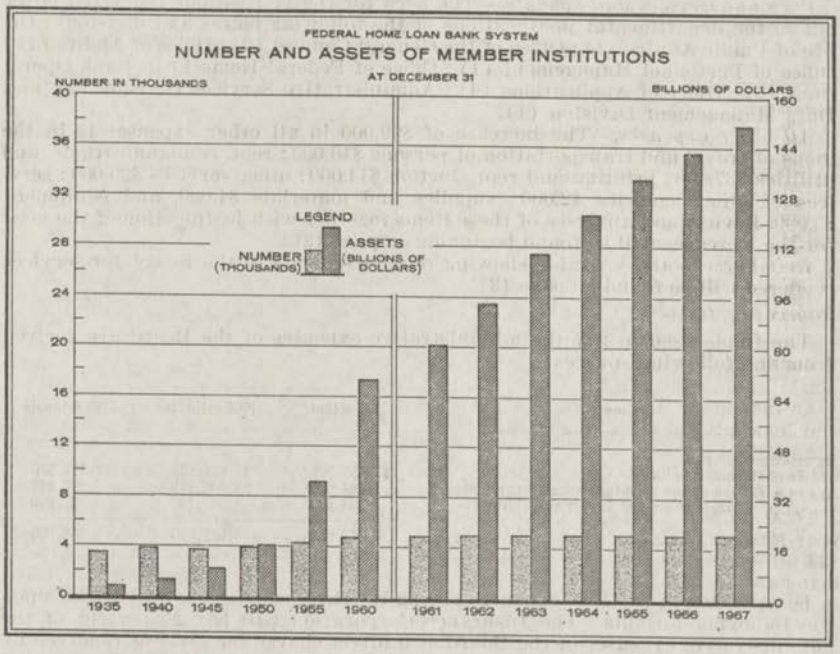
Mr. HORNE. Yes, sir.

Mr. EVINS. Do you know any other industry that had a 68-percent increase.

Mr. HORNE. There is no doubt there are some, but I do not recall one right now.

Mr. EVINS. Place in the record the chart on page 14. This shows you the number of institutions in billions of dollars of assets. It is a very good table.

(The table follows:)



Mr. EVINS. There is more breakdown on the composition of the membership. Federal-chartered is 2,055, the State-chartered and insured is 2,433. State-chartered uninsured is 447 and mutual savings banks, 49. They are only in certain States?

Mr. HORNE. That is right.

Mr. EVINS. Where are they located?

Mr. TREVAS. Principally in the East.

Mr. EVINS. Then you have one insurance company. Tell us about this again.

Mr. DAY. This came about 2 years ago.

Mr. EVINS. Where is it located?

Mr. DAY. It is located in Detroit, Mich.

Mr. EVINS. What's the name of the company?

Mr. DAY. The name of the life insurance company is League Life Insurance Co., Detroit, Mich.

MORTGAGE LOANS

Mr. EVINS. Mortgage loans are shown to be estimated at $18,590 million. That is a lot of loans and it has grown from $2.2 billion in 1946, 23 years.

Place pages 16 and 18 in the record.
(The pages follow:)

Mortgage Loans.—Loans made by member savings and loan associations for the years indicated are shown in the following table:

LOANS MADE BY MEMBER SAVINGS AND LOAN ASSOCIATIONS

[In thousands]

	Savings and Loan members of FHLB system	All insured associations
Fiscal year:		
1946	$2,636,640	$2,214,731
1950	4,202,461	3,708,755
1955	10,297,586	9,820,255
1960	14,193,016	13,916,162
1961	15,161,982	14,893,578
1962	18,937,180	18,646,917
1963	22,239,441	21,939,045
1964	25,217,130	24,894,717
1965	23,788,807	23,473,280
1966	22,343,134	22,023,589
1967	14,605,117	14,394,791
1968 [1]	16,200,000	15,990,000
1969 [1]	18,800,000	18,590,000

[1] Estimate.

As indicated, total dollar volume of mortgage loans made by member savings and loan associations in fiscal year 1967 aggregated $14.6 billion compared with $22.3 billion in fiscal year 1966, a decrease of $7.7 billion, or 34.5 percent. Mortgage loans are expected to reach $16.2 billion in the current fiscal year and $18.8 billion in fiscal year 1969, an estimated increase of $4.2 billion in the 2-year period.

Total dollar volume of mortgage loans made by insured associations in fiscal year 1967, also shown in the above table, aggregated $14.4 billion compared with $22 billion in fiscal year 1966, a decrease of $7.6 billion, or 34.6 percent. These loans are expected to reach $16 billion in the current fiscal year and $18.6 billion in fiscal year 1969, an estimated increase of $4.2 billion in the 2-year period.

TREND IN SAVINGS

Savings.—The trend in savings in member savings and loan associations is shown in the following table:

TREND IN SAVINGS IN MEMBER SAVINGS AND LOAN ASSOCIATIONS

[In billions of dollars]

	New savings	Withdrawals	Net inflow
Fiscal year:			
1947	3.0	1.9	1.1
1950	4.5	3.0	1.5
1955	11.9	7.3	4.6
1960	23.0	16.3	6.7
1961	25.7	17.5	8.2
1962	29.0	20.3	8.7
1963	33.3	22.4	10.9
1964	36.5	26.3	10.2
1965	38.3	29.0	9.3
1966	40.6	34.3	6.3
1967	48.5	40.9	7.6
1968 [1]	50.5	42.5	8.0
1969 [1]	52.8	44.4	8.4

[1] Estimate.

As indicated, new savings accepted by member savings and loan associations during fiscal 1967 aggregated $48.5 billion, an increase over 1966 of $7.9 billion, or 19.5 percent. Withdrawals of savings aggregated $40.9 billion, leaving a net inflow of $7.6 billion.

Net inflow of savings for the current fiscal year is expected to reach $8 billion, and $8.4 billion in fiscal 1969.

Mr. EVINS. You state home purchase loans reflected a decrease of 31.7 percent over 1966, and loans for other purposes a decrease of 36 percent. The overall decrease was 34.9 percent. Is this because of unusually high interest rates or what?

Mr. HORNE. That has something to do, of course, with the rise in interest rates.

Mr. EVINS. Construction is down by the table. Home purchases is slightly up, percentagewise, and other purposes are decreased. This is repairs and alterations and improvements?

Mr. HORNE. That is right.

Mr. EVINS. Savings are shown on page 18. New savings increased from $3 billion to $52.8 billion from 1947 to 1969, about 22 years. Withdrawals for 1969 are estimated to be $44.4 billion for a net inflow of $8.4 billion.

Mr. TREVAS. These are figures at the end of the fiscal year.

Mr. JONAS. This was prepared last fall?

Mr. TREVAS. Yes.

Mr. HORNE. This is on the fiscal year basis, too.

Mr. JONAS. It is a little out of date now.

JUSTIFICATION MATERIAL

Mr. EVINS. Place in the record pages 20, 21, 22, and 23.

(The pages follow:)

PROGRAM ON EXAMINATION AND SUPERVISION OF FEDERAL HOME LOAN BANKS

The examination phase of this activity for fiscal 1969 is carried on by the office of audits (9 positions); the supervision phase is carried on by the Office of Federal Home Loan Bank Operations (20 positions).

The functions and duties of the Board and its staff units in the examination and supervision of the 12 regional banks include:

1. Issuance of regulations covering their operations.
2. Appointment of four public interest members of each regional bank's board of directors (the comptroller's division conducts the elections of the industry members of each board).
3. Review, analysis, and approval of the operating budget of each bank.
4. Examination of each bank at least once annually.
5. Issuance of consolidated obligations.

The 12 Federal Home Loan Banks constitute a Nationwide permanent credit reserve for their member institutions. They provide members with a ready source of funds to meet both normal and unusual home-financing demands and withdrawal requests of their investors. They also serve to equalize the supply of home-mortgage credit by the transfer of funds between banks to areas where unfilled demands exist.

The banks obtain their funds primarily from capital stock subscribed by member institutions, interbank deposits, members' deposits, return on their investments, and borrowings from the public.

Capital stock.—The U.S. Government provided the original capital of the banks by investing, over a period of years, $124,741,000. This investment was retired by the banks, over the years, at a rate in excess of statutory requirements. As of July 2, 1951, the Government's investment had been fully repaid. All of the capital stock of the 12 banks is owned by the member institutions. Capital stock outstanding at June 30, 1967, was $1,391,540,175, an increase of $52,123,250 or 3.9 percent since last year.

Operating highlights.—A comparison of the operating highlights of the banks at June 30, 1965, 1966, and 1967 is afforded in the following table:

[In thousands of dollars]

Description	June 30, 1965	June 30, 1966	June 30, 1967
Assets	7,425,222	8,951,001	8,173,727
Liabilities	6,018,823	7,439,796	6,589,149
Capital	1,406,399	1,511,205	1,584,578
Legal reserve	94,009	108,595	123,926
Net income for year	54,637	72,934	47,726
Investments (par)	1,705,410	1,959,335	3,781,985

As indicated, assets at June 30, 1967, reflected a decrease for the fiscal year of $777.3 million or 8.7 percent; liabilities decreased by $850.7 million or 11.4 percent, thus capital increased by $73.4 million or 4.9 percent. Legal reserve increased in the same period by $15.3 million or 14.1 percent; net income for year decreased by $25.2 million or 34.6 percent, and investments increased by $1,822.7 million or 93 percent.

Loans to members.—The following table shows the trend in loans to member institutions, repayments, and amounts outstanding at June 30 each year for the years indicated:

[In millions of dollars]

Fiscal year	Loans	Repayments	Outstanding June 30
1950	364.3	285.0	442.7
1955	1,058.4	716.6	1,016.9
1956	948.8	792.3	1,173.4
1957	931.9	1,025.9	1,079.4
1958	1,258.6	1,408.5	929.5
1959	1,622.4	1,014.8	1,537.1
1960	2,050.5	1,817.8	1,769.8
1961	2,199.3	2,099.7	1,869.4
1962	3,583.7	2,686.0	2,767.1
1963	4,498.0	3,995.3	3,269.8
1964	6,078.2	4,579.1	4,768.9
1965	5,661.5	4,844.5	5,585.9
1966	4,499.7	3,302.5	6,783.1
1967	2,065.3	4,546.2	4,302.2

Loans or advances to member institutions in fiscal year 1967 aggregated $2.1 billion, a decrease over last year $2.4 billion or 53.3 percent. Repayments aggregated $4.6 billion, an increase over last year of $1.3 billion or 39.4 percent. Loans outstanding at June 30, 1967, aggregated $4.3 billion, a decrease over last year of $2.5 billion or 36.8 percent.

Mr. EVINS. Capital stocks are shown on page 22. The U.S. Government provided the original capital, as was testified to earlier, of $124,741,000 over a period of years. This investment was retired by the banks and as of July 2, 1951, the Government's investment had been fully repaid. All of the capital stock of the 12 banks is owned by the member institutions.

LOANS TO MEMBERS

Loans or advances to member institutions aggregated $2.1 billion, a decrease of $2.4 billion over last year. They required less funding.

Mr. TREVAS. That is right.

CONSOLIDATED OBLIGATIONS

Mr. EVINS. We will place in the record pages 24 and 25.

(The pages follow:)

CONSOLIDATED FEDERAL HOME LOAN BANK OBLIGATIONS

Consolidated obligations—Pursuant to law, all issuances of consolidated obligations by the Board become the joint and several obligations of all the Banks. The following table shows the number of offerings made and the amounts of such offerings for the years indicated:

Fiscal year	Number of offerings	Amount (millions)
1950	5	$333
1955	6	554
1956	9	1,530
1957	10	1,481
1958	6	994
1959	8	1,073
1960	9	1,982
1961	8	1,214
1962	8	2,392
1963	10	2,928
1964	13	4,522
1965	13	4,357
1966	15	6,533
1967	7	3,850

As indicated, the Federal Home Loan Bank Board made seven offerings of consolidated Federal Home Loan Bank obligations during fiscal 1967 aggregating $3.9 billion. Each of these offerings was for a term of more than 1 year. Interest ranged from 5.375 percent to 6.25 percent and compares with the 1966 range of 4.30 percent to 5.75 percent. The total offerings represented a decrease from fiscal 1966 of $2.7 billion, or 41 percent. The proceeds from these offerings were used to meet the loan demands of the membership.

The following table shows cumulative totals of consolidated obligations issued, retired, and outstanding at June 30, 1965, 1966, and 1967:

[In thousands]

Description	June 30, 1965	June 30, 1966	June 30, 1967
Issued	$27,591,250	$34,124,250	$37,974,250
Retired	22,834,250	27,815,250	33,389,250
Outstanding	4,757,000	6,309,000	4,585,000

The balance outstanding at June 30, 1967, reflects a decrease of $1,724 million or 27.3 percent when compared with June 30, 1966.

Financial condition.—Beginning on the following page, the following three consolidated financial statements of the banks, as of June 30, 1967, appear in the order listed below:

1. Comparative condensed consolidated statement of condition.
2. Comparative consolidated statement of income and expense.
3. Condensed income statement and disposition of net income.

Personnel requirements.—The estimate of 29 positions for this activity reflects an increase of five positions over the current fiscal year. The new positions for the Office of Federal Home Loan Bank operations are: One GS–13 financial analyst; one GS–12 and one GS–11 systems accountants, and two GS–5 clerks. A more detailed outline of the duties involved in this joint activity and justification of the need for the new positions requested will be found beginning on pages 69 and 82.

On a man-year basis there are 26.3 man-years in 1969 and 22.9 in 1968, an increase in 1969 of 3.4 man-years. Of the increase, 0.4 man-year represents delay in filling positions in the current fiscal year; the remaining 3.0 man-years represent the new positions requested.

CONSOLIDATED STATEMENTS

Mr. EVINS. And here is a comparative condensed statement on page 26 showing as of June 1967 total assets of the institutions were $8.173 billion, last year it was $8.951 billion, a decrease of $777,274 million. They had a right sharp decline in the assets in the last year.

What caused this decline?

Mr. HORNE. Repayment of advances by members to the banks is the main reason for that. That fluctuates rapidly depending on how heavily the members borrow from the central banks.

Mr. EVINS. Place in the record pages 26 through 33.

PROGRAM ON CHARTERING FEDERAL AND INSURING SAVINGS AND LOAN ASSOCIATIONS

This joint activity is carried on by the Office of Applications.

Chartering Federal Savings and Loan Associations.—Section 5(a) of the Home Owners' Loan Act of 1933 authorizes the Board to provide for the organization, incorporation, examination, operation, and regulation of associations to be known as Federal savings and loan associations and to issue charters therefor.

These associations provide thrift and home-mortgage lending facilities in communities where such facilities are unavailable or inadequate. They are established by the granting of charters to newly created associations anywhere in the United States or its territories. State-chartered associations may also apply and, if approved, convert to a Federal charter.

The savings or share account of each saver in Federal savings and loan associations is insured up to $15,000 by the Federal Savings and Loan Insurance Corporation. The associations are subject to periodic examination by the Federal Home Loan Bank Board and are members of the Federal home loan bank system.

The following table shows membership, aggregate assets, and reserves and undivided profits of Federal associations for the years indicated:

	Membership	Assets in billions	Reserves and undivided profits
Fiscal year end—			
1950	1,515	$7.9	$513
1955	1,656	18.5	1,184
1956	1,709	21.6	1,419
1957	1,757	24.4	1,640
1958	1,787	27.6	1,887
1959	1,828	32.2	2,197
1960	1,856	36.4	2,493
1961	1,885	41.0	2,830
1962	1,922	46.6	3,195
1963	1,957	52.9	3,580
1964	1,969	58.9	3,945
1965	1,993	64.3	4,342
1966	2,031	68.6	4,744
1967	2,055	72.1	4,971

As shown, a steadily increasing upward trend in membership and assets is reflected. Assets have shown a rapid growth over the years. In the last 5 years they have increased by 54.7 percent from $46.6 billion at June 30, 1962, to $72.1 billion at June 30, 1967. Similarly, reserves and undivided profits for the same period have kept pace with this growth, increasing from $3.2 to $5 billion, an increase of $1.8 billion, or 56.2 percent.

The chart shown on the following page reflects the trend in assets of all State-chartered and Federal savings and loan associations at December 31 of the years indicated. Although the estimated number of State-chartered associations at December 31, 1967 (4,059) exceeded Federal associations (2,058) by 2,001, or 97.2 percent, the estimated assets of Federals ($75 billion) exceeded those of State-chartered associations ($68.1 billion) by $6.9 billion, or 10.1 percent.

This section of the activity includes the analyses of applications for Federal charter, branches, conversion, and bank system membership and recommendations thereon to the Board. The related workload increases in direct proportion to the upward trend in the business activity of insured institutions. The Federal-Charter Facilities and Operations Division processed 17 applications for new charters, 25 applications for conversion from State to Federal charter, and 116 applications for branches, or a total of 158 applications in fiscal 1967. It expects to process approximately 233 applications in the current fiscal year and 263 in 1962.

Insuring savings and loan associations.—Insurance protection is obligatory for all federally chartered associations. State-chartered institutions of the savings and loan type which apply for insurance and meet the Corporation's requirements are also insured.

In the underwriting process, the State-Chartered Facilities and Operations Division analyzes all factors bearing upon the financial condition and other aspects of applicant associations. Included among these are: Capital structure, assets, liabilities, reserve position, operating income and expense ratios, liquidity position, etc. Other considerations are character of management and directorate, and soundness of all policies and practices pursued in appraising and lending. All factors are evaluated in the light of local economic conditions and the trends and prospects of the general economy.

Public demand for protection of its savings makes it advisable for uninsured savings and loan associations throughout the country to seek insurance on the accounts of their savers or investors. The following table shows the number of insured institutions at June 30 of the years indicated and the net increase each year:

	Number of insured associations	Net increase
At June 30—		
1947	2,529	
1950	2,799	108
1955	3,472	102
1960	4,044	108
1961	4,160	116
1962	4,267	107
1963	4,386	119
1964	4,443	57
1965	4,483	40
1966	4,514	31
1967	4,488	−26
1968 [1]	4,520	32
1969 [1]	4,555	35

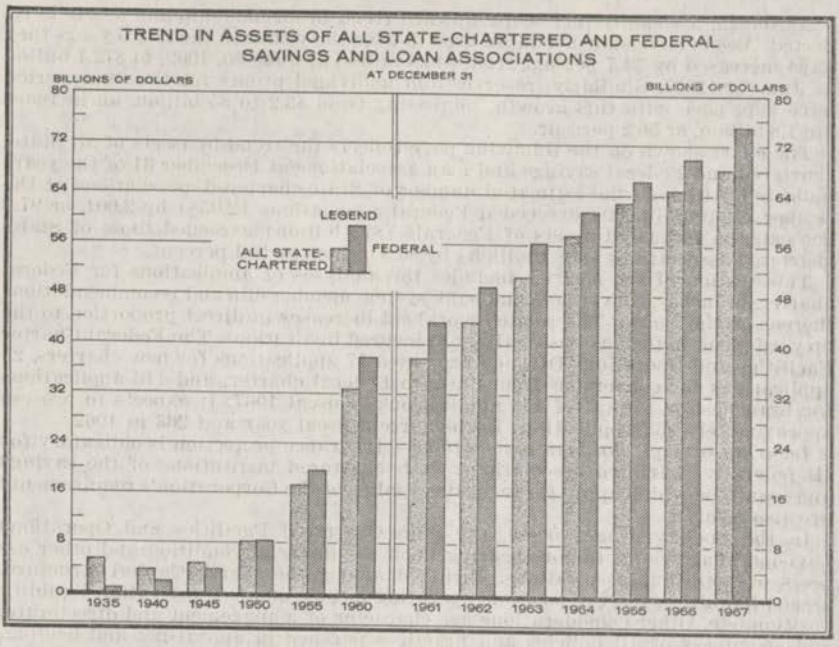
[1] Estimate.

As indicated, the 1967 figure is expected to increase by 32 associations in fiscal 1968 and by 35 in 1969, bringing the total at June 30, 1969, to 4,555.

There were 40 insurance applications processed in fiscal 1967. It is expected that 40 applications will be processed in the current fiscal year and 40 in fiscal 1969.

This section of the activity also processes a large variety of other types of applications relating to regulatory requirements. These types accounted for 2,565 case studies last year, and represented 95.3 percent of the 2,692 case studies made during the year. It is expected that case studies will total 2,812 in the current year and 3,003 in fiscal 1969.

The term "case study" refers to the analysis and evaluation of voluminous documents, such as articles of incorporation, constitution and bylaws, security



forms, passbooks formerly and currently issued to evidence savers' and investors' holdings, State supervisory examination reports, Federal eligibility examination reports, audit reports, annual financial reports, published financial statements, correspondence covering criticisms and actions by the State supervisory authorities, form of mortgage notes and related instruments, maps disclosing extent of lending territory, and sales plans and practices.

Personnel requirements.—The estimate of 49 positions for both phases of this activity reflects an increase of four positions over the current fiscal year. The new positions are two GS–12 financial analysts and two GS–5 clerk-stenographers. A more detailed outline of the duties involved in this joint activity and justification of the need for the new positions requested will be found beginning on page 90.

On a man-year basis there are 47.2 man-years in 1969 and 44.6 in 1968, an increase in 1969 of 2.6 man-years. Of the increase, 0.2 man-year represents delay in filling positions in the current fiscal year; the remaining 2.4 man-years represent the 4 new positions requested.

Mr. EVINS. You state that the public demand for protection of its savings makes it advisable for uninsured savings and loan associations throughout the country to seek insurance. The table on page 32 shows the number of insured institutions at June 30 of the years indicated and the net increase each year, 4,555 institutions are insured. There is a net increase of 35.

Mr. HORNE. It might interest all of you, Mr. Chairman, to know occasionally there is a failure of an uninsured association. There was one recently in one of our Midwestern cities. Quite a few people evidently thought it was insured and they wrote their Congressmen and their Senators and many wrote directly to the Board asking that the insurance corporation make good the money they had on savings in the institution.

Mr. EVINS. And they were not insured?

Mr. HORNE. No, sir.

Mr. EVINS. We will place in the record pages 34 and 35.
(The pages follow:)

PROGRAM ON EXECUTIVE DIRECTION AND STAFF SERVICES

The following offices and positions are included in this joint activity for fiscal 1969: Offices of the Chairman and board members (15); Office of the executive assistant to the Chairman (2); Office of International Home Finance (5); Office of Research and Home Finance (17); Office of the Secretary, immediate (18); Office of the General Counsel (54); Office of Personnel Management (14); Office of Public Affairs (8); and the Organization and Methods Division (3).

Executive direction.—The Board establishes the general policies for all operations under its control. It supervises the operations of the 12 regional banks and the examination of each bank at least annually.

It conducts hearings on applications for and issue charters for Federal savings and loan associations and prescribes regulations relating to their lending and other activities.

It is responsible for examination and supervision of all member institutions insured by the Federal Savings and Loan Insurance Corporation. It is the final authority for the administration of the insurance system, including approval or disapproval of applications for insurance and of requests from insured institutions to permit mergers, purchase of assets, consolidations, etc. It makes final determination of the course of action to be taken by the Insurance Corporation to prevent default in an insured institution as well as the method of settlement when an insured institution is declared in default.

Dissolution of the Home Owners' Loan Corporation, which was also a responsibility of the Board, was completed February 3, 1954. Correspondence and claims relating to the former Corporation's operations are now handled by the Board staff.

Staff services.—In the interest of economy, proper use of manpower and efficiency of operations, staff units of the Board, in addition to rendering services to the Board, also render services to the Insurance Corporation and to the Office of Examinations and Supervision. Such services are furnished by the Office of the Secretary, Office of the General Counsel, Office of Personnel Management, Office of Public Affairs, and the Organization and Methods Division.

Other common services furnished by the Board's staff are fiscal and housekeeping services; these are treated and discussed in this submission as a separate activity under the caption "Administrative Services."

The workload of most phases of this joint activity has increased in direct proportion to the growth and activity in the savings and loan business coupled with the development of conditions resulting from competitive factors in the savings industry and the mortgage market. The continued increase in the growth and activity of the savings and loan business has increased the workload of this joint activity in the following offices to the extent that additional personnel is requested in fiscal 1969 to keep abreast of the workload.

Office of the General Counsel: The estimate of 54 positions reflects an increase of two positions over the current fiscal year. The new positions requested are a GS–15 attorney-adviser and a GS–5 clerk-stenographer. Outline of the duties of the Office and justification of the need for the new positions will be found beginning on page 59.

Office of Personnel Management: The estimate of 14 positions reflects an increase of one position over the current fiscal year. The position is a GS–9 personnel technician. Outline of the duties of the Office of Personnel Management and justification of the need for the new position will be found beginning on page 78.

Office of Public Affairs: The estimate of eight positions reflects an increase of one position over the current fiscal year. The position is a GS–5 clerk-stenographer. Outline of the duties of the Office of Public Affairs and justification of the need for the new position will be found beginning on page 55.

Personnel requirements.—The estimate of personnel requirements for both phases of this activity provides for 136 position, an increase of four positions over the current fiscal year.

On a man-year basis, there are 131.3 man-years in 1969 and 120.4 in 1968, an increase in 1969 of 10.9 man-years. Of the increase, 8.5 man-years represent delay in filling positions in the current fiscal year; the remaining 2.4 man-years represent the new positions requested.

Mr. WYMAN. Did the depositors in that bank have notice they had these deposits in a bank that was uninsured, or were they laboring at the time they made their deposits under the mistaken conception that it was insured?

Mr. HORNE. Frankly, I do not know, that association not being a Federal-chartered association. If it had been it would be automatically insured, but being a State-chartered and not federally insured, we had nothing whatsoever to do with it. I rather doubt whether the people managing it had informed each saver it was not insured, but it would have been a matter completely in the hands of the State authorities as to whether or not such information was given out.

It may interest you to know further that some of the savers did take the case to court. I do not know all of the ramifications except the Supreme Court, by refusing to overrule the appeals court, in effect gives the uninsured savers a claim on the people who owned and operated that association.

Mr. WYMAN. As individuals?

Mr. HORNE. As individuals, yes, sir.

And that also has some ramifications so far as we at the Federal level are concerned, for example, or other State-chartered associations; that is, it gets into the question of what kind of information each saver ought to have about the soundness and operation of the association.

Mr. WYMAN. But in the last analysis, the question of whether the saver wishes to place his money on deposit in an institution that is insured or not insured is up to him, is it not?

Mr. HORNE. That is right; yes, sir.

SPECIAL STUDIES OF SAVINGS AND LOAN INDUSTRY

Mr. EVINS. We discussed earlier the special study being made by the Board. We will place in the record page 38.

(The page follows:)

PROGRAM ON SPECIAL STUDIES OF THE SAVINGS AND LOAN INDUSTRY

The Board is authorized by Public Law 89-426 (80 Stat. 141, 143), approved May 13, 1966, to conduct special studies of the savings and loan industry to be completed by December 31, 1968. A total of $500,000 was authorized for this purpose.

Pursuant to this authorization, the Board established an Advisory Panel and negotiated a contract in July 1966 with the University of Pennsylvania, Philadelphia, Pa., to conduct a study of the savings and loan industry. The purpose of the study is to evaluate the role of the industry as a financial intermediary and its position in the money and capital markets, particularly in the light of recent developments, and to determine methods for streamlining and improving the industry's operations, the functions of the Federal Home Loan Bank Board, and the operations of the Federal Home Loan Bank System in its role as a credit reservoir for the industry.

The Advisory Panel was appointed as liaison with the Director of Research, Prof. Irwin Friend, and approved the outline of the study submitted by the Director of Research. The Director of Research then assembled a professional staff of 21 persons, including six at the University of Pennsylvania and the remainder at other universities. The full staff was not assembled until April 1967. Nevertheless, substantial preliminary work was performed on the study between August

and April. Basic data were supplied from Board files to Professor Friend during the first half of 1967 and these data were processed during the summer of 1967 so as to put them in a form which could be used by the various scholars.

On November 3, 1967, the Director of Research, pursuant to the contract, presented his third progress report. That report shows that some of the authors have developed extensive preliminary working papers and that all others, except two, are in the process of performing research on their topics. The two authors who have not performed any work are not obligated to commence their research until mid-1968.

So far, not enough work has been performed by any author to permit the statement of any conclusions or results.

During fiscal year 1967, the Board expended $88,000 of the total authorization of $500,000; $187,000 is estimated to be expended in the current fiscal year and $225,000 in fiscal year 1969.

OFFICE OF RESEARCH AND HOME FINANCE

Mr. EVINS. We hope this study will come up with some good recommendations and the Board will implement them.

You state the Office of Research is responsible for economic analysis. You have 17 jobs. What progress are you making?

Mr. HORNE. The information we get from that office is almost, I would say, necessary for the intelligent operation of the Board.

Mr. Schwartz did not return with us. He is the Director of that.

For years the Federal Home Loan Bank Board, in contrast to the Federal Reserve Board, had no research office at all. In my opinion it is very necessary. For example, we go to it for information as to how many associations do this or how many do that or how do we compare with commercial banks in several areas.

I might say that the amount of money we spend as compared to our size is infinitestimal, I mean so much smaller than what the Federal Reserve Board spends.

Mr. EVINS. It is a question of whether you need 17 jobs. You have a special study that is being conducted.

Mr. HORNE. This is a day-by-day, week-by-week, month-by-month source of information, Mr. Chairman. It may be that this office will also be very helpful to us once we know what the special study recommendations are going to be toward implementing their recommendations.

Mr. EVINS. Place in the record page 51.

(The page follows:)

OFFICE OF RESEARCH AND HOME FINANCE

	1967 actual	1968 estimate	1969 estimate
Positions	17	17	17
Man-years	10.1	14.6	16.6
Net salary	$125,874	$182,490	$213,476

FUNCTIONS AND RESPONSIBILITIES

This Office is responsible for economic analysis in areas that are vital to the development and execution of Board policy. These functions can be viewed as falling into three categories:

1. The development of an adequate research program to supply the Board with required economic intelligence; this includes providing guidance to the Data Management Division as to data requirements.

2. The development of policy papers based on research to cover such matters as advances policy, reserve regulations, lending regulations, entry of new associations, merger policies; evaluation of economic aspects of legislation; and other policy programs requiring an economic evaluation of the thrift industry, mortgage market, and housing.

3. Contacts with other agencies, including the Treasury, the Council of Economic Advisers, the Federal Reserve System, the Bureau of the Budget, and the Department of Housing and Urban Development; coordination of systemwide research projects; contacts with universities and other public and private organizations.

INVESTMENT BY U.S. SAVINGS AND LOAN ASSOCIATIONS IN LOANS ABROAD

Mr. JONAS. If you will return to the Office of International Home Finance, I would like to discuss that with you.

Mr. HORNE. All right, sir.

Mr. JONAS. As I understand the law, the U.S. savings and loan associations are permitted to invest 1 percent of their assets in loans abroad.

Mr. HORNE. If insured by the Agency of International Development; yes, sir.

Mr. JONAS. That is restricted now to the Western Hemisphere?

Mr. HORNE. Yes, sir.

Mr. JONAS. But it is proposed to expand that lending and guaranteeing authority to countries outside this hemisphere?

Mr. HORNE. Yes, sir.

Mr. JONAS. Have any of our associations loaned any of their money out under this arrangement so far?

Mr. HORNE. I do not know the full details of that.

Mr. RAND. There have been some commitments made, but no money has gone forth yet.

Mr. JONAS. To what extent?

Mr. RAND. I do not know. It is a very insignificant amount at the present time. It is just really getting underway.

Mr. JONAS. Are these associations anxious to do this or are they being pressured to do it?

Mr. HORNE. They are not being pressured, Mr. Congressman. Some of them are anxious to. As a matter of fact, many of the associations—and I commend them for it—have taken the lead in helping the Latin American countries to establish thrift systems.

Mr. JONAS. I do not know whether an association that has not got enough money to lend at home has any business investing 1 percent of its assets in a saving and loan institution outside the United States.

Mr. HORNE. I think the fact they have had a shortage of money since the program was made effective by Congress has been one reason there has been so little obligated or committed by the associations.

POOLING ARRANGEMENT FOR LOANS

Mr. JONAS. It is another foreign aid program. If it is expanded outside the Western Hemisphere, you will add to the balance-of-payment problem.

I notice in the justification you are planning a pooling arrangement. Will you explain what you propose there, to have some Federal home loan bank designated as agent for channeling pool investment funds?

Mr. HORNE. What is meant by this, Congressman, is the Federal Home Loan Bank of New York, we will say, acting for its member

institutions, could be the vehicle through which the administrative handling and prorating could be accomplished.

Mr. JONAS. I understand that. It is to solicit pledges from U.S. associations, accept and invest funds in short-term securities.

Mr. HORNE. I think what would happen there is that if Congress passes this particular piece of legislation, which I think is now resting in the Senate if I remember correctly—what would happen rather than solicitation, the members really would be apprised of this authority, which we would have to do under our rules and regulations anyhow, that is, keep the members informed.

I can tell you there would be no pressure so far as the Board is concerned put upon any association that they participate in this.

Mr. JONAS. I would assume if any pressure, it would come from AID or the State Department.

Mr. HORNE. They would not have any authority over forcing them.

Mr. JONAS. They would have authority to go out under this law and try to persuade them to participate. There will be no pressure put on any institution to participate in the program, it will be strictly voluntary?

Mr. HORNE. Yes, sir.

Mr. JONAS. How long will the loans run?

Mr. HORNE. I assume they could run as long as the AID guarantee provided.

Mr. RAND. At the present time, the loans in Latin America are in the area of 10 or 15 years as I understand it, and it is not traditional to go into a long-term loan. So I would assume the first commitments here would be on a shorter basis.

CONTROL OF INTEREST RATES

Mr. JONAS. Who will control the rate of interest?

Mr. TREVAS. That would depend on the kind of guarantee AID gives.

Mr. JONAS. My information is that it is considerably higher than the rates in the United States.

Mr. TREVAS. It is. Money is short there.

Mr. HORNE. What would happen with an AID guarantee, Congressman, unless they proceed differently from what it has done this far, AID would say to the association making the loan—and they would also, along with us, pass on where the loans are going to be made. AID would give the guarantee and prescribe the interest paid to the association making the loan.

Mr. JONAS. It would be quite a temptation to association X to take one of these Government guarantees and lend money to some foreign association at 8 or 10 percent interest.

Mr. HORNE. This might be some inducement. But it is limited under the law that Congress passed to 1 percent of the savings of the particular association involved. So it could go up to 1 percent.

Mr. EVINS. You are providing for pooling by administrative action, are you not?

Mr. HORNE. We could do this, yes.

Mr. JONAS. And sales of participation certificates?

Mr. HORNE. Let me say one thing if I may: The purpose of this program is to—I realize Government is involved through AID guaran-

tee, but the main purpose of the program and what the savings and loan industry itself has been doing in recent years in the Latin American countries is to develop a private enterprise system which has worked so successfully here at home and to encourage the people there to lift themselves up by practicing thrift and being able to get low-cost housing.

(Off the record.)

Mr. HORNE. Again the main emphasis I would like to make is that its origin is from the industry itself.

Mr. EVINS. With a little encouragement by AID which increases the outflow of the dollars. We just caution the Board to see what they can do about it.

Mr. JONAS. You do not have the insurance program operating outside the United States, do you?

Mr. HORNE. No, sir. You mean of the savings accounts program?

Mr. JONAS. Yes.

Mr. HORNE. No, sir.

Mr. WYMAN. Is there any limitation on AID as to the rate of interest?

Mr. HORNE. I think that Congress imposes some limitation on interest, but I know Congress does impose a limitation on AID's guarantee power.

Mr. WYMAN. A limitation on the guarantee power, however, having to do with the ceiling and amount?

Mr. HORNE. That is my understanding.

EFFECT OF INFLATION ON LOAN PROGRAM

Mr. WYMAN. So if a currency of a particular foreign nation should be at all shaky, the guarantee would not only take into account the interest rate, whatever was needed, but it would underwrite the currency situation in terms of convertibility figured out at the time the guarantee was entered into. Would it not have to be that way?

Mr. TREVAS. A lot of these AID agreements have to be repaid in American currency.

Mr. HORNE. The rate of interest that would be allowed by AID, and under your description might also be guaranteed by AID, would be in terms of its earnings in American dollars.

Mr. WYMAN. But that is not an escalation clause. If there is inflation in that country, which sometimes happens in these countries, the repayment would be computed as of the time the agreement with the local bank was entered into; would it not?

Mr. RAND. I would like to answer that.

This is a very minor part of the program so none of us on the Board are completely familiar with it, but I have been inquiring in the last few days about this program. Some of the countries in Latin America have built-in escalation clauses. And the rate goes up with the cost of living or some other index they have.

As a matter of fact, I think most of the Latin American countries have similar escalation clauses whereas in this country we have not developed that to much of an extent. They have so much inflation in that area it is almost necessary.

Mr. HORNE. They have in Chile.

Mr. WYMAN. That is what I mean. That is what I had reference to. If this is the case and if you have all of these guarantees, you say it is a very small part of your program, but with 1 percent of the total value here, we are talking about billions of dollars potential.

Mr. HORNE. About a billion dollars potentially.

Mr. RAND. We might add that so far nothing has been spent in this program.

Mr. WYMAN. I understand.

Mr. RAND. We will get into that area more thoroughly in time, I suppose.

Mr. JONAS. Is not this legislation up for amendment now?

Mr. HORNE. It is up on the Senate side. The legislation providing AID guarantee was passed, I believe, 2 years ago, but at the time it was passed, and I do not recall these figures, I think a little over $200 million was made available to AID. Congress controls, of course, how many dollars AID would have at its disposal to provide a guarantee.

PROCEDURE FOR PROCESSING LOANS

Mr. JONAS. Can you tell us for the record how this will work? The X association or the bank pools funds from a number of associations and they want to make an investment. Say a million dollars. And they get AID's guarantee.

Mr. HORNE. Yes, sir.

Mr. JONAS. They have to send a million dollars down to X country and they will lend it out to their customers and they will repay those loans in the local currency of that country. Where will the association in X country get the dollars to repay the loan?

Mr. HORNE. This is where AID's guarantee works.

Mr. JONAS. I am trying to keep AID from having to pay off on this guarantee. If they do not get the dollars and cannot repay us in dollars, it is another giveaway program.

Mr. HORNE. If it works it is supposed to be self-supporting. But if it has all the safeguards we envisage, we think it would be, but FHA is involved in part of this to the extent of reviewing the loan, and AID is involved; and somebody sitting in Santiago, Chile, for example, could not willy-nilly apply for the loan and get the loan.

The application is processed, the application is looked at by the institution. It is reviewed by the institution making the loan, by AID and by FHA underwriters reporting to AID. So precautions are taken in those countries similar to the ones we take here in making the loan. AID would be riding herd on the safety and the soundness of the investment.

(Off the record.)

Mr. JONAS. This is a potential tremendous loss right here. I do not see how the borrowers are going to generate the dollars to pay back these loans.

Mr. EVINS. The Federal Home Loan Bank Board did not envision this. They got through the back door with AID.

Mr. HORNE. This is legislation. I have forgotten its origin, but I believe it was enacted about 2 years ago.

OFFICE OF PUBLIC AFFAIRS

Mr. EVINS. We will take a look at the Office of Public Affairs. You want eight people. The Board uses this Office to carry Board actions to the public essentially through public information media—the press, magazines—professional, trade, and lay—radio, television, visual media. You have a lot of information, Mr. Chairman.

Mr. HORNE. Yes, sir. We could double the staff and still hardly meet all of the requests, but of course I am not asking for doubling of the staff.

Mr. EVINS. You state here you have a 32-page monthly magazine.

Mr. TREVAS. We are going to get away from the eight-page digest to the 32-page magazine.

Mr. HORNE. This is something many people in industry have wanted for some time, but we simply have not been able to provide it.

Mr. EVINS. Was it not Justice Brandeis who said that big business becomes inefficient? You have been always an efficient body. You are getting big now.

OFFICE OF GENERAL COUNSEL

Next is the General Counsel's Office.

We will place in the record 59 through 68.

(The pages follow:)

OFFICE OF GENERAL COUNSEL

	1967 actual	1968 estimate	1969 estimate
Positions	46	52	54
Man-years	36.9	46.4	51.8
Net salary	$437,120	$551,585	$657,690

Functions and responsibilities

This Office renders legal services to and is responsible for the conduct and coordination of all legal matters, including litigation in the following areas:

Federal home loan banks.—The Office is responsible for passing on all legal questions relating to operations of the banks under the Federal Home Loan Bank Act and the regulations promulgated thereunder. It prepares suggested legislation, prepares or participates in the preparation of new regulations and amendments to existing regulations, reviews the opinions and rulings of counsel for the banks which require action by the Board and generally advises the Board on all legal questions concerning the bank system and bank operations. In addition, the Office renders legal advice to the Board's Office of Federal Home Loan Bank Operations and to the fiscal agent of the banks in connection with the issuance of consolidated obligations.

Federal savings and loan associations.—The Office provides legal services to the Board in connection with mergers or other corporate reorganizations of such associations and renders legal opinions on petitions for purchase or sale of assets, mergers, dissolutions, reorganizations, or conversion to State-chartered associations. Legal services in connection with mergers have, as a result of recent Supreme Court decisions, been expanded to include legal antitrust evaluations. The General Counsel advises the Board on all legal matters relating to the appointment of supervisory representatives in charge, conservators or receivers for such associations. Staff attorneys of the Office act as counsel for the Board in administrative hearings in connection with the appointment of conservators or receivers and in court review of decisions of the Board in such matters.

In addition, the Office renders opinions to the Board, its staff sections, and the savings and loan industry, on a wide range of questions concerning the operations of Federal associations, including the creation and operation of agencies and branch offices, powers of directors, distribution of earnings, donations and contri-

butions, loans and investments, powers, liquidity requirements, proxies and voting, issuance of securities and taxation.

Staff attorneys act as hearing officers in agency hearings with respect to applications filed for Federal charter and applications for branch offices of existing Federal associations. In such hearings, staff attorneys also act as counsel for the agency, when required.

Federal Savings and Loan Insurance Corporation.—The Office acts as legal adviser to the Federal Savings and Loan Insurance Corporation and furnishes hearing officers, and counsel when necessary, for the Corporation in hearings held upon applications for insurance of accounts.

The Office renders legal opinions on matters arising out of the examination and supervision of insured institutions, including questions of lending limitations, sales plans and practices, advertising, reserve requirements, and lending territory. In addition, it furnishes legal services in connection with the liquidation of insured institutions both at the preparatory stage and during actual liquidation.

The Office prepares suggested legislation; prepares new regulations or amendments to existing regulation; reviews and analyzes comments on proposed and existing regulations; defends and prosecutes litigation; supervises the activities of fee attorneys and generally advises the Board on all legal questions concerning the operation of the Corporation.

Every year there are changes in the laws of a number of States which affect the operations of savings and loan associations, both State and federally chartered. These changes substantially affect the workload of the Office of the General Counsel.

Workload and personnel requirements

Legislation Division.—This Division is responsible for the drafting of all legislation submitted by the Federal Home Loan Bank Board to the Bureau of the Budget and to Congress and performs all legal work in connection with the legislative activities of the Board.

The Division develops justifications for legislation proposed by the Board: reports to the Bureau of the Budget and to Congress on proposed or pending legislation as well as preparation or legal review of committees; and analyzes pending or proposed legislation which would affect Board operations or is otherwise of concern to the Board.

So far as concerns legislative proposals of the Board, the workload of the Legislation Division at the present time is centered around proposals designed to (1) strengthen the statutory provisions on savings and loan holding companies by the amendment of section 408 of the National Housing Act, as amended (S. 1542 and H.R. 8696, 90th Cong.), (2) provide for the chartering and regulation by the Board of Federal savings banks (S. 1919 and H.R. 10745, 90th Cong.), and (3) provide for a system of certification of real property appraisers by suggested State legislation (submitted to the Council of State Governments for consideration by the State legislatures in their 1968 session).

Pending proposals not sponsored by the Board but as to which its views have been requested include S. 1492 and S. 1493 (relating to the establishment of a secondary market for conventional mortgages), S. 5 (the so-called truth-in-lending legislation), S. 1955 (which if enacted would provide for the chartering and regulation by the Board of Federal savings associations), and numerous other proposals.

The workload of the Division during fiscal year 1968 is at a high level because of these proposals and pending bills and it is estimated that it will remain at a high level during fiscal 1969.

Despite this high level of activity, the Legislation Division should be able to meet its responsibilities in fiscal year 1969 without additional staffing.

Opinions and Regulations Division.—Chairman's Order No. 170 dated May 19, 1967, abolished the Office of Regulations and its functions were transferred to the Office of the General Counsel. Within the Offices of the General Counsel the functions of the former Office of Regulations are being conducted by the Opinions and Regulations Division. This Division prepares drafts of proposed regulations and proposed amendments to existing regulations as requested by the Board or by the Chairman and other members and officials of the Board, reviews all such proposals for legal sufficiency and performs all legal services in connection with the preparation and promulgation of regulations or amendments thereof.

These regulations consist primarily of implementations of, or exercise of regulatory authority under, the three basic statutory provisions relating to the

Board's operations; namely, the Federal Home Loan Bank Act, the Home Owners' Loan Act of 1933, and title IV of the National Housing Act.

Fields covered by these regulations and amendments include the election and appointment of Bank directors and the organization and operations of the Banks including the handling of securities, investments, advances, and required liquidity; the chartering, operation, and regulation of Federal savings and loan associations; the conservatorship, receivership, and liquidation of such associations; the admission of applicants to Bank membership and to insurance by the Federal Savings and Loan Insurance Corporation, and the termination of such membership or such insurance; the advertising, sales plans and practices, lending activities and reserves of insured institutions, and the practice and procedure in proceedings before the Board, including hearings.

New regulations and amendments to existing regulations have not only greatly increased in number but have, of necessity, been broadened in scope and effect and become more complex. Changes in basic legislation have required many of the regulatory changes; however, most have been required as a result of adjustments in the national economy, the growth of the savings and loan industry and the increased complexity of savings and loan operations. In addition, the Board has found it necessary to regulate areas of operations which heretofore have not required regulatory restriction. These factors have required substantial adjustments in the Office of the General Counsel in order to meet the increased workload in the field of regulation.

During the fiscal year 1967 regulatory activity remained at a very high level. Fifty-six new regulations and amendments to existing regulations were adopted by the Board. During the present fiscal year, additional regulatory amendments will be required to continue to meet the required changes in operational programs.

There is every indication that the regulatory workload of the Office will continue to expand through fiscal year 1969 as the magnitude, momentum and complexities of the savings and loan industry increases. The new areas into which the industry is expanding, coupled with the stresses brought about by increasing competition among financial institutions, will doubtless require the adoption of new regulations or the amendment of existing regulations.

Changes in basic legislation governing the investment powers of Federal savings and loan associations and changes in the necessary implementing regulations have, in recent years, resulted in a substantial increase in the variety and complexity of the problems presented to the Division for opinion. Federal associations, originally created primarily to provide mortgage financing for homes, have been authorized to broaden their operations to permit investment in service corporations and in real estate located within urban renewal areas and to broaden their lending operations to include such specialized fields as loans for a college or university education, loans to finance the acquisition and development of land, loans to provide housing facilities for the aging, and loans to business development credit corporations. Such additional investment authority, coupled with extensions of lending authority geographically, both as to whole and participation loans, have increased the complexity of the operations of Federal associations and resulted in the submission of more complex operational plans and programs to this Office for legal review and analysis.

Like Federal savings and loan associations, State-chartered savings and loan associations insured by the Corporation have had their investment and lending authority broadened and the geographic limitations governing their operations extended. Utilization by the institutions of such new tools has brought them into more highly competitive areas, inevitably producing a greater number and greater complexity of supervisory and legal problems directly affecting the risk of the Corporation.

The questions on which opinions are sought usually result from a direct inquiry from a savings and loan institution or examination of an institution subject to the Board's jurisdiction. In many instances the legality of a transaction involving many millions of dollars is brought under scrutiny and the inability of the Division to promptly determine the legality of such transactions can have a deleterious effect on the institution itself or, through the passage of time, act to compromise the supervisory position of the Board.

Because of the foregoing, it is anticipated that the workload of the Opinions and Regulations Division will continue at its present high level during this fiscal year and in fiscal year 1969, both in the preparation of regulations and in the volume of requested legal opinions. However, it is believed that the Divi-

sion can carry out its duties and meet its responsibilities to the Board without the assignment of additional personnel.

Litigation Division.—This Division is responsible for litigation involving the Board and the Federal Savings and Loan Insurance Corporation.

During fiscal year 1967, the Division opened four cases under section 407(b) of the National Housing Act, as amended, and one case under section 5(d)(6) of the Home Owners' Loan Act, as amended; it closed five section 407(b) cases and one section 5(d)(6) case. Pending as of July 1, 1967, were nine section 407(b) cases, a decrease of one case under July 1, 1966.

During the current fiscal year it is estimated that seven section 407(b) cases and one section 5(d)(6) case will be opened. This estimate is based upon the fact that as of July 1, 1967, serious problem cases were pending in the Office of Examinations and Supervision on which neither 407(b) nor 5(d)(6) proceedings were in progress.

It is estimated that the average 5(d)(6) or 407(b) case, if carried through all the administrative and judicial steps possible, involves approximately 300 man-days of work. The time would be consumed in preliminary consultations with the supervisory authorities, research of the facts, preparation of the 407(b) letter or 5(d)(6) resolution, preparation of the case for hearing, conduct of the hearing, handling of the appeal, if any, at the U.S. district court, handling of the appeal at the court of appeals and any conferences or negotiation for settlements taking place during the period.

There were pending, as of July 1, 1967, 41 litigation cases, including matters relating to the liquidation of assets acquired by the Insurance Corporation under section 406(f). In addition, there are approximately 317 cases in which the Insurance Corporation has elected to accept deeds pending foreclosure rather than proceed through judicial foreclosure.

Because the Litigation Division must work with deadlines always present on section 407 and section 5(d) cases, it has no backlog, as such. However, on several occasions it has been necessary to proceed with administrative hearings in 407 cases on the basis of staff availability rather than on the merits of the case and, for the first time in history, to utilize special counsel to prosecute a termination proceeding. Because of the anticipated large increase in its workload for the current fiscal year, the Litigation Division will not be able to perform its tasks as it should. More time will have to be devoted to the large number of projected section 407(b) and section 5(d)(6) cases. Less time will be available for supervising the work of outside counsel in connection with liquidations. Accordingly, it is necessary that another attorney be assigned to the Division. This forecast is made without taking into account the undoubted emergency situations which will arise in the current fiscal year.

An increase in the Litigation Division's workload in fiscal year 1968 is expected because of the large number of problem cases and the huge volume of assets owned by the Insurance Corporation which must be liquidated. In fiscal year 1969 the volume of assets managed by the Corporation could aggregate anywhere from $150 to $300 million.

General Division.—In addition to its responsibility for conducting the hearings on the chartering of new Federal associations, the establishment of branch offices of existing Federal associations and insurance of accounts of State-chartered institutions, the General Division is responsible for advising the Office of Applications in connection with applications for permission to organize and applications for branch offices. Assignments to this Division are also drawn from the Office of the Secretary and, to some extent, the Office of Examinations and Supervision. Near the end of fiscal year 1966, the hearing section of the General Division has overcome personnel and administrative problems which had caused serious delays earlier in the fiscal year and it is anticipated that the present hearing section staff, consisting of three attorneys and two clerk-stenographers, will be adequate to meet its responsibilities during the forthcoming fiscal year.

Because of precise eligibility and other requirements in the regulations governing the chartering of new Federals and the establishment of branch offices, the Office of Applications is requesting a legal opinion on each application for permission to organize or establish a branch office. It is estimated that, on the average, each such application requires an hour of an attorney's time and one-half hour of secretarial work. At the present time approximately 300 applications of this type are being received annually by the Office of Applications.

Approximately nine legal antitrust evaluations in connection with merger applications, each requiring approximately 10 man-days, are prepared annually

in the General Division. Each evaluation requires a thorough examination of detailed information, primarily statistical, which the applicants are required to submit. Examination of such data, which requires approximately 3 man-days, is designed to disclose the salient points and any deficiencies in the submission so that additional information can be sought before the analysis itself is commenced. The initial phase of the analysis is a determination and a recording of relevant geographical data to provide a basis for the evaluation. This step, requring approximately 2 man-days, is followed by an evaluation of a proposed merger in the light of the antitrust statutes and court decisions, particularly the six leading cases in the Supreme Court. The evaluation itself, involving an analysis of competitive overlap, degree of market concentration produced and amount of competition eliminated, requires approximately 4 man-days, which time includes the actual writing of the evaluation. An additional man-day is required for review by the Division Chief and General Counsel and for related consultation.

Despite the existing high level of the workload of the General Division, and allowances for reasonable growth during the fiscal year, it is anticipated that the Division can meet its responsibilities in fiscal year 1969 without the assignment of additional personnel.

Manual Division.—Chairman's Order No. 170, dated May 19, 1967, established within the Office of the General Counsel a Manual and Information Compliance Division to provide for the creation, publication, maintenance in a current status and distribution of a manual of the statutes, regulations, policy statements, rulings, and General Counsel's opinions relating to the Board's functions. In addition, it is the responsibility of that Division to provide for compliance with the provisions of the Freedom of Information Act including the publication of appropriate material in the Federal Register and the making available of appropriate information to the public.

Initial staffing of the Division by the Office of the General Counsel consists of three attorney positions, Grades GS–15, GS–14, and GS–13, a subprofessional administrative officer, Grade GS–12, and a clerk-stenographer, Grade GS–5. In addition, this staff has been supplemented by the detail of three clerical positions to aid in the establishment of the Division and its early operations.

While staffing of this Division is in large measure conjectural without full knowledge of the nature and extent of its workload, it is our present view that the Division can carry out its assigned tasks without the assignment of additional personnel.

Immediate Office.—At the beginning of the current fiscal year, arrangements were made with the General Services Administration to survey the files and the file systems employed in this Office with a view toward improving our file systems to expedite the retrieval of information, reduce space required for files and generally promote efficiency in the Office. The project by GSA is continuing; however, we have been able to determine that one of the principal shortcomings in the maintenance of practicable and usable file systems is the fact that no one person has heretofore been fixed with a continuing responsibility to maintain our file systems. It is anticipated that substantial cost reductions and time saving can be accomplished with a more effective file system. However, unless a position is added to the staff of this Office to provide us with a full-time clerk to be responsible for filing and maintenance of the files, the new system being prepared under the auspices of GSA will soon fall short of its potential.

Budget summary

This estimate, which provides for 32 attorneys and 22 clerical positions, represents an increase of two positions over the 52 positions provided for the current fiscal year. The 52 positions include six positions from the Office of Regulations which were transferred to this Office by Chairman's Order No. 170 dated May 19, 1967. Added would be one attorney position, grade GS–14, and one clerical position, a clerk, grade GS–5. The attorney position would be used to implement the Litigation Division of this Office; the clerk position would be used in the Immediate Office of the General Counsel.

Stated briefly, the reasons for the additional positions requested are as follows: Protracted administrative hearings leading to termination of a member's insurance or the appointment of a conservator or receiver for a Federal association, handled by the Litigation Division, have continued at a high level under adverse economic pressures on the industry. For the first time in the Board's history, it was necessary during the past fiscal year to utilize outside special counsel to represent the Board in the prosecution of a termination of insurance pro-

ceeding. The requested attorney position would be allocated to the Litigation Division to help meet its requirements.

The remaining position requested, a clerical one, is for the Immediate Office of the General Counsel. It represents a file clerk in charge of maintenance of the central files for the entire Office to implement a new filing system being developed following a survey of the filing system now in use in this Office by the General Services Administration.

The fragmented and somewhat unsystematic nature of the filing arrangement in use by this Office is a drain on the time and efficiency of all its members.

On a man-year basis there are 51.8 man-years in 1969 and 46.4 in 1968, an increase in 1969 of 5.4 man-years. Of the increase, 4.2 man-years represent delay in filling positions in the current fiscal year; the remaining 1.2 man-years represent the new positions requested.

Mr. EVINS. You want 54 positions, up from 46 two years ago. Your caseload is shown on page 64.

The Litigation Division opened four cases under the National Housing Act as amended, one case under section 5(d)(6) of the Home Owners' Loan Act. You closed five section 407(b) cases and one section 5(d)(6) case. And pending as of July 1, 1967 were nine section 407(b) cases, a decrease of one.

Mr. TREVAS. That is termination of insurance, a judicial type proceeding.

Mr. EVINS. Do you have to file a petition in court to take away the insurance?

Mr. TREVAS. We have to hold hearings according to the law.

Mr. HORNE. And we have to go down a long road to establish substantial reasons for doing it.

Mr. TREVAS. The total number of employees in fiscal 1968, in the Office of the General Counsel includes six positions absorbed from the separate Office of Regulations which was abolished.

Mr. EVINS. Where is the General Counsel?

Mr. MOSCOV. Here.

Mr. EVINS. Tell us about your workload. Is it pretty heavy?

Mr. MOSCOV. Quite heavy in drafting new regulations and interpreting existing regulations, and we have large undertakings in the litigation area.

Mr. EVINS. You have a good staff there.

Mr. MOSCOV. Thank you. Yes, we do. Thirty-one of the staff are attorneys and the rest are clerical employees. If you were to grant our request the number of attorneys would be moved up to 32.

ESTABLISHMENT OF MANUAL DIVISION

Mr. EVINS. Manual Division. Chairman's Order No. 170 established within the Office of the General Counsel a Manual and Information Compliance Division to provide for the creation, publication, maintenance in a current status and distribution of a Manual of the statutes, regulations, policy statements, rulings and General Counsel's opinions relating to the Board's functions. All of the institutions know what the Board's instructions are, do they not?

Mr. HORNE. They change from time to time, of course. We try to update and codify our basic statutes and regulations. This is something the industry has been urging the Board for several years to bring about. We finally felt we could undertake that program. We got it underway last year.

Mr. Moscov. There is no present official Federal home loan bank collation of all of the helpful materials which a lawyer or a member of the public might want in deciding how to operate in a particular area. This is an effort to have one official publication containing a coherent organization of all our materials such as rules, rulings, and regulations.

Mr. Evins. You say approximately nine legal antitrust evaluations in connection with merger applications are prepared annually in the general division.

Mr. Moscov. Yes, sir. In considering merger applications we are pretty much tied to the same requirements the banking industry is tied to, and because of recent court decisions in this area, we have to make antitrust evaluations under the Clayton and Sherman Acts.

Mr. Evins. At the beginning of the year, arrangements were made with GSA to examine your files? What were the results?

Mr. Trevas. They have suggested centralizing it, and one of the two positions is for a clerk who would do the work of centralizing the files so the office could operate more efficiently.

Mr. Evins. You also state in addition to the General Counsel you have an outside special counsel.

Mr. Trevas. That was because the workload on the termination cases exceeded our capacity to keep abreast of them. This is to eliminate outside hiring.

Mr. Evins. You say this would help prosecute the insurance proceedings. Did you file the proceedings and then employ counsel outside to try the case?

Mr. Moscov. In one case, because our litigation division at the time was too busy to handle it. That is more costly than having our own attorney handle the matter and that is one reason we are requesting one more attorney.

OFFICE OF AUDITS

Mr. Evins. The Office of Audits. You want an increase from 13 to 14.

Mr. Trevas. One position of GS–5.

Mr. Evins. You indicate the functions. You have a score of things for the Audit Division to do. Page 73 shows the workload data.

Expenses are up 24 percent. Disbursement vouchers, up 9 percent. Here is the number of issues held. There is a 34-percent increase in the number of issues held.

Mr. Trevas. This is for the purpose of showing an increase in what they have to do.

Mr. Evins. We will place in the record 69 through 73.

(The pages follow:)

OFFICE OF AUDITS

	1967 actual	1968 estimate	1969 estimate
Positions	13	13	14
Man-years	11.6	12.6	13.6
Net salary	$147,840	$168,694	$180,541

Functions and responsibilities

The Office of Audits has direct responsibility for the verification and audit of accounts and records and independent appraisal of the activities of the Federal Home Loan Bank Board and the Federal Savings and Loan Insurnce Corporation, and for the audit and examination of the 12 Federal Home Loan Banks, including their fiscal agent, together with responsibility for reports of deviations from compliance with applicable laws, rules and regulations, applicable general and specific Government standards and statutes, and policies of the Board.

The functions of the Office of Audits are:

1. The postauditing and reporting as to the accuracy and adequacy of books of account, ledgers, controls, vouchers and other records of the Insurance Corporation, the Federal Home Loan Bank Board, and the Federal Home Loan Bank System.

2. The survey and examination of the Agency's Offices and Divisions and the reporting of deviations from established procedure.

3. The annual and any special audit and examination of the 12 Federal Home Loan Banks as required by statute and the preparation of reports in connection therewith, specifically determining that the Banks are operating in conformity with the Federal Home Loan Bank Act, as amended, the regulations applicable to the Federal Home Loan Banks and the administrative policies incident thereto; counting for, either by inspection or direct confirmation, all assets and liabilities of such Banks; inspection at the present time of 975,000 mortgages or their equivalent held by Banks either as collateral or for safekeeping and the inspection or accounting for by direct confirmation of custodians of $2.6 billion of investment securities held in like status; the audit of the books and records of the Banks in detail when warranted and/or test check and sampling.

4. Annual or special audits of the Office of the fiscal agent of the Federal Home Loan Banks.

5. Any special reports or surveys as required by the Federal Home Loan Bank Board.

6. Liaison with Civil Accounting and Auditing Division and the Accounting and Auditing Policy staff of the General Accounting Office; the Office of the Commissioner of Accounts, U.S. Treasury Department; and the U.S. Bureau of the Budget in respect to fiscal matters, excluding budgetary operations.

Workload and personnel requirements

Audit of Board and Insurance Corporation.—The personnel currently engaged in the verification and audit of the accounts and records of the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation, including the survey and examination of the Offices and Divisions, consists of the Director, Associate Director, and Secretary to the Director. This complement has been, and will continue to be, augmented from time to time by the services of the bank examiners when necessary. This assistance is equal to one man-year of bank examiner's time.

These audits and surveys are also designed for use by the Civil Accounting and Auditing Division, General Accounting Office. This enables the General Accounting Office to reduce the scope and cost of a detailed audit which otherwise would be required by them under the Government Corporation Control Act.

The volume of internal audit activity has been increasing progressively each year, due to growth of the savings and loan business and due to additional program activity authorized by statutory amendment. The increase in internal audit workload during recent years is indicated by the comparison of certain workload factors shown in the table on page 73.

Examination of Federal home loan banks.—The bank examining staff consists of a chief bank examiner, eight field examiners, and one audit clerk. In addition to the responsibility for the examination and audit of the 12 regional banks and the Office of the Fiscal Agent, the bank examining staff assists on the internal audit of the Board and the Corporation. The work on the internal audit program is accomplished by having one bank examiner continuously detailed to the Washington office (this detail is rotated among examiners) and with the entire bank examining staff assigned to duty in the Washington office at various times for a total of 30 days per year.

On the basis of the foregoing, the number of examiner days available per year for examination and audit of the banks is computed as follows:

Days in year	365
Less:	
Saturdays and Sundays	104
Holidays	8
Annual leave, sick leave, and other nonavailable days	35
Days in home office	30
Total	177
Examiner days available	188

During fiscal 1967 examination and audit of the regional banks required approximately 0.141 man-day per million dollars of assets. Procedures have been reviewed and modified over the past few years and are now considered at the minimum level necessary to maintain the overall strength and effectiveness of the program. Therefore, the future growth of the bank system will require proportionate expansion of the bank examining staff.

Over the past 5 years the regional banks have grown a total of $5 billion in total assets. In projecting this growth, it is estimated that the regional banks will have total assets of approximately $9.2 billion at the start of fiscal 1969. On the basis of 0.141 man-day per million dollars of assets, 1,297 man-days will be required to examine and audit the regional banks. With available examiner man-days at 188, a field staff requirement of 6.9 is indicated. Rounding this field staff requirement to seven examiners, plus one examiner for duty in the Washington Office, equals our authorized strength of eight examiners. Therefore, we are not requesting an increase in the bank examining staff for fiscal 1969. However, we are requesting an additional clerk-stenographer (GS–4) who would be assigned the major responsibility of typing bank examination reports in order that the present clerical staff could devote their time to more professional duties.

Examination and audit procedures have been revised and modified over the last several years and are now considered at the minimum level necessary to maintain the overall strength and effectiveness of the bank examination program.

Budget summary

The estimate of 14 positions for fiscal 1969 reflects an increase of one position over the current fiscal year. The new position is a GS–4 clerk-stenographer.

On a man-year basis there are 13.6 man-years in 1969 and 12.6 in 1968, an increase in 1969 of one man-year. Of the increase 0.4 man-year represents delay in filling positions in the current fiscal year; the remaining 0.6 man-year represents the new position requested.

OFFICE OF PERSONNEL MANAGEMENT

Mr. EVINS. Personnel management. You want another job.
Mr. HORNE. Yes.
Mr. EVINS. We will put in 78.
(The page follows:)

OFFICE OF PERSONNEL MANAGEMENT

	1967 actual	1968 estimate	1969 estimate
Positions	13	13	14
Man-years	10.6	13.0	13.6
Net salary	$118,771	$136,360	$144,842

Functions and responsibilities

Personnel management is an integral part of general management. The office of personnel management, as a member of the management team, is delegated, under the chairman, responsibility for establishment, maintenance, and execution of a program of service, guidance, and action which will support equitably, the mission of the agency, the workforce, and the interest of the general public.

The office seeks to achieve this objective in carrying out the following functions:

1. Recruiting and staffing.
2. Employee development.
3. Employee performance and evaluation.
4. Position classification and pay administration.
5. Employee recognition and incentive.
6. Personnel records and reporting.
7. Program evaluation.
8. Formulating and issuing personnel policy.

Workload and personnel requirements

As a service organization, the volume of our work and the extent of our responsibility is very sensitive to increases in breadth and volume of activity in any one or all segments of the Federal Home Loan Bank Board. It is a known fact that as a result of the expanding role of the Board the volume of work throughout the agency has increased with a corresponding impact upon our area of responsibility.

OFFICE OF HOME LOAN BANK OPERATIONS

Mr. EVINS. Home Loan Bank Operations.

You go from 15 to 20. You want a five job increase there.

Mr. HORNE. Yes. I explained that in my testimony this morning. I tried to justify it there, and this also tries to justify it here in fuller detail than I did this morning.

Mr. EVINS. You have increased activity and increased workload as their assets increase.

We will put pages 82 through 89 in the record.

(The pages follow:)

OFFICE OF FEDERAL HOME LOAN BANK OPERATIONS

	1967 actual	1968 estimate	1969 estimate
Positions	14	15	20
Man-years	13.1	14.3	17.7
Net salary	$159,994	$180,070	$223,414

Functions and responsibilities

The Office of Federal Home Loan Bank Operations coordinates and supervises the operations of the 12 Federal home loan banks and the activities of the office of the fiscal agent in New York. In the past few years the complexity of operations of the banks has increased substantially as have their assets which at the present total $8.2 billion and are more than double those of 5 years ago. The tremendous growth of the savings and loan industry has been largely responsible for the increased scope in the operation of the banks. Because of the expansion of the banks and the addition of new services offered to the member institutions, they have been required to institute many procedural changes.

A major responsibility of the Office is the supervision of the extension of credit by the Federal home loan banks. During the past year revised standards of credit worthiness have been established and qualitative limitations have been developed with respect to loans for mortgage expansion purposes. Development of procedures and policies to assure that the proceeds of expansion loans will be properly reinvested in satisfactory market areas and in properties providing adequate security has generally been accomplished. It is necessary now and in the future to insure that there is conformity by the banks with all Board policies relating to credit; that evaluation procedures for the determination of credit worthiness are carried forth in a prescribed manner; and that changes in credit policies are formulated when needed to meet national or regional changes in economic conditions. By restraining or relaxing the availability of Federal home loan bank credit during periods when the economy experiences dislocating pressures, the Board discharges its responsibility for maintaining sound and economical home financing by members of the System. The time involved in policy formulation, operational review, and advisory endeavor has added immeasurably to the workload of the Office.

The changes in concepts and management innovations that have taken place in the past few years in the savings and loan industry make it necessary that this Office be always on the alert to the effect of these continuing changes on the operations of the Federal home loan banks. Because of the demands made by other urgent Board programs and the workloads referred to above it has not been possible to undertake important and greatly needed studies in depth with respect to future plans and programing. These are required to recognize and measure the potential and severe impacts that will likely occur as a result of the ever changing financial environment, and considering the increasing role the Federal home loan banks play in that environment, and the projected growth and increased demands to be made on the system. It is essential that the Office be prepared to cope in the relatively near future with substantially different activities and methods of operations that are presaged by the ever more frequent changes in monetary and fiscal policies that make it necessary to maintain a great degree of flexibility. It is a responsibility of this Office to keep the Federal Home Loan Bank Board fully informed as to the anticipated future operational demands on the Federal home loan banks and to provide the Board meaningful planning intelligence for its deliberations and in its relationship with other Government agencies and the savings and loan industry. This intelligence can be developed only through the proper staffing and efficient functioning of an organizational unit devoted to the planning of alternative future courses of action that will insure continuing proper supervision and successful management of the Federal home loan banks.

The ever-increasing volume of activity and the need by management to obtain more timely financial information upon which to base important management decisions have induced several banks to make drastic changes in accounting procedures and techniques. Other banks have not instituted such changes, and this office, in fulfilling its advisory and supervisory function, should initiate procedural studies which would also involve improved equipment utilization. A continuing comprehensive management survey has been long delayed for lack of personnel and should be started at the earliest possible time for the maximum effectiveness and value. The survey will provide the means of determining exactly what differences exist among the banks and provide a basis for prescribing changes in accounting systems and procedures where needed.

The major duties and responsibilities of the office include:

Supervisory.—1. Submission of recommendations to the Federal Home Loan Bank Board on general policies relating to the operation of the Federal home loan banks.

2. Supervision of compliance by the banks with the provisions of the Federal Home Loan Bank Act, the regulations for the Federal home loan bank system, and the policies of the Federal Home Loan Bank Board.

3. Analysis of all phases of the banks' operations and actions of the board of directors and executive committees, before making recommendations to the Federal Home Loan Bank Board with respect to actions requiring approval such as election of officers and appointment of counsel, officers' salaries, interest rates, budgets, dividends, leases, and bylaw amendments.

Financing and Investments.—1. The office either approves or disapproves requests of the Federal home loan banks for the purchase, sale, or exchange of securities in the open market. It also instructs the fiscal agent for the Federal home loan banks as to purchases, sales, and exchanges of securities to be made in behalf of the Federal home loan banks. During the fiscal year 1967, such purchases and sales aggregated $34.4 billion through approximately 5,100 transactions.

2. Recommends to the Board, at such times as the Director deems appropriate, new issues of consolidated Federal home loan bank obligations, the refunding in whole or in part of outstanding consolidated obligations, as well as the retirement in full of maturing obligations. The office is also responsible for all financial arrangements which are necessary for the sale, issuance, and retirement of, or payment of interest on, consolidated Federal home loan bank obligations. During the 12-month period ending June 30, 1967, there were seven issues of such consolidated obligations totaling $3,850 million, and maturities aggregated $5,574 million.

3. Maintains close liaison with top officials of the Treasury Department and obtains clearance from the Secretary of the Treasury with respect to the offering date, term, amount, and rate of consolidated obligations as required by section 303(a) of the Government Corporation Control Act.

4. Makes all necessary arrangements for acceptance and release by Federal Reserve banks of Government securities held in custody for the Federal home loan banks.

5. Has full responsibility for the transfer of funds from one area of the country to another through interbank borrowing and in connection therewith designates the bank or banks which are to lend to other Federal home loan banks.

Accounting, Procedures, and Reports.—1. The office develops and prescribes the accounting system for the Federal home loan banks and the form and type of weekly, monthly, and other periodic reports.

2. Maintains controls and tests the reporting accuracy of the banks on a continuing basis.

3. Prepares consolidated financial reports on the Federal home loan banks periodically.

4. Maintains complete records by banks and by issues of all securities owned, purchased and sold, or exchanged in order to exercise proper supervision over investment transactions of the banks and in order to make complete reports to the Treasury Department under the provisions of the Corporation Control Act.

Advisory.—1. As requested, or as initiated, advises the Federal Home Loan Bank Board with respect to the effect of, or need for, policies, regulations, or legislation with respect to all phases of the operations of the banks.

2. Provides daily advice, guidance, and counseling to the Federal home loan bank presidents and other bank officers on the many phases of the operations of the banks, interprets policy directives of the Board in the several functional areas of the banks, and engages in discussions of contemplated actions by the officers or boards of directors.

3. Maintains an operating handbook reflecting applicable statutes, regulations, and policies pertaining to matters affecting the banks and under the supervision of this office.

Workload and personnel requirements

The Immediate Office of the Director consists of six positions. The increase over the prior year results from an additional GS–14 position provided in the 1968 budget, and which will be utilized in the area of credit administration. The office presently includes nine other positions.

Four existing positions relate specifically to bank operations and have the responsibility for making analyses and recommendations on many phases of the operation of the 12 Federal home loan banks. Such matters include the ap-

proval or disapproval of budgets, dividends, leases, surety bonds, and various types of insurance, the analysis of reports from the banks and the preparation of consolidated financial statements. The banks are in varying stages of accounting modernization and procedural updating, and it is considered necessary to augment the existing staff by the employment of two Systems Accountants, GS–12 and GS–11. Under the guidance of Bank Operations Analysts, the additional staff members will study the detailed operations of each bank and develop standardized procedures to effect improvements in all areas of operations. The management survey will have as a corollary objective the bringing of operations of the banks closer together for a further system unifying effect.

Presently, the Bank Operations Analyst, GS–14, and a clerk make the highly technical arrangements necessary in the issuance of consolidated Federal home loan bank obligations. A large amount of background material must be developed and correcspondence prepared in connection with each offering of securities. A review is made of the minutes of all meetings—stockholders, boards of directors, and executive committees—of all the banks for conformity with applicable statutes, regulations, and policies. The annual examination report on each bank is reviewed and supervisory recommndations are made as deemed appropriate and the Board is advised of any significant aspects. In addition, bylaw amendments and interest rate changes are reviewed. The annual election of bank officers and their salaries are likewise reviewed and the actions are transmitted to the Board with appropriate recommendations as to approval, disapproval, or proposed modification.

Policy and procedural matters are studied and recommendations are made for changes looking toward improved Board and bank operations. There is an urgent need for the initiation of comprehensive studies leading to policy development and determination with respect to certain areas of the operations of the banks such as (1) surety bonds, including a current evaluation of the form of bonds and their applicability to the needs of the banks in relation to risk and cost; (2) a review of the corporate structures of the banks and a comprehensive analysis of the functioning of each board of directors, procedurally, and as to the substantive matters to which directors' deliberations should be directed; (3) projections and forecasts of activity in the various operating areas, including the quality and sufficiency of information flowing from members to the banks and the adequacy of its utilization; (4) the quality and timeliness of the reporting of data to the Board, and the need for additional data in other areas of bank activities; and (5) studies looking to improved communications between the banks and the Board to assure timeliness and appropriate utilization of intelligence. The employment of an additional person, a Financial Analyst, GS–13, is greatly needed to participate in the undertaking of these projects as well as to provide assistance in the other functional areas assigned.

The remaining three positions are immediately concerned with the purchase and sale of securities by the banks and the incumbents make analyses and recommendations on investment transactions concerning the portfolios of the 12 banks which, when considered together, constitute one of the largest concentrations of U.S. Government securities in existence.

While the additional positions requested above are urgently needed because of increased activities and workload, a definite and highly desirable additional benefit will be the development of a program for management succession. Retirement possibilities over the next few years and the need of a relatively small office for minimal backup in emergency situations calls for assurance of continuity in operations which would be provided from these additional positions.

The Office is in real need of two additional clerks in order to facilitate the handling of the increasing volume of work both internally with respect to the Board and externally to the banks. One of the celrks would serve as a TWX operator to expedite handling of the heavy volume of traffic to and from banks, and to do the filing in order to release other clerical personnel for more substantive duties. The second clerk would assist in overcoming undue delays in processing material to be submitted for Board consideration and action, to facilitate an evening in the flow of work by taking pressure off of peak workload periods, and to provide relief due to absences. The workload of the Office has increased materially and will continue to do so due to the expansion in the activities of the Board and the banks and the increase in the volume of activity.

Without the procedural and operating studies to which most of the additional personnel would be assigned, the operation of the 12 individual entities constituting the reserve credit reservoir for the thrift and home financing industry be-

comes more divided and lacking in uniformity and objectivity of purpose as part of a national system.

Recognition must be given to the areas in which data processing programs will permit operations of the Office to be accomplished more efficiently through computer applications. A considerable amount of exploratory study and evaluation will necessarily precede such applicatfons and should be commenced as early as possible. It is proposed to utilize the existing and requested personnel to review and evaluate all areas of operations to determine those which are susceptible to data processing. The principal operations to which these efforts will be directed are investment portfolio management and accounting; projecting, consolidating, and evaluating the need of the banks for funds including cash flow projections; and projection of income and expenses of the banks.

Because the functions of the Office are so wide in scope and deal with formulating and enforcement of policies connected with the operations of the banks, it is difficult to develop many meaningful workload measurements. Most functions are not the repetitive type of operations susceptible of definition which can be measured. The time spent relates in large measure to analysis and review of operations, formulation of policy recommendations, and providing counseling and guidance on the myriad of situations which develop in the operations of the 12 Federal home loan banks. It is anticipated, however, that the management survey will define those areas of the Office's operations where measurement techniques may be employed.

Budget summary

The estimate of 20 positions for fiscal year 1969 reflects an increase of five positions over the current fiscal year. The new positions are:

One, GS–13, financial analyst.
One, GS–12, systems accountant.
One, GS–11, systems accountant.
Two, GS–5, clerks.

On a man-year basis, there are 17.7 man-years in 1969 and 14.3 in 1968, an increase in 1969 of 3.4 man-years. Of the increase, 0.4 man-year represents delay in filling positions in the current fiscal year; the remaining 3 man-years represent the new positions requested.

OFFICE OF APPLICATIONS

Mr. EVINS. Office of Applications.

You want about four jobs, from 45 to 49. You have a Federal Charter Division, a State Charter Division, and a legal review staff in the Office of Applications.

Why can you not let the General Counsel do this work?

Mr. TREVAS. We had a reorganization several years ago, Mr. Chairman, and the point of that was that there was a lot of routine legal work that required immediate attention.

Mr. EVINS. This is a subcommittee of the General Counsel's Office.

Mr. TREVAS. And they have been doing some wonderful work. They work as a team right in Mr. Smith's office and, therefore, they can keep abreast with their demands instead of having to put it aside for other work that has equal or greater priority. It has worked out very well.

Mr. HORNE. Also still, I am sorry to say, we are many cases behind in the Office of Applications. We have caught up some since I was with you last, but there are still quite a few awaiting handling.

Mr. EVINS. How long does it take from the time an application is filed until a charter is granted, if the papers are in good order?

Mr. SMITH. From the time the charter is granted, they could open up for business within 30 days. It depends on the applicant complying with the conditions that were laid down. From the time they first

file an application, Mr. Chairman, for permission to organize, we are within 60 days' limit on that. That is the hardest process.

Mr. EVINS. That is one of the fastest applications of any agency of Government.

In some of these commissions, it takes a year to get a matter before the commission. We commend you for your speedy process.

In some cases they say the business will be bankrupt before it is acted upon. That does not apply to the Federal Home Loan Bank Board.

Mr. HORNE. No, sir; it does not, fortunately.

Mr. EVINS. You check to see if the statutory requirements are complied with and your legal section looks it over for you.

Mr. HORNE. Yes.

Mr. EVINS. Do you refer it to the General Counsel's Office?

Mr. TREVAS. Any substantial question goes to the General Counsel's Office, anything out of the routine category.

JUSTIFICATION MATERIAL

Mr. EVINS. We will place in the record pages 90 through 95.

(The pages follow:)

OFFICE OF APPLICATIONS

	1967 actual	1968 estimate	1969 estimate
Positions	45	45	49
Man-years	41.2	44.6	47.2
Net salary	$474,737	$531,156	$567,114

Functions and responsibilities

The functions of the Office of Applications involve the handling of all matters concerning applications by existing institutions, both Federal- and State-chartered, and by organizing groups for new Federal and State associations requiring action by the Federal Home Loan Bank Board under the rules and regulations for the Federal Savings and Loan System, the rules and regulations for insurance of accounts and the regulations for the Federal Home Loan Bank System.

It is the responsibility of the Office of Applications to initiate and develop eligibility standards with Board approval; uniformly apply eligibility requirements established in accordance with law, regulation or policy; and develop programs for serving the public interest through the insurance of accounts, chartering new Federal savings and loan associations, establishing branch offices and mobile facilities of existing Federal associations and granting bank membership to associations, savings banks, and insurance companies. In addition to applications relating to the estabilshment of insured savings and loan facilities, many other applications involving the operations of insured associations must be processed for Board action or action by the Office of Applications under delegated authority without reference to the Board. Such applications include matters relating to mergers, investment in service corporations, investment in office buildings, joint occupancy of office quarters, change of location, extension of lending area, sale of loans, purchase of assets, voluntary dissolutions, approval of security forms, amendment of charters and bylaws, designation of loss reserves, and releases and transfers of escrowed stock.

All of these functions are essential and consistent with the Agency's mission.

Organization

In addition to the Office of the Director, the Office of Applications is comprised of three organizational units, specializing in the following activities:

Federal-Charter Division.—Processes all applications relating to the establishment of additional Federal facilities and the operations of federally chartered associations.

State-Charter Division.—Processes all applications relating to the insurance of existing of new State institutions, the operations of State-chartered insured associations, and bank membership of State-chartered associations, savings banks, and insurance companies.

Legal review staff.—Provides day-to-day legal services for the variety of applications received by the Office, processes applications by State-chartered associations relating to security forms and accompanying revisions of bylaws and articles of incorporation, and develops statewide and nationwide security forms.

Workload and personnel requirements

The Office of Applications, since it was created in 1963 through the transfer of functions and personnel from other offices of the Board, has been hampered by the lack of overall administrative authority in any position other than the Director's. The normal administrative and policy functions have been of such increasing number and volume as to demonstrate the need for strengthening the Office of the Director. After careful study, it was determined to create, in April 1967, the positions of Deputy Director and Administrative Assistant to the Director and Deputy Director. The Deputy Director is authorized to act in all respects for the Director in his absence or in his inability to act for any reason. In addition, he has specific responsibilities for broad administrative matters and for development of policy recommendations and procedures. The administrative assistant is responsible for day-to-day matters of general administrative detail and preparation and coordination of a variety of reports relating to the operations of all units of the Office.

In the accompanying workload summaries, it is estimated that the volume of case studies will show a gradual increase during the fiscal years 1968 and 1969. As also shown in those summaries, it is estimated that the average time per case study can be kept relatively constant. This could be achieved through the addition of four new positions in fiscal year 1969, assigning one professional and one secretarial-clerical employee each to the Federal-Charter and State-Charter Divisions. A number of factors, in addition to the personnel needs in the Office of the Director described above, justify the requested increase.

With respect to the Federal-Charter Division, experience has shown that the present hearing procedure, which has been in effect for about two years, requires more work in the Office of Applications to process applications for permission to organize Federal associations and applications for branch offices. More detailed analyses must be made of the voluminous supporting information now submitted, and the staff is now responsible for functions formerly handled elsewhere. The procedure has resulted in more efficient processing, earlier decisions and equitable treatment for all interested parties; this has more than compensated for the additional effort required of personnel of the Office of Applications.

New responsibilities with respect to Federal facilities have been assigned to the Office of Applications during the fiscal year 1967. By regulation, the Board has authorized the establishment of mobile facilities by Federal associations in communities not warranting full-scale branch operation. The recently adopted procedure for processing such applications involves public notice, scheduling of hearings, and detailed analyses comparable to those required in the processing of applications for permission to organize Federal associations and branch offices. So far, only a few applications for mobile facilities have been received but considerably increased numbers of such applications are expected during this and next fiscal year.

By legislation enacted during the fiscal year 1967, the Congress has authorized participation by Federal associations in "service" corporations. Guidelines for approval of such corporations are currently being developed and it is expected that, once detailed information is published as to the basis for Board consideration and approval of Federal association participation in such organizations, a number of applications for participation will be forthcoming.

With respect to the State charter division, the Board has approved, effective July 7, 1967, an entirely revised procedure for processing applications for insurance of accounts from State-chartered savings and loan associations. At the same time, a new application for a commitment to insure accounts has been developed for State-chartered institutions in process of organization. The new procedure calls for public notice and hearings in connection with State applications in much the same manner as for Federal applications. Although resulting in increased efficiency, equitable treatment of all interested parties and a marked saving in

the time of the Board, the new procedure will require a larger volume of work by the staff of the office of applications. Involved, in addition to preparation of comprehensive analyses of supporting information, are the participation of analysts in the public hearing procedure and formal notification of decisions to all interested parties. Accompanying the adoption of the revised procedures for State applications for insurance was the publication of a completely revised outline of information to be submitted in support of applications for insurance or commitment, which includes a comprehensive description of the criteria followed in the evaluation of such applications and conditions established as a basis for approval.

Greatest in number among the State applications are those for approval of forms of securities, savings and bonus plans and related bylaw and charter amendments. With the increased competition for savings during the past several years, the number of such applications has constantly risen, and it has been necessary to assign additional personnel to this function. Whereas in 1964 two people were assigned full-time and two others part-time to the processing of applications of this type, now seven professional, clerical and secretarial employees devote virtually full time to this activity. No increase in personnel for this purpose is being requested for the 1969 fiscal year but the use of positions which were originally to be assigned to other duties adds to the need for approval of the additional positions requested for the office. The table on analysis of workload for State charter applications includes the case studies performed in connection with applications for approval of security forms and related bylaw and charter amendments; also, included in the number of employees appearing in the table are the personnel of the legal review staff whose time is devoted to this function. The huge volume of case studies on such applications, which on the average require less time than case studies on other types of applications, has had a significant effect on keeping the average number of days per case study on State applications at its present low level.

Additional developments have affected the functions of both the State charter and Federal charter divisions. In recent years there has been increased interest in mergers of both Federal- and State-chartered insured institutions. During the 1967 fiscal year, the Board and its staff devoted considerable attention to the development of a merger policy statement setting forth the criteria applied by the Board in considering such applications. Increased attention is being given to the possible antitrust and anticompetitive aspects of a proposed merger, the fairness of its terms, the performance of the participating institutions and the alternatives that have been considered short of merger. The application of these criteria requires comprehensive staff analysis of a large quantity of information supporting each merger application. Furthermore, in February 1967, decision was made to entertain applications for merger of permanent stock institutions into mutual associations; since consideration of such applications had been deferred since 1963, this action is expected to increase the number of merger applications. Another activity which has added to the work of the office of applications is a new procedure, instituted last year, for the collection of withdrawable account subscriptions, which has put Federal associations and State chartered applicants for insurance on a par. Analysis of the performance of applicants in the collection of the subscriptions requires additional work by personnel of the office. Implementation of the requirements of the freedom of information statute has also added to the workload of this office, particularly because of the large volume of applications involving decisionmaking and establishment of precedents which are processed by the office.

In addition to the processing of applications by State associations relating to security forms, described above, the legal section of the office of applications passes on the various legal aspects of applications submitted by both Federal-chartered and State-chartered facilities. The types of applications most generally involved are those relating to permission to organize new Federal associations, amendments to charters and bylaws of both Federal and State associations, branch offices, Federal Home Loan Bank membership of State-chartered existing or proposed associations, insurance of accounts, and modification or waiver of insurance conditions. In addition, the legal review staff passes on general legal matters submitted by the office of applications, legal opinions consistent with criteria established by the Office of the General Counsel, and selects for referral to the office of the General Counsel legal questions which must be determined by that office. It is expected that no additional personnel during the 1969 fiscal year will be needed for these functions.

Budget summary

The estimate of 49 positions for fiscal year 1969 reflects an increase of 4 positions over the current fiscal year. The new positions are:

Two, GS–12, financial analysts.
Two, GS–5, clerk-stenographers.

These positions would be allocated as follows:

Office of the Director	5
Federal Charter Facilities and Operations Division	19
State Charter Facilities and Operations Division	16
Legal Review staff	9
Total	49

On a man-year basis there are 47.2 man-years in 1969 and 44.6 in 1968, an increase in 1969 of 2.6 man-years. Of the increase, 0.2 man-year represents delay in filling positions in the current fiscal year; the remaining 2.4 man-years represent the new positions requested.

ANALYSIS OF WORKLOAD

Mr. EVINS. On page 96 you show the Federal charter facilities and operations applications.

You had 40 conversion charters received during 1968 and estimate 50 for 1969. You estimate 29 new charters will be processed during 1969.

Now, what do you mean by branches?

Mr. TREVAS. Applications for branches of existing associations.

Mr. EVINS. 185 want to establish branches. They go up from 116 to 185. The next page shows you the mergers. In 1967 there were 36, in 1968 there were 50, and you estimated 60 in 1969. Miscellaneous applications will total 340. What are they for?

Mr. TREVAS. Change of location, extension of time to comply with certain conditions imposed by the Board or amend a charter or bylaw provision.

Mr. EVINS. Generally speaking, what is the service area of an average Federal savings and loan association in a medium-size city?

Mr. SMITH. The average service area would depend on what the applicant claims.

Mr. HORNE. By law, which Congress passed I think a couple of years ago, you extended the lending area from 50 to 100 miles.

Mr. EVINS. That is what I am referring to, the lending area. That is 100 miles, generally, is it?

Mr. HORNE. That is right. There are a good many associations which were grandfathered in across State lines back in the 1930's.

Mr. EVINS. They were chartered beyond the State in some cases.

Mr. HORNE. Yes, sir. We have situations in which an association will almost encompass an entire State and run over into other States.

Mr. EVINS. How does the Board define its policy?

Mr. HORNE. We go, of course, by the law. A newly chartered association, one that was not grandfathered in, is limited in its lending territory to 100 miles of its principal office.

Mr. EVINS. New locations are generally 100 miles from the principal office; that is, the lending area is encompassed in that area?

Mr. HORNE. That is right. We have difficulty sometimes administering the grandfather clause. Now, if I may say this off the record——

Mr. EVINS. Off the record.

(Discussion off the record.)

STATE-CHARTER FACILITIES AND OPERATIONS APPLICATIONS

Mr. EVINS. Here are some more interesting figures on page 98, on the Office of Applications. Let us place this in the record.

(The page follows:)

STATE-CHARTER FACILITIES AND OPERATIONS APPLICATIONS
ANALYSIS OF WORKLOAD

	1967 actual	1968 estimate	1969 estimate
Applications for insurance:			
Carryover from prior year	15	10	10
Received during year	35	40	40
Less carryover end of year	10	10	10
Total applications processed during year	40	40	40
Case studies per application	3.18	3.75	3.75
Case studies in connection with applications for insurance	127	150	150
Other applications (case studies):			
Carryover from prior year	366	748	732
Received during year	2,947	2,646	2,855
Less carryover end of year	748	732	734
Total	2,565	2,662	2,853
Case studies in connection with "other applications":			
Membership	122	119	110
Mergers	65	85	95
Bylaws and forms of securities	1,811	2,000	2,150
Designation of reserves	51	42	45
Releases and transfers of stock within escrow	129	128	130
Miscellaneous and special studies	387	288	323
Total	2,565	2,662	2,853
Total case studies	2,692	2,812	3,003
Number of positions [1]	20	21	23
Average number of working days per employee per year	225	225	225
Total number of days available to complete all case studies	4,500	4,725	5,175
Average number of days per case study	1.67	1.68	1.72

[1] Includes 6 employees of the legal review staff for 1967 and 7 for 1968 and 1969 whose time is devoted to processing applications for approval of security forms and related bylaw and charter amendments of State-chartered institutions.

COMPTROLLER'S OFFICE

Mr. EVINS. Here is the Comptroller's Office on 104. Now, he wants 45 jobs, no increase. The Comptroller is right on top of the budget. Place in the record 104 through 107.

(The pages follow:)

COMPTROLLER'S DIVISION

	1967 actual	1968 estimate	1969 estimate
Positions	46	45	45
Man-years	37.4	43.4	43.8
Net salary	$310,888	$363,225	$374,668

Functions and responsibilities

The Division is responsible for the planning, development, and execution of the financial, budgetary, and fiscal policies of both the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation. It is also responsible for the conduct of the annual election of directors of the Federal home loan banks.

The major responsibilities of the Division include:

Development and maintenance of accounting systems and financial reports.—It is the responsibility of the Division to plan, direct, and currently maintain a system of accounting records and reports which will inform management of the

effect of all transactions on the operations and financial condition of the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation. In this connection the responsibilities of the Division include:

1. Accountability for all cash receipts and disbursements, assets, and liabilities, including the valuation thereof;

2. Purchase and sale or exchange of securities, including determination of yields thereon;

3. Issuance of checks in payment of claims for the Federal Savings and Loan Insurance Corporation;

4. Accountability for all income and expenses, by type;

5. Issuance of reports on the financial condition and the results of operations of the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation;

6. The billing and collection of insurance premiums (regular and prepayments), examination fees, and admission fees, including adjustments thereof, and authorizing the issuance of insurance certificates to all approved applicant institutions for insurance of accounts;

7. Determination of rate of return due on outstanding balance of the secondary reserve (premium prepayments) of the Federal Savings and Loan Insurance Corporation and the application thereof to individual accounts of the insured members as well as the notification of amounts credited and fund balances;

8. The planning and direction of accounting procedures for control of field operations, including payment of insurance, purchase of assets, receiverships, and contributions to insured institutions to prevent default;

9. The development of accounting practices and procedures with respect to: maintenance of individual records of mortgage loans owned by the Federal Savings and Loan Insurance Corporation; review and certification of loan service collection reports (contract servicers) as to principal, interest, taxes, insurance, servicing fees, and outstanding balances, and control of collateral obtained as security for loans made to insured institutions.

Analysis of financial needs and the furnishing of financial advice.—In addition to taking all possible steps to protect its insurance risk, it is essential that the Federal Savings and Loan Insurance Corporation maintain a liquidity policy which will provide sufficient funds for insurance purposes whenever and wherever needed with a minimum of delay. In accordance with this policy the Division is responsible for:

1. A continuing analysis of the security market and the future financial needs of the Federal Savings and Loan Insurance Corporation in order that the portfolio of investments may be properly balanced;

2. Recommending investment of surplus funds in Government securities at the best yields available commensurate with a distribution of maturities which will provide adequately for the needs of the Federal Savings and Loan Insurance Corporation.

3. The arrangement for and methods of repayments of loans authorized by section 402(i) of the National Housing Act, as amended;

4. Development of procedures for the establishment of depositories and transfers of funds for insurance purposes.

Other features of financial responsibility of the Division include:

1. Custody of all assets of the Federal Savings and Loan Insurance Corporation;

2. The liquidation of all liabilities;

3. Valuation of assets and the establishment of reserves;

4. Billings, adjustment, and collection of insurance premiums (regular and prepayments);

5. Collection of interest on investments of the Federal Savings and Loan Insurance Corporations;

6. Processing and payment of all legitimate claims against the Federal Savings and Loan Insurance Corporation.

Planning, coordinating, controlling, preparing of annual budgets.—The major functions and duties of the Division in this area of work include: planning and coordinating of all budget matters for the Board and the Insurance Corporation; establishment of procedures for the development and justification of estimates; collaboration with and advice to the staffs of the Board and the Federal Savings and Loan Insurance Corporation in the preparation and justification of the budget estimates; review and analysis of regular and special estimates and

recommendations thereon to the Chairman of the Board; participation in the hearings held in connection with the presentation of estimates to the Chairman of the Board, the Bureau of the Budget, and the Appropriations Committees of Congress.

Calls, attends, and participates in meetings held in connection with budget activities; maintains liaison with the Bureau of the Budget and the Appropriations Committees of Congress, and is responsible for clearance of all proposed legislation relating to budget.

Collaborates with Bureau of the Budget examiners in developing improved budget practices and methods of presenting and justifying estimates; reviews monthly budget reports of operations of the Board and the Insurance Corporation in comparison with internal budgetary allowances, and performs other activities related to the duties of a budget office.

The Division is also responsible for handling all matters relating to the former Home Owners' Loan Corporation.

In addition to the above, the Division is also responsible for the preparation of the annual budget for the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation, including the narrative statement of program and performance, business-type financial statements and detailed supporting schedules and justifications, as required by Bureau of the Budget circular A–11.

Upon approval of each annual authorization by the Congress, the Division is responsible for the preparation of quarterly apportionments for submission to the Bureau of the Budget and for maintaining operations within established limitations.

The Division is further responsible for the issuance of monthly and quarterly reports on the status of the budget, apportionments and allotments for both the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation.

DATA MANAGEMENT DIVISION

Mr. EVINS. Next is the Data Management Division, which goes up from 53 to 54 positions. Place in the record 112, 113, and 114.

(The pages follow:)

DATA MANAGEMENT DIVISION

	1967 actual	1968 estimate	1969 estimate
Positions	51	53	54
Man-years	45.6	50	51.9
Net salary	$372,496	$420,829	$464,624

Functions and responsibilities

The Division provides a wide variety of data analysis services to the Board and its staff, the savings and loan industry, the financial community, and Federal agencies whose programs are related to the home loan financial market. These services run the gamut from the collection of simple reports to the development of sophisticated statistical analyses.

In addition to compiling financial information on member institutions, the Division conducts a continuing study of mortgage financing, home mortgage holdings and foreclosures activities throughout the United States. It also collects data for and processes a basic study of interest rates and terms on conventional loans for all major home-mortgage lending institutions.

Beginning in fiscal year 1964, the Division's responsibilities were expanded to provide ADP services to other offices of the Board; in fiscal 1968 these services are being further expanded and in fiscal 1969 an even greater number of offices will be provided with ADP services.

In March of 1967 the name of the Division was changed to Data Management Division. Simultaneously, the functions and responsibilities of the Division were focused more sharply on the concept of computer-oriented support to all of the Board's programs. To assist in the orderly implementation of this function the Division was placed under the complete supervision, that this, including administration and program, of the Executive Assistive Assistant to the Chairman. Concurrently, an ADP advisory committee, consisting of top staff officers

whose programs are more obviously in need of computer support, was established and impowered to give policy guidance to the Division. Additionally, the Division was charged with the immediate responsibility of transferring the payroll and related personnel systems to the new computer.

Workload and personnel requirements

The organizational change outlined above along with the transfer of all existing statistical surveys to the Board's computer has given new impetus to the Division's plans to expand its support and thereby use the computer more effectively throughout the Agency. Several new applications have been proposed so that the Division has a long list of projects to analyze in terms of unused computer capacity.

In addition to the study now underway to develop an integrated payroll and personnel information system the Division has the following plans for fiscal 1969:

Program activities

1. *Office of Applications.*—The Division plans to devise data systems which will assist the Office in quantifying its recommendations concerning applications for new members and branches. This will involve designing data systems to develop guidelines and numerical weights about the financial market of the community and institutions concerned. The office already possesses manually a quantitative questionnaire which can be handled by the computer for a start, but it often needs to go deeper, particularly since associations have hired market research firms with sophisticated computer and data capabilities to justify their claims. The computer can provide ways and means for the Board to make objective judgments in these cases.

2. *Office of Examinations and Supervision.*—The bulk of the Board's staff is working on the problem of examination and supervision. Decisions made at the examining level can vitally affect the future course of an association. Quantitative guidelines need to be developed through data systems which will help examiners make sound analyses concerning the condition of an association. The Division will plan a flexible system designed to assist examiners, by providing them with numerical analyses and sampling criteria to use in their work. Former guidelines will be tested against experience. Comparisons with the history of associations with the same experience will be made. Additionally, the sheer administrative and management reporting burden of a far-flung field staff can be eased by the computer. The evaluating and scheduling of workloads are other areas which can be systematized.

3. *Office of Federal Savings and Loan Insurance Corporation.*—The Division has been asked to explore the insurance claim payoff system when associations fail. This will entail the design of a flexible, responsive system capable of accepting a variety of formats of account information and assembling claim and payoffs rapidly and accurately.

In addition, the premium billing system needs redesigning in the light of a computer facility to improve efficiency and quality as well as deliver comprehensive reports as byproducts. The staff will also assist the Office in its task of managing hundreds of real estate properties acquired by default.

4. *Office of Federal Home Loan Bank Operations.*—The operations of the bank system need to be quantified systematically and automated to provide rapid and accurate information and analyses for advance policy, profile margins, rates and obligations. As several banks are contemplating automation, coordination to insure mximum equipment integration will be required. Division staff must be available for consultation, planning, and where desirable, execution.

In this connection, a contracted management survey of the data processing requirements of the district banks is being conducted during fiscal 1968. Although the results of this survey are not complete, preliminary results indicate that at least six of the district banks are automating and the monumental burden of coordinating and supporting these endeavors falls upon the Director of the Division.

ORGANIZATION AND METHODS DIVISION

Mr. EVINS. The Organization and Methods Division. Why can't you consolidate this with data management?

Mr. TREVAS. That is a small office of three people. They do a different kind of job. That is, internal organization of the Board.

Mr. EVINS. You have a separate office for this. It should be in the other.

Mr. TREVAS. One has to do purely with statistical data.

AVERAGE NUMBER OF WORKING DAYS

Mr. JONAS. I hate to go back, but please look at page 97. I see a figure there that interests me. You say average number of working days per employee, per year, 225. That would be only 45 weeks, according to my figures. What do you do with them the rest of the 7 weeks?

Mr. TREVAS. To reach this figure you exclude Saturdays, Sundays, and holidays and leave. This is working days. Some employees have 26 days of leave and others have 13 days.

Mr. JONAS. That makes up the 52 weeks?

Mr. TREVAS. That is right.

OFFICE OF EXAMINATIONS AND SUPERVISION

Mr. EVINS. Let us get over to the Office of Examinations and Supervision. This Office conducts regular, periodic and special supervisory examinations of all Federal savings and loan associations, of insured State-chartered savings and loan associations, other institutions of the savings and loan type insured by the Federal Savings and Loan Insurance Corporation, and of noninsured member institutions. Tell us what a noninsured member institution is.

Mr. WALTERS. Any noninsured member institution in any State of the Union that is not properly supervised and examined in the State, we will make examinations at the request of the Federal home loan bank there. Now, those vary from time to time and from place to place. There are about 400 noninsured member institutions.

Mr. EVINS. You just told us about one that went broke. Did you investigate that?

Mr. GREENEBAUM. He was not a member.

Mr. HORNE. It was not a member of our bank.

INSPECTION OF NONINSURED MEMBERS

Mr. EVINS. You do, however, inspect noninsured members.

Mr. TREVAS. It would be a State-chartered savings and loan association which is a member of the Federal home loan bank in that district but is not insured.

Mr. EVINS. You inspect them?

Mr. TREVAS. Yes.

Mr. EVINS. Why do you inspect them if they are not insured?

Mr. TREVAS. Because they are going to make loans to them, and if they do not have adequate State supervision, the Federal home loan bank in that area will ask our Office of Examinations and Supervision to check them, because they are not going to make loans to them unless they know how solid the institution is.

Mr. EVINS. If the State does not supervise them and they are not insured or chartered by you, why do you go out into the field?

Mr. HORNE. They are allowed under the law to become members.

Mr. EVINS. Can't you draw up a regulation saying "If you are

going to be a member we want to know that you are sound and take the insurance?"

Mr. TREVAS. Any new member would have to be; yes. These are the ones that got in before these regulations.

Mr. EVINS. Noninsured members, how many are there?

Mr. CALLAHAN. 447.

Mr. EVINS. How often do you inspect these noninsured members?

Mr. WALTERS. Only upon request.

Mr. EVINS. Request by whom?

Mr. WALTERS. By the Bank System.

Mr. TREVAS. The bank itself which makes the loans to them in that area. We have 12 regional banks. Any one of those regional banks would ask the examinations people to take a look at them.

Mr. EVINS. How often do you make your so-called regular examinations?

Mr. HORNE. Every year, sir.

Mr. EVINS. Every institution gets a check once a year.

Mr. HORNE. That is our goal and we have just about achieved it.

Mr. WALTERS. That is right.

Mr. HORNE. Let me say this off the record.

(Discussion off the record.)

Mr. JONAS. Can one examiner do a better job by himself, or is it a better job if he has somebody with him?

Mr. WALTERS. I think in almost every case he would have one assistant even on the smaller jobs. We have cut down our crews, as I said earlier today, to the very minimum to get more efficiency. But in most cases, they would run from five men up to probably 10.

STATUS OF EXAMINATIONS

Mr. EVINS. You show on page 142 the status of examinations. Examinations of insured institutions were maintained on a current basis in fiscal 1967.

The average period between examination of Federals was approximately 11.7 months. It took about a year.

Mr. HORNE. Yes.

Mr. EVINS. The average period between examinations of State institutions was approximately 12 months.

Mr. HORNE. Yes.

Mr. EVINS. Examinations were not made of 12 Federal associations in 1967. This group included six associations that had not been examined within 13 months as of June 30, 1967. The other six were not examined because they had only reached the 12-month period between examinations at the close of the year. Offsetting these 12 examinations were 129 examinations which were made ahead of schedule. There were 79 insured State-chartered institutions that were not examined in fiscal 1967.

ROTATION OF EXAMINERS

Mr. JONAS. Do you rotate your examiners?

Mr. WALTERS. Generally, we keep examiners within a certain district. We rotate them as far as the examination of individual associations is concerned.

Mr. JONAS. You would not send the same team back next year that had made the examination this year, you would send in another team?

Mr. WALTERS. In some cases they will go back the second year, but generally we rotate them within a 3-year period at least. Frequently, we bring examiners in from other districts on a temporary basis to perform in those districts. That is part of our basic program. But we do use the rotation theory in order to get a different look at those institutions.

Mr. JONAS. Do you move your examiners from one district to another at any given interval?

Mr. WALTERS. No. We have no program for that. I would say the great majority of our examiners remain within the district to which they were assigned, but there may be several States in the district, and they may be rotated within different States, within the same region.

Mr. HORNE. One disadvantage, I suppose, of moving them from district to district on a permanent basis would be as regards their homes and families.

Mr. JONAS. Yes, I understand.

Mr. HORNE. But I understand what you are driving at, and it is something that is very important, that is, to have enough rotation to make sure that there isn't too close an affinity.

Mr. JONAS. That is right.

Mr. HORNE. We think we do that.

SUPERVISION OF INSTITUTIONS INSURED BY FSLIC

Mr. EVINS. The office of examinations and supervision is also responsible for the supervision of institutions insured by the Federal Savings and Loan Insurance Corporation, the purpose of which is to prevent the development or continuance of unsafe and unsound financial practices. You say the authority for examination was expanded by the Financial Institutions Supervisory Act of 1966, which you testified to earlier. It relates to affiliates.

Mr. HORNE. Yes, sir.

Mr. EVINS. You show the number of examinations annually and monthly and the time spent at each institution, which is about a week. How many problem cases do you develop as a result of these examinations? I suppose most of them are corrected promptly.

Mr. HORNE. In most cases we are meeting with better results than we were prior to this legislation.

Mr. JONAS. How long does an institution allow a loan to stay in default before it forecloses?

Mr. WALTERS. That depends a little bit on the policy of the institution, the conditions in the area, the cause of the default, that type of thing. Some are very prompt, the moment it comes delinquent they will file foreclosure actions. Others are a little more lenient, as I say, depending upon conditions.

Mr. JONAS. They have some judgment they can exercise in the situation?

Mr. WALTERS. Yes. Once they become delinquent, according to our formula, they will be treated as scheduled items in the substandard assets schedule.

Mr. JONAS. You would list them on your report as questionable assets?

Mr. WALTERS. That is right. But they have judgment as to what they want to do with those assets.

Mr. JONAS. After how long a default?

Mr. WALTERS. Ninety days.

Mr. RAND. Mr. Chairman, another factor that intervenes here is the State law pertaining to foreclosures. Some of the States have very liberal laws from the lender's standpoint. This might trigger foreclosure a little more rapidly than in another State where there is a long period of redemption or other technical, legal barriers put in the way.

WORKLOAD

Mr. EVINS. Here is the description of a caseload on page 138. This is the workload in the home office. Examination of insured associations, you estimate to be 4,610. Examination of affiliates of insured associations, you estimate to be 500. The average assets of insured institutions was $32.1 million, or is estimated to be that. The average volume of new loans made by insured institutions during the year is estimated to be $4.1 million; is that right?

Mr. HORNE. Yes, sir. Of course, as you say, sir, that 31.2 is an average. There is one association that has about $2 billion. Then there are two or three others that reach to about a billion dollars. Then there are quite a few that range between $100 million and $1 billion. Of course, there are some that range less than $1 million, a few, and quite a handful that range on up to $2 million, $5 million, up to $20 million. So the average comes out to $31.2 million.

Mr. EVINS. Here is the workload of the field on page 140. From 1964 to 1968 the combined assets of insured institutions go from $108.9 billion to $149.6 billion. Now, in the next column the increase over last year, the percentage goes down, does it not?

Mr. TREVAS. Yes.

Mr. EVINS. 1964 to 1969 the percentage increase of assets is down.

Mr. TREVAS. That is right.

Mr. EVINS. This is institutions examined, I suppose.

Mr. HORNE. Yes, sir.

Mr. EVINS. Consideration under the new statutes is given to all necessary expenses of the office in connection with the making of examinations. These are considered under the law nonadministrative.

Mr. HORNE. Yes, sir.

Mr. EVINS. Place in the record 138 through 142.

(The pages follow:)

Workload and personnel requirements—Home office

The staff required for the adequate and timely discharge of this responsibility is determined by the number, size, and business volume of insured institutions

and by economic conditions affecting their operations. Information relating to the workload of the office is set forth below:

[Dollar amounts in millions]

Description	1967 actual	1968 estimate	1969 estimate
Examinations of insured associations completed or to be completed	4,639	4,578	4,610
Examinations of affiliates of insured associations to be made		500	500
Average assets of insured institutions (start of year)	$28.3	$29.7	$31.2
Average volume new loans made by insured institutions during year	$3.2	$3.5	$4.1

For fiscal 1969, the staff of the Office will include the Director and a staff of 74.

Despite the estimated increase in the 1969 workload, as indicated in the table on the preceding page, the Office plans to absorb the additional workload with the same number of positions provided for fiscal year 1968.

On a man-year basis, there are 73 man-years in 1969 and 69 in 1968, an increase in 1969 of 4 man-years. The increase represents delay in filling positions in the current fiscal year.

The increase of 4 man-years in the Washington Office staff is to meet the responsibilities imposed by the Financial Institutions Supervisory Act of 1966 in furtherance of preventive supervision. Two man-years are required for additional analytical work to initiate cease-and-desist actions; the remaining 2 man-years are required for guidance of field staff and analysis of reports relating to affiliates of insured institutions.

Functions and responsibilities—Field offices

The Office, in carrying out its examining responsibility, conducts regular periodic and special supervisory examinations of all Federal savings and loan associations and those State-chartered savings and loan associations, homestead associations, and cooperative banks, the savings or share accounts of which are insured by the Federal Savings and Loan Insurance Corporation. Authority was expanded by the Financial Institutions Supervisory Act of 1966 to include examination of affiliates of insured associations.

Noninsured member institutions of the Federal Home Loan Bank System are examined by the Office if they are not subject to State examination and supervision or have not been examined by the State authorities.

The Office also examines applicant savings and home-financing institutions to determine their eligibility for membership in the bank system, insurance of savings or share accounts, or conversion from State to Federal charter.

Public Law 895, approved July 3, 1948 (62 Stat. 1239), considers all necessary expenses of the Office, in connection with the making of examinations, nonadministrative.

Growth of institutions subject to examination

The combined assets of insured institutions reached the approximate total of $133.1 billion on June 30, 1967. The continued asset growth in the fiscal years since 1964 is shown below:

[Dollar amounts in billions]

Fiscal year	Assets	Increase last year		Increase last 3 years		Increase last 5 years	
		Amount	Percent	Amount	Percent	Amount	Percent
1969 [1]	$149.6	$8.6	6.1	$21.8	17.1	$40.7	37.4
1968 [1]	141.2	8.1	6.1	21.5	18.0	45.0	46.8
1967	133.1	5.3	4.1	24.2	22.2	49.7	59.6
1966	127.8	8.1	6.8	31.6	32.8	55.3	76.3
1965	119.7	10.8	9.9	36.3	43.5	56.5	89.4
1964	108.9	12.7	13.2	36.4	50.2	53.1	95.2

[1] Estimated.

The average size of insured institutions as of June 30, 1967, was $29.7 million, an increase of $1.4 million (4.9 percent) during fiscal 1967, and an increase of $10.1 million (51.5 percent) during the past 5 years. It is estimated that the

average size will increase $1.5 million in fiscal 1968 and $1.6 million in fiscal 1969, reaching $32.8 million at June 30, 1969, an increase of 10.4 percent in this 2-year period.

Many of these institutions have grown to great size. The three largest associations at June 30, 1967, had assets in excess of a billion dollars. The largest association had assets of approximately $2.5 billion; the other two had assets of $1.5 billion and $1.4 billion, respectively. As shown by the following table, associations with assets of $100 million or over have increased in number from 211 at December 31, 1964, to 225 in 1965 and 231 in 1966, an increase of 9.5 percent in 2 years.

	Number of associations		
	1966	1965	1964
Assets at Dec. 31:			
Over $300,000,000	37	35	31
$200,000,000 to $300,000,000	46	41	33
$150,000,000 to $200,000,000	47	47	44
$100,000,000 to $150,000,000	101	102	103
$75,000,000 to $100,000,000	100	90	79
$50,000,000 to $75,000,000	243	237	204
$25,000,000 to $50,000,000	658	632	590
Total	1,232	1,184	1,084

New loans

The dollar volume of new loans made in fiscal 1967 amounted to $14.4 billion, a decrease of 34.5 percent below the $22 billion in fiscal 1966. The average volume per association exceeded $3.2 million. Mortgage loans made by insured institutions in fiscal years 1964 through 1967 totaled $84.8 billion; this compares with total mortgage holdings of these institutions of $81.2 billion at June 30, 1963. It is estimated that annual new dollar loan volume of insured institutions will increase to $16.2 billion in fiscal 1968 and to $18.8 billion in fiscal 1969. It is expected that these institutions will continue to make approximately 43 percent of new loans made by all lenders on one- to four-family dwellings while continuing to lend in volume on multifamily dwelling units.

The following table shows the volume and activity of the industry. (The data on loan volume is shown because this is a significant workload factor.)

Insured institutions	1966 actual	1967 actual	1968 estimate	1969 estimate
Number [1]	4,483	4,514	[2] 4,488	4,520
Assets [1] ..billions..	$119.7	$127.8	[2] $133.1	$141.2
Average size [1] ..millions..	26.7	28.3	29.7	31.2
New loans made ..billions..	22.0	14.4	16.2	18.8
Loans to finance construction (included in above) ..do....	5.1	3.1	3.5	4.5
Average volume of new loans ..millions..	4.9	3.2	3.5	4.1
Savings capital [1] ..billions..	102.0	108.1	[2] 115.7	123.6

[1] Beginning of year.
[2] Actual.

Status of examinations

Examinations of insured institutions were maintained on a current basis in fiscal 1967 (see workload table on p. 147). The average period between examinations of Federals was approximately 11.7 months. The average period between examinations of State institutions was approximately 12 months.

Examinations were not made of 12 Federal associations in fiscal 1967. This group included six associations that had not been examined within 13 months as of June 30, 1967; the other six associations in this group were not examined because they had only reached the 12-month period between examinations at the close of the year. Offsetting these 12 examinations were 129 examinations made ahead of schedule.

There were 79 insured State-chartered institutions that were not examined in fiscal 1967. This group comprised 37 institutions that had not been examined within 13 months as of June 30, 1967, and 42 institutions that had only reached

the 12-month period between examinations at the close of the year. However, there were 58 examinations made ahead of schedule.

COMPARATIVE SUMMARY OF NONADMINISTRATIVE EXPENSES

Mr. EVINS. Comparative summary of nonadministrative expenses on page 149. It shows that Greensboro, N.C. and Los Angeles, Calif. cost more to make investigations than in the other areas. The Boston area is the least costly. Is that because they have more institutions in California and North Carolina?

Mr. WALTERS. Larger institutions, primarily. Nine of the 10 largest in the United States are in California.

Mr. JONAS. The Greensboro bank is the biggest bank, is it not?

Mr. HORNE. Not assetwise, and territorially speaking it is second. In number of associations, you are right, sir.

FEDERAL SAVINGS & LOAN INSURANCE CORPORATION

PROGRAM AND FINANCING (IN THOUSANDS OF DOLLARS)

PERSONNEL SUMMARY

Total number of permanent positions	19	20	20
Average number of all employees	14	18	20
Average GS grade	10.0	10.2	10.2
Average GS salary	$11,570	$12,261	$12,619

Mr. EVINS. You delineate the services provided by the Board for the Federal Savings and Loan Insurance Corporation. They provide most of them for the Corporation, including insurance underwriting, examination and supervision of insurance institutions, development of rules and regulations for the Insurance Corporation, legal services, personnel functions, auditing, accounting, budgeting, public informa-

tion, and office management analysis. You do everything for the Insurance Corporation.

Mr. HORNE. Yes, sir.

Mr. EVINS. Then you state down here that the Office of Federal Savings and Loan Insurance Corporation implements the payment of insurance and the development of plans for settlement of insurance, takes steps to prevent default or restore institutions to normal operations, and manages assets acquired by the Corporation.

Mr. HORNE. Yes, sir.

STATEMENT OF SOURCES AND APPLICATION OF FUNDS OF THE INSURANCE CORPORATION

Mr. EVINS. This table on page 164 shows a statement of sources and application of funds of the Insurance Corporation.

In 1967 assets purchased from insured institutions were $1,400,000, then it jumped up to $12 million in 1968, and in 1969 you do not anticipate you are going to purchase any assets. You think you are going to have a good year?

Mr. WORTHY. We simply don't know.

Mr. HORNE. We just are not sure there. As I said in my testimony, Mr. Chairman, I don't want to mislead the committee at all. We still do have some very serious problem associations.

Mr. EVINS. In other words, in 1968 you had to pay off $12 million. You estimate this on the basis of past experience, and you do not anticipate any acquisition of assets.

Mr. HORNE. Estimated on the basis of past experience, and as we look at the problem cases we have. As I pointed out, we have 29 very serious problem cases. These problem cases, sometimes they work themselves out, sometimes it takes a year or 2 or 3 years down the road after they become a problem case before we know what the final results are going to be. There is no way to do more than estimate.

Mr. EVINS. The amount of funds applied to financing in 1967 was $211,500,000. In 1969 you estimate $397 million. This is in the purchase of United States securities by the Insurance Corporation.

Mr. HORNE. Yes.

Mr. EVINS. They want to buy these securities with their funds to make them more liquid.

Mr. HORNE. That is right.

INCREASE IN TREASURY CASH

Mr. EVINS. What about the next figure, the increase in cash with Treasury? It goes from $765,300 to $2,170,000.

Mr. CALLAHAN. This again is much like it was in the case of the Board, it is simply an estimate of the cash we expect to have on hand.

Mr. EVINS. To put into the Treasury?

Mr. CALLAHAN. Yes.

EXPLANATION OF INCREASE IN EXPENSES

Mr. JONAS. Mr. Chairman, I don't think we have a clear enough understanding in the record of why these expenses are jumping up $10 million a year.

Mr. WORTHY. Where is that?

Mr. JONAS. Under "Funds applied, expenses," $47.8 million in 1967 to $59.3 million in 1968, and $68.6 million in 1969.

Mr. CALLAHAN. If you look on the next page you will see the detail.

Mr. EVINS. Tell us why it goes up about $10 million a year.

Mr. CALLAHAN. On page 165 you will see a more detailed explanation.

Mr. WORTHY. We pay a return on our secondary reserves to the institutions which have deposited premium prepayments with us.

Mr. JONAS. That is called an expense; you list that as an expense?

Mr. WORTHY. Yes; though we retain the funds ourselves. That is shown on the next page. For example, in 1967 it is shown as $39 million, whereas in fiscal 1968 it will be $48 million, and then on up each year as our fund builds up. It really indicates a higher percentage return as well as a larger fund.

For example, our secondary reserve right now is something on the order of $1.1 billion. At the end of 1967, calendar 1967, we paid a return to the institutions who had deposited this with us of about 4.23 per centum for the average amount they had in during the year. That is how we arrive at the $39 million. As they deposit more with us, why, of course, that will go up.

Mr. HORNE. As they grow in size they deposit more.

Mr. WORTHY. If you look on the next page at the insurance reserves, the secondary reserve down at the bottom, in 1966 it is shown as $959 million and then it climbs on up each year. Right now it is, as of the end of 1967, about $1,127,000,000.

Mr. WYMAN. It is an interest charge.

Mr. WORTHY. That is right. The $39 million was counted as part of the earnings of the associations.

Mr. JONAS. Do you return any unearned premiums or any surplus of premiums back to the member institutions?

Mr. WORTHY. No, sir; we do not.

Mr. JONAS. You retain that?

Mr. WORTHY. The only return that we make is the one that I mentioned on the secondary reserve and we actually retain those dollars but credit them to the account of the association which earned them. We don't make a premium credit as does the FDIC.

APPLICATION OF FUNDS AND INCOME STATEMENTS

Mr. EVINS. We will place pages 164 and 165 into the record.

(The pages follow:)

A. STATEMENT OF SOURCES AND APPLICATION OF FUNDS

	1967 actual	1968 estimate	1969 estimate
FUNDS APPLIED			
To operations:			
Acquisition of assets:			
Assets purchased from insured institutions	$1,441,982	$12,000,000	
Furniture, fixtures, and equipment	11,356	5,000	$5,000
Subrogated accounts purchased in insured institutions	34,118,482		
Loans to insured institutions	65,000,000		
Contributions and provisions for contributions to insured institutions	12,457,475	5,000,000	
Expenses	47,896,490	59,354,567	68,620,028
Loss on assets acquired from insured institutions	10,634,758		
Increase in selected working capital			2,644,882
Total applied to operations	171,560,543	76,359,567	71,269,910
To financing:			
Increase in investments in U.S. securities held (par)	211,567,000	396,000,000	397,000,000
Increase in cash with Treasury		765,330	2,170,186
Total applied to financing	211,567,000	396,765,330	399,170,186
Total funds applied	383,127,543	473,124,897	470,440,096
FUNDS PROVIDED			
By operations:			
Realization of proceeds from assets acquired from insured institutions	19,755,545	20,000,000	20,000,000
Additional premiums credited to secondary reserve	84,618,842	183,000,000	189,000,000
Return on additional premiums—prepayments	39,200,863	48,633,212	56,756,843
Gain on assets acquired from insured institutions	114,598		
Income	164,986,416	220,145,779	204,683,253
Decrease in selected working capital	20,201,419	1,345,906	
Total provided by operations	328,877,683	473,124,897	470,440,096
By financing: Decrease in cash with Treasury	54,249,860		
Total funds provided	383,127,543	473,124,897	470,440,096
Funds applied to operations	171,560,543	76,359,567	71,269,910
Funds provided by operations	328,877,683	473,124,897	470,440,096
Net budget expenditures	−157,317,140	−396,765,330	−399,170,186
The above are credited to net receipts of the fund	−157,317,140	−396,765,330	−399,170,186

B. STATEMENT OF INCOME AND EXPENSE

Income:			
Insurance premiums and admission fees earned	$94,755,240	$139,180,492	$106,067,496
Interest earned on U.S. securities	63,771,243	74,040,287	91,690,757
Interest earned on loans	1,268,843	1,925,000	1,925,000
Income on assets acquired from insured institutions	5,148,142	5,000,000	5,000,000
Gain on assets acquired from insured institutions	114,598		
Gain on sale or exchange of securities	41,351		
Miscellaneous	1,597		
Total income	165,101,014	220,145,779	204,683,253
Expense:			
Administrative expense	245,059	306,000	340,000
Payments to Federal Home Loan Bank Board for services and facilities	4,013,304	5,380,355	6,382,185
Liquidation and other expenses	4,398,533	5,035,000	5,141,000
Contributions and provisions for contributions to insured institutions	12,496,206	5,000,000	
Subtotal	21,153,102	15,721,355	11,863,185
Accrued return on additional premiums—prepayments	39,200,863	48,633,212	56,756,843
Depreciation	2,059	4,000	4,000
Provision for losses on assets acquired from insured institutions	13,415,099		
Provision for losses on subrogated and insured accounts in institutions in liquidation	2,723,736		
Total expense	76,494,859	64,358,567	68,624,028
Net income for the year	88,606,155	155,787,212	136,059,225
ANALYSIS OF RETAINED EARNINGS [1]			
Retained earnings, beginning of year	775,295,681	863,901,836	1,019,689,048
Retained earnings, end of year	863,901,836	1,019,689,048	1,155,748,273

[1] In addition to retained earnings which are credited to the primary reserve, additional premiums (prepayments) and return on additional premiums are credited to a secondary reserve. (See statement C.)

STATEMENT OF FINANCIAL CONDITION

Mr. EVINS. Your financial condition statement is page 166. You have cash with the U.S. Treasury. In 1967 it was $59 million. Now it is down to $7,900,000. Tell us about this decline.

Mr. WORTHY. In 1966 you will note it is $59 million. The reason for that is that at the end of the year we were in the process of making a $48 million loan to an insured institution in California and we had transferred about $52 million out of our special series notes into cash. The loan was disbursed the next day, I believe.

Mr. GREENEBAUM. This was as of June 30 that you had this money in cash.

Mr. WORTHY. Yes. Now, ordinarily we will keep $5 million or sometimes a little more in cash. Quite often we will convert it retroactively to special series notes at the end of a month. The Treasury pays 2 percent on these notes. We do have to keep a substantial cash balance because of the nature of our insurance liability.

Mr. EVINS. Your investments were $1,516 million in 1966 and $1,728 million in 1967 and is estimated to be $2,500 million in 1969.

Mr. WORTHY. Right.

Mr. EVINS. The accounts receivable also increase, from $41 million in 1966 to $52,800,000 in 1969. Now, the assets acquired from insured institutions goes down. So that they must be operating and you are not acquiring them. Now, loans to insured institutions, $15 million to $80 million. They have to have more loans to keep them sound.

Mr. HORNE. Also, this is frequently to assist an association that has taken over a sick association.

Mr. TREVAS. To facilitate a merger.

Mr. WORTHY. We have used this method on three or four occasions to solve a problem.

Mr. HORNE. It is usually better when we can effect a merger, Mr. Chairman, than to pay out, although we follow whichever procedure, in our opinion, is least expensive to the insurance corporation.

Mr. JONAS. Of course you take a risk when you do that; you load the sound institution with a lot of unsound paper.

Mr. HORNE. We stand back of that. We work it out so that we stand back of the unsound paper.

Mr. WORTHY. Our theory is that the private institution can make a more efficient disposition of these marginal assets than we could.

Mr. JONAS. It is recourse transfer.

Mr. HORNE. Yes.

STATEMENT OF FINANCIAL CONDITION

Mr. EVINS. Place the financial statement of the corporation into the record, page 166.

(The page follows:)

C. STATEMENT OF FINANCIAL CONDITION

	1966 actual	1967 actual	1968 estimate	1969 estimate
ASSETS				
Cash with U.S. Treasury	$59,310,116	$5,060,256	$5,825,586	$7,995,772
Cash with banks	808	33,403		
Investments	1,516,701,000	1,728,268,000	2,124,268,000	2,521,268,000

Total insurance reserves	1,753,906,618	1,966,332,477	2,353,752,901	2,735,568,969
Total liabilities and insurance reserves	1,802,988,987	2,032,002,973	2,428,227,976	2,815,193,844

CREATION AND GROWTH OF INSURANCE CORPORATION

Mr. EVINS. Now the creation and growth of the Insurance Corporation is shown on page 169. The chart is on page 170. It shows insured State-chartered and federally insured institutions. Membership reached 4,488 in 1967. Down in the fourth paragraph of page 171 you say the estimated number of insured and uninsured savings and loan associations at December 31, 1967, was 6,117. Of this number, 4,491 were insured. Now, that 4,491 includes others that are uninsured but still members.

Mr. WORTHY. Not all of these are members of the Bank System.

Mr. TREVAS. 400 of them, of the roughly 2,000, are not.

Mr. EVINS. Are uninsured?

Mr. TREVAS. That is right.

Mr. EVINS. There is no liability with the Insurance Corporation?

Mr. TREVAS. No, sir; that is right.

Mr. EVINS. You just list them?

Mr. HORNE. Yes; as a point of information for the committee.

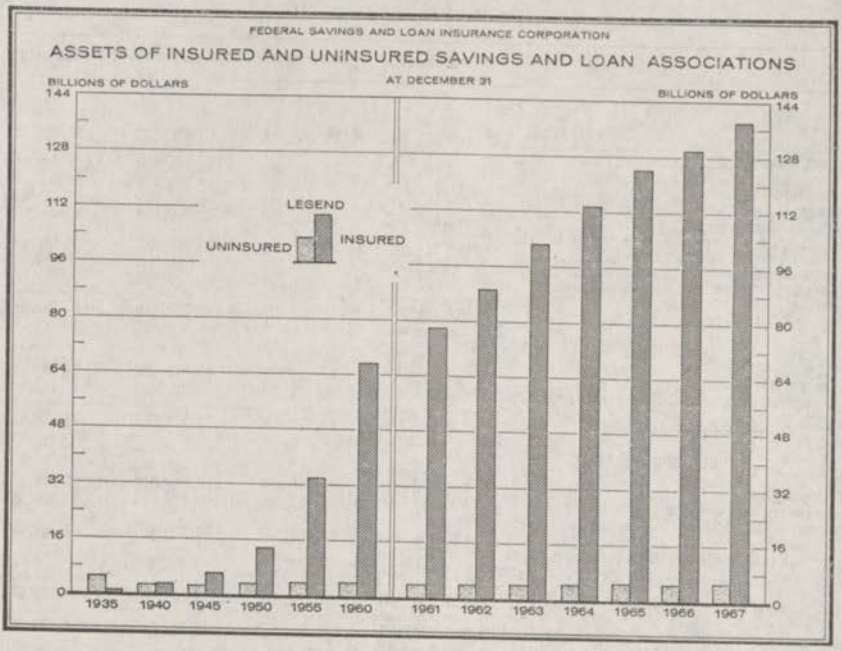
Mr. EVINS. Then you have approximately the same chart on page 172, showing the uninsured have remained relatively constant over the years.

Mr. TREVAS. Yes.

ASSETS OF SAVINGS AND LOAN ASSOCIATIONS

Mr. EVINS. Place this chart into the record.

(Page 172 follows:)



RATIO OF RESERVES TO POTENTIAL LIABILITIES

Mr. EVINS. Now as to insurance claims on page 176, has the growth of your reserves been commensurate with the growth of the liability?

Mr. WORTHY. Yes, sir. Our ratio of reserves to potential liabilities has been on the increase since 1961.

Mr. EVINS. What is the situation at the present time?

Mr. WORTHY. We hold reserves amounting to 1.62 percent of savings capital and creditor obligations.

Mr. EVINS. Not in percentages, but in dollars?

Mr. WORTHY. Our reserves total $2,050 million right now.

Mr. EVINS. A little over $2 billion in reserves.

Mr. WORTHY. Right.

Mr. EVINS. How much is insured now?

Mr. WORTHY. $120 billion.

Mr. EVINS. $120 billion insured, and $2 billion-plus in reserve.

Mr. HORNE. Yes. I might point out as fuller explanation to the committee, that this $2 billion we have in the Insurance Corporation, while theoretically it is to insure the $120 billion of savings in the industry, we also require each association to maintain a certain reserve to serve as its first line of defense. So if the system works as we intend for it to work—of course, it does not always do so—we would have today approximately the $2 billion in the Insurance Corporation that Mr. Worthy is talking about and we would have another probably $8 billion or $9 billion of reserves within the institutions themselves.

Mr. WORTHY. I might also point out that we have a call on the Treasury for $750 million and on the industry for approximately 1 percent of their savings, which is a little over $1 billion.

Mr. EVINS. You could call on the industry for 1 percent.

Mr. HORNE. If we have to, yes. You gave us that authority in 1965.

Mr. EVINS. But an individual institution is not responsible for the defaults of a sister institution or another institution?

Mr. HORNE. That is correct; only indirectly. He pays his insurance premium to the Insurance Corporation and this is where, of course, we obtain the money to payoff one that has gone sour. So the good ones have frequently contributed to paying out the savings of a bad one.

Mr. WORTHY. It would not be a contribution but only a deposit that they would make with us.

Mr. EVINS. They do not like it, but it is required by law to make the whole system sound.

Mr. HORNE. Yes, sir. The 1 percent additionally we could levy you are talking about is separate and apart from the regular insurance premium which they pay in to the insurance corporation annually. That 1 percent is a backup.

Mr. EVINS. You don't anticipate calling on this supplemental 1 percent.

Mr. HORNE. We never have.

INSURANCE LIABILITY

Mr. EVINS. Place in the record pages 175 through 177.

(The pages follow:)

Insurance liability.—The following table shows the potential liability of the Corporation as of the dates indicated:

Potential liability in billions at June 30—

1946	$5.7	1964	$93.5
1950	10.5	1965	102.5
1955	27.4	1966	109.6
1960	54.7	1967	118.4
1961	62.6	1968[1]	126.5
1962	72.0	1969[1]	135.1
1963	82.3		

[1] Estimate.

The potential liability of the Corporation increased from $109.6 billion at June 30, 1966, to $118.4 billion at June 30, 1967, an increase of 8 percent. It is expected to be $126.5 billion by June 30, 1968, and $135.1 billion by June 30, 1969, an increase of 14.1 percent in the 2-year period.

Insurance claims.—Since its inception through June 30, 1967, the Insurance Corporation has had a total of 69 settlement cases; 31 of these occurred in the last 10 years. Losses, including provision for losses, have amounted to $103.7 million as indicated in the following table (dollars in thousands):

Method of settlement	Number of associations	Number of investors protected	Net insurance losses (including provision for losses)
Acquisition of assets	13	75,782	$51,809
Acquisition of assets and contribution	5	25,244	8,097
Contribution	36	93,799	10,578
Contribution and loan	1	14,542	5,500
Loan	3	75,309	0
Loan and acquisition of assets	1	26,137	5,259
Receivership	10	48,896	22,452
Totals	69	359,709	103,695

As indicated, contributions were made to 42 institutions; 10 institutions were placed in receivership and liquidated, and in 19 cases the Corporation purchased the assets of 14 State-chartered institutions and five Federal-chartered institutions. The losses, including provision for losses, represent approximately 8.9 percent of cumulative gross income through June 30, 1967.

Borrowing position.—Under Public Law 576, approved June 27, 1950, the Corporation is authorized to borrow from the U.S. Treasury such funds, not exceeding $750 million outstanding at any one time, as in the judgment of the Federal Home Loan Bank Board are required for insurance purposes. As this authority has never been exercised, there are no obligations of this type outstanding.

Retirement of capital stock.—Pursuant to section 5(h) of Public Law 576, approved June 27, 1950, the Corporation on July 1, 1958, completed the retirement of its entire capital stock.

Retirement of the stock, amounting to $100 million, began in fiscal year 1951. The amount of the capital stock retired each year was equal to 50 percent of the Corporation's net income for the fiscal year.

During the life of the stock, the Corporation paid out in the form of a return in lieu of dividends, $42,976,000; almost the entire amount was paid to the Secretary of the Treasury.

PROBLEM CASE WORKLOAD

Mr. EVINS. You have never exercised your borrowing authority from the Treasury?

Mr. TREVAS. That is right.

Mr. WORTHY. We have not.

Mr. EVINS. On page 181, you talk about your workload. You state as of December 31, one case is pending which involves a contribution to facilitate a merger and a purchase of up to $12 million in problem assets. Several mergers of problem institutions will be consummated in a few months. Loans to two insured institutions can reasonably be anticipated in the approaching months.

Finally, there is a distinct possibility that the next 6 months will witness receiverships with the ensuing payout of insured savings in three institutions with savings aggregating $132 million. You made a loan of $48 million to an association to facilitate acquisition of its sound assets. You extended loans in the amount of $17 million to two associations, and executed an agreement to grant loans to a third institution in order to prevent their default, and you paid insurance in 1967 in two cases of default. You have a great record and it is very impressive. You cover this bad record way over here on page 182.

Mr. HORNE. That isn't intentional, Mr. Chairman. That is just simply a part of the record of the FSLIC.

Mr. EVINS. We wouldn't want it at the beginning. You have it in the right place. Tell us about your problem institutions.

Mr. HORNE. Let me explain, Mr. Chairman, that we are talking about two things here. We are talking about the associations described here. Then we do have some additional associations that are problem cases that I mentioned earlier in my testimony, which have not yet reached the stage that they come under the domain of FSLIC.

Mr. WORTHY. Actually, in calendar 1967, we only had five cases which we handled by merger.

Mr. EVINS. You handled five cases by merger last year.

Mr. WORTHY. Right. They were merged. This year we have already had one merger which has now been consummated, and we are working on another one.

Mr. EVINS. Is that in calendar year 1968?

Mr. WORTHY. That is right. We are in the midst of negotiations on another merger which will be consummated within the next 30 days. Then going from that, I really expect that we will probably have two or three receiverships during this calendar year.

CURRENT RECEIVERSHIP CASES

Mr. EVINS. Do you have any receiverships in operation now?

Mr. WORTHY. We are the receiver of an association in Phoenix, Ariz., and the State of Illinois is a receiver of two in their State.

Mr. EVINS. That one is called the Gibraltar.

Mr. WORTHY. That is right.

Mr. EVINS. That is a strong-sounding name, to go under.

You have two in receivership at this time in Illinois?

Mr. WORTHY. Yes; two in Chicago and one in Arizona. We anticipate two more this year.

Mr. HORNE. As you know, Mr. Chairman, usually if a State chartered, federally insured association goes under, the State has the right to make or not to make us the receiver. We prefer that the State make us a receiver because we can liquidate usually at a lesser cost to the Insurance Corporation than the State can, but frequently the State will, itself, retain receivership even though we have had to make the payout.

Mr. EVINS. Well, if it is insured by Federal Savings and Loan Insurance Corporation you immediately are involved, whether the State asks you to be a receiver or not.

Mr. HORNE. Yes; we certainly are.

Mr. EVINS. You want to assume the responsibility, and if the State gives it to you, you will gladly take it.

Mr. HORNE. Yes; because we will usually save the Insurance Corporation money when we do so.

Mr. EVINS. The five that merged last year and the two that merged this year, you will save the assets and the companies will be operating.

Mr. HORNE. Yes, sir.

Mr. EVINS. In the receiverships, you sell the assets and you pay off the shareholders a percentage?

Mr. HORNE. We pay off the shareholders; yes, sir. We pay the shareholders up to the full amount legally insured, now $15,000.

Mr. TREVAS. That is more than——

Mr. HORNE. We pay them immediately.

Mr. WORTHY. In the *Gibraltar* case that you mentioned, we were paying the savers the full $10,000, which was the limit at that time, within 5 days after the appointment of a receiver for the purpose of liquidation.

Mr. EVINS. Does the Insurance Corporation take physical custody of the properties or is the receiver appointed through a court?

Mr. WORTHY. Through the court.

Mr. HORNE. In the case of *Gibraltar*, the State of Arizona made us the receiver. In the case of the two in Chicago, the State authorities retained receivership for themselves.

Mr. EVINS. I think that is a very good record; of the great numbers of institutions and the large amounts of money involved, you are going to have a few bad apples.

Mr. HORNE. Bound to.

JUSTIFICATION MATERIAL

Mr. EVINS. Place in the record page 182.
(The page follows:)

During the 18 months ended December 31, 1967, the Corporation took the following actions with reference to problem institutions:

1. Paid insurance in fiscal 1967 in two cases of default and acquired approximately $35 million in subrogated share accounts. In one of these associations the Corporation was named as receiver for the purpose of liquidation.

2. Agreed to purchase $4.4 million in assets from an association in order to prevent a default.

3. Made a loan of $48 million to an association to facilitate acquisition of its sound assets and related savings by a sound institution.

4. Extended loans in the amount of $17 million to two associations and executed an agreement to grant loans to a third institution in order to prevent their default.

As of December 31, 1967, one case is pending which involves a contribution to facilitate a merger and a purchase of up to $12 million in problem assets. Several mergers of problem institutions which involve contributions are contemplated and will probably be consummated in a few months. Loans to two insured institutions (one an addition to an outstanding loan) can reasonably be anticipated in the approaching months. Finally, there is a distinct possibility that the next 6 months will witness receiverships with the ensuing payout of insured savings in three institutions with savings aggregating $132 million.

Each of these actions acted (and will act) to add substantially to the workload of the Corporation.

HISTORICAL AND FINANCIAL BACKGROUND OF THE FHLBB

Mr. EVINS. You have a general statement here in the appendix; we will put in the record, for informational purposes, pages 199 and 200.
(The pages follow:)

HISTORICAL AND FINANCIAL BACKGROUND OF THE FEDERAL HOME LOAN BANK BOARD

The Federal Home Loan Bank Board was established by the Federal Home Loan Bank Act, approved July 22, 1932, to provide a permanent credit reservoir for thrift and home-financing institutions through the creation of regional Fed-

The Home Owners' Loan Act, approved June 13, 1933, gave authority to the banks by investing, over a period, $124,741,000. This investment was retired by the banks, over the years, at a rate in excess of statutory requirements. As of July 2, 1951, the Government's investment had been fully repaid. Since that time the capital stock of the 12 banks is owned by the member institutions.

The Home Owners' Loan Act, approved June 33, 1933, gave authority to the Board to charter and supervise local mutual institutions to be known as Federal savings and loan associations. These associations were to serve as a means of encouraging local thrift and home financing.

On June 27, 1934, title IV of the National Housing Act provided for the creation of the Federal Savings and Loan Insurance Corporation and placed it under the direction and management of the Federal Home Loan Bank Board. The capital stock of the Corporation was $100 million. It was subscribed for by the former Home Owners' Loan Corporation. Retirement of the stock began in 1951. By July 1, 1958, the Corporation had completed the retirement of the stock.

The Federal Savings and Loan Insurance Corporation insures the safety of savings against loss up to $15,000 for each saver or investor in all federally chartered associations and in State-chartered associations which apply and qualify for such insurance.

From the date of its creation in 1932 until April 25, 1939, the Federal Home Loan Bank Board functioned as an independent establishment reporting directly to the Congress and the President. On April 25, 1939, by congressional approval of the Presidents Reorganization Plan No. 1, the Board and the organizational units under its jurisdiction were grouped under the Federal Loan Agency along with other related Government corporations and organizations.

The Board continued under the Federal Loan Agency until February 24, 1942, when by Executive Order No. 9070 the five-man Board was vacated and its Chairman was made Commissioner of the "Federal Home Loan Bank Administration," the units formerly under the Board being retained. The Executive order placed the Board under the National Housing Agency, together with the Federal Housing Administration and the Federal Public Housing Authority.

Under Reorganization Plan No. 3 of 1947, effective July 27, 1947, a bipartisan Board of three members was substituted for the single Commissioner and the "Home Loan Bank Board" became a component part of the Housing and Home Finance Agency.

The Board continued in this relationship until the enactment of the "Housing Amendments of 1955," approved August 11, 1955, which reestablished the "Federal Home Loan Bank Board" as an independent agency.

Reorganization Plan No. 6 of 1961, effective August 12, 1961, transferred to the Chairman of the Board, the Board's functions with respect to the overall management, functioning, and organization of the Agency. The appointment, removal, and direction of personnel, the distribution of business among and communication of Board policies to such personnel, the enforcement of policies, as well as other administrative and management functions were transferred to the Chairman. Nothing in the transfer impinges upon the ability of the members of the Board to act independently with respect to substantive matters. In carrying out his managerial functions, the Chairman is governed by the general policies of the Board; the Board has the authority to approve the Chairman's appointments of the heads of major administrative units, and the other Members of the Board retain their control over the personnel in their immediate offices.

FEDERAL HOME LOAN BANK INTEREST RATES

Mr. JONAS. State briefly for the record the basis on which you charge different banks a different rate of interest for their borrowings. You have 12 member banks and you have a different rate, do you not?

Mr. HORNE. I want to make certain that I know specifically what your question asks. Are you talking of the rates that the member associations pay for the money they borrow from the bank?

Mr. JONAS. Yes.

Mr. HORNE. All right, sir. That varies in accordance with what the board of directors at the particular bank authorizes. We at the Board level give the individual boards of directors latitude, that is, the directors of the individual 12 banks, a latitude between 5½ and 7 percent. So the board of directors operate within that range themselves.

Mr. JONAS. It is not based, then, as I understood, on the rate they have to pay on their own debentures that they issue?

Mr. HORNE. Well, that is one of the points that the board of directors will—that is, the board of directors of that particular bank will consider.

Mr. JONAS. They have the discretion?

Mr. HORNE. Within the range of 5½ to 7.

Mr. JONAS. That is why so many of the rates are different?

Mr. HORNE. Yes, sir.

EFFECT OF PUBLIC LAW 90–218 ON BOARD'S OPERATIONS

Mr. EVINS. Mr. Chairman, state for the record the effect, if any, of Public Law 90–218 on the Board's personnel and obligations?

Mr. CALLAHAN. The information passed on to me, Mr. Chairman, from the Bureau of the Budget was that this law, as passed, did not

apply to the Bank Board's operations since we do not operate with appropriated funds.

Mr. HORNE. In other words, Mr. Chairman, if I may express appreciation to you and other members of the committee for your understanding of our particular crucial situation evidenced by the wording that you put in your record last year; the Bureau of the Budget took that into consideration in determining whether or not this 10 percent was going to be applied to this agency. Also in considering your wording they took into consideration that here on the one hand we had increasing assets, we have had to a great degree increasing problems, and we are entirely self-supporting so far as public funds are concerned.

Mr. EVINS. Although it has an effect on expenditures?

Mr. HORNE. Bookwise yes, sir; bookwise it does, but not on appropriated funds.

They took all of these things into consideration and decided from the standpoint of the security of the $145 billion industry they should leave us to proceed under the restrictions that we were already under and not make those restrictions at that time any sharper than they already were.

Mr. EVINS. We want to commend the Board for its important work. It has an important responsibility. We wish you a lot of good luck and success. Mr. Greenebaum, do you have anything to say?

Mr. GREENEBAUM. No, sir.

Mr. EVINS. Mr. Rand?

Mr. RAND. Nothing at all, Mr. Chairman.

Mr. EVINS. Thank you very much.

TUESDAY, FEBRUARY 27, 1968.

APPALACHIAN REGIONAL COMMISSION

WITNESSES

JOE W. FLEMING, COCHAIRMAN
JOSEPH E. NAPOLITANO, SPECIAL ASSISTANT TO THE FEDERAL COCHAIRMAN
EDWARD B. CURRAN, PROGRAM COORDINATOR
EARL SCHMITT, COMPTROLLER

Mr. EVINS. The committee will come to order.

We have with us this morning our friends from the Appalachian Regional Commission. Mr. Joe W. Fleming is Federal Cochairman. Mr. Joseph E. Napolitano is the Special Assistant to the Federal Cochairman. Mr. Edward B. Curran is Program Coordinator, and Mr. Earl Schmitt is the Comptroller.

Mr. Chairman, your State representatives are not in attendance with you this morning.

Mr. FLEMING. We would be happy to supply them at a future date, Mr. Chairman.

Mr. EVINS. It would be well for the State representative to attend the hearings at some future date.

I believe this is about the fourth hearing we have had with the Commission. Heretofore it has been fractionated, but this time the programs are consolidated into one budget.

Mr. Chairman, we would be glad to hear you.

GENERAL STATEMENT

Mr. FLEMING. There is a statement in the front of the justification which summarizes the entire program. I would like to ask your consent to submit this for the record.

Mr. EVINS. The entire statement may be included. It is an excellent statement.

(The statement follows:)

PROGRAM SUMMARY

Fiscal 1969 will be the fourth full fiscal year of the Appalachian regional development program. It is the first full year for which this Committee has had the opportunity to review the program in its entirety. Fiscal year 1968 appropriations were included in the supplemental appropriation bill enacted shortly before the end of the first session of this Congress. Funds for the highway program were not included, having been previously appropriated in the State-Justice-Commerce appropriation bill.

A total of $213,600,000 is requested for all programs authorized by the Appalachian Regional Development Act as amended for fiscal year 1969. In addition, the $63,643,000 in obligational authority will be carried over from fiscal year 1968 to fiscal year 1969 as required by Public Law 90-218, which limits obligations in fiscal year 1968. Total obligations contemplated for fiscal year 1969 are, therefore, $277,243,000. This is an increase of $25,769,000 over current estimated obligations for fiscal year 1968. Virtually all of the increase will be in the highway program where the engineering and right-of-way acquisition, financed in the early phase of the program, are producing a great many more construction projects than have occurred in prior years.

We are all aware of the need for every economy consistent with the public wel-

fare and each item in the fiscal year 1969 appropriation request has been carefully analyzed to present to the Congress the minimum request possible. The basis for each request is covered in the section-by-section justification but an example might be helpful. One hundred and twenty-five million dollars is requested for the development highway and access road program. This is at least $100 million below what could be used on projects now authorized. Through the use of the advanced financing provisions of the 1967 amendments, it is anticipated that much of this deficit can be made up by the States. The appropriation request is the minimum which, in the judgment of all concerned, is adequate to exhibit a continued Federal commitment to the construction of the system.

By way of background, it is necessary to review the Appalachian program in the context of the events and conditions from which it evolved. Between 1950 and 1960, two million people migrated from the Appalachian region which was suffering from several severe economic changes—the decline of subsistence agriculture, the development of new machinery for mining coal which greatly reduced the need for manpower, the obsolescence of old industries and the decline of employment in timbering and other resource-oriented employment. These factors made the Appalachian region the greatest single concentration of rural poverty in the country.

These peculiar economic circumstances of the Appalachian region in 1960, while not created by, were certainly being perpetuated by, its inability to take full advantage of existing government programs.

Much has been said about the concept of federalism—creative federalism as President Johnson described it when he signed the original legislation into law on March 9, 1965—"The objectives of this Appalachian bill are important. But the origins of the measure are equally important. Originated by the Governors of the Appalachian States, formed in close cooperation with the Federal Executive, approved and enacted by the Congress of all the people, this is the truest example of creative federalism in our times." The success which the Appalachian program has achieved is due to its translation of those words into effort and organization—emphasizing the basic fact that modern government is and must be more of a process than an institution.

The origins of the Appalachian program say a great deal about federalism. Two events took place in May of 1960 which were to reflect these factors and determine the governmental response to them. The first was the focusing of national attention on the economic ills of the region in the course of the West Virginia presidential primary. Coupled with this was the realization by the region's Governors that while the States could not hope to do the job themselves, only the full participation of the States could make the new programs work. This resulted in the organization of the conference of Appalachian Governors.

In 1963, President Kennedy established a joint Federal-State Commission to propose solutions to the economic problems of the region. The report of this group, signed by the Governors and the Federal agency heads involved, was delivered to President Johnson in the spring of 1964. Legislation was submitted to the Congress and ultimately enacted March 9, 1965. The most innovative part of the legislation was the joint State-Federal Commission it established.

The Appalachian Regional Commission is composed of the Governors of the 13 Appalachian States, and the Federal Cochairman. The act provides that a State cochairman shall be elected by the Governors and the Governors have established a 6-month term for this position. Governor Buford Ellington is now serving as the State cochairman of the Commission.

In addition, there is a States regional representative who is selected and paid by the Governors. It is his responsibility to serve as the chief policy and administrative officer of the Commission for the States and to advise and assist the States on questions involving plans, programs, and projects. The States have budgeted $110,000 to support this office in fiscal year 1969.

Each of the Governors has appointed a representative who attends the monthly meetings of the Commission when the Governors are not present. They are generally members of the Governors' personal staffs or the heads of major State departments. In two States, the Governors' appointees are private citizens.

The program urged by the Governors and the President's Appalachian Regional Commission is well-known to most of you. It centers on:

Transportation in providing funds for a system of major highways through the region—complementary to the interstate routes—to provide new access for commerce into and within the region.

Better use of the region's water resources through the development of a comprehensive water resource plan for the region.

Better use of the land in the region by restoring land damaged by mining and through treatment of other lands with Federal cost-sharing.

Better public facilities for health, education, sewage treatment, and other areas—through a program of supplemental grants-in-aid to make better use of Federal programs in these fields.

It was the need for this last element that says much about Appalachia's tragic lag behind the rest of the Nation. Under the matching requirements of the grant-in-aid programs, the region did not receive a fair share of the funds from national programs simply because communities lacked the tax base to provide the local share.

Many Appalachian communities did not receive Federal funds for such facilities as a library, a sewage treatment plant, a hospital, or a vocational school, merely because local matching funds could not be raised.

In addition, there were other needs, besides funds, which had to be taken into account. These needs, while present in many parts of the country, were more evident in Appalachia because past governmental efforts (at all levels) had not been able to successfully deal with the long-range problems.

As the economic recovery began in the country in the spring of 1961 and continued on into 1963, it became painfully evident that Appalachia was not sharing in the general economic expansion. Indeed, if this expansion were to continue (as it has now for more than 7 years) the region's lag would become even greater—making it even harder for its economy to catch up.

To make the necessary beginning, three pertinent facts were identified: first, that scattered planning efforts on even a statewide basis, much less on a county-by-county basis, would not solve the overall regional problem; second, that the region had much to offer in the way of resources and manpower if they could be effectively utilized; and third, that the Federal treasury was not sufficiently funded to alleviate both the effects of the region's economic ills and the causes of those ills.

In addition to these judgments about what was needed, there was added a directive as to where it should go. Recognizing that there would never be enough money—or time—to meet the demands in the region, the Congress wrote into the act the single directive that funds should be invested to serve areas "where there is a significant potential for the future growth" and where the expected return on public dollars invested will be the greatest.

By law, the decisions on the potential in each State was left to its Governor subject to review by the Commission to be determined on the basis of an overall economic strategy for growth in the Appalachian portion of each State. Each State decides where growth can be produced. It must also decide what types of investments in what kind of facilities would produce the greatest return on the public dollars invested.

It was clear to the Commission from the outset that for each State to recommend the most appropriate projects, each State would have to prepare, and progressively refine, a State development plan, designed to be a program of specific actions, employing all available governmental programs and funds, to overcome obstacles to development and capitalize on the potentials of the area. Increasingly, these plans have become more specific in their evaluation of obstacles and potentials, and this has enabled the States to identify better their "areas where there is a significant potential for future growth."

This process of State planning for development has led each State to identify those programs deemed most useful to further growth in its Appalachian area and the specific locations at which the projects under these programs should be undertaken.

Commission resolutions, unanimously adopted, established the process of requirements for the State development plans, but each document is the product of a State. As such, it reflects the unique understanding and institutions of that State and provides evaluations that blend local awareness with the wider perspective provided by Commission policy and research. Collectively, these State plans define four distinct areas of the region that have common problems and common objectives.

Northern Appalachia, which encompasses the southern tier of New York, most of the plateau area in Pennsylvania and Maryland, northern West Virginia, and southern Ohio, the problems are related to the transition from dependence on the coal-steel-railroad economy to new types of manufacturing and service employment. Many communities suffer from environmental problems which are the legacy of past industrial and mining activities, and include mine drainage pollution, mine subsidence, blight from strip mining, and mine fires and flooding. Air pollution is also a problem, particularly in the river valleys. While there are deficiencies in urban facilities, they are not as acute as in other parts of the region, so there is less emphasis in the State plans on developing uniform public facilities for the smaller urban communities as there is in other parts of the

region. High priority has been given to solving environmental problems through the use of mine area restoration, water pollution control, supplemental grant funds, and other Federal and State programs. A second priority in northern Appalachia is in the field of technical education, particularly at the post high school level. The reason for this is that new skills are required to make the transition from the old economic base to the new, more diversified light manufacturing now evolving. New types of training and education must be provided. Pennsylvania has concentrated on the construction of technical education centers. Ohio is moving in the same direction and the Appalachian funds have prompted West Virginia to construct its first multicounty vocational facilities and begin planning for a statewide system.

A third priority in northern Appalachia is the development of industrial, commercial, and recreational sites where basic public facilities and access must be provided. Access road funds have been used to facilitate industrial park development, partciularly in Pennsylvania.

Central Appalachia, covering approximately 60 counties in eastern Kentucky, southern West Virginia, Virginia, and Tennessee, is quite different. The States have determined that urbanization must take place faster if adequate services and employment opportunities are to be developed for the million and a half people now living in the area.

The choice is between faster growth of communities in this area and continued outmigration. While this will ultimately call for a comprehensive "mix" of public investments, three initial priorities have been established. The first is transportation. Unless the 60 counties can be linked to the national markets and commutation of the labor force facilitated, it appears that development in this area will be virtually impossible. As a result, the largest share of the highway program has gone into this topographically rugged area.

As in other areas, education has high priority. Heavy emphasis is being placed on high school and post high school vocational and technical education, and complementary facilities such as educational television and some 2-year colleges. The States have recognized that such projects alone will not solve the educational difficulties of this area. Working through the Appalachian Education Advisory Committee, efforts are underway to provide and improve elementary and secondary education as well as preschool training funded under Federal and State programs.

The third priority in central Appalachia is in the field of health. The comprehensive health demonstration program, under section 202, will cover 75 percent of the population in this area where the health needs are the greatest in the region. Other health projects aided wtih supplemental grant funds emphasize the promotion of long term care beds in association with competent and well-staffed hospitals, and mental health and mental retardation facilities. Kentucky's program this year will have a very large proportion of mental health and nursing home facilities, in addition to the continued funding of vocational education plans previously implemented in that State under the Appalachian Act.

The third major subregion of Appalachia is the southern valley section covering Mississippi, Alabama, South Carolina, and parts of Tennessee and North Carolina and Virginia. Here, industrialization and urbanization is occurring quite rapidly. New jobs are being generated in such fields as apparel, textiles, and food processing, plus a sampling in other industrial sectors. The States of this area have recognized several priority problems:

The first is the need to develop an educational system capable of producing a skilled labor force. While it is recognized that there is a substantial deficiency in the elementary and secondary school system, the States have also recognized the need to provide high school and post high school level vocational education on a large scale, if enough trained technical employees are to be provided for the apparent growth industries here in the South. Georgia has completed, with Appalachian Act assistance, the construction of a post high school vocational education system in Appalachian Georgia. This year emphasis has shifted to the construction of high school level vocational education facilities in order to help young people qualify for jobs in the growing industrial economy. South Carolina has placed emphasis on post high school technical schools geared to those industries with technical manpower deficiencies. New industries now developing in southern Appalachia require professional personnel as well. As a result, the States are concentrating on the development of higher education facilities and the medical profession.

A second priority is the providing of public facilities to realize their full potential of developing industrial communities which need water treatment facilities, water supply system, and a variety of other public services needed for growth.

The fourth region is the Appalachian highlands, reaching from northern Georgia, through the Great Smokies of Tennessee and North Carolina, into the Blue Ridge of Virginia, and the Alleghenies of West Virginia, Maryland, Pennsylvania, and New York. This sparsely populated territory will be used primarily for recreation and tourism for the rest of Appalachia as well as the remainder of the eastern United States. The Commission, working with the Federal resource agencies, is attempting to determine how much potential can be properly exploited through comprehensive recreation complexis in which private capital is involved.

Each State contains portions of one or more of these broad regions and its plan reflects its deficiencies in its priorities. It is an intention to develop these priorities in even greater detail during the coming year. The following section-by-section summary sets forth the accomplishments, needs and plans for the use of individual programs.

It is clear that significant growth in the region will be tied to the national trend toward urbanization. Contrary to some popular thought, much of Appalachia comes close to or exceeds the national average in manufacturing, employment and such special activities as mining. The great deficiency in the region's economy is in service industries—the largest and fastest growing segment of the national economy. This appears to be directly related to the predominantly rural character of the region. Its communities must grow if the region is to supply opportunities for its people.

Thus, the Appalachian program in a nutshell has two essential elements—the development of health and educational services to exploit the primary resource of the region—its people—and the development of the communities of the region through better access, environmental improvement, housing, and better public facilities.

The final and most essential element for development must come from the initiative and capital of the private sector of the economy.

The Appalachian Regional Development Act directs the Appalachian Commission not only to administer the programs authorized but also to develop comprehensive plans and programs, prepare recommendations on the administration of existing programs, stimulate State and local activities addressed to the problems of the region, and to provide a forum for consideration of problems of the region. While a great deal of the Commission's time in the initial period of its existence has been addressed to the implementation of programs for which the Commission is specifically responsible, an increasing amount of time and effort is being expended on the direction and utilization of efforts outside of the Appalachian Act. For example, a contract is now being negotiated by the Commission and the Office of Education, under which the Commission, its staff and the Education Advisory Committee, which it has organized, will assist in the development of projects under titles I and III of the Elementary and Secondary Education Act.

In response to the mandate to provoke public discussion of problems of the region and to suggest solutions thereto, the Commission is sponsoring with the assistance of the American Institute of Planners, a conference to be held in Charleston, W. Va. in April, addressed to the human, environmental, institutional obstacles to development in the region. It is working with the Federal Aviation Agency on the development of the Appalachian portion of the National Airport Plan with the Department of Labor on means for tying vocational education more closely to the needs of industry and, with the assistance of the Commission's Health Advisory Committee, on the establishment of goals, objectives and priorities for the improvement of health facilities in the region through Hill-Burton, mental health and other programs. These examples are not exclusive: they do, however, provide some illustrations of the types of planning being undertaken in addition to the plans required for utilization of the Appalachian Act funds.

Appalachian planning by the States has at the State level reached well beyond Appalachian Act funds. In West Virginia, for example, the Governor, by executive order, has directed that the State development plan initially fostered because of the Appalachian program be used as a guide for State expenditures as well. Development districts initiated because of the program (and funded either from section 302 funds or under the Public Works and Economic Development Act) are beginning to organize, plan and influence a variety of public expenditures outside the Appalachian Act. These are examples of indirect benefits to the region which are not reflected in the program-by-program justifications for funds authorized by the Appalachian Act.

Mr. FLEMING. I would like to summarize my statement, go from that to the section-by-section analysis and respond to any questions that the committee may have.

Mr. EVINS. You may proceed.

Mr. FLEMING. As you indicated, the appropriation request for fiscal 1969 represents the first time that we have come before this subcommittee to testify on the entire Appalachian program. We were here slightly less than 3 months ago to present a justification relative to fiscal 1968, at that time appearing on all programs other than the highway program.

Funds for the Appalachian Development Highway System had previously been carried in the State-Justice-Commerce bill for fiscal 1968. The budget justification for fiscal 1969 includes the highway program.

The request for new obligational authority is $213.6 million for the program sections, and a total of $862,000 for the administrative expenses of the Commission.

In preparing for this hearing I discovered an error that appears both in the budget and our justification. There is an item of $213,000 requested for my office and staff. This is higher than it should be. It should be $196,000. There is a $17,000 error in favor of economy which we would like to point out initially.

Mr. EVINS. You are presenting a deduction of $17,000, and we can commend you for your action.

Mr. TALCOTT. If you are going to err, that is a good direction to err.

Mr. FLEMING. I am sorry we cannot give you a little more. Also, the justification, takes into account the effects of Public Law 90–218, which mandates some carryover into fiscal 1969. The total program level for fiscal 1969 which is contemplated is $277,243,000.

The justification and my comments this morning will be addressed to those larger totals rather than just the new NOA requests.

MIGRATION OUT OF RURAL AREAS

The purpose of the Appalachian program was rather well summarized if not by name at least by topic in an editorial in this morning's Washington Post entitled "The Great Migration," in which the editorial writers of the Post point out that the President's request for new urban programs, particularly housing, are prompted by a massive migration of people out of the rural areas of this country and smaller towns of this country into major cities.

One of the principal sources of this migration over the last 2½ decades has been the Appalachian region.

Mr. EVINS. Mr. Chairman, we recognize this out-migration from all sections of rural America to the cities. It is a problem with which we are all concerned, and many programs are directed towards slowing it down or reversing the trend.

The Census Bureau has made a report that it has been slowed down to a certain extent, but the migration continues. The programs are not being implemented fast enough to curtail this migration.

You may proceed.

Mr. FLEMING. I think this editorial pleads the issue rather well. The purpose of the Appalachian program first and foremost, as testified to in relation to the initial legislation, is to provide jobs in Appalachia by developing the public facilities necessary to attract private

capital into the region, provide opportunities in the region for people who heretofore have been leaving on a very large scale.

As my formal statement points out, between 1950 and 1960 approximately 2 million people migrated out of the Appalachian region, the bulk of this migration going to the major metropolitan areas of the North and Northeast.

In a nutshell the Appalachian program is designed to build up those communities within the region, both within the communities and in their labor markets, their watersheds and so on, to provide opportunities in them. I think it is clear that there will be migration within the region; and in the future as the communities grow, we are hopeful those opportunities will provide attractions to people who now live in the region who prefer to stay there rather than going to Chicago or Detroit or Cleveland. It has been an all too common pattern in the past.

Mr. EVINS. You point out:

> The decline of subsistence agriculture, the development of new machinery for mining coal which greatly reduced the need for manpower, the obsolescence of old industries and the decline of employment in timbering and other resource-oriented employment. These factors made the Appalachian region the greatest single concentration of rural poverty in the country.

HISTORY OF THE PROGRAM

Mr. FLEMING. That is correct, Mr. Chairman. It might serve to establish the record here this morning for me to review it briefly. The Appalachian program as authorized by the Appalachian Act came into being as a result of the joint Federal-State effort to arrive at common solutions to what are clearly represented here as regional problems. At the initiative of President Kennedy and the conference of Appalachian Governors a Federal-State task force was formed in 1963 to develop program recommendations. Their recommendations, embodied in a report to the President and to the Congress, were eventually submitted in the form of legislation in 1964, and the Appalachian Act was passed in March of 1965. The act was not intended to be a panacea.

Mr. EVINS. Mr. Chairman, to get this straight, the act was passed in 1965.

Mr. FLEMING. That is correct, March 9, 1965.

Mr. EVINS. Then it was extended in 1967.

Mr. FLEMING. That is correct, Mr. Chairman.

Mr. EVINS. What is the expected life of the Commission and its programs under the present legislation?

Mr. FLEMING. Under present law the Commission is authorized to continue through the end of fiscal 1971.

And the highway program is authorized through 1971, for a 6-year period.

Mr. EVINS. The Commission's program has been extended through 1971.

Mr. FLEMING. One caveat, Mr. Chairman, the nonhighway programs are only authorized to fiscal 1969 and new authorizing legislation will be required next year to complete the last 2 years of the program.

Mr. EVINS. Very good.

PROGRAMS INVOLVED IN THE ACT

Mr. FLEMING. The programs embodied in the act are, in large measure, supplemental to other activities that are being carried out

by Federal and State agencies. They are designed to fill the gaps, if you will, between existing programs to make maximum utilization of other programs, and not intended to represent a complete package of activities.

The legislation based on the task force recommendation centers on some primary areas of concern that are common throughout the region and which were not being met and would not be met through existing activities of the Federal-State and local governments.

Briefly summarized, these fall in the areas of transportation which has long been an impediment to development throughout the region, largely due to the very high cost of construction of highways through the mountains, extremely precipitous terrain that is common in the entire region. The highway trust fund supports the Interstate and ABC highway programs. Allocations from the Interstate programs are computed on authorized mileage. The ABC programs which would normally provide Federal support for improvements on the routes involved in the Appalachian system allocates funds on the basis of mileage rather than cost of construction. The net effect is that construction through the Appalachian Region has been substantially less than the same funds will buy in less precipitous and less rugged terrain.

In addition the declining tax base which marks a number of the States in the Appalachian area has contributed to an inferior road network, or in relation to modern standards no network at all in some areas.

For these reasons the highway program was authorized.

The second element, aside from transportation, is addressed to the natural resources of the region, particularly its water resources. This region experiences the highest annual rainfall on the average in the country. And yet because of the steep slopes and because of other problems such as the abandonment of farms and strip mining, erosion, and quick runoff is a very severe problem.

Mr. Evins. If I might interrupt, these several programs in the Appalachian Act were designed to supplement existing programs as additional remedies.

Mr. Fleming. That is correct, Mr. Chairman.

There is a water resources survey for which no funds are requested here. This has been fully funded up to the authorization, and it is anticipated that a report will be completed by the end of this calendar year and submitted to the Congress at the beginning of the 91st Congress.

There are in addition other efforts proceeding under the aegis of the Soil Conservation Service. The ASCS utilizes its regular program and funds authorized by section 203 to deal with erosion, which has been a very severe problem throughout the region.

The last major category of facility development authorized by the legislation are funds for public facilities in the critical areas of health and education, transportation. This is an effort to utilize all Federal grant-in-aid programs authorized nationally which prior to the passage of the Appalachian Act had tended to bypass this region.

Historically the region has received substantially less than its population would warrant from Federal grants-in-aid, largely due to the fact that local matching funds could not be raised in the magnitude sufficient to attract grants-in-aid under existing Federal programs operated nationally. For that reason the supplemental grant program authorized by section 214 was included to provide additional funds

to ease the burden on local communities, counties, and other applicants. The effect has been to greatly increase the Federal grants-in-aid going into the region to the point where the level is approximately on par with the population of the region for fiscal 1966 and 1967 which are the 2 years we have had full experience with the program.

The structure of the act is unique. We have discussed this before, and I think it would be useful to allude to it briefly.

STRUCTURE OF THE COMMISSION

It was clearly recognized when this legislation was formulated that a strictly Federal grant-in-aid program would tend to perpetuate some of the problems that have existed in the past, and that a selective use of this money would be required if the region was to feel any significant economic impact.

For that reason and because of their initiative in making State commitments in support of development efforts for the region, the State governments were given a major role in the administration of this activity.

The Appalachian Commission is composed of myself, representing the Federal Government, and Governors of the respective States. The State cochairman is Governor Ellington of Tennessee. The States have a major role in planning projects.

NUMBER OF STATES

Mr. EVINS. There are 13 States now in the Appalachian area embraced in this act.

Mr. FLEMING. That is correct.

Mr. EVINS. And the Governors select their chairman on an annual rotating basis. Governor Ellington of Tennessee is the cochairman for 1968.

Mr. FLEMING. It is on a 6-month basis.

Mr. EVINS. Six months?

Mr. FLEMING. Through the end of this fiscal year.

Mr. EVINS. Who was the State representative for the past 6 months?

Mr. FLEMING. Gov. Dan Moore of North Carolina, and prior to that Governor Smith of West Virginia.

Mr. EVINS. They only elect a Governor for 6 months.

Mr. FLEMING. Yes.

Mr. EVINS. They do not give him a second term?

Mr. FLEMING. I do not think there is a constitutional limitation on that. It has been a matter of practice thus far.

The States, by Commission resolution, are required to develop a developmental investment plan for the use of these funds as well as State funds and other Federal program money. Those investment plans delineate within the States the areas where they see a prospect for promoting development.

Mr. EVINS. Each State is to recommend its own plan, and the Governors know the situation of their States best.

Mr. FLEMING. That is correct. These plans delineate the areas where there is a prospect for promotion of growth, relate funds available under this act and other programs to the exploitation of that potential.

Mr. EVINS. Have each of the 13 States submitted a State development plan?

Mr. FLEMING. They have, Mr. Chairman. This is done on an annual basis and updated each year. Those plans include an annual request for funds, which are reviewed and which the Commission modifies or adopts. In many cases there are some modifications made in what the States initially request.

FOUR AREAS OF APPALACHIA

Mr. EVINS. Mr. Chairman, you might outline the four distinct areas of Appalachia.

Mr. FLEMING. I would be happy to. I think this a short-hand way of summarizing what the States have said in their plans and what the Commission has developed through its own research.

There are four fairly distinct areas of the Appalachian region with each having a special set of problems.

In the northern part of the region in Ohio, Pennsylvania, and New York, and to some extent western Maryland, the problems tend to relate to the modification or the transition of the economy from an existing industrial base related to railroads, coal, steel, to other forms of manufacturing in that there has been some decline or some stagnation of employment in these areas, and some obsolescence in the facilities where the industry itself tends to be on the move.

In these areas the States have concentrated on vocational training geared to the development of skills relevant to new job opportunities, or the development of industrial sites for new kinds of manufacturing and commercial employment, utilizing the access road primarily, and on dealing with the environmental problems created by the legacy of both mining and industrial production, in the latter case air pollution.

Mr. EVINS. They must deal with the problems of strip mining and mine fires.

Mr. FLEMING. That is correct. Particularly in the anthracite area of Pennsylvania the mine fire control and subsidence control programs authorized by section 205 of the Appalachian Act have been of major benefit in preventing both further subsidence underground in the Wyoming Valley and its adjacent areas and in preventing air pollution through escaping gases which in many cases has actually forced people from homes and plants. Any development in this area is obviously related to the control of these fires which could spread through many of these valleys. The coal seams underline the valleys and run through them.

PROGRESS IN MINE PROGRAM

Mr. EVINS. Mr. Chairman, you have assessed the problems. Are you beginning to attack them?

Mr. FLEMING. In the case of the mine program we feel some substantial progress has been made. Every major mine fire in anthracite Pennsylvania has had some work initiated on it, either under this program or through the normal Bureau of Mines activity. There will be some additional costs to actually control some of these, but the engineering has proceeded to establish the parameters of the fires to outline in more detailed fashion what is needed to be done to cope with them.

To move on to the central Appalachia area which can be roughly defined as the upper Cumberland area of Tennessee and the areas of West Virginia and Kentucky and western Virginia, the problems there

tend to be more closely related to decline in agricultural employment and the decline of mining, these areas never having had a strong manfacturing or industrial base. The State plans and the projects developed by the States and local areas in this central Appalachian region focus on somewhat more basic kinds of problems, such as better health care. The section 202 demonstration health program focuses on these problems and on transportation. The bulk of the highway program is addressed to transportation through this area which is the most isolated and most remote in the region.

An examination of the highway map that is inserted in the justification under section 201 will give a pretty clear picture of how the road network is being developed with these funds.

OTHER AREAS OF THE REGION

Mr. EVINS. Go ahead and summarize the region.

Mr. FLEMING. It shows how the transportation network is designed to both promote development in this region and promote access from within this region to the major centers which surround it. There is also a heavy emphasis on vocational training.

In the southern end of the region, South Carolina, Alabama, and adjacent areas of North Carolina, the transition is being made from a rural to an urban economy. The principal projects and principal programs being emphasized here tend to go to vocational and higher education, addressed to providing manpower for the cities which are developing in this area.

The fourth area of the region is the eastern highlands, which is dominated by national forests, is relatively sparsely populated, and where, frankly, the Appalachian Commission has not spent much money. Most of the big public investment in this area will be in the recreational field through a number of Federal agencies and through some State agencies as well as private capital.

We have engaged with the States in a planning program with the Federal agencies, the Forest Service and Park Service, and so on, to try to get maximum economic mileage out of activities which they have underway.

Those basically are the four areas that emerge from the State plans with a brief description of the programs that are being emphasized.

ESSENTIAL ELEMENTS OF PROGRAM

Mr. EVINS. You say at the bottom of page 7:

> The Appalachian program in a nutshell has two essential elements—the development of health and educational services to exploit the primary resource of the region—its people—and the development of the communities of the region through better access, environmental improvement, housing, and better public facilities.

Mr. FLEMING. That is it.

Mr. EVINS (reading):

> The final and most essential element for development must come from the initiative and capital of the private sector of the economy.

My question is: To what extent is this being effected?

Mr. FLEMING. There are a number of signs that this is taking place, although it is a very hard thing to analyze statistically. There are, of course, major State efforts in each one of these States for the attraction of new capital, new plant investment. There are major efforts on the

part of the private groups having an interest in motivation to develop the community. For example, there is an Appalachian utility committee that cooperates in relation to development problems and the utilities work closely with one another to try to stimulate new investment in the region.

There are an increasing number of new plants locating in the region. Some of these could be directly related to the potential availability of the highways, for example, which will provide access into them. Some others, particularly in the southern end of the region, are still attracted by relatively low-wage rates, which is a problem and which should not be unduly exploited as an attraction for investment.

What we are trying to do, frankly, with the vocational education program and other education investments that are being made under this program, and others, is to get the labor force in this area to compete for higher wage and higher skilled industries. There have been some heavy industry locating airframe fabrication, and these kinds of things which are still rare, but increasing.

Mr. EVINS. Mr. Chairman, I was interested in your text on page 8, where you refer to comprehensive planning designed to stimulate State and local activities. I hope you are doing that.

The program provides "a forum for consideration of problems of the region." And you have had this forum.

That is a very good statement as to what the Commission has been organized for.

EXPENDITURES TO DATE

Mr. JONAS. Mr. Fleming, the record shows that we have appropriated for various Appalachian programs $583,766,000 through 1968. How much of that has been spent?

Mr. FLEMING. Total obligations? I can supply a figure for the record.

Mr. JONAS. First I want to know how much of that has been spent. How much unexpended balances do you have as of some given date, any date you want to pick out?

Mr. FLEMING. Just so that I can clarify the terminology, we normally deal, as do most Government agencies, with obligations.

Mr. JONAS. I understand.

Mr. FLEMING. Expenditures? I will give to you a precise figure for the record.

Mr. JONAS. Please do.

Mr. FLEMING. I would imagine expenditures at this point would probably be in the range of $150 million to $200 million. Obligations would be in the range of $345 million as of today.

Mr. JONAS. You spent approximately, you estimate, $150 million and you obligated how much?

Mr. FLEMING. $345 million.

Mr. JONAS. How can you say that you will carry forward into 1969 only $63 million of unobligated balances if you had $583 million appropriated and have only obligated $345 million? Do you expect to obligate the balance between now and June?

Mr. FLEMING. We do.

Mr. JONAS. Down to the $63 million?

Mr. FLEMING. That is correct. The bulk of those obligations will be in the development highway program, supplemental grant program, vocational education, and the health program.

PROGRESS MADE TO DATE

Mr. JONAS. Can you give us any indication or any testimony or any evidence indicating that any substantial progress has been made in the area resulting from the expenditure of this $150 million? You stated in your general statement that during a certain period of time 2 million people outmigrated from Appalachia because of these conditions that we are trying to rectify. Have you any statistics or can you obtain them from the Census Bureau or from whatever source the original statistics were developed showing the rate of outmigration since we began this program in 1965? We have had 2 or 3 years of it now. We would like to know in specifics what you can cite to show that this program is doing what it is supposed to do and is justifying the expenditure of these substantial sums of money.

Mr. FLEMING. I would like to respond to that in two ways. First the figures on 2 million are accurate—as accurate as any statistics can be—being drawn from the 1950 and 1960 censuses. As you know, the statistical data available between decennial censuses vary somewhat in quality. The best evidence we have from the Office of Business Economics in the Commerce Department, from work that has been done in each of the State governments as well as some being done by the Bureau of the Census on an estimated basis is that outmigration from the region as a whole has slowed dramatically. There is still some outmigration from the most critically afflicted or economically troubled areas, principally eastern Kentucky, southern West Virginia, and Pennsylvania.

Mr. JONAS. Can you put in the record the best estimate you can get from the Census Bureau and any other sources that are available as to what the figures will show 1960 through 1967?

Mr. FLEMING. We have estimates, and I will be glad to provide those.

Mr. JONAS. And show the basis on which the estimate was made.

(The information follows:)

THE APPALACHIAN REGIONAL COMMISSION.
Washington, D.C.

Hon. JOE L. EVINS,
Chairman, Subcommittee on Independent Offices and HUD, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: During my appearance before your subcommittee on February 27, Mr. Jonas requested that current data on the economic condition of the Appalachian Region be submitted for the record. As I stated at that time, much of the data available covers only those periods of the regular census reports and in many particulars these data are not available for the period since 1965. Other types of information are available on a State or national basis, but not on a regional basis. To the extent practicable, however, data have been prepared from Federal and State sources that are indicative of the trend of events in the Appalachian region.

As I indicated, the nature and magnitude of the Appalachian program does not permit us to associate the changes reflected in these data with the effect of the program. Overcoming the fundamental handicaps of the region such as isolation and poor education will require years of effort and these efforts will not have their full impact for several years. It is also very difficult to separate the effects of the regional program from those national programs that have been operative and whose impact is felt in the region.

The attached tables show the most current information available relating to population, employment, and welfare recipients in the Appalachian region.

Sincerely yours,

JOE W. FLEMING.

Population and Population Change

The region's share of the national population has continued to decline. Between 1960 and 1965, three of the State portions in the region lost population, and in only four was the national rate of population growth equaled or exceeded. For the most recent period of 1965–66, losses were experienced in three State portions, and in only one was the national growth rate equaled or exceeded. Only West Virginia has consistently lost population, and only Maryland has consistently exceeded the rate of national population growth.

The region's rate of population growth remains low compared to the Nation, as it was in the 1950–60 decade, as the rate of outmigration continues to remain close to the rate of natural increase.

According to available estimates, Appalachian Kentucky, Pennsylvania, and West Virginia had fewer residents in 1966 than they had in 1960, though in the first two mentioned, the population decline was reversed in 1965–66. This population loss is, in part, responsible for declining rates of unemployment.

ESTIMATED POPULATION 1966 AND 1965, AND POPULATION 1960 AND ANNUAL RATES OF PERCENT CHANGE 1965–66 AND 1960–65 FOR THE UNITED STATES, THE APPALACHIAN REGION, AND THE APPALACHIAN PORTION OF EACH STATE

[All numbers in thousands]

Employment and Unemployment

Since 1962, the number of jobs in the region has been growing at an annual rate at least equal to the national performance, and between 1965 and 1966 the national performance was exceeded. The number of jobs has been growing in the Appalachian portion of every state in the region. The figures showing the change for any one year probably show expected random variations, but the overall 4-year pattern reflects the effect on the region of an extended period of national prosperity.

Matching the growth in jobs has been the decline in unemployment. The region in 1966 had about 10 percent of the national total, compared to almost 14 percent in 1962. Here again, the change in any one year is not as significant as the longer term performance, but overall the trend in the region is encouraging.

EMPLOYMENT AND UNEMPLOYMENT 1966, 1965, AND 1962, AND ANNUAL RATES OF PERCENT CHANGE 1965–66 AND 1962–65 FOR THE UNITED STATES, THE APPALACHIAN REGION AND THE APPALACHIAN PORTION OF EACH STATE

Employment by Industry

Data on industrial employment are not exactly comparable to the overall employment data in the preceding table, but the same trends are reflected. In the most recent year, growth in employment has occurred in every category, and comparing 1962 to 1966, every sector, except mining, now provides more employment than at the beginning of the period. Of the total growth of over 600,000 jobs reported, about 275,000 are in manufacturing, 70,000 in contract construction, over 100,000 in retail and wholesale trade, and more than 110,000 in services. This is a pattern of relative growth that tends to mirror that national experience, tempered by the region's historical employment structure.

NUMBER OF EMPLOYEES BY INDUSTRY, MID-MARCH PAY PERIOD 1966, 1965, AND 1962, AND ANNUAL RATES OF PERCENT CHANGE 1965-66 AND 1962-65 IN THE APPALACHIAN REGION [1]

Industry	Employment [2]			Annual rate of percent change	
	1966	1965	1962	1965–66	1962–65
Total	4,215,411	3,948,207	3,596,456	6.8	3.3
Agricultural services, forestry, fisheries	8,527	8,436	6,693	1.1	.9
Mining	136,529	134,533	144,112	1.5	−2.2
Contract construction	221,503	192,746	150,385	14.9	9.4
Manufacturing	1,944,671	1,833,583	1,667,866	6.1	3.3
Transportation and other public utilities	220,788	213,002	205,911	3.7	1.1
Wholesale trade	208,898	203,728	190,402	2.5	2.3
Retail trade	696,024	655,757	599,025	6.1	3.1
Finance, insurance, and real estate	161,438	155,730	140,208	3.7	3.7
Services	533,680	495,556	422,969	7.7	5.7

[1] Source: "County Business Patterns," 1966, 1965, and 1962. Excludes employees not covered by the social security program. Also, data for the following types of employment covered by the social security program in whole or in part are excluded from the basic tabulations in this report: Government employees, self-employed persons, farmworkers, and domestic workers reported separately. Also, railroad employment subject to the Railroad Retirement Act and employment on oceanborne vessels are not included.

[2] Employment in "County Business Patterns" amounted to approximately 66.7 percent of total U.S. paid civilian employment in 1966, 66.2 percent in 1965 and 63.7 percent in 1962.

Welfare Recipients

In the period between 1963 and 1967, the number of welfare recipients and the number of unemployed in the United States showed conflicting trends. While the number of unemployed fell by 1.1 million, the number of welfare recipients rose by 1.2 million. There are undoubtedly a number of factors at work to explain these trends, such as changes in welfare eligibility, that would be operative in the region as they are in the Nation. Though no regional data are presently available, there is no evidence that the region would show a different trend.

COMPARISON OF WELFARE RECIPIENTS AND UNEMPLOYMENT FOR THE UNITED STATES, 1963-67

Year	Welfare recipients	Unemployment
1963	7,421,600	4,070,000
1964	7,635,950	3,786,000
1965	7,756,750	3,366,000
1966	7,935,600	2,875,000
1967	8,648,300	2,975,000

Mr. Evins. There was some testimony earlier that there had been some slowdown in the outmigration.

Mr. Fleming. Generally, I think it would be erroneous to indicate that this change has resulted from the Appalachian Act, per se. I think it has had some influence; but I think it would be very hard to relate it in any kind of definitive sense. In the road program, for example, which has perhaps as much consequence for future development in the region as anything else that is being done here, engineering has

been initiated on every segment that can be built with the funds authorized. We have approximately 85 miles of new highway open as a result of this program, but that represents only about 5 percent of what is going to be done. It is very hard to say that that 85 miles has any regional impact. And, obviously, until the road is there to be driven on, it cannot translate into lesser driving times, and therefore some advantage to private capital.

Mr. JONAS. Will you undertake also to put in the record a statement showing a comparison of the number of people in the region on the welfare rolls now as compared with 1960?

Mr. FLEMING. We will be happy to.

Mr. JONAS. And I think another index that might be helpful to us in determining the effectiveness of this program is to show what increases in housing and industrial construction have occurred in the region.

Mr. FLEMING. All right. Fine.

Mr. JONAS. And perhaps new businesses established, and there may be others, and we would like to have—and I think it is important for the record to show—that the money we are spending down there is solving the problem that we are undertaking to attack. We need a review and some statistical information, if it is available, to support the contention that the program is solving the problem it was designed to solve.

Mr. EVINS. I think the committee as well as the Commission is interested in getting results, Mr. Chairman. You see, we appropriate the money and we want to see the results from it.

UNEMPLOYMENT RATE

Mr. FLEMING. I would like to respond further to Mr. Jonas by noting that the unemployment rate in the region as a whole is about a point and a half below what it was in 1965 when this was authorized.

Mr. JONAS. You would have to compare that with the rate around the country and relate it to how many people are in the Army, and all these other things.

Mr. FLEMING. Yes, this is a result of the expansion and growth in the national economy. The latest figures we have indicate that the unemployment rate for the region as a whole is about 1½ percent above the national average; and if you extract Appalachia from the national average, presumably the national average would go down a little bit and thus widen the gap. Unemployment in the region has tended to follow the national average down. When the national ratings go up a little or go down a little, the Appalachian region tags along behind it.

Mr. JONAS. From your statement, the money you have spent, much of it has been on roads, and it has not been spent in areas calculated to stimulate employment.

Mr. FLEMING. The highway program is strictly designed both to stimulate employment and to make employment opportunities accessible to people.

Mr. JONAS. If you can give us some figures showing the rate of new businesses established, any increased rate of industrial growth and housing starts, that would help us.

Mr. FLEMING. I would be glad to.

STORY FROM PITTSBURGH POST-GAZETTE

Mr. JONAS. I have one other question:

I was disturbed, Mr. Fleming, to read from the Pittsburgh Post-Gazette of January 11, 1968, a story written by Ingrid Jewell from which I quote the following:

"The Appalachian Regional Commission voted today to spend its money fast—before the President can freeze it or Congress can rescind it 'don't let scarce money lie fallow,' advised Federal cochairman Joe W. Fleming. So alarmed is the Commission its funds may disappear, its State representatives today adopted a 'program of reallocation.' This declares that a State which does not have detailed plans for projects it wants to undertake in the hands of the Washington office by April 1 will risk having its share of the Commission's money given to another State which has moved more quickly."

Now, it is not your primary objective to spend this money faster than the States are ready for it, is it, just because you have it available?

Mr. FLEMING. Mr. Jonas, my objective and the comments to which that story contained are to make maximum use of the program authorized by the Congress. The State governments sought to have this program enacted and to accept responsibility for developing the projects and doing the work required to make it effective on the ground.

The point you raised a minute ago about the gap between current obligations and the total availability for obligation pleads this point very well.

The highway program, for example, presently stands with 85 miles open to traffic with engineering underway on about 1,400 other miles with only $210 million obligated. The States committed themselves to do this job through fiscal 1971 when they came to the Congress in 1965 and asked for the program. It is my object to see that the program is implemented. The resolution to which that story is addressed is designed to do exactly what we have indicated to the Congress we would do, which is to put the funds where there are projects ready to move which are compatible with the standards in the act and with sound planning.

We have from the first day made highway funds available to those States which were prepared to do the work authorized under the general authorization. That is each State has an authorization or allocation of the authorized funds relative to mileage to be built.

Mr. EVINS. Mr. Chairman, nobody wants any money to be spent unwisely and uneconomically, but on the one hand we already started out berating the Commission for not proceeding, for not getting results, and for not stopping the outmigration, and on the next hand we berate you for spending too fast.

I think that you ought to carry out your mission. If I were to criticize you, I would criticize you on the first point, that is, not acting fast enough.

Mr. FLEMING. We have no intent to spend money for the sake of spending it. We have intentions, and the States fully concur in this, to make maximum utilization of programs authorized and funds appropriated by the Congress for the purposes for which those funds were authorized and appropriated.

Mr. JONAS. My point is you have $195 million of unspent funds from previously appropriated money, I mean the difference between what you have obligated and what you have already spent, and then you have $251 million from 1968 that you did not get until December,

so what you are trying to do is obligate 12 months' money in a period of 6 months; and this story, if it is true, indicates you are not doing it very wisely. You are just doing it to get it obligated.

Mr. FLEMING. The 195 is included in the 251.

Mr. JONAS. Well, you have had appropriations of $583 million.

Mr. FLEMING. Which includes the 251 and then some.

Mr. JONAS. Well, that is through 1968, that is right, $126.7 million. Anyway, I wanted your comment on this article. A person reading it would get the idea that what you are doing is what we used to criticize the executive branch, mostly the military, for rushing in to obligate all their money in June so that it does not lapse.

Mr. FLEMING. There is no intention to do that. These funds have not been tied to the fiscal year. I would regard it as a mistake to do so.

Mr. JONAS. I do not see how, if the article is correct, if X State is not ready for its plans to go forward, you can divert the money originally planned for that State to some other State because obviously it had not got plans ahead of the money that it foresees will be available.

Mr. FLEMING. I will give you an example of how this takes place. In the area of vocational education, for example, the States collectively indicate in present plans, projects in fiscal 1969 that total close to $90 million, and the amount of Federal funds that will be available, assuming the appropriation of funds requested here and the request under the Vocational Education Act of 1963, will be about $27 million or on a 50–50 basis, $54 million program. Thus, there is about a twofold—about a 2 to 1 discrepancy between what could be done and what can be funded.

If there is a vocational education school in Tennessee, for example, for which funds have been requested and then in March or April there is either a delay or failure on a bond issue or any one of the other issues that can affect such a commitment, we think it would be unwise to maintain a reservation of a quarter of a million dollars or $200,000, whatever it is, for a period of a year while they get their ducks in the row to move ahead with clearly identified projects if someone else has one that is compatible with their plans and the purpose of the act and is prepared to move.

What we are trying to do is to get maximum mileage out of the money that has been appropriated here, not wantonly spread it around the landscape.

I would certainly like to erase that impression if I can because it is certainly not my intent, and it is not the intent of the State governments involved.

Mr. JONAS. You would say that the article is fundamentally correct, but you defend your position?

Mr. FLEMING. I would say the words of the article are correct and the spirit is somewhat incorrect.

Mr. EVINS. What you are saying is if Ohio is not ready for its bond issue commitment, and South Carolina is, you would use the funds available for South Carolina. Wouldn't this help to stimulate the States?

Mr. FLEMING. In the case of the road program we have laid out a 6-year program and said we want every State to move as fast as we can to get it accomplished. If West Virigina is not prepared to move

a project, has it deferred because of a right-of-way problem or engineering problem——

ACCOMPLISHMENTS UNDER VOCATIONAL EDUCATION SECTION

Mr. EVINS. Turn over to section 211 just briefly. Here are some concrete results.

Somerset Area Vocational School in Somerset, Kentucky, is providing central post-secondary technical training for all the youth in the State in aircraft-related skills such as aircraft engine mechanics, aircraft instrumentation and control tower operations.

Here is one in Asheville, N.C. The Asheville-Buncombe Technical Institute has four extension courses serving 15 western North Carolina counties, offering training in electronics, mechanical, civil and chemical engineering, drafting, data processing, tool and die making, and radio and TV servicing.

Here is an unusual one. Greenville, S.C., has a school for six Appalachian counties which provides model programs in health occupations areas, offers courses in inhalation therapy, EKG technology, medical secretary training, surgical technology, and 19 other critical medical occupational areas.

I think those are to be commended. I think they are outstanding trade schools, one in Kentucky, one in North Carolina and one in South Carolina.

HIGHWAY PROGRAM PLANNING

Mr. BOLAND. With reference to the highway program you have indicated that planning is complete on the additional 1,400 miles.

Mr. FLEMING. It is underway.

Mr. BOLAND. Underway. If planning is underway in all the States, would it not be rather difficult to allocate some of the mileage from those States where the planning has not proceeded as rapidly as you would want, to other States?

Mr. FLEMING. What was done on the highway program is that shortly after the enactment of the act the Commission designated a system of highways, and after that an allocation of the total funds authorized to accomplish the program was made based on cost estimates that were established by the States and the Bureau of Public Roads so that West Virginia has an allocation relative to the number of miles it is supposed to do. North Carolina has an allocation. Tennessee has an allocation.

Relative to appropriated funds, the policy of the Commission has been to allocate those where the States have the capacity to proceed, subject to the limitation the State may not receive more than its allocation of the total amount authorized.

Mr. BOLAND. When do you expect that planning will be complete on the highways? You say it is underway. Most of your unobligated balances are in the highway program, are they not?

Mr. FLEMING. Yes. Planning has been initiated on the entire system in relation to route location that has been established on virtually every corridor. The next step beyond that is the design phase where they actually compute the pitch of the slope, the cut necessary to provide a roadway, the type of pavement required, drainage and that sort

of thing. In other words, the development of a set of plans that will establish a center line to permit the State to buy right-of-way.

Following right-of-way, then they are in the position to bid the construction contract.

Now, all States have undertaken location studies to establish precise location. We anticipate that design will be underway on every segment that can be built with these funds by the end of this fiscal year.

The States have committed themselves to that schedule, and it appears susceptible to accomplishment. This will produce a large number of projects.

The year 1969 is going to be a big peak as far as construction is concerned as all this engineering and right-of-way location that has been done in the first 2 years comes to fruition in the form of a demand for construction funds.

Mr. BOLAND. Do you anticipate that most of this will be obligated in fiscal 1969?

Mr. FLEMING. In fiscal 1968 and 1969.

Mr. BOLAND. 1968 and 1969.

Mr. FLEMING. The current amount available with the continuing resolution for highway program in fiscal 1968 is, in the aggregate through the life of the program, $316 million. At the end of January the obligation figure was $210 million. The chart, which is included in the text after page 5 under section 201, indicates the current capacity of the States to proceed.

HIGHWAY PROGRAM CONSTRUCTION CEILINGS

Mr. EVINS. Mr. Boland, if you will let me interrupt just a minute. Let us set the stage here to get this record straight and understand this and ask the chairman if this is correct.

Orginally, the Congress approved the building of 3,350 miles of development highway in Appalachia, and this included 1,000 miles of access roads.

Mr. FLEMING. Those are the original ceilings.

Mr. EVINS. Last year they added 350 miles of development roads, bringing the total of development roads to 2,700.

Mr. FLEMING. That is correct.

Mr. EVINS. And you added 600 miles of access roads, bringing the access roads to 1,600, so the total authorized highway construction in Appalachia is 2,700 miles of development roads and 1,600 miles of access roads.

Mr. FLEMING. That is correct. Those are the maximum mileages which can be legally constructed.

Mr. TALCOTT. You have been in the program now for a couple of years at least. Do you have any suggestions for improving the program? When Congress put the program together it was sort of helter skelter, hit or miss, and not a very precise program. It seems to me after a couple of years you would have some suggestions coming from the Commission itself as to programs which should be emphasized or programs which should be discontinued. Have you prepared any such project?

Mr. FLEMING. We made some suggestions in relation to the 1967 legislation which were generally adopted by the Public Works Com-

mittees in the legislation reported to the floor and subsequently by the full House and the Senate. The housing program which is authorized by section 207 was added as a recommendation of the Commission.

A number of modifications in the existing programs were made at the recommendation of the Commission. For example, the demonstration health program authorized by section 202 was really not implemented until legislative change could be sought in its structure.

Mr. TALCOTT. Looking at your budget request, it appears that there are four general programs: highways, health, vocational education, and then the supplemental programs which are your main ones. This takes up the bulk of your appropriations.

Mr. FLEMING. This is true.

Mr. TALCOTT. The Federal Government is already in these programs. I am wondering if you have discovered that your agency has developed too much duplication and if it would be better if it were all streamlined back into the respective general Federal programs?

Mr. FLEMING. As you know, Mr. Talcott, the administration of each one of these sections is undertaken by Federal agencies. The Commission's role is largely a planning and project development and approval activity.

NEED FOR PROGRAM

Mr. TALCOTT. My question is: Why the need for the Appalachian regional development program when the main bulk of your programs are already Federal programs that are already ongoing?

Mr. FLEMING. In the highway program, for example, it simply could not be accomplished within the framework of the trust fund program. There just is not enough money.

In the case of the supplemental grant program, these funds are used to really maximum utilization of a whole variety of other activities and programs being undertaken by the Federal Government in the field of education, health, airport construction, water pollution control, and the like.

Mr. BOLAND. These are the programs the local community would not be able to undertake on the basis of the regular formula?

Mr. FLEMING. That is correct.

Mr. TALCOTT. There is really nothing pecular about Appalachia except lack of local money?

Mr. FLEMING. There are some other things peculiar to Appalachia, and it is really the thing that the Appalachia Commission itself is addressed to, and that is the need for better institutions to plan and to use funds. Just money per se does not always do the job.

Mr. TALCOTT. When you refer to "better institutions" you refer to better local government?

Mr. FLEMING. Better local government, improved State government, and the State governments have responded to the availability of this program by increasing staff, increasing attention to planning overall program expenditures. Many of the Federal programs we are talking about are channeled through State government; education and health particularly. A number of States are in the process of developing proposals for using research funds under section 302, to attack local government problems, institutional limits on what local governments can

do, and how they can cooperate with one another in trying to put together some proposals for the legislatures.

Mr. TALCOTT. Is the minimum wage in all of the Appalachia States the same?

Mr. FLEMING. The Federal minimum wage? The Federal minimum wage is uniformly applicable. The State minimum wages vary somewhat.

One good example of a State activity relative to institution development that has grown out of this program: Right now in Kentucky there is being drafted a proposal for State housing and State nonprofit housing corporation to utilize the housing program incorporated in the Appalachian Act and to use with far greater effectiveness the FHA and other programs authorized through the Department of Housing and Urban Development. This results because there simply is a gap in the institutional capacity of eastern Kentucky to participate in these programs. There is a gap in financing. There is an effort on the part of the State here to take a particular problem and produce a solution to it, and this has come about largely because of discussions that have taken place among the States, between myself and the State governments and through the involvement of the Federal agencies through this program. That is one small example.

The local development districts program is probably the best example of where the State governments have taken the role of leadership in trying to produce multicounty cooperative organizations to combine tax resources, to combine county planning, to make maximum utilization of the dollars involved in this program. I do not know that I have completely responded to your question.

Mr. TALCOTT. That is a general answer to a general question. I believe that your comment about institutional deficiencies is quite apt. This is one of the major critical problems in Detroit and New York and most large cities. They just do not have the institutions or trained, competent people to cope with their problems, and the people are not much interested in changing their institutions.

Mr. FLEMING. I think frankly it is quite clear that one of the main reasons the State governments were given a role in this program is because the institutional capacity of local government through larger areas of this region is relatively poor. The counties are underfinanced and they are in many cases too small, and there is a need for providing some leadership at less than the Washington level which is too far away and yet big enough to do the job, and the State governments have, I think, exhibited quite a bit of initiative and talent and commitment in trying to fill that void.

Mr. EVINS. I understand you have had excellent cooperation. There was some thought earlier that there might be great difficulty among the Governors in deciding on priorities, but now the issues have been resolved. There is splendid cooperation. The Governors of each State recognize the problems of their State most acutely.

Mr. FLEMING. That is correct.

Appalachian Regional Development Programs

PROGRAM AND FINANCING

[In thousands of dollars]

		1967 actual	1968 estimate	1969 estimate
	Program by activities:

Mr. EVINS. We will take a look at this table on the first page.

On section 201, your highways, obligation authority is $128 million and you were appropriated $70 million in 1968 for a total of $198,341,000 and for 1969 you are asking for an appropriation of $125 million with carryover of $53,341,000 which would be a total for the program in 1969 of $178,341,000; is that correct?

Mr. FLEMING. That is correct, Mr. Chairman.

Mr. EVINS. And the same situation holds with respect to section 202, health; you are asking for an appropriation of $25 million with a carryover of $4,769,000, or total available for the program of $29,769,000; is that correct?

Mr. FLEMING. That is correct.

Mr. EVINS. Section 203, land development—there is very little activity there—$3 million.

Mr. FLEMING. $3 million.

Mr. EVINS. Timber development, section 204, nothing is recommended.

Section 205 relating to strip mining and mine fires, you are asking for an appropriation of $1,300,000 with a carryover of $3,993,000, for a total of $5,293,000. Will this amount $5,293,000, carry you to the total authorized amount for this particular function?

Mr. FLEMING. No, sir. That would leave a substantial amount of the authority uncovered.

Mr. EVINS. Under section 206 no funds requested, and in the field of housing $2 million. Vocational education has been indicated as one of the large programs. You have no carryover there, but you are asking for an appropriation of $14 million.

Mr. FLEMING. That does exhaust the authorization.

Mr. EVINS. This exhausts the authorization. I understand the various States have a much more ambitious program than these funds allow.

Mr. FLEMING. That is correct.

Mr. EVINS. For water and sewage, section 212, you have a carryover of $18,000.

Mr. FLEMING. That is correct.

Mr. EVINS. So you are asking for a $4 million appropriation and the $18,000 carryover. Would that be the actual amount of the authorization?

Mr. FLEMING. Yes, sir. That does exhaust the authorization.

Mr. EVINS. The supplemental is a popular and effective stimulant, section 214. You have a carryover of $1,261,000 in this area, and you are asking for $36,300,000 for a total of $37,561,000; is that correct?

Mr. FLEMING. That is correct.

Mr. EVINS. And for the local development district, you have a carryover of $261,000 and are asking for $3 million.

Mr. FLEMING. That is correct.

Mr. EVINS. It seems to me that is a rather small amount for the local development districts all over the 13-State area. You are asking for a total of $3,261,000.

In summary, you have a $63,643,000 carryover, and a new budget request of $213,600,000, for a totalof $277,243,000.

Mr. FLEMING. That is correct.

OBLIGATION FREEZE

Mr. JONAS. Have you ever had any of your expendable funds frozen by the Bureau of the Budget?

Mr. FLEMING. We were, as was the entire Government, under an obligation freeze, generally, through the last 3 months——

Mr. JONAS. Ten percent; I understand that.

Mr. FLEMING. Through October, November, and December last year, we suspended obligations on major construction projects.

Mr. JONAS. How did that affect you? How much did that affect you?

Mr. FLEMING. It just simply slowed down that obligation process you referred to a few moments ago.

Mr. JONAS. It stopped your obligating altogether for construction or anything else?

Mr. FLEMING. Well, there was some small obligation. For example,

we proceeded with engineering on the road program, but no construction contracts.

Mr. JONAS. Was your road program frozen in 1966?

Mr. FLEMING. No.

Mr. JONAS. Yours were not affected; that was interstate?

Mr. FLEMING. That was the trust fund.

Mr. JONAS. This freeze you had last fall, that was the freeze on expenditures or obligations?

Mr. FLEMING. Suspension of obligations.

Mr. JONAS. Do you know, have there been any freezes on expenditures?

Mr. FLEMING. No; there have not been. You mean liquidation of past obligations?

Mr. JONAS. Yes.

Mr. FLEMING. No.

Mr. JONAS. Has the freeze to which you referred been lifted now?

Mr. FLEMING. Yes; as of the first of the year. I think it is significant in the road program, for example, that obligations in January were in the neighborhood of $20 million.

Mr. JONAS. This $63 million, much of that comes about by reason of that joint resolution.

Mr. FLEMING. All of it.

Mr. JONAS. The 2 percent.

Mr. FLEMING. Two percent—10 percent.

Mr. JONAS. Did it affect your personnel; you do not have too many people, the 2 percent?

Mr. FLEMING. Actually, the cuts made took care of our obligations in that regard. So the continuing resolution did not affect it. We have refrained from filling some slots.

Mr. JONAS. Thank you.

SECTION 201—HIGHWAY SYSTEM

Mr. EVINS. Mr. Reporter, place in the record under section 201, Appalachian development highway system, pages 1 through 5 and the charts.

(The documents follow:)

APPALACHIAN DEVELOPMENT HIGHWAY SYSTEM, SEC. 201

	Public Law 89-4		Public Law 90-103	
Authorization	$840,000,000		$1,015,000,000	
	1965-66	1967	1968	1969
Appropriation	$200,000,000	$100,000,000	$70,000,000	[1] $125,000,000
Obligation	103,501,000	68,158,000	[2] 145,000,000	[2] 178,341,000

[1] Request.
[2] Estimate.

Through fiscal year 1968 $370 million has been appropriated under the authority of section 201 for development highway and access road construction. Public Law 90-218 necessitates a limitation of $145 million in obligations in fiscal year 1968 for a cumulative obligation total of $316 million through June 30, 1968. The $54 million in outstanding obligational authority coupled with a request for $125 million in new obligational authority will produce a program level of approximately $179 million in fiscal year 1969. This is the minimum level which is con-

sistent with maintenance of the schedule for the program set by the Congress in 1965.

As noted in the report of the President's Appalachian Regional Commission, one of the major factors contributing to the transportation problem in Appalachia is the topography of the region. The Appalachian Mountain Range, stretching in a general northeast-southwest direction through Appalachia, has been and still is a barrier to the east-west and north-south movement of goods and people.

Over the years, three major traffic corridors developed through these mountains. One paralleled the Pennsylvania-Maryland border where several major railroads, the National Pike, and the Lincoln Highway crossed the mountains and connected the east coast with the Ohio River. The second generally paralleled the North Carolina-Virginia border. Here the Wilderness Road passed through the Cumberland Gap and connected the Shenandoah Valley and the Virginia sea coast with Kentucky and the Ohio River tributaries. Third, an east-west transportation corridor crossed the mountains southeast of Charleston, W. Va. It furnished a more direct route from the tidewater area of eastern Virginia to the Ohio River Valley. This same mountain pass provided a north-south route from the central North Carolina area to Ohio. As Appalachia developed, these corridors became more and more important from a traffic standpoint and the Interstate System now follows them.

The completion of the Interstate System will be of great benefit to the economy of Appalachia. The Interstate System will generally follow the major traffic corridors, and its major effect will be in the improvement of transportation within these corridors. However, it will have a lesser effect on the more isolated and undeveloped areas of Appalachia. The development highway corridors are described below and plotted in the map which follows:

1. Corridors A, B, C, and K provide a north-south route located generally midway between Interstate 75 and Interstate 77, and connecting Atlanta, Georgia, and Chattanooga, Tennessee, with Asheville, North Carolina, and Cincinnati and Columbus, Ohio.

Corridors D, E, and H provide east-west connections from Cincinnati through Central West Virginia to the Baltimore-Washington, D.C., metropolitan complex.

3. Corridors J, F, G, and S provide a route extending northerly from Chattanooga, Tenn., to Interstate 75 south of Lexington, Ky., and extending from Interstate 75 north of Knoxville to Charleston, W. Va.

4. Corridors Q, R, and I provide east-west connection from Interstate 81 southwest of Roanoke, Va., to Interstate 64 east of Lexington, Ky.

5. Corridor L provides a north-south connection between Interstate 77 at Beckley, W. Va. and Interstate 79 near Sutton, W. Va.

6. Corridor M provides an east-west route between Interstate 76 near Pittsburgh and Interstate 81 near Harrisburg, Pa.

7. Corridors N, O, P, and U provide a north-south route from Corridor E in Maryland to Interstate 80, and via Interstate 80 to New York City on the east; also connects Williamsport, Pa., with Elmira, N.Y.

8. Corridor T provides an east-west route midway between Interstate 80 in central Pennsylvania and Interstate 90 across New York State, beginning at Erie, Pa., and crossing the southern tier counties to Interstate 81 at Binghamton, N.Y.

As a preface to a discussion of the current position of the highway program, a review of its history would be useful.

In 1965 the Appalachian development highway program was authorized to be accomplished within 6 years—by the end of fiscal year 1971. The 1965 act authorized the construction of not to exceed 2,350 miles of development highways and 1,000 miles of local access roads. For these purposes $840 million was authorized; $35 million of this total was earmarked by the Commission for access road construction. Thus, of the total authorization $805 million was available for application on the development highway system.

Promptly after the passage of the act, the Commission designated a system of corridors complementing the Interstate System and other major routes to provide a regional highway system. These corridors included approximately 2,628 miles, 2,270 miles of which were eligible for construction. The remainder was adequate for projected traffic. The total mileage eligible for construction was necessarily an approximation due to the fact that actual engineering and construction produce some variation in alinement.

In the summer of 1965, the participating States and the Bureau of Public Roads undertook a study to establish adequacy ratings for highway segments

in the designated corridors and cost estimates for upgrading segments eligible for construction within the system to standards justified by traffic projected for 1975.

The results of this study indicated that, at contemporary costs, $2.2 billion would be required to build the mileage authorized. The act authorizes a maximum of 70-percent Federal financing. Thus, the cost estimate study produced a theoretical requirement for a maximum of $1.54 billion in Federal funds, or approximately double the funds authorized. The Commission chose not to request expansion of the authorization by the Congress and in August 1966 voted unanimously to allocate the funds authorized among the participating States on the basis of proportionate mileage on the system and cost estimates. The policy of providing 70-percent Federal participation on engineering, right-of-way, and two-lane construction and 50 percent on four-lane construction was established and the adequacy rating produced in the cost estimate study were adopted for the selection of highway segments to be improved with these funds with provision for adjustment to provide continuity in the system.

In August 1965, under authority of the Kennedy-Javits amendment, a 13-county area in New York was added to the region by unanimous vote of the Commission, and at the request of the State a study of the transportation problems of the area was initiated. Out of this study came the designation of corridors "T" and "U" in New York and Pennsylvania with the condition that major construction would not be undertaken until such time as the Congress authorized additional funds for that purpose.

Subsequently, in the Appalachian Regional Development Act Amendments of 1967, the mileage limits on the development system were raised to 2,700 miles, the ceiling on access roads was increased to 1,600 miles, and the authorization for the highway program was increased from $840 million to $1,015 million (a total of $70 million of which was earmarked for access roads).

With the addition of these corridors which were established as fully eligible for construction by Commission action following the enactment of Public Law 90–103, the total mileage eligible for construction was increased to 2,571. The total mileage of all corridors on the system was increased to 2,962.

The pace of the development highway program has been irregular. During the first year, fiscal year 1966, the rate of obligation was relatively high. A number of projects engineered with State or Federal aid funds prior to passage of the act were placed under construction in the first year. All of the 85.6 miles now open to traffic falls in this category.

In fiscal year 1966, $99 million was obligated on the development highway system of which $75.6 million or 76.3 percent was for construction and $23.4 million or 23.7 percent was for engineering and right-of-way acquisition.

In fiscal year 1967, obligations progressed at a slower rate due to the fact few projects on which engineering had been initiated with other funds remained to be advertised for construction and because engineering initiated with Appalachian funds had not as yet produced construction projects. In fiscal year 1967, $64 million was obligated, $42.9 million or 69.7 percent of which was for construction and $21.1 million or 31.3 percent for engineering and right-of-way acquisition.

Through fiscal year 1967 a total of approximately $163 million was obligated for construction on 256.6 miles and on engineering and/or right-of-way for an additional 980 miles.

While Federal obligations on the development highway program through the end of fiscal year 1967 were low, relative to the funds appropriated, engineering and right-of-way had been initiated on projects which, through the construction phase, will require a total of $883.6 million and $491.5 million in Federal funds. Many of the projects initiated in prior years are being advertised for construction in fiscal year 1968 and the pace of the program is accelerating rapidly. No funds were obligated for construction in the months of October, November, and December 1967, because of a Government-wide deferral of new Federal obligations, but about $17.5 million was obligated in fiscal year 1968 before that.

As of January 1, 1968, a total of about $195 million had been obligated for the Appalachian highway program including both development and local access roads.

It has been the policy of the Commission, following allocation of funds authorized for the development highway program, to allocate appropriated funds on the basis of State capacity to proceed with construction. In fiscal years 1966 and 1967 such allocations were made semiannually. By November 1967, it had become clear that during fiscal year 1968 the collective ability of the States to contract previously approved projects would exceed the funds appropriated. This situa-

tion was made more critical by the enactment of Public Law 90-218 which reduced the Federal funds available for the program. These circumstances necessitated the allocation of appropriated funds over a shorter time period and based on specific estimates by the States of the work to be done. For these reasons, at its November 1967 meeting, the Commission voted to adopt the policy of allocating appropriated funds on a quarterly basis based on identified projects.

TOTAL COST

Mr. EVINS. We indicated earlier that the total authorized highway development for the area is 2,700 miles and 1,600 miles of access roads. What is the total estimated cost of completing the development highways and the access roads?

Mr. FLEMING. You mean to build 2,700 miles?

Mr. EVINS. To build 2,700 miles, which has been authorized, and 1,600 miles access roads?

Mr. FLEMING. The total cost to build the 2,700 miles established as a mileage ceiling is in the neighborhood of $2.75 billion. The highway program has been treated by and large as the authorized funds, the funds being a limitation, rather than mileage.

Mr. EVINS. Congress has authorized so many miles of highways, development roads, and corridor roads to be built in the 13-State area. My question is how much will it cost to build these roads?

Mr. FLEMING. The best estimate for the total cost of 2,700 miles of construction on these designated corridors——

Mr. EVINS. You are not adding 1,600?

Mr. FLEMING. Not access roads.

Mr. EVINS. I am asking overall.

Mr. FLEMING. The access road mileage is hard to estimate because they are very small projects.

Mr. EVINS. They are both hard to estimate.

Mr. FLEMING. The others we have cost estimates on every section.

Mr. EVINS. Give us the cost estimates on the development highways.

Mr. FLEMING. It would be about $2.75 billion total, combination Federal and State.

Mr. EVINS. $2.75 billion would be the cost for development of highways. What is the estimated cost for the 1,600 miles of access roads?

Mr. FLEMING. $160 million. That is based on an average of $100,000 a mile, which is the standard that we have generally adopted.

Mr. EVINS. I think we have arrived at it then. The estimated cost for development highways is $2.75 billion and the estimated cost for 1,600 miles of access roads is $160 million. The total of those two is $2.91 billion.

Mr. FLEMING. That would be the total cost, including State participation.

COMPLETED HIGHWAYS

Mr. EVINS. Mr. Chairman, you have not begun to walk. You are just crawling. You tell me you have only about 85 miles of the highway built.

Mr. FLEMING. That is open to traffic.

Mr. JONAS. Let me see where that is.

Mr. EVINS. Take a look at this chart. Can you point out where this 85 miles is open?

Mr. FLEMING. I can generally. The 26-mile section in Kentucky that

runs from Hazard north toward the mountain parkway, it stops at Quicksand. There is also a section in North Carolina which was the first one completed.

Mr. JONAS. That is where?

Mr. FLEMING. That is near Asheville, on the north side of Asheville.

Mr. EVINS. How many miles?

Mr. FLEMING. There are 6 miles open there and about 5 miles open below Asheville, the Waynesville bypass. In addition to the 26 miles stretching north from Hazard, there is another strip in Kentucky on U.S. 119 near Whitesburg, which totals about 7 miles, a section on U.S. 23 of about 3 miles, this is the Louisa bypass, and about 7 miles on 15 near Whitesburg. There are about 6 miles open in Maryland, west of Hagerstown. Virginia has currently about 10½ miles open on U.S. 460 and 4 miles on U.S. 23 near Wise. West Virginia has almost 7 miles open, which is reconstruction of old Route 50 east of Parkersburg on that corridor headed east from Cincinnati right across into Washington and Baltimore, and about 2 miles on 460 near Princeton. Tennessee has about 8 miles open on corridor J north of Chattanooga.

STATUS OF PLANNING

Mr. EVINS. What is the status of the planning?

Mr. FLEMING. The current situation as of the first of the year, there is underway engineering on all projects of 1,400 miles.

Mr. EVINS. When do you estimate more construction will be let?

Mr. FLEMING. We estimate a great deal of construction is going to be let between now and June 30. The current obligation at the end of January, $210 million. The States have indicated a capacity, and BPR confirms the figures project by project to handle the obligation level up to over $300 million by the end of March, which means it could be due at the rate of $50 million a month in February and March. I frankly think that is a little optimistic.

Mr. EVINS. Somewhere in your justification I read you have worked out a plan where the States can advance some money to accelerate their construction and then be reimbursed by the Commission to allow States that have a particular desire to move ahead.

Mr. FLEMING. To get a precise estimate of what the States could do in the past we have operated by and large on their assertions of what could be done in the road program. To get a harder estimate we took every project that is on the system and has been initiated in some form, applied to it the average time between the initiation of engineering and the initiation of right-of-way and the day it is let for construction; in other words, looked at what is in the pipeline.

On the basis of those estimates, the States could commit $343 million in development funds on the Federal system by the end of fiscal 1968. Now, the obligation limitation that we are working under now gives us $316 million, $27 million less than needed. I should indicate the States estimate they can do more than that. This $343 million is the best estimate we can work out.

HIGHWAY CONSTRUCTION

Mr. JONAS. Mr. Chairman, the red lines on the big map, are they your system of Appalachia roads?

Mr. FLEMING. That is correct.

Mr. JONAS. And is that uniformly along already identifiable roads? How much of it is through virgin territory?

Mr. FLEMING. Virtually every highway follows a corridor, general traffic artery, that is served by some kind of road now, just because the terrain is such that just anywhere that a road could be built somebody has built one.

Mr. JONAS. Some way of access between communities, and you are building roads between community and community.

Mr. FLEMING. Building a much higher standard road is what it gets down to.

Mr. JONAS. You said one or two roads are improvements on U.S. highways.

Mr. FLEMING. By law these highways must be added to the primary system and that is in the statute.

Mr. JONAS. I know. But they become added to what is built.

Mr. FLEMING. That is right. Some of them are existing primary routes.

Mr. JONAS. Some of the roads you are building are on U.S. highways now; others are identified as State highways and others local highways.

Mr. FLEMING. That is correct.

Mr. JONAS. We are a little different than most States. All of our roads are State roads. We have State road maintenance.

Mr. FLEMING. West Virginia has the same system.

Mr. TALCOTT. Your Appalachia region has approved State roads, Henderson-Asheville and up.

Mr. JONAS. Yes, sir; right. Asheville up to what you mentioned is not a part of Interstate. The Interstate System goes to Knoxville but your road goes up to Whitesburg, Ky. That is through Irvine, Tenn.

Mr. FLEMING. That is correct. That is 23.

Mr. JONAS. Was that a U.S. highway?

Mr. FLEMING. That is U.S. 23.

Mr. JONAS. And you are improving that, widening it and upgrading it?

Mr. FLEMING. That is correct. In many cases two lanes to four. But the corridor is designed to provide the best access compatible with local, State, and regional needs. For example, this one I happened to be on recently I remember, corridor H coming east from West Virginia. That corridor follows in its course from Weston east to Strasburg and covers a piece that is on a primary highway, a piece on a State highway, and a piece on what in most States would be a county road.

Mr. JONAS. You do not have identified on this map access roads as proposed.

Mr. FLEMING. No. Most of these are very small projects—industrial parks and that sort of thing. I would be glad to provide for the record a list of those in smaller detail maps. I think in relation to the point you have raised that some of these routes do follow existing primary highways where they are being upgraded. Some of them follow State routes and some of them follow county roads.

Mr. JONAS. Now you have contracts with the States to maintain these roads once they are constructed?

Mr. FLEMING. The State, under title 23 of the United States Code which governs all highway construction, becomes responsible for maintenance. The Public Works Committee wrote in the statute the requirement that these roads go on the primary system as built. That means the States are responsible for maintenance for all of them.

Mr. TALCOTT. So you are not in the maintenance business on any roads.

Mr. FLEMING. No.

ALLOCATION OF FUNDS TO STATES

Mr. JONAS. Actually you do not build any roads. You allocate the funds to State highway commissions.

Mr. FLEMING. The State highway departments do the contracting with the Bureau of Public Roads performing a sort of oversight function.

Mr. JONAS. The same oversight as on primary functions.

Mr. FLEMING. That is correct. On a number of these corridors the States in addition to Appalachian account funds are committing Federal primary assistance as well as substantial State funds.

Mr. JONAS. Even higher than your funds would do?

Mr. FLEMING. They are trying to build the sections which can't be built with this authorization is about what it boils down to. Out of the 2,700 miles that is authorized, the amount of money that is authorized on the current cost estimates would assist in the construction of 1,600 miles. To go beyond that the States are making commitments of State funds and Federal aid primary funds. There will be some sections that will just have to be deferred to live with this authorization.

Mr. JONAS. What is your dim red line? What does it indicate?

Mr. FLEMING. On the exterior—that is just——

Mr. JONAS. Down through the region.

Mr. FLEMING. The dark green lines are the Interstate System.

Mr. JONAS. I see. This is the boundary of the system.

Mr. FLEMING. Under current estimates the States will need to do work now authorized—that is projects authorized, on which engineering has been done, rights-of-ways are underway or completed—$343 million by the end of fiscal 1968. Now on top of that must come access road obligations which will cumulatively total about $20 million by that date. That means $363 million through the year cumulative. The obligation limitation that was imposed by the continuing resolution gives us 316, which means we have approximately $54 million appropriated but not available for obligation until after the end of the fiscal year.

Mr. JONAS. This map would indicate that of all the States in the region, Pennsylvania has more of its territory embraced than any of the others percentagewise.

Mr. FLEMING. Well West Virginia is entirely included.

Mr. JONAS. That is right—the whole State.

Mr. FLEMING. The land area in Pennsylvania is somewhat deceiving though because the northern tier is very sparsely populated. It is about half the population of the State.

Mr. EVINS. Has there been any diversion of funds?

Mr. FLEMING. There has not been, Mr. Chairman. The earlier authorization was for $840 million. Last year the Congress increased that authorization to $1,015 million.

Mr. EVINS. You said earlier about transfers in connection with health centers or trade schools, but are you following that practice with respect to highway development?

Mr. FLEMING. We are trying to put the money where the States can use it.

Mr. EVINS. Once it is allocated, it is tied down for that purpose?

Mr. FLEMING. All authorized funds are allocated firmly. Within the appropriated funds our allocations have been based on capacity to proceed.

Mr. EVINS. Let us take a look at this chart here. The total allocation is $1,015 million. That does not mean the appropriation. This is the total authorized that has been allocated.

Mr. FLEMING. That is correct.

Mr. EVINS. For access roads $4,689,665 for Tennessee has been allocated.

Mr. FLEMING. That is correct.

Mr. EVINS. For development highways $53,213,000. For North Carolina, $3,495,389 has been allocated for access roads and $49,541,000 for development highways. With respect to appropriations, only $100,000 has been appropriated for access roads in North Carolina and $19 million for development highways. In Tennessee, $800,000 of appropriated funds has been allocated for access roads and $20,500,000 for development highways for a total of $21,300,000. Your subtotal for all the 13 States is, access roads $21,500,000, development highways $289 million, for a total of $310,500,000. This is all the money that has been made available to the States.

Mr. FLEMING. That is right. The obligation ceiling through 1968 is $316 million. There is $5,500,000 which will be available for further allocation. The allocations have been made on the capacity of the States to contribute work through March.

Mr. EVINS. Mr. Chairman, there has been a news report that the last 3 months of 1967 freeze has been lifted. That is with respect to the Appalachian highway development program. What is the situation?

Mr. FLEMING. There was a suspension of obligations on the Appalachian highway program and most other activities in the Appalachian Act the last 3 months of the calendar year 1967, October, November, and December. These were effective the first of the year.

Mr. EVINS. So the freeze was on construction and not on right-of-way acquisition and planning.

Mr. FLEMING. That is right.

Mr. EVINS. Now do you think you are geared up to move at a more rapid pace?

Mr. FLEMING. Yes, sir.

HIGHWAY FUNDING AND CONSTRUCTION TABLES

Mr. EVINS. We will place in the record these tables. Also the access road text on pages 6, 7 and 8.

(The documents of the justification follow:)

SUMMARY OF SECTION 201 FUNDING REQUIREMENTS THROUGH MAR. 31, 1968, AS REPORTED BY STATES JAN. 1, 1968 COSTS ($1,000)

[4] Obligational authority, $316,700,000 through fiscal year 1968.
[5] Anticipated appropriations.
[6] Recommended uniform appropriations.
[7] Schedule can be attained only with prefinancing contingent upon the state's ability and willingness to advance funds, with implied reimbursement from future appropriations, in addition to required matching funds.
[8] Appropriations required for total funding.

APPALACHIAN DEVELOPMENT HIGHWAY SYSTEM—MILEAGE SUMMARY

State	Total corridor	Eligible for construction	Construction assisted with sec. 201 funds (estimated)	Status as of Jan. 1, 1968				
				Location studies completed or underway	Design completed or underway	R/W completed or underway	Construction completed or underway	Construction completed
Georgia	89.0	86.4	37.4	86.4	35.2	15.7	5.3	----
Kentucky	578.9	415.6	342.6	415.6	325.3	145.3	71.4	43.2
Maryland	82.2	78.1	70.1	78.1	69.9	22.7	13.0	5.8
New York	260.0	230.5	147.8	212.3	202.8	37.0	23.7	----
North Carolina	201.2	200.3	147.9	178.5	148.3	51.5	20.5	11.1
Ohio	295.3	202.3	164.2	199.7	128.6	84.1	4.1	----
Pennsylvania	491.1	441.5	170.8	348.0	50.5	39.5	26.4	----
Tennessee	335.2	322.4	158.9	291.8	165.6	55.9	23.1	8.3
Virginia	203.1	178.1	103.0	178.1	97.8	97.8	75.4	10.4
West Virginia	425.8	415.9	320.3	415.9	177.9	61.0	12.5	6.8
Total	2,961.8	2,571.1	1,663.0	2,404.4	1,401.9	610.5	275.4	85.6

Funds which are not obligated according to this schedule will be subject to reallocation in March, along with approximately $4.5 million not allocated in January. It is apparent from this chart and from States' projected construction schedules that very shortly, demand for funds will exceed supply.

To obtain the most accurate estimate possible of the construction schedule for fiscal year 1968 and funds required to support it, all projects on which work has begun were analyzed to establish the average time lapse between the initiation of engineering and the letting of a construction contract (19 months) and between beginning right-of-way acquisition and construction (10 months). These are regional averages. Individual State averages were used to gage the estimated date of contract letting for construction State by State and project by project for the duration of the program. On the basis of this analysis, it is estimated that total Federal obligations could reach $343 million on the development highway system and approximately $20 million on access roads by June 30, 1968, if funds were available. The project schedules prepared early in January and reflected in the foregoing chart bear out this analysis. However, as previously indicated, only $316 million will be available for obligation through the end of the fiscal year.

The Congress has provided for such a situation in the Appalachian Act Amendments of 1967 which authorize advance financing by the States on projects which require funds exceeding Federal appropriations. Such advance financing does not obligate Federal funds but permits reimbursement to the States as Federal funds are available.

Using this device substantial work can be accomplished during fiscal year 1968 beyond that on which direct Federal obligations—$316 million—can be made. It is our hope that the schedule originally anticipated, bringing obligations to approximately $364 million by the end of the year, will be maintained through the use of advanced financing.

A review of the States' financial capacity to prefinance indicates that all States, with the possible exception of West Virginia, have the capacity to move ahead where reimbursement can be anticipated within a relatively short period of time. In West Virginia, where additional State financing is needed, the Governor is seeking a bond issue which will be used primarily on the Appalachian system.

The development highway program is authorized through fiscal year 1971. The policies of the Commission and the budget request are geared to the objective of having all work under contract by June 30, 1971. To do that, the schedule summarized on the following chart will be necessary.

Appropriation of the $125 million requested will bring the total funds appropriated through 4 years of a 6-year construction program to $495 million—less than half of the $1,015 million authorized and which must be provided to do the job envisioned by the Congress in 1965. Projects currently underway on which engineering and/or right-of-way have been done and will be ready for construction in fiscal year 1969 require Federal financing considerably in excess of the budget request. To insure that the budget reflected the minimum Federal contribution consistent with accomplishment of the program, a conscious judgment has been made to place the burden on the State governments of moving beyond appropriation funds, using the prefinancing device which I have described.

The Governors of the Appalachian States and the responsible State highway officials are clearly aware of the need for maximum speed in the construction of the Appalachian Development Highway System because the authorization for the program is limited and, more importantly, because the economic impact can only be realized upon its completion. Further, it can be anticipated that costs will increase (as has been the experience of the highway industry over the past 5 or 6 years) because of general price advances for labor and materials and more expensive construction due to the inclusion of new safety features. Due to the fixed ceiling on the program, any increase in cost can be directly translated to a decrease in the mileage constructed and a lesser impact on the economy of the region. The Appalachian highway program is limited by money rather than mileage and it is false economy to proceed at any thing less than the maximum rate of which the State highway departments are capable.

LOCAL-ACCESS ROAD PROGRAM

As has been previously pointed out, the Congress authorized in the 1965 act, 1,000 miles of local-access roads. The Commission initially earmarked $35 million of the original $840 million highway authorization for this purpose. In the Appa-

lachian Regional Development Act Amendments of 1967, the ceiling on access roads was increased to 1,600 miles, and an additional $35 million was earmarked for their construction (making a total authorization of $70 million.)

By the end of fiscal year 1967, a total of more than $8 million in Federal funds had been obligated. Over 102 miles were under construction and another 55.7 miles had preliminary engineering and right-of-way acquisition underway. As of January 1, 1968, the Appalachian Regional Commission had approved 371 miles of access road projects. Also as of that date, $10.4 million had been obligated with 66 miles completed, 67.7 under construction, and another 85 miles in preliminary engineering and right-of-way.

It is estimated that by the end of fiscal year 1969, $30 million of access road funds will be obligated, leaving $40 million in authorization to complete the 6-year program.

These local-access roads may provide feeder links to development highways or interstate routes. Some are local service routes to industrial parks. Some will exploit the potential of new investments in recreation, particularly State parks, or capitalize on new private investment such as the reservoir now under construction in Appalachian South Carolina by the Duke Power Co. at a total investment of $700 million. Other access roads may be low-cost forest roads designed to further the development and utilization of the region's timber and other natural resources. And some will facilitate school consolidation and provide necessary access to higher education facilities of importance to long-range Appalachian development.

MILEAGE SUMMARY

Mr. FLEMING. The third table in this series is the one that gives the best current view of where we stand on mileage basis relative to development of the system.

Mr. EVINS. The total corridor is 2,961.8 miles for the entire system and eligible for construction is 2,571.1 miles.

Mr. FLEMING. What that means is that those segments are below standard rated to current traffic and the projected traffic that is used for highway planning. That would be the year 1975 on these roads. In other words, of those segments, that number of miles in these corridors need improvement. The construction that can be actually assisted under the funds authorized in the current cost estimates total 1,663 miles.

The last five columns on that chart summarize the status of the entire program as of the first of the year. The first column indicates location studies completed or underway which is designed to establish the firm location of the road. The second is detailed design or actual engineering. That is cumulative total of over 1,400 miles. The third column is the mileage on which rights-of-way have been initiated. I might say they are cumulative as you move to the right.

Each total is included in the one before. In other words, the 610 is included in the 1,401.

And then the construction is now underway or completed on 275 miles and, as we have discussed earlier, a little over 85 miles is open to traffic.

TWO- OR FOUR-LANE ROADS

Mr. EVINS. This is a very good chart.

Mr. Chairman, was it envisioned originally when we passed the 1957 act, that the roads would be two- or four-lane roads?

Mr. FLEMING. It was never established what any given section would be in the statute. These roads were to be designed in accordance with standard State and Bureau of Public Roads procedures in rating roads to the traffic they would have to bear. Once you get to a certain traffic

volume, there is a shift from two- to four-lane roads. The cost estimates and the initial State planning on this system contemplated that approximately 70 percent should be constructed at four lanes based on traffic demands, and the cost estimates that I gave you a few moments ago of $2.75 billion is based on those estimates. Kentucky has stayed mainly with two-lane roads with the exception of some of U.S. 23 going south from the Ohio River. This is primarily because the traffic volumes don't warrant four lanes. The States have generally chosen and have been permitted by the Bureau of Public Roads to stay with the higher-type design where the traffic warrants it and make an effort to finance the additional sections which cannot be financed with this authorization, either the State funds with Federal aid primary, although that is a relatively small amount of money, or looking toward additional Federal financing possibly at the conclusion of the interstate program when the trust fund——

Mr. EVINS. In other words it did not prohibit four lanes. It said it would be justified in each State depending on the traffic volume.

Mr. FLEMING. That is correct, the traffic volume.

I might note that where initial traffic projections don't justify four-lane roads, that is traffic by 1975 does not justify four-lane facilities, but where traffic to 1990 does, the States have been encouraged to buy four lanes of right-of-way in order to get it at a cheaper cost and have it available for future development, which we think is sound economy.

Mr. EVINS. Well, Mr. Chairman, I want to commend you. At the same time, however, there has been a lot of concern that you have not been able to move fast enough with this program. It held out great hopes and great prospects.

Mr. FLEMING. I might indicate that one of the problems is the problem which Mr. Talcott raised earlier—this question of capacity of the institutions to do the job. In the initial case, Virginia and Kentucky moved very quickly to capitalize on the availability of this program, primarily because the highway commissioners in the two States had proceeded to engineer projects with 100 percent State funds anticipating the availability of this program. For that reason obligations and actual construction moved very promptly in those areas. In some other States we have had to sort of build from the ground up at the same time that the interstate program was peaking out on them and has required the States to do some soul searching relative to the capacity of the highway department.

FUNDING OF HIGHWAY CONSTRUCTION

Mr. EVINS. How much are you asking in the appropriations for 1969 for the access road program?

Mr. FLEMING. I believe it is $30 million earmarked for that.

Mr. EVINS. And you are going to need $40 million more after the $30 million is expended?

Mr. FLEMING. That would leave $40 million between the appropriations and the authorized ceiling for $70 million.

Mr. EVINS. Will the $70 million be sufficient to complete the access road program?

Mr. FLEMING. As you know, Mr. Chairman, the access road program is not a closed system. It is contemplated here with development high-

ways that these are individual projects to get specific sites and for industrial or commercial and recreational development. There is probably an almost unlimited demand for this kind of money. In terms of authorization, $70 million will buy an awful lot.

Mr. FLEMING. I should point out that given the appropriation request for fiscal 1969, assuming that is approved, the total through fiscal 1969 would be $495 million for both development highways and access roads, leaving $520 million between that and the authorization to be appropriated in 2 fiscal years, fiscal 1970 and 1971. If the development highway system is to be built at the fund authorization included in the original legislation and confirmed by the Congress last year, the appropriation requests for the next 2 years will be in the neighborhood of $250 million or $260 million at an annual rate. We are working very diligently with the State governments, with the Governors and highway commissioners to make maximum utilization of the present financing provision that was included in the act this last year. It permits a State to move projects through construction, obtain clearances from the Bureau of Public Roads as to engineering standards and the location of the road, and to qualify for reimbursement subject to future appropriations. This device is to be used at the time the need exceeds the funds appropriated. Everything indicates that that point will be reached in April or May of this year relative to 1968 and probably early in the spring next year, that would be the spring of 1969, relative to the total program. In other words we are just not going to have enough money to meet the demands for doing projects that are currently authorized some time in the next 3 months and probably before the end of fiscal 1969, and we have done this in our appropriation request here consciously.

Mr. EVINS. Off the record.

(Discussion off the record.)

Mr. EVINS. Now back on the record.

Mr. FLEMING. Mr. Chairman, we are going to attempt to get the work done at the maximum pace in which the States are capable of utilizing the present financing provisions authorized in the 1967 amendments.

Mr. EVINS. If they want to have their own bond issues to construct the roads within their State at an accelerated rate, then the Commission is to reimburse them for their costs on an approved formula basis.

Mr. FLEMING. As funds are appropriated.

REIMBURSEMENT TO THE BUREAU OF PUBLIC ROADS

Mr. EVINS. All right. You show total personnel compensation for 1969 of $535,000 and then you state——

Mr. FLEMING. This is in relation to the highway program. This is the administration charged against this fund by the Bureau of Public Roads. The personnel summary is the next page. They have approximately 36 people working on this in the national office and regional office of BPR.

Mr. EVINS. There are 36 employees in the Development Highway System. Are these both State and Federal?

Mr. FLEMING. No. That is strictly in the Bureau of Public Roads.

Mr. EVINS. The funds carried in your budget are for the reimbursement of the Bureau of Public Roads for these 36 employees.

Mr. FLEMING. That is right. They are carried as administrative compensation for the total program.

Mr. EVINS. All the State employees are paid by the State governments.

Mr. FLEMING. Yes, the State employees are all paid by the State governments.

Mr. EVINS. Do they all work on the State level or do some of them work here?

Mr. FLEMING. In the road program they are all in the State highway departments.

Mr. EVINS. How many of your own employees are working on the highway system?

Mr. FLEMING. We don't have a highway section.

We have several—I would imagine that probably five or six of our professional staff spend some time on the road program, either in planning or in administration. Not full time.

Mr. EVINS. You do not break your own employees down by section?

Mr. FLEMING. No. It seems to me I spend a disproportionate amount of my own time on the highway program.

Mr. EVINS. The only ones you can identify full time on the highway development program are these 36 with the Bureau of Public Roads.

Mr. FLEMING. That is correct. They are totally responsible for the 201 program. Most of those are located in the division or regional offices in the Bureau of Public Roads.

SECTION 202—HEALTH PROGRAM

Mr. EVINS. Let us turn to section 202; $25 million is requested for grants for planning, construction, and operation of multicounty demonstration health projects authorized by section 202. This new obligational authority coupled with $4.769 million carried over will provide an effective program level of $29.769 million for 1969.

You are asking for $29,769,000 for the 202 health program. Is that correct?

Mr. FLEMING. That is correct.

Mr. EVINS. You are requesting $25 million plus a carryover.

Mr. FLEMING. Yes.

Mr. JONAS. Will you tell us how much is unexpended?

Mr. FLEMING. Virtually all of it.

Mr. JONAS. You have spent very little on this actually.

Mr. FLEMING. Virtually none. This program is the one that we had considerable discussion about in December.

MORGANTON PROJECT

Mr. JONAS. What about the Morganton project? Is it moving?

Mr. FLEMING. The current report I have on the Morganton project is that the Hill-Burton agency in the State has reserved $1,572,000 for commitment on the project. Hill-Burton normally approves projects in a four-stage process, and they were up to the last stage which would involve final commitment based on architectural drawings. To

convert the project to one with more regional significance with an outpatient clinic with additional facilities for referral patients from other counties, there has been some change in the design. This is now proceeding and funds are available for commitment as soon as the architectural work is completed. They are going to request, as I understand it, approximately $3 million out of this fund to complement the Hill-Burton money.

Mr. JONAS. And that money is neither obligated nor committed.

Mr. FLEMING. That is correct.

Mr. JONAS. But it is being held on the back burner in reserve, mental reservation.

Mr. FLEMING. Well, we anticipate an obligation will be made on this some time this spring and the sooner the better. Our staff has been working with the Hill-Burton agency and with the Public Health Service and with local applicants to try to move that as quickly as possible.

Mr. JONAS. Well, local people have been disappointed because they have had their money available and they run into roadblocks everywhere they turn.

Mr. FLEMING. Well, we are prepared to go. As this text indicates, in November the Commission designated seven of these demonstration areas based on proposals from the States. The delay in implementation of the program is partially because of its unique character and partially because we consciously did not make obligations until changes could be made in the statute this last year. The new law did not take effect until the middle of October. We have expedited consideration of these applications and made planning and administration grants in three areas. The total obligation there is about $600,000.

A meeting was held a week ago yesterday here in Washington with all of the project area coordinators—the doers—the people who are putting these programs together. The results of the discussions there and the requests identified by project are summarized in the chart included at the end of this presentation on 202 headed "Anticipated Request for '202' Funds." This shows a total for fiscal 1968 of slightly in excess of $36 million. Now, I should voice the caveat that that also is everything they would like to do and can do consistent with the overall proposals that have been submitted. Some of those projects will probably wash out for technical reasons or because they don't fit their program consistently enough. But that is the present anticipated request for money in fiscal 1968.

STATE REQUESTS

Mr. EVINS. Well, your table on this unnumbered page at the end of section 202 shows requests of $38,362,900, but you are only asking for $25 million in new appropriations.

Mr. FLEMING. That is correct.

Mr. EVINS. About 10 of the 13 States are participating.

Mr. FLEMING. There are proposals at present in existence from Tennessee as indicated on here which have not been formally approved.

Mr. EVINS. All of the States are not participating. Those participating are requesting $38,362,900 and you are asking for an appropriation of $25 million plus the carry over.

Mr. FLEMING. That is correct. We think the $25 million is what can be spent consistent with sound planning and sound administration. That would be a total cumulative period of——

Mr. EVINS. In certain areas the Advisory Committee found 60 physicians for every 100,000 people as compared to a national average of 140, and 16 dentists per 100,000 population as against the national average of 54. In one county the report showed—these are some facts—among infants less than 1 year old, the most dominant diseases were: disorders of the ear, 1 out of 3; respiratory tract, 1 out of 3; heart and circulatory system, 1 out of 4; blood diseases, 1 out of 4. Among children ages 2 through 12, heart and circulatory system, 1 out of 3, and so forth.

Mr. FLEMING. I am not sure that this is the point where perhaps this issue should be raised, but I think of it so I will put it in here. In relation to Mr. Jonas' question regarding how much could be obligated consistent with sound planning, I think the 3-year period is where we are going to show big jumps in obligation over this fiscal year 1968 will be in the highway program, in this program right here which will be initiated for the first time and in the supplemental grant program where we are, in effect, catching up with ourselves. A lot of commitments on 1967 projects were made in July and August.

Mr. EVINS. What about your vocational education? Is that one of your more active programs?

Mr. FLEMING. It is.

It has moved very quickly and funds have been obligated during the fiscal years during which they have been appropriated, the 2 years we have had experience with it, and it has stimulated a great deal of activity in the State vocational programs.

Mr. EVINS. Vocational education, highways, health, and supplemental grants are the largest programs for next year.

Mr. FLEMING. They are also the ones that show the greatest increase over obligations in 1967.

JUSTIFICATION MATERIAL

Mr. EVINS. Let us place in the record all of this text on 202 including the chart at the back.

(The justification follows:)

REGIONAL DEMONSTRATION HEALTH PROGRAM, SEC. 202

Authorization	Public Law 89-4		Public Law 90-103	
	$69,000,000		$50,000,000	
	1965-66	1967	1968	1969
Appropriation	$21,000,000	$2,500,000	$1,400,000	[1] $25,000,000
Obligation	117,000	14,000	[2] 20,000,000	[2] 29,769,000

[1] Request.
[2] Estimate.

The sum of $25 million is requested for grants for planning, construction, and operation of multicounty demonstration health projects authorized by section 202 in fiscal year 1969. This new obligational authority coupled with $4.769 million carried over into fiscal year 1969 under Public Law 90-218 will provide an effective program level of $29.769 million in fiscal year 1969.

This program was authorized in recognition of relatively low levels of health services in many areas of Appalachia and because adequate health facilities and services are fundmental to the attraction of private investment. The 202 program provides for grants to be made by the Public Health Service, and was designed to demonstrate improved techniques for the delivery of health services to selected areas. To carry out an evaluation of Appalachian health needs, develop program objectives and recommend criteria for project preparation and selection, the Appalachian Regional Commission established a Health Advisory Committee, composed of experts in the health fields. Findings of the committee, published in March 1966, presented a disturbing picture of high disease incidence and a distinctly inadequate supply of health manpower of all types and levels, and insufficient health facilities and services.

In certain areas, the committee found only 60 physicians for every 100,000 people against the national average of 140 and again in certain areas, only 16 dentists per 100,000 population against the national average of 54.

Death rates from cardiovascular diseases and tuberculosis are high, and infant mortality is also alarmingly high in some of the poorer counties.

The committee's report contained findings from a 5-month health study in one Appalachian county. Among infants less than 1 year, the most dominant disease frequencies were: disorders of the ear, one out of three; respiratory tract, one out of three; heart and circulatory system, one out of four; and blood diseases, one out of four. Among children ages 2 through 12: heart and circulatory system, one out of three; ear, one out of three; and eye, one out of four. Among adults: eye, 42 percent; heart and circulatory system, 27 percent; ear, 26 percent; and allergic, endocrine and metabolic disorders, 23 percent.

Since the committee's report, there have been developed more data indicating the extraordinary severity of Appalachian health needs. One 14-county study in eastern Kentucky, for example, revealed a 50-percent incidence of worms among the men, women, and children examined.

On the basis of its findings, the health advisory committee recommended, and the Commission adopted, criteria and guidelines for the development of 202 projects aimed at providing comprehensive health services for all residents of a project's service area. The committee emphasized three major concepts: regional service, comprehensive care, and demonstration of new health service techniques. Projects include health education, personal preventive services, diagnostic and therapeutic services, rehabilitative services, communitywide environmental health services, and provision for continuing care of persons to encourage the development of a continuing relationship between a patient, his physician, and other health service personnel.

The advisory committee recommended legislative changes to permit the achievement of these objectives. By the Appalachian Act Amendments of 1967, these recommended changes were written into law. The amendments provide that funds may be used for planning and evaluating projects, for the training of medical personnel, and for construction. Funds are authorized for the acquisition of facilities where this is necessary, to provide an integrated system of health services. Public Law 90–103 also amended the act to permit an operating grant for an existing hospital or other health facility which is a component of a multicounty demonstration health project, which is in keeping with the philosophy of providing comprehensive health service in a project area rather than simply building and operating a single facility. Public Law 90–103 contains language to confirm that construction costs can be funded from section 202 funds, or from a combination of 202 grants and grants from other programs such as the Hill-Burton program and the mental retardation facilities and community mental health programs. Grants for operations may cover up to 100 percent of costs for the first 2 years of operation, and up to 50 percent for the following 3 years of operation.

These changes became law on October 11, 1967. Project proposals had been developed and submitted to the Commission on the assumption the legislation would

be amended, and on November 29, 1967, seven demonstration areas were designated. They included eight counties in Georgia; 11 in Kentucky; four in North Carolina; seven in Ohio; six in South Carolina; nine in West Virginia, and seven in Virginia. Other proposals are in preparation. Alabama presently is revising its application. A proposal for the first interstate project has been submitted by Tennessee and Georgia.

Following are some of the specific component projects the seven designated areas plan to include in their comprehensive programs:

Satellite out-patient centers to provide health services to persons in remote areas;

Special transportation systems, to move seriously sick and injured quickly from remote areas to hospitals;

Home health services;

Rehabilitation centers;

Extended care facilities;

Health manpower training programs;

Speech and hearing clinics;

Mental health and mental retardation centers;

Hospital construction;

Development of a system for the common management of medical records and health data throughout an entire demonstration area;

Family planning services;

Prenatal care services.

There is no pattern among the States for the management of the projects. In Virginia the State department of health is the applicant agency. In West Virginia, the acting project director is a physician who has practiced in Princeton for many years. In Ohio and some other areas, a nonprofit organization has been established to run the program, with a hospital administrator as project director.

Because of the unique and often unprecedented character of the projects, it was realized last year that most areas would require funds to carry forth the detailed planning of their proposals. The 1967 amendments to the act provided for this and as of February 1, 1968, planning grants of $200,000 each were made for projects in West Virginia, North Carolina, and Ohio. Proposals for similar grants have been submitted by Virginia, South Carolina, and Georgia.

On the advice of the Health Advisory Committee, the Commission has recently appointed a health project review panel to carry out detailed assessments of proposals for both comprehensive demonstration projects and the component activities. The panel is made up of outstanding representatives of the fields of medicine, public health, hospital planning, hospital administration, nursing education, the social sciences, and other fields. This is the standard practice of the Public Health Service which will also participate in these evaluations.

The effects of the "202" program, both at the local and interstate levels, will be continually and carefully assessed by the Commission with respect to the potential value of comprehensive health programs to the entire Nation. At the time of the passage of the act, section 202 constituted an entirely new concept in Federal health programming. It was followed shortly by Public Law 89-239 (regional medical programs) and Public Law 89-149 (comprehensive health planning). All three programs are in their early development, with little or no precedent to follow, but with the promise of providing a new level of health to the American people through Federal-State-local cooperative efforts.

In the case of Appalachia, the health program is aimed at more than simply raising the health level. Its purpose is to halt the human erosion caused by disease and lack of health care and to strengthen and develop the human resources so that Appalachia can become a more prosperous and more productive region.

FISCAL YEAR 1969

Fiscal year 1969 will be the first year of full-scale operations of the "202" program, and initial plans are being completed for the establishment of urgently needed facilities. In the start-up period of this program, emphasis was placed on those projects which could most readily assure essential health services. In fiscal year 1968 training programs started to develop the supply of auxiliary health personnel to staff facilities and in a number of projects arrangements were made with state schools of medicine so that professional personnel would become available to augment the limited number of physicians in the project areas.

The section 202 program is, by design, competitive. Those States which have

submitted proposals recognize there are limited funds available to carry out their projects. Indeed, the total funds appropriated through fiscal year 1968 for section 202 represents less than one-seventh of the section 202 requests for comprehensive health demonstrations. Therefore, in fiscal year 1969 the organizations involved in the demonstrations will improve their proposals for individual components and will accelerate their areawide development and planning in order to generate projects capable of receiving Appalachian Regional Commission approval. Each 202 proposal has some 40 to 50 components, ranging from the development of home health care services to transportation and communications systems and multi-county diagnostic and treatment centers. This gives some measure of the extent of each 202 demonstration.

Additional proposals are being developed in Alabama, Tennessee, and Mississippi. Some funds may be devoted to planning and initial projects in these areas in fiscal year 1969 if the proposals receive Commission approval.

Following is a summary of the proposed program in the designated demonstration areas including an estimate of the funds required in fiscal year 1969. While not yet eligible for funds, the Alabama and Tennessee proposals are included to give the committee the best possible view of the program. Final commitments will, of course, vary from the estimates as components are refined to the application stage.

ALABAMA

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds	$995,000	$1,640,000	$2,635,000
202 funds	1,810,000	6,560,000	8,370,000
Total	2,805,000	8,200,000	11,005,000
Requested funds, 1968	884,200	3,750,000	4,634,200
Anticipated requests for funds, 1969	950,000	4,050,000	5,000,000

Area	*Population*
3 counties: Limestone, Lawrence, Morgan	121,500

This proposal provides for a full-time staff to continue project development and to provide the demonstration area with a close link to the University of Alabama in Birmingham through its medical center. A regional health complex is envisioned in this proposal along with a coordinated system of area colleges and trade schools to provide training for health workers and continuing training for those already in the health field. "Unless additional health manpower can be trained for the tri-counties," the proposal states, "no solutions designed to supplement existing health resources can be implemented. Progressive patient care, dental care, extended care and public health services are among the programs indicated for later development.

Modification of inpatient facilities to progressive patient care usage, operation of health personnel training programs and services, and construction of dental facilities will require additional support in fiscal year 1969.

GEORGIA

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds	$14,620,475	$6,190,586	$20,811,061
202 funds	8,883,188	2,995,244	11,878,432
Total	23,503,663	9,185,830	32,684,043
Requested funds, 1968	2,036,300	262,300	2,298,600
Anticipated requests for funds, 1969	2,319,100	1,173,400	3,492,500

Area	*Population*
Bartow, Chattooga, Cherokee, Fannin, Floyd, Gilmer, Gordon, Murray, Pickens, Whitfield	270,000

The commitment of the Georgia Department of Public Health, which is responsible for a broad range of health activities, including mental health, mental retardation and comprehensive health planning, strengthens this project. With

this assistance, local communities have studied existing gaps in health care and have attempted to structure programs to fill these gaps. Innovative features include a new approach to mental health through a "mental health learning center" and a "neighborhood health-learning center" to develop new techniques for health education.

KENTUCKY

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds	$42,528,000	$45,555,750	$88,083,750
202 funds	23,076,622	27,435,000	50,511,622
Total	65,604,622	72,990,750	138,595,372
Requested funds, 1968	1,595,000	4,534,000	6,029,000
Anticipated requests for funds, 1969	4,000,000	5,588,000	9,588,000

Area	*Population*
11 Counties: Bell, Breathitt, Clay, Harlan, Knott, Knox, Laurel, Leslie, Letcher, Perry, Whitley	250,000

This 11-county area in the coal mining region of eastern Kentucky is subdivided into three medical service areas. A large number of local citizens have participated in the planning of this project which also intimately involves the University of Kentucky Medical Center.

Anticipated construction during the first year includes the upgrading of existing acute hospital beds, the addition of extended care and psychiatric units to existing hospitals and the construction of one long-term hospital facility. Among the proposed health services are home care programs, mental health and retardation services, health screening, and environmental health services. A unique training program is designed to bring senior medical students to the project area under the direction of community health field professors from the University of Kentucky School of Medicine, an innovative demonstration aimed at increasing the supply of rural physicians.

Financing of health services including extended care, preventive and restorative services, and emergency care, as well as modernization of substandard facilities will be priority projects.

NORTH CAROLINA

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds		$5,293,222	$5,293,222
202 funds	$9,041,989	5,958,614	15,000,603
Total	9,041,989	11,251,836	20,293,825
Requested funds, 1968	1,046,700	3,047,500	4,094,200
Anticipated requests for funds, 1969	695,400	1,209,100	1,904,500

Area	*Population*
Alexander, Burke, Caldwell, McDowell	144,600

North Carolina's proposal focuses on creation of a modern health facility, training of nurses and other paramedical personnel and expansion of public health and welfare services.

In the immediate future, a new Grace Hospital will be built with an initial capacity of 160 beds, with the capacity to be expanded to 330 beds. It is proposed that the old hospital be renovated into a 100-bed extended care facility. Hill-Burton funds are anticipated for these projects, and processing of these applications is now underway.

Construction of a paramedical training facility and a hearing testing center and operating funds for services and health manpower training programs are priority projects.

OHIO

7-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds	$8,432,405	$12,239,999	$20,672,404
202 funds	6,500,136	14,745,612	21,245,748
Total	14,932,541	26,985,611	41,918,152
Requested funds, 1968	681,500	7,263,000	7,944,500
Anticipated requests for funds, 1969	1,640,000	2,825,000	4,465,000

Area	*Population*
7 Counties: Athens, Vinton, Gallia, Jackson, Lawrence, Meigs, Hocking	210,322

The Ohio project anticipates the construction of two major hospitals. One, the Holzer Medical Center, effects the merger of two group practices. Other proposed construction includes public health units in Jackson and Gallia Counties and a vocational rehabilitation center and mental health center in Athens. Among the projected service programs are a mental retardation mobile evaluation unit, an emergency transportation service and family planning and home care programs. Both nursing education and paramedical training programs are included in the manpower development component.

SOUTH CAROLINA

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds	$5,572,000	$7,584,000	$13,156,000
202 funds	5,581,000	10,634,000	16,215,000
Total	11,153,000	18,218,000	29,371,000
Requested funds, 1968	1,746,600	1,200,000	2,946,600
Anticipated requests for funds, 1969	1,677,000	2,137,000	3,814,000

Area	*Population*
6 counties: Anderson, Cherokee, Greenville, Oconee, Pickens, Spartanburg	650,000

There is an active widely representative health council in the proposed demonstration area and considerable energy has gone into laying the foundation for a 202 proposal. A planning grant will permit more rapid development of essential components, including rehabilitation facilities of regionwide impact, and health manpower training programs.

High-priority projects are two satellite diagnostic and treatment centers and programs in dental and mental health.

TENNESSEE-GEORGIA

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds			
202			
Total			
Requested funds, 1968			
Anticipated requests for funds, 1969	$500,000	$1,000,000	$1,500,000

Area	*Population*
6 counties: Georgia: Catoosa, Dade, Walker; Tennessee: Hamilton, Marion, Sequatchie	[1] 339,900

[1] Established 1965.

This project covers three counties in Tennessee and three adjoining counties in Georgia. It is the first 202 project which is interstate. Total projects costs, includ-

ing 202 requirements, are not now available. However, a survey of the area's needs indicates early utilization of $1.500 million for this demonstration for planning, administration and project development, as well as construction and operating funds for expanded public health services, bed modernization, and facilities for mental retardation programs.

VIRGINIA

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds	$24,500,000	$1,200,600	$25,700,000
202 funds	17,434,500	4,802,400	22,236,900
Total	41,934,000	6,003,000	47,937,500

Anticipated requests for funds, 1969	1,998,900	0	1,998,900

Area: *Population*

7 counties: Buchanan, Dickenson, Lee, Russell, Scott, Tazewell, Wise, and the independent city of Norton 223,200

The primary concern of this project to be operated as a separate unit of the State health department will be to seek out patients and get them into a system with an emphasis on continuity of medical care. This will be accomplished by establishing and operating a network of regionalized clinical services. A regional specialty clinic will be established in Wise County which will also include a mental health unit, poison control center, rehabilitation conseling service, and a continuing education program. The satellite, or outlying clinics will be located in the surrounding counties and will afford referral flow of patients from the smaller clinics to the regional clinic as well as a flow of physician consultation services from the regional clinic to the outlying clinics. There are plans to establish and operate a railroad medical unit, which will be moved from one community to another and left on railroad sidetrack for a limited period of time and equipped to do multiphasic screening of patients. Patients with health problems would be referred from the railroad medical unit into the mainstream of clinical services.

In conjunction with the system of regionalized clinic services, arrangements will be made to establish paramedical personnel training to purchase hospitalization at local facilities to provide transportation of patients and to arrange payment for home health services through existing health agencies.

WEST VIRGINIA

5-year proposal	Administration and operation	Construction	Total
Other Federal, State, and local funds		$7,398,416	$7,398,416
202 funds	$17,556,849	8,621,464	26,178,313
Total	17,556,849	16,019,880	33,576,729
Requested funds 1968	2,300,000	3,820,000	6,120,000
Anticipated requests for funds 1969	2,600,000	4,000,000	6,600,000

Area *Population*

9 counties: Fayette, Logan, McDowell, Mercer, Mingo, Monroe, Raleigh, Summers, Wyoming 442,500

This nine-county area, located in the heart of Appalachia, encompasses the three medical service areas of Princeton-Bluefield, Beckley-Mount Hope, and Williamson-Logan.

The objectives of this project are to develop and implement a comprehensive plan demonstrating innovative methods in delivery of health services and in the construction of medical facilities. The seven major components—public health, dental health, extended care, manpower and training, medical services, transportation and communication, and mental health—are interrelated to meet the area's health needs.

Included in the construction program are public health centers in Logan, Mercer, and Raleigh Counties with additional satellite centers in the other six counties (and of three regional mental health centers in Mercer, Raleigh, and Logan Counties). The manpower and training program is to be implemented at local community colleges. In addition, programs in dental health, medical services, and transportation and communication have been designed to meet the unique needs of this largely rural area.

ANTICIPATED REQUEST FOR "202" FUNDS

FISCAL YEAR 1968

	Administration and operation	Construction	Total
Alabama	$884,200	$3,750,000	$4,634,200
Georgia	2,036,300	262,300	2,298,600
Kentucky	1,495,000	4,534,000	6,029,000
North Carolina	1,046,700	3,047,500	4,094,200
Ohio	681,500	7,263,000	7,944,500
South Carolina	1,746,600	1,200,000	2,946,600
Virginia	1,220,100	1,312,000	2,532,100
West Virginia	2,300,000	3,820,000	6,120,000
Total	11,410,400	25,188,800	36,599,200

FISCAL YEAR 1969

Alabama	950,000	4,050,000	5,000,000
Georgia	2,319,100	1,173,400	3,492,500
Kentucky	4,000,000	5,588,000	9,588,000
North Carolina	695,400	1,209,100	1,904,500
Ohio	1,640,000	2,825,000	4,465,000
South Carolina	1,677,000	2,137,000	3,814,000
Tennessee-Georgia	500,000	1,000,000	1,500,000
Virginia	1,998,900		1,938,900
West Virginia	2,600,000	4,000,000	6,600,000
Total	16,380,400	21,982,500	38,362,900

Note: The "202" funds required to accomplish the preceding can be scheduled as follows: $36,600,000 in 1968, an $38,400,000 in 1969. This reflects a pace the demonstration health area directors and planners have set out as feasible and in keeping with sound planning and development practices. Obviously, all cannot be accomplished at once. It is the best judgment of the Commission that the ensuing competition for "202" funds will cause the best projects to be supported first. Given the present "202" schedule, a request for $25,000,000 is justified.

Section 203—Land Stabilization

Mr. Evins. The next program is land stabilization. This is section 203. You are asking for $3 million. Is there any carryover in this program?

Mr. Fleming. No. We anticipate total obligations by the end of the year 1968.

Mr. Evins. The chart shown on page 3, showing the States, estimates the total will be $2,710,000, and administrative costs will be $290,000 for a grand total of $3 million. There are no carryovers in this fund.

Mr. Fleming. That is correct. These funds are used for contracts with individual landholders relative to land stabilization plans on a project basis.

Relation to Department of Agriculture Program

Mr. Jonas. Mr. Chairman, how do these differ from the normal land stabilization program handled by the Department of Agriculture?

Mr. Fleming. They differ in two ways essentially. One is that they may be programed for a longer term. This program authorizes up to

10-year contracts to be executed by the Secretary of Agriculture with individual landholders providing 80 percent of cost, which can be done under the ACP program but it is done on an annual contract basis. The second thing is by Commission policy these funds are not allocated by county throughout the region as are ACP funds and are not used as an agricultural production device but generally for erosion control and land stabilization. Each of the States develops a plan for the use of these funds focusing on complementing other kinds of investments—for example, reservoirs, small watershed projects, municipal water supply projects where there are siltation problems.

Mr. JONAS. Where does John Smith who lives in X County go if he wants to get in on this program? To the county ASCS office?

Mr. FLEMING. The county ASCS office ultimately administers the contract. In the first instance the State will make the decision it wants to have a project in county X to help protect the water supply in the county if it is clogging up with silt, and the county office is in contact with the landholders.

Mr. EVINS. Who administers this?

Mr. FLEMING. It is administered through the county ASCS office. The State's involvement comes in determining the area eligible to participate and establishing the project.

ROLE OF ASCS OFFICE

Mr. EVINS. Will a farmer go to the ASCS office or State agricultural office?

Mr. FLEMING. The farmer would go to the ASCS office.

Mr. JONAS. And they will tell him what to do.

Mr. FLEMING. That is correct.

Mr. JONAS. Is this program designed to help the individual farmer on an individual farm or do you say it is designed more on a sort of a regional or sectional basis?

Mr. FLEMING. During the first 2 years of the program it has been used largely to help the farmer on the farm, with some modification of that. For example, in the two States that have done the best with this program, Kentucky and Tennessee, have focused on a project area in trying to relate the contracts that are being let to an area plan.

Mr. JONAS. If it was designed simply to help an individual farmer, it would be merely an extension of the ASCS program, would it not?

Mr. FLEMING. That is true.

Mr. JONAS. To provide supplemental funds.

Mr. EVINS. Mr. Chairman, could you give us the figures as to how many projects have been initiated in the last 2 years?

Mr. FLEMING. I will be glad to supply for the record the number of contracts per State.

Mr. JONAS. And show the average amount per farm.

Mr. FLEMING. One of the best examples where this has been done on a project basis is in relation to Cookeville, Tenn., where they have concentrated these funds in contracts to landholders to cut down on erosion and siltation that was threatening the public water supply.

Mr. EVINS. That is related to the local development district program.

Mr. FLEMING. This is being used as a companion effort to that. That is true.

STATES—NUMBER OF PROJECTS AND ACREAGE COST

Mr. EVINS. Give us a table showing us the States and the number of projects and the average cost.

(The information follows:)

CONTRACTS UNDER SEC. 203

LAND STABILIZATION JUSTIFICATION

Mr. EVINS. Insert pages 1 through 4 of this section in the record.

(The pages follow:)

LAND STABILIZATION PROGRAM, SEC. 203

	Public Law 89-4		Public Law 90-103	
Authorization	$17,000,000		$19,000,000	
	1965-66	1967	1968	1969
Appropriation	$7,000,000	$3,000,000	$3,290,000	[1] $3,000,000
Obligation	6,640,000	3,360,000	[2] 3,290,000	[2] 3,000,000

[1] Request.
[2] Estimate.

Three million dollars is requested for fiscal year 1969 for land stabilization, conservation, and erosion control carried out by the Department of Agriculture. Section 203 authorizes the Secretary of Agriculture to enter into contracts of 3- to 10-year duration with landholders for conservation practices. These practices are accomplished with Federal cost sharing not to exceed 80 percent of cost. The program is administered through the Agricultural Stabilization and Conservation Service with the technical assistance of the Soil Conservation Service.

While the administrative structure of the program is patterned on the Agriculture Conservation Program, its focus is somewhat different. The Appalachian Regional Commission, by Resolutions 47 and 138, established criteria for the use of this program. Normal ACP assistance is available on a "first-come" "first-serve" basis and is available throughout counties. Under section 203, the Appalachian Commission hopes through planning to define specific program areas and apply land stabilization practices to prevent erosion, siltation and encourage desirable land use conversion. In addition, the Commission stresses high value, long-term contracts as opposed to annual cost-sharing in small dollar amounts.

To accomplish this the Appalachian Commission has been attempting to break new ground in the use of land treatment measures by requiring States to prepare investment plans for expenditures of funds. These plans must be developed to show how 203 funds will be utilized to overcome adverse physical conditions which are contributing to sluggish economic development.

These plans have been developed by committees made up of representatives from the States' Soil Conservation Committees, Farmers Home Administration, and other appropriate agencies. Because the directive in the Act that funds should be invested in areas with potential for growth, these State plans have limited the areas eligible for section 203 contract assistance. In fiscal year 1966, the first year of the program, 138 counties out of 373 counties in the region were included in the program. In fiscal year 1967 the number of areas was reduced to 111, primarily because of a smaller appropriation and more concentration in use of funds. Because of the history of the Agriculture Conservation Program, to which 203 funds are closely related, most of the initial State plans established eligibility by county.

The Commission, however, has now designated criteria to focus the program more sharply on project areas addressed to the areas identified in an approved State Appalachian development plan as having a significant potential for future growth; or assure that projects to be assisted will complement investments in the area to be served or otherwise have a demonstrable impact on the solution of problems or the development of potential of the area to be served as specified in the approved State Appalachian development plan, such as (1) protection of a water supply by reducing erosion and siltation; (2) development of recreation areas; (3) complement Public Law 566 projects which add to potential for development; or (4) protect other significant public investments such as Corps of Engineer Reservoirs, National Parks or Forests, et cetera, where the project area has a demonstrable bearing on development.

Several States have developed project areas which will require multiyear appropriations to see successful accomplishment of objectives. For example, the State of Kentucky requires over $1.5 million to complete 27 projects designed to reduce siltation of municipal water supplies and flooding. Another example is in the State of Tennessee where a three-county area in the Cookeville growth area is earmarked to receive over $1 million in 203 funds over several years. These 203 funds will be used in conjunction with a major watershed project under Public Law 566 eventually involving three impoundments. Such concentration will assure the greatest return on the Federal investment.

The rate of obligation of section 203 funds is high, as indicated by the following table of obligations. Also included are estimated obligations for fiscal year 1968 and fiscal year 1969.

SEC. 203—FISCAL YEARS 1966, 1967, 1968, AND 1969: OBLIGATIONS AND ESTIMATES

State	Obligations			
	Actual		Estimated	
	Fiscal year 1966	Fiscal year 1967	Fiscal year 1968	Fiscal year 1969
Alabama	$841,865	$486,775	$398,130	$359,644
Georgia	308,787	166,644	138,600	125,202
Kentucky	664,529	402,406	317,610	286,908
Maryland	91,685	45,000	39,870	36,016
Mississippi	0	0	253,920	229,374
New York	558,923	310,899	259,650	234,551
North Carolina	463,371	261,355	207,720	187,640
Ohio	413,666	225,037	184,110	166,313
Pennsylvania	790,217	432,774	354,060	319,834
South Carolina	82,577	155,638	80,460	72,682
Tennessee	841,748	380,422	353,520	319,346
Virginia	356,133	187,648	157,110	141,923
West Virginia	591,395	305,506	255,240	230,567
Total	6,014,896	3,360,104	3,000,000	2,710,000
Administration	625,000	0	290,000	290,000
Grand total	6,639,896	3,360,104	3,290,000	3,000,000

Since 1960, the 13 Appalachian States accounted for about one-third of total national ACP assistance, averaging about $67 million per year. The original 12 Appalachian States obligated some $22,363,987 in fiscal year 1964 in their Appalachian counties. One of the objectives of the 203 program is to coordinate 203 and ACP investments toward common objectives in designated project areas.

A $3 million appropriation was requested for fiscal year 1968 to maintain continuity in the program areas approved for fiscal year 1967. The same amount, $3 million, is being requested for fiscal year 1969 for continued concentration in already approved areas while the Commission continues to work with the States to prepare multiyear program investment plans for section 203 that will establish definitive needs for the remaining life of the act.

SECTION 205—MINE AREA RESTORATION

Mr. EVINS. Section 205. This is mine area restoration. You are asking for $5,293,000, and you have a carryover in this fund.

Mr. FLEMING. Yes, sir. There is a carryover of $3,993,000.

Mr. EVINS. You are asking for an appropriation of $1,300,000 plus the carryover.

Mr. FLEMING. That is correct, which gives an effective program of $5,293,000.

Mr. EVINS. Tell us about your activities under this section.

Mr. FLEMING. The bulk of the program activity under this section is in Pensylvania. The section was originally included in the act at the request of Governor Scranton who was instrumental in the initial planning on this program. It has been devoted primarily to mine fire control and subsidence in the anthracite region of Pennsylvania with some attention to smaller outcrop fires in the bituminous area of southwestern Pennsylvania that are generally related to air pollution. In Scranton, Wilkes-Barre and companion communities. These fires are a very serious threat to life and property from gas, heat, and subsidence. This appropriation level will permit us to move ahead in liquidation in a sense of the commitments or on projects that have already been initiated in some form.

MINE FIRES

Mr. EVINS. Fire in the west middle anthracite field in the Mount Carmel area and other places would affect 88,000 people and property valued at $160 million if allowed to burn. Well, are you making any progress in arresting the fires.

Mr. FLEMING. Yes. In the case of Mount Carmel the Bureau of Mines recommended with the State department of mines concurring only exploratory drillings costing $150,000 should be undertaken to established the perimeters of the fire and develop the engineering design to control it. In most cases it is not practical to try to extinguish a fire. All you can do is to block off the arteries of passage to keep it from spreading. There are eight or nine major mine fire projects initiated thus far in the anthracite region. All of these are moving ahead at a very rapid pace.

Mr. EVINS. You indicated, in Scranton alone, in the heart of the downtown area can be seen the adverse effects of earlier deep mining operations. According to a report of 1965, 12,493 acres of property in the county are consumed by stripping and culm banks. This is 15 percent of the Central Valley sector. Well you assess the problems. We hope you are able to do something about them. You are asking for $1,300,000 and that seems like a pretty small amount of money to settle all those problems.

Mr. FLEMING. The request is low because of the need to accomplish a lot of the work that has been initiated in the past.

STATE CONTRIBUTION

Mr. EVINS. How much is the State expending on this?

Mr. FLEMING. This is a 75 Federal, 25 State.

Mr. EVINS. 75–25.

Mr. FLEMING. It is somewhat unique in terms of Federal-State efforts in that the Federal Bureau of Mines is the contracting agent on these mine fire projects and the State pays in its share to the Federal agency rather than vice versa.

Mr. EVINS. How much is the Department of Interior spending in this area?

Mr. FLEMING. You mean under existing programs?

Mr. EVINS. In their mine fire program?

Mr. FLEMING. They have no strip mine program. Their mine fire program naturally runs about $400,000 and $500,000. This program authorized by section 205 represents the bulk of Federal activity addressed to this particular problem.

Mr. EVINS. In other words, this is the main treatment.

Mr. FLEMING. That is correct.

JUSTIFICATION MATERIAL

Mr. EVINS. The 1967 Amendments to the Appalachian Act authorized expenditures of funds also for culm bank removal and grading, the culm bank being the refuse left over from underground mining. One project is currently being developed in the Scranton area on which approximately $500,000 is the estimate as put together now which is

admittedly very rudimentary. This would be tied to an industrial park development where these funds would be used to restore the land keyed to other state and local financing efforts.

We will insert the justification material for this section.

(The justification follows:)

MINE AREA RESTORATION, SEC. 205

	Public Law 89-4		Public Law 90-103	
Authorization	$36,500,00		$30,000,000	
	1965-66	1967	1968	1969
Appropriation	$17,350,000	$7,500,000	$0	[1] $1,300,000
Obligation	714,000	10,302,000	[2] 8,000,000	[2] 5,293,000

[1] Request
[2] Estimate.

A sum of $1.3 million is requested for mine area restoration programs administered in the Department of the Interior in fiscal year 1969. This new obligational authority coupled with $3.993 million carried over into fiscal year 1969 under Public Law 90-218 will provide an effective program level of $5.293 million.

Since the beginning of the program $24.85 million has been appropriated. As of January 31, 1968, $21,083,396 in Federal funds have been approved for projects. The following table shows appropriations, approvals, obligations, and uncommitted funds as of January 31, 1968:

Activity	Appropriations (fiscal years 1965-68)	Projects approved		Obligation	Funds uncommitted
		Number	Federal dollars		
Fires and subsidence	[1] $20,800,000	36	$19,904,576	$10,592,077	$895,424
Surface reclamation:					
Bureau of Mines	[1] [2] 1,300,000	3	303,750	202,149	996,250
Fish and Wildlife Service	[3] 1,450,000	4	875,070	574,000	[4] 574,930
Strip study	500,000		500,000	500,000	0
Totals	24,050,000	43	21,583,396	11,858,226	2,466,604

[1] $2,000,000 reprogramed from surface reclamation to mine fire and subsidence.
[2] $400,000 reappropriated for research on the "conversation and development of mineral resources." (81 Stat. 64.)
[3] $400,000 reappropriated for construction programs of the Bureau of Sport Fisheries and Wildlife Service (Department of the Interior and related agencies Appropriation Act Public Law 90-28).
[4] Authority for the surface mine restoration program of the Fish and Wildlife Service has been deleted from Public Law 90-103 and these funds presently are not available to the Appalachian Commission.

After mine fire projects are approved by the Appalachian Commission, they are implemented by the Department of the Interior. Through the contribution contract, the Department of the Interior promises the State it will supply the agreed-upon Federal share of funds needed to complete the project. The State promises to do the same as far as State and local funds are concerned and it also assures the Department of the Interior that it will be free from any liability arising from work on the project. This latter factor has played an important role, unforeseen 2 years ago, in determining the pace at which the program has been implemented.

The difference between approved projects and funds obligated reflects the long-time period required to obtain releases from property and mineral rights owners at the project site. These releases are required to permit the Department to perform work without liability for damages, but obtaining them has been very time consuming.

The State legislature of Pennsylvania has under consideration a bill permitting quick access to threatened property through the use of the State's police powers for the protection of the health, safety, and general welfare of the people of the Commonwealth. Passage of this legislation by the State will greatly accelerate the combat of mine fires and subsidence.

MINE FIRES AND SUBSIDENCE

Most of the projects approved by the Commission are still a long way from completion and, accordingly, direct results have not yet been achieved in terms of improved conditions to promote economic growth. However, it is an inescapable fact that large numbers of people and high-value property would be adversely affected if the fires were allowed to burn. Also, the legacy of past mining is a serious impediment to development.

For example, in Carbondale, Pa., a fire directly affects a population of 200,000 people and property valued at $34 million. In Hazelton, $99 million in property is threatened. In Throop Township adjacent to Scranton, Pa., an industrial park is threatened which would affect 3,300 jobs, the total payroll of which is $17.5 million. Property damage is estimated at $18.6 million. In Scranton, a General Electric plant has been partially closed as a result of an underground fire and 600 jobs were lost to the area. Furthermore, the affected industrial park could ultimately develop 7,000 jobs if the underground fire is first extinguished, while surrounding residential and commercial property directly affected by this fire is valued at $6 million, not counting streets and public utilities.

The foregoing greatly understates the real damage of mine fires in terms of lost opportunities. Obviously, no businessman would invest in an area threatened by fire or which provides a pollution laden and noxious environment to its inhabitants.

In anthracite Pennsylvania alone there are several major coalfields. Fire, if unchecked, could burn through an entire field and eventually threaten much more in the way of property and population. The northern anthracite field, for example, is underneath the Wyoming Valley which is virtually a single urban complex running from Carbondale in the north through Scranton, Pittston, Wilkes-Barre and Nanticoke in the south. In 1960, there were roughly 442,000 people living in this valley and property is valued at $1.1 billion. A fire in the eastern middle anthracite field over which is centered the city of Hazleton, affects a population of 50,000 people and property valued at $118 million. Fire in the west middle anthracite field which underlies Shamokin, Mount Carmel, Ashland, Shenandoah, Frackville, and Mahanoy City would affect 88,000 people and property valued at $160 million if allowed to burn. In these examples, alone, roughly 200 square miles of land is affected.

From this point of view clearly, mine fires must sooner or later be extinguished even where only low value property is immediately threatened. It is just good economic sense to extinguish the fire while the cost of such extinguishment is lower and before high value property is threatened or destroyed.

SURFACE MINE RECLAMATION

The reclamation of strip and surface mine areas has not proceeded at a pace satisfactory to the Commission. The act provides that only publicly owned lands may be reclaimed under the program and little of the land in Appalachia scarred by strip mining is in public ownership. The report of the Secretary of the Interior indicated that only 4 percent of strip-mined acreage in the region is owned by public bodies and few of the States or units of local government within them have the capacity to acquire such land for reclamation. The Commission has, however, approved seven strip mine reclamation projects which, in total, will require $1,178,820 in Federal funds. With the exception of one project adjacent to the Pittsburgh Airport, all of these projects have been related to recreational developments.

The act was amended in 1967 to allow the cost of land acquisition for projects to be treated as part of the State's share of the project costs. In addition, it will be able to support projects where surface damage, such as waste piles, is the result of earlier deep mining activities.

This new authority will assist economic expansion in the rapidly growing areas of Eastern Pennsylvania. For example, in Scranton alone, in the heart of that community's downtown area can be seen the adverse effects of earlier deep mining operations. According to a land use report of 1965, 12,493 acres of property in Lackawanna County is consumd by stripping and culm banks. This is only 4.3 percent of all land in the county but represents 15 percent of the Central Valley sector, the area of greatest urban development. Waste piles dominate the central portion of the valley and several of these piles are presently having a blighting and noxious effect on surrounding developed land uses.

It is the intention of the Commission to proceed with some restraint in this area. Waste piles are expensive to move. Moreover, their removal should, in almost all cases, be carefully coordinated with other types of restoration, particularly subsidence projects. This is because of the requirements of subsidence projects for large amounts of fill materials. Waste piles are ideally suited from a physical and cost point of view to meet this requirement.

In July 1967, the Secretary of the Interior submitted to the President its final report on strip and surface mining in Appalachia. This report indicates 1,439,837 acres of land in the Appalachian States have been disturbed by surface mining and estimates that the cost of reclaiming this land would be $403 million.

Section 207—Housing Fund

Mr. Evins. Turn to section 207, Appalachian housing fund. You are requesting $2 million. There is no carryover. This is a new section added by the 1967 amendments.

Mr. Fleming. That is correct, the initiation of work under this section.

Mr. Evins. Presently approximately 1 million Appalachian families live in substandard housing. The distribution of these conditions even intensifies the problem. They are scattered all over. For example, in the most depressed areas of Kentucky and West Virginia less than 10 percent of the families live in adequate housing. Well $2 million is not going to solve that problem.

Mr. Fleming. What these funds are designed to do is to stimulate the use of section 221, particularly the below market interest rate provisions of that section, for nonprofit sponsors to develop low-cost and low- and moderate-cost housing in these areas. The basic 221 program simply has never been used to any extent outside of Pittsburgh, Binghamton, and Knoxville.

Mr. Evins. The grants will be used to meet the cost of obtaining competent technical assistance for initiating and managing the construction of 221 projects.

Section 221 of the National Housing Act

Mr. Fleming. That is section 221 of the Housing Act.

The 221 projects are difficult and demanding undertakings. In Appalachia the record will show that it is next to impossible here. I think the members of this committee are probably well aware that section 221 provides for FHA insurance.

Mr. Jonas. At less than market rate of interest.

Mr. Fleming. Section 221(d)(3) includes the below market interest rate program, currently 3 percent, for nonprofit institutions such as church and fraternal groups. We are trying to get State governments involved also.

Mr. Evins. How will these nonprofit institutions use these funds?

Mr. Fleming. These funds are designed to help them to get an application put together to get a 221 mortgage. In estimates we have from the FHA, 5 percent of the total project cost is required to put the application together.

Mr. Evins. Apparently to initiate 221 projects.

Mr. Fleming. Most of the available responsible sources within the Appalachian region simply have not been able to put together the 5-percent cost to get the architectural planning.

Mr. JONAS. This money will be granted?

Mr. FLEMING. No. There is authority for some small grants for technical assistance for planning management and to cover projects on which mortgages are not issued. The bulk of the money will be recaptured. They are loans which are advanced to responsible sources and recaptured when the mortgage is issued. There is a chart at the end of this section which shows the anticipated recapture on an annual basis. The act authorizes a revolving fund so these funds become available for reloaning. It is an advance, if you will, which is repayable at the time that the mortgage is issued.

Mr. PRYOR. Is this a misprint on page 2 of section 207? Where it says here in the next to the last paragraph: "As a result, the West Virginia Legislature is not considering"—should not that be "now"?

Mr. FLEMING. It should have been "now" when it was written and I guess right now it should be "not," because the legislation involved was passed by the senate in the West Virginia Legislature and was not passed by the house, largely because of the parliamentary situation. But it is anticipated that the bill will be brought up the next time it meets. The Kentucky Legislature is getting ready to consider the same kind of legislation which will involve the State providing the fund to make construction loans before permanent financing is secured.

NONPROFIT HOUSING INSTITUTIONS

Mr. TALCOTT. Mr. Chairman, are there any public nonprofit housing authorities or agencies in the Appalachian area?

Mr. FLEMING. Yes, there are.

Mr. TALCOTT. Why can they not participate in the Federal housing programs?

Mr. FLEMING. The public housing has been used to a fairly substantial degree.

Mr. TALCOTT. I do not necessarily mean low cost or big public housing developments, but are there not some public housing authorities that could take advantage of some of the Federal funds to provide separate houses, separate homes; without waiting for huge Federal low-cost housing ghettos?

Mr. FLEMING. We anticipate that the public bodies that qualify under FHA will use this program to a substantial degree.

Mr. TALCOTT. What is this Urban America, Inc.? Who are they?

Mr. FLEMING. It is a group that is headed by William J. Slayton who is former head of the Urban Renewal Administration. They specialize in trying to promote the planning, design, and development of communities.

Mr. TALCOTT. Are they volunteers or do they get pretty handsome salaries?

Mr. FLEMING. The contract we have with them that is referred to here is for almost $25,000.

Mr. EVINS. They have a lot of expert knowledge like a lawyer who has worked for the Government and goes out to practice law.

Mr. TALCOTT. Well do you check on their salaries? It is my understanding that some of these people are drawing very handsome salaries.

Mr. EVINS. The authorities who sponsor nonprofit organizations have a contract, do they not?

Mr. FLEMING. That is right. The reference to Urban America is related simply to delivery of services to the Commission and to the two States in this instance. Are we talking about them or talking about housing authorities who are nonprofit?

Mr. TALCOTT. Urban America, Inc.

Mr. FLEMING. I can't tell you right now the salaries of the officers, but they are a nonprofit organization.

Mr. TALCOTT. That is what I thought. We are supposed to be dealing with nonprofit organizations.

Mr. JONAS. Are they in the category of some architects who go around the country selling public housing to the communities and then offer to do all the paperwork?

Mr. FLEMING. That is right, the same way you hire an engineer or contractor to build a road.

Mr. TALCOTT. We had one of these so-called nonprofit organizations in our area whose organizers have no competence in housing construction or management. They are simply trying to put together housing authorities in my area to provide lucrative positions for the directors and promoters, and they are causing more trouble than doing good. We should be careful in dealing with these nonprofit corporations. They may not have the competence at all.

Mr. FLEMING. This is absolutely the case. The other problem is the need for a competent institution. One response that we have produced is the State housing corporation where you would have people on the State payroll who could assist in putting these projects together, arranging the financing and perhaps in the initial management. Most of the State governments are getting people to provide the technical assistance to implement this program.

HOUSING FUND JUSTIFICATION

Mr. EVINS. We will insert your housing fund justification material at this point.

(The information follows:)

APPALACHIAN HOUSING FUND, SEC. 207

	Public Law 89-4		Public Law 90-103	
Authorization			$5,000,000	
	1965-66	1967	1968	1969
Appropriation			$1,000,000	[1] $2,000,000
Obligation			[2] 1,000,000	[2] 2,000,000

[1] Request.
[2] Estimate.

Two million dollars is requested for further implementation of the program to stimulate low and moderate cost housing in the Appalachian region under section 221 of the National Housing Act. This program was authorized in the Appalachian Act Amendments of 1967 (Public Law 90-103). One million dollars was provided for it in fiscal year 1968 appropriation. Current estimates indicated these funds will be obligated by June 30, 1968.

Throughout the Appalachian region, housing quality and availability is a persistent problem.

At present, approximately 1 million Appalachian families live in substandard housing. The distribution of these conditions even intensifies the problems. For example, in the most depressed areas of Kentucky and West Virginia less than 10 percent of the families live in adequate housing.

Despite these conditions, very limited use is being made of operating Federal programs, with the exception of public housing. In the entire State of West Virginia, only 200 FHA mortgages for new single family construction in a typical year; in eastern Kentucky only 25 such mortgages will be insured. And with the exception of the larger metropolitan areas such as Pittsburgh or Birmingham, no use is being made of low and moderate income aids, including rent supplements.

In response to these conditions, the Congress added section 207 to the Appalachian Regional Development Act to authorize the Secretary of Housing and Urban Development, upon approval of the Commission, to make grants and loans to qualified sponsors to cover the costs of initiating low and moderate income housing projects under section 221 of the National Housing Act. Responsibility for administration of the program has been delegated to the Federal Housing Administration.

Grants will primarily be used to cover the costs of obtaining competent technical assistance for initiating and managing the construction of 221 projects. Under the best of conditions, 221 projects are difficult and demanding undertakings; in Appalachia the record (602 units built in 6 years) will show that it is next to impossible.

The loans will be made to cover specific items that a sponsor must fund in order to obtain a mortgage insurance commitment under section 221.

The items include:

(*a*) Land options;
(*b*) Market analyses;
(*c*) FHA and FNMA fees;
(*d*) Preliminary architectural fees;
(*e*) Preliminary site engineering fees;
(*f*) Construction loan financing fees;
(*g*) Construction loan discounts.

All of the above costs are eligible for inclusion in project mortgages, and will be recovered by the Government from mortgage proceeds.

Thus, the program authorized by section 207 is designed to meet two critical problems—the shortage of capital to initiate 221 projects and the lack of technical competence needed to get such projects organized. To capitalize on the opportunities presented by this program, the Commission has contracted with Urban America, Inc., for assistance in the design and organization of State, chartered, private housing corporations to assist the construction of low-income housing. The initial efforts under this contract have been addressed to the creation of such institutions in Kentucky and West Virginia. In addition to assisting in the stimulation of section 221 projects, it is hoped that these corporations will provide service to local organizations and assist in obtaining financing for the wide variety of housing, including the generation of private mortgage funds.

In several other States, notably, Pennsylvania, Ohio, New York, and North Carolina, State-supported personnel have been assigned to encourage and assist local sponsors in the development of projects. It appears that this activity will ge beyond 207–221 projects to stimulate other forms of new and rehabilitated housing in the region.

To facilitate the prompt availability and use of the 207 program, the Commission has requested the Federal Housing Administration to conduct housing market analyses for a number of communities in the region. Efforts are also underway to develop workable programs in communities where their absence is a principle impediment to the generation of 207–221 projects.

The following chart indicates the anticipated effect from the grants and loans made under the authority of section 207 as well as the rate for recapture of loans made from the Appalachian housing fund.

Mr. EVINS. I suggest we suspend until 1:30.

AFTERNOON SESSION

Mr. EVINS. The subcommittee will come to order. We will resume our hearings with the Appalachian Regional Commission this afternoon.

I believe we had concluded consideration of the mine area restoration, section 205 and the Appalachian housing, an item for $2 million.

VOCATIONAL EDUCATION FACILITIES, SECTION 211

Mr. EVINS. We will now look at the vocational educational facilities, section 211.

Here, you are asking for an appropriation of $14 million. This is one of your major programs.

How much did you expend in this program last year, Mr. Chairman?

Mr. FLEMING. Through fiscal 1967 a total of $16 million was appropriated for this program, all of which was committed with the exception of $7,000 which was carried over into fiscal 1968 and is recorded in this estimate.

Those funds, coupled with the section 214 funds prompted the construction of approximately 70 vocational educational schools of one type or another throughout the Appalachian region. In fiscal 1968, another 18 or 19 schools have been approved, so we now have 89 schools which have been financed in one way or another under the Appalachian Act.

Mr. EVINS. There are 89 vocational schools that have been assisted through the Appalachian educational bond.

Mr. FLEMING. That is correct.

I might add that during hearings and consideration of the Appalachian Act Amendments of 1967, the last year extension of the program, the vocational educational program was the only section where the authorization was expanded beyond what was requested.

It was increased to a 2-year authorization of $26 million. This $14 million request for fiscal 1969 would exhaust that. We are asking for the appropriation of the full authorization for this program.

Mr. EVINS. Could you tell us how much funding is planned or envisioned by the States?

I have an impression that you have more planning and requests for this than you have funds available.

Mr. FLEMING. These funds are 50-percent grant fund for the cost of construction and equipping vocational educational facilities. They are used in conjunction with Vocational Educational Act of 1963 funds.

The region, by population, will receive approximately $20 million under the Vocational Educational Act of 1963.

These funds would be supplemental to that. In other words, there would be a total availability of approximately $34 million in Federal funds for vocational educational construction and equipment grants.

NATIONAL VOCATIONAL EDUCATION PROGRAM

Mr. EVINS. The overall program that the Department of Education envisions, is this throughout the Nation or in Appalachia?

Mr. FLEMING. Throughout the Nation.

Mr. EVINS. How much will this provide for Appalachia?

Mr. FLEMING. The national program will provide about $20 million in Appalachia. This $14 million under section 211 is additional to that. Of that $20 million, according to the experience this year, about $7 million would be used for operations which is permissible under that basic statute, leaving approximately $13 million for grants for construction and operations, construction and equipment. This plus the $14 million requested under section 211 would provide $27 million. The States have identified projects that would require approximately $90 million total.

USE OF SECTION 211 FUNDS

Mr. EVINS. Will any of this $14 million be used for operations?

Mr. FLEMING. None for operations, only construction and equipment. The Vocational Education Act funds can be used for operations,

Mr. EVINS. Fine.

Mr. JONAS. But none of these funds are usable for operation?

Mr. FLEMING. No; just construction and equipment.

Mr. JONAS. Or maintenance?

Mr. FLEMING. No.

Mr. JONAS. For original construction?

Mr. FLEMING. Original construction and equipment. Under the 1967 act they can be used for new equipment in existing facilities, so there will be some equipment projects.

NUMBER OF SCHOOLS CONSTRUCTED

Mr. EVINS. Can you give us a breakdown as to how many trade schools or vocational schools have been built in each of the States?

Mr. FLEMING. I can provide that for the record.

Mr. EVINS. Provide a statement for the record. I have the impression this has been one of your more active programs.

Mr. FLEMING. It certainly has. There is a tremendous shift in curriculum going on nationally and doubly so in this region.

We have recently completed work undertaken by the Educational Advisory Committee the Commission established which indicates that some 350,000 people or students enrolled in vocational education in the region, over 60 percent are in agriculture and home economics, areas which are obviously declining as far as employment opportunities are concerned.

Almost all of the projects undertaken with these funds are addressed to trades and industries, construction trades, mechanical skills and so forth.

USE OF GRANTS

Mr. EVINS. Mr. Chairman, the overall vocational education program throughout the Nation is over $200 million. Part of it is for operation and part for construction, but in the Appalachian educational program, the grants are on a 50–50 basis for construction and for facilities. If operating funds are obtained, they are secured from other sources.

Mr. FLEMING. That is right.

Mr. EVINS. Your funds are committed to the construction of facilities.

Mr. FLEMING. That is right.

Mr. EVINS. You have been able thus far in your 4 years to build about 89 trade schools. We cited this morning a few examples that are shown here.

Mr. FLEMING. We have approximately 20 of those that were opened this last fall. The bulk of the others will be opened next September.

Mr. EVINS. This is interesting.

Mr. JONAS. As we could not really claim credit for inaugurating all these programs because your money in this program is supplementary to the State funds and Federal vocational and educational funds, is that not true?

Mr. FLEMING. That is true.

Mr. JONAS. This program is designed to provide, in these States and the region, some additional funds over and above those available from these other programs for vocational education.

Mr. FLEMING. That is correct.

Mr. EVINS. You state that the need for vocational education in Appalachia is indicated by these figures: of every 10 children in the first grade, six finish high school, two go to college, and one is graduated. This is nationally.

Here is what happens in the Appalachian region: Out of every 10, less than one graduates from college, and four finish high school.

In the Nation as a whole, high school dropouts are 40 percent, in Appalachia, it is 65 percent.

Now, this is a program that is designed to improve that condition. We cited these schools shown on page 3 in Somerset, Ky.; Asheville, N.C.; and Greenville, S.C.

FUNDING BY STATE

Mr. JONAS. I have a question by reason of the citation of these three examples. We do not have a table showing the breakdown of allocations and funds among the different States in this program as you have in others. I suppose it would be easy to furnish that?

Mr. FLEMING. I would be happy to provide that.

(The information follows:)

SECTION 211 FUNDS AVAILABLE TO EACH STATE

State	Fiscal year 1965-66 allocation	Fiscal year 1967 allocation	Fiscal year 1968 allocation	Total allocation
Alabama	$817,940	$217,920	$1,189,200	$2,225,060
Georgia	659,820	349,800	708,000	1,717,620
Kentucky	886,293	1,247,520	976,800	3,110,613
Maryland	300,020	300,000	418,800	1,018,820
Mississippi	0	0	598,800	598,800
New York	448,420	448,400	646,800	1,543,620
North Carolina	673,160	410,140	850,400	1,933,700
Ohio	541,780	541,760	770,400	1,853,940
Pennsylvania	1,144,347	1,645,160	2,152,800	4,942,307
South Carolina	461,860	461,840	649,200	1,572,900
Tennessee	1,058,540	600	1,153,200	2,212,340
Virginia	395,600	2,058,580	650,800	3,104,980
West Virginia	612,220	318,280	1,234,700	2,165,300
Total	9,000,000	8,000,000	12,000,000	28,000,000

Mr. JONAS. With respect to the Somerset area schools, what part of the cost of construction and equipping that institution did you provide?

Mr. FLEMING. That school was 50 percent out of section 211 and it was 30 percent out of section 214 with the remaining 20 percent from State and local funds.

Mr. EVINS. While the building of these vocational schools is on a 50–50 basis under statutory provision, if the local governmental unit is unable to raise their proportionate share, is there authority for the making of a supplemental grant?

Mr. FLEMING. Yes, sir.

Mr. EVINS. This is where the Appalachian program has come in to supplement these plans to make them become a reality.

Mr. FLEMING. That is correct. In the main, the supplemental assistance on vocational education has not been up to 80 percent as in most programs. It has been somewhat lower.

In Kentucky, there have been more 80-percent projects just because those school districts are the poorest in the region.

Mr. EVINS. You are confident you can use this entire $14 million?

Mr. FLEMING. Fully confident. As a matter of fact, the commitment of the Congress in the authorization bill which increased what was requested has tended to spur the States into more activity in this area. As I indicated the full appropriation was obligated during the first 2 years and a lot of additional projects were stimulated in the process.

VOCATIONAL EDUCATION JUSTIFICATION

Mr. EVINS. We will insert the justification for this program.

(The justification follows:)

VOCATIONAL EDUCATION FACILITIES, SEC. 211

	Public Law 89-4		Public Law 90-103	
Authorization	$16,000,000		$26,000,000	
	1965-66	1967	1968	1969
Appropriation	$8,000,000	$8,000,000	$12,000,000	[1] $14,000,000
Obligation	2,547,000	13,446,000	[2] 12,007,000	[2] 14,000,000

[1] Request.
[2] Estimate.

$14 million is requested for grants authorized by Section 211 to assist in constructing and equipping vocational education facilities. It is anticipated that all $12 million available for this purpose in fiscal year 1968 will be obligated by June 30, 1968.

Central to the economic plight of the Appalachian region is a large pool of untrained manpower which is reflective not only of the economy but also of the often underfinanced and poor quality schools in the region. Special funds for vocational education were authorized by Section 211 to help break the continuing cycle of unprepared youngsters coming into the labor force having either dropped out of school or finished a curriculum poorly tailored to potential employment.

The need for vocational education facilities in the Appalachian region is clearly indicated by the fact that nationally, of every 10 children who enter the first grade, six finish high school, two go to college and one is graduated from college. In the Appalachian region, of every 10 beginning the first grade, four students finish high school, one goes to college and, statistically, less than one is graduated. While 20 percent of high school graduates go to college nationwide, only 10 percent do so in the region. In the nation, the high school dropout rate is 40 percent. In Appalachia, it is 65 percent.

As a result most Appalachian youngsters, possessing a high school education or less, must compete in a labor market in which skills are at a premium. Given their background, their chances of having marketable skills are slim. This realization has given rise to accelerating demands in the Appalachian region for vocational education facilities.

To rectify these circumstances, improvement of education at all levels is required. The Elemenetary and Secondary and the Higher Education Acts are making major contributions to education in the region. The effect of these efforts will be felt over a relatively long period of time. This concentrated effort for vocational education development is addressed to the immediate opportunity to produce trained, employable youngsters at the end of high school or, in some cases, after high school.

The authorization in Section 211 is supplementary to monies available to states and school districts in the region under the Vocational Education Act of 1963. The budget request for this program for fiscal year 1969 is $199,309,000. These funds are apportioned among the states by a statutory formula. Based on the population of the region as a proportion of the participating states, approximately $20 million will be available to the region under this legislation.

Thus, the total Federal assistance for vocational education in the region will be approximately $34 million. It should be noted that Vocational Education Act of 1963 funds may be used for operating costs as well as construction and equipment subject to the limitation that at least 25 percent of a state's allocation must be devoted to construction. Seventy-one percent of the funds disbursed under this program nationally have been used for operations.

In Appalachia, just the reverse has been true historically. About 75 percent of these funds have gone for construction. This in itself indicates the dearth of facilities in the region. As more and more schools (70 have been approved in fiscal years 1966 and 1967) are opened, there are increasing demands for operating funds and thereby less for new facilities. Thus, if the full amount requested is made available under section 211, a total of only $20 to $25 million in Federal funds will be provided for construction and equipment grants in the region in fiscal year 1969.

In part, the existence of the Appalachian program has prompted exceptional efforts in the State governments and local school systems to upgrade and, in many cases, initiate vocational training. Through fiscal year 1967, $16 million was appropriated under section 211 and $15,993,000 was obligated. In the process, a great many valuable proposals have been developed. The State governments now have in being plans for new vocational education facilities requiring $87.9 million in fiscal year 1969.

A portion of this demand for funds stems from the enormous need for converting courses offered from the fields of vocational agriculture and home economics to industrial crafts. Such a shift produces equipment costs even where no new construction is required.

Due to the process of State plans, cooperative services, and Commission criteria, emphasis is being given to the new secondary and postsecondary technical courses in high-wage, high-skill growth occupations. For example:

1. Somerset Area Vocational School in Somerset, Ky., is providing central postsecondary technical training for all the youth in the State in aircraft-related skills such as aircraft engine mechanics, aircraft instrumentation, and control tower operations. This school is located next to the local airport and flight service facility, and is serving projected needs for a growing demand for such skills throughout the State.

2. Asheville-Buncombe Technical Institute, Asheville, N.C., with its four extensions serves 15 western North Carolina counties and offers training in electronics, mechanical, civil, and chemical engineering, drafting, data processing, tool and die making, radio and TV servicing, and has opened a new curriculum for motel management and other occupations related to needs created by a growing tourism industry. All of these training courses were designed in cooperation with local industry and their growing needs.

3. Greenville Technical Institute, Greenville, S.C., provides postsecondary education for all in South Carolina's six Appalachian counties and has model programs in the health occupations areas in which there is tremendous regional and national demand. Offerings include inhalation therapy, EKG technology, medical secretary training, surgical technology, and 19 other critical medical occupational areas. This institute is a critical component of a demonstration project to provide urban equivalent medical services in a dispersed multicounty rural area, under section 202. Further, it is providing needed paraprofessional medical personnel for the southern part of the region.

Regional vocational-technical centers are considerably accelerating progress toward multicounty cooperation in larger districts, stimulating growth of new and modern job demands, and supporting new high-skill industry which have been attracted in part by the trained manpower produced by such centers.

A basic premise of the entire Appalachian program is that there will continue to be a migration from one part of the region to another, either in residence or by commutation to work. Thus, the vocational education facilities and curriculums developed in the region must be responsive to the potential labor demands of fairly large areas.

In an attempt to gear vocational course offerings more closely to the needs of industry, locally and regionally, the Commission, working with its Education Advisory Committee, and in cooperation with the Departments of Labor and Health, Education, and Welfare, has embarked on the survey to determine the projected needs of industry in the Appalachian region in 1975. The needs will be broken down into occupational groupings and specific skill areas and these used as a guide for curriculum development in the region. Every effort is being made to have this data available for fiscal year 1969 project and curriculum planning.

Sewage-Treatment Facilities, Section 212

Mr. Evins. Gentlemen, let us take a look at the next program. This is section 212 for sewage-treatment facilities.

You are requesting $4 million and you have a $18,000 carryover for a total program of $4,000,018.

Will this exhaust the authority for these sewage-treatment grants under the Appalachian programs?

Mr. Fleming. That is correct. That exhausts the authorization.

Mr. Evins. We were told by another agency that this committee hears, that they had many more requests for water and sewage-treatment facilities than they had funds.

There is a great demand for funds in this area. Will these funds be used to supplement the other programs; to initiate new programs, or what?

Relation to National Program

Mr. Fleming. As in the case of the vocational education, this adds some additional funds for this purpose, earmarked for the Appalachian region.

We estimate, of the national program for the construction of municipal waste-treatment plants, approximately $25 million will be available to the Appalachian region, in addition to this $4 million.

Mr. EVINS. $25 million will be available in other programs for the Appalachian region.

Mr. FLEMING. That is right, that is under Public Law 660—the Water Pollution Control Act.

This additional $4 million would be on top of that, making a program in the region of about $30 million. These are basically 30 percent grants, although the statute permits 40 percent and 50 percent grants if the States establish water quality standards and themselves enact a matching program for this purpose.

There are only three States in the Appalachian region that use that 50-percent provision—New York, Pennsylvania, and Maryland. Others are still working to get their water quality standards established to the satisfaction of the Interior Department.

The total need, as estimated in the inventory of municipal waste treatment facilities in the region and the country, is greatly in excess of the funds requested. These funds, as in all cases, will be used selectively.

Mr. EVINS. The table at the bottom of the page shows the size of the community. There are 4,417 small communities benefiting from this program.

Mr. JONAS. Is this a direct grant to the municipality?

Mr. FLEMING. Yes.

Mr. JONAS. Or public body from the commission, or does it go through the State?

Mr. FLEMING. It goes through the Interior Department. It is administered like the Public Law 660 program.

Mr. JONAS. You turn your money over to Interior and that Department disburses it?

Mr. FLEMING. Just as in the way the highway program is administered by the Bureau of Public Roads?

Mr. EVINS. The application is processed through the State Governor to the Commission and then it is turned over to the Department for funding?

Mr. FLEMING. That is correct.

JUSTIFICATION MATERIAL

Mr. EVINS. If there are no questions, we will place these three pages of the justification into the record.

(The justification follows:)

SECTION 212

	Public Law 89-4		Public Law 90-103	
Authorization	$6,000,000		$6,000,000	
	1965-66	1967	1968	1969
Appropriation	$3,000,000	$3,000,000	$1,410,000	[1] $4,000,000
Obligation	1,556,000	1,389,000	[2] 4,447,000	[2] 4,018,000

[1] Request.
[2] Estimate.

Four million dollars is requested for sewage treatment facilities in fiscal year 1969. This new obligational authority combined with $18,000 carried over into fiscal year 1969 under Public Law 90–218 will provide an effective program level of $4.018 million.

Section 212 of Public Law 90–103 authorizes $6 million in grants for the construction of sewage treatment plants. These funds are in addition to those allocated by the States under the authoriy of Public Law 660 and subject to the same requests.

The best available measure of need for sewage treatment facilities was published by the Department of Health, Education, and Welfare in 1963—"1962 Inventory: Municipal Waste Facilities." This was a comprehensive survey of national needs and showed the number of treatment facilities needed, by size of community. The survey showed:

NUMBER OF FACILITIES

Size of community	Total need, United States	Total need, Appalachia
100,000 and over	52	5
50,000 to 99,999	56	7
25,000 to 49,999	76	40
10,000 to 24,999	273	62
5,000 to 9,999	416	97
0 to 4,999	4,417	762
Total	5,290	[1] 973

[1] 18.4 percent.

The number of facilities needed can be translated into costs by using the experience of the Federal Water Pollution Control Agency in constructing sewage treatment plants. Costs which vary by size of facility are applied to the table above to translate the number of facilities into costs. These are shown below.

[In thousands of dollars]

Size of community	Total need, United States	Total need, Appalachia
100,000 and over	488,649	46,985
50,000 to 99,999	174,757	21,845
25,000 to 49,999	144,488	76,046
10,000 to 24,999	318,317	72,292
5,000 to 9,999	268,672	62,647
0 to 4,999	737,802	126,937
Total	2,130,684	[1] 406,752

[1] 19 percent.

The region has, according to November 1967 population estimates, 9.2 percent of the Nation's population. As can be seen from the above tables, however, it has 19 percent of the Nation's need for treatment facilities. Topography and lagging economic activity, among others, account for the wide difference between the percentage of population and the percentage of need in the region. This difference was the main reason for including section 212 in the original Appalachian Regional Redevelopment Act and for reauthorization in 1967 amendments.

According to data from the Federal Water Pollution Control Agency, the estimated total cost of all sewage treatment projects approved for the Nation under the authority of WPCA, APWA, AROA, and PWEOA is $3,635,183,000. The cost of all projects approved in the Appalachian region as of October 1967 however, is $322,439,264, or only 8.9 percent of the total. In other words, with 19 percent of the need, the region has received only 8.9 percent of new construction.

Need, as stated above, does not take into account three factors: replacement of worn out facilities; expansion of existing facilities based on industrial needs, and; population growth and shift. When these three factors are taken into account, the Department of Interior estimates that it would require about $600 million each year to meet the Nation's water treatment needs over the next 10 years.

It is expected that the Appalachian region's share of this need is greater than normal. For while there are fewer treatment facilities to begin with which would need replacement, there will be a greater than normal shift in population. Most of this will take place in small urban areas within the region—the growth centers—and will take place on a scale exceeding the national average. Moreover, to meet the needs of industry, more expansions of existing facilities will most likely be required in Appalachia than elsewhere.

It should be noted that on January 10, 1968, the Federal Water Pollution Control Administration issued a new estimate of need in its report to the President and the Congress, "The Cost of Clean Water." This report contained sewage treatment capital requirements for each of the 5 years 1969–73 and took into account such factors as population growth and obsolescence. It also took into account the existing backlog of need. Since the 1962 inventory referred to earlier considered only the existing backlog as of that time, the latest report is obviously much more comprehensive.

It is unfortunate, however, that county data are not available in the report so that there is no way of isolating and identifying the sewage treatment needs in Appalachia. However, the average annual requirement for capital outlays nationally is $2.65 billion, or 24 percent more than was shown in the 1962 report. One can safely assume need in Appalachia has risen at least proportionately.

Supplements to Federal Grant-in-Aid Programs, Section 214

Mr. Evins. We will look at section 214, the supplements to Federal grant-in-aid programs.

You are asking for an appropriation of $36,300,000 and you have a carryover of about $1,261,000.

Mr. Fleming. That is right.

Mr. Evins. Which will make a total program next year of $37,561,000.

Mr. Evins. In any of these several programs, if it is found that the local interests are unable to raise the entire amount of money, they can make application for a supplemental grant for a specific project?

Mr. Fleming. That is correct.

Mr. Evins. This program does not apply to your highway program.

Mr. Fleming. That is correct. This is only with sections 211 and 212 of the Appalachian Act and other Federal grant-in-aid programs.

FUNDING TO DATE

Mr. Evins. How much money has been expended in the supplemental grants program to date?

Mr. Fleming. Through fiscal 1968, $109 million has been appropriated for this purpose.

Mr. Evins. How much has been authorized?

Mr. Fleming. The initial authorization was for $90 million and then it was reauthorized for 1968 and 1969.

Mr. Evins. For $97 million?

Mr. Fleming. That is correct.

Mr. Napolitano. It was $90 million for the 1965–67 period.

Mr. Evins. How much has been authorized for the supplemental grants program in total?

Mr. Fleming. It is $187 million.

Mr. Evins. $187 million.

Mr. FLEMING. Of that, $109 million has been appropriated through fiscal 1968.

Mr. EVINS. Leaving how much available?

Mr. FLEMING. $63 million. The initial $90 million can be ignored. The effective authorization is $97 million of which $34 million has been appropriated, leaving a remainder of $63 million.

Mr. EVINS. The original authorization was for $90 and the next authorization was $97 million additional.

Mr. FLEMING. Additional.

The $90 milion expired. Of the $90 million, $75 million was appropriated.

Mr. EVINS. The remainder expired?

Mr. FLEMING. The $15 million expired.

Mr. EVINS. I thought it was a continuing authorization.

Mr. FLEMING. It was replaced with a new, 2-year authorization of $97 million.

Mr. EVINS. That would be $171 million.

Mr. FLEMING. That is right, of which $109 million has been appropriated.

Mr. EVINS. Why didn't you obligate all of your $90 million authorization?

Mr. FLEMING. Frankly, the reason that the obligation figure was low at the end of 1967, it was a great many basic act grants, vocational education, higher education, and airports, and so forth, tended to be approved by the administering agencies in June, and we could not act on the supplemental grants until July and August. The chart at the end of the section shows funds committed against fiscal 1967. We have included, under fiscal year 1967, some funds actually obligated in fiscal 1968 to give a true picture against the national programs in 1967.

If a Vocational Educational Act grant is approved in June, that shows up as a 1967 obligation in the Office of Education. We cannot act on a supplemental grant until the basic funds are assured so the supplemental grant may not be approved until July, so that shows up as a 1968 obligation, but it is related to a fiscal 1967 program. It is for that reason that the accounting gets slightly out of whack.

It is for that reason that the obligation estimate was so high this year in fiscal 1968 of $51 million, because we are catching up on 1967.

REQUESTS FOR SUPPLEMENTAL GRANTS

Mr. EVINS. Mr. Chairman, since the beginning of the Appalachian program, in numbers, how many requests for supplemental grants has the Commission received?

Mr. FLEMING. We have approved 476 grants under section 214 since the beginning of the program. We have no way of knowing with any precision how many requests the States have turned down. The Commission itself has never disapproved a request, although many have been withdrawn by the States.

Mr. EVINS. Mr. Chairman, have they all been funded?

Mr. FLEMING. Not all requests made by the States. The State is under an obligation to submit their request up to its authorized allocation. Funds are allocated to the States as a yardstick for their planning. A State is required to come in with a package of projects for the year.

Mr. EVINS. But, they are not expected to be funded beyond a specified level?

Mr. FLEMING. That is correct. So, unless something is deficient with the project or is not compatible with the State's plans—there are a number of projects withdrawn for a number of reasons or another—the State submits a full program for its funds on a fiscal year basis.

SUBMISSION OF PLANS

Mr. EVINS. Do they submit the plans all at one time or do they submit various programs as they can be processed?

Mr. FLEMING. The State submits an annual investment plan.

Mr. EVINS. They submit one package.

Mr. FLEMING. That is right; and we look at it from the State's own analysis and what is needed.

Mr. EVINS. Are the Governors of the other States sitting in on the approval of a plan for any one particular State?

Mr. FLEMING. These plans are approved by the Commission as a whole when they are approved.

Mr. EVINS. If a State plan is within the amount of the allocated fund, the Governors of the other States are not concerned?

Mr. FLEMING. You are accurate in that. I fall heir to the responsibility of taking a look at that to see that it is consistent with the purpose of the act.

Mr. EVINS. Well, I imagine your supplemental grant program is very popular and you expect you can use this $37,561,000 next year.

Mr. FLEMING. We think that is just about right. This estimate has been arrived at as indicated by the text on the basis of what experience indicates it will take to get the Appalachian region its share of the national programs if the population warrants it.

This estimate is based on the attraction of 10 percent of these national grant-in-aid programs into the region. Obviously, more will come in, depending on program priorities and the kinds of plans the States will develop, but the 10-percent guide is warranted by the past experience here.

Mr. EVINS. I noticed in reading your justification that in other areas under the other programs, States outside of Appalachia were receiving a larger proportionate share and it is estimated that based on the population for the entire area, about a 10-percent supplementary grant would bring them up to the national average level.

Mr. FLEMING. That is true.

Mr. EVINS. Is that how you arrived at your 10 percent?

Mr. FLEMING. That is right.

FUNDING FROM BASIC PROGRAMS

Mr. EVINS. Mr. Chairman, explain this chart of page 3 for us.

Mr. FLEMING. That is the amount of money attracted into the region under the basic programs.

In other words, $65 million was spent there in fiscal 1965 with no expenditure under the 214 program. It jumped to $110 million in one year under the influence of the supplemental grant program and was up to $123 million in fiscal 1967.

I anticipate this will level off a little bit in 1968 and 1969 mainly because the national programs are tending to be about the same level as in fiscal 1967.

Mr. EVINS. This shows the amounts expended each year?

Mr. FLEMING. Yes, sir.

Those are the funds attracted into the region under the basic grant-in-aid programs.

Under the section 214 column it shows what it took to get there.

JUSTIFICATION MATERIAL

Mr. EVINS. We will insert the justification material for the supplements to Federal grant-in-aids programs.

(The justification follows:)

SUPPLEMENTS TO FEDERAL GRANT-IN-AID PROGRAMS, SEC. 214

	Public Law 89-4		Public Law 90-103	
Authorization	$90,000,000		$97,000,000	
	1965-66	1967	1968	1969
Appropriation	$45,000,000	$30,000,000	$34,000,000	[1] $36,300,000
Obligation	16,121,000	40,618,000	[2] 51,000,000	[2] 37,561,000

[1] Request.
[2] Estimate.

In fiscal year 1969, $36.3 million is requested for supplemental assistance to be expended by the major Federal grant-in-aid agencies. This new obligational authority, coupled with $1,261,000 carried over into fiscal year 1969 under Public Law 90–218, will provide an effective program level of $37,561,000.

This program, under section 214 of the Appalachian Regional Development Act of 1965, as amended, was reauthorized by the 90th Congress because of the great many communities, counties and States in the region which are and have been unable to supply the matching funds to take full advantage of existing Federal grant-in-aid programs. Because of this a large amount of Federal grant-in-aid funds, which otherwise might have gone into the region, went by default.

In the brief history of the Appalachian regional development program, supplemental assistance under section 214 has produced the desired result, as indicated on the accompanying table which compares the amount of basic Federal grant-in-aid going into the region in fiscal 1965, when no 214 funds were available, and fiscal 1966 and fiscal 1967, when they were. The chart does not include every Federal grant-in-aid program that can be supplemented with 214 funds. Such programs as small watersheds, soil conservation and outdoor recreation have been excluded because these programs have low priority in State and Commission planning and project development.

A new device has been created as a yardstick to determine the amount of section 214 funds that should be made available to the region. Its predicate is an equitable share for Appalachia of all grant-in-aid funds going to the Nation as a whole. The Bureau of the Census estimated that as of November 1967, the Appalachian region, including the additional counties of Mississippi, contained 18.25 million people, or 9.13 percent of a national population of 200 million. In 1965, prior to the passage of the Appalachian Act, the region received 7.7 percent of the funds obligated from these major grant-in-aid programs. In 1966, this rose to 9.2 percent, and in 1967, to 9.7 percent. A valid target for the region would be 10 percent of all grant-in-aid funds, given the region's share of the national population and its past inability to take advantage of national programs, plus

the effort represented in the Appalachian legislation to life the region to economic parity with the Nation.

In fiscal 1966 and fiscal 1967, every dollar in 214 funds generated $4 of Federal grant-in-aid funds for projects in the Appalachian region. Of all projects, only half were financed with the assistance of 214 funds. Thus, on projects funded with supplemental grant funds, the ratio has been one 214 dollar to two in basic grant funds.

This would indicate that section 214 funds should be budgeted at a level of 25 percent of the amount of basic Federal grants-in-aid set as the target for the region for a particular fiscal year. If the target for Appalachia is 10 percent of grant-in-aid funds going to the Nation, then 25 percent of that amount should be made available under section 214.

The accompanying table shows that actual obligations in fiscal 1967 in the 13 major grant-in-aid programs nationally amounted to almost $1.4 billion. The portion obligated in the Appalachian region was $135.5 million, or 9.9 percent. The amount of 214 funds expended was $39.1 million, which was 28.8 percent of the Appalachian share of the national total.

The attempt here is not to adhere rigidly to a fixed set of numbers, but rather to approximate these percentages. Hence, the estimated total of Federal grant-in-aid funds to be obligated throughout the Nation in fiscal 1969 is $1,380,370,000. If 10 percent of this may be expected to be obligated in the Appalachian region, then the Appalachian portion would be $138,037,000. And the section 214 percentage under the formula would be $34.5 million.

The request, however, for section 214 is for $36.3 million, because there are other grant-in-aid programs not listed on the table which can be supplemented under 214, most notably sections 211 and 212 of the Appalachian Act which provide basic grant-in-aid funds for sewage treatment and vocational education respectively.

SELECTED FEDERAL PROGRAM OBLIGATIONS IN APPALACHIA, FISCAL YEARS 1965-67

Program	Fiscal year	Expenditures, Appalachia	Sec. 214
Libraries	1965	$2,054,974	
	1966	3,736,887	$2,422,813

Local Development District and Research Program, Section 302

Mr. Evins. Take a look now at your local development district and research program. You are requesting $3 million for grants for the local development district program in 1969 and you have a carryover of $261,000 from last year for a total program of $3,261,000.

Federal grants for 75 percent of the administrative costs of State-sponsored local development districts for a maximum grant period of 3 years have enabled the Appalachian States to promptly implement the Appalachian program.

More importantly, the personnel provided a base on which the States and multicounty districts can build sound economic development programs. During the first years of the program, funds have been used to support State-employed administrative and planning staffs to define the districts and organize local development groups leading to sound, locally rooted organizations. In general, the Appalachian States have taken one of three courses to organize their local development district program. Some, like Georgia and Kentucky, have expanded and extended existing development commissions. Others, like South Carolina, New York, and Maryland, have set up Appalachian areawide committees on which are represented local leaders. Most have funded new multicounty organizations to coordinate not only efforts under the Appalachian Act, but consistent with the criteria for development districts under the Public Works and Economic Development Act of 1965.

Some States are conducting studies to determine whether their districts should encompass their whole Appalachian portion or concentrate on smaller multicounty areas.

These funds are made on a 75-percent grant to the States for the districts, is that correct?

Mr. FLEMING. That is correct.

Mr. EVINS. These are the the planning groups?

Mr. FLEMING. That is correct.

CENTRAL APPALACHIA STUDY

Mr. EVINS. Mr. Chairman tell us about the central Appalachia study.

What is the plan?

Mr. FLEMING. The central Appalachia study covers a 60-county area in Kentucky, West Virginia, and Tennessee——

Mr. EVINS. The Commission staff was assisting the States by developing area plans addressed to endemic economic and social problems that are interstate in character or by assisting them in developing special interstate growth opportunities.

The central Appalachian area of eastern Kentucky, southern West Virginia, southwestern Virginia, and northern Tennessee is receiving special attention.

The area defined as central Appalachia is composed of 60 counties in the States of Kentucky, Tennessee, Virginia, and West Virginia and includes many of the poorest counties of the region.

The primary emphasis of the central Appalachia study will be to prepare project applications for a coordinated series of Federal programs to be implemented in the region. Program emphasis is on pooling educational resources, manpower training, housing development, and urban services.

Tell us what is envisioned.

Mr. FLEMING. The four States are cooperating in a joint planning venture to try to deal with this area, particularly in Kentucky and southern West Virginia which represents the greatest economic problems and the highest incidence of poverty in the region.

Really, what is involved is a special planning effort to try to figure out how to use the program more effectively, lift it out of the administrative channels and make a crash effort on a set of programs and problems.

Mr. EVINS. Well, you have several good, on-going local development districts.

Mr. FLEMING. That is right. They are cooperating in this effort.

Mr. EVINS. This is an interstate development group. It is a four-State planning effort with the development districts in the area participating and trying to coordinate their own projects.

Mr. FLEMING. That is right.

Mr. EVINS. I am not opposed to planning, Mr. Chairman. I am for good sound planning, but is this just another layer on the top of the cake?

Mr. FLEMING. This is really an effort to try to do the job for a number of different areas and communities at the same time.

Mr. EVINS. Is it conflicting?

Mr. FLEMING. No, Mr. Chairman, it does not conflict. As a matter of fact, it is assisting the States in the production of their development plans.

Mr. EVINS. What will it cost?

Mr. FLEMING. The cost to the Commission is about $60,000. A great deal of it has been supported through the States and the local communities with their own funds and with 701 planning funds out of the housing program.

ALLOCATION OF FUNDS

Mr. EVINS. How will this $3,261,000 be allocated?

Mr. FLEMING. The formula in the past has been to allocate on the basis of land area and population. The stated estimate included on page 4 as to the commitments by State is really predicated on reported State need. What we have done, in effect, is to sit down with each State and work out what is needed to get the job done, and then to base the budget request on that.

In other words, these figures do not follow a formula allocation. They follow what the State feels is necessary.

Mr. EVINS. Could it be 100 percent?

Mr. FLEMING. It would be 75 percent by law. It is 75 percent of cost.

Mr. EVINS. It is 75 percent by law and then these funds are allocated to the State by needs?

Mr. FLEMING. That is right.

Mr. EVINS. Well, I am sure that these local development districts are coming up with good plans. We have had a lot of planning.

Mr. FLEMING. For example, one reason that Tennessee drops off sharply from 1968 to 1969 is because the State is moving to the establishment of local districts exclusively and no funds will be used at the State level. The two largest districts in Tennessee are being funded under the Public Works and Economic Development Act, and the $41,000 will be used primarily in the upper Cumberland area to support the local development district up there.

Mr. EVINS. Is this money going to go to the interstate development district, or to several of the local development districts?

Mr. FLEMING. This will go to the local.

Mr. EVINS. You discussed your interstate area plans.

Mr. FLEMING. The central Appalachia work is not a development district, as such. It represents an interstate effort that the State government is securing for them.

Mr. EVINS. How much will be committed to local development districts?

Mr. FLEMING. $1,561,000 is the estimate for local development districts.

Mr. EVINS. What is the other?

RESEARCH STUDIES

Mr. FLEMING. The one million and a half for research studies and demonstration projects authorized by the Congress this past year and the $500,000 will be used to carry that work forward. The $500,000 is obligated for research.

Mr. EVINS. About $1.5 million of the funds will be grants to districts?

Mr. FLEMING. That is right.
Mr. EVINS. Others will be administrative costs and research?
Mr. FLEMING. Primarily research.
Mr. EVINS. And special studies?
Mr. FLEMING. A half million on this drain study.

JUSTIFICATION MATERIAL

Mr. EVINS. All right, place all this in the record under section 302 with the exception of the last page.
(The justification follows:)

LOCAL DEVELOPMENT DISTRICT AND RESEARCH PROGRAM, SEC. 302

	Public Law 89-4		Public Law 90-103	
Authorization	$5,500,000		$11,900,000	
	1965-66	1967	1968	1969
Appropriation	$2,500,000	$2,750,000	$1,600,000	[1] $3,000,000
Obligation	1,631,000	1,708,000	[2] 3,250,000	[2] 3,261,000

[1] Request.
[2] Estimate.

Three million dollars in new obligational authority is requested under section 302 for grants for administrative expenses of local development districts, research and demonstration projects, and a special study of mine acid drainage pollution. A carryover of $261,000 is anticipated for a program level of $3.261 million in fiscal year 1969. Of this total, it is anticipated that $1,561,000 will be committed to the development district program and $1,550,000 for research. Costs of administration will require $150,000.

The local development district program was enacted to provide the means for consolidating planning and financial resources in multicounty areas and to help develop the technical competence essential to sound development efforts. It is clear that collectively a number of counties and communities can develop and support needed public facilities, most of which individually they cannot afford.

Federal grants for 75 percent of the administrative costs of State-sponsored local development districts for a maximum grant period of 3 years have enabled the Appalachian States to promptly implement the Appalachian program. More importantly, the personnel provided a base on which the States and multicounty districts can build sound economic development programs. During the first years of the program, funds have been used to support State-employed administrative and planning staffs to define the districts and organize local development groups leading sound, locally rooted organizations.

These State-employed staffs will be financed entirely by State funds during fiscal year 1969, except in two States where the 3-year grant period does not expire until the end of fiscal year 1969.

The districts provide an effective bridge between local and State governments in much the same way as the Appalachian Regional Commission provides a bridge for the Federal and State governments. They help assure that local aspirations and priorities are fully considered in the implementation of the Appalachian regional development program.

By January 1968, 18 active districts at the multicounty level had been established. By the end of fiscal year 1969, it is expected that there will be 37 active multicounty districts in the region. During fiscal year 1968, therefore, the States are shifting from State-employed technical staffs to the establishment of permanent development organizations and staffs at the multicounty level.

In general, the Appalachian States have taken one of three courses to organize their local development district program. Some, like Georgia and Kentucky, have expanded and extended existing development commissions. Others, like

South Carolina, New York, and Maryland, have set up Appalachian areawide committees on which are represented local leaders. Most have funded new multicounty organizations to coordinate not only efforts under the Appalachian Act but consistent with the criteria for development districts under the Public Works and Economic Development Act of 1965. Some States are conducting studies to determine whether their districts should encompass their whole Appalachian portion or concentrate on smaller multicounty areas.

The attached chart gives a summary of local development district activity State by State.

SEC. 302—LOCAL DEVELOPMENT-DISTRICT ACTIVITY

	Date 302(a) grants to State agencies expire	Multicounty districts established through fiscal year 1968 (18)	Estimated, fiscal year 1969 multicounty districts
Alabama	Feb. 23, 1969	State provides local planning service	1
Georgia	Nov. 29, 1968	5 local planning commissions in existence receive 302(a) assistance.	5
Kentucky	Nov. 22, 1968	3	4
Maryland	Oct. 30, 1968	State department of economic development operates field office.	1
Mississippi [1]			
New York	Aug. 1, 1969	State provides local planning assistance [2]	
North Carolina	Mar. 23, 1969	7	7
Ohio	Nov. 18, 1968	State maintains field office and provides technical assistance.	1
Pennsylvania	July 16, 1969	7	7
South Carolina	Dec. 28, 1968	State provides local planning assistance	1
Tennessee	Dec. 14, 1968	do	1
Virginia	Jan. 1, 1969	1	3
West Virginia	Jan. 28, 1969	State maintains 9 local field offices	6
Total			37

[1] Study contracted preliminary to establishment of development district(s) at the State and local level.
[2] Office planning coordination established 2 field offices which provide technical assistance through advisor ou

The local development districts represent an areawide bootstrap effort to effectively use all public and private resources for area development. The districts advise the States on local problems and priorities. They provide the leadership required locally to obtain local support for the funding of local development projects. In some cases, the States are moving to confer upon these districts additional powers, including the right to raise their own revenues and finance projects themselves.

For fiscal year 1969, the anticipated obligation for the local development district program is $1,561,000, which is $255,000 less than the estimated obligations for fiscal year 1968. The reduction results from the fact that in most States no further section 302 support will be provided for State-employed staffs.

During the first 2 years, section 302 funds were used to support State-employed staffs only. This was done in order that the States could establish a contiguous set of districts covering the entire region. This step prevented the haphazard development of scattered districts that would not encompass the region as a whole and lead to duplication and conflict in the local areas.

The following table indicates the obligations by States for 1966–67, the estimated obligations by States for 1968, and the requests for 1969. The fiscal year 1969 requests are based on the planned multicounty development districts requiring funding, and a final State-level grant to those States entitled to a final grant of support.

LOCAL DEVELOPMENT DISTRICTS, FISCAL YEAR 1966-69

	1966-67 actual	1968 estimated	1969 estimated
Alabama	$238,191	$190,000	$40,000
Georgia	87,338	67,000	41,000
Kentucky	213,212	181,000	160,000
Maryland	93,343	44,000	41,000
Mississippi	0	84,000	84,000
New York	100,999	136,000	137,000
North Carolina	181,066	116,000	106,000
Ohio	245,570	95,000	82,000
Pennsylvania	313,700	438,000	425,000
South Carolina	141,344	80,000	41,000
Tennessee	233,966	117,000	41,000
Virginia	207,325	100,000	123,000
West Virginia	339,209	168,000	240,000
Total	2,395,263	1,816,000	1,561,000

RESEARCH

The $1,550,000 requested for research for fiscal year 1969 includes $500,000 for Commission research, $550,000 for State research, and $500,000 to conclude the mine drainage pollution study which Congress directed the Commission to complete by March 1969.

The remaining request is for $150,000 for administration of section 302 (the local development district program and research).

The Applalachian research program was designed to provide an ever broadening base of information about the region and its problems so that public investments would reflect an increasingly sophisticated strategy of economic development. The object was to achieve not one pattern to be imposed on the entire region but a series of progressively detailed plans tailored to the needs and potential of the many areas that make up the region.

The first job was to establish a base of information leading to a better understanding of the trends and problems that characterized Appalachia and their relation to the national economy. More specifically, research was conducted to enable the Commission to make the best possible judgments about the expenditure of funds within the diffrent sections of the act. For example, use of research funds produced a substantial revision of the programs initially authorized by section 202.

As the State investment plans developed, other types of research provided vital information about industrial locational characteristics, growth projections for subregions, public facility requirements, and appropriate use of the region's recreational potential. It also became clear as the individual States identified problems which constrained their developmental activities, that more limited and detailed research was needed. Much of this is currently under way—a study of water quality requirements as they affect the development of Appalachian South Carolina; a study of North Carolina's educational and manpower needs; specifics about land available for development around the growth centers in Virginia; and an impact study of selected Appalachian development highway corridors in Maryland, Pennsylvania, West Virginia, and Ohio.

To continue this research program in fiscal year 1969 the following research areas are identified.

1. Mine Pollution Study

In the Appalachian Regional Development Act of 1967, Congress directed the Appalachian Regional Commission to carry out a survey and study of mine drainage pollution in the region with the objective of developing a comprehensive action program for the appropriate control, reduction, or elimination of such pollution and submit, with recommendations, a report to the President and Congress no later than March 31, 1969.

During fiscal year 1968, field studies of the source, extent and impact of mine drainage pollution was initiated. During fiscal year 1969 these studies will be analyzed and recommendations developed in cooperation with the Secretary of the Interior and relevant Federal agencies, appropriate State authorities, and an expert panel of the National Academy of Sciences and the National Academy of Engineering.

It is requested that $500,000 be made available during fiscal year 1969 to complete this study. The fiscal year 1968 and fiscal year 1969 budget requests for this study total one-third of the sum authorized.

2. Education

Because education in its many facets is the key to future development of the region, the Commission established in August 1966, an education advisory committee to assist in developing a coordinated program of investment tailored to the specific educational needs and problems of the region. Its work in relation to vocational education is discussed under section 211. In addition, the advisory committee will work with the office of education and academic institutions to explore the problems of: school financing, preschool programs, tuition waiver agreements between States, improvement of guidance and counseling services for Appalachian students, and the "pooling" of certain educational equipment and facilities among school districts.

3. Health

In 1966, a Health Advisory Committee was established to suggest criteria and guidelines for the Appalachian comprehensive demonstration health program. Working with the Public Health Service, the next job of the Committee is to develop specific project proposals to be funded in fiscal year 1969. They will also make recommnedations on: programs to deal with the acute shortage of health personel in the region; methods for more effective use of health funds, both public and private, available to the region; and any new Federal or State legislation which may be required to meet health problems of the region.

4. Manpower

The Commission, working with the Department of Labor, developed during fiscal year 1968 manpower projections indicating the future job market and occupational classifications for which Appalachian youths can compete in the region and in surrounding areas, providing they are provided appropriate skills and training.

Work began in fiscal year 1968 in several States to adjust the curriculums in vocational and technical schools in Appalachia to conform to this future occupational pattern and deemphasize declining occupations in agriculture. During fiscal year 1969, this work will be broadened and involve sessions with key State and local administrators in education.

5. Local Government

The organization and financing of local government is a primary problem impeding development in many areas of Appalachia. To the credit of the communities and the States, this problem has been recognized, and a variety of studies have been requested to help strengthen and modernize local administration in the region. Pennsylvania and Ohio began such studies during fiscal year 1968. West Virginia, South Carolina, and Georgia intend to carry this work forward in fiscal year 1969. The studies embrace such matters as intergovernmental contracts, consolidation, modernization of administrative machinery, and personnel reform.

6. Area Plans

The Commission staff is assisting the States by developing area plans addressed to endemic economic and social problems that are interstate in character, or by assisting them in developing special interstate growth opportunities.

The central Appalachian area of eastern Kentucky, southern West Virginia, southwestern Virginia, and northern Tennessee is receiving special attention. The area defined as "Central Appalachia" is composed of 60 counties in the States of Kentucky, Tennessee, Virginia, and West Virginia, and includes many of the poorest counties of the region. The primary emphasis of the central Appalachia study will be to prepare project applications for a coordinated series of Federal programs to be implemented in the region. Program emphasis is on pooling educational resources, manpower training, housing development, and urban services.

The Appalachian highlands area in the Blue Ridge and Allegheny Mountains has a special potential for joint Federal, State, and private recreational development. A plan for this whole area was begun in fiscal year 1968, and will be completed in fiscal year 1969.

7. State Research

Section 302 funds to support State-sponsored research will be employed to help the States in special efforts to find solutions to specific problems impeding devel-

opment in their areas. The Commission requires each State to assess priority problems retarding growth each year in their State Appalachian-developed plan.

During fiscal year 1968, the States have embarked upon a varied group of research projects addressed to their special problems. North Carolina is engaged in an attempt to determine its future needs and is attempting to convince educational officials to make appropriate modifications in curriculum for vocational schools. New York is preparing a comprehensive resource plan for its 14 Appalachian counties. Pennsylvania is developing recommendations for major reforms in local government organization and financing. Ohio is developing a major housing program. West Virginia is planning a major graduate center near Charleston. Virginia is engaged in an intensive land-use analysis in order to identify developable sites. South Carolina is preparing a comprehensive water facilities plan. Alabama is developing major plans for development in the Coosa River Valley.

Total number of permanent positions	10	10	10
Average number of all employees	9	10	10
Average GS grade	12.0	11.7	11.4
Average GS salary	$13,408	$10,162	$11,291

Mr. EVINS. Now, this is the Commission itself. This is a separate appropriation for the Appalachian Regional Commission.

Mr. FLEMING. As I indicated earlier this morning, there is an error here. The initial figure on that page should be $862,000 instead of $879,000. This is a $17,000 overage. It is just an error in arithmetic.

Mr. EVINS. Look at the chart on the following page, the second chart. You have the Federal cochairman with nine positions. You have the regional representative with two employees, employed by the State on a full-time basis here in Washington. That is 100-percent State funds, true?

Mr. FLEMING. That is right.

Mr. EVINS. The Governors support three positions here in Washington?

Mr. FLEMING. That is right.

Mr. EVINS. The Federal Government supports nine with a Federal cochairman. It would be 10 with a Federal cochairman?

Mr. FLEMING. That is right.

Then, as you are aware, the States pay half the cost of the Commission staff which is everything below those two boxes.

Mr. EVINS. The States pay one-half now of the remaining staff. Heretofore, the Federal Government picked up the entire tab.

When did they begin paying one-half?

Mr. FLEMING. The States began paying one-half July 1, 1967, the beginning of fiscal 1968. We developed this budget with the States, and they are committed to support this program level. They are now asking the legislatures for appropriations to cover that.

NUMBER OF EMPLOYEES

Mr. EVINS. Mr. Chairman, how many employees, overall, do you have, Federal and State, counting the three with the State?

Mr. FLEMING. The total would be 75.

Mr. EVINS. Your table shows 75 employees and that includes the three State employees?

Mr. FLEMING. I do not think that includes the three State employees. It would be 78.

Mr. EVINS. There are 75 Federal employees and three State?

Mr. FLEMING. No, sir; there are 10 Federal employees, three State employees and 65 commission employees. The Federal Government fully supports the 10, the State fully supports three and we split support of the 65.

Mr. EVINS. A staff of 78?

Mr. FLEMING. Yes, sir; the total request for the Federal contribution to the Commission's staff is $666,000. And the amended request for the Federal staff is $196,000.

Mr. EVINS. Where is this shown, Mr. Chairman?

Mr. FLEMING. It is shown in the salaries and expenses as well as in the initial part of the text.

Mr. EVINS. Federal cochairman and staff is $196,000?

Mr. FLEMING. Yes, sir.

Mr. EVINS. The Appalachian administrative expense?

Mr. FLEMING. $862,000.

Mr. EVINS. Do you have enough to do the job efficiently?

Mr. FLEMING. I think we have enough. When the Appalachian Act was passed, it was specified the Commission staff should be 65.

Mr. EVINS. Is this what the law provided originally?

Mr. FLEMING. There is no legal limit.

Mr. EVINS. But, it was projected it would be a staff of 65. You have 78 now.

Mr. FLEMING. We have stayed right with the original of 65 on the Commission staff. The others are Federal and State staffs.

PAY ACT INCREASE

Mr. EVINS. How much of the Pay Act increase were you able to absorb last year, 1968?

Mr. FLEMING. We absorbed all of it.

Mr. EVINS. What is planned for 1969?

Mr. FLEMING. I will call on Mr. Schmitt.

Mr. EVINS. The budgeted amount here includes the Pay Act increase for your employees?

Mr. SCHMITT. For the last pay increase, yes, sir.

Mr. FLEMING. That is right.

Mr. EVINS. Pay increases are included in that amount?

Mr. FLEMING. Yes, sir.

PUBLIC LAW 90–218

Mr. EVINS. How did the Public Law 90–218, the 2 percent cutback on your staff, affect the regional commission?

Mr. FLEMING. We have simply not filled about three principal vacancies that existed at the time the legislation was enacted. We would propose to fill them on the basis of this budget in 1969.

Mr. JONAS. The chart shows you have quite a lot of chiefs and few Indians.

Mr. FLEMING. Sort of high on the chief's side.

Mr. JONAS. You have 37 people, 10 super grades. That is pretty plush, is it not?

Mr. FLEMING. It would run high relative to an operating agency.

The reason for that is most of these people are professional economists, planners, lawyers or administrators of one variety or another as indicated here, because the Commission is not involved in the administrative work—in other words, we are not processing a contract between BPR and the State Highway Department.

Mr. JONAS. That is why you need your executive types.

Mr. FLEMING. We have fewer GS–5's, GS–7's and GS–9's than you would find in the average operating agency.

REAPPROPRIATION

Mr. EVINS. You have an $11,000 reappropriation. What is this for?

Mr. FLEMING. If I am not mistaken, I will ask the comptroller to check me, it was an $11,000 lapse in 1967.

Mr. SCHMITT. Unexpended dollars.

Mr. FLEMING. Unexpended at the end of the fiscal year. The authorization bill revived it and made it available for expenditure in 1968, and that has been figured in the budget.

Mr. EVINS. This is within the commission, for the commission's staff?

Mr. FLEMING. That is right.

Mr. EVINS. You found another $17,000 error in your figures and you want to make a further revision.

Mr. FLEMING. The $17,000 is a mistake in arithmetic. I cannot find what really prompted it.

Mr. EVINS. You want to reduce your budget then by $17,000?

Mr. FLEMING. That is right.

Mr. EVINS. What is this $11,000?

Mr. SCHMITT. That was a 1967 unexpended balance that was actually carried over to 1968.

Mr. EVINS. Does it require any action?

Mr. SCHMITT. No further action is required.

Mr. EVINS. Mr. Chairman, you have an important mission. When this act was passed originally it held out great promise.

Mr. FLEMING. Mr. Chairman, I appreciate the chance to present this case to you today.

Mr. EVINS. We want to commend you for your important work and for your mission.

Mr. FLEMING. I would like to say that there is always the contention here between trying to make maximum, effective use of a program and trying to get the money down too fast.

Mr. JONAS. We would like to start seeing some tangible results.

Mr. EVINS. You have your problem with 13 Governors, but they are pretty harmonious.

JUSTIFICATION MATERIAL

Mr. EVINS. We will insert your justification for "Salaries and expenses" at this point.

(Justification follows:)

SALARIES AND EXPENSES

Eight hundred and sixty-two thousand dollars is requested for necessary expenses for the Federal cochairman, for his alternate, and the payment of the Federal share of the administrative expenses of the Commission for fiscal year 1969.

For administrative expenses of the Commission other than those of the Federal cochairman, $666,000 is requested, an increase of $99,000 over the amount appropriated in fiscal year 1968. This increase results from the following increased costs:

Personnel compensation and benefits	$84,000
Rent and communications	36,000
Other services	78,000
Total	198,000

The Appalachian States share one-half of these increased costs, leaving a requested Federal share of $99,000.

The expenses of the Federal cochairman's office and staff are budgeted $213,000 which will support 10 people, including the Federal cochairman. It is the responsibility of this office to handle all the contacts and communications with the various Federal departments and agencies to implement the policies and decisions made by the Commission. The office includes three professionals, in addition to the Federal cochairman and the alternate cochairmen, and five secretaries.

Under the Appalachian Regional Development Act of 1965, the expenses of the Federal cochairman, an alternate and a small staff are paid solely by the Federal Government. Beginning July 1, 1967, however, the 13 States of the Appalachian region assumed responsibility for providing one-half the administrative expenses of the Appalachian Regional Commission.

Under the direction of an Executive Director, it is the responsibility of this technical staff to assist the Commission in meeting its responsibilities under the act.

The staff currently totals 52 persons with three vacancies. Of that number, 34 are professional economists, geographers, planners, health experts, and educational specialists. As previously indicated, 10 positions are charged against section 302 to administer the local development district and research programs. In fiscal year 1966 and fiscal year 1967 these services were provided to the Department of Commerce on a reimbursable basis from 302 funds. Three staff divisions have been established under the Executive Director.

The executive staff consists of the Office of the General Counsel and the Deputy Director.

The General Counsel is the chief legal adviser to the Commission and counsels the Federal Cochairman and the States as well. Under him are a Deputy Counsel, an Assistant Counsel which is currently vacant, and supporting clerical personnel. Because of the increased responsibilities of the Federal Cochairman and the Appalachian Regional Commission under the 1967 amendments to the Appalachian Regional Development Act, the General Counsel has assumed additional duties in the legal review of projects and proposals submitted to the Commission. He also serves as a principal adviser to the Federal Cochairman and the Commission on legislative matters.

While the position of Assistant Counsel has been left vacant in order to carry out the congressional directive under Public Law 90–218, requiring a 2-percent reduction in obligations for personnel costs, it appears essential to fill this position in order to effectively discharge the new responsibilities of the Commission under the recent amendments to the act.

The Deputy Director, who also serves as Secretary to the Commission, is responsible to the Executive Director for most of the administrative and housekeeping responsibilities of the Commission. He supervises the Comptroller, procurement operations, all supply, clerical, and support services, information and publication programs, and maintains the official files and minutes of all Commission proceedings. In addition, the Deputy Director supervises certain program responsibilities assigned to him, including the staff review of all Appalachian projects. Under the Deputy Director, the Comptroller serves as the Commission's chief fiscal officer and is responsible for all financial and accounting activities for both administrative and program operations.

The Planning Division is primarily responsible for all planning and research functions of the Commission as well as special program development activities in such fields as education, health, housing, transportation, and natural resources.

The position of Planning Director has been left vacant during fiscal year 1968 in order to carry out the directive under Public Law 90–218. So long as this position remains vacant, the Executive Director has assumed direct supervision of operations of this Division. This vacancy was created when the former Planning Director of the Commission was appointed Executive Director of the New England Regional Commission. Seventeen persons, 14 of whom are professionals, are assigned to this Division. In addition, there are three directors of special study staffs. The three study staffs are in the fields of education, health, and mine drainage pollution.

Congress directed the Commission to carry out the acid mine drainage study, under section 302 of the Act, and to submit a report to the President for transmittal to Congress by March 31, 1969. The Commission is requesting the assistance of a special panel of the National Academies of Sciences and Engineering to provide expert advise in the conduct of this study. In addition, appropriate Federal and State personnel will work with this special committee in directing the study. It is anticipated that one additional professional employee will be required in addition to the study director. The expenses of that employee, who will be temporary, will be funded under section 302 of the act.

The education staff, in addition to providing technical assistance to the States on educational matters, also services a special Appalachian Education Advisory Committee comprised of experts in the field of education. This committee is developing special recommendations in the fields of occupational preparation, preschool education, primary and secondary education, and higher education. In addition, the staff is reviewing special manpower needs in the region and developing recommended programs to supply additional personnel in those fields in which the region has critical manpower shortages.

The health staff is responsible for assisting the Commission in the administration of the section 202 demonstration comprehensive health program and works closely with the Public Health Service, State health agencies and local health officials, and private medical leaders in developing this pioneering program. Under the direction of an Appalachian Health Advisory Committee comprised of 26 experts in various health services, the staff is developing recommendations in such fields as child health, nutrition, environmental health, and in a number of categorical diseases which are endemic to certain parts of the region.

While the directors of both the health and education staffs are full-time Commission employees and are paid jointly by the Federal Government and the States, temporary staffs and consultants required by them in their studies are financed under section 302 of the act.

Two sections of the Planning Division, research and regional planning, are responsible for assisting the Commission in carrying out its responsibilities under sections 302 and 102 of the act.

The research section is currently engaged in carrying out special studies on migration in the region and has prepared definitive analyses of the economic problems in the 60 State planning districts of Appalachia. This work is now being used by the States in developing their fiscal year 1969 development programs. The research staff works closely with the States in preparing these plans. The research staff is also engaged in a program evaluation in order to determine the effectiveness of Appalachian and other Federal investments in helping to develop a self-sustaining economy. The results of this study will be completed by mid-April 1968.

The regional planning staff, under the direction of the States, is preparing comprehensive plans for two large areas of the region—one is Central Appalachia, a 60-country area in northern Tennessee, eastern Kentucky, southern West Virginia, and southwestern Virginia, where deprivation and underdevelopment are at their greatest. The first portion of this work has been completed and opportunities for development have been identified. The staff is now developing programs to be implemented prior to September 1968 in this 60-county area. Programs are in the fields of transportation, health, education, housing, and urban development. It is expected that by 1975 the population of Central Appalachia and employment opportunities in the 60-county area will come into balance and the long economic decline of the area can be reversed. The Central Appalachian plan is designed to assure the most effective use of all Federal, State, and

local resources in the 60 counties to promote development of the area and convert it from a welfare economy to one making its own contributions to national growth.

A second regional plan is being prepared for the Appalachian Highlands in seven States extending from north Georgia to southern New York. Most of this area is in Federal and State ownership and substantial Federal and State investments in recreation are being made there. The Appalachian Highlands plan is designed to assure that these public dollars will improve the local economies and have their greatest impact on the welfare of the region itself. The plan involves work by the Department on the Interior and Agriculture, the Bureau of Public Roads, the U.S. Corps of Engineers, Tennesse Valley Authority, and resource agencies in seven States.

The regional planning staff is also engaged in work with several States on plans to strengthen the administrative and financial structure of local government in several States. This work is concentrated in Pennsylvania, Ohio, and West Virginia. However, South Carolina, Georgia, and Alabama have also indicated that during fiscal year 1969 they desire to undertake similar efforts.

The Technical Assistance Division of the Commission staff works with the States and development districts in the actual implementation of Appalachian programs. Within this division is one section responsible for analyzing all projects submitted to the Commission for Appalachian assistance. It prepares appropriate recommendations to the Commission concerning approval or disapproval of each project. Approximately 450 projects are processed by this division each year.

A second group of professionals in this division is responsible for working with the States in organizing and establishing development districts in the 60 planning districts of the region. After the districts are established, this staff provides technical assistance to them in planning their program. This section also is responsible to the Commission for the review of all financial and administrative questions involved in the implementation of the development district program.

This section is also responsible for providing broad technical assistance to the States and local governments upon request. The section is organized as a team of experts. One is well versed in housing and community planning; another in industrial development and industrial financing; another on State and local government administration and municipal finance. The remaining members of the staff are required to be intimately familiar with all Federal grant-in-aid programs and assist the States and communities on administrative or other problems involved with Federal grants-in-aid. This staff has been of invaluable assistance to numerous communities throughout the region and is now being used by the Federal agencies themselves to deal with special problems involved in Federal grants-in-aid in certain communities.

LISTING OF PERMANENT POSITIONS

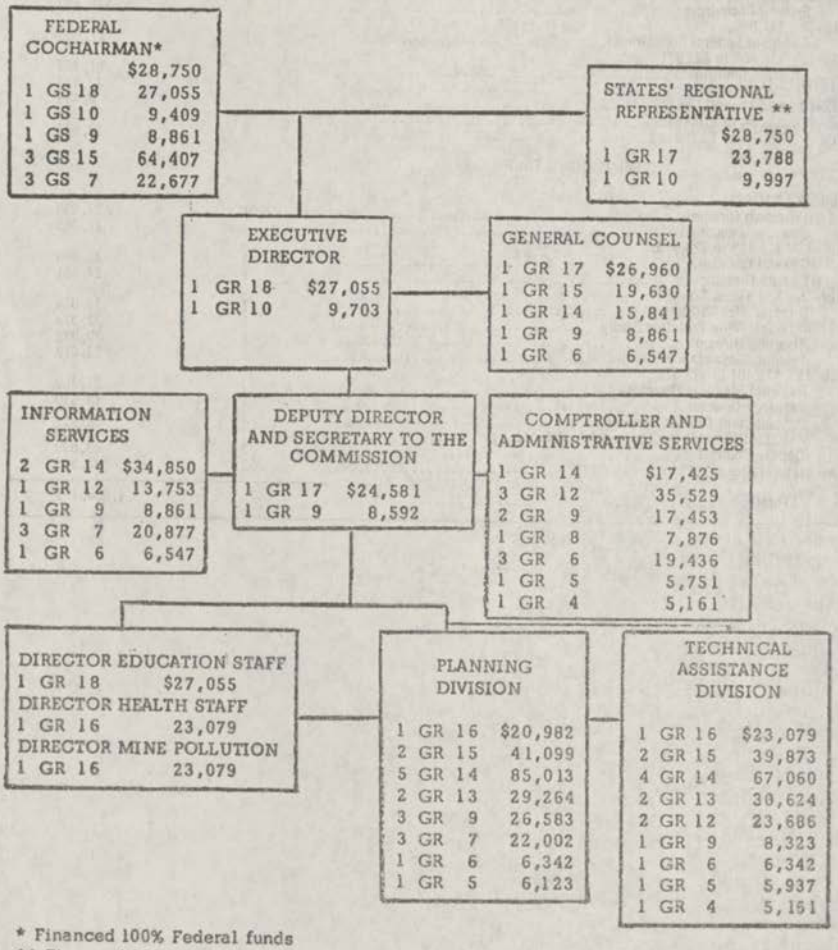
APPALACHIAN REGIONAL COMMISSION
FISCAL YEAR 1969



* Financed 100% Federal funds
** Financed 100% State funds
All other categories financed 50-50 Federal-State funds except for 10 ARC staff positions chargeable 100% to Section 302 funds.

Statement on Appalachian Development Highway Program

Mr. Evins. Would you supply for the record a further statement on the status of the Appalachian development highway program?

Mr. Fleming. Yes, sir. We will provide that.

(The statement follows:)

The Appalachian Regional Commission,
Washington, D.C.

Hon. Joe L. Evins,
Chairman, Subcommittee on Independent Offices and HUD, U.S. House of Representatives, Washington, D.C.

Dear Mr. Chairman: When I appeared before your committee on February 27, 1968, regarding the appropriations for the Appalachian development highway program for fiscal year 1969, you asked that I give you a letter indicating the funds which will be needed to keep the program on schedule.

Since the Appalachian highway program was authorized, there has been a question as to whether the highway program was to be limited by the mileage authorized or the funds authorized for its accomplishment. As you are aware, $1.015 billion is now authorized for highways and access road construction. Of this amount, $940 million is earmarked for the development highway system which has an authorized ceiling of 2,700 miles. The latest cost estimates available for the entire system indicate that approximately $2.75 billion would be required to construct all sections of the designated corridors which are inadequate for present projected traffic. This estimate is based on work being done on approximately 2,571 miles. If Federal participation in such an undertaking were pegged at the statutory maximum of 70 percent, $2 billion in Federal funds would be required.

Obviously, the current authorization of $940 million is insufficient to support this level of activity. This became apparent in the spring of 1966 when uniform cost estimates were prepared by the State highway departments and the Bureau of Public Roads. At that time, the Appalachian Commission made the decision to obtain maximum mileage, and thereby maximum economic impact, through the selective application of the funds authorized on the highway segments which were least adequate for present or projected traffic. The funds authorized for the program were allocated among the participating States on the basis of mileage to be constructed and the matching ratio set at 70 percent Federal, 30 percent State on right-of-way engineering and two-lane construction, and at 50–50 for four-lane construction. The States have also been encouraged to apply State and regular Federal aid funds to projects on the Appalachian highway system.

The appropriation request for fiscal year 1969 is, therefore, related to the accomplishment of a construction program on the designated corridors involving the application of $940 million in Appalachian highway funds over a 6-year period—through fiscal year 1971. Present estimates indicate that this level of funding will permit the construction of 1,663 miles. Through fiscal year 1968, $370 million has been appropriated. Public Law 90–210 limits cumulative obligations through fiscal year 1968 to $316 million. As of March 1, 1968, $233 million was obligated on the development highway program. An appraisal made the first week in March indicates that the total obligations on the development highway program could reach $325,657,000 by the end of fiscal year 1968. Approximately $23,594,000 will be obligated on access roads and approximately $1 million for administration, leaving $293 million available for obligation on the development highway system.

Thus, the capacity of the States to do work on the system will exceed funds available by almost $34 million during fiscal year 1968. We anticipate that most, if not all, of the projects which this represents will proceed, financed 100 percent by the participating States, but qualified for reimbursement in fiscal year 1969 as permitted by section 201(h) of the Appalachian Regional Development Act, as amended.

The budget request of $125 million, coupled with the mandated carryover of $53,341,000, will permit a program level of $178,341,000 for fiscal year 1969. If the schedule I have outlined is maintained, approximately $34 million will be used for reimbursement to the States for projects contracted in fiscal year 1968, leaving approximately $145 million for obligation on new work in fiscal year 1969. This will bring the total obligations on the development highway and access

road programs to $495 million by the end of fiscal year 1969. Current estimates of Federal funds which could be employed in the construction of the designated system through fiscal year 1969 exceed this total by approximately $100 million.

As I indicated in my testimony before your committee, it is my intention to encourage the States to use the prefinancing provision in the law to make up this difference. Most of the participating States have indicated the willingness and ability to use this device to move the program forward. Completion of the program now authorized will, however, require an average appropriation of $260 million a year for fiscal year 1970 and fiscal year 1971.

I am enclosing several tables containing information compiled since the submission of the budget justification to you. They provide the most current picture of the Appalachian highway program.

I hope this information is helpful. If any further data would be useful, please let me know.

Sincerely yours,

JOE W. FLEMING.

APPALACHIAN DEVELOPMENT HIGHWAY PROGRAM—SUMMARY OF FINANCING

[In thousands of dollars]

State	Allocation of authorized funds	Allocation of appropriated funds	Obligations through Mar. 1, 1968	Estimated obligations through June 30, 1968	To be prefinanced
Alabama	18,149	10,800	5,754	10,800	
Georgia	190,320	60,000	46,270	65,823	5,823
Kentucky	48,078	12,000	11,738	12,000	
Maryland					
Mississippi	108,800	30,900	30,880	38,380	7,480
New York	49,541	17,600	14,999	20,817	3,217
North Carolina	57,246	17,500	13,922	23,083	5,583
Ohio	110,638	37,000	29,164	43,783	6,783
Pennsylvania	53,213	20,500	14,218	25,442	4,942
South Carolina	42,107	35,500	33,527	35,500	
Tennessee	261,908	50,200	32,551	50,200	
Virginia					
West Virginia					
Subtotal	940,000	292,000			
BPR Administration	5,000	1,000			
Total	945,000	293,000	233,023	325,828	33,828
Access roads (see next table)	70,000	23,650	13,633	23,594	
Grand total	1,015,000	316,650	246,656	349,422	33,828

APPALACHIAN ACCESS ROAD PROGRAM—SUMMARY OF FINANCING

State	Allocation of authorized funds	Allocation of appropriated funds	Obligations, Mar. 1, 1968	Estimated obligations, June 30, 1968
Alabama	$15,530,352	$8,780,000	$7,996,000	$8,771,000
Georgia	3,016,524	170,000	145,000	165,000
Kentucky	3,792,608	650,000	485,000	642,000
Maryland	1,706,949	260,000	33,000	257,000

South Carolina	6,433,216	3,850,000	2,100,000	3,850,000
Tennessee	4,689,665	1,440,000	176,000	1,432,000
Virginia	2,709,053	680,000	677,000	677,000
West Virginia	5,371,159	2,070,000	342,000	2,063,000
Total	70,000,000	23,650,000	13,633,000	23,594,000

Mr. EVINS. Thank you, very much gentlemen.

Mr. FLEMING. Thank you.

MONDAY, MARCH 5, 1968.

OFFICE OF EMERGENCY PLANNING

WITNESSES

PRICE DANIEL, DIRECTOR, OFFICE OF EMERGENCY PLANNING
CHARLES BREWTON, ASSISTANT DIRECTOR, OEP
M. M. MERKER, GENERAL COUNSEL
WILLIAM B. RICE, DIRECTOR OF ADMINISTRATION
ROBERT Y. PHILLIPS, DIRECTOR, EMERGENCY OPERATIONS OFFICE
WILLIAM C. TRUPPNER, DIRECTOR, NATIONAL RESOURCE ANALYSIS CENTER
WILLIAM LAWRENCE, CHIEF, MATERIALS POLICY DIVISION, NRAC
EUGENE J. QUINDLEN, DIRECTOR, PROGRAM PLANNING AND EVALUATION
A. JAMES READ, BUDGET OFFICER
JAMES D. O'CONNELL, DIRECTOR, TELECOMMUNICATIONS MANAGEMENT

Mr. EVINS. The committee will come to order.

We have with us this morning our friends of the Office of Emergency Planning, headed by former Governor Price Daniel, of Texas, who is Director of the OEP. Mr. Charles Brewton is the Assistant Director, Mr. Merker is General Counsel, William B. Rice is Director of Administration, Robert Phillips is Director of Emergency Operations Office, and Mr. William C. Truppner is Director of the National Resource Analysis Center, and this is part of your reorganization.

Mr. William Lawrence is Chief of the Materials Policy Division, Mr. Eugene Quindlen is director of program planning and evaluation, and Mr. James Read is the budget officer.

That is a very distinguished group, and, Governor, we are always pleased to see you and hear you. You may proceed as you wish.

GENERAL STATEMENT

Mr. DANIEL. Mr. Chairman and members of the committee, it is indeed an honor and a privilege to appear before you today in support of OEP budget estimates for fiscal year 1969. As a former Member of the other body of the Congress, I take special satisfaction in renewing my association with the legislative branch. I believe that the budget document which you have before you provides a detailed justification of our requirements. Therefore, I shall concentrate on highlights of OEP accomplishments during the past year and on key features of our programs for the future. General O'Connell and members of his staff will discuss the telecommunications request separately.

Throughout recent months, the need for a strong emergency planning program has become increasingly evident as the Nation continues to meet the challenge of Vietnam without disrupting economic growth and prosperity here at home. OEP's contribution to the national security has, I believe, been an outstanding one, and it has been accomplished entirely within the appropriations enacted by the Congress for fiscal year 1968. Other than for pay raise costs for the civil defense and defense mobilization functions of Federal agencies appropriation, no supplemental funds are required for the current fiscal year.

Despite an exanding workload, our budget request for OEP salaries and expenses for fiscal year 1969 is only $343,000 larger than last year's appropriation, and that includes salary increases. Our fiscal year 1969 estimate will support a total staff of 270, an increase of four positions over the current fiscal year. The additional positions will further strengthen our National Resource Analysis Center in providing a first-rate scientific basis for determination of national security policy.

In our fiscal year 1969 budget request, as in our fiscal year 1968 estimates, no new contract research and development funds are sought. We will continue to perform the research function inhouse with the aid of specialized, highly trained consultants who are widely respected for their expertise in analysis of nonmilitary defense problems entailing economic and other considerations. We are requesting a small amount to insure the continuation of emergency preparedness studies by Federal agencies with a built-in competence.

We continue to fulfill our role as coordinator of the entire Federal Government nonmilitary preparedness program by providing policy guidance and leadership to the Federal departments and agencies, and by reviewing and evaluating program objectives and the effectiveness of program results. In this connection, you have scheduled for a later hearing our request for funds to cover the emergency preparedness functions of eight Federal departments and agencies which cannot be absorbed within their regularly appropriated funds.

In last year's budget presentation to this committee, we committed OEP to the development, refinement, and use of scientific methods for coping with a potential crisis or attack, related to the war in Southeast Asia or otherwise. I am pleased to report that our achievement in initiating a scientific analysis capability has been substantial.

During the past year, OEP has given particular attention to developing and maintaining a highly sophisticated capability for monitoring and projecting the status of the Nation's resources. Our National Resource Analysis Center analyzes the impact of military programs on the U.S. economy through use of econometric models and operations research techniques. Considerable progress has been made in improving the national economic strength model, an input-output economic model designed to estimate the effects of alternative combinations of Government actions on various industries.

STATE MANAGEMENT OF RESOURCES

In another important preparedness program, substantial progress was made in the development of State plans for the emergency management of resources. All 52 jurisdictions participating in the program have now completed and tested initial drafts of their resource management plans. Since our last appearance before this committee, 15 State plans have been approved for publication, bringing to 40 the total approved to date.

NATIONAL DEFENSE EXECUTIVE RESERVE

I am pleased to report that during the past year more than 1,400 executive reservists attended the Fifth National Conference of the National Defense Executive Reserve held in Washington, D.C., on

October 23–24, 1967. More executive reservists attended this training meeting than any of the four previous national conferences. They received instruction in current emergency procedures and heard top level officials speak on the importance of reservists' responsibilities. Addresses by Vice President Hubert Humphrey, Deputy Secretary of Defense Paul Nitze and General Maxwell Taylor highlighted the 2-day conference. The entire second day of the meeting was devoted to work sessions in which each reservist joined the members of his unit to consider problems they might face as Federal officials called to duty in an emergency. Eight Departments and agencies now sponsor 22 National Defense Executive Reserve units with close to 4,000 reservists participating in this important program for Government readiness.

STRATEGIC AND CRITICAL MATERIALS STOCKPILES

Turning now to the status of our stockpiles of 77 strategic materials, OEP maintains close surveillance over the materials that are stockpiled, and initiates new supply-requirements analyses whenever reviews indicate that the status of a particular material has changed or will change in the future. In fiscal year 1967, OEP completed a number of such analyses. Based on these new studies, revised stockpile objectives were established for nine materials.

Here, as in much of our work, we are planning and preparing for contingencies which we hope will never occur. However, we must be prepared for any eventuality. For instance, during fiscal year 1967 our office announced stockpile objectives in the event of a nuclear attack against the United States. That announcement represented a culmination of 3 years of study involving approximately 30 Federal departments and agencies. We also have set objectives for materials necessary for a conventional war short of nuclear attack against our Nation. Except for a few isolated materials, our stockpile objectives have been met and are maintained at a level sufficient to be prepared for either of these contingencies.

SUPPLY REQUIREMENTS STUDIES

During fiscal year 1968 we will complete new studies of supply-requirements in the event of conventional war against the United States. Based on these studies, we will develop revised conventional war stockpile objectives. This is a continuing matter, as I am sure the committee understands. In addition, special supply-requirements studies will be conducted for any material if there is an indication that the supply may be insufficient to meet the needs of the war in Vietnam.

Throughout the history of our stockpile program, changed conditions have reduced our objectives as to some materials and, therefore, have made possible the sale of excesses. Sales commitments for fiscal year 1967 amounted to $466.9 million. Cumulative sales commitments as of June 30, 1967, total approximately $2.7 billion at sales value, of which $2 billion were from the national and supplemental stockpiles and approximately $680.7 million from the Defense Production Act Inventory. For the first 6 months of fiscal year 1968, disposal sales commitments totaled approximately $85.3 million at sales value. As you know, these sales are handled by the General Services Administra-

tion which, I understand, has already testified before this committee concerning sales estimates for fiscal years 1968 and 1969.

STOCKPILE SURPLUS

Mr. EVINS. Governor, we understand that at one time we had about $10 billion in the stockpile of surplus materials and this committee for several years has urged, in view of the excesses, that there be a program of disposal. We have held hearings in the Congress on both sides regarding the disposal of certain of our stockpiled surpluses. The GSA and you have moved in that direction.

Now then, with the Vietnam war developing as it has, we wonder if there has been a changed policy, and if some items may be in short supply. Has your office taken a look at the requirements of the current situation?

Mr. DANIEL. Yes, we have. When you mention $10 billion, I do not think you meant to say that there was this much in excess. You were referring to the total in the stockpile.

Mr. EVINS. Yes.

Mr. DANIEL. There are $6.6 billion worth of materials there now and about $3.4 billion of that amount is in excess of our objectives.

Mr. EVINS. About half of the $6.6 billion is considered excess?

Mr. DANIEL. Yes, sir.

Mr. EVINS. Are we still disposing of materials even though we are in an emergency situation?

Mr. DANIEL. Yes, sir, we are. I am sure this committee knows how this occurred. Many years ago some materials such as lead and zinc were purchased and stockpiled in quantities. If they were not in excess of the actual needs then, they are certainly in excess of our needs as we see them today. And that is how the excesses were built up. About half of the materials, on a dollar basis or value, are still in excess.

Mr. EVINS. I think that was brought about by reason of the fact that originally we had a 5-year supply objective and that has now been reduced to what, 3?

Mr. DANIEL. To three. That is another reason that our objectives are lower now than at the time some of these purchases were made.

Mr. EVINS. But in any event, even with the emergency situation, you still consider that we have surplus in certain categories.

Mr. DANIEL. In some categories we do. Going back to your question, yes, sir, we certainly are keeping up with these materials and trying to see that we have on hand sufficient amount to take care of either of the contingencies I have just described to you.

Mr. JONAS. What are you doing about copper? Is that not critical?

Mr. DANIEL. Our objective on copper is about 775,000 short tons and we have on hand 259,000 short tons.

COPPER STRIKE

Mr. JONAS. What are we going to do if the strike continues?

Mr. DANIEL. If the strike continues, there is a possibility that some releases will have to be made. However, the office has a policy of not making releases from the stockpile while there is a labor dispute going on.

Mr. JONAS. Are you active in efforts to settle this strike?

Mr. DANIEL. Yes, sir.

Mr. JONAS. What can you tell us about the prospects?

Mr. DANIEL. As you know, the President has called all the representatives of the companies and the unions to meet at 4 o'clock today, and in his telegram he asked that they stay together and meet around the clock until some settlement of the strike is reached.

Mr. JONAS. What are the issues? Are they economic? I understood they were mostly jurisdictional.

Mr. DANIEL. I believe the biggest issue is companywide bargaining. The unions are insisting on companywide bargaining throughout the Nation and the companies are against it.

Mr. JONAS. Have you had to release any copper from the stockpile in this emergency?

Mr. DANIEL. Not since I have been here. We have previously made some releases.

Mr. JONAS. Not as a result of the strike?

Mr. DANIEL. Not as a result of the strike.

Mr. JONES. I imagine you are getting many calls though.

Mr. DANIEL. A lot of letters too.

Mr. EVINS. Governor, you tell them that we are concerned and hope to get this matter settled.

Mr. DANIEL. Yes, sir. We have been working with the President and the administration people in trying to get it over with.

CONTINUITY OF GOVERNMENT

In the important area of operational readiness of government at all levels, improvements were made this year with respect to emergency operating facilities and their supporting communications. We are continuing to work with the States to increase their capability to operate in an emergency and to insure continuity of Government. Forty-nine States have already adopted 276 constitutional amendments and legislative measures to accomplish these objectives.

In a related area, revision of the plan for the emergency broadcast system was completed through the combined efforts of the major networks, the Federal Communications Commission, the Office of Civil Defense and the Office of Emergency Planning. The system is operational and is tested monthly from various points in and away from Washington.

INTERNATIONAL ROLE

We are cooperating with other friendly nations on emergency preparedness. Following approval by the Canadian Cabinet, a new United States-Canada Civil Emergency Planning Agreement was effected by an exchange of notes, signed at Ottawa on August 8, 1967. The agreement establishes a framework within which the two nations can proceed with the development of mutually supporting emergency plans. We work continuously with the members of the North Atlantic Treaty Organization through our membership on the NATO Senior Civil Emergency Planning Committee. In addition, we are in the process of negotiating an exchange of notes with Mexico for the ex-

tension of mutual aid in case of crossborder disasters such as Hurricane Beulah.

DISASTER RELIEF FUND

In fiscal year 1967, in the field of disaster assistance, after major disaster declarations by the President, our Office allocated $21,755,000 to 14 States to reduce suffering and repair damages caused by major disasters. Thus far in fiscal year 1968, seven new disasters have been declared and aid in the amount of $32,026,000 has been allocated to State and local governments to supplement their efforts to overcome the havoc caused by these new disasters and those of prior years.

FEDERAL-STATE RELATIONS

Before concluding, I wish to mention the progress we are making in intergovernmental relations. In addition to OEP's numerous contacts with States resulting from our role in emergency readiness planning and disaster relief assistance, the Director has received an assignment from the President to serve as his liaison with the Governors on other matters involving Federal-State relations.

Our participation in Governors' Conferences, our trips to State capitals and our participation in State Days in Washington are all designed to bridge the communications gap that has sometimes existed between Federal and State officials. We have taken top-ranking troubleshooters from a score of executive agencies into statehouses in 42 capitals to identify and eliminate the old practices that qualify as red tape and that work to defeat the intent of the legislation enacted by the Congress. The State Days in Washington make up a new series of work sessions designed to follow up on the job of improving Federal-State working relationships. And in this program the Governor brings his officials here to meet with their Federal counterparts.

These meetings have involved more than 600 Federal officials and more than 2,000 State officials. Over 1,500 questions, problems, or complaints have been identified. More than half of these were answered or solved on the spot at these conferences, and the remainder have been attended to in follow-up actions, most of which have been entirely satisfactory to State officials. Some problems of course are continuing and still pending.

As one who has spent all of his 25 years in public service at the State level, except for 4 years in the Senate and 5 months in this office, it is my opinion that this program initiated by President Johnson has resulted in the finest working relationship between the Federal and State governments that has ever existed. I can praise this work without too much immodesty because most of it was inaugurated and established by my predecessors, Governor Buford Ellington and Governor Farris Bryant.

CONCLUSION

Back to our traditional duties, and in conclusion, I am convinced that OEP's contribution to the mobilization effort is an invaluable element in our Nation's total defense. As our past achievements readily demonstrate, a civil emergency preparedness program complements and supplements the Nation's military preparedness program for a

fraction of military defense costs. In light of the world situation today, I believe that our budget estimates for fiscal year 1969 represent a minimal investment in a nonmilitary defense program which will continue to produce benefits far in excess of its costs.

Mr. EVINS. It is a very fine statement, Governor. You have covered the highlights of your program. Of course, the Office of Emergency Planning is the nonmilitary preparedness agency of the Government, and sometimes overlaps into the military. With the Vietnam emergency, you are concerned with stockpiling critical materials.

PREPAREDNESS RESPONSIBILITIES AND PLANS

Tell us the status of your plans, Governor. We have been listening to reports of your predecessors for several years and they have been diligently working to keep the Federal Government and the States prepared.

What is the status of your plans now?

Mr. DANIEL. They require continuous study and updating to meet changed military and economic conditions.

Mr. EVINS. You have to constantly review and update them.

Mr. DANIEL. That is right. I think any plan the President might call for today, in any of these fields, we would have something ready to go. I do not mean just think about it; I am saying this positively, that we have something ready to go. But if you called a year from today we should have something better and even more up to date.

Mr. EVINS. Do you have plans for the continuity of Government in case of an emergency attack?

Mr. DANIEL. Yes.

Mr. EVINS. How many of the States have adopted emergency plans?

Mr. DANIEL. We have contracts for emergency resource planning in all States except Mississippi and Pennsylvania. These are contracts between the States and the Federal Government.

Mr. EVINS. Does each of the agencies of the Federal Government have their standby plans pretty firm?

Mr. DANIEL. Yes; I think that is correct.

Mr. EVINS. You are up on top of your job then, Governor?

Mr. JONAS. Of course, I am not advocating abolishing the office, I am not opposed to planning, but it does seem to me that you cannot have any more serious emergency than a nuclear attack. You already have your plans formulated as to what we will do at the State government level and the Federal Government level.

What else is there to plan?

Mr. DANIEL. You mean insofar as a nuclear attack is concerned?

Mr. JONAS. And conventional, too. You just said in your statement you had all of these cooperative arrangements made with the States, a number of constiutional amendments have already been adopted; 49 States have emergency plans. What more is there to plan? How can we have a greater crisis than a nuclear attack?

Mr. DANIEL. Actually, Mr. Jonas, there are conventional war plans and contingencies we are now taking into consideration that require more planning and preparedness in some respects than a nuclear war.

For instance, with respect to stockpiles, we find our objectives are higher in the case of conventional war than they would be in the case

of a nuclear attack on the country. The main thing there is that we do have to continuously prepare and plan with respect to stockpiles, continuity of Government, and so forth. With respect to all of these matters we have to face continuing military and economic change and keep our plans updated to meet changed conditions.

Mr. JONAS. That is what I cannot understand. I do not see what changed conditions you visualize that you do not already have blueprints for. You already have these blueprints. I understand you have to keep them current.

Mr. DANIEL. For instance, let's take stockpiles. We assumed that certain materials would be available from certain Western Hemisphere countries such as Cuba until Cuba went over to Castro and we had to strike it.

Mr. JONAS. That is about 6 years ago.

Mr. DANIEL. That is just an example. There are some other countries now that are getting away from us, getting to where it might be unsafe to count on them for some materials. On the other hand, it might be possible for us to rely more safely on countries outside this hemisphere for some materials. It is a matter of continually studying the situation in those countries, the shipping capabilities, what Defense says as to the possibility of having the shipping interrupted, and so forth. I know it probably seems to you——

Mr. JONAS. It seems to me once you get your plans made for both kinds of emergencies, thereafter it should be more of a streamlined operation. It does not take the same manpower to keep current as it does to formulate plans initially.

Mr. DANIEL. You have to have someone then to carry them out. If we did not have the Office of Emergency Planning, you would have to have some other agency available not only to keep them updated, but to carry them out and be ready to implement them when called for.

CIVIL DISORDERS

Mr. EVINS. We want to commend OEP for having these emergency plans prepared and ready.

I think you have one emergency condition I did not see alluded to in your justification. We know the OEP is concerned with all areas of planning and the committee is concerned to know what is being done with respect to the announced civil disobedience this spring in Washington. Is this under your jurisdiction?

Mr. DANIEL. That is not within our jurisdiction. I understand that consideration and work is being done on it by other agencies of the Government.

Mr. EVINS. We certainly hope it is in some areas. I hear the Mayor of Washington on television try to tell everybody not to be alarmed, but there is a great deal of concern. Fortunately, Washington has not had any of these riots like in Detroit, Newark, and elsewhere. But these announcements do not say they are coming to petition the Congress or petition the Government, which is a right they have under the Constitution. They also have the right to demonstrate and march, but they use the words "civil disobedience." When they use this phrase, I think the Justice Department and other areas of the Government ought to be concerned and do some planning.

Mr. DANIEL. I certainly share your concern and have satisfied myself that the Department of Justice and other agencies are taking action. It is not within our jurisdiction insofar as civil disobedience is concerned.

Mr. EVINS. I hope that you will take this under advice and contact your colleagues. You have great reaches into all agencies of the Government.

Mr. JONAS. If they burn down half the city, you would immediately have jurisdiction, would you not? All it would take would be an Executive order. I do not see how the Department of Justice can do that work. It would seem to me it ought to be assigned to you.

Mr. DANIEL. Well, sir, if the Congress wishes to assign it to us, we would certainly try to do the job.

Mr. JONAS. Do you agree an Executive order is all that would be required?

Mr. DANIEL. I am not sure about that. There is some difference of opinion among lawyers. In my opinion the way the law we operate under reads, as far as disasters are concerned, it applies to natural disasters and not manmade disasters or sabotage or things of that kind.

Mr. JONAS. Were you involved in rehabilitiation in Watts or Detroit?

Mr. DANIEL. No, sir. Our Office has not been involved.

Mr. EVINS. The Small Business Administration made loans, the Corps of Engineers provided assistance, and the Red Cross provided aid.

I suspect in all areas the Governors called upon the President through the Director of the Office of Emergency Planning to provide grants for at least the building of facilities.

Mr. DANIEL. Yes, indirectly, on requests coming in from the Governors who want to see if we cannot speed it along and cut the redtape. In that manner, we might have been involved. We are certainly involved in almost anything a Governor is asking for, just like you.

Mr. EVINS. The Attorney General is the chief law-enforcement officer. In the old days, if you prosecuted one man you set an example and one of the purposes was to retard others. I think the Attorney General should proceed with some actions to have a deterring effect.

But I just want to say, Governor, that an announced emergency is coming our way and I hope you will be prepared to give some assistance and cooperation and to urge your colleagues, also.

KERNER COMMISSION RECOMMENDATION

Mr. DANIEL. We certainly will do that, and you might have noticed that the Kerner Commission recommended that you amend the law to bring civil disturbances into the jurisdiction of this Office insofar as disaster relief is concerned.

Mr. TALCOTT. Do I understand the stockpiling in which you are involved is only for use in natural disasters and not conventional warfare disasters or civilian disorders?

Mr. DANIEL. No, the stockpiles are for use under certain contingencies such as nuclear war or conventional war. We do not draw on them for natural disasters.

Mr. TALCOTT. So you are stockpiling for war?

Mr. DANIEL. Yes.

Mr. TALCOTT. And your other activities are not for war?

Mr. DANIEL. Actually, our activities in natural disasters are simply the Federal Government paying for the repair of certain public facilities and emergency aid of that nature through the money you appropriate to the President for natural disasters.

Mr. TALCOTT. And none of this, as Mr. Jonas suggested, went into Watts?

Mr. DANIEL. None of this money went into Watts.

Mr. TALCOTT. Or any other locale of the civil disorders which we have had?

Mr. DANIEL. That is correct.

Mr. RICE. We operate under several pieces of legislation: The National Security Act of 1947, Defense Production of 1950, and Natural Disaster Act or Public Law 875. So there are different basic authorities.

Mr. TALCOTT. So it is your judgment that you just could not do anything so far as the pending civil disobedience projects are concerned?

Mr. DANIEL. Insofar as repairing public facilities through the President's disaster funds. That is my opinion. I ought to call it my personal legal opinion, having studied it.

Mr. TALCOTT. So you have not done any planning to help avoid or ameliorate this kind of disaster?

Mr. DANIEL. No, sir. The planning there is definitely outside of our jurisdiction. We have two things we are talking about here—planning to prevent them and whether or not there could be some disaster money used to repair damages afterward.

As far as preparing for the prevention of destruction of property here or anywhere else, other agencies of Government have that jurisdiction. There is no question about that. The only question on which there might be some difference is whether or not the disaster legislation under which the President can declare a major disaster would permit some of the funds you appropriate to him to go for the repair of public facilities damaged by riots. It has never been done, and in my opinion the way the act reads, you have not broadened the authority that much. It has been recommended to you by the Kerner Commission that it be done, and I think by others in the past.

Mr. TALCOTT. Governor, over 6 years ago we lost Cuba as one of our sources for some of our needs. You indicate that we might have lost some other countries since that time. Could you tell us what countries we have lost, either on the record or off the record.

(Off the record.)

Mr. EVINS. Back on the record.

Mr. MARSH. What is your total appropriation request. You indicated it was $343,000 over the preceding year.

Mr. RICE. We are asking for $5,043,000. That is on page 4.

Mr. MARSH. Actually, is it not $10,164,000?

Mr. RICE. Yes; to finance the three elements.

Mr. MARSH. So your total appropriation request is $10,164,000?

Mr. RICE. Right. This morning we have been talking about the first item.

Mr. MARSH. Your total request is $10,164,000?

Mr. RICE. Yes, sir.

Mr. MARSH. In addition to that, you have the disaster fund which is run separately?

Mr. RICE. Yes.

ECONOMETRIC MODELS

Mr. MARSH. I noted on page 3 of the Governor's statement the reference to econometric model, and in previous testimony here by the National Science Foundation reference was made to the kind of econometric model they were establishing. What cooperation do you have on this?

Mr. TRUPPNER. Actually, the National Science Foundation finances one professional man on the staff of the Natural Resource Analysis Center. They pay his salary and he operates as a full-time liaison to ensure cooperation.

Mr. MARSH. What is the econometric model?

Mr. TRUPPNER. These are simply models normally in the form of a program to be put on the computer to establish the financial and economic relationships that exist between different components of our industrial society.

Mr. MARSH. To what extent does OEP work with the new phase of the National Guard Bureau and the National Guard on military support for civilian defense?

Mr. RICE. Not directly at all.

Mr. MARSH. Thank you, Mr. Chairman.

RESULTS OF REORGANIZATION

Mr. EVINS. One more general question before we get into the details of the budget.

You had a reorganization in the Office of Emergency Planning during the last year. Do you want to tell us in a few words what you have done and what the results are?

Mr. DANIEL. Yes, sir. I have covered it generally there.

As you know, this reorganization was put into effect by my predecessor, Governor Bryant. And we feel it has given us a better, more streamlined operation.

Mr. EVINS. We will take a look at page 5. This shows you the present staffing of the Office of Emergency Planning.

Mr. DANIEL. Down on the left-hand corner you will see the National Resource Analysis Center. We gathered together there under Mr. Truppner the various divisions, some of which had been entirely separate—Materials Policy Division, Mobilization Plans, Economic Stabilization, Resource Evaluation, and System Evaluation. They have the computers here in this Center and this is where we have the scientists.

NATIONAL RESOURCE ANALYSIS CENTER

Mr. EVINS. You have had a reorganization and, as a result of the reorganization, you have some more jobs. The two places that go up are the National Resources Analysis Center, which goes up from 17 to 20 in 2 years and the Resource Evaluation Division, 18 to 22.

Mr. RICE. Yes, sir, but those are internal adjustments in 1968 sir. Between 1967 and 1968, the increases were just shifts within OEP. No aggregate increase.

Mr. EVINS. You have four new jobs.

Mr. RICE. Yes, for fiscal year 1969.

Mr. EVINS. Are these for the National Resource Analysis Center?

Mr. RICE. Yes, sir.

Mr. EVINS. Governor, you have plans for price controls and wage controls. Are those plans formulated? Would OEP participate in recommending such controls?

Mr. DANIEL. I doubt it would be our office alone that would recommend, but we have the plans ready and have had for years. I have seen to it that they are updated. And we have the plans ready if called for, but we would not likely be the only agency that would recommend when they be used. Like some of these other things we hope will never happen, if there are calls for, it is our responsibility to have the plans ready.

Mr. EVINS. Your Division of Economic Stabilization is concerned, I am sure, with economy matters of the Nation.

Mr. DANIEL. One of their main concerns would be having plans ready if ever needed.

ORGANIZATIONAL SETUP

Mr. EVINS. We will place in the record the organization chart and the one on the next page which shows the regional offices.

You have eight regional offices. Olney, Md., is for the Washington area and Thomasville, Ga., is for the Southeast.

Mr. DANIEL. We just swore in the new regional director for your region this morning, Bob Short, who has served under three Governors of Georgia.

Mr. EVINS. We will place these in the record.

SCARE ORDERS

Mr. JONAS. Recently I had occasion, Governor, to send you a document being circulated, I do not know how widely, around the country, but it is put out by some organization. It contains some scary Executive orders that contemplate taking over almost every function of the Government by the Executive. I sent it to you to give you the opportunity to respond to it. I have had some mail on it and I sent your response out and have not heard anything more about it. I think you ought to, in the record someplace, put the substance of your reply, or a statement explaining the purpose of those Executive orders, and that they are not in effect and are not planned to go into effect in the absence of a serious emergency, for reference by other Members of Congress who may be receiving similar mail.

Mr. DANIEL. I will be glad to do that.

Mr. JONAS. You think it is a good idea?

Mr. DANIEL. I will be glad to do it unless you think it will give it wider publicity for other kooks to pick it up and try to use it. When you said you had not heard anything further, you did not mean you had not received a reply? You did receive my reply?

Mr. JONAS. Yes. And I sent it out to the people who sent those things to me, two or three. Since your reply, I have not had any further communications on that subject. You are right, it might give more impetus to the thing.

Mr. DANIEL. All of those orders that they had printed up and sent to you were simply emergency planning orders to provide a state of readiness, if we had a nuclear attack, or if we had an all-out conventional war, or other condition of national emergency.

It is just like wage and price and rent controls. All authority to declare or put those into effect expired in 1953. We have the planning responsibility. The plans we have would have to come to the Congress. And because of the fact that we work on these plans continuously and we consult with the people in the retail and wholesale and other fields——

Mr. JONAS. We will just let it go this way as far as the record here is concerned; that the Executive orders to which reference was made are not in effect today and are emergency orders.

Mr. DANIEL. Some of them would probably require congressional action before they could be put into effect. Certainly they are intended for great emergencies. And I may say that our office has received letters like yours through the years from people who are still circulating these, although yours is the first one that I have seen in the 5 months I have been there.

FEDERAL-STATE RELATIONS

Mr. JONAS. Only one other general question.

On page 9 you say, "Over 1,500 questions, problems, and complaints were identified. More than half were answered and solved on the spot." I would like for you to give us some examples of what those problems were. If you cannot do it right now, would you prepare for the record when it comes down a half-dozen or so examples of the sort of thing you are talking about here?

Mr. DANIEL. Yes, sir; we will prepare some examples and put them in the record.

But right now I would say that one of the main things we ran into was so much redtape, long delay, in getting action on certain applications which had been filed by State agencies with the Federal agencies.

(The information follows:)

EXAMPLE OF FEDERAL-STATE COOPERATION

To obtain States' views during Congress' consideration of highway safety legislation, OEP arranged for the Highway Safety Committee of the Governors' Conference to meet with the President, Federal officials and appropriate committees of Congress. The proposed legislation was amended to provide that Governors and State officials should serve as members of the National Highway Safety Advisory Committee and the Traffic Safety Council. States' views are now continuously considered in developing nationwide safety standards.

Based on the views of Governors and State officials concerning the proliferation of agencies handling new grant-in-aid programs and in an attempt to minimize duplication and confusion in administering more than 400 separately authorized programs, OEP arranged for the Federal-State Relations Committee of the Governors' Conference to meet with the President, Cabinet members and key Federal officials administering grant programs.

Consequently, the President issued a number of directives, particularly those of September 5, 1967 and November 11, 1967, which required Federal agencies to conform to common planning boundaries as prescribed by Governors. Areas and districts are now required to be uniform within each State and in accordance with the Governors wishes. The directive of November 11, 1967, ordered Federal agencies to consult with State and local executives in the development and execution of programs affecting them. Budget Circulars A–80 and A–85 further assured advance consultation with the States in establishing common boundaries and in administering grant programs. Circular A–85 establishes a procedure through the office of the Advisory Commission on Intergovernmental Relations for clearing orders, regulations and directives with the States before they are promulgated.

Governors in 46 States have appointed special assistants or established departments to coordinate Federal-State relations, particularly grant programs in their States. Seventeen States now have Washington offices to work on Federal-State problems.

Through our good offices HUD was encouraged to make a $700,000 demonstration planning grant to Massachusetts. Staff employed by the grant will devote their attention to consolidating and coordinating Federal programs in Massachusetts to the end that they will effectively serve the State, its localities, and citizens. Results of this demonstration project will be made available to other States.

Inadvertently, a contract between the U.S. Office of Education and the Southern Education Reporting Service was terminated 6 months in advance with some embarrassment and financial loss to those participating in the Service; namely, some 18 newspaper editors and educational correspondents from six Southern States. As the request of the Governor of Tennessee and as a result of our efforts, negotiations were resumed, administrative errors corrected, and the contract renewed for the promised 6-month period.

In our conference with North Carolina officials, we were successful in releasing the Winston-Salem low-income housing project which was held up, expediting the 701 planning grant, lifting of an aircraft parking rule at the airstrip at Wright-Memorial Park and in obtaining a commitment from Department of Interior for a study of an airport at Ocracoke Island.

At the request of Washington State officials we assisted in the release of funds from DHEW for the operation of kidney centers.

Assisted the State of Iowa in winning approval of two of its manpower training programs.

Helped Connecticut get approval to use State appraisers for land acquisition under the land and water conservation fund program. An official of the Bureau of Outdoor Recreation notified the State within 3 weeks that State appraisers could be used and their use was encouraged for most acquisition projects. This

simplifies State procedures and cuts the State's costs of participating in the programs.

The OEP-sponsored Federal-State Relations Conference in Idaho provided the incentive needed to end the delay on a community action program in Nampa, Idaho, because of the representation on the CAP Board. Following the conference the OEO regional CAP manager returned to Idaho and worked out the problems. A new board was accepted, the program funded, and a director hired.

Approval of a work experience program (title V, Equal Opportunity Act) for Indians in the Standing Rock Reservation in North Dakota was hindered by the fact that two States and five counties were involved, making designation of the required single State agency extremely difficult. Through OEP the problem was brought to the attention of Federal officials by the State chairman of the Indian Affairs Commission. The HEW regional director was able to get agreement by the North and South Dakota State Welfare Departments on a single State agency sponsor for the program, effectively removing governmental hindrances at Federal and State levels to the program.

The OEP-sponsored Maryland conference revealed that the Neighborhood Youth Corps program was severely handicapped by apparent lack of funds for transportation and medical expenses for trainees. Subsequently, the Labor Department made funds available for these purposes and the program moved ahead.

As a result of visits to the States and OEP's working with them in general, problems common to most or all States came to the surface. For example, the need to give greater consideration to block grants and consolidation of related programs. Another example is the multiplicity of forms and certifications to prove compliance on civil rights. Interior now requires only that primary recipients of Federal funds keep on file satisfactory evidence of a subrecipient's compliance. For continuing programs, a single assurance is all that is required. HEW is in the process of creating a single Office for Civil Rights to serve the entire Department, and this office is also working to reduce the number of forms required. Half of the Office of Civil Rights staff will be in HEW regional offices so that communication with the States can be rapid and effective. In this, as in other instances, the States' comments have added impetus to work already underway.

Mr. JONAS. It disturbs me to read that 1,500 questions could be raised at State levels about operation and some of your people are able to solve them without even thinking about them. I just wonder whether I am right. I have been arguing that all of the brains in the United States are not in Washington.

Mr. DANIEL. I certainly agree with you on that, having just returned recently.

Mr. JONAS. I do not understand that the people in the States would have some problems your people could just answer off the cuff. That is why I asked for examples.

Mr. DANIEL. We will put in some examples, but let me clarify it right now in your mind. These questions involve many hundreds of applications that State officials have with their Federal counterparts on which they have had delays or redtape, many guidelines and conflicts in guidelines, that it may be the same general trouble affecting perhaps a hundred different applications.

Mr. JONAS. They were able to answer them off the cuff because they had come up before?

Mr. DANIEL. They had come up before and the Federal team could give them the answers when they really sat down and understood what the trouble was in more than half of all the problems raised. Really, a lot of it was due to misunderstanding.

Another thing that has been a chief concern and is still troubling us is the fact that so many of the agencies set up guidelines and regulations or change them without advance consultation with the States that are going to have to carry out these programs. The President has ordered all of the agencies now to give the Governors and the mayors

an opportunity to look for a 21-day period at changes in Federal regulations or guidelines or at new ones being proposed before they are put into effect. This is helping a whole lot, but sometimes they forget to do it or do not give the States adequate time. I do not think it is so much a matter of having the brains right ready to answer the questions as it is sitting across the table, identifying the problems and finally understanding what might be troubling the State agency, and being able to tell them here is the way to do it, and satisfy them.

Mr. EVINS. President Johnson has stated previously, and I have read in press releases, that there will be no program coming from Washington. They come to Washington through the local initiative and local management. The Federal Government may to a certain degree give assistance, but he has emphasized local leadership.

I believe at the recent Governors Conference the chairman of that conference made a statement that he had served under three different Presidents and to his experience there has been better cooperation and more done toward Federal-State relationships under this administration than in any previous administration.

I think the Office of Emergency Planning's cooperation with the States is one of your finest achievements. I commend you for it, Governor.

Mr. DANIEL. Thank you.

May I just add that the chairman of the conference is a Republican Governor.

BASIC AUTHORITIES

Mr. EVINS. I read the press reports to the effect that they were having better cooperation with the States, and I think this is probably the result of some of your activities.

Let us mention some of the statutes under which you operate.

The Office of Emergency Planning discharges its responsibilities in compliance with a series of statutes and Presidential orders, including the National Security Act of 1947, the Defense Production Act of 1950, the Federal Civil Defense Act, the Strategic and Critical Materials Stockpiling Act, the Federal Disaster Act, the Agricultural Trade Development and Assistance Act, the Buy American Act, Reorganization Plan No. 1 of 1958 as amended, and Executive Order 11051.

You list Executive Order No. 11051 and OEP Order 1100.8. Tell us about those three latter ones, Reorganization Plan No. 1, Executive Order 11051, and OEP Order 1100.8.

Mr. MERKER. The reorganization plan was the plan under which the Office of Defense Mobilization and the Federal Civil Defense Organization, and all of their functions were combined into a new agency and the authority delegated within that plan to the President. The President delegated all of the authority that came to him through the reorganization plan to the new agency, which at that time was called the Office of Civil and Defense Mobilization. We now have another name, the Office of Emergency Planning.

Mr. EVINS. The President took these various statutes and delegated some authority in creating the Office of Emergency Planning.

Mr. MERKER. Yes, sir.

It is statutory authority that has been delegated by the President to the Director of the Office of Emergency Planning.

Mr. EVINS. Tell us about the others.

Mr. MERKER. Executive Order 11051 is the Executive order which codified all of the authorities which we felt at that time existed in the Director of the Office of Emergency Planning. We felt it would be a good time to put together in one document all of the authorities that we have, and we recommended the Executive order to the President. So 11051 is an easy reference to all of the authority that is in the Director of the Office of Emergency Planning.

EXECUTIVE ORDER 11051

Mr. EVINS. Will you supply a copy of that for the record?
Mr. MERKER. Yes, sir.
(The information follows:)

EXECUTIVE ORDER 11051

PRESCRIBING RESPONSIBILITIES OF THE OFFICE OF EMERGENCY PLANNING IN THE EXECUTIVE OFFICE OF THE PRESIDENT

Whereas national preparedness must be achieved and maintained to support such varying degrees of mobilization as may be required to deal with increases in international tension, with limited war, or with general war including attack upon the United States; and

Whereas the national security and our continuing economic growth and prosperity are interdependent, appropriate attention must be directed to effective coordination of emergency preparedness measures with national economic policies and objectives; and

Whereas mobilization readiness and civil defense activities can be accomplished most effectively and efficiently through the performance by departments and agencies of the Government of those emergency preparedness functions related to their established roles and capabilities; and

Whereas responsibility for emergency preparedness involves virtually every agency of the Federal Government, and there is need to provide a central point of leadership and cordination in the Executive Office of the President:

Now, therefore, by virtue of the authority vested in me as President of the United States, including the authorities contained in the National Security Act of 1947, the Defense Production Act of 1950 (50 U.S.C. App. 2061 et seq.), the Federal Civil Defense Act of 1950 (50 U.S.C. App. 2251 et seq.), and other authorities of law vested in me pursuant to Reorganization Plan No. 1 of 1958 (72 Stat. 1799), and also including the authority vested in me by the provisions of Section 301 of title 3 of the United States Code, it is hereby ordered as follows:

PART I. SCOPE

SECTION 101. *Résumé of responsibilities.* The Director of the Office of Emergency Planning (hereinafter referred to as the Director) shall:

(a) Advise and assist the President in the coordination of and in the determination of policy for the emergency plans and preparedness assignments of the Federal departments and agencies (hereinafter referred to as Federal agencies) designed to make possible at Federal, State and local levels the mobilization of the human, natural and industrial resources of the nation to meet all conditions of national emergency, including attack on the United States.

(b) Under the direction of the President, be responsible for the preparation of nonmilitary plans and preparedness programs with respect to organization and functioning of the Federal Government under emergency conditions and with respect to specific areas of Federal activity necessary in time of war which are neither performed in the normal operations of the regular departments and agencies nor assigned thereto by or under the authority of the President.

(c) Perform such other functions as are vested in him by law or are by this order, or by orders referred to in this order, delegated or otherwise assigned to him.

(d) Perform such additional functions as the President may from time to time direct.

PART II. GENERAL COORDINATING RESPONSIBILITIES

SECTION 201. *General.* (a) The Director shall advise and assist the President in (1) the development of planning assumptions and broad emergency preparedness objectives with respect to various conditions of national emergency, (2) the development of policies and procedures to determine the relationship between available supplies of the nation's resources and the requirements of military, foreign, and essential civilian programs, including those of civil defense, (3) the development of policies, programs, and control systems designed to deal with supply deficiencies and to meet effectively the most urgent requirements for those resources in the interests of national defense, and (4) coordinating the governmental programs designed to achieve these ends.

(b) The Director shall advise and assist the President with respect to resolving any issues, related to emergency preparedness responsibilities of Federal agencies, which arise between two or more such agencies.

SEC. 202. *Resources and requirements.* The Director shall provide policy guidance to the heads of Federal agencies having resource mobilization or claimancy responsibilities to assist them in (1) the development and submission of estimated military and foreign as well as industrial and consumer requirements, (2) the development of resource supply estimates; and (3) the periodic evaluation of requirements estimates in relation to estimates of availability of resources from all sources.

SEC. 203. *Central program determination.* The Director shall develop an overall emergency system for reaching central program decisions for the utilization of resources on the basis that he will have the responsibility for making such central decisions in the initial period of an emergency. This system shall include uniform criteria and procedures for:

(a) The development by each Federal agency of the amounts and types of resources which it must claim in order to meet the requirements of its planned program;

(b) The central consideration of the supply-requirements evaluations of planned programs;

(c) The central determination of major resource utilization programs under varied conditions of national emergency on a relative urgency basis and central direction for the adjustment of agency programs consistent with such determinations; and

(d) The decentralized of controls if required by emergency conditions.

SEC. 204. *Control systems.* The Director shall develop policies and procedures for the coordinated application by Federal agencies, in time of emergency, of priorities, allocations, and other resource control and distribution systems (including a system for the rationing of consumer goods) for the conduct of approved major programs.

SEC. 205. *Research.* The Director shall develop, maintain, and conduct a central research planning program for emergency preparedness purposes. The Director shall maintain, with the participation and support of Federal agencies concerned, a national resources evaluation capability for predicting and monitoring the status of resources under all degrees of emergency, for identifying resources deficiencies and feasible production programs and for supplying resource evaluations at national and subordinate levels to support mobilization base planning, continuity of government, resource management and economic recovery.

SEC. 206. *Dispersal and protection of facilities.* (a) The Director, after consultation with the appropriate Federal agencies, shall advise the President concerning the strategic relocation of industries, services, government and economic activities, the operations of which are essential to the nation's security. He shall coordinate the efforts of Federal agencies with respect to the application of the principle of geographic dispersal of certain industrial facilities, both government- and privately-owned, in the interest of national defense.

(b) The Director, under authority of, and in accordance with the provisions of, Executive Order No. 10421 of December 31, 1952, shall perform functions in respect of the physical security of facilities important to the national defense.

(c) In addition, the Director shall review all measures being taken by the Federal agencies with respect to the physical security and protection of facilities important to defense mobilization, defense production, civil defense or the essential civilian economy, including those under the provisions of emergency preparedness assignments to such agencies and shall recommend to the President such actions as are necessary to strengthen such measures.

SEC. 207. *Civil defense.* (a) Under authority of the provisions of Section 2 of Executive Order No. 10952 of July 20, 1961, and as there prescribed, the Director shall advise and assist the President, and shall perform other functions, in respect of civil defense.

(b) Under authority of, and in accordance with the provisions of, Executive Order No. 10958 of August 14, 1961, the Director shall advise and assist the President with respect to the stockpiling of food and medical supplies.

(c) The Director shall advise and assist the President with repect to the need for stockpiling various items essential to the survival of the population, additional to food and medical supplies, and with respect to programs and for the acquisition, storage, and maintenance of such stockpiles.

SEC. 208. *Federal-State relations.* (a) The Director shall represent the President in working with State Governors to stimulate vigorous State and local participation in emergency preparedness measures.

(b) He shall provide advice and guidance to the States with regard to preparations for the continuity of State and local civilian political authority in the event of nuclear attack on the United States which shall include, but not be limited to, programs for maintaining lines of succession to office, safekeeping of essential records, provision for alternate sites of government, the protection and effective use of government resources, personnel, and facilities, and interstate compacts and reciprocal legislation relating to emergency preparedness.

(c) He shall assist the President in achieving a coordinated working relationship between the various elements of State governments and the Federal agencies to which specific emergency preparedness functions have been assigned pursuant to statute or Executive order.

(d) The civil defense activities involved in the functions prescribed by the foregoing provisions of this section shall be carried out in accordance with the provisions of Section 2 of Executive Order No. 10952 of July 20, 1961.

SEC. 209. *Review and evaluation.* The Director shall from time to time furnish the President overall reports and recommendations concerning the emergency preparedness programs, including the state of preparedness of Federal, State, and local governments to carry out their emergency functions.

PART III. SPECIAL EMERGENCY PLANNING RESPONSIBILITIES

SECTION 301. *General.* Under the direction of the President, the Director shall have primary responsibility (1) for planning assumptions and broad nonmilitary emergency preparedness objectives, (2) for planning the nonmilitary organization and functioning of the Federal Government in time of national emergency, (3) for developing, in association with interested agencies, the emergency planning, including making recommendations to the President as to the appropriate roles of Federal agencies, in currently unassigned matters, such as, but not necessarily limited to, economic stabilization, economic warfare, emergency information, and wartime censorship, (4) for planning for the emergency mobilization of telecommunications resources, and (5) for the development of nonmilitary policies and programs for use in the event of enemy attack on the United States designed to restore the national defense potential of the nation.

SEC. 302. *Emergency organization.* The Director, in consultation with the Director of the Bureau of the Budget, shall plan for the organization and functioning of the Federal Government in an emergency, including provisions for the central direction of all emergency mobilization activities and the creation of such emergency agencies as may be required for the conduct of emergency activities including those within the normal jurisdiction of existing agencies. Plans shall provide for maximum practicable reliance to be placed on existing Federal agences with competence in emergency operations and, as best may be, shall be harmonious with related operations of the Government as a whole.

SEC. 303. *Emergency authorities.* The Director shall provide for the prompt exercise of Federal emergency authority through the advance preparation of such proposed legislation, Eexecutive orders, rules, regulations, and directives as would be necessary to put into effect operating programs appropriate to the emergency situation.

SEC. 304. *Continuity of Federal Government.* The Director shall develop policies and plans to assure the continuity of essential Federal Government activities through programs to provide for lines of succession to office, safekeeping of essential records, alternate sites for Government operations, and the protection and effective use of Government resources, personnel, and facilities.

SEC. 305. *Executive Reserve.* The Director, under authority of, and in accordance with the provisions of, Executive Order No. 10660 of February 15, 1956, shall develop policies and plans for the provision of an Executive Reserve of personnel capable of filling executive positions in the Government in time of emergency.

SEC. 306. *Emergency telecommunications.* The Director shall be responsible for (1) planning for the mobilization of the nation's telecommunications resources in time of national emergency, and (2) carrying out, under the authority of, and in accordance with the provisions of, Executive Order No. 10705 of April 17, 1957, the functions thereby delegated or otherwise assigned to him.

SEC. 307. *Post-attack recovery.* Under the direction of the President, the Director, with the cooperation and assistance of the Federal agencies, shall develop policies, plans, and programs designed to provide for the rapid restoration after an attack on the United States of a national capability to support a strong national defense effort.

PART IV. CURRENT MANAGEMENT RESPONSIBILITIES

SEC. 401. *Defense production.* Under the authority of, and in accordance with the provisions of, Executive Order No. 10480 of August 14, 1953, the Director shall perform the functions thereby delegated or otherwise assigned to him.

SEC. 402. *Strategic and critical materials stockpiling.* (a) There are hereby delegated to the Director all those functions under the Strategic and Critical Materials Stockpiling Act (50 U.S.C 98 et seq.), under Section 4(h) of the Commodity Credit Corporation Charter Act (15 U.S.C. 714b(h)), and under Section 204(f) of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 485(f)), which were transferred to the President by the provisions of Reorganization Plan No. 1 of 1958 (72 Stat. 1799).

(b) The Director, under the provisions of the said Strategic and Critical Materials Stockpiling Act, shall determine which materials are strategic and critical and the quality and quantity of such materials which shall be stockpiled, and shall direct the General Services Administration in the purchase, storage, refinement, rotation, and disposal of materials.

(c) The Director is hereby designated as an agency under and for the purposes of the provisions of clause (b) of Section 5 of the Strategic and Critical Materials Stockpiling Act (50 U.S.C. 98d (clause (b)); and, accordingly, in the event of enemy attack upon the United States the Director is authorized and directed to order the release by the Administrator of General Services of such materials from stockpiles established under the said Act, in such quantities, for such uses, and on such terms and conditions, as the Director determines to be necessary in the interests of the national defense.

SEC. 403. *Supplemental stockpile.* The Director, under authority of the provisions of Section 4(d)(2) of Executive Order No. 10900 of January 6, 1961, shall determine from time to time the materials to be contracted for or purchased for a supplemental stockpile with foreign currencies pursuant to the Agricultural Trade Development and Assistance Act of 1954 (7 U.S.C. 1704(b)).

SEC. 404. *Imports threatening the national security.* (a) The Director, under the authority of, and in accordance with the provisions of, Section 2 of the Act of July 1, 1954 (68 Stat. 360; 19 U.S.C. 1352a), shall make appropriate investigations of the effects of imports on the national security and shall advise the President of any case in which the Director is of the opinion that an article is being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security.

(b) The Director, under authority of, and in accordance with the provisions of, Section 3(d) of Executive Order No. 10582 of December 17, 1954, shall furnish advice to procuring agencies with respect to the rejection of bids or offers to furnish materials of foreign origin on the ground that such rejection is necessary to protect essential national security interests.

SEC. 405. *Disaster relief.* The Director, under authority of, and in accordance with the provisions of, Executive Order No. 10427 of January 16, 1953, and Executive Order No. 10737 of October 29, 1957, shall exercise authority under the Act of September 30, 1950, entitled "An Act to authorize Federal assistance to States and local governments in major disasters, and for other purposes" (42 U.S.C. 1855 et seq.).

SEC. 406. *Telecommunications.* Under authority of, and in accordance with the provisions of, Executive Order No. 10995 of February 16, 1962, the Director shall perform functions in respect of telecommunications.

PART V. GENERAL PROVISIONS

SEC. 501. *Rules and regulations.* In carrying out his responsibilities under this this order, the Director is authorized to issue such rules and regulations, and directives, consonant with law and Executive order, as he deems necessary and appropriate to the functions involved.

SEC. 502. *Boards and committee.* The Director is hereby authorized to establish in headquarters and in the field such boards and committees as he deems necessary to advise him in the conduct of activities outlined herein.

SEC. 503. *Certain additional authorities.* (a) There are hereby delegated to the Director all those now-existing functions under the National Security Act of 1947 which were transferred to the President by the provisions of Reorganization Plan No. 1 of 1958 (72 Stat. 1799).

(b) In performing the functions under the Federal Civil Defense Act of 1950 assigned to him, and subject to applicable provisions of Executive orders, the Director is authorized to exercise the authority conferred by Title IV of that Act. The foregoing provision of this subsection shall not be deemed to derogate from any authority under Title IV heretofore available to the Secretary of Defense.

SEC. 504. *Reports.* The Director is authorized to require from Federal agencies such statistical data and progress reports at such intervals as he deems necessary to discharge his responsibilities under this order.

SEC. 505. *Prior action.* All orders, regulations, ruling, certificates, directives, and other actions relating to any function affected by this order shall remain in effect except as they are inconsistent herewith or are hereafter amended or revoked under proper authority, and nothing in this order shall affect the validity or force of anything done under previous delegations or other assignments of the functions affected by this order.

SEC. 506. *Executive Order 11030.* Nothing in this order or in any order amended by this order shall derogate from the provisions of Executive Order No. 11030 of June 19, 1962.

SEC. 507. *References to orders and Acts.* Except as may for any reason be inappropriate, references in this order to any other Executive order or to any Act, and references in this order or in any other Executive order to this order, shall be deemed to include references thereto, respectively, as amended from time to time.

PART VI. PRIOR EXECUTIVE ORDERS AND PROCLAMATIONS

SECTION 601. *General amendments.* Each reference to the Office of Civil and Defense Mobilization or to the Director of the Office of Civil and Defense Mobilization in the following is hereby amended to refer to the Office of Emergency Planning and the Director of the Office of Emergency Planning, respectively:

(1) Executive Order No. 10296 of October 2, 1951
(2) Executive Order No. 10312 of December 10, 1951
(3) Executive Order No. 10346 of April 17, 1952 (penultimate sentence of Section 2, only)
(4) Executive Order No. 10421 of December 31, 1952
(5) Executive Order No. 10427 of January 16, 1953
(6) Executive Order No. 10480 of August 14, 1953
(7) Executive Order No. 10494 of October 14, 1953
(8) Executive Order No. 10601 of March 21, 1955
(9) Executive Order No. 10634 of August 25, 1955
(10) Executive Order No. 10660 of February 15, 1956
(11) Executive Order No. 10705 of April 17, 1957
(12) Executive Order No. 10737 of October 29, 1957
(13) Executive Order No. 10900 of January 5, 1961
(14) Executive Order No. 10952 of July 20, 1961
(15) Executive Order No. 10958 of August 14, 1961
(16) Proclamation No. 3279 of March 10, 1959

SEC. 602. *Executive Order 10242.* Executive Order No. 10242 of May 8, 1951, is hereby amended:

(1) Bl deleting from subsection 101(a) thereof the following: "upon the Director of the Office of Civil and Defense Mobilization, hereinafter referred to as the Director,".

(2) By deleting from Sections 101(c), 101(d), 102, 103, 104, 106 (preamble), 201, and 301 the following: "upon the Director of the Office of Civil and Defense Mobilization".

(3) By substituting for the words "the Director of the Office of Civil and Defense Mobilization", at each place where they occur in the order and are not deleted or otherwise amended by this order, the following: "the delegate of the President".

(4) By substituting for the words "shall not be delegated" in subsection 101(d) the following: "shall not be redelegated by the delegate of the President".

(5) By adding after Section 106 new Sections 107, 108, and 109, reading as follows:

"SEC. 107. The words 'the delegate of the President' as used in this order:

"(1) In respect of functions under the Act delegated or otherwise assigned to the Secretary of Defense, mean the Secretary of Defense.

"(2) In respect of functions delegated or otherwise assigned to the Director of the Office of Emergency Planning, mean the Director of the Office of Emergency Planning.

"SEC. 108. The authority conferred by Section 401(a) of the Act to employ part-time or temporary advisory personnel deemed necessary in carrying out the provisions of the Act, and delegated by the provisions of Section 101(a) of this order, shall be available as follows: (1) To the Secretary of Defense in respect of not to exceed eighty personnel (including not to exceed twenty subjects of the United Kingdom and Canada), and (2) to the Director of the Office of Emergency Planning in respect of not to exceed twenty personnel (including not to exceed five subjects of the United Kingdom and Canada).

"SEC. 109. The relevant provisions of this Part shall be subject to the provisions of the Memorandum of the President, pertaining to conflicts of interest, dated February 9, 1962 (27 F.R. 1341 ff.)."

(6) By amending Section 401 to read as follows:

"SEC. 401. The approval of the President is hereby given for the employment of retired personnel of the armed services, pursuant to the provisions of subsection 401(a) of the Act as follows: (1) By the Secretary of Defense, not to exceed twenty persons, and (2) by the Director of the Office of Emergency Planning, not to exceed five persons."

SEC. 603. *Other orders.*—(a) Executive Order No. 10260 of June 27, 1951, is hereby amended by striking from Section 1 thereof the following: "Office of Civil and Defense Mobilization, the".

(b) Executive Order No. 10346 of April 17, 1952, is hereby amended by substituting for the reference therein to the Director of the Office of Civil and Defense Mobilization, and for each reference therein to the Office of Civil and Defense Mobilization except that in the penultimate sentence of Section 2, the following: "the Office of Emergency Planning or the Department of Defense or both, as may be determined under the provisions of appropriate Executive orders".

(c) Executive Order No. 10421 of December 31, 1952, is hereby amended by inserting before the period at the end of Section 3(b)(9) thereof a comma and the following: "including recommendations as to actions necessary to strengthen the program provided for in this order".

(d) Executive Order No. 10529 of April 22, 1954, is hereby amended by substituting for each reference therein to the Director of the Office of Civil and Defense Mobilization the following: "the Director of the Office of Emergency Planning or the Secretary of Defense or both as may be determined under appropriate Executive orders".

(e) Executive Order No. 10582 of December 17, 1954, is hereby amended by striking from Section 3(d) thereof the words "from any officer of the Government designated by the President to furnish such advice" and by inserting in lieu of the stricken words the following: "from the Director of the Office of Emergency Planning. In providing this advice the Director shall be governed by the principle that exceptions under this section shall be made only upon a clear showing that the payment of a greater differential than the procedures of this section generally prescribe is justified by consideration of national security".

(f) Executive Order No. 10789 of November 14, 1958, is hereby amended by striking from Section 21 thereof the words "Office of Civil and Defense Mobilization".

SEC. 604. *Superseded orders.*—To the extent that the following have not heretofore been made or become inapplicable, they are hereby superseded and revoked.

(1) Executive Order No. 9981 of July 26, 1948
(2) Executive Order No. 10219 of February 28, 1951
(3) Executive Order No. 10269 of July 6, 1951
(4) Executive Order No. 10438 of March 13, 1953
(5) Executive Order No. 10461 of June 17, 1953
(6) Executive Order No. 10524 of March 31, 1954
(7) Executive Order No. 10539 of June 22, 1954 (without prejudice to final liquidation of any affairs thereunder)
(8) Executive Order No. 10638 of October 10, 1955
(9) Executive Order No. 10773 of July 1, 1958
(10) Executive Order No. 10782 of September 6, 1958
(11) Executive Order No. 10902 of January 9, 1961

JOHN F. KENNEDY.

THE WHITE HOUSE, *September 27, 1962.*

Mr. EVINS. Tell us about 1100.8.

Mr. RICE. I might answer that.

That simply formalizes the reorganization instituted under Governor Bryant and sets forth the organizational structure.

Mr. EVINS. You had an internal reorganization under Governor Bryant and this order sort of formalized it.

Mr. RICE. It is an internal OEP order.

Mr. EVINS. This justification language says:

The Office of Emergency Planning assists the President in directing the national nonmilitary defense effort, whose primary aim is to create and maintain a preparedness to meet all contingencies from limited war to all-out nuclear attack on the United States. The total security of the United States requires a military and nonmilitary preparedness which complement and supplement each other. To successfully wage war and respond or recover from attack require a predeveloped capability to make immediate and maximum use of remaining resources and to mobilize the entire economy to meet whatever national goals are determined by the President and the Congress. True nonmilitary preparedness also assures the continuation of civil control of government at all levels under the most extreme conditions.

This is the concept in which we believe.

Then you state that considerable progress was made in the analytical capacity to provide a more scientific basis for policy decisions. How are you doing this? Good commonsense is what we need in this office.

CONTINGENCY ANALYSIS

Mr. DANIEL. Through our computer system we now have a capability that we have not had in the past.

Do you want to say anything more on that, Mr. Truppner?

Mr. TRUPPNER. I think I might add to that simply that we have succeeded in recruiting a number of rather distinguished scientists to join us and provide us with their help. And I hope they have commonsense too.

Mr. EVINS. We are not discounting scientists, but in case of emergency we have not got the time for scientific research.

Mr. TRUPPNER. No, sir; this is on the planning side.

Mr. DANIEL. That is where we are doing it now.

Mr. EVINS. OEP's overall system for nonmilitary defense includes development of alternative approaches to preparedness problems presented for top-level decisions. Emergency preparedness involves Federal, State, and local government, as well as the private sector of our economy and the individual citizen.

The patriotic individual citizen will respond to good leadership.

Do you deal with industry much, Governor?

Mr. DANIEL. Yes, through the executive reservists and certain other fields where we prepare for these contingencies we hope will never occur. We do deal directly with industry in those programs.

Mr. EVINS. You state here that in response to the current military and economic situation, OEP has increased the emphasis on preparedness for contingencies short of nuclear war. What about the latter?

You testified earlier that you have given some of your attention to the case of nuclear war.

Mr. DANIEL. Yes, we have.

Mr. EVINS. So you are already making studies and plans in the event of either?

Mr. DANIEL. Both.

As you know, the thinking now is that the former is more likely to occur than the latter. We base all of this on military judgments. We hope they are right.

Mr. EVINS. The military has been carrying us around the corner for some time now.

Mr. JONAS. May I pursue that one step further?

Mr. EVINS. Mr. Jonas.

Mr. JONAS. The military does not tell you we are in danger or there is any real likelihood of any conventional attack on the United States, on the continental United States. Are they not talking about the danger of conventional wars around the world being greater than nuclear wars? But there is not any real probability that we are going to be subject to a conventional attack in the United States?

Mr. DANIEL. No, sir; I have not heard of any.

You know what I am referring to, I am sure. The fact that most of the military people feel that with a nuclear capability in many countries, if we get into a bigger war it is more likely to be a conventional war than a nuclear war. Therefore the emphasis is on the contingency of conventional war.

As I told you, we do find, as far as our objectives in stockpiling and some other things, that the conventional war requires more than a nuclear war.

Mr. JONAS. Sure, because you have to ship a lot of goods out of the country, but your plans would be quite different about survival from a nuclear attack and survival from a conventional attack on the continental United States.

Mr. DANIEL. Plans and needs would be quite different. It was hard for me to figure out at first, but I understand it now because so much of this country would be destroyed if we actually had a nuclear attack.

APPROPRIATION REQUEST

Mr. EVINS. Looking at the appropriation item on page 4, you had $4.7 million in 1967, $4.7 million in 1968, and you are asking for $5,043,000 in 1969, which is an increase of $343,000 over last year.

How much of the Pay Act did you absorb this year?

Mr. RICE. We have absorbed $133,000 of it for fiscal year 1968.

Mr. EVINS. You have absorbed the Pay Act increase for 1968.

Mr. RICE. Yes, sir.

Mr. EVINS. But you are asking for a net of $210,000 for 1969; is that correct?

Mr. RICE. For increased pay purposes and four new positions.

Mr. READ. The increase is spelled out, Mr. Chairman, on page 9.

Mr. EVINS. You are coming up with a net increase of $210,000; is that correct?

Mr. READ. Yes, sir.

Mr. EVINS. Your increase is $204,000 for increased employment, pay raise annualization, and four new positions; $15,000 for increased personnel benefits, $1,000 for increased travel.

Then you make reductions of $11,653 for contract research and $8,000 reduction for fewer security clearances.

Telecommunications is $1.6 million for fiscal year 1967, $1,945,000 for 1968, which is an increase over the previous year, and for 1969 you have increased it to $1,986,000.

Then you have civil defense and defense mobilization functions of Federal agencies, $4 million in 1967, down to $3,135,000 for 1969.

Total appropriations for the Office of Emergency Planning is $10,164,000, plus the $15 million for disaster relief.

DISASTER RELIEF ALLOCATIONS

Mr. JONAS. On page 4, you show funds appropriated to the President for disaster relief of $24,550,000 in 1967, $20 million in 1968, and you are asking for $15 million in 1969, but on page 8 of your statement you said in 1967 you allocated $21,755,000, and so far in 1968 you have allocated $32,026,000. That adds up to $53,781,000.

Where did you get the money?

Mr. RICE. The figures in page 4 are what was actually appropriated.

Mr. JONAS. You had carryover funds?

Mr. RICE. We had carryover funds from previous years. For example, 1966 was a large year.

JUSTIFICATION SUMMARY

Mr. EVINS. We will place in the record page 4.

(The page follows:)

EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF EMERGENCY PLANNING

APPROPRIATION SUMMARY

Appropriation	1967 actual	1968 actual	1969 estimate
OEP: Salaries and expenses	$4,700,000	[1] $4,700,000	$5,043,000
Telecommunications: Salaries and expenses	1,600,000	1,945,000	1,986,000
Civil defense and defense mobilization functions of Federal agencies	4,000,000	[2] 3,000,000	3,135,000
Total appropriated to OEP	10,300,000	9,645,000	10,164,000
Funds appropriated to the President, disaster relief	24,550,000	20,000,000	15,000,000

[1] This amount does not include $133,000 due to increased pay costs of Public Law 90-206. Congressional authority is being sought to transfer $15,000 from "Salaries and expenses, telecommunications" and $118,000 from "State and local preparedness."

[2] This amount does not include $102,000 due to increased pay costs of Public Law 90-206 for which a supplemental appropriation is anticipated.

Salaries and Expenses

Mr. Evins. Your chart on page 10 is a breakdown for several years. It shows an increase of four jobs, from 266 to 270, and an increase of $219,000 for personnel. Place pages 8 through 11 in the record.

(The pages follow:)

PROGRAM AND FINANCING (IN THOUSANDS OF DOLLARS)

		1967 actual	1968 estimated	1969 estimated
	Program by activities:			
	1. Resource evaluation and readiness	1,996	1,993	2,093

[1] See the following table:

Appropriated to OCDM	$25,000,000
Transferred to other agencies	17,112,000
Balance remaining in OEP	7,888,000

[2] Totals do not add due to carryover of no-year funds.

[3] Includes $86,000 transferred to "Civil Defense and Defense Mobilization Functions of Federal Agencies" as authorized by Public Law 89-426, May 13, 1966.

[4] This amount does not include $133,000 due to increased pay costs of Public Law 90-206. (See appropriation summary.)

Relation of fiscal year 1968 program to fiscal year 1969 program

APPROPRIATION BASIS

Fiscal year 1968 appropriation	$4,700,000
Fiscal year 1969 request	5,043,000
Fiscal year 1969 increase	+343,000
Actual cost of pay increase in fiscal year 1968	133,000
Net change	+210,000

Fiscal year 1968 cost of pay raise will be absorbed pending transfer authority of available funds from other accounts.

OBLIGATION BASIS

Fiscal year 1968 obligations	4,842,653
Fiscal year 1969 obligations	5,043,000
Fiscal year 1969 increase	200,347

Details of increase:

Increased man-years of employment, annualization of 1968 pay raise, and 4 new positions	+204,000
Increased personnel benefits	+15,000
Increased travel	+1,000
End of contract research program	−11,653
Fewer security clearances	−8,000

FINANCIAL AND PERSONNEL SUMMARY

National Resource Analysis Center

Mr. Evins. Let's just take a brief look at your various programs. Your National Resources Analysis Center provides executive direction and general management in your resources preparedness. You go up from 95 to 99 jobs. You do forecasting. What can you forecast?

Mr. Daniel. Will you answer that Mr. Truppner?

Mr. Truppner. Rather than use the word "forecast," I would prefer to say——

Mr. Evins. That is what you have in your budget. You say you do forecasting.

Mr. Truppner. Yes, sir. I was going to explain. We project various contingencies and develop the governmental responses to deal with the problems that would arise from a projected contingency. Now, in order to lay the basis for such a contingency, one has to forecast such

things as the size of the economy, the gross national product, and the like. So this really provides the basis for a contingency planning which is our major business.

IMPORT INVESTIGATIONS

Mr. EVINS. You maintain a national resources evaluation capability for monitoring the status of our resources. You conduct investigations and continued surveillance of imports that threaten to impair the national security. What have you done here?

Mr. DANIEL. When we are called on to conduct a hearing as to whether the national security is imperiled by reason of any specific import, that duty and responsibility falls on us, to conduct the hearing, but simply from the standpoint of the national security aspect of it.

Mr. JONAS. When are you going to make a decision on the textile case? This case has been pending for several years. It seeks to have a determination made as to the importance of the textile industry to the national security. But you won't act on it.

Mr. DANIEL. If you will go on to the next question, I will answer that in just a few minutes. I want to review my notes because I did look into it, figuring you might bring it up. But I do want to give you the accurate information.

Mr. JONAS. Good.

Mr. MARSH. Will the gentleman yield before you leave that question?

Mr. JONAS. Yes.

IMPACT OF KENNEDY ROUND

Mr. MARSH. What is going to be the general impact of the recent Kennedy round at Geneva on not only textiles but chemicals, shoes, fish, and other products that are vital to the national economy? Representatives of these industries indicate that they are going to be adversely affected, and other Federal agencies involved in these cases indicate that also, for example the Bureau of Commercial Fisheries.

Mr. DANIEL. That is an area in which I am not really able to testify. In other words, I am not able to testify on the effect of these on the economy.

Mr. MARSH. By that I mean from the standpoint of maintaining our national capability to produce these products for our own national consumption. For example, the shoe industry indicates that they may lose a substantial capability in the production of shoes. The fish industry indicates that they may lose a substantial capability in the production of fish, which relate to the food and fiber and national sustenance of our own citizens.

Mr. DANIEL. Mr. Truppner, do you have an answer to that question?

Mr. TRUPPNER. Yes, sir.

Mr. MARSH. Is this Mr. Jonas' question about textiles?

Mr. TRUPPNER. No, sir. This is in response to your question.

Mr. MARSH. But textiles fit in?

Mr. TRUPPNER. Yes, textiles fit in here, in general.

Under section 232 of the Trade Expansion Act, the Director of the OEP is responsible for concerning himself with the imports of particular materials or products which affect the national security by adversely affecting the domestic industry that produces those materials or products.

I might mention in connection with the textile case that events rather overtook us in that case because while we did conduct the investigation, the administration took so many actions that were responsive to the request, in the first place, that in effect it would have required, I believe, a resubmittal of the case and a complete updating. In any case, that whole investigation is totally outdated now and the administration has taken a great many of the actions that were requested to alleviate the problems that were described. Consequently, I would say events simply overtook us.

TEXTILE CASE

Mr. JONAS. Isn't it a fact that the case filed before you sought to have a determination made that the textile industry is an essential industry to the national security of the country?

Mr. TRUPPNER. Yes, sir.

Mr. JONAS. Why don't you make a decision on that?

Mr. TRUPPNER. I think the question is whether or not the imports so adversely affected an important industry that the result of the imports would have impaired our national security.

Mr. JONAS. That is right. That is why they want you to make a determination.

Mr. TRUPPNER. My point was that a number of the actions which the industry requested the administration to make were actually taken.

Mr. JONAS. The industry contends that the situation is deteriorating and has deteriorated constantly.

Mr. TRUPPNER. What I am trying to say, sir, is that I think this would require a reopening, a reexamination of the case rather than a simple updating of an out-of-date analysis which simply does not have very much application to 1968.

Mr. DANIEL. Mr. Congressman, let me say that I asked this same question. Being relatively new on the job, I know nothing about it except what has been reported to me. Having reviewed my notes, I want to add something to the answer Mr. Truppner has given.

The complaint, or the request for investigation was filed in 1961. The evidence was put on by the industry and other interested parties, and in 1962 President Kennedy tried to bring about some multilateral agreements for limiting the imports of cotton textiles. Many of the things complained of were solved by these agreements that were worked out. At least, much of the evidence and many of the facts complained of were completely changed.

According to the records of our office, the industry did not update its case after the November 1962 actions, and has never done so since that time. The evidence that was taken in 1961 is so far out of date that it would be impossible to base a decision on it as to whether or not the national security is adversely affected as of today.

Mr. JONAS. I can certainly understand that, but has the industry been informed or invited to update this material?

Mr. DANIEL. They have been informed, so I understand, because inquiries have been made.

Mr. JONAS. I understood that no answer had been made by OEP.

Mr. DANIEL. I doubt that, though I have been there only 5 months.

Mr. JONAS. I asked your predecessor that same question last year, and he smiled and said that there are a lot of ramifications. I took it to mean that one of them came from the State Department. A lot of things that were entering into this picture were preventing a determination from being made. I am glad to hear you say, if I understand you correctly, that the office will be glad to consider this matter if the industry wants to update the case, file a petition for a new hearing.

Mr. DANIEL. Yes, sir; mainly the updated evidence.

Mr. WYMAN. Would you yield?

Mr. JONAS. Yes.

FOREIGN IMPORT PROBLEMS

Mr. WYMAN. Governor, the criteria that face industry and the questions that they have to go into in preparing a new position in relation to 1968, would involve different factors, would it not, than for Congress on the economic side of quota restrictions?

Mr. DANIEL. Yes, that is correct. Some of the same questions would have to be answered in both cases because the economic effect does, of course, enter into what might happen to the national security. In other words, if it is going to put mills out of business, if that is the economic effect, it would be a threat to the national security. So some of the same evidence would have to be made in both instances.

Mr. WYMAN. That is what bothers me. The other day a lot of Members attended a meeting in which the textile industry pointed out the development of the situation in which just that kind of a picture is presented, not only are they going to be cut back in terms of what they can sell here but they are receiving assaults from foreign imports. Then I go over and see the same thing from the shoe industry, where they have imported shoes selling here that are made overseas for 40 cents an hour, which they can sell here at $8, and which in this country we cannot even make for $8, we cannot even come close to making them for $8. Now, it seems to me, it would be helpful, and if you do not have it now you could supply it for the record, I would be grateful to know what kind of a case in terms of points must the industry prove to you to get you to take some action here.

TRADE ACT REGULATIONS

Mr. DANIEL. We will try to submit something for the record that will be helpful on that. Mr. Merker, will you do this?

Mr. MERKER. Yes.

Mr. MARSH. Will the gentleman yield?

Mr. WYMAN. Yes.

Mr. MARSH. It seems to me at this point that inasmuch as this is the Office of Emergency Planning the potential loss of a substantial American industry that produces food or fiber or materials vital to the na-

tional survival is an emergency for which the Office of Emergency Planning should be planning. You would agree to this, would you not?

Mr. DANIEL. Yes. We do have certain jurisdiction there. But really as far as our office coming into the picture, there are other agencies that would have the jurisdiction unless it is an application, a complaint that the national security is being adversely affected, and a request that our office conduct a hearing on that aspect of it. Otherwise, you would have to go to the Tariff Commission or someone else.

Mr. MARSH. What power do you have to act?

Mr. DANIEL. We just make a finding.

Mr. MARSH. So you cannot enforce your finding, anyway?

Mr. DANIEL. Not at all. We just make the finding and make a recommendation to the President.

Mr. JONAS. But Mr. Marsh's point is that shoes and uniforms are only slightly less important to an army than guns.

Mr. DANIEL. Yes, sir.

Mr. JONAS. I thought you already had all this information as to our needs in the event of an emergency and whether we can supply them in this country or not. Also, what it would do to the national security if you closed down the entire domestic shoe industry or the textile industry or they are driven out of business.

Mr. DANIEL. We have information on which we could come to a conclusion on that under this procedure that has been set up by Congress itself, gentlemen. Let me say as a Member of the Senate I voted the way you are talking here this morning and made some fights in that direction.

Mr. JONAS. Off the record.

(Discussion off the record.)

Mr. DANIEL. Our powers for making a determination under this national security provision are set forth by the Congress. Therefore, to make that determination and make a recommendation we have to follow what you set out in the statute. As far as making other judgments, as to what our needs are going to be or as to how many plants might be knocked out if we had a nuclear attack, those kind of things, we do keep that information gathered and updated. We get it mostly from other agencies, however. Mr. Truppner, is that a fair statement?

Mr. TRUPPNER. Yes, sir; it is a correct statement.

Mr. WYMAN. Governor, don't you see anything in the nature of an emergency in the drafts which segments of these industries present to Congress showing an absolute flood of foreign imports, putting people out of work in this country and creating a situation where we cannot sell our products—some of them, not all of them—in competition with foreign products? Isn't that an emergency? Don't these same plants have to make uniforms, as the chairman and Mr. Jonas have said, and shoes? Don't we have to or shouldn't we, as a matter of emergency planning, take such economic steps as are necessary to keep a minimum number of our industries alive even if they have to have an indirect subsidiary by some kind of restriction on foreign imports?

Mr. DANIEL. Yes. I think it could become of emergency proportions, but there are a lot of emergencies that our office does not make plans for. To get our office into this act, the procedure as set forth by the Congress would be for an application to be filed under Public Law 87-794 alleging that the national security was endangered by these specific imports. Then this office would make its finding and recommendation.

Mr. WYMAN. That is why I asked you if the gentleman to whom you turned could sort of outline for the record what points they would have to establish. Maybe they cannot make this kind of a case so as to invoke your functions. But it would be helpful to know what they have to prove in order to get you into the act.

Mr. DANIEL. Yes. We will supply that. Mr. Merker will give you something on it right now.

Mr. MERKER. We have regulations which set forth the elements that ought to go into a petition. We do not mean that they have to be controlling but they are a guide. If these elements are followed, it would be in the nature of a prima facie case, enough for us to look into it and make an investigation. We will place a copy of those regulations into the record.

Mr. WYMAN. Thank you.

REGULATION UNDER SECTION 232 OF TRADE EXPANSION ACT OF 1962

Mr. DANIEL. I might say that Congress has made it clear that in the administration of this section of the act that I have referred to, that the Director and the President shall further recognize the close relation of the economic welfare of the Nation to our national security and shall take into consideration the impact of foreign competition on the economic welfare of individual domestic industries. We will supply you with the regulations, and I think they will answer your question.

Mr. WYMAN. Thank you.

(The information follows:)

TITLE 32A—NATIONAL DEFENSE, APPENDIX

CHAPTER I—OFFICE OF EMERGENCY PLANNING

OEP Reg. 4—Regulations under section 232 of the Trade Expansion Act of 1962

Sec.

1. Authority.
2. Definitions.
3. General.
4. Criteria for determining effects of imports on national security.
5. Applications for investigation.
6. Confidential information.
7. Conduct of investigation.
8. Emergency action.
9. Report of Director.

Authority: Sections 1-9 issued under section 232, Public Law 87-794.

Section 1. Authority

These regulations are promulgated pursuant to section 232 of the Trade Expansion Act of 1962, Public Law 87-794, October 11, 1962.

Sec. 2. Definitions

As used herein "Director" means the Director of the Office of Emergency Planning.

Sec. 3. General

Upon request of the head of any Government department or agency, upon application of an interested party, or upon his own motion, the Director shall set in motion an immediate investigation to determine the effects on the national security of imports of any article.

Sec. 4. Criteria for determining effects of imports on national security

(a) In determining the effect on the national security of imports of the article which is the subject of the investigation, the Director is required to take into consideration the following:

(1) Domestic production needed for projected national defense requirements including restoration and rehabilitation.

(2) The capacity of domestic industries to meet such projected requirements, including existing and anticipated availabilities of—

(i) Human resources

(ii) Products

(iii) Raw materials

(iv) Production equipment and facilities

(v) Other supplies and services essential to the national defense.

(3) The requirement of growth of such industries and such supplies and services including the investment, exploration, and development necessary to assure capacity to meet projected defense requirements.

(4) The effect which the quantities, availabilities, character, and uses of imported goods have or will have on such industries and the capacity of the United States to meet national security requirements.

(5) The economic welfare of the Nation as it is related to our national security, including the impact of foreign competition on the economic welfare of individual domestic industries. In determining whether such impact may impair the national security, any substantial unemployment, decrease in revenues of Government, loss of skills or investment, or other serious effects shall be considered.

(b) The Director shall also consider other relevant factors in determining whether the national security is affected by imports of the article.

Sec. 5. Applications for investigation

(a) Applications are required to be in writing. Twenty-five copies shall be filed by mail with the Director, Office of Emergency Planning, Washington, D.C.

(b) Applications shall describe how the quantities or circumstances of imports of the particular article affect the national security and shall contain the following information:

(1) Identification of the person, partnership, association, corporation, or other entity on whose behalf the application is filed.

(2) A precise description of the article.

(3) Description of the applicant and the domestic industry concerned, including pertinent information regarding companies and their plants, locations, capacity and current output of the domestic industry concerned with the article in question.

(4) Pertinent statistics showing the quantities and values of both imports and production in the United States.

(5) Nature, sources, and degree of the competition created by imports of the article in question.

(6) The effect, if any, of imports of the article in question upon the restoration of domestic production capacity in an emergency.

(7) Employment and special skills involved in the domestic production of the article.

(8) Extent to which investment and specialized productive capacity is or will be adversely affected.

(9) Revenues of Federal, State, or local governments which are or may be affected by the volume or circumstances of imports of the article.

(10) Defense or defense supporting uses of the article, including data on defense contracts or subcontracts, both past and current.

(c) Statistical material presented should be on a calendar year basis for sufficient periods of time to indicate trends and afford the greatest possible assistance to the Director. Monthly or quarterly data for the latest complete years should be included as well as any other breakdowns which may be pertinent to show seasonal or short-term factors.

Sec. 6. Confidential information

Information which would disclose confidential business data or operations within the meaning of section 1905 of title 18 of the United States Code will be accorded confidential treatment by the Director if submitted in confidence. All information submitted in confidence must be on separate pages marked "Business Confidential."

Sec. 7. Conduct of investigation

(a) The investigation by the Director, or by such official or agency as he may designate, shall be such as to enable the Director to arrive at a fully informed opinion as to the effect on the national security of imports of the article in question.

(b) Upon undertaking an investigation the Director, unless it would be contrary to the interests of national defense, shall issue a public notice thereof which shall be published in the Federal Register. Any interested party may submit to the Director 25 copies of any comment, opinion, or data relative to the investigation within 45 days after such public notice. Rebuttal to material so submitted may be filed with the Director within 75 days after such public notice and all data and comment from interested parties shall be a matter of record by 90 days after the giving of such public notice or 15 days after the close of any hearing conducted under paragraph (f) of this section, whichever is later.

(c) All applications filed and all comments, opinions, and data submitted pursuant to paragraph (*b*) of this section, except information submitted in confidence as provided in section 6, will be available for inspection at the Office of Emergency Planning in Washington, D.C., where they may be read and copied by interested parties, and the Director will maintain a roster of persons who have submitted material.

(d) The Director or his designee may also request further data from other sources through the use of questionnaires, correspondence, or other means.

(e) The Director or his designee shall, in the course of the investigation, seek information or advice from appropriate Government departments and agencies.

(f) In addition, the Director, or his designee, may, when he deems it appropriate, hold public hearings to elicit further information. If a hearing is held—

(1) The time and place thereof will be published in the Federal Register.

(2) It will be conducted by the Director or his designee, and the full record will be considered by the Director in arriving at his determination.

(3) Interested parties may appear, either in person or by representation, and produce oral or written evidence relevant and material to the subject matter of the investigation.

(4) After a witness has testified the Director or his designee may question the witness. Questions submitted to the Director or his designee in writing by any interested party may, at the discretion of the Director or his designee, be posed to the witness for reply for the purpose of assisting the Director in obtaining the material facts with respect to the subject matter of the investigation.

(5) The hearing will be stenographically reported. The Director will not cause transcripts of the record of the hearing to be distributed to the interested parties, but a transcript may be inspected at the Office of the Director in Washington, D.C., or purchased from the reporter.

Sec. 8. Emergency action

In emergency situations or when in his judgment national security interests require it, the Director may vary or dispense with any of the procedures set forth above and may formulate his views without following such procedures.

Sec. 9. Report of Director

A report will be made and published upon the disposition of each request, application, or motion under section 3 hereof. Notice of publication of a report shall be given in the Federal Register. Copies of the report will be available at the Office of Emergency Planning.

These regulations shall be effective upon publication in the Federal Register and shall supersede OCDM Regulation 4 (24 F.R. 364) and amendment 1 thereof (24 F.R. 601).

Dated December 20, 1962.

EDWARD A. MCDERMOTT,
Director, Office of Emergency Planning.

[F.R. Doc. 63-52; Filed, Jan. 3, 1963; 8:46 a.m.]

NRAC JUSTIFICATION SUMMARY

Mr. EVINS. Gentlemen, let's place in the record the statement on pages 13 and 14 which is the text of the function of the National Resource Analysis Center.

(The pages follow:)

OFFICE OF EMERGENCY PLANNING

SALARIES AND EXPENSES—NATIONAL RESOURCE ANALYSIS CENTER

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Positions	93	95	99

The National Resource Analysis Center (NRAC) was officially established by OEP order 1100.8, March 15, 1967, and its present organizational structure formalized by order 1100.8A on August 1, 1967. NRAC provides executive direction and general management in the development and implementation of the agency's overall program of resources preparedness. Specifically:

It provides the analytical and statistical basis for OEP's policy, planning, and program activities in support of the agency's national security responsibilities as set forth in Executive Order 11051; and develops and applies various mathematical models, simulation techniques, systems analysis, and other scientific methods for analyzing, forecasting, and testing alternative solutions to a wide range of resource problems pertaining to national security.

It develops contingency policies, plans, orders, and standby organizations required to mobilize and allocate resources, and to utilize fiscal and monetary measures to meet national security objectives; and, provides guidance for and coordination of resources mobilization planning among the Federal departments and agencies pursuant to statutes, Executive orders, and other authorities.

It conducts studies of materials resources to serve as the basis for developing policies designed to achieve national security objectives; identifies and analyzes present and future resource deficiencies and strengths; maintains, with the participation and support of the Federal departments and agencies, a national resource evaluation capability for predicting and monitoring the status of resources under all degrees of emergency; and, conducts studies to anticipate the impact of current and proposed U.S. national security programs on the economy and the mobilization base.

It conducts investigations and continuous surveillance of imports that threaten to impair the national security; performs secretariat services for OEP's Program Advisory Committee, the Joint United States/Canadian Emergency Resources Planning Committee, and others as required; provides resource analysis and mobilization planning support for the agency's participation in NATO and other international and foreign organizations; provides staff support to the Director as a member of the National Security Council; provides intelligence information for the OEP Director and the executive staff and staff.

The center consists of the Office of the Director, NRAC, and five divisions.

RESEARCH

Mr. EVINS. You point out your objectives for 1969: To develop an internal OEP research capability to provide the Director of OEP, and other elements of the Executive Office as appropriate, with alter-

native courses of action in emergency planning, and other management responsibilities; provide direction to the development of emergency plans; coordinate and direct the research activities of other Federal agencies; administer, direct, coordinate, and evaluate, as appropriate, the contract research programs of OEP. How did this operate prior to this reorganization? Do you do your own research and direct other agencies in research also?

Mr. DANIEL. Mr. Truppner.

Mr. TRUPPNER. We do our own research. In specific answer to your question, sir, there was an Office of Analysis and Research that handled this function prior to the reorganization.

Mr. EVINS. Yes, you reorganized and you are still doing research and directing others in their research.

Mr. TRUPPNER. That function was incorporated in NRAC.

Mr. EVINS. What are you doing today?

Mr. TRUPPNER. As you know, we are not asking for any new funding for contract research as of today. Therefore, we are working with other agencies who have the direct appropriation for contract research. An example is the Office of Civil Defense.

Mr. EVINS. Give us an example.

Mr. TRUPPNER. In the case of the Office of Civil Defense we are proposing to contribute approximately $30,000 of our funding to the Office of Civil Defense research. As of this year they have approximately $7 million available for this purpose.

Mr. EVINS. The Office of Civil Defense has about $7 million for research?

Mr. TRUPPNER. Yes, sir.

Mr. EVINS. What is the nature of the research which you are asking Civil Defense to do?

Mr. TRUPPNER. We are increasing, shall I say, our influence in an advisory capacity on the kind of contract research they are establishing. For example, we are encouraging them to further studies.

Mr. EVINS. What kind?

Mr. TRUPPNER. Post-attack recovery situations, for example. There is an initial period in a post-attack situation when putting the pieces together is a major preoccupation of the Government. OEP has a much longer term interest and responsibility for reconstruction and finally growth, but the extent to which we would be successful depends on the adequacy with which the initial phase is handled. We are endeavoring to get them to make studies in that area.

Mr. EVINS. They are making a study of the number of basements in the country for fallout shelters. Are you urging them to do this?

Mr. TRUPPNER. No, sir. Our business is simply in resource management. That is why the example I gave you has much to do with what resources would remain.

Mr. EVINS. Are you asking them to use their own funds for research?

Mr. TRUPPNER. For research in their area of business, which has an important effect on our responsibilities.

CIVIL DEFENSE RESEARCH

Mr. EVINS. Can you supply a breakdown for the record as to what you are asking them to expend for you?

Mr. TRUPPNER. Yes.

(The information follows:)

OEP participates in and benefits from OCD's research program, particularly in the field of postattack recovery research. While the whole recovery program is closely coordinated with OEP, the token funds contributed by OEP are identified with the following projects:

POSTATTACK RESOURCES MANAGEMENT

Development of methods, techniques for determining postattack requirements and priorities. The study includes methodology for preattack preparation and postattack application of alternative sets of resource management systems.

POSTATTACK SYSTEMS ANALYSIS

Study of special recovery problems of urban areas and the determination of minimum requirements and services to attain postattack viability in such areas.

FEDERAL AGENCY LOCAL ROLE

In the context of OCD five-city study, this involves analysis in depth of potential postattack local recovery roles of Federal agencies and the development of solutions to identified interagency operational problems.

PRODUCTION ANALYSIS

Analysis of industrial systems which produce items and provide services essential to postattack economic viability to improve the basis of preattack planning and postattack operations.

Mr. RICE. We call it "piggyback." With a small contribution we get some results out of their research for our purposes.

MATERIALS POLICY DIVISION, NRAC

Mr. EVINS. Place pages 17 through 19 into the record.
(The pages follow:)

MATERIALS POLICY DIVISION, NRAC

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Positions	20	18	18

The Materials Policy Division conducts studies of materials resources as the basis for developing policies designed to achieve national security objectives. The Division develops assumptions, policies, techniques, and guidelines for use by other Federal agencies participating in these studies as required. These studies, both long and short term, are addressed to contingencies ranging from small-scale limited war to general war including nuclear attack.

It develops and issues guidance to other Federal agencies on policies and programs for the management of stockpiles, covering the procurement, upgrading, rotation, storage, security, maintenance and disposal of strategic and critical materials.

The Division provides guidance and policies on various programs relating to industrial preparedness, including production equipment, survival items, industry evaluation board analyses, etc. It also monitors operation of programs for the allocation of materials under the defense materials system.

MAJOR ACCOMPLISHMENTS IN FISCAL YEAR 1967

Although in fiscal year 1967 this Division did not exist as a constituent of the (then) proposed National Resources Analysis Center, its functions were carried on elsewhere within the agency resulting in the following:

1. Completed the supply-requirements studies for nuclear war and reconstruction for each of the 77 materials stockpiled. Computers were used to a major extent in carrying out these requirements studies and the analyses used in determining nuclear war stockpile objectives.
2. Special conventional war studies of nine materials that are stockpiled were completed and new conventional war objectives were set for them.
3. BDSA completed for OEP a report on the supply-requirements situation for 18 high-heat alloy and special property materials.
4. OEP, with assistance from other agencies, carried out special studies of medical supplies and equipment and herbicides needed for Vietnam operations.
5. Authorized purchase programs for two materials, upgrading programs for six materials, and barter programs for eight materials.
6. New purchase specifications for five materials and special stockpile instructions for two materials were prepared by BDSA for approval by OEP.
7. Authorized capacity expansion programs for three materials.
8. Approved five requests for proposed nondefense leases of production equipment.
9. Sixteen machine tool "trigger order" contracts amended by BDSA to reflect new models of equipment were approved for placement by GSA.
10. Held preliminary discussions with representatives of the Department of Defense on the need for revising the rental rates specified by OEP for use in leases covering the nondefense leasing in Government-owned production equipment.
11. Industry evaluation board studies which assemble data on the capacities of individual plants to produce important products or services were completed.
12. Continued, in close cooperation with BDSA, to maintain the defense materials system.
13. Provided the lead executive branch testimony before congressional committees in support of administration stockpile legislation. Fiscal year 1967 stockpile disposal sales and commitments amounted to $266.9 million.

SELECTED OBJECTIVES FOR FISCAL YEAR 1968

1. Eliminate, or reduce, where feasible, existing shortages against stockpile through purchase, barter, and upgrading or refinement programs.
2. Develop new or revised storage plans required because of the acquisition of additional quantities of materials or the disposal of excess materials.
3. Reevaluate the policies that control the management of the stockpile.
4. Review capacity expansion proposals.
5. Development of techniques and procedures for making long-range supply-requirements analyses for materials.
6. Completion of supply-requirements studies for conventional war for each of the 77 materials that are stockpiled and for each of the various shapes, forms, alloys, grades, and so forth in which they are stored. Develop revised conventional war stockpile objectives based on these studies.
7. Initiation of new supply-requirements studies for nuclear war and reconstruction.
8. Conduct special supply-requirements studies for any material, component, or product if it is indicated that the supply may be insufficient to meet requirements for Vietnam operations and other essential uses.
9. Assist industry evaluation board in updating IEB analyses.
10. Assist other Federal agencies in conducting supply-requirements studies on resources for which they are responsible.
11. Employ the material factors developed in fiscal year 1967 in supply-requirements studies needed in the new review of conventional war stockpile objectives.
12. Test usage factors for 15 or 16 additional materials.
13. Maintain survival item program in existence on minimum sustaining basis pending cessation of hostilities in Vietnam.
14. Assist Department of Health, Education, and Welfare in conducting supply-requirements studies on medical survival items.
15. Develop and issue updated rental rates for nondefense leasing of Government-owned production equipment.
16. Evaluate GAO report on leasing of production equipment by the Department of Defense and, if appropriate, revise OEP's leasing policies.
17. Continue to process amendments to machine tool "trigger order" contracts.

18. Review proposals for nondefense leasing of Government-owned production equipment.
19. Provide support to the Director in connection with legislation to extend the provisions of the Defense Production Act beyond June 30, 1968.

SELECTED OBJECTIVES FOR FISCAL YEAR 1969

1. Continue actions to eliminate shortages in meeting stockpile objectives.
2. Continue to dispose of excess stockpiled materials.
3. Continue actions to improve quality and suitability of stockpiled materials for meeting requirements in an emergency period.
4. Conduct long-range supply-requirements studies for stockpiled materials.
5. Reevaluate nuclear war stockpile objectives based on supply-requirements studies for nuclear war and reconstruction made in fiscal year 1968.
6. If Vietnam operations continue, conduct special supply-requirements analyses on various materials, components, and products.
7. Continue to work with Industry Evaluation Board in obtaining plant capacity data for important resources.
8. Test materials usage factors for additional materials.
9. Initiate, if Vietnam hostilities cease, the maximum number of supply-requirements studies on survival items that can be performed by the agencies involved, or . . .
10. Maintain, if Vietnam hostilities continue, the program on a minimum sustaining basis.
11. Provide support to the Director, OEP, on legislative matters pertaining to materials policy.
12. Continue to monitor the implementation of policies governing Government-owned idle production equipment.
13. Continue to process amendments to machine tool "Trigger Order" contracts.
14. Review proposals for nondefense leasing of Government-owned production equipment.

SHORTAGE OF MATERIALS

Mr. EVINS. Here are your goals for 1969: Continue actions to eliminate shortages in meeting stockpile objectives. Do you want to tell us what commodities you are short of now for the record?

Mr. DANIEL. Yes, sir.

Mr. EVINS. You say you are going to continue actions to eliminate shortages. Spell out for the record some of the materials in which you came to the conclusion that there is a shortage.

Mr. DANIEL. Mr. Lawrence, what are the main materials?

Mr. LAWRENCE. Copper, nickel, platinum. Silver is a problem.

Mr. EVINS. You haven't got any gold, have you?

Mr. LAWRENCE. I think we have enough to meet our needs for the mobilization period.

Mr. EVINS. I hope we have. We have been losing a lot of it. They have been talking about short-term goals and long-term goals to stop the draining of gold out of the country, but they have not stopped it yet.

Mr. JONAS. If we need warehouse space, we are going to have some vacant space on Fort Knox, if we do not stop this gold drain.

DEFENSE PRODUCTION ACT

Mr. EVINS. What is the status on the program proposed for the use of the DPA revolving fund. The expenditures increased from $19 million in 1968 to $143 million in 1969. How much do you have in the revolving fund?

Mr. DANIEL. As of December 31, 1967 the borrowing authority had an unallocated balance of $282,979,000. The controlling factor at this

time in the application of funds for direct Federal contracting, however, is a limitation, which was enacted by Congress, of $100 million on such activities. That limitation is in the 1964 amendment to the act. Now, about $84 million of the $100 million contracting authority has been exercised for the Duval copper contract. This was something I wanted to come back to, Mr. Chairman. One of the members asked about what we have done in the copper field. In addition to what I said, we have, under this act, helped to finance this new copper operation in Pima, Ariz. Under this act, GSA will advance Duval $83 million of Defense Production Act funds and guaranteed a private bank loan of $48,750,000. In addition, Duval has advanced $16 million of its own funds to the project.

The first copper from this project will become available in late 1969. The production for the first 5 years will be about 57,800 short tons annually.

Now, by the time we pay the interest that is owed on the borrowing under this act, it is my understanding that we will not have anything left to continue, unless Congress does something more about it. Am I correct in that?

Mr. LAWRENCE. That is right.

Mr. JONAS. Did you say GSA advanced the $85 million?

Mr. DANIEL. Yes. That is part of the GSA contract which we authorized.

Mr. JONAS. The used their stockpile money?

Mr. DANIEL. No. This is Defense Production Act borrowing authority. This is under the Defense Production Act.

Mr. JONAS. Who borrows it? Do you borrow it from the Treasury?

Mr. LAWRENCE. Yes.

Mr. DANIEL. It is borrowed from the Treasury and we have to pay interest on it to the Treasury.

Mr. JONAS. Does OEP borrow it?

Mr. EVINS. The Defense Production Act has a fund in excess of $2 billion for making contracts to build up industry with respect to the critical materials which are needed. You have used borrowing of about $1,500 million over the years and you have about $250 million available in borrowing authority. Do you plan to use any of this borrowing authority in the next year?

Mr. DANIEL. We have used this which I have just told you about, which comes out of that $250 million. Does it not?

Mr. LAWRENCE. We can only use $16 million more because of the limitation in the language which prevents us from having more than $100 million under contract at one time.

Mr. JONAS. You loaned $85 million, so that just leaves you the $15 million?

Mr. LAWRENCE. Yes.

Mr. EVINS. $16 million more can be used for contracts?

Mr. LAWRENCE. Yes.

Mr. EVINS. You have that additional authority?

Mr. LAWRENCE. Yes.

Mr. JONAS. You said you guaranteed a loan of $40 million.

Mr. DANIEL. Guaranteed a loan of $48 million.

Mr. JONAS. To the same company?

Mr. DANIEL. Yes.

Mr. JONAS. Who does that guaranteeing?

Mr. LAWRENCE. The private banks loans are guaranteed by an agency of the Federal Government—in the Duval case by GSA. In other words, the Government guarantees that they will be repaid.

Mr. JONAS. Do you negotiate that?

Mr. LAWRENCE. No, sir. GSA did that.

Mr. JONAS. You just give GSA an order and they go out and borrow the money?

Mr. LAWRENCE. Yes.

TRIGGER CONTRACTS

Mr. EVINS. You talk about 16 machine tool "trigger order" contracts or amendments thereto. Tell us the nature of these "trigger order" contracts.

Mr. TRUPPNER. Those are contracts placed by the General Services Administration with the manufacturers of machine tools. They are designated tools with specific companies to meet the needs of a wartime situation.

Mr. EVINS. Are they put into operation under certain conditions?

Mr. TRUPPNER. When the Director of OEP issues instructions.

Mr. EVINS. The General Services Administration enters into a contract to buy machine tools but they are not put into effect until OEP gives them the green light; is that correct?

Mr. TRUPPNER. Yes, sir.

Mr. DANIEL. That is the way it is supposed to be.

NUCLEAR CONTINGENCY STUDIES

Mr. EVINS You say, "If Vietnam operations continue." Then you say you will conduct special supply-requirements analyses, and reevaluate that nuclear war stockpile objectives. What are your objectives?

Mr. DANIEL. What are our objectives?

Mr. EVINS. Yes; your nuclear stockpile objectives.

Mr. DANIEL. Well, they are based on the contingency of a nuclear attack on this country. To determine our objectives, we figure our requirements and what supply we can rely on.

Our objectives are the difference between what we figure our supply would be and what our needs will be; what we could meet from industry here and from shipments that could be made to us. Our objectives are the difference or the shortage that we feel we should stockpile for.

We will continue to reevaluate the stockpile objectives because of changes that are made from time to time.

Mr. WYMAN. Doesn't what you do really in this regard involve taking a look at where you think a possible nuclear attack might fall and what it would knock out in terms of defense capabilities and how much we should have in reserve in relation to particular materials?

Mr. DANIEL. That is correct.

Mr. WYMAN. And this kind of material would also include material from which nuclear explosives are made?

Mr. TRUPPNER. It could, yes.

Mr. DANIEL. It could, but I think the Chairman is right that those kinds of materials would be in other agencies.

Mr. WYMAN. So that you really plan to see how much copper would be knocked out if they knocked out a big copper area and how much other supplies would be knocked out and where we could get material in reserve, and so forth. This depends on your assessment of how much of an impact we would receive on an initial nuclear attack; is that right?

Mr. DANIEL. Yes, sir. For instance, we do not stockpile any uranium. We do not stockpile things that other agencies are taking care of as far as weapons are concerned.

Mr. WYMAN. I understand that. How can you estimate how much of an impact a nuclear attack would have unless you have the top secret material from the Defense Department on the capability of the Soviet Union, for example?

Mr. DANIEL. Well, we do have that.

Mr. WYMAN. Yes. This is a continuing study by people on your staff, all the time?

Mr. DANIEL. A continuing study. We also study the effect of nuclear attacks of various sizes and types.

Mr. WYMAN. When you say you are going to reevaluate and you say it doesn't make any difference whether there is an "if" before—whether the Vietnam war continues or not—is there something new that has developed in terms of the large bombs that the Soviet Union has exploded, or the new explosions coming from Red China that lead you to believe a reevaluation of the impact of an attack on the United States is necessary? Do you see any change?

Mr. TRUPPNER. Yes, sir; there has been. I would like this off the record, please.

Mr. EVINS. Off the record.

(Discussion off the record.)

STOCKPILE OBJECTIVES

Mr. EVINS. On the record. We have been working on this stockpile since 1950. When do you expect to reach your stockpile objectives for all materials?

Mr. DANIEL. The present objectives?

Mr. EVINS. Yes, the present objectives.

Mr. DANIEL. We have reached them all except——

Mr. TRUPPNER. Except nine, I think.

Mr. EVINS. What are they?

Mr. DANIEL. Principally chrysotile asbestos, copper, jewel bearings, quinidine, quinine, rutile, and titanium.

Mr. EVINS. Do you have any projections as to when you may reach these goals?

Mr. DANIEL. We won't reach these particular goals for some time, unless there is a change. These goals may be changed. I wouldn't doubt but what these objectives and goals may be changed some, but as far as our acquiring any more of these materials there has been no request made for funds in GSA other than the usual amount for jewel bearings.

BARTER

Mr. EVINS. Tell us about your new barter plan. How is this working?

Mr. DANIEL. I suppose the GSA people have discussed that with you some, but as we understand it, barter, as far as agriculture is concerned, is not going to be used any more. I understand that it is preferable to have barter supported by a direct appropriation which would pay for the materials and I believe that GSA did not ask for any appropriation for it this year; did they, Mr. Lawrence?

Mr. LAWRENCE. No, sir.

Mr. DANIEL. I don't know how far our request and recommendation got, but I understand no request is made of you for any money to take care of any barter with Commodity Credit Corporation products for this next fiscal year.

PARTICIPATION WITH NATO

Mr. EVINS. In your Mobilization Plans Division you state that you participate with NATO and other international activities in the development of agreements and machinery for the emergency management of resources. Now, no NATO country appears to be ready to come to our assistance in an emergency. What do the agreements provide?

Mr. DANIEL. The agreements simply provide that we will work together on emergency planning in their countries like we are doing in ours to meet these emergency contingencies that we have been talking about. This had been limited to a nuclear contingency planning up until this year. We took the leadership in trying to get these countries to do emergency planning such as we have for conventional war. That was adopted. We are hopeful that they will make those plans. It is a cooperative matter to get them to prepare for these emergencies like we are trying to do.

Mr. EVINS. You state that progress was made with international organizations in the development of compatible plans and measures for emergency resource mobilization. What are the organizations?

Mr. DANIEL. I am referring to NATO and Canada, the agreement that I have outlined to you.

MOBILIZATION PLANS DIVISION

Mr. EVINS. Place pages 22 through 26 into the record.

(The pages follow:)

MOBILIZATION PLANS DIVISION, NRAC

	Fiscal year		
	1967	1968	1969
Positions	14	14	14

The Mobilization Plans Division develops contingency plans, orders, and standby organizations required to mobilize resources to meet national objectives, and provides guidance to all levels of government in the development of resource mobilization plans and programs. Specifically—

It develops operational concepts, policies, principles, and the necessary organizational structure for the mobilization and management of the Nation's resources under varying types of emergency conditions;

It defines emergency resource mobilization responsibilities at all levels of government and develops operational policy and guidance applicable during emergencies to provide compatible resource management systems and procedures;

It develops basic systems and procedures under which major resources may be programed centrally in an emergency;

The Division serves as principal liaison to Federal departments and agencies on resource mobilization matters; provides guidance in their development of resource mobilization plans and measures; maintains a continuing review of the resource preparedness programs of the Federal departments and agencies and recommends actions for strengthening and improving these programs;

It provides guidance for the development of a capability at State and local levels to conserve, distribute, and use resources under nuclear attack conditions; reviews State plans;

It develops basic standby documents required for resource mobilization under varying emergency conditions;

It participates in NATO and other international activities in the development of agreements and machinery for the emergency management of resources;

It develops plans, in cooperation with other Federal agencies and industry, for the dispersal and protection of facilities and services essential to the Nation's security;

It cooperates in the development of economic stabilization policies and measures to insure consistency with overall resource program objectives; and

It develops policies for application by other agencies of the priorities and allocation authorities in the Defense Production Act.

MAJOR ACCOMPLISHMENTS IN FISCAL YEAR 1967

During fiscal year 1967 a resource mobilization plan for limited war was developed. The plan includes a range of emergency resource management measures which could be taken within the framework of an economy undamaged by direct enemy attack. The development of an organizational structure and the functional arrangements necessary to carry out the central resources programing responsibilities (the Office of Defense Resources) has been completed.

Under the basic concept, OEP staff and OEP executive reservists would form the nucleus of this standby emergency organization. The current OEP staff has been given standby emergency assignments to specific areas of responsibility within ODR and general indoctrination courses were developed at both the staff as a preparedness measure. This work has been completed at both the national and field levels. The executive reserve roster for ODR has been expanded to approximately 200. Area briefings on the ODR concept and functions have been carried out for the ODR executive reservists.

The plan includes a draft Defense Resources Act and implementing Executive order, as well as the basic emergency action documents necessary to implement various aspects of the plan.

The Federal resource agencies have developed the necessary supporting procedures and standby organizations to provide an operating capability for a limited war emergency. All resource agencies (except the newly formed Department of Transportation) have completed their assigned resource sections. These sections have been revised and edited and are included as annexes to the plan.

In addition, 33 of the resource sections of the State plans for the conservation, distribution, and use of resources at the State and local level were reviewed and approved. Progress was also made with international organizations in the development of compatible plans and measures for emergency resource mobilization.

OBJECTIVES FOR FISCAL YEAR 1968

The major objective in fiscal year 1968 is to reach a state of readiness to meet various contingencies in emergency resource mobilization, including the contingency of general war. This will include:

1. Develop a resource mobilization plan for general war.
2. Expand executive reservist program to meet general war conditions.

3. Develop programs for industrial preparedness.
4. Provide for the Director's issuance of a revised Defense Manpower Policy No. 4 assigning to the Secretary of Labor, the Secretary of Commerce and all Federal procurement agencies certain responsibilities respecting preferences in Federal procurement contracting for firms operating in or near areas with high concentration of unemployed.
5. Provide guidance and direction to Federal resource agencies in the development of operational plans and programs for emergency contingencies.
6. Review and evaluate agency programs to insure their adequacy.
7. Develop guidance and provide direction to all levels of government to achieve a capability at State and local levels to conserve, distribute and use, resources during an immediate postattack period.
8. Work with NATO and other international organizations to provide a coordinated approach in mobilization planning and compatible resource measures.

OBJECTIVES FOR FISCAL YEAR 1969

In fiscal year 1969 the Mobilization Plans Division will continue to update and modify, as required, general resource mobilization guidance and basic plans. In carrying out this program, full consideration will be given to advanced computer techniques for resource information data gathering and control.

Specific objectives are briefly outlined as:

1. In conjunction with other divisions of NRAC, analyze in depth, various emergency mobilization contingencies and develop alternative resource control policies, measures, basic documents, and type of organizational structure for the most effective and feasible management of resources. Extensive use will be made of a task force approach in order to utilize all staff expertise. This planning work will cover areas of manpower, production, construction, fuel and energy, food and water, health, communications and transportation.
2. Serve as the central point of liaison in OEP to work with the Federal resource agencies in the updating and improvement of their operational plans and organizational arrangements for carrying out their assigned resource responsibilities. In fiscal year 1969, emphasis will be placed on extending operational capability to all levels of government in order to meet the many types of emergency contingencies that may arise in the mobilization of the Nation's resources.
3. During this year the Division will cooperate with Federal resource agencies in the further development of the industrial preparedness program. Particular empsasis will be placed on the development of an adequate construction preparedness program.
4. During fiscal year 1969, the program to ensure an adequate capability at State and local levels for the conservation, distribution, and use of resources under nuclear attack conditions will be continued and updated as appropriate.
5. The work with NATO and other international organizations in the development of resource mobilization plans and international resource agreements will be continued.
6. Method for testing the effectiveness of resource management systems will be established.

EXECUTIVE RESERVE

Mr. TALCOTT. How many people are involved in this executive reservist program?

Mr. PHILLIPS. Almost 4,000 people.

Mr. TALCOTT. Do they agree to serve in this capacity, in time of emergency, and not in any other capacity?

Mr. PHILLIPS. This is basically the responsibility they have, to serve the Government in a war or emergency situation.

ECONOMIC STABILIZATION DIVISION

Mr. EVINS. The economic stabilization we discussed this morning. You have some standby plans ready but they have not been put into effect. They will not be put into effect without approval from Congress?

Mr. DANIEL. Yes.

Mr. EVINS. Place in the record pages 27 through 30.
(The pages follows:)

ECONOMIC STABILIZATION DIVISION, NRAC

	Fiscal year 1967	Fiscal year 1968	Fiscal yeaf 1969
Positions	10	11	11

The Economic Stabilization Division establishes and maintains emergency measures that may be required to insure economic stability under varying emergency situations, including national survival and recovery in the event of attack. Implicit is the development of the authorities, plans, procedures, and capabilities for their execution. Specifically:

It develops standards, criteria, and the operational programs needed to implement and administer "direct" economic control measures involving price, wage and salary, and rent stabilization and a system of consumer rationing. Where appropriate, the Division utilizes the knowledge and expertise of a number of consultants from private industry and other Federal departments and agencies. It also develops comprehensive organizational plans required to activate an emergency economic stabilization agency, including detailed functional statements, personnel requirements, etc.

The Division works closely with Federal financial departments and agencies in the development and coordination of emergency monetary, credit, and banking programs, and organizational requirements. It insures compatibility of these programs with those developed for "direct" controls.

It identifies, develops, and maintains with the Federal and State departments and agencies emergency economic stabilization preparedness and operational support roles. As necessary, revamps assignment to these agencies and exercises surveillance and coordination over such assignments.

It conducts, coordinates, and/or monitors economic studies to support the development of new planning concepts, special orders, and regulations that would be required in the implementation of economic stabilization program objectives.

It develops criteria, standards, techniques, and guidelines necessary to support emergency stabilization preparedness operations in the OEP regional offices and, as appropriate, the States and lower levels of government.

The Division insures emergency economic stabilization preparedness coordination with the Office of Civil Defense in the development and execution of State and local resource management programs.

It cooperates in the development of emergency resource mobilization policies and measures to insure compatibility with overall economic stabilization objectives.

MAJOR ACCOMPLISHMENTS IN FISCAL YEAR 1967

Although not a constituent of NRAC in fiscal year 1967, this Division carried out its functions during much of the year within the agency's former organizational framework to accomplish the following:

1. Reviewed the economic stabilization section of the emergency resource management plans of 31 States, provided substantive comments for revision, and thereafter approved these plans.

2. Prepared and arranged for the prepositioning of additional program guidance material designed to assist regional OEP offices, and State and local governments in the establishment and maintenance of an organizational and operational capability to respond to a nuclear attack emergency.

3. Coordinated a series of conferences at regional levels, developed materials for test exercises, and participated in a number of regional- and State-sponsored exercises designed to evaluate the effectiveness of emergency plans at regional, State, and local levels.

4. Prepared a number of separate legislative drafts which, subject to adoption by the President and the approval of Congress, would be required in order to impose various types of direct and indirect economic controls in nonnuclear attack situations.

5. Circulated to, and obtained the approval of, eight major Federal departments and agencies to these legislative drafts (except for one issue).

6. Prepared and circulated for review by departments and agencies involved drafts to Executive orders required to implement the aforementionel legislative approaches.

7. Identified, in priority order, a number of basic industries for which "tailored" regulations would be among the first required order to provide optimum equity and to eliminate potential production "roadblocks."

8. Recruited, and enrolled some 25 qualified, high-level consultants (from nominations received from various trade organizations and industry associations) to assist in the development of "boilerplate type" industry regulations, based upon their knowledge of current industry customs, practices, pricing methods, etc.

9. Completed a preliminary, but comprehensive, emergency Economic Stabilization Agency organizational structure and made substantial progress toward the completion of organizational structures for constituent agencies thereof. This includes the preparation of tentative staffing patterns, detailed qualification standards, and specific position descriptions.

OBJECTIVES FOR FISCAL YEAR 1968

1. Develop, in cooperation with other departments and agencies, emergency economic stabilization legislative authorities, executive orders, and basic regulations required to implement such authorities.

2. Prepare draft memorandums of understanding for selected Federal regulatory agencies and commissions, to govern relationships affecting economic stabilization under emergency conditions.

3. Complete the review of the economic stabilization section of State and Territorial emergency resource management plans; provide briefings to State economic stabilization personnel; conduct training exercises below the State office level in the States and territories, and complete the prepositioning of emergency economic stabilization operating instructions in all States and territories participating in the comprehensive program.

4. Further refine the organizational structure of an Emergency Stabilization Agency and continue the development of programs to staff these emergency organizations through qualified personnel within the executive branch and through the selection and training of industry executives.

OBJECTIVES FOR FISCAL YEAR 1969

1. Continue to develop and refine economic stabilization control measures with particular emphasis on industry control orders and regulations; and, initiate the drafting of special orders for selected industries through the use of additional consultants from private industry.

2. Explore the applicability of types or "mixes" of control measures that might be used to complement and support traditional monetary, credit, and fiscal measures.

3. Develop the regional and district organizational and administrative requirements for each of the four constituent agencies of an emergency economic stabilization agency (price, rent, wage stabilization, and consumer rationing); and, in cooperation with the national and regional offices of the Civil Service Commission, complete a system that woud provide qualified Federal personnel for temporary assignment to an emergency economic stabilization agency or to one of its four constituent agencies during the early days of emergency operations.

4. Arrange for testing the economic stabilization section of State and territorial emergency resource management plans and for evaluating the results with a view to revising and improving them; and, conduct regional tests to determine the readiness of regional executive reservists to assume their emergency responsibilities.

INDUSTRY PROBLEMS

Mr. EVINS. You state here your objectives for 1969, one of them is to initiate the drafting of special orders for selected industries. How many, and what are your plans?

Mr. DANIELS. Mr. Truppner.

Mr. EVINS. What do you plan to do?

Mr. TRUPPNER. At the moment we have identified 200 separate industry problems to deal with by specific regulation.

Mr. EVINS. Give us an example.

Mr. TRUPPNER. The retail food industry, retail gasoline, automobiles.

Mr. EVINS. This is price controls?

Mr. TRUPPNER. Yes, sir.

Mr. EVINS. Rent controls?

Mr. TRUPPNER. Yes, sir.

Mr. EVINS. You have the plans, but they have not been put into effect?

Mr. TRUPPNER. The Director has recently——

Mr. EVINS. We talked about that earlier. Then I read your words "special selected industries." Is this something separate?

Mr. TRUPPNER. It is a more refined development than that which the Director referred to before as being ready. We are ready in general.

Mr. EVINS. Each of your four constituent agencies are all ready?

Mr. TRUPPNER. Yes.

RESOURCE EVALUATION DIVISION

Mr. EVINS. Your Resource Evaluation Division, you want four jobs. We discussed that earlier. This Division has to do with your large-scale computer, the Univac 1108. You put in computers and you have to have more jobs. You say you will work more closely with agency data sources and agency users to establish more precise criteria for data collection. Place all this in the record. This is your main braintrust.

(Pages 32 through 37 follow:)

RESOURCE EVALUATION DIVISION, NRAC

	Fiscal year 1967	Fiscal year 1968	Fiscal year 1969
Positions	18	18	22

The Resource Evaluation Division provides statistical and analytical support for emergency planning and preparedness in the Office of Emergency Planning and in other Federal departments and agencies. Rather than perform analyses which a single department or agency can perform most efficiently and effectively for itself, this Division focuses attention on analytical tasks which can be performed more efficiently and effectively on a collective basis. It depends heavily upon other agencies for data and staff support. In addition to maintaining a close working relationship with other Federal departments and agencies, it provides specialized statistical and analytic services to elements of the executive office.

The analytical requirements which many agencies have in common and which the Resource Evaluation Division endeavors to meet include the following types of estimates: Nuclear damage estimates, nuclear hazard estimates, resource requirement and availability estimates, feasible production estimates, and economic and industrial impact estimates. For the purpose of making such estimates, it develops and applies a variety of models and massive data banks. The Resource Evaluation Division collaborates with the Canadian Emergency Measures Organization in making joint studies.

This Division provides direction to the Mathematics and Computation Laboratory (MCL).

The Division's proposed increase of four professional positions is designed to insure maximum benefits from the investment in the new high-speed, large-scale computer, the Univac 1108. These positions are needed to meet two basic requirements: (1) to provide closer surveillance and tighter direction of MCL to insure that the use of its computer systems is consistent with the highest standards of efficiency and priority management and that its computations and analyses are always of a quality acceptable to the scientific community; and (2) to work more-

closely with agency data sources and agency users to establish more precise criteria for data collection and more practical methods of manipulation and priority processing.

MAJOR ACCOMPLISHMENTS IN FISCAL YEAR 1967

Although in fiscal year 1967 this Division did not exist as a constituent of NRAC, its functions were carried on during the year by the unit formerly known as NREC, resulting in the following accomplishments:

1. Continued emphasis during the year was placed on improving and maintaining the resource evaluation data base. During the year over 60 different files were updated and improved. The total number of resource records was increased from over 1 million to over 4 million.

2. A new vulnerability study, Hazard 1965, was published and distributed. In addition, special Hazard 1965 studies were made in response to General Services Administration, Department of Commerce, Department of Defense, and many other individual agency requests.

3. A new and improved damage assessment model, Ready, was first used for studies and exercises during this period.

4. Increased emphasis was placed on the problems associated with limited war. In this connection, the national economic strength model (Strength) was used to estimate the impacts associated with the current and hypothetical levels of Vietnam involvement and those associated with an antiballistic missile system deployment.

5. Although the Strength model was operational throughout fiscal year 1967, a continuing effort was made to improve the model and the interindustry and requirements factors incorporated into it. Particular attention was paid to the development of improved methods for handling the generation of the detailed final demand statements necessary for model application. The development of an interindustry table for use in the Strength model based on an activity rather than establishment classification was completed.

6. Work was undertaken in the SPIM research project with the objective of developing a method for estimating the impacts on relative prices caused by major shifts in national objectives. Pilot studies were made of the labor components of value added for several industrial sectors which gave encouraging results.

7. Participated with the Canadian Government in joint studies of nuclear hazards in the United States and Canada.

8. Other accomplishments:

(*a*) created a U.S. missile category;

(*b*) created a DSA category;

(*c*) special application of Hazard 1965 for use in review of stockpile requirements;

(*d*) addition of Dun & Bradstreet industry data to data base;

(*e*) inaugurated the Ready model (damage assessment) and began conversion of files for Ready use; and

(*f*) participated with DSA and GSA in special training programs for staffs of these agencies.

OBJECTIVES FOR FISCAL YEAR 1968

The programs on which the Resource Evaluation Division expects to focus much of its attention during fiscal year 1968 fall within the general categories of economic analysis and data development.

These programs will support other programs of other divisions of NRAC, other elements of OEP and other agencies. Also RED anticipates support from other elements of OEP, especially the Systems Evaluation Division, and from other agencies.

The programs which will receive emphasis are the following:

ECONOMIC ANALYSES

(1) Development of methodology, including further development of the Strength model for analysis of impacts of Government programs associated with limited war, the SPIM system for analysis of price and alternative contingencies, and the general formulation of a model which will consider interregional flows as well as interindustry flows.

(2) Regional and network analysis including coordination of a contractor's formulation of a regional model and participation with the Systems Evaluation Division, elements of the new Department of Transportation and other agencies in the development of methodologies and models for network analysis.

(3) Final demand estimation and the estimation of the impacts of final demand on various factors of the economy in support of studies by the Impact Analysis Group Task Force and activities of other elements of OEP and other agencies upon request.

(4) Postattack analyses including case studies such as the Joint Chiefs of Staff Study, PONAST, and the national test exercise REX, and also general vulnerability studies in the Hazard series.

DATA DEVELOPMENT

(1) Development and refinement of resource data including the organization of approximately 2 million resource records recently added to the previous 1 million resource record data base.

(2) Improvement of requirement factors for use in translating general statements of national program goals into detail statements of final demand.

(3) Improvement and updating of interindustry factors, including input requirements per unit of output in the production process.

(4) Executive Office and White House support including the design and operation of information management systems.

Included in the foregoing programs are resource evaluation and recovery studies undertaken jointly with the Emergency Measures Organization of Canada. The Resource Evaluation Division, as in the past, stands ready to provide resource evaluation, advice, and assistance to NATO.

The Resource Evaluation Division will also support the Assistant Director, Telecommunications, with computer support of the telecommunication allocation function.

OBJECTIVES FOR FISCAL YEAR 1969

The Resource Evaluation Division will continue during 1969 to focus much of its effort on economic analyses, information management, and related data and program development in support of contingency planning and preparedness in OEP and other agencies.

DATA DEVELOPMENT

(1) Continuation of the devolpment of resource records regularly being added to the agency's data base.

ECONOMIC MODELING AND ANALYSIS

(1) Adoption, improvement, and application of macro- and micro-economic models for measurement of the efficacy of alternative combinations of Federal contingency policies, plans, and programs.

(2) Development and application of a gaming model to develop skills in resource management.

(3) Development and application of a comparatively simple prototype regional analysis model.

(4) Application of post-attack recovery and related resource evaluation models.

(5) Further development and application of a frequency-management system in support of the Director of Telecommunications Management.

INFORMATION MANAGEMENT

(1) Improvement of—
Resource data base;
Requirement factor files;
Interindustry factor files;
Economic time series; and
Other data required by economic and information management systems.

(2) Development and application of a prototype system for updating and projecting into the future selected economic statistics.

SYSTEMS EVALUATION

Mr. WYMAN. You don't rely on computers to supersede your judgment, do you, when it comes to this sort of thing? The information supplied as a result of programing into a computer?

Mr. DANIEL. I don't so far. I will let the expert answer that.

Mr. TRUPPNER. I refer you to the ancient expression, GIGO—garbage in, garbage out. Unless common sense and good judgment are used in the inputs put into a computer you won't get a very helpful answer out of the computer.

Mr. EVINS. What you put in is what comes out. The input is important. My question is, Why can't you transfer some of these systems evaluation division positions to other areas of higher priority.

Mr. DANIEL. Mr. Truppner?

Mr. TRUPPNER. I regard them as my area of highest priority, sir.

Mr. EVINS. How is this different from the previous division?

Mr. TRUPPER. If I may make a distinction, the Resource Evaluation Division which we just covered evaluates the relative importance of resources. This relates to resources such as copper, steel, and the like. The Systems Evaluation Division people are evaluating the policies which the OEP is developing.

Mr. EVINS. That is what the Director does?

Mr. TRUPPNER. Yes, sir. And we are working for the Director. We are trying to give him a more rational basis for making his policy decisions than he has had heretofore.

JUSTIFICATION MATERIAL

Mr. EVINS. We will place in the record pages 38 and 39.

(The pages follow:)

SYSTEMS EVALUATION DIVISION, NRAC

	Fiscal year 1967	Fiscal year 1968	Fiscal year 1969
Positions	14	14	14

The Systems Evaluation Division develops and applies analytical techniques in evaluating both existing and proposed mobilization plans and programs in the light of national security objectives. These analyses include the examination of various benefit measures to provide adequate bases for precise problem definition leading to cost-benefit considerations and sensitivity studies among alternative system candidates.

Systems analysis and operations research techniques are applied to agency-wide problems as well as to those of other NRAC divisions.

MAJOR 1967 ACCOMPLISHMENTS

This Division, one of the cornerstones of OEP's reorganization accomplished in fiscal year 1968, did not exist in fiscal year 1967, but positions are shown above for fiscal year 1967 to reflect the fact that the Division was organized by reassignment of positions from other NRAC elements.

OBJECTIVES FOR FISCAL YEARS 1968 AND 1969

During this period the Systems Evaluation Division will direct its efforts to the development and application of cost-benefits and similar analytical techniques for application in formulating and evaluating policies and programs for coping with national emergencies. Particular emphasis will be given to the development of alternative emergency plans in policy formulation in the fields of stockpiles, economic contingencies, and recovery planning.

Analysis of stockpiling of critical materials for limited war will include ascertainment of requirements, specification of content, assessment of purpose, and recommendations for manner of use or disposal.

Economic contingency planning will make extensive use of economic models in the form of textual description or mathematical formula and the application of computers to available economic data to provide a basis for policy decisions and program evaluations.

Recovery planning will include formulation and evaluation of programs to enhance the Nation's capabilities to recover from nuclear attack through the application of network analyses, identification of alternative supply sources, evaluation of manpower skills and techniques, and similar studies.

Studies, reports, and participation in the application of these findings will be made as appropriate to the stage of accomplishment of objectives or as required by current events.

Emergency Operations Office

Mr. Evins. With regard to the Emergency Operations Office, place in the record pages 44 through 53.

(The pages follow:)

	Fiscal year 1967 actual	Fiscal year 1968 estimate	Fiscal year 1969 estimate
Positions	26	26	26

EMERGENCY OPERATIONS OFFICE

The Director of the Emergency Operations Office directs the activities of the Government Readiness Division, the Special Facilities Division, and the Disaster Assistance Division (covered at p. 92).

GOVERNMENT READINESS DIVISION

This Division provides the overall leadership and coordination of Federal, State, and local readiness programs designed to insure the capability of Government to respond effectively to any emergency. It is responsible for all aspects of continuity of government, including succession lines, essential records, emergency operating facilities, emergency communications, the effective use of government resources, and the predelegation of authorities. It prepares Executive orders and other documents which formally assign emergency planning responsibilities to Federal departments and agencies. It develops plans and procedures for the restoration of civil authority at various levels of government in the event of disruption. It fosters interstate compacts and the enactment of legislation relating to emergency preparedness. This Division also provides the liaison with the Office of Civil Defense and other agencies to provide the necessary coordination between civil defense and other aspects of total emergency preparedness. This Division implements and maintains the readiness of standby agencies and programs, when developed, including the updating of procedures, organization, staffing and logistical support, as well as the training of personnel with emergency assignments to these agencies. It also administers the national defense executive reserve program.

SPECIAL FACILITIES DIVISION

This Division provides administrative support, planning and coordination of agency use, and management of emergency operating facilities for OEP national office and top level Federal Government.

Major accomplishments in fiscal year 1967

1. Revised guidance was issued this year to insure that adequate succession is provided for key officials at all levels. The new criteria establishes the depth of succession and reporting requirements for constituent agencies, bureaus, and field organizations.

2. New criteria was issued this year to provide the necessary authority and standards for agency actions in the predelegation of emergency authorities to subordinate levels.

3. Determinations of essential wartime functions have been developed by all agencies with assigned emergency responsibilities. Periodic review and reassessment of essential functions are being made to insure that the functions identified reflect changes in assumptions, organizations, and emphases.

4. Agences reported on the status of their readiness plans and these reports were reviewed and evaluated.

5. All agencies with emergency responsibilities reported this year to the National Archives that essential records have been preserved and appropriately prepositioned.

6. Eight emergency operations action documents have been prepared in support of the ODR plans for limited war.

7. Of the 34 emergency planning assignments made to departments and agencies by Executive order, one was completed and issued in fiscal year 1967. In addition, Executive order assignments to two departments were brought to the point of final clearance.

8. Two emergency operating facilities were completed this year; the development of another emergency facility was initiated, and another facility is in the design stage.

9. A "Handbook on Support Requirements for Federal Agency Emergency Operating Facilities," OEP Circular 9400.2 was published in November 1966. This handbook assists the Federal departments and agencies in the development of their emergency operating facilities and the identification of actions required to achieve acceptable readiness.

10. Steps were taken in fiscal year 1967 to establish a prototype consolidated emergency operating facility for multiple agency use in one region which will provide greater emergency operational capability more economically than the several individual agency sites which will be absorbed. The experience gained will be applied to other regions.

11. The improved Interagency Communications System serving the emergency operating facilities of the headquarters of the Federal Government has been maintained in a continuing state of operational readiness. The system is tested periodically.

12. A preliminary review of all requirements has been completed in a study of emergency communication services to Federal agencies by the General Services Administration under the auspices of the National Communications System and with OEP participation.

13. Construction was started on the Federal Regional Centers in Regions 1 and 8.

14. Ten departments and agencies now sponsor 22 National Defense Executive Reserve units. A total of 3,909 reservists are now enrolled for a gain of 341. In addition to the customary unit training sessions held throughout the country and the substantial home study by each Executive Reservist, the year's training program featured a series of seven 1-day regional conferences sponsored by the Office of Emergency Planning. Reservists enrolled in units of nine agencies participated in the conferences with a total of 974 Executive Reservists attending.

15. The standby emergency censorship organization and supporting plans were brought to a stage of operational readiness. A protected operating facility for the emergency national censorship headquarters operation was completed and in its main aspects is operational. Training was conducted monthly and plans were reviewed and updated. Standby agreements have been completed with Post Office and Treasury, and efforts are underway for completion of agreements with other Federal departments and agencies in support of the program objectives. Negotiations were begun with Canada to develop the framework for mutual United States-Canada emergency censorship operations.

16. The revised Emergency Broadcast System plan was completed through the combined efforts of the major networks, FCC, OCD, and OEP. The system is operational and was tested monthly from various points in and away from Washington. Approximately one-fourth of the 2,500 broadcasting stations in the system have been protected against radiological fallout.

17. All States except one have enacted some or all of the legislative provisions for assuming continuity of State and local governments. Thirty-four State legislatures have ratified constitutional amendments providing the basic authority for continuity of Government legislation. Five other States indicate they have adequate existing authority and do not need constitutional changes. Legislation providing for adequate succession to the Governor has been enacted by 39 States and succession to legislators by 18 States. Thirty-six States have passed legislation authorizing the movement of their governments in an emergency to emergency operating facilities. Twenty-one States have provided for

the management, protection, and preservation of records essential to Government operations and those which will protect the rights of individuals.

Objectives for fiscal years 1968 and 1969

The following objectives are designed to increase the emergency readiness of governments:

1. *Facilities*—Steps will be taken to—

(*a*) Increase the capability of the National Headquarters of the Federal Government to operate under emergency conditions by—

(1) the incorporation of suitable emergency operating space in new buildings designed primarily for other purposes, where feasible;

(2) modification of existing facilities to accommodate emergency requirements;

(3) the establishment of improved sites for five agencies;

(4) completion of two emergency operating facilities now under construction and initiation of construction of another facility; and

(5) upgrading the operation readiness of the national headquarters sites generally with special attention to the improvement of the emergency facilities of five specific agencies;

(*b*) Assess the adequacy of the present program for emergency operating facilities through a comprehensive study of experience to date, current and projected assumptions, principles and concepts and alternate plans for meeting the objective;

(*c*) Maintain special facilities in a constant state of operational readiness;

(*d*) Advance the schedule in coordination with OCD for the establishment of the remaining Federal regional centers (FRC's) to house the day-to-day activities of OCD and OEP and serve as the focal points in the regions for coordination of the activities of the Federal agencies in an emergency. It is contemplated that one or more of the FCR's will be completed during each year, fiscal years 1968 and 1969;

(*e*) Carry out selected pilot projects in combined field relocation sites in two regions to determine economies which can be accomplished by multi-agency occupancy of fewer but more efficient and better protected regional area emergency operating facilities. Experience gained will be applied in other regions; and

(*f*) In coordination with the National Communications System and the General Services Administration—

(1) In fiscal year 1968, formulate a proposal for meeting the identified emergency field communications requirements; and

(2) In fiscal year 1969, initiate the program designed to satisfy such requirements.

2. *Special projects.*—Carry out special assignments in sensitive areas, such as participation in the United States-Canada joint planning efforts and the furnishing of specialized assistance concerning NATO civil emergency planning problems.

3. *Assistance to the National Resources Analysis Center.*—Furnish communications and facilities support for computer operations and provide guidance for the input to continuity of Government models.

4. *Master plan.*—

(*a*) In fiscal year 1968 develop a draft plan to delineate the interacting elements of Government in an emergency as a basis for individual agency plans and the taking of emergency actions on a timely basis.

(*b*) In fiscal year 1969 complete and promulgate the master plan and issue guidance to Federal agencies for the preparation of their supporting plans.

5. *Executive order assignments.*—

a. Prepare new emergency Executive orders as necessitated by departmental reorganization and newly delegated responsibilities to the departments and agencies and revise existing orders as required by such changes—

(1) The following revised or new Executive orders will be coordinated and issued in fiscal year 1968:

(*a*) Department of Health, Education, and Welfare;

(*b*) Department of Housing and Urban Development; and

(*c*) Department of Commerce.

(2) The following revised or new Executive orders will be coordinate and issued in fiscal year 1969:

(*a*) Department of Transportation;

(*b*) Department of the Interior; and

(*c*) Department of Health, Education, and Welfare revision.

6. *Continuity of State and local governments.*—

(*a*) Assist 18 States and the appropriate OEP regional offices in the preparation, coordination, and ultimate enactment of proposed continunity of Government measures which were indicated as essential and not yet accomplished by the OEP Continuity of Government survey of 1965. This will be accomplished by the following subobjectives—

(1) Provision of appropriate guidance materials and model legislation for use by each of the 18 States;

(2) Development of specific State-by-State goals in coordination with each OEP region; and

(3) Provision of personal specialized assistance to each region and State in support of enactment programs.

7. *Readiness plans.*—

(*a*) Provide day-to-day, detailed guidance and assistance to agencies, generally for the development of readiness plans, procedures, and documentations. Special emphasis will be placed on agencies affected by reorganization and redelegations.

(*b*) Issue current policy guidance as required to insure that all Government readiness planning is current and realistically reflects the national and international conditions which make such planning necessary. This guidance may include essential functions; succession to key officials; predelegation of emergency authorities; emergency organization and staffing; emergency automatic actions; emergency readiness and operations plans; response to warning; emergency communications; emergency operating facilities; and vital records preservation.

(*c*) Issue policy and planning guidance to departments and agencies for assistance to emergency personnel for the care of their dependents in time of national emergency to insure that essential personnel will report to emergency duty stations.

(*d*) Provide policy and guidance for the training and cross-training of OEP personnel in performance of emergency functions, including communications, damage assessment, resource analysis support, security, logistical maintenance, and presentation of information.

(*e*) Prepare emergency action documents on which decisions may be made and actions taken by key officials in case of general war.

(*f*) In coordination with National Archives (1) develop an up-to-date vital records handbook for the guidance of Federal agencies, and (2) conduct the annual survey of vital records programs in the Federal agencies.

(*g*) Develop and issue new guidance to the Federal agencies incorporating criteria and other changes required by DOD for the selection of key (essential) Government employees in relation to commitments in the military Ready Reserve.

8. *National defense executive reserve.*—Recruit from all sectors of the economy a select corps of executives who have the talents and experience essential to the direction of expanded emergency activities and train them in their responsibilities. This will involve—

(*a*) Recruitment of 350 new reservists in each year, fiscal years 1968 and 1969, toward the ultimate goal of 5,000;

(*b*) The fifth national conference to be conducted in fiscal year 1968;

(*c*) One specialized training conference for the standby Office of Emergency Wartime Censorship in fiscal years 1968 and 1969;

(*d*) Regional training sessions in emergency stabilization (two in each region) in both fiscal years 1968 and 1969;

(*e*) The 3,000 reservists, due for redesignation in fiscal year 1968, will be processed;

(*f*) Four regional NDER training conference will be held in fiscal year 1969;

(*g*) NDER manpower data will be developed by EOO and programed by NRAC;

(*h*) Develop preliminary plans for the Sixth Annual National NDER Training Conference; and

(*i*) Develop and issue all necessary documents and instructional materials, including—

(1) The NDER directory;

(2) Administrative procedures; and

(3) Promotional brochure.

9. *Emergency censorship organization.*—Insure the Federal Government's capability to conduct the necessary censorship activities in wartime by—

(*a*) Maintaining at a high level of readiness the standby national censorship organization;

(*b*) Physical adjustments in the censorship emergency operating facility to permit operations under emergency conditions;

(c) Recruitment to full complement the necessary executive reservists; and

(d) Complete the necessary international and Federal agency agreements and coordinate all related planning with other agencies.

OTHER FEDERAL AGENCIES

Mr. EVINS. You state that you have Executive order assignments to the Department of Health, Education, and Welfare, the Department of Housing and Urban Development, and the Department of Commerce. What are you delegating to these agencies, Mr. Director?

Mr. DANIEL. In line with our overall responsibility to coordinate the emergency preparedness of all these Departments, we assign to them what we think they should do to have their programs up to date.

Mr. EVINS. Do they comply with your requests?

Mr. DANIEL. I have hardly had time to find out personally. Mr. Phillips.

Mr. PHILLIPS. Yes, sir; they are most cooperative. Frankly, Mr. Chairman, we get the greatest cooperation on our activities that do not require a large expenditure of funds. This has to do with the kind of facilities I was speaking of a minute ago. In these particular cases we are working with HEW on a new educational assignment which they did not have previously in their order. We are working with them to get a revision there. In terms of housing and urban renewal, because this is a new department we have to take the old HHFA order, redo it, tailor it to the HUD organizations. In terms of the Commerce Department, we have to allow for the changeover to the new Department of Transportation of the emergency transportation function previously in Commerce.

CONTINUITY OF GOVERNMENT

Mr. EVINS. You indicate you have 18 States that you have cooperated with in the presentation of plans for continuity of government. Then you indicate that you have a provision of guidance materials and model legislation for use by each of the 18 States. You suggest a model plan to the States and they adopt it if they want to?

Mr. DANIEL. Yes, sir.

Mr. EVINS. Do you prepare the legislation?

Mr. DANIEL. Yes, sir; we have suggested legislation.

Mr. EVINS. Only 18 States out of the 50 have adopted it?

Mr. DANIEL. No. There are more States than that. All but one State have adopted at least part of the legislation. That one State is Colorado.

Mr. EVINS. You mentioned Mississippi a while ago.

Mr. DANIEL. That is on resource planning, emergency management of resources.

Mr. EVINS. What about your continuity-of-government plans?

Mr. DANIEL. They have plans or are working on plans, some of the legislation that we have recommended, except for one State.

Mr. RICE. In our report to the Joint Committee on Defense Production there is a summation of this legislation.

Mr. EVINS. This shows the status of the continuity-of-government legislation enacted by the States. Just a bird's-eye view of this looks like it is fully covered. Place this in the record.

* STATES HAVING ADEQUATE EXISTING AUTHORITY FOR CONTINUITY OF GOVERNMENT LEGISLATION

Mr. EVINS. You have testified about your executive Reserve program. The details are shown on page 52. You say that 3,000 reservists are due for redesignation in 1968 and will be processed. You are bring-

ing in 350 new reservists each year toward an ultimate goal of 5,000. Tell us again how many you have.

Mr. DANIEL. About 4,000.

FIELD SERVICES REGIONAL OFFICES AND OTHER ACTIVITIES

Mr. EVINS. Now, gentlemen, we go to field services regional offices, page 56. No new jobs are requested.

Program planning and evaluation, page 60, no new jobs are requested. You have 12 there.

This staff provides support to the Director on plans and priorities.

It provides guidance to the Federal departments in developing emergency preparedness programs. Is this done annually or continually?

Mr. DANIEL. Continually, is my understanding.

Mr. RICE. Annually, the Program Planning and Evaluation Office works with the State Department, the Defense Department, CIA, in updating the military and nonmilitary defense assumptions on which we base our work. We try to do this annually. This office also is our inspector general for nonmilitary defense work at all levels.

Mr. EVINS. For 1969 you want to update the estimates of potential contingencies, update the statements of long-range goals, and develop a comprehensive program structure.

Pages 60 through 63.

(The pages follow:)

OFFICE OF EMERGENCY PLANNING, SALARIES AND EXPENSES

Program planning and evaluation

Positions:	
Fiscal year 1967 actual	12
Fiscal year 1968 estimate	12
Fiscal year 1969 estimate	12

This staff provides support to the Director and the Planning and Review Committee in their deliberations and judgments on program priorities, program plans, and work to be accomplished via project management. It apprises the Director and Deputy of the status of programs and projects, and identifies matters requiring their attention or the attention of office or staff directors. It develops and maintains an information and progress reporting system to aid in program review and decisions. This staff negotiates with other agencies and prepares for the Director's approval long-range test and exercise programs, and evaluates the effectiveness of tests and exercises conducted by the program offices of OEP. It works with DOD, State, CIA, and other agencies in updating nonmilitary defense assumptions. It also provides secretariat support to the Interagency Emergency Planning Committee and other program development groups as required.

Major accomplishments in fiscal year 1967

1. Provided the Federal departments and agencies with guidance for developing their emergency preparedness program in the form of national objectives and subobjectives for fiscal years 1968–73.
2. Established a revised system for developing OEP programs.
3. Issued programing guidance for the development of OEP programs.
4. Issued revised guidance to the Federal departments and agencies for developing program objectives and for reporting on progress, status, and problems with respect to emergency preparedness programs.
5. Reviewed and evaluated 15 State plans for the emergency management of resources.
6. Maintained the management information system for the Director, OEP.
7. Evaluated 16 tests of State plans for the emergency management of resources.

8. Participated in national and international conferences to develop concept, scope, and design of the NATO-sponsored exercise CIVLOG–69.

Objectives for fiscal year 1968

1. Produce current estimates of potential contingencies and problems to be planned against basic emergency preparedness guidance.
2. Produce statements of long-range goals, mid-range and short-range ob-
3. Compile a Federal 5-year program book summarizing the emergency preparedness programs of the executive branch.
jectives, and current priorities of effort.
4. Compile an OEP program book summarizing the programs of OEP.
5. Make an assessment of the preparedness posture of 15 Federal departments and agencies.
6. Complete the review and assessment of emergency preparedness programs in 25 selected States.
7. Develop or refine standards of performance for individual parts of the OEP program, wherever feasible.
8. Develop and submit to the President, a progress and status report on the civil emergency preparedness program.
9. Conduct an operational readiness exercise in each of the OEP regions.
10. Test and exercise region 2 to function as a national alternate center.
11. Exercise in each State, the resource management plans developed under the Federal contracts through the stage III tests.
12. Conduct a resource management seminar in preparation for the NATO-sponsored exercise CIVLOG–69.
13. Issue initial guidance to Federal agencies for participation in NATO exercises to be held during fiscal year 1969.
14. Schedule and conduct a series of internal tests and contingency exercises.
15. Revise the structure and operating procedures of the IEPC to make it more effective in program planning and management.
16. Develop a NATO civil emergency planning symposium to be conducted at NATO headquarters.

Objectives for fiscal year 1969

1. Update estimates of potential contingencies and problems to be planned against basic emergency preparedness guidance.
2. Update statements of long-range goals, mid-range, and short-range objectives, and priorities of effort.
3. Develop a comprehensive program structure, including the identification of program elements in various Federal departments and agencies, to serve as a framework for planning and coordinating the total emergency preparedness effort.
4. Make evaluative analyses of significant aspects—including program objectives, policies, intraprogram and interprogram balances, and other related matters—of selected emergency preparedness programs to provide the basis for policy direction of the total emergency preparedness effort.
5. Develop, as a pilot project, a planning and programing system for a selected emergency preparedness program which will facilitate fuller integration with the day-to-day program execution and decisionmaking processes of individual Federal departments and agencies.
6. Identify the critical elements of emergency preparedness programs of individual Federal departments and agencies, and establish standards of performance wherever feasible.
7. Establish a pilot system for self-appraisal of emergency preparedness programs by the Federal departments and agencies which recognizes the role of hub agencies and subsidiary agencies in a major resource area.
8. Review and assess the emergency preparedness programs in 25 selected States.
9. Assess the preparedness posture of 15 Federal departments and agencies.
10. Complete the planning, and conduct the U.S. portion of the NATO-sponsored exercise Civlog for the NATO civil wartime agencies.
11. Conduct three contingency gaming exercises involving top level officials.
12. Develop plans for a national exercise.
13. Design and conduct a series of limited tests to evaluate the readiness of civil agencies to respond to a variety of contingencies.

Mr. TALCOTT. If the Capitol was hit by an atomic bomb, do you have plans for moving the Capitol and its functions to some better location like St. Louis or Kansas City?

Mr. DANIEL. I think we will have to go off the record with you there.

Mr. EVINS. Off the record.

(Discussion off the record.)

ADMINISTRATION AND GENERAL COUNSEL

Mr. EVINS. Place in the record pages 65 and 68.

(The pages follow:)

Administration

Positions:	
Fiscal year 1967 actual	40
Fiscal year 1968 estimate	39
Fiscal year 1969 estimate	39

This staff provides logistic, administrative, and management support to the work of the agency in accordance with Government policies and practices and consistent with laws, regulations, and rules relative to Federal funds, personnel, procedures, and practices. It recommends organizational, functional, procedural, staffing, and financial programs and plans for achieving the agency's mission and discharging its responsibilities at maximum effectiveness and lowest cost. It administers financial management, personnel, training, administrative services, security, auditing, procurement, records, and directives management programs.

Major accomplishments in fiscal year 1967

1. Provided necessary administrative support to all agency accomplishments.
2. Planned and began implementation of a career development system that will provide definitive patterns of promotion and professional progress for new employees as well as skill development and promotion opportunities for present employees. The career development program will include—job rotation, formal and on-the-job training, special seminars, counseling, and performance approval.

Objectives for fiscal year 1968 and fiscal year 1969

This is a continuing support service which will be performed with one less position in fiscal year 1968 and fiscal year 1969.

General Counsel

Positions:	
Fiscal year 1967 actual	6
Fiscal year 1968 estimate	6
Fiscal year 1969 estimate	6

The General Counsel provides legal counsel, advice, and assistance to the Director on national security and disaster laws, policies, regulations, problems, and programs, including special Presidential assignments to the Director. He also provides legal advice, guidance, and assistance to all officers and employees in the agency on the administration and operation of programs for which OEP is responsible. He coordinates the preparation of legislation proposed by OEP and the preparation of reports on other proposed legislation, and is responsible for the initiation, preparation or review of submissions to the Attorney General and Comptroller General. He serves as counselor under OEP Regulation 6 (Ethical Conduct); as civil rights coordinator under title VI of the Civil Rights Act; and as equal employment opportunity officer for OEP. He reviews adverse personnel actions.

Objectives for fiscal year 1968 and 1969

This is a continuing support service.

STAFF ASSISTANT FOR HEALTH

Mr. EVINS. You have 39 jobs for administration and six jobs for General Counsel. No increases are proposed.

The staff assistant for Health Division, three positions. Tell us about this function. This is your bloodmobile, Nursing Corps, and these three positions are for the staff?

Mr. DANIEL. Yes.

Mr. EVINS. Place pages 70 through 72 into the record.

(The pages follow:)

Staff Assistant for Health

Positions:

Fiscal year 1967 actual	3
Fiscal year 1968 estimate	3
Fiscal year 1969 estimate	3

The Staff Assistant for Health serves as staff adviser to the Director on policies, plans, and programs for the emergency availability and utilization of national health resources. Similarly, he provides assistance to other Federal agencies and to OEP officials regarding national and international health resources.

The Staff Assistant for Health maintains close working relationships with national medical and health associations, professional health personnel of other Federal agencies, and with health advisory committees; and serves as their principal point of OEP contact in health matters.

Major accomplishments in fiscal year 1967

Coordinated the development by the Public Health Service of the delegate agency Health Resources Annex to the Resource Mobilization Plan for Limited War.

Participated in an interagency review of the civilian emergency health preparedness program for the purpose of developing modifications of the content and administration of the program consistent with current assumptions.

Developed, coordinated, and published Defense Mobilization Order 8540.2 for the national emergency blood program.

Stimulated and coordinated an industrial mobilization survey by the Department of Defense of the potential of the commercial scale plasmapheresis process as a source of plasma for blood fractions during a mobilization.

Objectives for fiscal year 1968

1. Conduct active liaison designed to insure the effective interchange of health manpower resources data among concerned governmental and nongovernmental agencies having emergency preparedness responsibilities and participate in review of the adequacy of the content and format of the National Resource Analysis Center data bank on health manpower and other health resources for supporting the needs of emergency preparedness and planning.

2. Examine all means for improving the utilization and conservation of scarce health manpower with particular stress on measures which will enhance the national emergency health preparedness posture.

3. Assist in the development by public and private agencies of appropriate criteria for guiding those charged with the selection of persons possessing scarce health manpower skills for military service.

4. Participate in continuing review of the impact of limited war mobilization and expanded civilian health programs on the health industry and health services sectors of the Nation's economy with special attention to the implications for emergency health preparedness.

5. Coordinate review of state of operational readiness of Federal, State, and local emergency health standby organizations and plans.

6. Provide for participation by appropriate emergency planning agencies in periodic review of the civilian emergency medical stockpile program.

7. Organize a survey of the adequacy of national emergency health facilities.

8. Initiate a study of the vulnerability of the U.S. health industry to physical damage and interruptions in availability and distribution of certain factors of production.

9. Stimulate cooperation at the national level designed to achieve effective organization at the local level for emergency casualty first aid, collection, and evacuation.

Objectives for fiscal year 1969

Provide a capability to assess objectively the effectiveness of major health programs, governmental and private, in terms of their impact on the Nation's supply of health resources available for emergencies, adequacy of interagency and Federal-State coordination, cost-effectiveness, and other factors bearing on the Nation's health readiness posture.

Mr. EVINS. You have big language on page 72:

Provide a capability to assess objectively the effectiveness of major health programs, governmental and private—

Now, three people can't do this—

in terms of their impact on the Nation's supply of health resources available for emergencies, adequacy of interagency and Federal-State coordination, cost effectiveness, and other factors bearing on the Nation's health readiness posture.

Mr. DANIEL. We simply coordinate the planning and information, put together the information which we get from the other agencies.

Mr. EVINS. Governor, I commend the man who wrote that phrase.

Mr. DANIEL. I will pass along that commendation.

INFORMATION STAFF

Mr. EVINS. You have three positions on information staff. This staff advises the Director, is responsible for press relations, and maintains liaison with the White House on press matters. I expect you need three for all of that. Place page 74 into the record.

(Page 74 follows:)

Information staff

Positions:	
Fiscal year 1967 actual	3
Fiscal year 1968 estimate	3
Fiscal year 1969 estimate	3

This staff advises the Director on means of securing and maintaining general public understanding and acceptance of emergency preparedness and other programs administered by OEP. It is responsible for press relations and for information materials intended for the general public. It participates in planning press and information programs for emergencies. It maintains liaison with the White House on press matters, provides press support for State liaison activities, and assists the Director in his special assignments such as the Cabinet Travel Task Force.

In the event of disaster or national calamity, this Office gathers and provides the press with comprehensive information on Federal relief effort. It provides the Director with early information and reports of disaster or calamity gained by surveillance and interrogation of news sources. It gathers and edits Federal relief information.

Major accomplishments in fiscal year 1967

Assisted the White House and OEP in the preparation of meetings of Governors' White House Conferences with regard to Federal-State relations, national legislative meetings, highway safety, and others.

Assisted and participated in the preparations for Federal-State relations visits to 40 States and traveled with Federal team to each of these States.

Increased the communications capability of Information Office for more immediate and quick response to the public as well as to our regional offices, Government agencies, and State and local offices.

LIAISON STAFF

Mr. EVINS. No new increases are proposed in the liaison staff. I thought the previous office dealt with liaison. You say this liaison staff maintains liaison with Members of Congress, committees, State and local government associations, business, labor, farm, and other national organizations concerned with political, social, and economic activities. Then you state it provides for coordination of the executive branch's participation in NATO civil emergency preparedness activities. It assists the Director in the active partnership with Governors. The Governor testified about his relationship with the Governors. I think this is one of your good activities.

Mr. DANIEL. This liaison staff, of course, could not carry on all this work with just the seven people. We have to borrow from others to help out when they are needed. As you can see, they cover a lot of territory.

Mr. EVINS. On page 81 you have two big areas: Continue work toward the streamlining of NATO-collective nonmilitary defense capabilities and participation in the second NATO-wide civil logistics exercise. What has been accomplished?

Mr. DANIEL. That is what I mentioned to you a minute ago. We accomplished something over the opposition of some of the countries, at our senior committee meeting in Brussels. The committee and also the NATO Council have agreed that they will update their emergency planning for contingencies other than nuclear war. We feel that the other countries will eventually cooperate with us on emergency planning.

DIRECTOR'S OFFICE

Mr. EVINS. Very good. Let's place in the record page 83, the Director's Office.

(The page follows:)

Director's Office

Positions:

Fiscal year 1967 actual	18
Fiscal year 1968 estimate	18
Fiscal year 1969 estimate	18

The OEP Director advises and assists the President in the determination of national nonmilitary defense policies and objectives. The Director acts on behalf of the President in coordinating the Government's entire emergency preparedness effort, and in developing a more active partnership with the Governors and legislative leaders of the States. The Director is a statutory member of the National Security Council. He participates in meetings of the Cabinet by invitation of the President, and chairs special Cabinet meetings for the President, in times of severe emergency. He provides overall direction to the Office of Emergency Planning.

The Deputy Director shares responsibilities with the Director and has full authority to act in his absence. The Deputy Director provides direction to daily operation of OEP and serves as the chairman of the planning committee which is composed of principal OEP officials, supplemented by others as needed. The planning committee considers long and short-range agency goals, program alternatives, projects, and priorities of the agency.

The Director and Deputy Director are assisted by two Assistant Directors who advise on policy matters and carry out special assignments for the Director.

Mr. EVINS. Now let us turn to "Other objects." You show an increase in everything, permanent positions, temporary positions, intermittent

employment is up from $103,000 to $104,000, part-time employment goes from $13,000 to $14,000, and overtime from $17,000 to $19,000. Then you have invitational travel which goes up from $24,000 2 years ago to $38,000. Is this because of the executives reserves?

Mr. RICE. Yes, sir; plus some of these specialists that we need.

DISASTER RELIEF

PROGRAM AND FINANCING (IN THOUSANDS OF DOLLARS)

[1] Selected resources as of June 30 are as follows: Unpaid undelivered orders, 1966, $19,300,000 (1967 adjustments, −$3,902,000): 1967, $23,354,000; 1968, $23,354,000; 1969, $23,354,000.

Mr. EVINS. Let us take a look at "Disaster relief." Place in the record pages 92 through 99.

(The pages follow:)

Disaster relief

Estimate for 1969, $15 million.

GENERAL STATEMENT

The Federal Disaster Act, Public Law 81–875, empowers the President to supplement the efforts and resources of States and local governments in carrying out their responsibilities to alleviate suffering and damage resulting from major disasters.

The President has delegated to the Director of the Office of Emergency Planning the responsibility for coordinating Federal assistance under the act. Upon the declaration of a major disaster, the OEP administers funds allocated for the State from the President's disaster fund, and directs and coordinates disaster assistance by other Federal agencies.

In a declared major disaster area, Federal aid is made available to help a State and its political subdivisions with debris clearance, emergency protective or health measures, with temporary housing, or to make emergency repairs to or temporary replacements of essential public facilities such as roads and bridges, sewer and water systems, and public buildings.

The recently enacted Disaster Relief Act of 1966, Public Law 89–769, provided for additional assistance for areas suffering a major disaster. It underscored the Office of Emergency Planning's role in the coordination of all Federal disaster assistance activities. It also created additional demands on the President's disaster fund in that it requires OEP to share the costs of repair and reconstruction of certain public facilities under construction at the time of a major disaster.

The past few years have seen a large number of major disasters, a number of which required considerable expenditures of Federal disaster relief funds. In the past 5 fiscal years there were 96 presidentially declared major disasters. Declarations were made for 41 States as well as Puerto Rico, the Virgin Islands, Guam, American Samoa and the Trust Territories of the Pacific Islands. Allocations totaling $312,786,750 were made for disasters occurring in this period. There were certain unusually severe disasters: The Alaskan earthquake in March 1964 resulted in allocations of Public Law 875 funds totaling $57,600,000; the Christmas week 1964 flooding in the Northwest was the basis for Presidential declarations for 5 States and total allocations exceeding $54,000,000; Hurricane Betsy in September 1965 has been described as the "hurricane of the century." with Louisiana especially hard hit and Public Law 875 work costing $39,750,000 accomplished in the State.

The table below lists the number of major disaster declarations and the dollars allocated for Public Law 875 relief and recovery work for those disasters in the past 5 fiscal years:

Fiscal year	Number of major disasters	Funds allocated
1963	23	$39,166,000
1964	18	72,927,000
1965	29	123,093,000
1966	18	65,030,750
1967	8	12,570,000
Total	96	312,786,750

As indicated, there were just eight major disaster declarations in fiscal year 1967, with Federal funds in the amount of $12,570,000 made available for Public Law 875 work in the declared areas. During the fiscal year, there also were a number of disaster emergencies that did not qualify as major disasters within the intent and scope of Public Law 875. Seven requests for major disaster assistance were turned down on the basis that they were not of such severity and magnitude to warrant Presidential declarations.

It is obvious that disasters vary in number and severity which cannot be predicted. For budget purposes, annual averages can only be a consideration.

Our fiscal year 1969 request for $15 million will not be sufficient if there is an unusually severe disaster or series of disasters.

A recapitulation of fiscal year 1967 major disaster activity follows:

The first declaration of the fiscal year was made on July 9, 1966, for storm and flood damages in North Dakota. It was the second declaration for the State in a 4-month period, for, in March 1966, there also was a flood disaster resulting in a Presidential declaration of a major disaster.

In September, a major disaster was declared for Nebraska because of torrential rains and flooding. Also in September, Hudspeth County, Tex., was declared a major disaster area because of unprecedented rain and serious property damage.

In late November and early December 1966, there was general rainfall over the entire Central Valley of California amounting to about twice the normal amounts. It resulted in major flooding and severe damages. The President declared a major disaster for California on January 2, 1967.

Three major disasters were declared in March 1967. Heavy spring rains in mountainous eastern Kentucky and over the State of West Virginia caused numerous rivers and streams to flood, causing widespread damage, especially to county and local roads and bridges. The President approved Public Law 81–875 assistance for both States.

A major disaster was declared for the Trust Territory of the Pacific Islands, also in March, because of damages caused by Typhoon Sally. Koror and Babelthuap, two small islands in the Palau district of the trust territory, were devastated when typhoon winds roared through the islands on March 2. Federal disaster funds have been provided for the repair or replacement of schools, dispensaries, and other public facilities of the territorial government.

On April 21, a series of tornadoes in the Midwest left in their wake a tragic toll of human lives, suffering, and property damage. Hardest hit were northeastern counties of Illinois where the tornado toll read: 53 dead and 952 injured; 373 homes destroyed and 1,160 damaged.

At the request of the Governor of Illinois, a major disaster was declared by the President in order to provide recovery and rehabilitation assistance in the tornado-damaged areas. Federally financed assistance was furnished to aid in the massive debris-clearance tasks and to repair damaged public facilities.

Since fiscal year 1967 was a relatively quiet year with respect to both the number and severity of natural disasters, OEP took advantage of the reduced activity to devote increased attention to a review and evaluation of State and Federal disaster assistance plans and programs.

A significant development in this period was the enactment of the Disaster Relief Act of 1966, Public Law 89–769, which liberalized existing Federal disaster assistance programs and gave statutory reaffirmation to OEP's role in the overall coordination of the Federal response to disaster.

In November 1966, the OEP convened an interagency conference to review the authorities and responsibilities of Public Law 89–769 and to insure that the appropriate Federal agencies were taking the steps necessary for its implementation. Subsequently, State and regional meetings were held with State and Federal agency officials to review, discuss, and plan disaster assistance programs and procedures.

Section 13 of Public Law 89–769 directed OEP to conduct an intensive study and investigation to determine what additional or improved air operation facilities are needed to prevent or minimize the loss of life and property resulting from forest or grass fires.

A special study group consisting of OEP staff assisted by State and Federal forestry consultants conducted the investigative study. The report with recommendations was submitted to the Congress in May 1967. The study revealed that Federal, State, and local governments have well-accepted plans for fire prevention and suppression, and that additional legislation is not required if sufficient funds are made available under laws now in effect. The recommendations generally were to implement existing legislation by adequate financing.

In fiscal year 1968, we are continuing to provide direct or financial assistance under Public Law 875 in declared major disaster areas. We are also giving increased effort to planning and preparedness activities that will increase readiness and minimize the effect of a disaster.

Our OEP disaster assistance procedural and guidance manuals are being revised and reissued. An interagency committee is being established at the national level to provide a point of liaison and coordination in preparedness activities, and in emergency operations as necessary.

In fiscal year 1969, we shall continue a reexamination of the disaster assistance program in the interest of developing new procedures and criteria that will afford more efficient and expeditious disaster relief. There will be an ongoing review and evaluation of disaster plans and organizations. Continued emphasis will be given to training, seminars, postdisaster critiques, disaster studies, and the overall coordination of Federal agency disaster relief activities. No increase in staffing is proposed for fiscal year 1969.

Already in fiscal year 1968, seven new major disasters have been declared. Allocations from the President's Disaster Fund in this period total $32 million for these disasters and for prior-year disasters. Two of these disasters deserve special mention because of their magnitude.

A Presidential declaration was made with respect to Fairbanks, Alaska, and adjacent areas because of severe damages resulting from the flooding Chena and Tanana Rivers. Virtually all of Fairbanks was inundated. Allocations totaling $7 million have been made for Public Law 875 emergency recovery work.

Hurricane Beulah, which hit southern Texas, has been rated by the Weather Bureau as one of the three most destructive hurricanes in American history. The President issued a major disaster declaration for Texas on September 28, 1967, and thus far, $10 million has been allocated from the President's Disaster Relief Fund for relief and restorative work in the area.

The attached table indicates our current estimate of funds required for disasters already declared. We estimate that approximately $16.8 million ($3 million during the remainder of fiscal year 1968 and $13.8 million during fiscal year 1969) is needed for Public Law 81–875 and Public Law 89–769 costs in these past disasters.

DISASTER RELIEF

SUMMARY OF REQUIREMENTS FOR DECLARED DISASTERS AS OF FEB. 29, 1968

State and disaster Number	Allocations from President's disaster relief fund to date (fiscal year 1968 and prior years)	Estimated additional allocation required	
		Fiscal year 1968	Fiscal year 1969
California (183)	$35,000,000	$1,500,000	$13,400,000
Minnesota (188)	12,150,000	250,000	
Colorado (200)	19,700,000	50,000	
Louisiana (208)	37,000,000	720,000	
California (211)	2,900,000	30,000	
Nebraska (228)	1,250,000	200,000	
Idaho (231)	250,000	(1)	
New York (233)	300,000	225,000	
North Carolina (234)	400,000	50,000	
Total		3,025,000	13,400,000
Plus 3 percent administrative expense		90,750	402,000
Total requirements		3,115,750	13,802,000
Balance in President's fund as of Feb. 29, 1968		18,401,257	
Estimated recoveries		1,000,000	4,450,000
Fiscal year 1968 total known requirements		3,115,750	13,802,000
Available for contingencies during remainder of fiscal year 1968		16,285,507	
Request for fiscal year 1969			15,000,000

[1] Undetermined.

ALLOCATIONS MADE, FISCAL YEAR 1967

[In thousands of dollars]

State	Type of disaster	Date declared	Allocated
Louisiana	Hurricane Betsy	Sept. 10, 1965	7,000
Mississippi	do	Sept. 25, 1965	265
American Samoa	Typhoon	Feb. 10, 1966	675
Minnesota	Flooding	Mar. 22, 1966	125
North Dakota	do	Mar. 23, 1966	700
Arizona	do	Apr. 30, 1966	1,120

North Dakota	Severe storms and flooding	July 9, 1966	475
Nebraska	Heavy rains and flooding	Aug. 31, 1966	845
Texas	do	Sept. 27, 1966	100
California	Severe storms and flooding	Jan. 2, 1967	5,000
West Virginia	Flooding	Mar. 13, 1967	1,250
Trust Territory	Typhoon Sally	Mar. 21, 1967	750
Kentucky	Severe storms and flooding	Mar. 27, 1967	250
Illinois	Tornadoes	Apr. 25, 1967	500
Total allocations for disaster assistance, fiscal year 1967.			21,755

ALLOCATIONS MADE, FISCAL YEAR 1968, AS OF FEB. 29, 1968

Alaska	Earthquake	Mar. 28, 1964	2,600
Montana	Severe storms and flooding	June 9, 1964	1,300
Nevada	do	Jan. 18, 1965	876
Louisiana	Hurricane Betsy	Sept. 10, 1965	2,750
California	Severe storms and flooding	Jan. 3, 1967	2,000
Trust Territory	Typhoon	Mar. 21, 1967	1,400
Kentucky	Severe storms and flooding	Mar. 27, 1967	150
Illinois	Tornadoes	Apr. 25, 1967	500
Nebraska	Severe storms and flooding	July 18, 1967	1,250
Kansas	Tornadoes, severe storms and flooding	July 18, 1967	1,250
Alaska	Severe storms and flooding	Aug. 17, 1967	7,000
Idaho	Forest fires	Aug. 30, 1967	250
Texas	Hurricane Beulah	Sept. 28, 1967	10,000
New York	Severe storms and flooding	Oct. 31, 1967	300
North Carolina	Severe ice storm	Feb. 10, 1968	400
Total allocations for disaster assistance, fiscal year 1968 (July 1, 1967–Feb. 29, 1968).			32,026

CARRYOVER

Mr. EVINS. You are asking for $15 million.

Disasters vary in number and severity, and nobody can predict when they may come. Now, what is the amount of carryover that you have in this fund?

Mr. RICE. As of the moment, $18 million.

Mr. EVINS. You have $18 million in the fund, and you are asking for an increase of $15 million more?

Mr. RICE. The $18 million is all obligated, or will be.

Mr. EVINS. You have $18 million carryover, but most of it is obligated?

Mr. RICE. Yes, that is our estimate.

Mr. WYMAN. Mr. Chairman, just one question. Are riots included in this, possible riots?

Mr. DANIEL. No.

Mr. EVINS. I think the new Director, the Governor, ought to give some attention to this area of concern.

Mr. DANIEL. Gentlemen, you consider it with me, please, because as I have said there has been disagreement in the past. My immediate predecessor had a feeling that you could interpret the language to cover a manmade disaster. I do not think so. I think the history of your act makes it clear that you are talking about natural disasters. If you want to broaden it, I hope the language will say what you want us to cover, and that you will provide the money, too.

Mr. EVINS. This $15 million is for natural disasters?

Mr. DANIEL. That is correct.

Mr. EVINS. They have a bill in Congress pertaining to riot insurance for stores that are destroyed. Insurance companies don't want to take the risk. They want Uncle Sam to pick up the tab.

Mr. DANIEL. You know this title of Emergency Planning makes a lot of people think, "Well, that Office ought to just plan for all emergencies." There are some that you have not authorized us to plan for and put money into if they occur, and this is one of them, in my opinion.

Mr. WYMAN. Have you made a legislative recommendation in this regard?

Mr. DANIEL. I have not. Before you came in, I pointed out that the Kerner report suggests broadening our authority.

Mr. WYMAN. Thank you.

Mr. EVINS. Look at page 98. It looks like "Available for contingencies" during the remainder of 1968 is $16,285,507.

Mr. RICE. For example, Mr. Chairman, we have a potential payment of $13,400,000 for the Placer County disaster in California on which the first voucher just came in 3 weeks ago.

Mr. EVINS. We know about the one in Texas, Beulah; we know about those in Alaska. What about this one in Placer County?

Mr. RICE. This one will be acted on under Public Law 769, otherwise known as the Bayh bill.

Mr. EVINS. Doesn't the President have to declare these areas a national emergency before this fund is available?

Mr. DANIEL. That is correct.

Mr. EVINS. Has Placer County been declared?

PUBLIC LAW 769

Mr. RICE. It has been declared eligible under Public Law 769.

Mr. EVINS. What is that?

Mr. PHILLIPS. Section 9, Mr. Chairman of Public Law 769 in effect amends our Public Law 875, the Major Disaster Act, in that it says we shall reimburse State and local entities of government up to 50 percent of the cost of essential public facilities of certain types which are enumerated.

Mr. EVINS. 50 percent of the cost of public facilities?

Mr. PHILLIPS. Which are incomplete at the time they are damaged. This is the significant difference. Under Public Law 875, we can reimburse a State or local governmental entity for the full damages, full

cost of repair or replacement of an essential public facility. That has been interpreted as a facility in use at the time of the disaster. Section 9 of the Public Law 769 was passed by the Congress to take care of some seven or eight specific types of facilities which were incomplete at the time they were damaged.

Mr. DANIEL. They were being built when they were destroyed.

Mr. EVINS. Certain types can be reimbursed 100 percent and other types 50 percent. Basically, tell us the different categories.

Mr. PHILLIPS. The difference is one is complete and one is incomplete. The incomplete ones are still the responsibility of the contractors, which is the normal way of building such facilities, by private contract. So that we can reimburse the local government up to 50 percent of the loss which was not covered by insurance, or not otherwise provided for, so that the local government can reimburse the contractors. Now, in this Placer County situation in California there was a very serious disaster and it damaged some facilities that were incomplete, which are now complete, by the way, and are in use. This is an old situation. as Governor Daniel indicated. We are now getting applications in on it.

Mr. EVINS. Do you think that most of your unobligated funds will be obligated in 1968?

Mr. RICE. Yes.

Mr. EVINS. The Governor testified you cannot tell the number or severity of the disasters.

Mr. DANIEL. That is right.

Mr. EVINS. You need some money in the bank in reserve.

Mr. DANIEL. Yes. We usually get some supplementals. We withdrew our supplemental request this year for $10 million.

Mr. EVINS. Governor, we like to accommodate you, but if we can give you enough funds now and not have a supplemental, why, that is better for all concerned, is it not?

Mr. DANIEL. It would be better.

CONSULTANTS

Mr. MARSH. Thank you, Mr. Chairman.

Going back to the first function of OEP, you mentioned in your statement that you had certain in-house research being done with the assistance of expert consultants. Can you furnish for the record the names of those consultants?

Mr. DANIEL. Yes, we can.

(The information follows:)

The following consultants and experts on the rolls of the Office of Emergency Planning as of March 5, 1968, are available in fiscal year 1968 as consultants and members of advisory committees to bolster the agency's in-house research.

Less than 4 man-years of consultant time is represented by this list, which includes 31 consultants serving without compensation.

COMPUTER OPERATIONS

Mr. MARSH. Could you furnish for the committee a general outline of the computer capability that you have, its costs, whether or not it duplicates work being done currently in Defense or CIA or other agencies, and the number of personnel that you have engaged, the number of hours those computers work?

Mr. DANIEL. Yes. You want that furnished for the record or do you want Mr. Truppner to speak to it now?

Mr. MARSH. All right.

Mr. TRUPPNER. I can say this: that we have 14 positions shown in the budget directly concerned with computer operations and direction. Then, as you know, the Corps of Engineers provides us operating support in the way of programers, statisticians, and machine operators, who work under our direction, under the title of the Mathematical Computation Laboratory. The two computers that are operative are the CDC–3600 which operated at slightly over 4,000 hours in calendar year 1967, and the new Univac–1108 which we have not accepted officially as yet. Consequently, it is operating essentially on a debugging basis. We have neither accepted nor paid the company for this computer.

Mr. MARSH. Are you having any trouble with encouraging or obtaining manufacturers to produce sufficient quantities of ordnance and ammunition?

Mr. TRUPPNER. That is not a serious problem, sir. As a matter of fact, what has happened in the past 12 to 18 months is a very substantial increase in the manufacturers of munition and materiel, for assistance from the personnel of the Business and Defense Services Administration, the Commerce Department, in the obtaining of necessary raw materials, components and subassemblies for the manufacture of ammunition and other military equipment.

Mr. MARSH. Finally, going back to the question that the chairman addressed to you at the beginning of the hearing where he set out the number of materials and other items of American production that are being shipped to Communist countries, the satellites, and to the Soviet Union, which I assume is under the policy of the bridges to the east, in your assessment of the national ability to reespond to meet these emergencies, how do you reconcile this type of support by supplying the sinews of war to the countries and area of the world that in effect are counterproducing the emergencies for which you have the obligation to plan against?

Mr. DANIEL. I cannot. I am in no position to justify it. That is not within our jurisdiction. We do not pass on this.

Mr. TRUPPNER. Governor, I might mention, however, that there are inputs into these decisions that are not always easy to discern on the surface. For example, one question is whether they can buy the same material for the same price elsewhere, anyway. So that if we did decide not to ship it, it wouldn't have any effect on the war potential at all. I know that in some cases, for example, material is shipped so as to reduce the necessity for the receiving country to create their own production facilities to produce it themselves, with the thought that in the long run the trade-off is to the national interest of the United States.

Mr. DANIEL. But in reply to Congressman Marsh's question, do we make any of these decisions?

Mr. TRUPPNER. No.

Mr. DANIEL. Is our Office cleared with at all?

Mr. TRUPPNER. We participate and are consulted, but do not make these decisions.

Mr. DANIEL. Where we need the materials, that is where we are consulted.

Mr. TRUPPNER. We certainly make a contribution with respect to the national security aspects of the material, and we frequently participate in interagency discussions that lead to decisions, but this decisionmaking responsibility is not ours.

Mr. MARSH. But you do make recommendations?

Mr. TRUPPNER. Yes, sir.

Mr. DANIEL. We are going to check the list that you mentioned to see whether or not we should express ourselves.

Mr. EVINS. Mr. Pryor, are there any questions?

Mr. PRYOR. No, sir.

Mr. EVINS. Mr. Wyman?

Mr. WYMAN. Governor, do you make recommendations in the course of the performance of your work that relate to the Department of Defense? I mean emergency planning; do you sometimes say that perhaps the Defense Department ought to consider this and that, thus and so, in what you recommend to the President?

Mr. DANIEL. Yes.

PENTAGON DISPERSAL

Mr. WYMAN. Have you ever made a recommendation that the Pentagon be dispersed, the functions that are all centered in the Pentagon be dispersed in the interest of the national security? Of course, I do not mean scattered to the four winds.

Mr. DANIEL. This Office has worked with all Federal agencies on dispersal but Defense has its own plans and they have worked them out themselves. Would you add anything to that, Mr. Phillips?

Mr. PHILLIPS. We advise and assist the military departments in the same way we have civilian departments on the aspects of readiness. The instructions and guidance issued by OEP are instructions and guidance to Defense in terms of the readiness of the civilian aspects of the Department of Defense.

Mr. WYMAN. But you relate directly and primarily to the civilian side?

Mr. PHILLIPS. Nonmilitary aspects completely.

Mr. DANIEL. They are on their own on this, wouldn't you say, as far as planning for their dispersal, as to what kind of installations they have?

Mr. PHILLIPS. The question of whether the Pentagon should be dispersed; that is entirely correct.

COMPUTER OPERATIONS

Mr. TALCOTT. Could you put in the record or give me an idea of how much you have invested in computers?

Mr. TRUPPNER. OEP does not invest directly in computers. Our computers are funded through a classified budget of the Defense Department and made available for our use.

Mr. TALCOTT. Whatever you have, you are only using less than half time. This seems to be an extravagance to me, especially if you have very much invested in computers.

Mr. TRUPPNER. If we may go off the record?

Mr. EVINS. Off the record.

(Discussion off the record.)

Mr. TALCOTT. You said that you use it for 4,000 hours; that is less than half the year, is it not?

Mr. RICE. No, sir. The computer is operated on a two-shift basis, 5 days a week, all year long.

Mr. TALCOTT. This is a matter that needs a closer look. The Pentagon has computers running out of their ears and the surplus here is used less than half the time.

Mr. EVINS. A lot of sins are committed in the name of national defense.

Mr. TALCOTT. Also, maybe we should be glad that you do not have the authority to make the decisions about purchasing or selling to enemy countries when they can buy from another country, if the only reason for us selling is because our enemy can purchase it from someplace else.

Mr. TRUPPNER. I merely mentioned that as an input that goes into the decisionmaking.

Mr. TALCOTT. I just happen to disagree very strongly with that basis for trading with our enemies.

Mr. EVINS. Governor, you made reference to the fact that we were going to supply you with the list. We hope that you will acquire the list from the Secretary of Commerce.

Mr. DANIEL. Yes, sir.

Mr. EVINS. That is, the list of materials. Give it your best thought and judgment. Off the record.

(Discussion off the record.)

Mr. EVINS. We wish this important agency a lot of good luck. You have a very important mission.

Mr. DANIEL. Thank you very much, Mr. Chairman and members of the committee.

OFFICE OF TELECOMMUNICATIONS MANAGEMENT

WITNESSES

JAMES D. O'CONNELL, SPECIAL ASSISTANT TO THE PRESIDENT FOR TELECOMMUNICATIONS/DIRECTOR OF TELECOMMUNICATIONS MANAGEMENT

COLE A. ARMSTRONG, DEPUTY DIRECTOR

JAMES H. GREEN, ASSOCIATE DIRECTOR (RESEARCH AND TECHNOLOGY)

WILLIAM E. PLUMMER, ASSOCIATE DIRECTOR (FREQUENCY MANAGEMENT)

WILL DEAN, SPECIAL ASSISTANT TO THE ASSOCIATE DIRECTOR (FREQUENCY MANAGEMENT)

V. F. EVANS, DEPUTY ASSOCIATE DIRECTOR (NATIONAL TELECOMMUNICATIONS)

COL. H. R. JOHNSON, ASSISTANT DIRECTOR, PROGRAM PLANNING

RALPH L. CLARK, SPECIAL ASSISTANT FOR INTERNATIONAL TELECOMMUNICATIONS STUDY

CHARLES E. LATHEY, SPECIAL ASSISTANT FOR FEDERAL-STATE AND MOBILIZATION COMMUNICATIONS

JOHN J. O'MALLEY, LEGAL COUNSEL

LEON J. FISHKIN, ASSISTANT FOR LEGISLATIVE AND MEDIA LIAISON

J. RAY O'CONNELL, EXECUTIVE ASSISTANT

Salaries and Expenses

PROGRAM AND FINANCING (IN THOUSANDS OF DOLLARS)

		1967 actual	1968 estimate	1969 estimate
	Program by activities:			
	1. Telecommunications management	1,067	1,330	1,186
	2. Research and development	306	719	800
10	Total program costs, funded—obligations	1,373	2,049	1,986
	Financing:			
21	Unobligated balance, start of year		−119	
24	Unobligated balance available, end of year	119		
25	Unobligated balance lapsing	90		
	New obligational authority	1,582	1,930	1,986
	New obligational authority:			
40	Appropriation	1,600	1,945	1,986
41	Transferred to other accounts	−18		
43	Appropriation (adjusted)	1,582	1,945	1,986
45	Proposed transfer to other accounts for pay increases		−15	
	Relation of obligations to expenditures:			
71	Total obligations (affecting expenditures)	1,373	2,049	1,986
72	Obligated balance, start of year	355	309	387
74	Obligated balance, end of year	−309	−387	−413
77	Adjustments in expired accounts	−12		
90	Expenditures	1,407	1,971	1,960
	Expenditures are distributed as follows:			
01	Out of current authorizations	1,407	1,662	1,573
02	Out of prior authorizations		309	387

OBJECT CLASSIFICATION (IN THOUSANDS OF DOLLARS)

	Personnel compensation:			
11.1	Permanent positions	662	828	866
11.3	Positions other than permanent	34	61	66
11.5	Other personnel compensation	6	6	6
	Total personnel compensation	702	895	938
12.0	Personnel benefits	49	62	69
21.0	Travel and transportation of persons	27	34	34
22.0	Transportation of things	1	2	2
23.0	Rent, communications, and utilities	195	240	58
24.0	Printing and reproduction	30	18	18
25.1	Other services	306	719	800
25.2	Services of other agencies	46	51	44
26.0	Supplies and materials	12	18	15
31.0	Equipment	5	10	8
99.0	Total obligation	1,373	2,049	1,986

PERSONNEL SUMMARY

Total number of permanent positions	70	70	70
Full-time equivalent of other positions	3	3	3
Average number of all employees	58	66	68
Average GS grade	10.1	9.8	9.8
Average GS salary	$11,802	$12,304	$12,408

Mr. Evins. The committee will come to order.

We have with us this afternoon our friends of the Telecommunications Service, headed by James D. O'Connell and Mr. Cole Armstrong, Deputy Director. Mr. Green is Associate Director for Research and Technology; Mr. Plummer, Associate Director for Frequency Management; Mr. Dean is special assistant, and Mr. V. F. Evans is a Deputy Associate Director for National Telecommunications; Colonel H. R. Johnson, Assistant Director; Mr. Ralph Clark, special assistant for international telecommunications study; Mr. Lathey is a special

assistant for Federal-State and mobilization communications; Mr. John J. O'Malley is legal counsel. Mr. Leon Fishkin is assistant for legislative and media liaison; Mr. J. Ray O'Connell is the executive assistant.

Mr. JAMES O'CONNELL. I hasten to say, Mr. Chairman, we are not related in any way. There is no nepotism going on here.

Mr. EVINS. It is a good name and I have no objections to family relationships. I think they are fine.

We will be pleased to hear your statement in justification of your appropriation request.

Mr. JAMES O'CONNELL. Mr. Chairman and Mr. Jonas, distinguished members of this committee, I appreciate this opportunity of briefing you on our budgetary needs for the fiscal year beginning next July 1.

I have been encouraged each year by the sympathy and understanding which I have received from this committee, by your counterpart in the Senate, and by this administration. As a result, we have received modest but significant annual increases in our budget. This has enabled us to begin to construct the organization and the competence with which to make inroads on the increasingly complex and important tasks which confront us—to identify the major problems in telecommunications and to start moving toward solutions.

A sense of honesty, however, demands that we measure this progressive increase in capability against the magnitude of the tasks—which are not being adequately done—tasks whose impact upon the social and economic life of the Nation has become so great that a Presidential task force has been organized to study the legal, regulatory, and organizational framework in which we are trying to apply telecommunications to our national needs and to the needs of world society. Mr. Chairman, this is a rather long statement.

Mr. EVINS. You may place the entire statement in the record if you wish, and summarize or highlight it as you wish.

GENERAL STATEMENT

Mr. JAMES O'CONNELL. Very good, sir. I will go through it in very much abbreviated form.

During the past 4 years we have dedicated ourselves to the task of identifying the problems and trying to do something about them. We have passed the point of problem definition and, in a sense, the task force now constitutes a crash effort to enable us to catch up with the accumulated backlog of unresolved issues.

There is no question but that we should be trying to obtain an unprecedented augmentation of our resources this year, but we realize that the practical nature of our situation in respect to national priorities is such that it would be unreasonable to expect it and that we should be prudent in our requests.

We therefore are not asking for an increase over last year's budget despite the needs which exist. We will continue to concentrate on our top-priority problems. We will move ahead on other important problems which we face, and we will anticipate picking up the ball which the task force will hand us in terms of policy recommendations which will have to be analyzed and implemented.

AREAS OF PRIORITY EFFORT

I wish to say just another word about the President's task force and then talk about our concerns and activities in respect to the frequency spectrum, the national communications system, and Federal-State cooperation in telecommunications. These are issues of utmost importance to us—and while there are many other important problems, these are the ones we hold in the highest priority.

THE PRESIDENT'S TASK FORCE ON COMMUNICATIONS POLICY

The President's task force is an unprecedented investigative body in telecommunications. It has a very broad, open-ended charter. In his August 14 message to the Congress, the President underscored specific telecommunications problems, complex, critical, interrelated, bearing heavily upon the national interest, upon economic and social political growth, not only within our own Nation but in all nations of the world, problems related to national and international law, regulatory practices, telecommunications industry structure, especially in the international field, and to the Federal Government's organization in telecommunications.

In other words, a basic look at the whole telecommunications picture as it exists today, and if and how it should be restructured for the future.

I should also say that for the past 4 or 5 months the resources of my office have been devoted very largely to assisting the task force in its comprehensive investigations in which they are proceeding from the identification of problems which we did, identifying others, taking a broader look, and I might say that they are doing what we should have been doing continuously had we the resources and personnel to have done so. Our resources have been made available to the task force and I estimate that between 75 and 100 percent of the time of all of the key personnel in my office is devoted to supporting task force requirements.

THE FREQUENCY SPECTRUM

A word on the frequency spectrum. I have in every appearance before this committee emphasized the importance of this problem and I am sure the committee fully recognizes it. The problem is a far more difficult one than my understanding of it almost 4 years ago. We have consistently devoted the bulk of the resources of the office, including 80 percent of the funds available for contract study, in coping with the problem, in getting better understanding, in trying to arrive at a clear picture of what is going to have to be done to improve the basic situation. And we intend to do the same next year, that is, the preponderance of our effort will be devoted to taking the steps that we feel needs to be taken to work toward a solution of this problem.

Mr. JONAS. May I interrupt there?

Mr. JAMES O'CONNELL. Yes, you certainly may, Mr. Jonas.

Mr. JONAS. Is not the problem one of making a decision instead of a study? You know somebody is going to get hurt.

Mr. JAMES O'CONNELL. Not necessarily.

Mr. JONAS. I do not think you can solve this problem without impinging upon the so-called rights of a lot of people that want to use this spectrum.

Mr. JAMES O'CONNELL. The simple way of looking at it is that you just take something away from somebody that has it and give it to somebody else.

Mr. JONAS. That is what I say.

Mr. JAMES O'CONNELL. That is really not the heart of the problem, if I may say so.

Mr. JONAS. There is just not enough room for everybody, is there?

Mr. JAMES O'CONNELL. There is more room that we have not used.

Mr. JONAS. The FCC has just split up some channels.

Mr. JAMES O'CONNELL. That is right. They have made 300 percent more channels available to the police forces of the country, for example, by channel splitting and reassignment.

Mr. JONAS. Did you advise them in that?

Mr. JAMES O'CONNELL. Not specifically, no. However, we work very closely with the FCC on studies in this whole field. We work together as a team.

Mr. JONAS. Go ahead with your statement.

Mr. JAMES O'CONNELL. Just let me finish answering your general question.

Once there is large capital investment in one portion of the spectrum it is extremely difficult to move and to reallocate the occupants except on a long-term basis. This takes time; it takes study. This is why we have to continually examine how to do it; this is why it is absolutely essential to undertake the studies that we do—accumulate data that we need—build on it. We're getting answers—concepts of how to do it.

I amphasize again that the problem is by no means simple. It's very complex and the farther one gets into it the better recognition there is of this.

When the President asked his special task force, "Are we making the best use of the electromagnetic frequency spectrum?" this was a very broad charge, involving value analysis and economic choices and engineering methodologies by which we could fit more services into the spectrum as it now exists. We are confident this can be done; that much more use can be made of the existing spectrum without the necessity for major reallocations.

I will pass on to page 8. This committee is well aware of the need for more land mobile services; of the problems of the small businessman in obtaining frequency space; of the actions that the FCC is taking to endeavor to make additional frequencies available to them.

As I say, we feel that our major role in working with the FCC, is to generate concepts of how we can, together, get much more usage out of this natural resource.

I might mention that we have had a joint technical advisory committee of the Electronic Industries Association and the Institute of Electronic and Electrical Engineers working on this problem for the last 4 years to give us industry's views of how this problem can be attacked. And we expect to get the results of their 4-year study in about 2 months.

We need more engineering; we need to develop additional capabilities which do not now exist. We have been operating with a methodology which was adequate many years ago because there was plenty of spectrum. Now we are in the situation of an overcrowded spectrum, and we've got to engineer our way out in terms of available space—and time—and geography—and in terms of how the various parts of the spectrum are being utilized.

One of the illustrative problems which gives a concrete example of the difficulties in frequency allocation is the sharing that was imposed upon satellite communications and our terrestrial microwave system. Both of these have potentials for rapid growth, and they are eventually going to collide in their demands for more spectrum space. Much additional experimentation and research is needed in this field so that we can determine how much each can expand without interfering with the other, and what the basic nature of the interference problems are going to be. We have devoted funds to study these very important questions—which are of great economic significance. We have been trying to get an experimental program going during the past year. We consider it a matter of great urgency, because we're talking here about two very important growth industries—telecommunications by satellite, and our profuse and highly developed terrestrial microwave system which at the present time support all of our TV network transmissions as well as much of our long-distance telephone transmission.

INTERNATIONAL CONSIDERATIONS

Added to our own national problems of the spectrum are important international problems. In 1969, the United States will participate in the renegotiation of the interim arrangements of 1964, under which INTELSAT, the international satellite communication consortium, has grown from an initial membership of 11 nations to its present membership of 61.

Furthermore, the Secretary General of the ITU is asking for an early convening of an international space conference to answer the questions of additional requirements for frequency space for satellite communication and other purposes.

Having studied this matter, we are convinced that to prepare for either or both of these conferences it is essential that our representatives have at their disposal far more technical data than is available to us today. We have proposed experimental programs and we are discussing these with the Defense Department and NASA to endeavor to get necessary resources mobilized from other Government agencies to conduct these experimental programs.

We believe very strongly that through engineering study and experimentation we can develop new areas of the spectrum above those areas now in use.

RADIO FREQUENCY PROBLEMS

Mr. EVINS. If I might interrupt you, here on page 22 you say, for example, 38 separate cities and 350 patrol cars now share one frequency. This is an overcrowded spectrum use. Do they not apply to the Federal Communications Commission for these grants?

Mr. JAMES O'CONNELL. They do.

Mr. EVINS. You have studied the problem, but you have no authority to enforce any regulations upon any bureau?

Mr. JAMES O'CONNELL. That is right, exactly.

Mr. EVINS. Because of this crowded situation, 38 separate cities and 350 patrol cars using one spectrum, what can you do about it?

Mr. JOHNSON. As a specific example, and I know you like specifics, Mr. Chairman, we have been working with Mr. Robert Goe in Mayor Yorty's office in Los Angeles. Much of this they have to do themselves but we have been supporting their activity and they are studying a single management system for the radio spectrum in Los Angeles that will handle all emergency facilities, fire, police, emergency ambulance, and they are right now in the middle of a 120-day design study to put all of these services under single management, and they believe they are going to get much better utilization out of the spectrum in that city.

Mr. EVINS. Do they have to apply to the FCC for authority for consolidating all of their services into one?

Mr. JOHNSON. They will have to in this area, but they have a good, solid engineering base behind their representations to the FCC, and we, of course, to the extent we can, will support them in that.

CITY STUDIES CONCERNING RADIO SPECTRUM

Mr. JONAS. Are you recommending to other cities that they initiate similar studies?

Mr. JAMES O'CONNELL. We are.

Mr. JONAS. Have you got any of them underway?

Mr. JAMES O'CONNELL. New York is making a study.

Mr. JOHNSON. Under task force cognizance, we will have three studies going on, one in New York, one in Chicago, and one in Los Angeles, which is already advanced.

Mr. JAMES O'CONNELL. First of all, they can do considerable amounts for themselves.

Secondly, by attacking the problem in these megalopolis areas, rapidly growing urban areas, we can focus engineering capabilities on measuring interference patterns, determining actual use being made of frequencies. We are convinced that such engineering investigations will ultimately result in a great deal more utilization.

Mr. JONAS. You tell us you are encouraging them to do it and you are meeting with them and consulting with them, and giving them the benefit of your advice and counsel, and they are moving forward and making some progress.

Mr. JAMES O'CONNELL. This is true.

Mr. JONAS. Where besides Los Angeles? Give us some examples.

Mr. JOHNSON. We have the two cases under study now in New York and Chicago, under the direction of the task force with contract assistance.

Mr. JONAS. Can you do this on a regional basis or does it have to be restricted to a metropolitan area?

Mr. JAMES O'CONNELL. We think it could be done on a regional basis. In this sense, there is an analogy with the New York Port Authority in the transportation field.

Mr. JONAS. That whole area in New York City would require maybe some statutory authority and creation of an authority or something.

Mr. JAMES O'CONNELL. They could mutually agree to the establishment of an authority. If legislation is required, it should be sought. This is one view of the way of engineering ourselves out of this problem over the next 5 years.

Mr. JOHNSON. In many of these cases metropolitan areas themselves are finding a lot they can do for themselves.

The city of Los Angeles, for instance, has now for the first time a communications board which reviews and passes upon all of the requirements within that metropolitan area. And it is a major undertaking administratively. But they are making great strides and we are learning as we go and we will recommend these same solutions to other large metropolitan areas.

Mr. LATHEY. I might mention also our work with the States, New York, Massachusetts, Illinois, California, Nebraska, Kentucky, Missouri, South Dakota, Colorado, Ohio, all working on the same problem with our office.

Mr. JONAS. This problem does not lend itself to a State-by-State solution as well as it does to metropolitan areas?

Mr. JAMES O'CONNELL. That is true.

Mr. JONAS. You cannot stop at a State line.

Mr. JAMES O'CONNELL. That is right. That is one of the major problems.

Fundamentally, it's a regional problem, it's a problem of knowing what is the actual usage within a regional area.

Mr. JONAS. How much of this spectrum do we have unused?

Mr. JAMES O'CONNELL. No one can really answer that question.

CHANNEL SPLITTING

Mr. JONAS. Do you know how much you can split up the channels now in existence?

Mr. JAMES O'CONNELL. That is a technical problem. We estimate that we have gone about as far in channel splitting as we are going to be able to go with the present state of the art.

In the next 5 years, assuming further research and development there might be some additional channel splitting. We have already split about 5 to 1 from where we started. There is a joint study which we are conducting with the FCC for a 5-year review of usage reporting, and a regional pilot study as to what uses actually are taking place in various areas.

Mr. PLUMMER. If I might expand on that a little bit, there are four objectives.

With the study being carried on by our subcommittee, we hope within about 2 weeks to have a report of the use of land mobile frequencies in the 10 major metropolitan areas and we are looking for the possibility there of improving the use in the non-Government frequencies as well as Government.

We considered, if necessary, shifting unused Government frequencies over to non-Governmental purposes, particularly for emergency service.

Secondly, we are working to put all Government assignments on a 5-year basis so they would automatically be reviewed at 5-year intervals. We have never had the capability before for the cleanup of deadwood. Last year we deleted something over 12,000 assignments. We hope to increase that number considerably with this mechanism.

Mr. JAMES O'CONNELL. I think we ought to say at this point that the needs of the Federal Government are increasing, as are the needs of the private sector. By increased housecleaning operations, by getting timely information about changing requirements—about frequencies no longer needed—by retiring or reassigning them—we are able to meet the Government's increasing needs without increasing the overall spectrum space allocated for Government use. In other words, we have allocated for Government use—discarded many frequency slots and put in their place more important Government requirements. This is a process of housecleaning, let's say a more businesslike operation within the Federal Government than we have ever been able to do before.

Mr. EVINS. Go ahead and highlight your statement.

You are not asking for any increased personnel?

Mr. JAMES O'CONNELL. That is right.

FEDERAL-STATE COOPERATION IN TELECOMMUNICATIONS

I should say a brief word about our Federal-State telecommunications activity.

The States are beginning to realize that they have a need for economizing and systematizing their State communications systems. To respond to the States' increasing requirements for guidance and assistance by this Office, we have created a Federal-State advisory council consisting of representatives of the States and of the executive departments which give grants to the States in telecommunications.

Mr. EVINS. The Governors of various States nominate certain representatives on this council.

Mr. JAMES O'CONNELL. That is right.

Mr. EVINS. How frequently does this council meet?

Mr. JAMES O'CONNELL. We have met three times so far. And we have another meeting this month. We have found the States to be extremely anxious to get assistance and advice from us.

Here is a letter passing on to me a request from Governor Volpe for the assignment of personnel. Unfortunately, we have only one man working in this area because of our meager staff, and if we assign him to Governor Volpe we cannot be helping the other State Governors.

Mr. EVINS. You have a lot of experts over there, General O'Connell. They can advise the Governors.

Mr. JAMES O'CONNELL. At the present time we are the catalytic agent: we are suggesting how the States can improve their communications system, we are suggesting that they organize a central State authority reporting to the Governor to handle telecommunications. We are pointing out that if they are going to have and make economical use of what they are spending, and what the Federal Government is giving them for telecommunications, they are going to have to get coordinated systems studies. Otherwise, every State department is going to have its own little system—the health service, the ambulance

service, the police, the sheriff's office, the roads. They all have their own. They are not integrated or systematized.

Mr. EVINS. Your capacity is advisory.

Mr. JAMES O'CONNELL. Exactly. And we are very actively promoting this.

Mr. EVINS. You are assisting the States in making more efficient use of their communications system.

Mr. JAMES O'CONNELL. We're responding to the States' apparent needs—giving them advice and assistance when they come to us for it. I should point out that our efforts in response to these requests for assistance is by no means a one-way street. What we're doing in the way of helping the States plan for integrated, less costly statewide telecommunications systems is of very important ultimate benefit to the Federal Government as well. Take for example a situation of a natural disaster where many Federal agencies would immediately become involved in assisting the State—troops from military installations, Small Business Administration, HEW, and many others—and it would be essential to have adequate communications, particularly if rural or relatively remote areas were involved. The best possible response to this kind of situation—or even to a situation in which this Nation was attacked—would be if you had a well-integrated statewide system which could easily be hooked in to the National Communications System, using all means of communication by which to reach outlying areas—people out of touch with the rest of the Nation. Right now, in virtually no instance among the States is this kind of interconnectibility between State and Federal telecommunications resources planned as such. This will be a very important benefit to the Nation, which results from what we're now doing to assist the States in their communications planning.

I have here a little brochure——

Mr. EVINS. Federal-State cooperation advisory committee.

Mr. JAMES O'CONNELL. This tells what its objectives are. You may or may not want to put that in the record.

I also have copies of our 5-year spectrum development program which are available.

PREPARED STATEMENT AND APPENDIX

Mr. EVINS. You list the major accomplishments during 1967 in the frequency management. We will place your statement and appendix to your statement in the record.

(The material follows:)

Mr. Chairman, distinguished members of this committee, I appreciate this opportunity of briefing you on our budgetary needs for the fiscal year beginning next July 1.

I have been encouraged each year by the sympathy and understanding which I have received from this committee—by your counterpart in the Senate—and by this administration. As a result, we have received modest but significant annual increases in our budget. This has enabled us to begin to construct the organization and the competence with which to make inroads on the increasingly complex and important tasks which confront us—to identify the major problems in telecommunications and to start moving toward solutions.

A sense of honesty, however, demands that we measure this progressive increase in capability against the magnitude of the tasks—tasks which we admit are not being adequately done—tasks whose impact upon the social and economic life of the Nation has become so great that the alarm bells have been heard and

a blue-ribbon task force created for the purpose of determining whether our legal, regulatory and organizational structure is indeed equal to the problem of adapting this dynamic technology to our national needs and to the needs of world society.

During the past 4 years we have dedicated ourselves to the task of identfying the problems and trying to do something about them. In a sense, the task force constitutes a "crash effort" to enable us to catch up with the accumulated backlog of unresolved issues.

However greatly we may be dedicated in trying to match inadequate resources with monumental challenges, there is much difficulty in being forced to determine the optimum point at which dedication and responsibility coincide with reality. Responsibility and forthrightness tell me that I should try to obtain an unprecedented augmentation of my assets so that we can do more than react to problems as they arise—so that we can create, shape and influence a telecommunications environment which is far more relevant to the needs of Government and industry and the public than that which we have today.

But responsibility also tells me that our national priorities and *all* of our growing national needs demand a prudent and balanced approach.

And it is in this spirit of prudence and appreciation for economic realities that I come before this committee and ask that you support us at the same resource level as that which we were given for fiscal year 1968.

This amount will permit us to move ahead on a few of the most important problems which we face; it will permit us to make a reasonable dent on other problems which are of growing importance and complexity; and it will perhaps enable us to devote a little time and effort to the longer range questions which continued technological progress will inevitably raise.

I would like now to devote the major portion of this presentation to acquainting this committee with our priority problems and the efforts which we are applying to their correction.

I intend in these next minutes to say something about the President's task force—about the problems of the frequency spectrum—about the national communications system—and about our program for Federal-State telecommunications cooperation. These constitute our current list of priority effort. They are by no means the sum and substance of our concerns; nor can we be content with the need for ranging other problems at a level of lower priority. They also demand our attention and our study.

I would like initially to say a few words about the task force. I do so for two reasons. First, the task force is an unprecedented body. At no time in our modern history has a group been assembled whose charter for investigation is as open-ended as the one under which this task force is operating. In his August 14 message to the Congress on communication policy, the President underscored specific telecommunications problems, all of them complex, critical, interrelated—all of them bearing heavily upon the national interest, upon the social and political growth not only within our own Nation but in all nations of the world—all of them related to national and international law, to regulatory practices, to telecommunication's industry structure, to the Federal Government's organization for telecommunications.

The second reason for my mentioning the task force is because, during the past 4 or 5 months, the resources of our office have increasingly been devoted to assisting the task force in its comprehensive investigations of numerous and varied issues. We look upon the work of the task force as work we should be doing on a continuous basis, were our means adequate for the purpose. Nevertheless, the expertise of our office and the objective results of our many relevant studies in the past were from the outset made available to the task force and have been provided with increasing frequency and hopefully with increasing value.

We expect that this will assist the task force to develop the conclusions and recommendations in respect to important issues which are amenable to ad hoc considerations, so that we can concentrate on the less tractable, longer term priority problems which I have mentioned.

The fact is, however, that between 75 and 100 percent of the time of virtually all of the key members of my staff has been devoted to supporting task force requirements. I have no doubt that this level of effort will continue or will rise before the task force has completed its work; and then the continuity of action and follow-on must be maintained. This support has forced us into an attempt to absorb this workload with minimum impact upon other heavy commitments. Obviously, something has had to give; what we have been forced to do is to con-

centrate our reduced capability upon the most important activities, and go into a "holding action" on those activities which, while eminently important, must give way to top priority issues.

Of these priority issues, none is more important than that of the frequency spectrum problem.

I have, in every appearance before this committee, emphasized the critical nature of this problem and based my request for additional funds primarily on the need for making headway on this issue.

During the current fiscal year, we have devoted the bulk of all of the resources of our office—including 80 percent of the funds available to us for contract studies—in coping with the problems of the frequency spectrum on a day-to-day basis while simultaneously moving ahead on the formulation and execution of longer range plans.

Today I can tell you that we will, during the coming fiscal year, again devote the bulk of our resources, including some 80 percent of our resources, to this one major problem.

I need not tell this committee, as I have told it before, that the problem is not one of money alone—that there is no way in which we can work a miracle to undo what has been developing over the past decade or more.

Nor do I need to remind this committee that the President, in his message to Congress on communication policy, posed several questions for task force consideration. And the first of these was:

"Are we making the best use of the electromagnetic frequency spectrum?"

This is a problem which the task force is studying intensively. We would expect that this group can, if it sees fit, reinforce or augment our analyses and longer term planning on how the job can be done and what it will take to do it.

The fact is that, today, we know much more about what needs to be done, and we can point to very many important activities and accomplishments resulting from the additional resources which we have been given specifically for this purpose. I have noted the most important of these as an enclosure to this statement and I submit it to this committee as a progres report of our efforts during this current fiscal year.

Far more remains to be done—and far more rapidly than our resources will permit.

The pressures for immediate and long-term solution are growing. In the brief period since my last appearance before this committee, the question of the frequency spectrum has become increasingly a "popular" issue. Today, more small businessmen throughout the Nation whose economic livelihood depends upon the use of the spectrum for 2-way communication, are asking Congress for relief from the strictures of a seemingly vanishing natural resource. An increasing number of metropolitan centers are finding themselves unable to "beef up" their communication capability in response to increasing needs for better and faster public services—because of limited frequency spectrum space. The voices of industries whose investments in the spectrum involve literally billions of dollars are increasingly raised on behalf of finding the solutions to a problem which today makes it impossible for them to plan reasonably for future growth. We are basically faced with a situation in which this important national resource is threatened by inadequate engineering and by great unmeasured growth and use.

To find the answer to our polluted frequency spectrum, we've got to do research and encourage others to devote funds to research. We must engineer our way into new frontiers in the higher ranges of the spectrum. We've got to think about rearranging and perhaps reallocating existing parts of the spectrum so as to permit those segments of our economy which are trying to grow to have the room to grow; and to permit those segments of our economy which have already grown to great size to grow even more. We've got to do far more than we've done to analyze this resource in terms of its real value to the Nation and to its users.

The economic segments of our society which use the frequency spectrum already contribute more than $20 billion a year to our gross national product. Given the opportunity for expansion, this figure could easily be doubled in a very few years.

But I repeat: The years of apathy, lack of understanding, inadequate effort, profligate use of what seemed at one time to be an almost inexhaustible resource, cannot be washed out overnight. Even if we were confronted with only the problems which existed 5 years ago, we would still not be able to obtain a rapid solution to the problem.

But the situation today is far more complex than it was 5 years ago, for we are now squeezed in addition by advancing satellite technology. The space services; that is, communication by satellite, could only be initiated by sharing spectrum space between the satellite and our terrestrial microwave radio relay services. As a result, we impose limitations upon both services. These constraints imposed by sharing cannot be accepted too long if we are to provide for the ultimate needs of a technology which promises to double the volume of world-wide communications every 5 years.

And compounding this problem is the mounting pressure both in the United States and Canada to utilize satellites for domestic communication systems. A domestic system would make it necessary to deploy relatively large numbers of earth terminals over our highly developed land mass.

But we are already faced with very serious technical problems of avoiding unacceptable mutual interference between existing and planned microwave radio relay facilities. These engineering problems are considerably expanded when you contemplate superimposing a network of satellite system earth stations on our profuse and expensive microwave complex.

Added to these considerations are important international pressures. In 1969, the United States will participate in the renegotiation of the interim arrangements of 1964 under which Intelsat—the international satellite communication consortium—has grown from an initial membership of 11 nations to its present membership of 61.

Moreover, there is a good possibility that there will sometime in the near-term future be held an international space conference under the sponsorship of the International Telecommunication Union.

To prepare for either or both of these conferences, it is essential that the representatives of the United States have at their disposal far more technical data in respect to the electromagnetic frequency spectrum than is available to us today.

The urgency of this requirement is underscored by a number of interacting and highly significant considerations.

Among these are the great and growing demand for domestic and international communication satellite services; the surprisingly high demand for new frequencies in the millimeter wave portion of the spectrum for both space and terrestrial services; and—above all—the limited amount of spectrum space available for these and other uses.

We will need additional technical data so that we can determine with reasonable accuracy a number of very important decisions for the future; for example, the design, the feasibility, and the economic justification for a domestic satellite communication system; how orbital space will be used both for international and domestic or regional systems; to what extent the United States should continue to develop its current $2 billion investment in terrestrial radio relay systems; what the U.S. position should be during the 1969 renegotiations on domestic and regional satellite communications systems.

The fact is that the data cannot be easily obtained. We have devoted a preponderant share of our limited resources to contract studies and in-house research in an effort to obtain the facts.

One of the urgent needs is an early and extensive propagation and interference measurement program, conducted over a period of at least 1 year in order to include a full weather cycle.

I have personally attempted over many months to encourage a program of this magnitude to be undertaken. I am far from optimistic that it will be undertaken or can be undertaken in time to meet our most urgent needs.

Apart from specific requirements such as this, we have been engaged in a general assessment of what might be done to obtain prompt and far-reaching relief. We have arrived at three basic short term objectives: First, to improve our engineering capability to permit greater sharing of available frequency resources based upon concepts of geography and time; second, to increase coordination and engineering of frequency assignments in certain frequency bands, to be effected at the local or regional level; and, third to require regular reporting of frequency usage so that we will know the actual situation and be in a position to determine what needs to be done.

At the same time, we must contemplate the formulation of measures which will provide additional and longer term relief. We believe that this can be realized by improved engineering of both frequency assignments and communications-electronics systems, including the introduction of improved technology, automated data systems and multichannel "common-user" concepts. We believe that

implementation of these measures will provide a major increase in the effectively available radio frequency spectrum and thereby greatly postpone the time when its use may have to be denied for purposes that can be satisfied by other means.

All of these steps forward are important, but the magnitude of the task and the requirement for speed demands far more in the way of dollars and people than are now available both at the national and local levels.

We shall continue, however, to move as rapidly and surely as we can along our presently charted course:

To collect adequate facts, construct an adequate data base that can be rapidly consulted and coordinated on an electronic data processing basis.

To apply adequate engineering to the problem of eliminating interference, and when interference and conflicts occur, to engineer our way around them so as to accommodate more services in the same spectrum area.

To continue to analyze the comparative values in the use of the spectrum—values to the national and the public interest—so that when some forms of use must be restricted, we can choose those of lowest real value to the Nation and to the public.

To establish standards of use of the spectrum and assure that these standards are universally known; and, then, to obtain the capability for measuring the use and the observance of these standards.

To develop an adequate body of policy and regulation so that people who wish to invest in the spectrum have a reasonable chance of obtaining a return on that investment over a reasonable period of time and within the framework of the national interest.

While we have devoted the bulk of our resources to the problems of the frequency spectrum, we could justifiably apply equal resources to the problems of the national communications system.

In August 1963, following an intensive investigation by a Presidentially-appointed committee which studied apparent deficiencies in our national communications during the Cuban crisis, President Kennedy directed by memorandum that a national communications system be established.

The unified system was to be developed by linking together, improving, and extending on an evolutionary basis the communications facilities and components of the various Federal agencies. The ultimate objective has been to obtain a survivable network which could meet the entire range of Government needs throughout the world and under all conditions ranging from a normal situation to national emergencies and international crises, including a nuclear attack.

In terms of our national security, the NCS clearly reflected an urgent and overriding national need.

It can be described in equally critical terms today.

The Presidential memorandum also specified that the Director of Telecommunications Management would serve as a special assistant to the President for telecommunications and that he would, in respect to the NCS, advise, provide guidance as to the relative priorities of requirements, identify requirements unique to the needs of the Presidency, review actions to insure compliance with policy determinations and guidance, and insure adequate planning to meet future needs of the NCS.

When I assumed my present position in May 1964, there were no funds specifically earmarked for NCS implementation; there was available to me the part-time service of one professional staff member; there was no organizational element of the office charged with the NCS responsibility; there was only meager information concerning the resources available to support the establishment of the NCS; there was no identifiable program for determining the manner in which the major communications systems of the Federal Government valued at some $2½ billion were to be linked together to form the NCS.

It was not until late in 1966 that I was able to assemble an adequate number of highly-competent professionals who could undertake a meaningful program for implementing the responsibilities of this office for the NCS.

Implementation has moved steadily forward. The evolving system is being achieved through linking together some 41 formely independent systems of the Government departments and agencies.

Through the interconnection of networks operating within the NCS, significant increases have already been attained in the survivability and flexibility of NCS components.

Extensive tests and exercises have been conducted and operational standards and objectives have been published by the manager, NCS.

A National Communications System Emergency Actions Group has been formed and staffed with representatives of the major operating components.

This group has the capability for speeding decisions and expediting actions during emergencies.

There has been progressive improvement in the NCS long range plan. Even though this annual plan is not yet a decision forcing document, the initial steps have been taken to introduce coordinated planning, programing and budgeting procedures for the NCS.

Within my office, considerable planning has been done to improve the interface between Federal and State telecommunications systems. (I will refer to this matter later in my presentation.)

The current NCS long range plan includes for the first time a resource inventory which categorizes expenditures for systems procurement, manpower, maintenance and operation, research and development, and leased facilities for major elements of the NCS.

Despite substantial progress, much remains to be done; growing interdependence of Government operations demands increased communication interconnection. In this regard, I have asked the Executive agent to recommend an optimum NCS design concept for the 1970–80 period, and I expect it to come to me for approval this summer. This will help assure that future Federal communications are planned from an overall national viewpoint.

Government telecommunications requirements are changing rapidly. To meet these requirements demands a continuously updated data base so that valid requirements are translated into a forward-looking NCS plan.

The advent of Government-owned communication satellite systems will impact heavily upon the further development of the NCS. A comprehensive, detailed long-range plan which relates the growth of Government-owned satellite systems to their impact upon existing national policy and international regulations and procedures, has yet to be written.

There is a need for a comprehensive body of technical, operational and service standards for Government telecommunications.

There is a need for rendering greater assistance to the executive agent for the NCS in identifying and pursuing near-term goals of making NCS telecommunications services available to all Government agencies.

There is a concurrent need for planning our telecommunication needs sufficiently far in advance as to enable industry to provide timely and effective support of our future requirements, particularly those with crisis overtones.

We need to study far more than we are currently able to do the potential uses to which this rapidly developing telecommunications technology can be put. For example, how can we better integrate current and future technology with the changing methods of conducting international diplomacy?

In brief, the ultimate objective for the NCS is to provide the Government with a reliable, responsive communications backbone, capable of meeting all national requirements and of doing so at minimum cost and maximum effectiveness.

Last year I acquainted this committee with the important initial efforts which we were making in response to the growing need for assistance by the States in their telecommunications planning.

The tempo and scope of this activity has increased so rapidly during the past year that the workload which has been generated by the needs of State and local governments for policy advice and assistance is far outstripping our capability for providing assistance.

It has become increasingly clear that telecommunications constitutes an indispensable factor in the achievement of congressional established goals contained in some 400 legislative acts authorizing Federal assistance to State and local governments. In more than 450 programs being administered under these acts, telecommunications support is vital.

In the brief time since we have undertaken to respond to State and local requests for our assistance, we have held discussions with more than 400 State and local officials and more than 300 officials from our national telecommunications industry. We have learned from these discussions that adequate statewide communications facilities and services, communications management structures, and communications policies, do not exist. Major improvements in our coordinating and planning structure are needed if State and local governments are to develop fully responsive, economical communications systems to meet today's requirements across a broad spectrum of government activities.

None of today's requirements at the national, State and local level is more important than that of telecommunications in support of law enforcement. The

report of the President's Commission on Law Enforcement and Administration of Justice highlights more than 20 specific ways in which telecommunications can improve law enforcement activities at the State and local level. The report underscores specific deficiencies resulting from inadequate telecommunications support:

> "Probably the single greatest technical limitation on the"—law enforcement—"system's ability to make its decision wisely and fairly is that the people in the system often are required to decide issues without enough information.
>
> "Automatic car locator systems costing $100,000 or less per year to operate would decrease the system delay"—(police response)—"at least twice as much as a comparable investment in additional patrol units.
>
> "The most troublesome problem in police radio communication is the critical shortage of radio frequencies available to the police community. In the Chicago metropolitan area, for example, 38 separate cities with 350 patrol cars must share one frequency.
>
> "The scientific and technological revolution that has so radically changed most of American society during the past few decades has had surprisingly little impact upon the criminal justice system . . . more than 200,000 scientists and engineers are helping to solve military problems, but only a handful are helping to control the crimes that injure or frighten millions of Americans each year—most police could have been equipped 30 or 40 years ago as well as they are today."

Our own direct and frequent contact with law enforcement authorities at the State and local levels confirm these findings. We have recently been working with representatives of the city of Los Angeles who are actively seeking means for improving telecommunications support of their law enforcement activities. The Los Angeles authorities have summarized their present situation as follows:[1]

"The LAPD is handicapped in the discharge of its responsibility by a system which is inadequate for optimum information gathering, processing, and exchange; command and control functions.

"This handicap results in an inability to perform optimally such functions as protecting lives and property; enforcing laws and city ordinances; preventing acts of lawbreaking; performing traffic control tasks; apprehending criminals; gathering intelligence about potential criminal acts; and providing any other services assigned to it by proper authorities.

"Inadequacies of the present system include but are not limited to the following general areas:

"Insufficient capability to follow and control events in the field.

"Insufficient knowledge of location, capability, and availability of field units.

"Insufficient communications handling and monitoring capability."

"Insufficient information processing, exchange, retrieval, and display capability.

"Limited operating utilization of costly equipment (i.e., used for major emergencies only).

"Additional training required for effective use of costly equipment because of specialized nature of operation."

During the past year, with the support first of Governor Bryant and then Governor Daniel, we have taken steps to organize a Federal-State Telecommunications Advisory Committee to provide a forum to which mutual Federal-State telecommunication matters may be referred for advice and assistance. Included on the Committee, apart from myself as Chairman, is the Defense Commissioner of the FCC who serves as vice chairman; Assistant Secretaries from the Departments of Commerce, Defense, HEW, HUD, Justice, State and Transportation; senior representatives from the Federal Advisory Commission on Intergovernmental Relations, Bureau of the Budget, GSA and OEP; State representatives from the Council of State Governments and the Governors' Conference.

A publication describing the composition of this Committee, its functions and its objectives was prepared for Governor Daniel's review and was recently disseminated to all State Governors for their information (I have copies here for each member of this committee).

---

[1] From "Request for Proposal for an Electronic, Communication, Command, and Control System for the Los Angeles Police Department", transmitted to the Office of Telecommunications Management by Letter dated Jan. 23, 1968, from Thomas Reddin, Chief of Police, and E. M. Davis, Deputy Chief, Planning and Control, City of Los Angeles Police Department.

Many critical nationwide planning tasks and issues remain to be tackled in the context of our Federal-State telecommunications coordination activity. Typical examples of critical questions which relate to telecommunications support are:

How can we use this technology more effectively to reduce the accident toll on our highways, improve the utility and capacity of our interstate highway system, respond more quickly with medical aid which could save lives when highway accidents occur?

How can the Public Broadcasting Act of 1967 and related legislation dealing with education be adequately supported by telecommunications technology to bring about the President's objective for a network for knowledge?

It is possible for Federal, State and local governments to begin to share telecommunications facilities and services so as to achieve economies of cost and use of the frequency spectrum? At present, there are administrative, legislative and regulatory impediments to achieving these objectives.

We have undertaken to promote the drafting of legislation which would permit the States to utilize the facilities of the Federal Telecommunications System. This is but one area in which Federal-State cooperation and coordination may bear useful results. There are many others.

How shall Federal, State, and local governments establish the procedures for intrastate, interstate and Federal-State coordination which can lead to the development and operation of efficient, economical telecommunications systems and interconnections?

The achievements of the past year testify to the degree of cooperative spirit between the Federal Government and State and local governments. I am optimistic that, if we are able to devote adequate resources to this activity, we can continue to make substantial progress toward finding the answers to the questions which I have raised.

Gentlemen, at the outset of my statement, I underlined the fact that the major and growing challenges to management of our telecommunications resource are vastly larger than the resources which I can apply to them.

I have tried to reconcile this disproportion between challenge and response by recognizing that we can do only so much with what we have in the way of planning and action in the light of mounting needs in virtually every major facet of our national life.

But we can and we do highlight—and give visibility—to our requirements, and seek to interest other Government departments toward action.

I have—despite clear recognition of increased need—asked that our budgetary authorization remain at the same level as last year's so that we may continue to make progress in our most important areas of activity.

I have reviewed three of these top-priority efforts: The problems of the frequency spectrum; the requirements for an integrated National Communications System; and the growing need for assisting State and local governments in applying telecommunications technology in support of their expanding requirements.

I do not wish to leave the impression that these activities are unique in their importance to the Nation. There are other massive and serious problems, but I merely want to identify a couple of them without going into extensive detail.

We are responsible for, and very heavily involved in, addressing a variety of critical issues which have arisen because of our progress in communication satellite technology. The pressures and the interactions which have developed continue to grow in strength and complexity. Our stated commitments in the Communications Satellite Act of 1962, and those arising out of our being a signatory to the Interim and Special international agreements of 1964—make it mandatory that we deal with questions such as the proposals for domestic satellite services, technological assistance to developing nations, the future of INTELSAT, and many other related matters which must be resolved before we enter into the 1969 renegotiations.

The rapid growth of satellite technology in the last few years is but one example of the continuing revolutionary advances in telecommunications. In fact, telecommunication technology is moving so fast that we find it increasingly difficult to adapt what we now have to the needs of our society much less try to develop a policy base which will enable prompt and wise use of the technology that's coming along. We are devoting as much of our effort as we can to try to anticipate the problems which will inevitably develop as a result of this onrushing technology and innovation of use—to try to act rather than react—

to try to plan for integrating these new developments smoothly, economically, and with least disruption to our social and economic life and to existing telecommunications facilities and services.

Scientific research into these matters is costly—but not nearly as costly as waiting for the problems to hit us.

We will continue to do everything that we can to grapple with these many problems—so that we can lay the groundwork for implementing the recommendations which the President's task force will make—so that we can maintain the impetus which we have been able to develop toward the formulation of improved national telecommunications policies.

Mr. Chairman—members of this committee—I appreciate your courtesy and am prepared to respond to your questions.

MAJOR ACCOMPISHMENTS DURING 1967 IN THE FREQUENCY MANAGEMENT AREA

1. Early in 1967, a Spectrum Development Division was added to the OTM staff for the express purpose of planning for and bringing about better use of the radio frequency spectrum. This group has already produced a 5-year spectrum development program, and the program is being pursued. Copies of this program are available for the committee and for introduction into these proceedings.

2. In response to a query from my office, the Joint Technical Advisory Committee (JTAC) (sponsored by the Institute of Electrical & Electronics Engineers and Electronic Industries Association) initiated a study in 1964 on the need for technological programs and the formulation of objectives for dealing with the subject of electromagnetic compatibility (interference) as a national problem. The JTAC effort, involving the services of over 200 people with an accrued total of approximately 40 engineering man-years, has just completed its work and has submitted a verbal report to the DTM. A final report is to be issued in the latter part of April 1968 wherein recommendations will be set forth for a major program for coping with the many facets of electromagnetic compatibility and frequency management, with emphasis on the need for major increases in engineering capabilities.

3. OTM staff members involved in the frequency management activity screened and processed over 32,000 frequency assignment actions involving the use of the radiofrequency spectrum by Government agencies in the fulfilment of their missions. The accomplishment of this workload, without increase in personnel, was facilitated greatly by extensive improvements in the application of automatic data processing to the frequency management area. Increased examination of frequency resources has brought about extensive reuse of the spectrum as evidenced by the fact that over 13,000 deletions, expirations, and withdrawals of frequency authorizations were processed during the past year. Such improved management is imperative if the increased requirement, brought about by our ever-increasing reliance upon communication-electronics devices, are to be fulfilled. Improved management also permits new needs, many involving national security matters, safety of life and preservation of other natural resources, to be treated expeditiously.

4. Coordination was effected with Government agencies and a concise statement of national objectives for use of the radiofrequency spectrum was developed.

5. The OTM approved and instituted for the first time a recommendation by the Intergovernment Radio Advisory Committee (IRAC) which requires the periodic review of Government frequency assignments at least every 5 years.

6. OTM staff representatives participated in a World Administrative Radio Conference of the International Telecommunication Union, attended by 70 countries, wherein the ITU radio regulations as regards the maritime mobile service were revised. One significant result was the allocation of radiofrequencies for oceanography, thereby enhancing the ability of U.S. scientists to insure that national objectives are met in this important area.

7. Intensive effort was made toward filling information voids pertaining to radiowave propagation in connection with communication satellites, particularly above 10 GHz. An interference measurements program, setting forth the specific experimentation required is under active consideration by an Interagency Policy Group (DOD, NASA, and FCC) chaired by the OTM.

8. A most significant report entitled "Impact of Projected Space Services Upon the Utilization of the Radiofrequency Spectrum" was received recently. This effort, conducted under OTM contract, was for the purpose of determining radiofrequency spectrum requirements for the allocation to space services during the

period 1966 to 1980. The study contains basic information essential to the formulation of the U.S. position for use in future national and international spectrum planning.

9. Under OTM sponsorship, contracts were let in the following areas with the objective of providing vital inputs to the national radiofrequency management effort:

a. Basic factors bearing on future use of the radio spectrum.
b. Study of electromagnetic side effects.
c. Improved usage of the frequency spectrum.
d. Alternatives in frequency management (pricing the spectrum).

An additional effort entitled "Standards and Measurements for Improved Spectrum Utilization" is currently out for bid.

10. Through the Subcommittee on Spectrum Planning of the Interdepartment Radio Advisory Committee, which reports to the OTM on matters pertaining to the radiofrequency spectrum, several problems of national significance have been treated. One area receiving attention has been the critical need for additional frequency resources in the case of non-Government land mobile services. A report, prepared in coordination with the representatives of the Federal Communications Commission, as to the findings on this problem is due in the immediate future. The subcommittee has also spent considerable effort on the difficult problems inherent in determining the frequency allocation needs associated with foreseen applications of telecommunication technology in the space area. A report on the spectrum space available for satellite communication services above 10 GHz was submitted recently to the OTM.

11. The OTM developed and submitted to the Interdepartment Radio Advisory Committee a proposed "unified spectrum usage reporting program." The purpose of this program is to incorporate into the Government frequency management data base as soon as practicable the capability whereby an indication may be obtained as to the extent to which radiofrequency resources authorized for use by agencies of the executive branch are actually employed. This is a particularly important objective in the case of mobile radio services. The availability of such a tool is a fundamental objective of the OTM since frequency usage data constitute a prime cornerstone in coping with the problem of frequency management at the national level. This objective of far-reaching and unprecedented magnitude in the radiofrequency area will be pursued with vigor during the coming year.

12. A policy has been developed to insure that Government agencies do not obligate themselves financially for the acquisition/development of expensive earth or terrestrial station sites until it has been ascertained that coordination has been completed with all parties affected and that adequate frequency support is available. This measure is necessary in view of the increasing proliferation of communication/electronics installations and is particularly appropriate with respect to the large investments necessary for major radar sites and earth station (communication-satellite) facilities.

13. The Manual of Regulations and Procedures for Radiofrequency Management, the first codification of regulations, procedures, and policy guidance for the acquisition and use of radiofrequencies by Government agencies, was revised, improved, and expanded.

14. Increased emphasis was placed at the national level on the need for improved engineering standards. In this regard, action was taken to give greater consideration to the proceedings of the International Radio Consultative Committee (CCIR) of the ITU. As an associated action, the work program of the Technical Subcommittee of the Interdepartment Radio Advisory Committee was expanded and accelerated. In the engineering area, particular attention is being given to improved use of the radiofrequency spectrum through such measures as the reduction of spurious emissions and harmonics of transmitters and the spurious responses of receivers.

Mr. EVINS. We note here that you are asking for $1,986,000, which is an increase over last year of $41,000 with the same number of jobs.

Mr. JAMES O'CONNELL. Yes.

Mr. EVINS. The reason for this increase I suppose is because of the pay act increase that the Congress passed.

Mr. JAMES O'CONNELL. Partly, but mostly a difference in lapse rates between fiscal year 1968 and fiscal year 1969.

UNFILLED POSITIONS

Mr. EVINS. How many unfilled jobs do you have in your organization at the present time?

Mr. JAMES O'CONNELL. We have four out of 70. Three are in the process of being filled, which leaves one that is not in the immediate process of being filled.

Mr. EVINS. Were you able to absorb any of your pay increase in 1968?

Mr. JAMES O'CONNELL. We did.

Mr. EVINS. Full amount?

Mr. JAMES O'CONNELL. Yes.

Mr. EVINS. You are going to be able to absorb some in the next year?

Mr. JAMES O'CONNELL. Yes.

Mr. EVINS. But you need $41,000 more.

Mr. JAMES O'CONNELL. That is correct.

SUMMARY OF RESPONSIBILITIES

Mr. EVINS. We will place in the record page 1, which is a summary of your program.

(The page follows:)

TELECOMMUNICATIONS MANAGEMENT, SALARIES AND EXPENSES

PROGRAM AND PERFORMANCE

The Office of Telecommunications is responsible for advising and assisting the President on all communications matters.

1. Telecommunications

This activity includes: (1) providing policy direction for the development and operation of the national communications system; (2) develop advanced concepts and plans for the application of new technology within the Government; (3) developing overall policies for the mobilization of the Nation's telecommunications in a national emergency; (4) assigning frequencies to Federal Government radio stations and developing procedures and rules for their use; (5) reviewing the actual usage of Government frequencies; (6) developing data on Federal Government frequency requirements; (7) providing assistance and advice to the Department of State on international telecommunications matters; (8) assisting the President with respect to his coordinating and other functions under the Communications Satellite Act of 1962; and (9) promoting efficiency and economy in the procurement and management of communication services throughout the Federal Government.

2. Contractual studies and research

This activity will finance technical studies of telecommunications matters which are too broad in scope to be undertaken by any single department and for which staff and facilities are not available.

Mr. EVINS. Telecommunications provides for policy direction for the development and operation of the national communications system.

Secondly, you develop advanced concepts for the application of new technology within the Government.

You develop overall policies for mobilization of the Nation's telecommunications in a national emergency. You assign frequencies. Does not the FCC assign the frequencies?

Mr. JAMES O'CONNELL. Not within the executive branch of the Government.

Mr. EVINS. This is where you have a hand in saying what frequencies should be assigned to the Federal Government?

Mr. JAMES O'CONNELL. Here I have the total responsibility for doing it. This is not advisory. This is authority.

Mr. EVINS. You review the actual usage of Government frequencies. GSA says they have a nonmilitary system and the military owns a communications system. One agency can pick up and call another.

Mr. JAMES O'CONNELL. Actually, the GSA system is part of the national communications system; this is not part of the problems in the frequency field. I am talking about the operational phase.

Mr. EVINS. You assist the President with respect to his coordinating and other functions under the Communications Satellites Act. We will talk a little more about that later, but tell us in a word what you do in the communications satellite field.

SATELLITE COMMUNICATIONS

Mr. JAMES O'CONNELL. We keep current on the progress that the Communications Satellite Corp. is making, the difficulties that they are having, the negotiations being conducted with their foreign partners, with the Commission and the State Department.

Mr. EVINS. Do these negotiations involve whether the land or facilities shall be owned by the corporation or shall be owned and maintained by the country in which they are located?

Mr. JAMES O'CONNELL. They are all owned by the country in which they are located. One of the problems here in the United States has been the question of ownership of eath stations in the United States, whether they should be wholly owned by COMSAT or partly owned by other carriers. And the FCC decided sometime ago on an interim basis to share ownership.

Mr. EVINS. Suppose you have a country that is a little recalcitrant and does not go along with your plans. How could you make them cooperate?

Mr. JAMES O'CONNELL. Persuasion and intellectual conviction, I would say. We do not try to exercise the weight of our position in the satellite business.

APPROPRIATION AND PERSONNEL HISTORY

Mr. EVINS. We will place page 2 in the record.

(The page follows:)

APPROPRIATION AND PERSONNEL HISTORY—OBLIGATIONS

Period (fiscal year)	Positions	Compensation and benefits	Other objects	Studies and research contracts	Total appropriation
1966	70	$638,000	$342,000	$300,000	$1,280,000
1967	70	800,000	375,000	425,000	1,600,000
1968	70	957,000	388,000	600,000	1,945,000
1969	70	1,007,000	179,000	800,000	1,986,000

SUMMARY OF ACTIVITIES

Mr. EVINS. We will look at this other summary. Your state that this budget is designed to encompass a period of transition and major change in the telecommunications policies of this Nation. These communications policies have guided the United States throughout the past 30 years. The role of the Office of Telecommunications has been that of a catalyst, as the Director said.

You point out the major intentions and problems. Then you list some of these problems on page 4 and page 5.

General, a friend of mine who reviewed this to give me an independent appraisal made this comment at the bottom of page 5. You say:

There is growing appreciation of the interaction between telecommunications and the social, economic and political objectives of the Nation. If used effectively, telecommunications can materially aid in solving of the problems of transportation, urban development, labor, education, the elimination of poverty, and almost every other major problem facing the Nation.

His comment was that is a rather modest claim.

Mr. JONAS. Did you say he was independent. He ought to be on this board.

Mr. EVINS. I asked him for an independent appraisal of the budget. This says you can solve all of our problems with telecommunications—elimination of poverty and almost every other thing.

Mr. JAMES O'CONNELL. Not some of them. But telecommunications support is essential to the solution of most of them.

Mr. EVINS. If you can do that, General, your money is well justified.

Mr. JAMES O'CONNELL. We do not say we can solve them all. Better communications can assist in solving most of these problems, the crime on our streets, the slaughter on our highways.

Mr. EVINS. If used effectively is the way you put it?

Mr. JAMES O'CONNELL. Yes. We have not begun yet to develop the potentials that lie in better communications for the solution of our national problems. This is the statement we are making.

JUSTIFICATION SUMMARY

Mr. EVINS. You say:

The goal is national telecommunications policy and growth that can support our national goals, our international objectives, our laws, our regulatory activities and the entire fabric of our national life.

That is a great goal. That covers it all.

You set that out on page 6.

We will place this all in the record.

(The material follows:)

I. SUMMARY OF THE TELECOMMUNICATIONS MANAGEMENT TASK

INTRODUCTION

This budget is designed to encompass a period of transition and major change in the telecommunications policies of this Nation. It is presented in an environment of anticipation and great interest throughout the Nation. An environment in which the President is providing leadership in the conduct of a total reappraisal of the communications policies that have guided the United States throughout the past 30 years.

The creation of the President's Task Force on Communications Policy "sets in motion the necessary studies for a better understanding of policy needs in domestic and international communications." [1] This budget seeks to provide the basis for the continuation of these studies—for the implementation of the policy recommendations presented by the task force—and for maintaining the impetus toward achieving improved telecommunications policies.

This administration, and this Office, have provided much of the leadership and factual analysis so essential to bring about a national focus on telecommunications policy matters. The major policy studies supported by the administration and the Congress in past programs of the Office of Telecommunications Management have been a major factor in:

Focusing attention upon the technological forces that are creating economic and social pressures.

Identifying significant policy needs in the field of telecommunications.

Creating awareness among Federal, State, and local government officials of the role the telecommunications can play in meeting the needs of modern government.

In prior years, the role of the Office of Telecommunications Management has been that of catalyst. It has been the task of the Office to point out the major potentials and problems that advancing telecommunications technology brings to the Nation—to focus national attention on these potentials and problems—and to set in motion the forces within Government and industry which could cope with the problems and take specific steps toward realization of the potentials.

The appointment of the President's Task Force on Communications Policy will provide a new national focus on telecommunications policy and increase the need for the development of factual data and implementation of coordination action. The development of factual-objective studies to aid in coordination of policy interactions between Government agencies, U.S. industry, and international interests has been a major function of the Office throughout the past several years. In many cases the issues dealt with are so fundamental in terms of financial impact or are sufficiently basic in other ways as to generate a crisis atmosphere that requires extremely careful policy action. Following are some representative policy crises that have been dealt with recently by the Office:

Uncertainty as to the role of the Government as an "authorized user" of satellite communications and the attendant issues of Government dollar savings versus continued viability of the international common carriers.

Dissatisfaction on the part of our Intelsat partners and disagreements concerning the extent to which the FCC should be involved in the international competitive bidding procedures employed by Comsat in their role as Intelsat manager for the global system.

Conflict concerning the proper division of services between communications satellites and undersea cables in the Caribbean.

Disagreement concerning the technical and radio interference issues between Government interests and the Communications Satellite Corporation in the implementation of the Hawaii communications satellite earth terminal.

Conflicting interests between the Government, Comsat and the domestic common carriers in an 18-month controversy involved in the final selection of the east coast (West Virginia) communications satellite earth terminal.

Conduct of factual studies and resolution of multiple conflicting interests involved in the executive position concerning the introduction of domestic satellite communication services.

Differences of views and objectives within Government and industry and conflicts of interests concerning the U. S. position to be taken relative to the 1969 negotiations and international discussions concerning "definitive arrangements" for the Intelsat global satellite organization.

Action to identify and clarify the issues involved in the conflict between Comsat and the common carriers in the case of TAT-5/Intelsat IV controversy.

One of our main roles must be that of providing adequate support to the task force and direction and management capabilities to carry out the policies recommended to and approved by the President. This is the mission addressed within this budget. We must seek to meet urgent decision action on crisis problems which cannot be deferred and at the same time provide the long-term management and direction that will permit us to achieve the potentials inherent in the telecommunications technology which makes up today's environment.

---

[1] President Lyndon B. Johnson, message to the Congress on Communications Policy, Aug. 14, 1967.

TODAY'S TELECOMMUNICATIONS POLICY ENVIRONMENT

There is growing appreciation of the interaction between telecommunications and the social, economic, and political objectives of the Nation. If used effectively, telecommunications can materially aid in solving the problems of transportation, urban development, labor, education, the elimination of poverty, and almost every other major problem facing the Nation.

In designating the members of the task force on communications policy the President took full note of the fact that telecommunications can be a pacing item to other important national objectives. The participation includes experts in the field of economics, international affairs, labor, space technology, information systems and media, science and technology, national security, law, transportation, commerce, health, education, and welfare, as well as the Director of Telecommunications Management, and the Chairman of the FCC. The goal is national telecommunications policy and growth that can support our national goals, our international objectives, our laws, our regulatory activities and the entire fabric of our national life.

The President described the environment well in his message on communications policy:

"The future of this new technology stirs our imagination.

In business and commerce—

Commercial telephone calls will be carried routinely by satellite to every part of the globe.

Rapid and universal exchange of data through satellite-linked computers will encourage international commerce.

Productive machinery can be operated at great distances and business records can be transmitted instantaneously.

In education and health—

Schools in all lands can be connected by television—so that the children of each nation can see and hear their contemporaries throughout the world.

The world community of scholars can be brought together across great distances for face-to-face discussions via satellite.

Global consultations, with voice and pictures, can bring great specialists to the bedsides of patients in every continent.

The art, culture, history, literature and medical science of all nations can be transmitted by satellite to every nation.

Who can measure the impact of this live, direct contact between nations and their people? Who can assess the value of our new-found ability to witness the history-making events of this age? This much we know: because communications satellites exist, we are already much closer to each other than we have ever been before.

But this new technology—exciting as it is—does not mean that all our surface communications facilities have become obsolete. Indeed, one of the challenges before us is to integrate satellites into a balanced communications system which will meet the needs of a dynamic and expanding world society. The United States must review its past activities in this field and formulate a national communications policy."

This budget presents specific programs which can respond to the challenge described by the President and concentrates in areas where identification by the task force on communication policy seem probable. The challenge is not easily met, the path from promise to practice will involve much vision, hard work, and cooperation:

We will need hard scientific knowledge and comprehensive trade-off analysis if we are to successfully balance the technological breakthroughs in space communications with those equally important innovations in microwave, cable, millimeter wave guides, and laser pipes.

THE TELECOMMUNICATIONS PROGRAM

Telecommunications needs creative Federal leadership—both in terms of national policy and modern legislation. The progress of telecommunications technology has been dramatic, but the task of introducing new telecommunications advances is not one of simply grafting a few improvements onto the existing system. Major policy studies are needed across a wide range of topics.

The task to be achieved is to bring up to date the established guidelines for a telecommunications industry that has been growing in various directions over the years.

In a period of over 100 years, there has been only five major legislative actions directly aimed at telecommunications policies. This is not to say that a large number of amendments have not been initiated; but there have been only five fundamental acts:

The Post Roads Act of 1866.
The Radio Act of 1912.
The Radio Act of 1927.
The Communications Act of 1934.
The Communications Satellite Act of 1962.

If telecommunications is to keep pace with the modern world, we need to provide a climate that will foster a more creative role for the Government in terms of national telecommunications policy and development of potentials for growth.

Some of the issues which can be expected to require attention in the future are:

Authorization for merger of the international common carriers.
Updating of section 606 of the Communications Act of 1934.
A basis for national policy on the communications and the copyright aspects of CATV.
Enlarged consideration of the issue of "Privacy in Telecommunications."
Interaction of Communications and Computers.
Improvement in the structure for the Federal Operation of Communications Systems and Facilities.
Consideration in depth of the national issues involved in the use of communications satellite systems to serve domestic needs.
Negotiation and consent to ratification of the International Agreement for Global Communications Satellites—Intelsat definitive arrangements.
Measures to advance the achievement of modern low-cost telecommunications systems by the developing nations.
Adequate management of the radio spectrum.

Radio frequency spectrum program

Of the many issues that we face, none is of greater urgency than that of dealing effectively and rapidly with the worsening crisis of the radio frequency spectrum.

Congress is well aware of the problem; it is aware that the long failure to plan effectively for the explosive growth in use of the spectrum has had a serious impact upon small businessmen throughout the Nation—has curtailed the expansion of essential public services which make use of the spectrum—and has seriously affected the economic growth of industries whose use of the spectrum has contributed over $20 billion per year to the GNP. That problem is now further aggravated by the introduction of communication satellite technology.

It is clear that time is running out on our ability to cope meaningfully with this problem. There is no way in which a miracle can be achieved, for it is only within the past 2 or 3 years that there has been significant recognition given to the nature of the problem and its impact upon our national life.

A comprehensive spectrum development program is presented in this budget. Stripped to its essentials, the program involves:

Collection of adequate facts, construction of an adequate data base that can be rapidly consulted and coordinated on an electronic data processing basis.
Adequate engineering which can plan the elimination of interferences, and when interferences and conflicts occur, to engineer our way around them so as to accommodate more services in the same spectrum area.
Value analysis to determine values to the Nation, values to industry, values to our public services, relative values to the public interest and to the national interest, of the use of the spectrum.
Standards of use, establishment of building code standards for the use of the spectrum so that everyone knows what the standards are.
Measurement of the use and observance of standards.
An adequate body of policy and regulation so that people who wish to put money into development of the spectrum have a reasonable chance of getting a return from that investment.

The national communications program

The requirements for this Office to act as a catalytic agent to resolve differing views and to stimulate more rapid progress toward established objectives is nowhere more apparent than in respect to the activities of the national communications directorate.

The need for an integrated, survivable, fully responsive national system has been repeatedly underlined by apparent deficiencies and by opportunities for further Government cooperation and greater economy. Typical issues and problem areas confronting the national communications directorate are evident in the following:

There is the question of how to cope with the requirements for communications systems capabilities in support of computer requirements. The issues generated by the growth of computer systems and the impact on telecommunications facilities will create problems of technical and operational standardization and require close examination of policy and needs for regulation.

There is the continuing requirement for some means of coping with the impact of technological progress on telecommunications.

There are questions of the soundness and adequacy of existing U.S. national telecommunications policy. Much of today's telecommunications policy extends from the Communications Act of 1934. This act was conceived and instituted in an era totally different in terms of the sophistication, kinds and quantities of telecommunications in use as compared with the extreme sophistication of today's communications which pervade and control every aspect of our social, governmental, and industrial lives. It is now appropriate to evaluate the Communications Act of 1934 and such other legislation and policies impacting on telecommunications.

There are issues evident in the area of State government communications requirements. Each of the 50 States is developing communications capabilities to meet its own particular State governmental requirements. Federally funded State telecommunications programs must be examined closely to determine whether some of the existing Federal communications facilities in a given State can also meet the State's requirements or that the State's facilities might be able to meet some Federal requirements.

There is the question of whether the U.S. Government is making its telecommunications needs known far enough in advance so that the U.S. industry can work toward the Government market of the future.

There are issues connected with consistency in implementation of cost effectiveness methods concerning telecommunications facilities.

There is the question of how to best cope with the impact of obsolescence.

There are a number of questions concerning the national telecommunications system (NCS). The national communications systems (NCS) is a major area of concern to the Director, Telecommunications Management.

There are problems in the management procedures evident in the need for "unanimous consent" of all agencies involved; the full power and control of the NCS executive agent cannot be directed to accomplishing major improvements under such conditions.

The Director, Telecommunications Management, as special assistant to the President, must guide and support the NCS executive agent in identifying and pursuing near term goals toward making telecommunications service available to all Government agencies. Through the continuous evolution of the NCS toward a single, common user Federal communications system, the Federal Government can expect to increase its telecommunications capability with a minimum expenditure of resources.

There are many issues connected with Government-owned communications satellite systems. This new telecommunications trunking medium has not yet been fully appreciated and applied in all areas of possibility. There are impacts of this new medium, because of its international nature, on existing national policy and international standards. A comprehensive, detailed long-range plan on the growth of the Government-owned communications satellite systems has yet to be written.

There is a drastic need for comprehensive, yet simplified, technical, operational, and service standards for Government communications.

International and satellite communications program

The need for a strong and efficient international telecommunications structure to support our worldwide commercial interests and our diplomatic activities has increased sharply during the post-World War II years. Many U.S. indus-

tries formerly involved in international trade in very minor ways have now developed manufacturing and sales organizations in a large and growing number of foreign countries. These major activities urgently require maximum support from the U.S. international common carriers.

In this situation of increasing world demand and growing importance of international telecommunications, the structure of U.S. international communications should be at its best. It is not—it contains serious flaws. Studies made by OTM, FCC and by other elements of the executive branch of Government have identified many inadequacies.

More and more, the international carriers are being forced to place their radio circuits on standby status and depend upon A.T.&T. or COMSAT for their international channels. This places the carriers very much in the situation of being middlemen and makes it more difficult for them to provide the management innovations and leadership needed.

Satellite communications technology is also impacting heavily upon international communications. A number of issues relating to domestic use of satellites has recently arisen; and these domestic issues interact in a very crucial way upon international telecommunications policies.

The following are typical issues in the international and satellite communications field;

Will our Nation's interests in the space age be served well and adequately by preserving the present pattern among international communications services?

What measures should be taken to assure the most efficient and economical use of frequencies and facilities employed in domestic and international communications—whether by satellites or other means?

What principles of international agreement should govern participation by the United States and foreign nations in the ownership and use of a global satellite communications system?

What agreements should be sought to guarantee freedom of the content of satellite radio and television broadcast transmissions, particularly in view of the differing cultures, ideologies, and conflicting philosophies of operation now prevalent?

What means should be used for assisting less developed countries to establish ground facilities linking them with communications satellites, particularly where extension of the service will not be economical from a commercial standpoint?

What are the special Government interests in the communications satellite field?

What kind of domestic satellite systems should we develop—

Multipurpose?

Dedicated?

Who should own and operate the—

Satellites?

Ground stations?

How should gains and losses from any of the new technologies arriving out of Government research and development be shared?

Should technological competition be encouraged or should competitors be protected?

How should terrestrial systems and satellite systems share the market both domestically and internationally?

How shall satellite and terrestrial systems be developed to make best use of the freqency spectrum?

How, and to what extent, should domestic satellite systems be interconnected with international facilities?

Research and technology

The fundamental objective is to create the policy framework and management capability that can take full advantage of new technology. To achieve this objective requires careful analysis of the entire process of telecommunications research and especially of the interactions between Government policy and research incentive within industry. We must determine:

What factors influence technological R. & D. and innovation.
Are the factors named below important elements?
Basic research: advances in the state of the art.
Demand from users:
Defense.
Civilian.
Research on potential uses: creating demand.
Industry structure.
Government policies and programs:
Economic regulations.
Industry assistance.
Financing.
Prohibitions.
Taxation.
Promotion.
How successful have past Government policies been in influencing future technology of telecommunications?
Should basic research be done by the telecommunications industry alone?
How does demand from users impact upon research goals?
Do we have an effective program for research on potential uses which can create new demand?
Does industry structure retard or accelerate technological change?
How do economic regulation policies influence future technology?

FIVE FUNDAMENTAL ACTS

Mr. EVINS. You state that the task is to bring up to date the established guidelines of the telecommunications industry. You have stated there have only been five major acts passed, the Radio Acts of 1912 and 1927, Post Roads Act of 1866, Communications Act of 1934, and the Communications Satellite Act of 1962.

Are you making any specific recommendations for legislation?

Mr. JAMES O'CONNELL. Not as yet. But the task force, we think, with our cooperation, will do this.

Mr. EVINS. General, your office was created by Executive order of the President?

Mr. JAMES O'CONNELL. Right, sir.

Mr. EVINS. And you are a study group and advisory group. You say that you have some old statutes that need updating, but you have not made any specific recommendations. Do you not think it is about time you tell the Congress what you need in the way of legislation?

Mr. JAMES O'CONNELL. The answer is "Yes," I think we should.

RADIO FREQUENCY SPECTRUM PROGRAM

Mr. EVINS. Your justification states that the use of the spectrum has contributed over $20 billion per year to the gross national product. I suspect that is an accurate statement. I do not know how you get it, but I suspect it is true.

Mr. JAMES O'CONNELL. Four years ago we had a panel, Mr. Chairman, which met over a period of about a year to endeavor to determine what this was, what the use of the spectrum contributed. At that time it was the estimate, based upon the figures we could collect, of 17

billion. We believe that it has increased at least 3 billion since that time, probably more. We think this is an overly conservative figure, but we do not really have today's statistics.

Mr. EVINS. The amount of radios and television sets manufactured provides a lot of employment, and FCC testified on the immense amount of money spent for commercial advertising over these media.

Mr. JAMES O'CONNELL. This is right. Seventy million television sets in the United States, 210 million radio receivers.

Mr. EVINS. Are any fees charged by your agency for the advisory service which you give?

Mr. JAMES O'CONNELL. They are not, sir.

Mr. EVINS. Are there any areas in which fee services could be scheduled?

Mr. JAMES O'CONNELL. We have not given that matter study.

Mr. EVINS. We are asking some of the regulatory agencies, in view of the increased appropriations, if they cannot revise their schedule of fees. If all would join in one proposal for an act to allow them to use their fees in lieu of their own appropriation, their appropriations could be reduced.

They presently turn these fees in to the general fund of the Treasury. Consider the question of fees.

Mr. JAMES O'CONNELL. We will consider it.

NATIONAL COMMUNICATIONS PROGRAM

Mr. EVINS. Much of today's communication policy extends from the Communications Act of 1934. This act was conceived in an area totally different from the terms of specification we have today.

Federally funded State telecommunications programs must be examined. Are you proposing to subsidize State telecommunications programs?

Mr. JAMES O'CONNELL. Not to any great extent than they are now being subsidized by Federal grants.

Mr. EVINS. On page 12 you state that there is the question of how to best cope with the impact of obsolescence. There are a number of questions concerning the National Telecommunications System.

Are we getting the answers through your office? You say there are a lot of questions and problems.

Mr. JAMES O'CONNELL. We are working on it. Perhaps I should submit to you the appendix to our budget here which shows objectives and important accomplishments in the frequency spectrum field in all of these fields, short-term and long-term objectives, and how we are proposing to operate.

Mr. EVINS. Leave this with the committee for the study of our staff.

A comprehensive, detailed long-range plan on the growth of Government-owned communications systems has yet to be written. We do not know yet how many Government-owned systems there are?

Mr. JAMES O'CONNELL. I agree with you we should know and we are working with the Bureau of the Budget now to establish a system whereby we will have the information that we should have on what it is costing us in our various Government departments, specifically for telecommunications.

INTERNATIONAL PROGRAM

Mr. EVINS. You speak of the need for strong support for a worldwide communications structure. Many U.S. industries formerly involved in international trade in very minor ways have now developed manufacturing organizations in a large and growing number of foreign countries.

Do you do anything about helping our balance-of-payments situation?

Mr. JAMES O'CONNELL. Not specifically.

Mr. EVINS. We are all concerned about it.

Mr. JAMES O'CONNELL. I certainly agree.

THE TAT–5 CABLE

Mr. EVINS. More and more the international carriers are being forced to place their radio circuits in standby status and depend upon A.T. & T. and COMSAT for their channels. We noticed a press release recently that the FCC has announced the approval of a new additional transatlantic cable.

Did the telecommunications management recommend this?

Mr. JAMES O'CONNELL. No. It has not been approved as yet. All that has been done is that the Commission has told the carriers the conditions which would need to be met in their filing for authority for a landing license to land this cable in the United States. This is the next step—a filing by the carriers with the FCC.

Mr. EVINS. This would be a private concern which would be authorized to build another transatlantic cable?

Mr. JAMES O'CONNELL. Exactly.

Mr. EVINS. Are the existing ones opposing it?

Mr. JAMES O'CONNELL. No. The existing ones are not. COMSAT did object. They did so because they felt they would be able to supply the demand at ultimately lower cost since the proposed satellite system is going to have even greater capacity than the cable. This became a very complicated issue and the upshot of it was that, subject to certain conditions, the FCC told the carriers that a filing would be entertained if it met with the conditions which they imposed.

Mr. JONAS. Did not Comsat show a profit last year and is now in the black?

Mr. JAMES O'CONNELL. The last quarter, I believe.

Mr. JONAS. You mean they do not want to give up some of their business?

Mr. JAMES O'CONNELL. However, I think we should recognize that of the $200 million of Comsat's stock issue, about $60 million is invested in communications facilities and $155 million—I will check these figures—is invested in securities. So they are deriving much of their income from their investment in securities. So we do not yet have here a communication corporation that is living basically and primarily on doing communications business. Its growth is very much needed.

Mr. EVINS. You are good at assessing the problems. What are the problems between international communications, let us say, for the cable system as against the COMSAT system?

Mr. JAMES O'CONNELL. We organized an intragovernment committee, Department of Justice, State, Defense, my Office, the FCC, Labor, which came up with a recommendation that the 1934 act be amended to remove the prohibition on merger which now exists. This would allow our present international carriers to merge and produce one strong, one or more strong U.S. international carriers rather than the five we have now. A draft act was prepared to be submitted to Congress which has now been referred to the Presidental task force for review. So this is one of the issues the task force is undertaking to review, the possible need for a merger to produce one or a fewer number of international carriers to strengthen our international business, to provide a better competitive capability with the single foreign entities.

Mr. EVINS. How do you establish a more competitive situation if they are going to merge and monopolize it?

Mr. JAMES O'CONNELL. It is a question of who you are competing with.

If we are competing amongst ourselves, that is one thing. If we are competing with the world and other nations, you want to streamline your operation and cut your costs, reduce your overhead so that you can compete to the best advantage.

And furthermore, you want to build up your economy of scale to the maximum extent possible.

Lehman Bros. made a study of this at the request of the carriers in 1950–51, in which they found that substantial economies could be effected and rate reductions achieved if a merger were to be authorized. So this is one of the questions up before the task force at the present time.

Mr. EVINS. You have two pages of questions on this area.

Do you have any answers yet?

Mr. JAMES O'CONNELL. Again, all of these questions are before the task force now; we make our contribution to them, but no conclusions have been drawn as yet.

TECHNOLOGICAL IMPROVEMENTS

Mr. WYMAN. What would be some of the illustrations of the market to which you have reference other than television or radio communications as such? What kind of a market that is so different from what we have now other than for technological improvements in communications?

Mr. JAMES O'CONNELL. We are really talking about all types of communication, leased service, data transmission, computers talking to computers across the oceans from country to country. We are talking about telephone conversations, of course, which we have now to a limited extent to those nations that are connected up either with a satellite or with cable communications or high frequency radio which is quite inferior. We are talking about the development of world television on a really major scale so that we will be able to pull into the television community all of those nations that wish to receive programs.

Mr WYMAN. This is something that is bounced off a satellite?

Mr. JAMES. O'CONNELL. That is right.

In other words, there is no real electrical differentiation between any of these modes of communication any more. A signal traveling from an earth station to a satellite, being amplified and coming back to another earth station does not know whether it is a part of speech conversations, part of a television picture, part of a data bit, or what exactly it is being used for. They are all the same kind of waves.

Mr. WYMAN. And in this kind of development, on the scale to which you make reference, there would be no such thing as integrity. You could not code them and put them on a spectrum or frequency that would not be interceptible?

Mr. James O'CONNELL. Yes, sir; they can be coded.

Mr. WYMAN. Coded in the sense that a combination of letters might not mean what they appeared to, but they could still intercept transmission?

Mr. James O'CONNELL. All of the transmissions can be intercepted, but they can be encrypted, what is called group encryption, in which all that appears to the listener is a noise signal, and without highly specialized equipment it is not broken into speech or a television picture or facsimile picture or what have you.

Mr. WYMAN. If the transmision was made of a picture, this could be picked up anywhere there was a receiver in any country that was built to receive that type of thing?

Mr. James O'CONNELL. This is right, provided they wanted to pick it up and distribute it.

Mr. PLUMMER. Pay television is going to use a scrambler.

Mr. James O'CONNELL. Yes. There have been developed television scramblers in which you have to set your set to a certain combination.

Mr. MARSH. Will the gentleman yield?

Mr. WYMAN. Yes.

OVERRIDING TRANSMISSIONS

Mr. MARSH. Is it technically feasible to override transmissions by a satellite in the electronic communications field, whereby such transmission could usurp another program?

Mr. JAMES O'CONNELL. Jamming, you mean?

Mr. MARSH. Either jam or beam in on the television program, let's say from a vessel at sea or country that did not recognize international agreements or allocation of spectrum, where they would transmit a message that would be receivable on American television sets.

Mr. JAMES O'CONNELL. It is possible to do this. It costs a lot of money to do it because you have to have a powerful earth station to do it with. You can identify rather rapidly who is doing it.

Generally speaking, the history of international communication that this sort of thing has not been done. The nations respect their membership in the ITU (International Communications Union), which does set up interference codes, regulations, for observance by all nations, which says one shall not interfere with another. And by and large in the international field we have had, to my knowledge, no intentional jamming or usurpation of the other fellow's frequency.

The answer is, it is always technically possible to do this sort of thing. But within Intelsat, for example, with a grouping of 61 nations comprising roughly 95 percent of the world's communication traffic, we consider it unlikely that anyone who is not a member of the consortium would deliberately offend 61 nations.

Mr. EVINS. They can pick up all of these programs and information and then they have to have a sort of a centrifuge to dissect what they want to transmit?

Mr. JAMES O'CONNELL. At the present time.

In the early stage of the satellite business you had one satellite and two earth stations and that was your combination. You could talk from one earth station to another earth station through one satellite. But in the next phase coming along, what they call Intelsat 4, it will be possible for 20 stations to talk to one another through the same satellite. So we have the potential here for a much greater diversity and volume of transmission and reception.

Mr. EVINS. You have an informal consortium, as you say among 60 nations for agreement and cooperation. You might put your best legal minds to drawing up a code of conduct in international communications, if you have not already done that.

Mr. JAMES O'CONNELL. They have that.

QUALITY OF PICTURE FROM SATELLITES

Mr. WYMAN. In the state of the art that prevails today, you say 20 stations in Intelsat, and so forth. Do you get the sort of picture and signal of sufficient integrity right out of one of the satellites as you do from the ground station? Does it look as though it is going to be as good?

For instance, cable television in my area gives better pictures on TV than most ordinary pictures. Are we going to have pictures comparable to that by way of satellite?

Mr. JAMES O'CONNELL. We think there is no question about it.

Mr. WYMAN. Of the 70 million TV sets you referred to a minute ago, now in the United States, there is nothing like this in Africa and yet the main thrust of the international aspect of this will be for us probably to communicate with other nations and peoples in the world in the interest of world peace and expansion of education, and so on.

Mr. JAMES O'CONNELL. Exactly.

Mr. WYMAN. Therefore, I take from what you are saying you think there is a tremendous future for the television business in some of these backward countries.

Mr. JAMES O'CONNELL. I do, indeed.

Mr. CLARK. Let me just clarify a point. We are not talking about direct broadcasting, this is all relay. This is just a means of taking a signal from the specialized station in a country to one in another country from which it is then distributed through the television network.

Mr. JAMES O'CONNELL. We are not talking about direct broadcasting from the satellite to the home receiver.

Mr. WYMAN. That is why I asked you in the very beginning if there was some new technology coming along. This is something to be expected in the future?

Mr. GREEN. We can address ourselves to this.

Yes, indeed, there is new technology which is being very closely followed by our office, which offers several possibilities. One would be direct broadcasts to individual receivers. This seems quite a way off at the present time. A good deal closer, the technology will support at the present time a broadcast to a small receiving station which does distribute into a CATV system, or wire system or a small rebroadcast system on a very limited geographical basis.

So all of these possibilities for extensions of what we currently have, which Mr. Clark has pointed out, right now does not encompass direct broadcasting, but these are in developmental stages of the future state of the art.

Mr. WYMAN. This is something you can talk about. Do you refer to classified information?

Mr. GREEN. No.

Mr. WYMAN. Something you know enough about?

Mr. GREEN. Yes.

Mr. JAMES O'CONNELL. In fact, we had a research program for the last several years to investigate the potentials of direct broadcasting; how much power will be required in the satellites, what kind of technology is going to be required to do this, what would be the cost of conversion of receivers on the ground, and all of this sort of thing.

That program did not find favor with Congress last year; but we think that—without trying to solve the economic and political problems which we would have—that from the standpoint of advancing the state of the art and providing a facility which could be used in countries such as India, that it is a very worthwhile program of R. & D., not highly expensive, and it should be encouraged because it will bring to fruition a new capability for worldwide education.

Mr. WYMAN. This is part of the task force's function to assess?

Mr. JAMES O'CONNELL. Right.

Mr. CLARK. In the first place, there is no international agreement on frequencies for direct broadcasting. As a matter of fact, in 1963, at the Extraordinary Administrative Radio Conference, two nations introduced a clause into the Conference prohibiting the direct broadcasting from satellites because they were fearful of a repetition of Voice of America and BBC broadcasts in the high-frequency broadcast band. The clause was not included so there is now no international frequency assignment for direct broadcasting by satellites.

Mr. EVINS. The Voice of America is supposed to broadcast behind the Iron Curtain and throughout the world. Are we misinformed on this?

Mr. CLARK. No. They are doing a very good job, but in different frequency bands.

Mr. GREEN. The chairman might be interested in the situation in the Soviet Union. They have a very highly developed television distribution system, not unlike the one I just mentioned, where satellites transmit to small distribution systems. As vast as their land territory is, and because they have not previously had the extensive development of television broadcasting, they have chosen to leapfrog parts of the state of the art and they are now accomplishing distribution of tele-

vision programs across the Soviet Union by means of their satellite system.

Mr. WYMAN. You cannot transmit a television signal in the same manner you can transmit a radio wave over mountains and down valleys?

Mr. JAMES O'CONNELL. It depends on the frequency you use. These frequencies are line-of-sight frequencies, and do not go over mountains, et cetera.

Mr. WYMAN. TV, but not in radio?

Mr. JAMES O'CONNELL. In high-frequency radio we can get long-range signals.

Mr. WYMAN. But they are not line of sight; are they?

Mr. JAMES O'CONNELL. They are not line of sight. They bounce off the ionized layer. But they are unreliable because they are influenced, for example, by the sunspots. They are subject to static, interference, and atmospheric noise. So the quality of reception on those frequencies is poor.

Furthermore, the bandwidth required for TV cannot be obtained at high frequencies. TV requires at the present time a 6-megacycle band, which would take up a substantial part of the whole high-frequency spectrum for just one transmission.

Mr. WYMAN. When the chairman referred to the Voice of America reaching over into these countries, this can be received by an ordinary radio set?

Mr. JAMES O'CONNELL. Yes; that is right. He is talking about high frequency.

Mr. CLARK. Music programs.

Mr. WYMAN. You cannot broadcast TV like this?

Mr. JAMES O'CONNELL. No; just voice and music.

PERSONNEL STAFFING

Mr. EVINS. General, the chart on page 19 shows that, in 1964, you had 38 authorized jobs, 28 staff and 10 professional. Then, you go to 40, 53, 59, and 69, for a total onboard of 69. For 1969 you are asking for 70 positions.

Mr. JAMES O'CONNELL. That is right.

The next page shows the appropriation request and appropriations granted. The total appropriation has gone up from $771,000 to $1,945,000. You have had a rather precipitous growth.

INCREASE IN STUDIES AND RESEARCH

Mr. MARSH. I notice on this chart, last year your total appropriation was $1,945,000 and this year you are requesting $1,986,000, which is an increase of $41,000, but your studies and research is up from $600,000 to $800,000. So you reflect there a $200,000 increase, yet only $41,000 increase in your total appropriation request.

Where are you picking up the other $159,000?

Mr. RAY O'CONNELL. Up until this year we bought computer time from other agencies, Bureau of Standards primarily. But with OEP's NRAC computer, which you heard about this morning, we are now at the point where we can utilize OEP's computer for our purposes.

Mr. JAMES O'CONNELL. This is a deliberate program to effect sub-

stantial savings in our computer charges. In fact, we let a contract to develop the program for converting our activity, which was based upon previous computer utilization, to one which would utilize the NRAC. We are going to save considerable amounts of computer fees in that way.

Mr. MARSH. So what you did, you went ahead and increased your R. & D. rather than passing the savings along in the appropriations?

Mr. JAMES O'CONNELL. No. There is no relationship between the savings which we effected through our program for better and cheaper computer usage—an the funds which we need for research studies. If we had not gotten substantial savings in computer fees, we would then be forced to ask this committee for the additional funds needed for what I feel are mandatory requirements for studies. The savings in computer fees are a bonus—a means for increasing our work in very important research areas without a proportionate increase in our overall budget requirement. The only relation between the money requested for studies and the savings which we've gotten from our program for better and cheaper computer use is that a part of the contract money—about 25 percent of it—is needed to continue our program for adapting our frequency-management system to the greatest potential given us by the NRAC computer.

When this conversion effort is completed, we're going to be able to obtain data in a far more timely and productive way than we've ever been able to before—and this is the name of the game; if we're to make headway on solving the frequency problems, we simply have to get more data to work with. We can't do much without it; and without these studies which we have undertaken and upon which we build our knowledge base—we're spinning our wheels. The studies that we've done and the studies that need to be done are absolutely prerequisite to our moving ahead.

Without these studies we're operating in a knowledge vacuum—this is the kind of vacuum which is responsible for the problems we've got now. Right now we need to know how the spectrum is being used—the numbers of equipments using it, where they're located. We need more engineering data so we can anticipate with some confidence what the requirements are going to be and what interferences may occur when we introduce new electronic devices into our environment. We need to establish the economic and social values of the use of the spectrum so we can make an intelligent evaluation of who should get parts of the spectrum when you've got competing claims for them.

We just don't have a large enough staff to develop this kind of data. We need help—and our studies are the only means of getting it.

Mr. JOHNSON. Some part of this is related to new programing to use that computer also.

Mr. RICE. You mean an increase in the R. & D.?

Mr. J. RAY O'CONNELL. Yes, sir.

COORDINATION OF COMMUNICATIONS ACTIVITIES

Mr. EVINS. You point out that the communications activity of the U.S. Government is big business. It cost the taxpayers between $2 billion and $3 billion per year, this justification says. There are some 17 major departments and agencies that operate separately organized

communications systems, and 30 separate systems operating under the central management of the National Communications System. Does the National Communication System include GSA?

Mr. J. D. O'CONNELL. Yes, sir. It includes GSA.

Mr. EVINS. GSA is one of the 30?

Mr. J. D. O'CONNELL. Yes.

Mr. EVINS. You say there are 33 other fixed systems operating outside the national system?

Mr. J. D. O'CONNELL. These systems were all surveyed by the executive agent, who is the Secretary of Defense. They picked up, as part of the National Communication System, all of those systems that they concluded would contribute to an integrated National Communications System. They didn't pick them all up. But this pickup program is still going on.

Mr. EVINS. Who made this survey, the Department of Defense?

Mr. J. D. O'CONNELL. The Department of Defense, assisted by other agencies of Government.

Mr. EVINS. You point out on the next page that traffic in this area is increasing at the rate of 70 percent each year. Are you speaking about data communications?

Mr. JOHNSON. Yes, sir.

JUSTIFICATION MATERIAL

Mr. EVINS. Data communications is increasing 70 percent per year. You point out your accomplishments on pages 23 through 31. It is more of an assessment of the problems than accomplishments. Insert pages 23 through 33.

(The pages follow:)

IV

ACCOMPLISHMENTS

Establishment of the President's Task Force on Communication Policy focused national attention upon the serious policy problems in the telecommunications field. This Presidential action achieved the objective of bringing national awareness to telecommunications policy problems and provided the basic Government machinery to deal with such problems.

Important accomplishments of the Office of Telecommunications Management during the past year were:

OFFICE ORGANIZATIONAL STRUCTURE

A radio spectrum development and long range planning staff has been organized and initial staff assigned.

With personnel actions now in the process the office has reached the ceiling of 70 positions authorized in the fiscal year 1966-68 budgets. In addition, the Department of Defense and GSA have provided experienced communications management personnel on permanent detail to the Office of Telecommunications Management.

COMMUNICATION SATELLITE POLICY

Coordinated and issued policy guidance concerning U.S. assistance in the development of foreign satellite capabilities.

Essentially completed, in cooperation with the State Department, a statement of policy to serve as a guide for the 1969 renegotiation of the INTELSAT Interim Agreement.

Coordinated a thorough and comprehensive review of U.S. policies and developed criteria which will speed the flow of U.S. information and know-how to other friendly countries involved in communication satellite activities.

Coordinated the establishment of a Government steering committee to provide instructions to ComSat relative to international communication satellite matters. The committee is chaired by the Department of State with the DTM and FCC Chairman as members. Instructions have been provided in the area of international procurement policy, international rate structures, and satellite design objectives.

Continued analysis of the programs for establishment of communication satellite earth stations in developing nations; published a staff report on this subject, and provided the results to the Eximbank, the IADB and other development banking agencies who can help accelerate the financing of satellite programs.

Administered a program encouraging the construction of earth station links to the global communications satellite system being established (INTELSAT) in order to permit developing nations to benefit by direct access to communications satellites.

Participated in continuing studies concerning possibilities for using the global communications satellite system (INTELSAT) to advance international information exchange and educational purposes.

Carried out extensive in-house and contract studies to develop policies relative to domestic satellite communications and the support of educational television interconnection agreements. A national report on these studies was presented to the Senate Communications Subcommittee in the hearings conducted during the past year. Reports have also been presented to the FCC.

Worked with the Department of State and other Government agencies in providing support for Ambassador Linowitz and the President in the recent OAS Summit Conference.

Coordinated with the FCC, DOD, ComSat and other agencies relative to rate reductions and other policy determinations involved in the Pacific Satellite "30 Circuits" case.

Aided in the planning and development of the national program for the establishment and operation of the worldwide commercial communications satellite system. Continuous review has been maintained of all phases of the development and operation of the system, including the activities of the Communications Satellite Corporation and actions before the Federal Communications Commission.

Prepared, for issuance by the President, annual reports to the Congress on activities and accomplishments under the Communications Satellite Act of 1962.

Served as the focal point for, and provided liaison between, the executive branch of Government and the Communications Satellite Corporation.

Established an ad hoc policy group on the satellite interference measurement

RESEARCH AND TECHNOLOGY

In cooperation with the Electronic Industries Association and other leading industry associations, established a panel of experts who will study and develop ways of improving industry-Government cooperation in the area of creative telecommunications planning. Specific objectives of these discussions are to—

Develop new concepts and establish an active, creative role for the Federal Government in telecommunications;

Develop new national systems approaches which will help guide future development of telecommunications services;

Develop new means for achieving timely applications of new technology; and,

Develop better ways of insuring that telecommunications adequately support national objectives.

Initiated discussions with George Washington University concerning the establishment of a communications systems planning institute which would provide postgraduate studies in the engineering and economic aspects of communications systems, with special emphasis on international communications and communications for developing nations. The institute will provide specific support to ComSat and INTELSAT.

NATIONAL COMMUNICATIONS IN GENERAL

Initiated action with the FCC in its inquiry into the regulatory and policy problems presented by the interdependence of computer and communications services and facilities (docket No. 16979). Requested the executive agent, National Communications System (NCS), to provide responses to the FCC questions. The

General Services Administration, in coordination with this office, in securing responses from other non-NCS Federal departments and agencies.

Conducted a comprehensive analysis of NCS reports, Federal Communications Commission reports, and industry reports on "The Effect on Communications of the Northeast United States Power Blackout on 9 and 10 November 1965."

Reviewed a DOD draft bill to authorize the disposal of Government-owned long-lines communications facilities in the State of Alaska, and for other purposes and presented the results for consideration to the Bureau of the Budget.

Initiated action, in coordination with BOB, to review current policies relating to the field of automatic data processing as they affect telecommunications.

NATIONAL COMMUNICATIONS SYSTEM

Approved a recommendation by the executive agent, NCS, to eliminate the Alaska Railroad telecommunications point-to-point facilities as NCS assets.

Implemented a day-to-day method of procedure and a program for more effective determination and delineation of the telecommunications requirements of the presidency as directed in the President's Memorandum of August 21, 1963.

Developed and coordinated with appropriate governmental and industry representatives instructions for the application of BOB Circular A–76 on Government procurement policy in the telecommunications area.

FEDERAL-STATE TELECOMMUNICATIONS SUPPORT

Established a Federal-State telecommunications advisory committee. This committee is composed of representatives from 14 Federal departments and agencies, representatives of nine State Governors, a representative from the Council of State Governments, and a representative of the Governors' Conference; it serves as a focal point in the Nation for consideration of telecommunication activities of interest to Federal, State, and local governments.

Initiated action which is resulting in a major study of communications in support of the Nation's health activities. This is being accomplished by the Department of Health, Education, and Welfare in cooperation with the Director of Telecommunications Management.

Completed a major study and developed procedures concerning the procurement of Government-owned versus Government-leased telecommunications.

Initiated action to respond to Senator Pastore's charge that the Director of Telecommunications Management in cooperation with the Department of Health, Education, and Welfare recommend a policy applicable to a nationwide system of educational television interconnection.

Created an awareness in the States of the need of adequate telecommunications structures, total State systems planning on near-term and long-range bases, and for interstate, intrastate and Federal-State coordination in the development of adequate telecommunications.

Provided advice to and liaison with State and local government officials as they have requested such advice. Contact has been made with officials in all of the States.

Conducted, and provided on a request basis, two major studies concerning the trends in Federal, State, and local government telecommunications.

Assisted one State in the development of legislation to provide for adequate telecommunications maangement at State level. The resulting enacted bill has been made available to several other States seeking to accomplish the same objective.

Initiated six major studies concerning problems facing the States in their development of adequate telecommunications. These studies have been launched through the mechanism of the Federal-State Telecommunications Advisory Committee, with various departments serving as primary action offices in each instance.

Conducted a major study in an effort to determine telecommunication objectives, and policies, as they are reflected in the Federal Assistance Legislative Acts. These acts have resulted in more than 450 programs, each of which imposes telecommunications requirements upon Federal, State, and local governments.

Provided minimal secretariat support for the overall Federal-State Telecommunications Advisory Committee, and have developed Director of Telecommunications Management positions on policies and other matters being considered by the committee.

TELECOMMUNICATIONS MOBILIZATION

Conducted approximately five classified studies of adverse telecommunications activities which occurred during the past year.

In coordination with the Director of the Office of Emergency Planning, approved nine State plans and coordinated 11 final draft plans concerning overall State emergency telecommunications policies and procedures.

Worked with the Federal Communications Commission and the Department of the Interior on industry emergency electrical power, gas and petroleum telecommunications plans.

Conducted a study on telecommunications claimancy responsibility during mobilization conditions.

Published, in cooperation with all Federal departments and agencies, "Procedures for the Use and Restoraton of Private Line Telecommunications Services During an Emergency."

Devised an organizational structure for exercise of the President's authority over telecommunications as it is contained in sections 606 (a), (c) and (d) of the Communications Act of 1934, as amended.

Developed, issued, and maintained current a complete inventory of international circuitry—radio, cable, and satellite, for use by the Federal Government and industry during mobilization conditions.

Coordinated closely with the Office of Civil Defense in their efforts to assist the States in the development of adequate civil defense communication systems, facilities, and services.

Participated in U.S. civil defense council meetings, State civil defense council meetings, interagency emergency planning committee meetings, and other meetings concerning civil defense telecommunications.

Developed and provided to the Federal Communications Commission an initial revised policy on telecommunications precedences for use throughout the Nation.

Provided assistance and advice to the U.S. representative to the NATO Civil Emergency Planning Committee in support of his attendance at committee meetings. This has been accomplished in coordination with the Office of the Director, OEP, the Department of Defense and the Department of State.

Provided advice and assistance to industry officials through attendance at the Federal Communications Commission-sponsored National Industry Advisory Committee.

Provided, on a continuing basis, a member of the National Communications System Emergency Action Group. This group provides guidance to the NCS manager during emergency conditions.

Developed, in coordination with industry and government agencies, a system of procedures whereby residence telephone services of key personnel will be assured during emergency conditions.

FREQUENCY MANAGEMENT AND SPECTRUM UTILIZATION

Sent to the President and to Congress a comprehensive report on national frequency management within the executive branch of Government.

Successfully applied automatic data processing and computer techniques to our management of the radio spectrum. We are now able to provide complete radio-frequency assignment data to all Government agencies on a monthly basis, whereas previously it had been done quarterly. We are moving ahead to further automate this important activity.

Continued to strengthen our Frequency Management Advisory Council. The Council now includes the Executive Director Electronic Industries Association (the latest member) and seven outstanding experts representing a cross section of talent from outside the Government who are in a position to provide objective judgment on frequency management problems and concepts.

Maintained and improved the Manual of Regulations and Procedures for Radio Frequency Management which provides a codification of the regulations and procedures, including policy guidance, for the acquisition and use of radio-frequencies by Government agencies.

Developed new computer techniques to provide remote access to our frequency data bank and extend on an evolutionary basis into new areas which will improve the Government's frequency management system.

Completed a study (in which the FCC and other Government departments and agencies are collaborating) to determine the potential growth and possible needs for frequencies in the space services between now and 1980 as well as the means of satisfying approved needs in the light of spectrum saturation.

Improved and extended our program for inspection of Government radio stations.

Established a new subcommittee on long-range planning within the interdepartment radio advisory committee (IRAC).

In collaboration with the FCC maintained current data in the national table of frequency allocations.

Established and initially staffed a group for radiofrequency spectrum development. A charter has been drafted which provides for fully coordinated planning between the OTM long-range planning group and a similar group which has been established by the Federal Communications Commission.

Completed a preliminary staff analysis of laser technology and its potential impact on telecommunications management policies over the next few years.

Developed, in collaboration with the FCC and the Department of State, the U.S. position for the frequency management aspects of the administrative conference on martime mobile communications.

Continually updated the Government table of transmitter frequency tolerances and that of tolerance for the levels of spurious emissions to reflect the state of the art.

Developed and promulgated improved procedures for the submission of Notices of frequency assignments to the International Frequency Registration Board of the ITU, as well as for the processing of letters and questionnaires from the board concerning such assignments.

Continued the comprehensive program that has been started for reviewing assignments contained in the Government frequency assignment list.

Continued the survey of Goverment radio frequency usage. When completed it is expected to provide an indication of the extent of use being made of each frequency assigned to the agency concerned. An inventory of such usage has been completed, and procedures are under development for periodic submission by the Government agencies of reports of their frequency usage, for their processing by ADP techniques and their inclusion in the central magnetic tape file.

Given increased attention to measures to control the pollution of the electromagnetic spectrum. Steps thus far taken include (*a*) the establishment of procedures for the control of Government-restricted radiation devices and industrial, scientific and medical equipments; (*b*) efforts to remove the serious hazard to safety of life and property from garage door openers interfering with the navigation and control of aircraft; and (*c*) the establishment of a policy looking to the more effective control of transmitter spurious emissions.

Established improved procedures for the selection, coordination and authorization of frequency assignments for foreign embassy radio stations at the U.S. seat of Government.

Made extensive successful efforts to locate a site for the east coast satellite earth terminal which would provide adequate protection to the national radio quiet zone.

MAJOR ACCOMPLISHMENTS

Mr. EVINS. You point out many areas of research, many areas of study, and many problems. Tell us in a few words: What are some of your major accomplishments?

Mr. J. D. O'CONNELL. Well, many of them are in the frequency management field where we have for the first time initiated and gotten underway some long-range planning, where we are conserving to an extent not previously achieved the frequencies which are in use by the executive branch of the Government. Do you want to pick up at this point?

Mr. JOHNSON. We have those listed in the appendix.

Mr. EVINS. Federal-State cooperation?

Mr. J. D. O'CONNELL. They are listed in my statement and in the Federal-State brochure.

In our Federal-State activity we are giving advice to the States on the development of their State communications systems, the integration of the State systems with those of the Federal Government, advising them as to how they can save money on their communications.

We have assisted GSA in submitting legislaion to the Congress to permit the States to use the Telefax system which the Federal Government is using, at substantial savings to the States, savings as such as 75 percent of what they have been paying.

Mr. PLUMMER. Here are some earlier accomplishments in the report of 1966, if you want to use that.

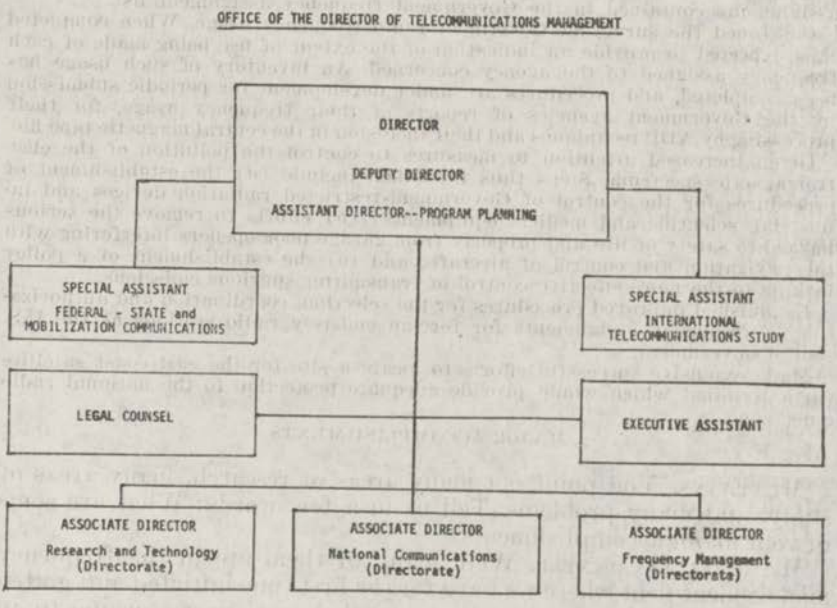
Mr. J. D. O'CONNELL. We also have on pages 16 and 17 of our previous report the measures we have taken in frequency management to increase the emphasis given by other departments of Government to frequency management within their departments, to increase their capabilities and improve their management.

We have instituted a system of inspection of the installations of other departments of Government in which we actually go around and check up on them.

ORGANIZATION

Mr. EVINS. Now we turn over to your organization and we will place the chart on page 38 into the record.

(The page follows:)



TELECOMMUNICATIONS MOBILIZATION

Mr. EVINS. Next is telecommunications mobilization and Federal-State activities, a summary. You list several of those matters for Federal-State cooperation. My question is: How urgent are these?

Mr. J. D. O'CONNELL. We think they are urgent.

Mr. LATHEY. We believe they are very urgent, sir. Almost all of them are a result of requests from Governors and State legislatures for advice and assistance. We try to respond to those just as quickly as we can.

Mr. J. D. O'CONNELL. How many Governors and their staffs have you personally talked to?

Mr. LATHEY. Thirty-seven.

I might give you one example, Mr. Chairman. In Massachusetts I gave a briefing to Governor Volpe and his staff. He wanted to know why he couldn't reduce the costs in his State annual gudget for communications. Within 2 weeks, simply by a paper transfer—no funds involved—he began a saving of $45,000 a year.

Mr. EVINS. That is good, to advise the Governors. These advisory and counseling services, I am sure, are all helpful; they promote efficiency, economy, and better management. On page 41 you say you are going to set up a separate agency to exercise control over national telecommunications resources. This agency would be, in effect, an expansion of the Office of the Director of Telecommunications Management.

Mr. LATHEY. When the President's authority under section 606 of the Communications Act of 1934 comes into effect the President will take over many of the responsibilities now vested in various departments and agencies, in order to direct the war efforts of the United States.

Mr. EVINS. What act is that?

Mr. LATHEY. The Communications Act of 1934.

Mr. J. D. O'CONNELL. Section 606.

Mr. EVINS. What does it say, again?

Mr. LATHEY. It grants to the President authority to assign priorities for the use of communications. It also enables him to control the radio and wire communications of the United States in order to defend the United States.

Mr. EVINS. This is in a case of extreme emergency.

Mr. LATHEY. Yes, sir.

Mr. J. D. O'CONNELL. This is nuclear attack or emergency short of nuclear attack.

Mr. LATHEY. This authority has been delegated to Mr. O'Connell on a contingency basis. There is no office in the land now capable of exercising that authority.

Mr. J. D. O'CONNELL. This would only be invoked in the event of a proclamation by the President.

Mr. EVINS. Off the record.

(Discussion off the record.)

Mr. EVINS. The general testifies that this authority under the Communications Act would only be exercised by the President in case of dire emergency.

Mr. LATHEY. That authority in 606 does not include censorship.

Mr. EVINS. Fine. That is reassuring.

Place these pages 39 through 47 into the record.

(The pages follow:)

VII

TELECOMMUNICATIONS MOBILIZATION AND FEDERAL-STATE ACTIVITIES SUMMARY

The Director of Telecommunications Management is charged with major responsibilities in the areas of national telecommunications mobilization and Federal-State telecommunications coordination. To carry out these responsibilities specific objectives have been established. These are as follows:

1. National telecommunications mobilization:

Develop a realistic Federal Government capability for effectively mobilizing the Nation's telecommunications during limited war and civil defense conditions of any severity.

Improve the existing Federal Government telecommunications capability to deal with national crises and emergency conditions, particularly natural disasters, civil disturbances, limited and general war.

Establish procedures and a program to exercise and test the ability of the Nation's telecommunications to respond to emergency conditions.

Provide telecommunications guidelines, standards, policy guidance and other assistance to the States in their development of emergency communications facilities and systems.

2. Federal-State telecommunications coordination:

Provide the Chairman, the Secretary and required overall administrative support for the Federal-State Telecommunications Advisory Committee established by the Director, Office of Emergency Planning.

Serve as a focal point in the executive branch of Government for the provision of advice and liaison to State and local government telecommunications officials.

Serve as a coordinator for the Director, Office of Emergency Planning, on all telecommunications activities referred to him by State and local government officials.

Foster a better understanding of telecommunications activities between Federal and State telecommunications activities by encouraging Federal and State participation in the development and adoption of mutually acceptable telecommunications planning methodologies and procurement policies.

TASKS NEEDING ACCOMPLISHMENT

The urgent telecommunications mobilization tasks awaiting accomplishment are as follows:

1. The task of determining total service requirements to be placed upon national telecommunications during emergency and civil defense conditions

Without a collection, analysis, and structuring of requirements effective administration of the President's authority over communications appears impossible. During fiscal year 1968 coordination has been effected with Government agencies and industry to begin the task. However, completion of the task will not be possible during fiscal year 1968. It will extend throughout fiscal year 1969.

2. The task of assessing and improving the national telecommunications resources capability to meet the requirements imposed by emergency and civil defense conditions

This is a continuing task for the Nation's telecommunications resources are continuously being rearranged, expanded and improved. The task is required to assure that essential Government and non-Government users are provided adequate and responsive services during emergency and civil defense conditions. No other Government agency or element of industry has assessed, or plans to assess, this total capability.

3. The task of devising an organizational structure for effective administration of the Nation's telecommunications during emergency conditions

This is a major task involving the cooperation of all departments and agencies of the Federal Government having assigned telecommunications responsibilities. Existing authority is fragmented to such an extent that delays, tolerable under normal conditions, could occur which would adversely affect the ability of the President to exercise his command, direction and control of functions during emergency and war conditions.

Since appointment, the Director has given prime consideration to this task. In fiscal year 1967, agreement was reached with the Director, OEP, and other Government agencies that at some stage of escalation:

a. A separate agency, the National Office of Telecommunications, will be created to exercise administration over the national telecommunications resources. This agency would be, in effect, an expansion of the Office of the Director of Telecommunications Management.

b. The Director of Telecommunications Management will assist the Director, OEP, by performing adjudication of all mobilization activities involving telecommunications resources claimancy.

4. The task of administering the war-emergency authority of the President contained in the Communications Act of 1934

While preemergency/prewar planning might be accomplished quite efficiently, no war was ever progressed as it was preplanned. The administration of the President's authority under subsections 606(a), (c) and (d) cannot be conducted in a vacuum. That is, without a continuing and current knowledge of operating requirements as they are changed by the course of emergency-war operations. Neither can telecommunications responsiveness be instantaneous and meet emergency-war requirements on an adequate basis unless the capability to administer the authority of the President is available in advance of emergency-war periods. There is a peacetime requirement to establish a status and control telecommunications facility for this purpose.

5. The task of establishing preemergency/prewar policies, rules and regulations for emergency and war administration of telecommunications

This task looks towards the creation of policies and procedures during peacetime that will permit an efficient transition to a war footing, if required. The preplanning activities of major concern involve the development of precedence systems to govern the public message networks, war and emergency telecommunications claimancy procedures, control of aviation and maritime services telecommunications, and related control measures required in the event of emergency.

6. The task of mobilization planning

The Director of Telecommunications Management must be prepared to exercise the nationwide authority of the President during extreme national emergency conditions. This authority is contained in subsections 606(a), (c) and (d) of the Communications Act of 1934, as amended, and has been redelegated by the Director, OEP, to the Director of Telecommunications Management.

Activities in support of this responsibility assignment involve continuing discussions with industry and Federal and State Government officials; analysis of systems adequacy; updating of plans, administration and training of executive reservists who would augment telecommunication staffs during emergency conditions; reporting on damages accruing to national systems as a result of riots, civil disturbances, and natural disasters; provision of advice to Federal and State civil defense and other telecommunications officials; development of policies; publication and review of plans—Federal, State and local governments; and inspection visits to Federal, State and industry emergency operating facilities.

7. The task of communication support for natural disaster and civil disturbance activities

One of the greatest needs during, and immediately after, disasters is the need to communicate rapidly within the disaster areas and between the areas by the Federal, State and local government agencies and organizations involved. Communications are required for direction and coordination of disaster assistance forces for the relief of suffering and for restoration activities.

To date, no agency of Government has investigated this matter. Such an investigation is a responsibility of the Director of Telecommunications Management in cooperation with the Director, Office of Emergency Planning.

8. The task of coordinating the telecommunications emergency planning of the Federal departments and agencies assigned telecommunications responsibilities

As the concept for administration of the Nation's telecommunications developed during fiscal year 1967–68 and as the overall method of exercising the President's war emergency control over telecommunications became clearer, coordination on emergency telecommunications matters took on increasing importance and more time was devoted to it. Although most of this coordination was effected by the office by liaison with the individual departments and agencies, with the States, and with industry, additional emphasis and impetus was provided by:

a. Participating in the Interagency Emergency Planning Committee activities. This is a committee composed of representatives of all Federal departments and agencies and one which is chaired by the Director, OEP.

b. Participating in the National Industry Advisory Committee activities. This is a committee composed of industry officials which is sponsored by the Federal Communications Commission to develop and recommend actions on

all responsibilities assigned to the Commission by Executive Order 11092.

c. The DTM's creation of an Ad Hoc Intragovernmental Emergency Telecommunications Committee. This committee is comprised of representatives of: the DTM (provides the chairman); the General Services Administration; the Department of Commerce; the manager of the National Communications System; and the Federal Communications Commission.

This task will continue and its activities will expand during fiscal year 1969.

9. *The task of conducting NATO civil emergency planning coordination (NATO–CCPC).*

This is a continuing task. Considerable coordination has been effected on NATO–CCPC matters with the Department of State, the Department of Defense and the Office of Emergency Planning. This task is expected to increase in intensity during fiscal year 1968 since the CCPC is becoming more and more involved in international emergency telecommunications and since a restructuring of NATO telecommunications has been proposed because of France's announced intention with respect to NATO.

The urgent Federal-State telecommunications tasks awaiting accomplishment are as follows:

1. Within the framework of the Federal-State Telecommunications Advisory Committee, develop and recommend policies and procedures which can be mutually adopted by the Federal and State Governments concerning:

How could States establish adequate management structures for coordination of State telecommunication activities and for coordination with Federal Government telecommunication officials on activities of mutual interest to Federal and State Governments?

How could States develop statewide all-purpose telecommunication systems in lieu of the many and separately independent systems which now exist in almost all States?

What are the Federal, State and industry responsibilities in the development of adequate nationwide communications in support not only of day-to-day operations, but also in support of emergency, natural disaster, civil disturbance and civil defense operations?

How could the funds being provided to State agencies in the many Federal assistance programs be consolidated at the State level of Government so that adequacy of service and cost savings may be obtained in overall State and Federal operations?

How could Federal assistance funds be provided to the States for development of telecommunication programs when more than one State is involved?

To what degree should Federal and State systems be permitted to interconnect for the effective interexchange of information?

What should be the Federal and State policies pertaining to the development and procurement of Government-owned and Government-leased telecommunication services and facilities?

To what extent should single Federal and State communication systems support multinumbered functions such as highway, law enforcement, and medical operations?

To what extent should civil defense funds be provided for communication systems and services procured for day-to-day operations in view of the fact that such systems and services will be required for use during civil defense activities?

To what extent should the Federal Government and State governments' systems be interconnected to support communication requirements of mutual interest to governments?

2. Develop a structure in the Office of Telecommunications Management which can adequately support the Chairman and the overall administrative requirements of the Federal-State Telecommunications Advisory Committee. This structure should also provide professional support for the development of DTM positions on matters being considered by the committee as well as professional personnel who can provide liaison to State telecommunications officials and coordination of Federal-State telecommunications activities for the DTM.

3. Determine the impediments—legislative, operational, administrative, financial—to the coordinated development of adequate Federal and State telecommunications systems, facilities, and services of mutual interest to Federal and State officials and recommend actions for overcoming these impediments.

4. Encourage and foster increased coordination and the mutual development of telecommunications policies by Federal and State telecommunications officials.
5. Provide increasing liaison with State telecommunications officials and with elements of industry, regional bodies, nonprofit and profit organizations conducting efforts in support of State and local government telecommunications activities.
6. Provide a focal point in the executive branch of Government to which State and local government officials may turn for advice and assistance on telecommunications activities.
7. Continue the conduct of special Federal-State telecommunications studies in such areas as highway traffic control, safety, and emergency operations; health requirements, including communications to support the continuing education of physicians, dentists, and other health professionals; law enforcement; and emergency operations resulting from natural disaster and others.

Research and Technology

Mr. Evins. Take a look at research and technology. General, you have been conducting research for years. How much money are you going to spend for research next year?

Mr. J. D. O'Connell. $800,000.

Mr. Evins. Are these to be private contracts?

Mr. J. D. O'Connell. The items to be covered are in here. They will be either private contracts or money given on contract to a Government agency such as the Central Radio Propagation Laboratory of the Department of Commerce.

Mr. Johnson. Most of the funds are for radio spectrum studies.

Mr. Evins. You expect to let some contracts for radio spectrum studies. How many other agencies of Government engage in this same activity? FCC is asking for moneys for research in the spectrum.

Mr. J. D. O'Connell. I would say that at the present time there are only two. We and the FCC are the only ones pursuing a spectrum research program. We coordinate our programs completely. There is no overlap or duplication.

Contractual Studies

Mr. Evins. Turn over from page 48 to page 85. This is your contractual studies. In 1969 contractual studies are designed to initiate minimum essential study efforts in critical areas. They will point toward accomplishing increased efficiency and effective utilization of our resources. Specifically, the funds requested are designed to effect future economies in frequency management, monitoring duties, and early implementation of the national communications system.

Also, you say policy studies pertaining to the administration of the Communications Satellite Act of 1962 and further development of research analysis capabilities will receive special emphasis. A major effort has been projected in the area of studies and research to devise new means of improving our use of the radio spectrum. How many of these studies have been made?

Mr. J. D. O'Connell. Four studies during the past year.

Mr. Evins. Four studies were made during the last year. Do the studies that you propose for next year in any way overlap or duplicate what you did last year?

Mr. J. D. O'Connell. The ones we did last year just got us off the mark and got us started. They are the foundation on which we must build our future studies.

Mr. EVINS. You had four last year. How many studies do you propose for next year?

Mr. JOHNSON. Nine in the area of radio spectrum research.

Mr. EVINS. How much did it cost last year, your research study effort?

Mr. J. D. O'CONNELL. $600,000.

Mr. EVINS. How much for next year, again?

Mr. J. D. O'CONNELL. $800,000.

Mr. EVINS. Besides spectrum use, what other studies do you propose?

Mr. JOHNSON. There's a total of 13; nine are in the radio spectrum area, one in research and technology of basic factors for encouraging research in the communications field, one in the field of the application of the President's emergency powers, studies and research in that area; communications support in time of crisis; one in the area of national communications, the administration of Government communications facilities, policy studies in that area.

Mr. J. RAY O'CONNELL. The other one we mentioned was the continued use of contracts for our data processing conversion program for the management of frequencies.

COST SUMMARY OF CONTRACTUAL STUDIES

Mr. EVINS. For the record, supply a summary of your contract research program, including the estimated costs in each area.

Mr. J. D. O'CONNELL. We will do that.

(The information follows:)

OFFICE OF TELECOMMUNICATIONS MANAGEMENT

PROGRAM OF STUDIES AND RESEARCH

The need for contract research.—The fundamental objective of the contract research program is to provide the factual base and analytical support to guide and justify the hard policy decisions necessary to achieve really effective use of the spectrum.

To make the significant decisions needed in this area, we need to know with precision and certainty:

How and for what purpose the spectrum is being used.

The number of equipments in use.

The location of use and the technical characteristics of each application.

With a solid base of engineering data, we can continue and extend our job of accommodating new requirements and expanded use without the dangers from harmful interference which currently plague some bands of the spectrum. We will also have a basis to judge economic and social values of the use of the spectrum —to make an intelligent evaluation of who should get parts of the spectrum in the face of competing claims—all of high priority.

The role of the FCC and DTM in spectrum management.—The need for basic spectrum engineering data is apparent both within the FCC and the DTM. In the Communications Act of 1934, the Congress has charged the FCC and the President jointly with assignment of radio frequencies and management of the radio spectrum. Specifically:

The FCC is responsible for regulating interstate and foreign commerce in communications by radio and wire and under sections 301 and 303 of the act for the assignment of radio frequencies and prescribing regulations and standards for their use.

The DTM has responsibilities for the assignment of radio frequencies to Government agencies which flow from section 305 of the Communications Act and Executive order.

Section 305 of the Communications Act provides Government stations shall use such frequencies as shall be assigned to each or to each class by the President. Section 606 of the act sets forth the war emergency powers of the President and contains the authority for the President to direct that such communications as in his judgment may be essential to the national defense or security shall have preference or priority with any carrier subject to this act.

Executive Orders (Executive Order 10705, Executive Order 10995, and Executive Order 11084) assign definite responsibilities to the Director of the Office of Emergency Planning and the Director of Telecommunications Management. The Director of Telecommunications Management is responsible for the development of data with regard to the U.S. Government frequency requirements, coordination of telecommunications activities in the executive branch of the Government and the authority to assign radio frequencies to Government agencies.

The elements of the program.—The responsibilities of the Director of Telecommunications Management include the establishment of policies, and the management and coordination of telecommunications activities of the executive branch in its entirety. Because of the fundamental nature and overriding importance of the radio spectrum to so many telecommunications activities, 80 percent of the contract research program has been devoted to spectrum studies. At the same time, it is essential to maintain some research effort in the field of national telecommunications policies and communication satellite studies and research.

Spectrum studies.—Based on experience with our contractual studies and in-house efforts in support of policy development, we are convinced that in order to fill gaps in present knowledge, a hard core of research and development in the frequency management area must be continued as a matter of priority. Specifically, we need to know in quantitative terms the degree to which the spectrum is actually employed (numbers of equipments, locations, and extent of use). Once these data are obtained, deadwood and lesser important uses of the spectrum may be culled and reviewed with a view to accommodating increased requirements. From an engineering standpoint, it is essential that we acquire sufficient data base (frequency usage, equipment characteristics, interference potentialities) to enable frequency managers to predict/engineer with confidence the extent to which interference might be experienced in the introduction of new communication-electronic devises into existing environments. Additionally, there is an urgent need to develop a base for value analysis (that is, economic and social values) of the use of the radio spectrum, and the injection of such considerations into the formulation of national policies with respect to spectrum usage. These objectives are vital to both Government and non-Government use of the spectrum and constitute pioneering undertakings in this area.

The key elements of the program in order to obtain efficient spectrum management are:

1. Adequate facts and data base.
2. Value analysis of the radio services.
3. Continuing information as to telecommunication research in progress.
4. Engineering capability to keep interference to a minimum.
5. Development of standards and policies.
6. Adequate measurements of use of the spectrum.

The elements which will be pursued during the coming year are:

1. Improvement in automated data-processing techniques. This is imperative if the vast amounts of data are to be treated on a near-real-time basis.
2. The development of standards applicable to both transmitters and receivers which will conserve the radio frequency spectrum and prevent the problem from getting progressively worse.
3. The establishment of value analyses.
4. The establishment of usage information.
5. The treatment of case studies.

If the foregoing tasks are not undertaken, the executive branch will be handicapped severely in areas such as the following:

1. Restricted ability to support from a frequency standpoint the large and vital requirements of the Defense Establishment in connection with overall readiness and the Vietnam war.
2. Deficient planning for U.S. participation in international conferences pertaining to the use of the radio frequency spectrum for space applications, particularly communication satellites.

3. Continued limited ability to assist measurably in the solution to problems such as those connected with the critical non-Government land mobile situation and the Sentinel (antiballistic-missile) program.

4. In summary, ODTM will have to continue to operate in a vacuum so far as quantitative data with respect to the radio frequency spectrum are concerned.

National Telecommunications Policy and Communications Satellite Studies.—This area of research will concentrate on communications satellite policy studies—studies to improve the management of the national communications system—especially the communications needs of the President in time of crises—and the basic factors of telecommunications research and development. It is of vital importance.

The Task for the Coming Year.—The general task areas of the contract research program are noted below. Each task area is described in greater detail in the summaries which follow:

1. Development of Data Processing Techniques.
2. Standards and Measurements for Improved Spectrum Utilization.
3. Determining Value(s) of the Radio Spectrum and Its Use.
4. Spectrum Usage Reporting Program.
5. Case Studies of Spectrum Use Problems.
6. National Telecommunications Policy and Communications Satellite Studies.

I. Title

DEVELOPMENT OF DATA PROCESSING TECHNIQUES

II. Purpose

To provide a powerful enough tool to deal with detailed technical complexities of radio equipments using the radio spectrum. New assignments permitting such equipments to operate come in at the rate of 2,000–3,000 per month, and therefore, new equipment operations are many times this. These new equipments cannot operate if they interfere with already existing and operating equipments or with each other. The ADP techniques developed with these funds are only a small step in the direction of providing the necessary engineering capability for allowing the most effective use of the spectrum. In particular this year, these funds will (a) provide a land mobile radio service model; (b) provide an engineering capability for microwave point-to-point systems; (c) provide a near real time assignment review capability; (d) introduce display techniques to provide statistical reports.

III. Impact

Without effective engineering tools, radio frequencies will not be available in sufficient supply to serve this Nation's needs. The increasing volume of demands cannot be met without adequate support tools. This computational facility can do quicker and more reliably what it would require at least 100 professional engineers, technicians, and other specialists to accomplish by manual methods.

I. Title

STANDARDS AND MEASUREMENTS FOR IMPROVED SPECTRUM UTILIZATION

II. Purpose

A. Obtain information on technical standards which are applied to radio equipment dependent for its operation on the utilization of radio frequencies in all allocated parts of the radio frequency spectrum. Determine the means in which these standards are applied.

B. Develop a detailed rationale for the development of standards and their application and verification.

C. Develop a sound detailed understanding of the different ways in which equipment standards and measuring techniques support effective use of the radio spectrum.

D. Propose steps to rectify deficiencies in the development and application of standards and measuring techniques to effectively utilize the electromagnetic spectrum.

III. Impact

Without this program the present state of confusion will continue and many frequency assignments will have to be made without adequate technical information. Interference conditions, jeopardizing vital activities, such as military communications, space flights, etc., will continue to arise. Substandard radio emissions will continue to make unusable many parts of the spectrum, inhibiting the development and implementation of more or better electronic equipments.

I. Title

DETERMINING VALUE(S) OF THE RADIO SPECTRUM AND ITS USE

II. Purpose

To develop a basic understanding of values relating to the radio spectrum. In apportionment of this most valuable natural resource, there has never been a fundamental determination as to how the radio spectrum should best be assigned to serve the Nation. Radio services provide communication for protection, make high speed transportation possible, and provide entertainment, but there has never been any systematic basis for determining how much of this resource should be allotted for serving each of these purposes. Or, in other words, a 20.3 billion a year industry is floundering in an increasingly stormy sea of uncertainty.

III. Impact

Without a value analysis basis for assigning use of the spectrum, police will continue to lack effective communication systems, land mobile uses will be inadequate, and new techniques will not see implementation to aid our economic growth and permit new services to be accommodated. Again initial efforts will be jeopardized.

I. Title

SPECTRUM USAGE REPORTING PROGRAM

II. Purpose

The purpose of this program is:

a. To enable the selection of frequency bands within which new uses, radio service, might be supported or new equipment might be developed.

b. To permit analysis or review of frequency allocation plans to assure the equitable distribution of spectrum space among different radio services.

c. To insure that existing frequency assignments are being employed effectively.

d. To provide a basis for international adjudication of interference situations.

e. To justify the intention of existing frequency assignments in the national and international environment.

f. To provide useful data for effective day-to-day management of frequency assignments.

g. To reduce the likelihood of interference situations before they develop.

h. To obtain more use out of frequencies on existing assignments.

III. Impact

Without adequate information on how the spectrum is being used, it is impossible to perform a management function. Every major international crisis will continue to be a crisis in availability of radio frequencies. New services will go unimplemented; old services will not respond to new needs; interference to other countries radio equipment will continue to cause embarrassment.

I. TITLE

CASE STUDIES OF SPECTRUM USE PROBLEMS

II. PURPOSE

To document in detail specific cases illustrating the hazards and operational problems encountered under the current inhibitions to the full exploitation of the radio spectrum. Case studies will treat such problem areas as:

a. Lack of adequate spectrum planning.

b. Expenditures involved in rectifying interference situations.

c. Limitations on the operational capabilities of communications-electronics systems due to poor characteristics such as spurious or harmonic radiations from transmitters or poor receiver design.

As this program progresses, we will be able to give Congress for the first time some concrete examples of how much inadequate frequency management is costing the Nation and our economy.

III. IMPACT

This is a necessary part of the comprehensive data base required for spectrum management. Without case histories, which set forth in quantitative terms the cost in both dollars and operational efficiency caused by remedial measures, present practices will be continued whereby sensitive and expensive communications-electronics systems will not see full utilization because of not having the benefits of advanced engineering studies which would predict the likelihood of harmful interference. In other words, we will not benefit from past mistakes.

I. TITLE

NATIONAL TELECOMMUNICATIONS POLICY AND COMMUNICATIONS SATELLITE STUDIES

II. PURPOSE

This area of research seeks to construct an information base which can support dynamic policy development—which meets the needs of our modern society—and which can keep pace with rapid changes in technology. The program of study encompasses interdisciplinary research to include critical national problems, particularly those which occur at the interface between new communication techniques and the economic, legislative, political, administrative, and social institutions. Communications satellite studies are the primary example of this class of policy problem. In the coming year we must take a number of key policy decisions on the use of communications satellites—for domestic communications purposes—to support educational objectives—to develop definitive arrangements for Intelsat and the global system.

III. IMPACT

A solid base of national communication policies is essential to the future of the Communications Satellite Corp. and the accomplishment of U.S. objectives, both domestic and international. The successful use of telecommunications to support national objectives is even now in serious jeopardy. If we do not carry out the necessary policy research, we will lose our ability to exercise major influence on the direction of communication progress throughout the world.

Cost summaries

Fiscal year 1969 contracts:	*Estimated cost in thousands of dollars*
1. Continued development of automated data processing techniques for radio frequency management	250
2. Spectrum allocation versus spectrum usage	50
3. Economic values of the radio spectrum and its use	57
4. Social value of the use of the radio spectrum	44
5. Methodology for determining value of radio spectrum and its use	44
6. Relationship of economic and social value	55
7. Review of existing measurements and standards for spectrum use	100
8. Case studies of spectrum use problems	40
9. Communications satellite broadcast technology	30
10. Basic telecommunications policy research	30
11. Research and technology basic factors RTD–1	20
12. Communications support in time of crisis	30
13. National communications policy factors NCD–4	50
Total	800

JUSTIFICATION MATERIAL

Mr. Evins. Place this material shown on pages 85 through 92 into the record.

(The pages follow:)

XII

CONTRACTUAL STUDIES AND RESEARCH

The fiscal year 1969 contractual studies and research program is designed to initiate minimum essential study efforts in critical areas of national importance most of which have been specifically identified as needed by congressional committees and will point the way toward dollar savings, increased efficiency and effective utilization of telecommunications resources. Specifically, the funds requested are designed to effect: future economies in frequency management allocation review, and monitoring duties; early implementation of the national communications system, which will permit economy in governmental procurement and utilization of communications concurrent with increased operational effectiveness during day-to-day operations and during periods of national and international crises; and to provide consistency and effectiveness in international telecommunications matters to the best interests of the United States and the economy. Policy studies pertaining to the administration of the Communications Satellite Act of 1962 and further development of research analysis capabilities will receive special emphasis.

A major effort has been projected in the area of studies and research to devise new means of improving our use of the radio spectrum. This great public resource is suffering from pollution as are air and water resources. It is in need of development of improved technical standards to guide its use and sound methods must be found to determine the relative national importance of different uses of the spectrum.

The studies outlined below represent areas of major concern in which study and research projects have been identified. The contractual plan provides for major effort in studies identified as priority I, Priority II study projects will be grouped together and pursued only to the extent of completing exploratory definition.

Under the section entitled "Other Necessary Research," we have identified research projects which need to be carried out, but which should be accomplished by other agencies. Such studies and investigations are described with appropriate notations indicating the specific agencies that will be requested to make provision for the necessary resources and to carry out the work. This procedure

has been followed in order to clearly indicate the large amount of work needed, to show the completeness of the DTM's overall programs and to assist the other agencies in relating their requests for the necessary funds to the entire framework as a part of their justification.

PRIORITY I

1. Continued development of automated data processing techniques for radio frequency management

This is a continuing effort, begun in 1962, to establish a Central Government facility with the capability to store adequate data and manipulate them quickly to engineer assignment and use of frequencies and to produce the statistical facts essential to sound management. The ultimate objective is a National ADP Support Center to engineer assignments and uses of frequencies on a real time basis for all agencies wishing to avail themselves of the service, with the master file made current each day and immediately available for consultation and use via data links. ADP techniques are being introduced step-by-step as computer logic and programs become available and the necessary technical data can be furnished by the agencies.

During fiscal year 1967, the initial ADP system (phase I) with automated source data was brought into use (Sept. 13, 1966) in support of daily frequency assignment activities, information retrieval, file maintenance, related printing functions, and engineering analyses of point-to-point use of frequecies below 30 Megahertz, using National Bureau of Standards computers. Phase II of the program, started in the second quarter of fiscal year 1967, was completed by mid-fiscal year 1968. In this phase we: (*a*) converted existing computer programs to work with the OEP UNIVAC 1108 computer; (*b*) introduced augmented capability for machine checks of accuracy of input and file data to release manpower; (*c*) introduced an initial capability to check requests against the table of frequency allocations; and (*d*) increased the capability to generate management statistics in tables, charts and graphs.

Phase II of the program will be started in the second quarter of fiscal year 1968 and completed in fiscal year 1969–70. Specific goals for fiscal 1969 are:

a. Introduce an engineering model for the land mobile radio services in the frequency range 30 to 200 Megahertz;

b. Introduce an engineering model for microwave point-to-point application, including terrain data;

c. Introduce the capability for ADP review of requests for the assignment of frequencies with respect to the provisions of the Manual of Regulations and Procedures; and,

d. Introduce an initial spectrum management statistical and reports generation system to include real time display techniques (this part of phase III will not be completed until about January 1970).

2. Spectrum allocation versus spectrum usage

This study will investigate the theory and practice of assigning specific frequencies for use. It is the intent of this study to ascertain in technical terms, how in fact the radio frequency spectrum is being used. This entails the indexing and correlation of information on quantity, location, and duration of operation of the various equipments, and/or systems operating through the radiation of controlled electromagnetic energy. This is to be accomplished through collection of comprehensive lists on equipment information, and the actual measurement and inspection of areas containing equipments using the spectrum.

3. Economic values of the radio spectrum and its use

This study is to determine the economic value of the radio frequency spectrum and its users. This will include determination of national economic value and relation to gross national product, and the capital investment in systems and equipment utilizing the radio spectrum (including economic relationships between radio and wire line systems). This study will also ascertain and quantify any other significant indicators of economic value.

4. Social value of the use of the radio spectrum

This study will analyze the radio spectrum and its use, as it relates to society. This will include developing an understanding of the importance of the services performed by systems using the spectrum, and of the way in which the various types of systems which are available relate to the type of information needs

which require satisfaction. In other words the purpose of this study is to understand national value from the standpoint of public benefits (safety and other noncommercial service), and in general the influence of radio spectrum use in modern society.

5. Methodology for determining value of radio spectrum and its use

This study will be carried on concurrently with the other studies on determination of radio spectrum value, and will be aimed at developing a methodology for utilizing the information derived from them. This study will enable the development of a means for systematically incorporating economic and social value information along with the necessary technical information to bring about more effective utilization of the radio spectrum.

6. Relationship of economic and social value

The purpose of this study is to synthesize the findings of the economic and social value studies. This effort will determine the areas in which they are related and unrelated, investigate how trade-off's may be performed, and the relative significance of each vis-a-vis each other, and effective spectrum development.

7. Review of existing measurements and standards for spectrum use

This effort will review existing standards and techniques for specifying equipment and systems using the radio frequency spectrum. In so doing, it will identify deficiencies in the measurement methods employed and the accuracy with which the measurements are made and the standards specified, for such indicators of spectrum usage as power levels, field strengths, and transmitter emissions.

8. Case studies of spectrum use problems

This study is intended to thoroughly document and explain examples of the different types of problems which are encountered in the development of the radio frequency spectrum. Such case studies will cover such areas as (1) monetry waste through lack of program organization; (2) jeopardizing of person and property from over-used frequencies, and (3) the deleterious effects to proper communications systems operations because of uncontrolled radiation, and inappropriate equipment design. Such a study will serve to educate and broaden public and policy making knowledge regarding the need for adequate spectrum development programs.

9. Communications satellite broadcast technology

The technology to provide both the transmission and reception of quality television and voice signals from stationary satellites is presently being developed and soon will be a reality. Sufficient power will be available in the satellites to provide a variety of signals to different magnitudes of coverage area. Although this technology is on the threshold of possibility, its operational implementation is presently impossible because of a myriad of organizational, political, economic and regulatory barriers: i.e., there are presently no international allocation and there is uncertainty as to its application to other countries of the world. If the public is to benefit from this technology and its many unique applications realized, it is necessary to overcome current impediments. A detailed study is needed to determine the steps necessary to bring about the use the technology both domestically and internationally.

10. Basic telecommunications policy research

There is need to establish a continuing program of integrated, interdisciplinary research and analysis on selected critical problems, particularly policy-relevant problems at the interfaces between communications technology and economic, legal, political, administrative, and social institutions. It is proposed to establish such a program through a contractual arrangement with one of the nonprofit research organizations. This program will provide for DTM participation in a much larger effort which is to be funded through specific projects of other Government departments and agencies, and by one or more of the national foundations. It will:

Develop and provide a continuing capability to assess the effects of alternative policy proposals upon Government agency operations.

Provide a source of objective consultation and advisory services for those agencies concerned with telecommunications.

Act as a catalyst to bring other research groups into contact with the significant issues in telecommunications.

Call attention to future opportunities as well as problems deserving of attention by scholars, officials, and interested agencies.

Provide a central repository for the collection of information and analyses concerning telecommunications for the use of qualified persons and groups.

11. Research and technology basic factors RTD–1

Review appropriate plans and technological forecasts of Government agencies to identify research and development required. Review in-house research and development tasks of Government organizations and industry to determine what total research and development is being done. Weigh the research and development being accomplished by Government and industry against that needed to identify research and development deficiencies.

This effort will be performed through contractor assistance and will be a key effort of the research and technology directorate. Its purpose will be to more accurately identify the telecommunications studies, research and development which should be accomplished, but is not now being done by any of the Federal organizations or private industries. The overall task will be divided into a grouping of subtasks with each task consisting of a complete review of the state of the art, research and development underway, and research and development still needed in a particular discipline. It is expected that upward of 30 subtasks will be needed to cover the entire telecommunications area. Examples of these subtasks are: millimetric wave communications, transmission systems, communications satellites, automatic message processing, microwave communications and time division-frequency division methods and equipments.

Because of the limited staff now existing within the research and technology directorate, all tasks will not be immediately undertaken.

12. Communications support in time of crisis

Undertake with contractual assistance an analysis of the day-to-day and crises functions of the Presidency to determine telecommunications support requirements. This will involve analysis of crises situations in the past inclusive of those arising from natural disasters. Having identified requirements, determine telecommunications conditions and means for requirements satisfaction.

A contract is to be let about March fiscal year 1968 to provide assistance necessary to accomplish the work described above. A request will be made upon the DOD and other appropriate Government agencies or offices to assist in funding the fiscal year 1968 effort.

13. National communications policy factors NCD–4

Obtain contractual assistance to provide information on existing telecommunications policy and legislation and related policy and legislation which bear on telecommunications; identify the impact of such policy and legislation on today's telecommunications; identify the organizations which carry out research and development, manufacture, operation and management; identify how these organizations cope with existing policy and new policy; identify the organizations that are affected more than others and why; recommend a method of forecasting and evaluating new policy impact and organization reaction.

A contract was let during September fiscal year 1968. This contract is designed to perform a three month contract definition study for the purpose of determining the approach to be taken in meeting the needs of the office as described above.

NATIONAL COMMUNICATIONS DIRECTORATE

Mr. EVINS. Take a look at national communications directorate summary. You list some more tasks that need to be accomplished.

Mr. J. D. O'CONNELL. Here is where, working with the Bureau of the Budget, we need to get a better understanding of what our costs in all departments are, in all departments with significance to telecommunications.

Mr. EVINS. Insert pages 56 through 61 into the record.

IX

NATIONAL COMMUNICATIONS DIRECTORATE SUMMARY

National communications responsibilities set forth in Executive Order 10995, as amended, and in the President's memorandum of August 21, 1963, "Establishment of a National Communications System," form a major portion of the responsibilities assigned to the Director of Telecommunications Management.

To carry out the assigned responsibilities, the Director of Telecommunications Management has established the following national communications objectives:

1. Provide policy guidance for development of national telecommunications.
2. Provide policy guidance for a National Communications System which will be planned as a single system, implemented as a single system and operated as a single system to meet the needs of the Federal Government under all conditions.
3. Develop working relationships between the Director of Telecommunications Management and the executive agent of the NCS so that policy direction can effectively influence further NCS development and which will place maximum management responsibilities at the operational level.
4. Provide financial planning and program review procedures for the National Communications System.

TASKS NEEDING ACCOMPLISHMENT

Accomplishment of the foregoing responsibilities and objectives requires the conduct of several urgent national communications tasks. These are described in the following summaries:

1. Telecommunications and computers

Review and evaluate reports and planning documents pertaining to telecommunications requirements for computer systems of the national communications system, other Government agencies and industry. Develop policy and guidance needed to support homogeneous development of standardized national communications system information systems and the requirements for telecommunications interconnection. Identify factors inimical to meeting objectives and alternative approaches to their solution.

2. Legislative studies

Review and evaluate plans and report documents and determine through such other studies, as required, the needs for telecommunications capabilities in non-telecommunications activities. Identify the benefits to be obtained through providing such service and identify and provide guidance on potential roadblocks to progress toward meeting objectives. Develop guidance and new policy or changes to existing policy, recommendations of new legislation or changes to existing legislation as may be required.

3. International telecommunications

Appraise U.S. policy in the field of international telecommunications and provide support to the Department of State; promote cooperation and coordination among concerned Government agencies and the U.S. telecommunications industry. Continue evaluation of the need for updating the structure of U.S. international common carriers.

4. Policy impact evaluation

Obtain contractual assistance to provide information on existing telecommunications policy and legislation and other factors which bear on telecommunications; identify the impact of such policy and legislation on today's telecommunications; identify the organizational structures for carrying out research and development, engineering, manufacture, operation and management; identify the effectiveness of these organizations from the standpoints of progressiveness, economy, service in meeting public and national needs and objectives as a basis for forecasting and evaluating new policy impact and organizational and management structure.

5. Telecommunications objectives

Develop a plan of action and requirements for proposed changes to policy or legislation. Identify annual objectives. Coordinate with other Government agencies of interest.

6. Management studies

Identify and evaluate existing management systems in use by U.S. industry and the U.S. commercial domestic and international common carriers. Evaluate management systems of telecommunications organization within the Federal Government. Develop policy guidance and criteria for all levels of telecommunications organizations within the Federal Government. Provide the factual basis for telecommunications management legislation.

7. Department of State liaison

Maintain liaison and rapport with State representatives. Assist in identifying problems and issues. Develop technical, operational, economic, and systems guidance. Recommend policy or legislation changes where necessary.

8. Government-industry information exchange program

Survey industry and Government telecommunications activities to determine arguments for and against establishing an ODTM (Government)-industry information exchange program; identify methods and procedures.

9. NCS planning programing and budgeting system

Monitor and review national communications system activities from a planning, programing, and budgeting viewpoint in support of BOB.

10. NCS cost effectiveness

Determine guidance needed to improve the effectiveness and economy of telecommunications systems which operate in a supporting role to the primary mission of governmental departments and agencies. Prepare guidance which leads to the means for improving national communications system cost effectiveness.

11. Technological trends and their impact on national communications

Study the technological trends in communications to determine the impact of functional obsolescence on Government communications systems. Develop guidance to cope with functional obsolescence problems.

12. Technology and management systems

Study the impact of new technology on management systems of Government and commercial telecommunications organizations. Provide short- and long-range planning guidance for the national communications system design based on projected requirements, status of existing networks, and technological advances.

13. NCS analysis

Identify current status of the national communications system and review established program goals and related future plans and concepts for the progressive development of the national communications system within the Contus and overseas. Review output reports developed under tasks delineated in program III (this document). Develop policy guidance and criteria as it is required to achieve a single, unified national communications system.

14. Telecommunications support of the Presidency

Develop qualitative telecommunications support requirements for the Presidency throughout the spectrum of conflict from normal day-to-day operations through nuclear war. Contractual assistance required to support this task.

15. NCS traffic analysis—Impact of advanced systems

Collect and review documentation on Government-owned communications satellite systems or planned systems. Evaluate the growth of such systems and the contribution they make as an integral trunking media for the NCS. Develop guidance on the various uses for communications and other types of satellite systems for Government use through lease. Provide guidance and policy where necessary to define unique, vital or national interest requirements which can best be met through Government owned and operated communications satellite systems.

16. NCS standards

Determine the impact of existing standards on the integration of NCS component networks. Evaluate planned standards and the impact of their implementation on NCS integration and interconnection schedules. Review actions taken by the NCS manager and provide him with the guidance and assistance necessary to achieve complete technical compatibility of all NCS elements and connected networks of facilities. Obtain contractual assistance in accomplishing this task.

17. NCS customer satisfaction analysis

Monitor and measure NCS customer reaction-satisfaction. Determine criteria for reliability, availability and performance as concerns operational standards, methods procedures and operational organizations. Examine the magnitude of operational interfaces and the number and type of standards that are required. Recommend changes which will result in increase in speed of service, quality and less cost. This task will be assigned to the executive agent (NCS) for accomplishment.

18. Radio frequency conservation techniques

Review plans and programs of telecommunications activities of the Federal Government and prepare guidance necessary to encourage comprehensive study of telecommunications devices (equipment, systems) that might fulfill wide band trunking requirements via media other than the radio frequency spectrum. Through liaison with Government and industry telecommunications activities, determine examples of technological changes that should be considered for conversion of RF trunking to other means, that is, CATV concept, millimeter waveguides, laser pipes, high capacity transistorized cables, new modulation techniques. Promote evaluation of techniques which will allow increased circuit or channel capacities within a given bandwidth of radio frequency where the requirements demand that radio frequencies must be used.

Frequency Management Directorate

Mr. Evins. Here is frequency management on page 62. It seems to me like this is similar to FCC's work, frequency management. They manage the frequencies, do they not?

Mr. J. D. O'Connell. Not for Government use, sir.

Mr. Plummer. The FCC comes to Mr. O'Connell for its frequencies.

Mr. Evins. This is for the Federal Government. They manage the private sector.

Mr. J. D. O'Connell. That is correct, sir.

Mr. Evins. Place pages 62 through 78 into the record.

(The pages follow:)

X

Frequency Management Directorate Summary

The Office of Telecommunications Management Frequency management program is a continuing one designed to assist in achieving national goals, with emphasis on achieving the national objectives for the use of the radio spectrum. By force of circumstances, it is a program of management by exception, that is, the consideration of like matters through the application of rules, regulations and procedures, and case-by-case consideration of unlike or new matters as exceptions to the rules, etc.: when an exception becomes routine, provision is made for it within the system. In the interest of efficiency, economy and avoidance of duplication, it is carried on in close collaboration with the Federal Communications Commission (FCC).

The OTM frequency maangement program has six broad objectives which are:

1. Plan, manage, supervise, and regulate U.S. use of the radio spectrum in such a manner as to insure maximum contribution to the execution of national policies and achievement of national goals.

2. Provide policies, criteria, technical standards, regulations, justifications, and procedures for the acquisition and use of radio frequencies by Federal agencies so as to improve efficiency and effectiveness of use of the spectrum,

ensure maximum electromagnetic compatibility of operations, and avoid harmful side effects.

3. Insure that timely and adequate frequency assignments are made to Federal radio stations to meet needs found to be in the national interest, and to amend, modify or revoke such assignments as deemed necessary.

4. Provide a dynamic development plan and table of frequency allocations designed to accommodate changing national needs and technology so as to insure satisfactory accommodation of present and foreseeable frequency requirements found to be in the national interest.

5. Assist and advise the Department of State in the discharge of its functions in the field of international telecommunication policies, positions and negotiations.

6. Establish a central Government facility with the capability to store adequate data and manipulate the data quickly to engineer the assignment and use of frequencies and produce the statistical facts essential to sound management.

Considerable progress has been made to improve executive branch frequency management. However, much more improvement is essential to adequate support in reaching national goals and in obtaining maximum benefits from the use of the spectrum. For example, issuance of the Manual of Regulations and Procedures for Radio Frequency Management in August 1965 was a significant milestone. The manual continues to need improvement and expansion. Also, the introduction of automatic data processing (ADP) techniques into the frequency management program has made it possible, with no additional personnel, to handle a workload increasing at 6.8 percent a year with greater dispatch, accuracy and quality of product, and to give added and badly needed attention to technical and management activities. The fiscal year 1969 frequency management program is designed to continue and speed up this improvement, with major emphasis on: further development of ADP capability and service; acquisition, analysis, and application of essential facts to radio spectrum development and use; general management; and enhanced capability to assist and advise the Department of State with respect to the work of the International Radio Consultative Committee (CCIR).

Additional personnel are proposed only for radio spectrum development and CCIR work in the OTM.

TASKS NEEDING ACCOMPLISHMENT

Clearly defined specific frequency management tasks needing accomplishment are:

1. The task of frequency assignment and record-keeping

Objective.—To discharge the President's responsibility for the assignment of frequencies to United States and foreign government embassy radio stations in accordance with the Manual of Regulations and Procedures as expeditiously as possible to meet needs found to be in the national interest, and to amend, modify or revoke such assignments as deemed necessary.

Coordination and assignment of frequencies to Federal radio stations are effected as follows:

a. Each Government agency decides, in the light of policies, rules, regulations, frequency allocations and availability of frequencies, whether, what, and how much radio communication is needed to carry out its mission. The agency makes the necessary technical studies, selects possible frequencies, coordinates the selection with other agencies involved, and prepared and files an application with the executive secretary of the IRAC. (The FCC liaison representative to the IRAC submits memoranda requests on non-Government use of frequencies in shared frequency bands, and in other bands where he considers there might be an impact on or from Government operations.)

b. The IRAC Secretariat screens the applications for accuracy, completeness, and compliance with policy and procedures; assigns a docket number for identification; includes the particulars on the agenda of IRAC's Frequency Assignment Subcommittee (FAS); and distributes the agenda to each agency and the FCC for study

c. The Frequency Management Directorate meanwhile reviews the Government applications to insure adequate justification, compliance with policy and regulations, technical appropriateness, probability of major problems and whether there is a conflict with nonmembers of the IRAC.

d. Each month the FAS/FCC considers pending items and takes agreed action within policy guidance. When policy is needed, agreement cannot be reached, the IRAC has so directed, or an agency so requests, applications are referred to the IRAC/FCC. Matters which cannot be resolved within the IRAC/FCC, or when so directed by the DTM or requested by an agency, are referred to the Frequency Management Directorate where they are resolved or referred to the DTM. Matters of considerable importance, such as changes in the table of frequency allocations, significant Government use of non-Government frequency bands and advice to the Department of State, are recommended to the DTM for consultation with the FCC or other appropriate agencies. Although Government applications are not heard in public for security reasons, the public is represented by the FCC liaison representative to the IRAC who may object, concur or give tacit approval.

e. As soon as possible after each FAS/FCC meeting, the IRAC Secretariat enters the actions into the master record, prepared, has printed, and submits the list of frequency assignments to Government radio stations to the DTM for approval. Following DTM approval, distribution is made to the agencies.

f. The workload trend in frequency assignment and recordkeeping is reflected in the following table:

	Fiscal year 1955 actual	Fiscal year 1965 actual	Fiscal year 1966 actual	Fiscal year 1967 actual	Fiscal year 1968 estimate	Fiscal year 1969 estimate
Frequency assignment actions	16,700	32,775	32,854	32,163	35,000	38,000
Total frequency assignments to Federal agencies	(1)	104,000	110,691	116,310	122,000	128,000

[1] No data.

The number of frequency assignment actions, i.e., a new assignment, a change, a modification, or a deletion, is the one work element which has remained on the same base and has been recorded over the years. Since 1945, this element of workload has increased at an annual rate of 6.8 percent; or from 8,800 in 1945 to 32,163 in fiscal year 1967. Meanwhile, since fiscal year 1959, the personnel assigned to processing this workload and recording the actions has remained about the same. During this period, the number of persons engaged in recordkeeping has decreased 3 percent annually.

Improved methods and the introduction of ADP techniques make it possible in fiscal year 1969 to ask for no personnel increase for this work.

2. *The task of introducing automatic data processing and computers for improved radio frequency management*

Objective.—To establish a central Government facility with the capability to store adequate data and manipulate them quickly to engineer assignment and use of frequencies and to produce the statistical facts essential to sound management. The ultimate objective is a national ADP support center to engineer assignments and uses of frequencies on a realtime basis for all agencies wishing to avail themselves of the service, with the master file made current each day and immediately available for consultation and use via data links.

ADP techniques are being introduced step-by-step as computer logic and programs become available and the necessary technical data can be furnished by the agencies.

On September 13, 1966, the initial ADP system (phase I) was brought into use in support of daily frequency assignment activities, information retrieval, file maintenance, related printing functions, and engineering analyses of point-to-point use of frequencies below 30 MegaHertz. Natioal Bureau of Standards computers were used for this purpose.

To prepare to use the new OEP UNIVAC 118 computer, phase II of the program was started in the fall of 1966. In this phase, we have: (a) Converted existing computer programs to work with the UNIVAC; (b) introduced augmented capability for machine checks of accuracy of input and file data to release manpower; (c) introduced an initial capability to check requests against the table of frequency allocations; and (d) increased the capability to generate management statistics in tables, charts and graphs. Phase II will be completed by January 1, 1968.

Phase III planned for completion in fiscal year 1969 will introduce: (a) A model for engineering frequency assignments for the land mobile radio services in the frequency range 30–200 MegaHertz; (b) a model to engineer microwave point-to-point application; (c) capability for ADP review of applications with respect to the provisions of the manual; and (d) initial spectrum management statistical and reports generation system to include realtime display techniques.

Phase IV of the system, planned for fiscal year 1970, will incorporate data on: (a) purpose, extent and intensity of uses; (b) present investment in communication systems; (c) contribution to the GNP, productivity and efficiency; (d) relative values of uses; (e) growth and trends by frequency band and radio service; (f) unfilled and potential needs; and (g) growing congestion.

The ultimate ADP system, planned for completion by the end of fiscal year 1972, will constitute a National ADP support center to engineer frequency assignment and use on a realtime basis for all agencies wishing to avail themselves of the service, with the master file (record of uses and technical data) made current each day, via data links.

Benefits are already evident. Fewer persons are able to make more thorough review and apply better management with respect to a much greater workload. Management deficiencies have been and are being overcome rapidly. No application is held more than 1 month and frequency assignment actions are posted into the master file within 2 to 3 weeks after IRAC (FAS) decisions. The complete list of assignments is printed twice yearly, with monthly supplements, within 2 to 3 weeks after approval by the IRAC (FAS).

3. The task of providing frequency management regulations and procedures

Objective.—To provide the elements of frequency management (e.g., policies, criteria, technical standards, regulations, justifications, and procedures for the acquisition and use of radio frequencies by Federal agencies) vitally needed to improve the efficiency and effectiveness of use of the spectrum, insure maximum electromagnetic compatibility of operations, and avoid harmful side effects.

The development and codification of these elements of management in the Manual of Regulations and Procedures for Radio Frequency Management, issued initially in August 1965, has proved to be a valuable tool of management from the executive office down to the field. Since its issuance, it has been revised and improved quarterly.

During fiscal year 1967, the manual was revised, improved and expanded. Policy to govern spurious emissions was developed and promulgated. Standards in the form of minimum performance requirements for transmitters, receivers and antennas (above 4 MHz) were developed and issued for SSB equipments for single-channel voice communication in the mobile services between 2 and 30 MHz, and for single- and independent-sideband equipments in the fixed service between 2 and 30 MHz for transmitters with a mean power of more than 1 KW. The Government table of frequency tolerances was improved to the point that it equals or surpasses the ITU Table. Restrictions for radio door controls (garage) were developed in collaboration with the FCC, which issued them in a first report and order. Categories of justification for frequency assignments were developed and issued. Procedures for the advance coordination of earth stations in the band 1 to 10 GHz were issued. Procedures for the advance coordination of frequency usage in congested areas (mountain tops) were developed with the FCC who made them effective March 20, 1967. A comparable procedure for Government use has been drafted and is being studied. The IRAC radar engineering design objectives were adopted with some modification by the Department of Defense.

During fiscal year 1968 work will be completed on: national policy for the use of oblique ionospheric sounders; minimum performance requirements for radar; improved frequency tolerances for new transmitters after 1970 and 1975; expanding the table of tolerances for levels of spurious emissions above 235 MHz; standards for intruder alarms; and conversion of 406–4230 MHz land mobile FM equipment to narrowband FM.

During fiscal year 1969, efforts will be intensified to improve, develop and issue additional policies, standards, justifications, regulations and procedures as needed. Particular emphasis will be placed on the development of standards (minimum requirements) for transmitters, receivers and antennas in the VHF/UHF land mobile, other HF and other radio services.

4. The task of conducting frequency usage review

Objective.—To provide information to help assure that: radio frequency authorizations to Federal agencies are still needed and are used sufficiently to justify their continuance; agency management activities and practices are adequate and sound; approved policies, allocation conditions of assignment are followed; and that frequencies are still required and are being used for the purpose for which authorized.

The OTM has no monitoring facilities with which to insure compliance with terms of authorization or identify sources of interference. Frequency usage review is effected by examining existing authorizations, analyzing requests for assignment and inspecting Government radio stations.

This effort involves studying more than 100,000 assignments, on about 11,000 discrete frequencies, and an estimated 30,000 to 40,000 frequency assignment actions a year, of which about 17,000 are new assignments, and more than 12,000 are deletions, expirations or withdrawals. About eight to 10 Government frequency management activities and radio stations are inspected each year under the program described earlier.

Recently we have:

a. Analyzed the used of the frequency band 162–174 in the Los Angeles area in an effort to establish an approach to assist in an overall study of the land mobile problem in collaboration with the FCC.

b. Listed for review by the military agencies all frequency assignments to bases announced as being closed between 1962 and 1966 with a view to their deletion.

c. Reviewed 7,300 double sideband fixed assignments in connection with conversion to single sideband to determine whether to amend or delete the assignments.

d. Reviewed for deletion or amendment assignments with a bandwidth greater than 36 KHz in the band 406–420 MHz.

e. Initiated a procedure to follow up agency statements of intent to delete assignments to insure completed action.

These programs will be continued and new projects started during 1968 and fiscal year 1969 as manpower and workload permit.

5. The task of frequency allocation review and planning

Objectives: (1) To state the United States objectives in the use of the radio spectrum as a guide for the formulation of policies designed to achieve national objectives and the allocation and use of the spectrum; (2) to provide a dynamic table of frequency allocations designed to accommodate changing national technology; and (3) to develop a national plan for the allocation and use of the radio spectrum which will be a dynamic guide to the future to insure satisfactory accommodation of present and foreseeable frequency requirements found to be in the national interest.

This task may be divided into three subtasks which are:

a. Regular review and planning for the allocation and use of the spectrum which encompasses frequency review of the table of frequency allocations as necessary to meet changing national needs and to prepare for ITU Conferences and make changes to the table as appropriate.

The table was kept under continuing review and minor changes effected as needed. During fiscal year 1968 we completed an inventory of Government uses of the spectrum and the number of equipments in the various parts of the spectrum, including the investment in such equipments. This effort, started in fiscal year 1966, will be continued and refined in fiscal year 1969 and later years.

The IRAC/FCC are working together on the land mobile frequency problem in a newly established spectrum planning subcommittee (SPS) of the IRAC. To expedite the work, the SPS established three working groups to:

WG #1: Develop broad policies and procedures for the use and management of the spectrum and statement of needs;

WG #2: Evaluate spectrum allocations and provisions, with initial emphasis in the band 10–40 GHz; and,

WG #3: Examine the FCC land mobile problem urgently. Then evaluate the needs, new techniques, pressures on parts of the spectrum, changing requirements, etc.

During fiscal year 1968 we identified frequencies within the nonmilitary Government land mobile bands which could be shared with the FCC in the first 10 major urban areas, on condition that all land mobile suballocations be opened to general land mobile use and that all uses be engineered. This effort will be continued in fiscal year 1969.

Preparation for the maritime WARC conference (see task 6) was completed by early fiscal year 1968 and the U.S. delegation supported. The results of this conference will be implemented within the United States in fiscal year 1969.

b. Special review with respect to the space radio services. On February 28, 1966, we contracted (OEP–SE–66–7) for a study of space service spectrum needs through 1980 to determine the potential growth of and need for allocation of frequencies to the space services and the means of satisfying approved needs in the light of spectrum saturation. During fiscal year 1968 the report by the contractor was analyzed in conjunction with existing unfilled and possible future needs of other radio services, frequency allocation problems were identified and evaluated in connection with the next two items.

Rapid advances in space technology and capabilities, successful establishment of much of the global commercial communication-satellite system, and proposals for ETV via satellites with a large number of earth stations, raised doubt that the 1963 ITU EARC allocations of frequencies to the space services and conditions for sharing frequencies with terrestrial services would be satisfactory if the domestic use of satellites was approved. This confronted the FCC and the DTM with the unpleasant choice of taking far-reaching decisions in these matters without adequate information or deferring such decisions in the face of strong pressures.

In the circumstances, NASA was asked and agreed to define the requirements for an experimental measurements program to yield the facts essential to the establishment of criteria for the sharing of frequencies by space and terrestrial systems, determining the feasibility of using communication satellites for domestic services and broadcasting directly from satellites to the public, including the use of frequencies above 10 GHz. Specific measurement objectives, in order of priority, were:

(1) Terrestrial interference and propagation measurements (including off-path scatter);

(2) Propagation measurements above 10 GHz;

(3) Down-link (satellite to earth) interference measurements; and

(4) Up-link (earth to satellite) interference measurements.

The data sought through this program and from other sources are essential to wise decisions which allow for maximum exploitation of the space technique without damage or hindrance to the U.S. $2 billion microwave systems.

The measurements experiment was started in Fiscal Year 1968 and will be completed in Fiscal Year 1969. The results will then be analyzed in connection with the aforementioned contractor's report and the next item.

Under subtask 5.a., frequency bands between about 15 and 40 GHz which might be made available for exclusive satellite use were identified in fiscal year 1968. Considering the availability of such frequency bands, the report on space saturation and the results of the measurements experiment, in fiscal year 1969, and allocation plan to accommodate approved space requirements will be drafted and implemented, insofar as possible, within the ITU. A decision will be taken as early as possible on whether changes to the ITU table should be sought through as international conference. If a conference is considered necessary, the U.S. proposal therefor will be prepared during fiscal year 1969 and, if held, the results of the conference will be implemented in fiscal year 1970.

c. Radio spectrum development. In the DTM's report on frequency Management, October 1966, I recommend an OTM/FCC guided joint program of fact gathering, analysis, and planning to provide a radio spectrum development plan to make continually available guide for orderly development and exploitation of the spectrum, designed to insure satisfactory accommodation of present and foreseen frequency requirements found to be in the national interest.

During fiscal year 1967, the IRAC Spectrum Planning Subcommittee was established, a spectrum development division was started within the fre-

quency management directorate with two professionals to work full time with the FCC professionals, and a memorandum of understanding with the FCC and terms of reference for the joint group were drafted.

During fiscal year 1968, the FCC/OTM memorandum of understanding and terms of reference for the FCC/OTM joint radio spectrum development program were agreed; a contract was let for a compilation of basic factors bearing on use of the radio spectrum; resources for the future and the Brookings Institution sponsored a symposium on methodology to evaluate the relative values (benefits) of the various radio operations to the Nation, with papers by well-known authorities from Hofstra University, MIT, Yale University, Rand Corp., and the University of Rochester; a contract was let to collect and assemble information on "side effects;" a 5-year work program with schedules and cost estimates was drafted; work statements were prepared, and contracts let on the several study programs funded in the fiscal year 1968 appropriations.

During fiscal year 1969 work will be continued or started on:

(1) Obtaining information on use of the radio spectrum with respect to (a) comparison of radio spectrum allocations with actual usage; (b) case studies of radio spectrum utilization problems; (c) study of growth of radio "noise"—data base for yearly radio "noise" thermometer.

(2) Determining value(s) of the radio spectrum and its use: (a) development of methodology for determining radio spectrum values; (b) determination of economic value aspects (national economic value and relation to GNP; capital investment in equipment, etc.); (c) determination of social value aspects (national value from standpoint of public benefits—safety—influence of radio spectrum in modern society); (d) analysis and integration of information on social and economic values; and (e) investigation of special problems in spectrum values.

(3) Determining methods for improving use of the radio spectrum through: (a) analysis of technological aspects of spectrum usage improvement; (b) analysis of management aspects; (c) improving measurements and standards; (d) research in special problems in technology, measurements, and management.

(4) Planning future use of the radio spectrum: (a) determining future requirements; (b) study to determine recommendations for changes in statutes and Executive orders.

6. The task of international coordination of spectrum policy

Objective.—To insure that policies, views and needs of executive branch agencies are adequately projected in U.S. positions for international telecommunication negotiations; to identify U.S. treaty obligations and insure their discharge; and to assist and advise the Department of State in the discharge of its responsibilities in this field.

International frequency coordination is carried out through the ITU and with other countries within the ITU provisions, by or under the aegis of the Department of State. Coordination of frequency operational matters is effected also through the Inter-governmental Maritime Consultative Organization (IMCO), International Civil Aviation Organization (IACO), Intergovernmental Oceanographic Commission (IOC), and Intelsat. The IRAC is responsible under the United States-Canada Agreement relating to the coordination and use of radio frequencies above 30 megacycles per second of 1962 (as amended 1965) to effect coordination with respect to Government frequency usage and bands (TIAS 5205 and 5833).

Preparation of U.S. positions to international radio conferences; formulation of telecommunication policy advice to the Department of State; advice and assistance in coordinating with other countries, where not a function of the FCC; and guidance for implementing U.S. telecommunication treaty obligations usually originated in, or are carried out in, the IRAC/FCC. Recommendations of the IRAC/FCC, when necessary, are reviewed by the DTM and, if satisfactory, are coordinated with the FCC. The FCC conducts any rulemaking which may be indicated. The FCC and the DTM then make parallel recommendations to the Department of State for projection internationally.

Officials from the OTM, FCC and Government agencies having responsibilities with respect to the subject under consideration, serve as members of the U.S. delegation to international telecommunication conferences. In addition, private individuals serve as advisors to the delegation where appropriate.

During fiscal year 1967, preliminary views of the United States of America to the World Administrative Radio Conference to deal with matters relating to the maritime mobile service (September 18 to November 4, 1967) were developed, approved and circulated to other countries for study and comment. These preliminary views were discussed with officials of Canada and the United Kingdom, and in two joint civil/military meetings of the Allied Radio Frequency Agency (ARFA). As a result of these discussions and further study, the U.S. proposals were prepared and sent to the Secretary-General, ITU. Also, 1,130 Canadian and 345 United States proposed frequency uses within the United States-Canada Border zones were coordinated.

The Deputy Associate Director (FM), who is also Chairman of the IRAC, will serve as a Vice Chairman of the U.S. delegation to the Maritime WARC.

7. The task of maintaining the emergency readiness plan for use of the radio spectrum

Objective: To provide a national frequency plan for use of the radio spectrum in a war emergency to: (a) satisfy urgent military requirements in the most expeditious manner; (b) provide for continued operation of services vital to national security and welfare; and (c) provide for transition between war emergency and peace with a minimum of impact on established operations.

During fiscal year 1967 a complete revision of the emergency readiness plan was started to effect improvements. This work was completed and the revised plan issued in fiscal year 1968.

During fiscal year 1969 the plan will be maintained current.

8. The task of resolving problems

Objective.—To resolve problems wherever possible, thereby relieving the DTM for more important tasks.

Earlier I described a procedure whereby I personally, with the FCC Chairman included on matters of interest to the Commission, question and hear the Government agencies on important matters. An important aspect of this procedure is an arrangement whereby my Associate Director (FM) considers and decides routine questions and matters referred by the IRAC by direction or where IRAC agreement cannot be obtained. Where he cannot resolve the matter or significant issues are involved, he develops the facts, recommends a letter for my approval, or recommends that I hear the issue.

On the average he resolves about 10 routine requests for assignment of frequencies and one or two substantive issues a month.

OTHER OBJECTS

Mr. EVINS. Take a look at "other objects." This is on page 104. Travel remains the same as last year, although it is up from 2 years ago. Transportation of things remains the same. Here is an item, rents and communications, which goes down substantially. You had $194,000, then $255,000 and you are down to $58,000.

Mr. J. D. O'CONNELL. Give us credit for bringing this about.

Mr. EVINS. Did you do that or did the Bureau of the Budget?

Mr. J. D. O'CONNELL. We did this.

Mr. PLUMMER. Computer time is what it is.

Mr. EVINS. Rental of Equipment goes down from $212,000 to $25,000.

Mr. J. RAY O'CONNELL. This is where the savings are—purchasing of computer time.

Mr. EVINS. All right. Printing is $18,000. The other services is your research and contractual arrangements. They go up from $600,000 to $800,000.

Don't you think you could hold that to about $500,000, General? You let a lot of contracts.

Mr. J. D. O'CONNELL. That contract effort, Mr. Chairman, is indispensible to us. We screen each of these study requirements very carefully. It is an austere study program—down to rockbottom of what

needs to be done. The task force recognizes that certain studies must be made if it is to come up with well-founded conclusions and recommendations. We recognize the need too, not only as far as the task force is concerned, but in respect to our responsibility for determining adequate national telecommunications policy. We've actually amalgamated much of our contract money into common purposes—to meet our requirements and at the same time respond to task force requirements. In other words, we have economized to the extent we can to serve common objectives. We will continue to do this—we will continue to review very carefully our study objectives to make sure that the data which we get is data that we must have.

Mr. EVINS. Reimbursement to other agencies, $35,000. They ought to be paying you for the services you render to them, General. What is this?

Mr. J. RAY O'CONNELL. This is for administrative services.

Mr. EVINS. $35,000 is paid to other agencies?

Mr. J. RAY O'CONNELL. We reimburse OEP for administrative services which includes all the housekeeping functions, processing of personnel, procurement of supplies, etc.

UNEXPENDED BALANCE

Mr. EVINS. I think I asked you earlier if you had an unexpended balance in your contract studies.

Mr. J. RAY O'CONNELL. This is no-year money.

Mr. EVINS. How much carryover do you have?

Mr. J. RAY O'CONNELL. We do not anticipate any carry-over into fiscal year 1969.

Mr. EVINS. It is not all obligated. There is a freeze on some of it, is there not?

Mr. J. RAY O'CONNELL. No, not a freeze but some of our contract funds have not been apportioned for fiscal year 1968.

Mr. JOHNSON. We had a hearing with the Bureau of the Budget——

Mr. J. RAY O'CONNELL. Yes, they have come back and reviewed this, and have an arrangement with the BOB with respect to coordination of our research efforts with the work and requirements of the task force.

Mr. EVINS. You don't have any unexpended balance at this time?

Mr. J. RAY O'CONNELL. Let me clarify this—the BOB has coordinated the efforts of several agencies conducting contract studies in spectrum development and has held back the apportionment of $190,000 of fiscal year 1968 contract funds. Agreement has now been reached for the letting of two contracts which will obligate the balance of this year's contract funds.

Mr. EVINS. You have $190,000 in research money for contracts that you have not obligated yet?

Mr. J. RAY O'CONNELL. Yes.

Mr. EVINS. General, we are always impressed with the magnitude of your advisory capacities. You have an important mission. We commend you and wish you a lot of good luck.

Mr. J. D. O'CONNELL. Thank you, Mr. Chairman.

THURSDAY, MARCH 7, 1968.

CIVIL DEFENSE AND DEFENSE MOBILIZATION FUNCTIONS OF FEDERAL AGENCIES

OFFICE OF EMERGENCY PLANNING

WITNESSES

ENDICOTT PEABODY, ASSISTANT DIRECTOR
WILLIAM B. RICE, DIRECTOR OF ADMINISTRATION
EUGENE J. QUINDLEN, DIRECTOR, PROGRAM PLANNING AND EVALUATION
A. JAMES READ, BUDGET OFFICER

Mr. EVINS. We will hear Governor Peabody on the civil defense and defense mobilization function for OEP.

Mr. PEABODY. And then the delegate agencies will all testify in turn alphabetically in accordance with your wishes.

Mr. EVINS. We had Governor Daniel with us the other day and he did an excellent job. We will place Governor Daniel's statement in the record.

Mr. PEABODY. That is the statement I was going to present for him.

Mr. EVINS. We will be pleased to hear you.

GENERAL STATEMENT

Mr. PEABODY. I am particularly interested, as the Assistant Director of the Office of Emergency Planning in the delegate agency budget because I have been appointed by the Director, Governor Daniel, to serve as Chairman of the Interagency Emergency Planning Committee.

We work with these committees month by month, working out emergency programs and making sure that our program is up to date.

This committee, Mr. Chairman, is a very effective working tool in drawing together all of the emergency activities in all of the departments of government, and we are working extremely hard to better its operation so it will be up to the minute in every way possible.

As you well know, Mr. Chairman, agency programs are not individual, unrelated, nor uncoordinated pieces. They are an important part of the continuing Federal effort to build emergency preparedness into the existing structure of government. The objectives set forth are part of a total program designed to move nonmilitary preparedness forward rationally, uniformly, and with maximum benefit for every dollar invested.

OEP provides the departments and agencies, including the eight represented here, with overall assumptions, policy guidance, program assistance, and coordination. However, the departments and agencies carry out the detailed work of preparedness in their own areas of competence. OEP has worked with the agencies in establishing these defense mobilization goals and programs and funding levels.

The total request for the eight agencies has been held to the fiscal year 1968 level of funding except for a very slight increase due to the pay raise. This request is down more than 21 percent from the actual obligations for 1967. I believe that this appropriation request merits your favorable consideration.

Mr. EVINS. Very nice statement, Mr. Director.

We think, in view of continuity and order, we ought to hear the Department of Health, Education, and Welfare, and have it together.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

WITNESSES

DEAN SNYDER, DEFENSE COORDINATOR, OFFICE OF THE SECRETARY

CHARLES F. KEARNEY, DIVISION OF FINANCIAL MANAGEMENT, OFFICE OF THE SECRETARY

Mr. EVINS. We have Dean Snyder, Defense Coordinator, Office of the Secretary, and Mr. Charles F. Kearney, Division of Financial Management, Office of the Secretary.

Gentlemen, it is nice to see you and we will be pleased to hear you.

GENERAL STATEMENT

Mr. SNYDER. Mr. Chairman and members, I have had the pleasure of being before you in other years and I know you like short statements. So I will just file my written one, which runs to about two pages, and maybe I can be even briefer than that.

Mr. EVINS. You take your time and tell us your needs, Doctor.

(The statement follows:)

STATEMENT OF DEAN SNYDER, DEFENSE COORDINATOR, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Mr. Chairman and Members of the Committee:

I am pleased to appear for the Department of Health, Education, and Welfare to discuss that portion of the Office of Emergency Planning budget estimates which relates to our continuing role in defense readiness for fiscal year 1969. The amount of the request is $97,000. This is the same level of funding as allocated to us by OEP for the current fiscal year. The Department also receives funds for emergency health activities and the emergency medical stockpile but these activities are covered in a separate justification.

The Secretary is required by three Executive orders to develop and coordinate a series of readiness measures available for operational use in an emergency. These include emergency health and emergency welfare measures as defined in considerable detail in Executive Order 11001 and 10958, plus the capability to conduct emergency operations from headquarters and regional relocation sites as required by Executive Order 10346. In maintaining its defense posture the Department consults and works closely with both the Office of Emergency Planning and the Office of Civil Defense on a wide range of preparedness activities.

The estimate before you provides a minimum staff of six positions and $97,000 to support the Secretary in fulfilling this mission. The staff works under the general direction of the Assistant Secretary for Administration who is the focal point in the Department for development, maintenance, and testing of DHEW emergency readiness plans. In carrying forward civil defense and mobilization functions, the Secretary subdelegates defense assignments as much as possible to the heads of operating agencies and to the Department's regional directors. However, the ultimate responsibility resides in the Office of the Secretary.

It should be specially mentioned that under postattack emergency conditions the regional boundaries of the Department would become coterminous with those of OEP and OCD in order that the States could deal with one central point in each regional area. Regional offices participate in periodic test exercises with OEP and OCD, and, in addition, provide assistance and services in natural disasters.

The function of staff support for the Secretary is a continuing one as part of the Government's total nonmilitary readiness effort. The funds requested for allocation through OEP are not duplicated in any of the Department's regular appropriation structure.

I will be glad to respond to any questions.

Mr. SNYDER. This request is for the same amount as last year. There is no increase in either funds or personnel and we intend to proceed on the same level as before.

The purpose of the request is to provide staff support for the Secretary of Health, Education, and Welfare, which experience shows is necessary to undertake the readiness assignments that have been made to the Secretary in three Executive orders. These Executive orders contain 34 separate assignments. All of the Department's operating agencies and regional offices are involved in these.

DEFENSE ROLE OF SECRETARY'S OFFICE

The Secretary must coordinate, review, and evaluate the Department's readiness, and provide the channel for dealing with the Office of Emergency Planning and the Office of Civil Defense, and we look to these agencies for additional support and guidance.

Let me take just one example.

The Department is required by Executive Order 10346 to have a system for the continuity of its operation on a streamlined basis in time of emergency. This involves relocation sites in constant readiness, both headquarters and in the regions. High level officials of the

Department are relocatees. These must be knowledgeable. Classified matters are involved. Top people change and new people come on board.

During 1967, for example, we conducted seven out-of-town orientation sessions involving 178 of these top level people for this purpose. and numerous other examples could be cited, some of which are in the justification material, but perhaps I might stop now for questioning.

In summary, the staff support function in the Secretary's office is a continuing one. It is on a maintenance basis. Our request does not duplicate any of the Department's regular work and we would propose to operate next year at the same level as this year.

Mr. EVINS. A very good statement.

You support the Secretary, and you want to continue at the same level.

Mr. SNYDER. Yes.

Mr. EVINS. I think you have made an excellent statement.

You have six jobs and $97,000, the same as last year?

Mr. SNYDER. That is right.

JUSTIFICATION MATERIAL

Mr. EVINS. We will place in the record the justification which appears on pages 36 through 40.

(The pages follow:)

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

CIVIL DEFENSE AND DEFENSE MOBILIZATION FUNCTIONS OF FEDERAL AGENCIES, FISCAL YEAR 1969

STATEMENT OF MISSION

The defense readiness objective of the Department of Health, Education, and Welfare is to fulfill Presidential assignments made to the Secretary in Executive Orders 10346, 10958, and 11001. These assignments include the requirement, under postattack conditions, to operate and maintain the Department's organization and essential functions, and to conduct emergency programs—in particular, emergency health services and emergency welfare services as defined by Executive Order 11001.

Preparedness assignments are redelegated to heads of DHEW operating agencies wherever possible. The Secretary's office monitors these assignments and is the focal point for the coordination and direction of all readiness measures throughout the Department, including regional offices. Readiness measures also include management of relocation sites and the conduct of periodic exercises to test readiness capability.

STAFF SUPPORT FOR THE SECRETARY

With respect to continuing functions in the Secretary's office, for which this estimate is the 1969 request, the following is a summary:

Basic responsibility.—Serve as the one focal point in the Department for development and maintenance of DHEW emergency readiness plans. This includes:

1. Develop readiness plans under Executive Order 11001 to comply with following assignment: "The Secretary shall be prepared to implement all appropriate plans developed under this order." Example: Coterminous regional boundaries with OEP/OCD in the postattack period.
2. Keep operating agencies informed of overall policy and guideline materials and all other significant nonmilitary developments affecting their emergency readiness; provide a means for frequent consultation with op-

erating agencies to insure departmental consistency; and maintain DHEW emergency documents, manuals, and field issuances.

3. Participate with and provide support to staff of the Office of Emergency Planning, Office of Civil Defense, and other Federal counterparts in interagency planning and systems development for defense readiness and in the review of documents related thereto.

4. Supervise cadre and maintain current readiness at two DHEW headquarters relocation sites for emergency continuity of departmental operations, maintain cadre lists, and conduct orientation and training seminars at both sites for key DHEW officials with a need to know.

5. Prepare plans and direct test exercises involving both headquarters and field.

6. Develop and monitor damage assessment systems under Executive Order 11001 which requires DHEW to "maintain a capability to assess effects of attack on health, welfare, and education facilities and personnel, both at national and field levels, and provide data to the Department of Defense." Participate also in the work of the OEP National Resource Analysis Center.

7. Perform security functions involving the handling of classified material related to defense readiness in accordance with Executive Order 10501, and prepare defense-related reports and correspondence which frequently are of a classified nature.

8. Maintain a civil defense shelter and survival plan for DHEW employees in all headquarters buildings; recruit and train the self-protection (warden) organization; supervise building evacuation drills, maintain inventory and surveillance of all civil defense survival supplies stored in DHEW buildings.

9. Provide logistical support for a DHEW classified site in an out-of-town location (e.g., stocking of emergency rations and medical supplies, maintenance of communication equipment, training of communicators, etc.); maintain an emergency control center for use by Secretary and top staff in headquarters building.

FISCAL YEAR 1969 REQUEST

The fiscal year 1969 request of $97,000 and six positions is identical with the fiscal year 1968 level and provides only for maintaining a focal point for emergency preparedness in the Office of the Secretary.

CIVIL DEFENSE AND DEFENSE MOBILIZATION FUNCTIONS OF FEDERAL AGENCIES

Total obligations	[1] 92,364	97,000	97,000
Year end employment	6	6	6
Average employment	5	5	5

[1] Includes $62,231 transferred to HEW from Office of Civil Defense.

BASIC RESPONSIBILITIES

Mr. EVINS. Mr. Snyder, you outline about nine functions you support the Secretary with: developing readiness plans, keeping operating agencies informed of overall policy, participating with OEP, Civil Defense, and others in interagency planning, and you supervise the cadre and maintain current readiness for two DHEW relocation sites. You prepare plans and direct test exercises. Develop and monitor damage assessment systems.

We have not had any of that yet and hope we will not have.

You perform security functions. What do you do in this area?

Mr. SNYDER. What we mean there, sir, is the maintenance and custody of security files. We keep the Secretary's files in this general area of defense readiness. It involves about 600 to 700 log entries each year by one of the people on my staff. This is not investigation or anything of that sort.

Mr. EVINS. You maintain civil defense shelters. I thought GSA and the Office of Civil Defense did this.

Mr. SNYDER. In this area we have our own responsibilities for the buildings that house our people. The headquarters complex we occupy involves about 6,000 personnel with additional shelter space for 85,000 of the general public. We are required to maintain the self-protection system for our own employees at headquarters. It is a continuing responsibility. We have had it for a long time. It involves some 800 wardens who are trained by periodic exercises within our own building complex. It deals with storage of rations, water, and medical supplies for the relocatees who would be in these buildings in the event they would have to take shelter. Matters such as that.

Mr. EVINS. You provide logistical support for the Department of Health, Education, and Welfare classified site in an out of town location, and you maintain an emergency control center for use of the Secretary and top staff headquarters building facilities.

You have a lot of important functions and do not have very many personnel. We commend you for your important mission and wish you good luck, Doctor.

Department of Commerce

WITNESSES

ANTHONY A. BERTSCH, ASSISTANT ADMINISTRATOR FOR INDUSTRIAL MOBILIZATION, BUSINESS AND DEFENSE SERVICES ADMINISTRATION
JOHN F. LUKENS, DIRECTOR, OFFICE OF EMERGENCY READINESS
ROBERT SCHELLER, CENSUS REPRESENTATIVE TO NRAC
WILLIAM WILSON, BUDGET OFFICER

Mr. Evins. Let us take the Department of Commerce representatives next.

We have with us our old and esteemed friend, Anthony Bertsch, Assistant Administrator for Industrial Mobilization, better known as Col. Tony Bertsch, a very efficient, capable administrator. We will be pleased to hear you.

General Statement

Mr. Bertsch. Thank you, Mr. Chairman. I have a prepared statement which, with your permission, I would like to insert in the record, and if I could abbreviate a statement.

Mr. Evins. The full statement may be included in the record.

(The statement follows:)

Statement of A. A. Bertsch, Assistant Administrator for Industrial Mobilization, Business and Defense Services Administration, Department of Commerce

Mr. Chairman and members of the committee, I am happy to have the opportunity to inform the subcommittee about the Industrial Mobilization activities of the Department of Commerce under the Defense Production Act. For about 3 years, our country has been involved in a major military engagement. The number of our troops in South Vietnam is greater now than it was a year ago and it is higher than the number deployed in the Korean emergency. Our military expenditures have increased appreciably and our defense requirements are having a noticeable impact on many areas of the civilian economy. Despite the heavy defense effort, the Government has succeeded in avoiding the imposition of production controls on the civilian economy through our careful administration of the priorities and allocations powers of the President under the Defense Production Act to insure the fulfillment of military needs for munitions, equipment and supplies on schedule.

At the same time, Commerce is responsible for developing plans for the management of industrial production resources to meet the needs of any kind of national emergency, including nuclear attack. Both of these responsibilities have been carried on for a number of years. However, during the past 3 years, greater emphasis and attention have been focused on the needs in support of our engagement in South Vietnam. Despite the substantial extent of our involvement in Southeast Asia, and the increased rate of military procurement, we have been able to apply the experience gained from past emergencies and our planning endeavors to provide the necessary flow of materials, components, equipment, and supplies for defense without major disruptions in our national production effort.

The impact of increased military procurement has occasioned many production bottlenecks, delivery delays, and tight supply situations. We have met and solved these problems with the timely use of directive actions and, in numerous instances, have scheduled the entire order boards of companies so as to assure maximum assistance to our defense needs. On the other hand, the prolonged strike in the copper industry has had a serious impact on the normal patterns of distribution within the industry and on their inventory practices. It has also sharply affected the industry's price structure. We are still experiencing a tight supply situation with respect to nickel and for certain types of herbicides.

However, the exercise of existing priorities authority has permitted us to assure the preferential status of defense procurement on a continuing basis, and the defense materials system and priorities have proved to be sufficiently flexible to meet unexpected contingencies as they have occurred. We shall, of course, continue our appraisal of the system in the light of increased procurement levels and and our national industrial capability.

Despite the fact that our major emphasis has been directed to the fulfillment of requirements for the situation in Vietnam, we have continued, although in a lesser measure, our planning for an even greater contingency which includes the possibility of a nuclear attack upon the continental United States. Our planning for such an emergency contemplates the decentralization of survival efforts and resource management to assure the continuity of Federal authority in the event of a break in communications with, or the temporary inoperability of, national headquarters operations. In such an event, operational authority would be delegated to regional and field offices of BDSA, whose staffs would be augmented by our executive reserve complement which we continue to train through area and local training and orientation sessions, and through the medium of training bulletins. These regional and field staffs would have the benefit of prepositioned industrial and economic data developed, in large part, through our Industry Evaluation Board activities. In the past 2 years, we have placed increasing emphasis in training executive reservists in the functions they might be requested to perform.

We are continuing our stockpile activities, which represent a substantial part of our industrial mobilization responsibilities.

For the industrial mobilization functions of the Department of Commerce in fiscal year 1969, we are requesting funds in the amount of $1,919,000. BDSA is requesting $1,838,000. This is an increase of $158,000 over the fiscal year 1968 allowance. This increase constitutes pay act and other built-in adjustments. There are no program increases requested. The estimates for the Bureau of Census amount to $81,000, a decrease of $10,000 from the fiscal year 1968 allowance.

Administration of the defense materials system

The administration of the priorities and allocations powers under the Defense Production Act of 1950, as amended, is accomplished by the Business and Defense Services Administration with respect to production for national defense, through the operation of the defense materials system and priorities.

As I have indicated, we have up to this time found the system to be effective in supporting the timely fulfillment of defense needs. Since March 30, 1966, BDSA in cooperation with the Department of Defense, has conducted 60 briefing sessions for businessmen covering the operation of the defense materials system and priorities. Nearly 30,000 businessmen have attended these conferences, and they have acquired effective understanding of operations under this system.

That these conferences have accomplished their purpose is reflected by the reduction in the number of special assistance or expediting actions that BDSA has been called upon to provide in behalf of defense contractors or defense agencies during the first 7 months of fiscal year 1968. Special assistance actions are occasioned when conflicting demands, limited facilities, production bottlenecks, and other delays adversely affect defense contract production and delivery schedules. In such cases, BDSA provides expediting assistance to contractors or defense agencies involved through the use of special priorities or directives to improve deliveries, or through the scheduling of production and deliveries. The number of such actions was 3,756 in fiscal year 1966, 8,185 in fiscal year 1967, and 2,255 during the first 7 months of fiscal year 1968. There is no assurance that the special assistance caseload will not increase to a level approximating that of fiscal year 1966. However, we feel that our DMS conference training program has successfully accomplished its desired objective in making defense contractors more aware of their responsibilities under the system. We shall continue to conduct such conferences as the need is demonstrated.

Our administration of the Defense Production Act authorities under Executive Order 10480, and the industrial mobilization planning functions carried out under Executive Order 10999, are under the continued observation of the Joint Committee on Defense Production, to which we submit quarterly reports and an annual report.

Stockpile activities

Under Executive order and by statutory authority, BDSA also has responsibility for providing advice and counsel on stockpile matters to the Office of Emer-

gency Planning. This includes stockpile specifications, storage procedures, estimates of national essential mobilization requirements, availability of domestic materials to fulfill national programs, industrial technology, and related matters. The principal development in the stockpiling program by BDSA thus far during fiscal year 1968, was the initiation of a comprehensive review of mobilization requirements for all materials in the national stockpile. In addition, BDSA prepares special studies for OEP bearing on stockpile problems and carries our assignments related to the operation of the stockpile. We continually consult with industry to obtain its views on all stockpile matters.

Industry Evaluation Board activities

Executive Order 10421 delegates to the Secretary of Commerce the responsibility for the identification of those products and services and supporting facilites which are of exceptional importance to national security. The Industry Evaluation Board is an interagency committee whose chairman is a member of the BDSA mobilization staff. Detailed studies concerning those industries and facilities vital to the national security are made under the supervision of the Board Chairman, and provide significant data concerning production capabilities and availabilities for decision making.

National Defense Executive Reserve

Essential to a system of expanded industrial activity to meet emergency needs under war condition is the requirement of a corps of trained executives from the business community who stand ready to perform emergency responsibilities assigned to BDSA. Under a program authorized by the Congress we have recruited 1,435 executives of the 3,000 we believe necessary to staff the production unit of the National Defense Executive Reserve. These executives are available for duty assignments both at headquarters and in the field. The reservists are given training through work conferences conducted by members of the BDSA staff to prepare reservists to carry out their assigned emergency functions.

Bureau of the Census—Delegate agencies budget

The Bureau of the Census provides basic statistical services for defense mobilization. These services include collecting and compiling data through new surveys, special tabulations and analysis of data already collected.

The Bureau is one of the most important suppliers of basic information to the National Resources Analysis Center (NRAC). It collects and tabulates special data in addition to statistical information provided in the course of its regular work. The technical staff of the Bureau acts in an advisory capacity to NRAC in the full use of Census data and facilities.

During fiscal year 1968, the Bureau made available to NRAC current industrial establishment data and detailed agricultural data in support of the NRAC mission. In fiscal year 1969 the Census Bureau will again provide current industrial plant data and will begin preparing for extraction of information from the 1967 Economic Census for use at NRAC.

I shall be pleased to answer any questions you may have in connection with thees programs of Commerce.

APPROPRIATION REQUEST

Mr. BERTSCH. We are asking this year for no program increases, but a continuation of the program that was requested last year plus of course, the pay raise and other built-in charges.

Our job, as you know, Mr. Chairman and members of the committee, is primarily, at this time, the administration of the Defense Production Act through a series of priorities. This is the defense materials system. We support the defense effort through a mandatory system of priorities.

Our defense materials system sets aside each quarter a certain quantity of steel, copper, and aluminum and nickel. We handle bottlenecks by allocating materials between the various defense establishment contractors through a series of special assistance cases. Incidentally, this year, the number of these cases has diminished somewhat. We be-

lieve, this was result of a long-term educational campaign that we engaged in beginning March 30, 1966.

If the war in Vietnam maintains its present pace and the requirements for that war are maintained at roughly the current level, we expect no diminution of our work.

Mr. TALCOTT. All of the indications are that the war effort is going to be increased. You must be clued in on that.

Mr. BERTSCH. We are clued in so far as the potential increases concerned, but there has been no affirmation of increases, if any, either in manpower or in materials for the Department of Defense.

Mr. TALCOTT. How can you plan when you are so much in the dark. You must know in your own mind that there is going to be an increase in mobilization, which means an increase in everything, and yet you go on planning at the same rate.

Mr. BERTSCH. No, as a matter of fact, we do not. Our planning activities encompass the possibility of increased military procurement. However, for the purposes of this justification we were not in a position to request any additional funds or to anticipate any additional work because of those increases. Although they may very well occur.

Mr. TALCOTT. Does that mean you will be back for some sort of a supplemental increase when you finally receive the official word that we are increasing our mobilization?

Mr. BERTSCH. It depends upon the size of the increase as to whether or not it will be necessary for us to return for additional funds, although we do not rule out that possibility.

Mr. TALCOTT. Thank you.

Mr. EVINS. Mr. Bertsch, you had an appropriation for 1968 of $1,897,000 and 115 jobs.

Mr. BERTSCH. Yes, sir. The 115 jobs represent the year-end employment of the Department.

Mr. EVINS. In 1969, you are asking for $1,919,000 and 117 jobs, which is a $22,000 increase, and two positions.

Mr. BERTSCH. Yes, sir.

Mr. EVINS. Proceed.

PREPAREDNESS RESPONSIBILITIES

Mr. BERTSCH. In addition, of course, to our administration of the Defense Production Act, which is done with the policy guidance of the OEP, we continue our preparation for any increase in activity, as the Congressman has pointed out, through a variety of activities, not the least of which is our executive reserve program. BDSA has the largest component of the national defense executive reserve. We try to train them for all kinds of emergencies—not only conventional but nuclear emergencies.

This training program is done on a rather comprehensive scale.

In addition, we act as advisors to the OEP and other Government agencies on stockpile activities. This is done, not only in connection with the recommendations for conventional or nuclear war requirements, but also with respect to specifications, storage procedures, and the like.

Additional mobilization programs I think are outlined in the statement that was submitted to the committee.

Mr. EVINS. This is a very interesting statement and it contains a lot of information.

The Business and Defense Services Administration has four major defense objectives under congressional mandate and executive order.

First, you have responsibility for the administration of the current system of priorities and allocations.

This relates to military, atomic energy, and space programs pursuant to the Defense Production Act of 1950.

Your second major function is to conduct mobilization programs to assure the readiness of the production resources of the Nation to meet needs created by any emergency, including a nuclear attack. That is a big order to be ready and prepared.

Number three is, pursuant to Defense Production Act amendments of 1955 and Executive Order 11179, to develop and administer programs for recruitment, assignment, and training of a corps of national defense executive reservists.

In a moment I want you to tell us the number of these.

And the fourth is assisting the OEP in formulating and carrying out plans for stockpiling of strategic and critical materials. Those are your four major missions.

JUSTIFICATION MATERIAL

We will place in the record pages 15 through 22.

(The pages follow:)

DEPARTMENT OF COMMERCE

BUSINESS AND DEFENSE SERVICES ADMINISTRATION—CIVIL DEFENSE AND DEFENSE MOBILIZATION FUNCTIONS OF FEDERAL AGENCIES

STATEMENT OF MISSION

The Business and Defense Services Administration has four major defense and preparedness objectives under congressional mandate and executive order. First: It is responsible for the administration of a current system of priorities and allocations designed to assure the timely completion of current military, atomic energy, and space programs for production, construction and research and development. This activity is carried out pursuant to title I of the Defense Production Act of 1950, as amended, and Executive Order 10480. Second: It conducts mobilization programs to assure the readiness of the production resources of the Nation to meet needs created by any type of national emergency, including nuclear attack. These responsibilities are carried out under Executive Order 10999. BDSA would also, after appropriate Presidential determination, allocate materials in the civilian market should certain specified conditions arise relating to the serious disruption of the economy resulting from defense procurement. Third: Pursuant to the Defense Production Act amendments of 1955 and Executive Order 11179, it develops and administers programs for the recruitment, assignment and training of a corps of national defense executive reservists consisting of business executives and professional men who would staff an emergency production agency in case of need. Fourth: It is responsible for assisting the Office of Emergency Planning in formulating and carrying out plans for stockpiling of strategic and critical materials pursuant to Executive Order 10999.

CURRENT STATUS

The accomplishments under the objectives established for fiscal year 1967 are presented below:

1. Priorities and allocations

(*a*) The priorities and allocations authority administered by BDSA under a delegation from the Secretary of Commerce, through the defense materials system and priorities is designed to assure that national defense requirements are

met on schedule. The simplicity of the present priorities system, limited as it now is to national security programs as compared with the system of industrial controls which were imposed on the entire industrial economy in World War II and Korea, does not diminish the need for maintaining the continuing balance between military and civilian needs. A continuous process of assessment as well as a need for responsiveness to changing industrial situations is essential to support defense programs. This process is accomplished by the accumulation of facts and the analysis of industrial intelligence.

BDSA has negotiated a contract with a private research firm to prepare estimates of the consumption of controlled materials, by forms and shapes, as well as the consumption of other critical materials, in 1965 by all SIC 5-digit and selected 7-digit manufacturing industries and in 25 categories of construction. Value of shipments is to be obtained on an industry basis and ratios of materials usage per $1 million of shipments for each material surveyed are to be provided.

(*b*) *The defense materials system and priorities.*—During fiscal year 1966 BDSA conducted 30 conferences throughout the country for the purpose of informing the business community of the operations of the defense materials system and priorities. Upon completion of this series of conferences, BDSA prepared a booklet entitled "Questions and Answers—The Defense Materials System and Priorities". A second series of 30 such conferences was held in fiscal year 1967. Some 24,265 businessmen attended both of these conferences, 18,594 in fiscal year 1966 and 5,671 in fiscal year 1967.

BDSA Order, M-11A, copper and copper-base alloys, contains the rules applicable to producers of copper controlled materials and copper distributors under the defense materials system. This order was completely revised effective October 28, 1966. The major changes in the revised order were made to update the rules to bring them in conformity with the basic rules contained in DMS regulation 1 and with current industry practices.

The set-asides for copper-controlled materials were increased on August 15, 1966, and December 2, 1966, as a result of increased military requirements. Another revision of these set-asides was issued on May 15, 1967, reflecting both increases and decreases in several of the copper-controlled material items. These set-aside changes for copper-controlled materials were issued by BDSA in revisions of schedule A to BDSA order M–11A on the dates indicated. On December 2, 1966, the set-aside for ammunition strip was increased from 26 percent for the fourth quarter of 1966, to 27 percent beginning with the first quarter of 1967. On May 15, 1967, this set-aside was reduced to 25 percent beginning with the third quarter of 1967. These changes were accomplished by amendments to direction 1 to BDSA order M–11A on the dates indicated. The set-aside for domestic refined copper was increased from 18 percent in the fourth quarter of 1966, to 26 percent in the first quarter of 1967, based on average monthly production during 1965. The set-aside for domestic refined copper for the second quarter of 1967 was increased to 29 percent and reduced to 26 percent beginning with the third quarter of 1967. These changes were accomplished by amendments to direction 2 to BDSA order M–11A.

The aluminum set-aside for each quarter during fiscal year 1967 was maintained at 300 million pounds, representing approximately 13 percent of total industry shipments during each quarter, as compared to 8.5 percent during fiscal year 1966.

The defense set-asides for steel-controlled materials for the fourth quarter of 1966 were set at 1,440,335 net tons, representing about 6 percent of total industry shipments anticipated for that quarter. Subsequent set-asides of steel mill products for the balance of fiscal year 1967 ranged between 5.5 and 6 percent of anticipated industry shipments.

A nickel shortage was created during the third quarter of 1966 by a strike affecting the major production facilities of the chief source of U.S. supply of primary nickel. BDSA established a set-aside of primary nickel for defense needs in an amount equal to 25 percent of average monthly deliveries of U.S. suppliers during the first 6 months of 1966. The initial set-aside was effective for the month of August 1966, and applied to the three U.S. suppliers. The set-asides have been imposed from month to month until Canadian production, the primary source of U.S. nickel, returns to normal. The demand for nickel both by defense and nondefense consumers continues at a high level.

A total of 8,185 special assistance and authorization cases was processed during fiscal year 1967, as compared to 3,756 such cases for the preceding year.

Of this number, 5,178 special assistance (expediting) actions were processed and 3,007 authorizations, including production and allocation directives, were processed. This increase reflects the high rate of military procurement and acceleration of deliveries by defense contractors and their suppliers.

2. Emergency readiness planning

a. Executive Reserve Program

(1) Twenty-six conferences of BDSA executive reservists were held, attended by 806 persons, of which 511 were reservists and 295 were Government officials, and business and civic leaders. These conferences included 1-day meetings with seminars and problem sessions attended by BDSA officials who conducted briefing sessions. Plans were made for the fifth national training conference to be conducted in Washington in October 1967.

(2) Total executive reserve enrollment at the beginning of the year was 1,389. The yearend total was 1,435, notwithstanding loss of 15 reservists by attrition. Applications of an additional 207 candidates were in varying stages of processing at yearend.

(3) BDSA prepared a new executive reserve directory which will be issued at the fifth national training conference. This directory for the first time is coded to the BDSA data processing system to identify reservists by field office, regional or national assignments, and by industry division or office affiliation and by type of appointment.

(4) Four executive reserve information bulletins, entitled "Executive Reservist," were sent to the members. In addition, four orientation and training bulletins were given the reservists to provide technical training materials as distinguished from informational material of a transitory nature.

(5) The program to modify the boundaries of Department of Commerce field offices for mobilization purposes was completed, and the boundaries for such purposes now coincide with OEP–OCD regional boundaries. This eliminates conflicts of jurisdiction and responsibility under war conditions which would require activation of executive reservists holding field office assignments.

(6) The executive reserve manual is being revised and updated to eliminate and replace obsolete material.

(7) The executive reserve manpower requirements and recruitment plan has been completed. Under this program, BDSA Industry Divisions systematically determine the number of reservists needed to staff each field office, region, and the national headquartes of an emergency production agency for all the major four-digit SIC industries (or some other product categories) for which each BDSA Industry Division is responsible. This new program emphasizes a balanced staffing pattern for the entire emergency production agency, and in addition to production executives, includes administrative, labor representatives, transportation liaison, economists statisticians, educational compliance, and other professional types of individuals.

b. Stockpile and Supply Requirements

(1) *Stockpile activities.*—

Requirements analyses of stockpile materials for nuclear or conventional war	87
Stockpile disposal program analyses and recommendations	21
Purchase and acceptance specifications	10
Special instructions	10
High-heat alloy and special-property materials requirements	18
Special stockpile studies	13

The above activities required formal or informal discussions with industry regarding technical aspects, industry practices, and trends in usage. Such discussions amounted to several hundred during the year.

(2) *Section 232 cases.*—The BDSA report, with recommendations, on watches was sent to OEP.

c. Industrial Evaluation Studies

(1) *Industry Evaluation Board activities.*—Analyses of 175 essential products or industrial segments were completed during the year.

(2) *Vertical analysis studies.*—Methodology and applications of techniques were completed which enable the measurement, preattack, of industrial capability to produce any selected products after a nuclear attack upon the United States. The Office of Emergency Transportation has requested of BDSA studies measuring the probability of postattack national capability to produce transportation and auxiliary equipment for the common modes of transportation.

(3) *Supply-requirements study for nuclear war and reconstruction.*—In fiscal year 1966, the Office of Emergency Planning provided BDSA with an economic model for the first 3 years following a nuclear attack. The first postattack year was subdivided into the first quarter, second quarter, and second half year. During the fiscal year under review, estimates were developed for the quantities of 13 forms of controlled materials which would be required to permit production at an economic level defined by a postnuclear attack economic model prepared by the Office of Emergency Planning. This model is constructed of 88 sectors and divided into five time periods. Subsequent estimates of stockpile item requirements were correlated with those for the 13 forms of controlled materials.

As the BDSA, or its wartime successor agency, would be a claimant for transportation services in postattack survival and recovery periods, the Office of Emergency Transportation requested the BDSA to prepare fairly detailed estimates of the transportation requirements, involved in the above mentioned OEP postattack economic model, to move the quantities of commodities for which the BDSA is responsible. These transportation requirements were broken down for the five time periods of the model for each industrial sector and by the six common modes of transportation (rail, motor, air, inland water, Great Lakes, and coastwise).

Satisfied with the methods developed to gage transportation requirements postattack, the Office of Emergency Transportation requested of BDSA a similar set of estimates for a 3-year period of mobilization under conditions of conventional warfare. Like the postattack estimates, these estimates were also designed to satisfy production levels defined by an economic model for conventional warfare prepared by the OEP.

(4) *National Resource Analysis Center support.*—BDSA is the chief source of production capacity information for the National Resource Analysis Center data bank of information on industries essential to the national defense and security for both conventional war and postattack survival and recovery. BDSA abstracts from IEB analyses plant production capacity data, applies appropriate codings and geographic coordinates for each plant listed, and submits to the NRAC decks of cards, punched in the format it has prescribed, for transferring the information directly to magnetic tape. Similar treatment was given to the data obtained through surveys of selected survival items.

d. Essential survival items

Survival item surveys were completed by BDSA and final review of the results was made of: anesthetics, inhalation, intravenous, and local; ceramics, electrical, and electronic; circuit breakers, outdoor power type; chlorine; copper and aluminum electrical conductors; dry cell batteries; eating utensils, disposable; insulin and oral antidiabetic agents; rubber and plastic footwear; soda ash; surgeons needles; surgical dressings, sponges; trenching equipment. Surveys were conducted and analyses were in process on: Antimalarials, eight types; nonnarcotic analgesics and hypnotics, 21 types.

e. Relocation activities problem exercises

(1) *Mobilization readiness within BDSA.*—The BDSA emergency cadre for relocation of agency personnel in an emergency situation was expanded. The BDSA cadre program was tested by participating in exercise Blue Bell. Results were satisfactory.

(2) *Emergency data centers.*—Shipments of additional and replacement material for the emergency data centers are normally made semiannually. During fiscal year 1967, the necessary data were provided in two shipments.

(3) *Planning with commerce field offices.*—During the year BDSA was in the process of upgrading those relocation sites which had been determined to not be strictly adequate by the standards developed for measuring such adequacy.

f. Comprehensive programs

Guidance was provided a number of State production task groups during the year. The draft production plans of 29 States were reviewed and comments thereon submitted to the Office of Emergency Planning.

g. Industrial defense program

Pursuant to section 6(a) of Executive Order 10999, and under arrangement with the Office of Civil Defense of the Department of Defense, BDSA continued the program it had initiated to develop (or refine), publish and disseminate defense planning manuals and informational brochures. During the year, BDSA was actively engaged in the preparation of seven manuals and four brochures.

PROGRAM PLANS FOR FISCAL YEAR 1968 AND PROGRAM OBJECTIVES FOR FISCAL YEAR 1969

1. Support the current war effort in Vietnam through the continued and expanded administration of the defense materials system and priorities under the Defense Production Act, including special assistance (expediting), set-asides, production directives, production scheduling, and education, compliance and enforcement. Continue the modification and refinement of DMS to provide for priorities, allocations, regulation of production and the distribution of materials during expanded emergency situations, and to provide for execution of priorities and allocation activities at all levels of government. Include required emergency measures.

(*a*) Revise and issue regulations and orders relating to priorities and allocations as required.

(*b*) Conduct educational and compliance activities through DMS conferences, surveys, investigations and audits; prepare and issue publications as required.

(*c*) Update standby BDSA emergency regulations as required.

2. Assist OEP in stockpile activities by:

(*a*) Preparing or updating of requirements analyses of stockpile materials for nuclear or conventional war;

(*b*) Determining the economic and industrial impact of the stockpile disposal program;

(*c*) Reviewing and preparing purchase and acceptance specifications;

(*d*) Reviews of supply-demand situation for high-heat and special property materials;

(*e*) Preparing special stockpile studies.

3. Recruit and orient additional executive reservists to achieve an ultimate goal of 3,000; continue and expand local, regional and national training programs for executive reservists.

4. Provide the Interagency Survival Items Committee and its task groups with industrial and technological knowledge required in the determination as to what commodities are essential in a postattack period. Prepare required production and supply studies of essential survival items.

5. Maintain activities of the Industry Evaluation Board.

6. Revise and update BDSA emergency operating plans including plans for regional and field operations in an emergency.

7. Continue maintenance of emergency data centers and expand relocation of records to the extent desirable and possible.

8. Continue planning with Commerce field offices, and study possibilities of assigning personnel to State emergency relocation sites.

9. Collaborate with OEP in development of plans for industrial readiness and industrial defense currently supported solely by OCD so that major industries and corporations thereof may be cognizant of what Federal Government is doing and what should be expected of industry in an emergency.

10. Supply the OEP library, for automatic data processing activities, with production and capacity information required for industrial damage assessment and resource evaluation.

11. Provide support to the OEP State and local program through:

(*a*) Participation by field or national office personnel with the State and local planning groups as required;

(*b*) Review of the final product submitted for approval to OEP in fulfillment of programs between OEP and the States;

(*c*) Respond to requests from OEP national office, regional directors, States, and local authorities.

12. Continue support of the National Resource Evaluatoin Center; assign a member of the BDSA staff to maintain liaison with the NREC staff to establish appropriate basis for cooperative effort.

Mr. EVINS. Under your priorities and allocations, do you have any price and wage controls being planned? Certainly they are not in effect.

Mr. BERTSCH. Yes, sir; we have none in being. The authority for wage and price controls was taken away from the executive branch by the legislative branch in 1953 and not reinstituted.

The administration of this program would not necessarily be under the Department of Commerce, it would be under an agency designated by the President.

COPPER SITUATION

Mr. EVINS. How about the critical materials? What is the situation with respect to copper?

Mr. BERTSCH. The copper story, of course, is a long one, and I think it deserves a little telling.

The strike has been in existence since last July, it is now in its eighth month. We have been living off of imports and inventories and some domestic production resulting from secondary sources.

The most interesting development in the copper situation since the strike began has been the activities of the longshoremen, who refused to unload copper as of the 23d of last month. At that time we froze all refined copper in the United States for defense use, and that freeze is still in effect. We have reserved all refined copper for defense use. As soon as we are assured that copper is being unloaded at the docks in an uninterrupted manner, we possibily will unfreeze the copper that is in civilian refiners' hands.

The national difficulties occasioned by the copper strike are legion, not the least of which is the negative balance of payments, which in the last monthly period runs somewhere in the neighborhood of an annual rate of a billion dollars.

Mr. EVINS. That is a bad report and we are all concerned about it. We talk about long-range plans, we talk about short-range plans, and have been talking about them for years. I hope the Secretary of the Treasury and the Department of Commerce will come up with some answers.

Mr. TALCOTT. The answer to cut off imports is sort of a strike-breaking answer, is it not?

Mr. BERTSCH. Of course it was the international longshoremen that refused to unload as of the 23d of February.

Mr. TALCOTT. Soldiers or somebody could unload for defense purposes, could they not?

Mr. BERTSCH. The longshoremen have indicated that they would unload the material from the docks for all companies engaged in defense work or all companies which were not engaged directly in the strike. Now, copper is being unloaded. However, the total amount that is available in the United States, both from foreign sources and from domestic sources, is really not sufficient to run our economy over an extended period of time.

Ultimately we will not have enough copper unless the strike is settled. Otherwise, the economy will grind slowly to a halt.

Mr. EVINS. Besides copper, what other specific areas of material shortages are causing difficulty at the present time?

Mr. BERTSCH. There are no specific areas that are causing difficulty in respect to the defense effort because our priority system guarantees the defense effort will receive what is necessary.

Mr. EVINS. Defense is getting all the copper it needs for defense purposes?

Mr. BERTSCH. Yes, it is.

Mr. EVINS. And all it needs of other items?

Mr. BERTSCH. Yes, sir; there is no question about it.

Mr. EVINS. And if controls come, they would come with the civilian part of the economy first?

Mr. BERTSCH. Yes, that is right.

Mr. EVINS. The defense under the law has the priority.

Mr. BERTSCH. That is correct.

Mr. EVINS. Can we support a substantial war effort without extending our priorities and allocations to the civilian sector, in your judgment?

Mr. BERTSCH. That depends upon what we mean by a substantially expanded war effort. The President has authority under the Defense Production Act to impose controls in the civilian economy if the material requirements for defense create an appreciable hardship in the civilian economy. If defense requirements go up appreciably, obviously, the distortions may become so great that some action may have to be taken with respect to civilian controls. There is however no disposition on the part of the Executive branch of the Government at this time, or in the foreseeable future, to impose civilian controls.

EXECUTIVE RESERVE PROGRAM

Mr. EVINS. Tell us about the status of your executive reserves. Are you keeping your executive reserve program current and viable?

Mr. BERTSCH. Mr. Chairman, we have, as I mentioned, the largest component of the executive reserve. We currently have on board slightly over 1,450 executive reservists, and we have a goal of 3,000. We have conducted already 22 meetings during fiscal year 1968, including participation in the national meeting that was primarily directed by the OEP. The national conference was held here in October 1967. During all these meetings we had a total attendance of nearly 1,100 executive reservists. We have planned for the rest of this fiscal year an additional 19 meetings, which should complete our coverage of training efforts over the entire country.

We think this a tremendously important activity and we will continue through the years to prepare our executive reservists to serve us either during a conventional war or during a nuclear war.

Mr. EVINS. You state here that you had 26 conferences.

Mr. BERTSCH. Twenty-two, sir to date.

Mr. EVINS. This justification says 26.

Mr. BERTSCH. I think that talks about fiscal year 1967. I was talking about fiscal year 1968 to date.

Mr. EVINS. Right. Total executive reserve enrolled at the beginning of last year, 1,389.

Mr. BERTSCH. Yes.

Mr. EVINS. Year-end total was 1,435 notwithstanding a loss of 15 by attrition. Applications of an additional 207 candidates were in varying stages of processing at the end of the year.

Mr. BERTSCH. That is correct, sir. We have currently 153 candidates in process which will bring ourt total complement up to around 1,600 within the next month or so.

Mr. EVINS. The program to modify the boundaries of the Department of Commerce field offices for mobilization purposes was completed, and the boundaries for such purposes now coincide with OEP and OCD regional boundaries. This is for efficiency and coordination.

Mr. BERTSCH. That is correct, sir. It is an administrative detail, but we believe an important one.

DEFENSE NEEDS

Mr. EVINS. I think that is very good.

Has the Congress given you sufficient legislative authority to assure without question the fulfillment of all defense needs of Vietnam in preference to delivery of civilian materials and products? Do you need any legislation?

Mr. BERTSCH. No; we have all the legislation that is necessary in order to support the military effort.

This is a real tribute to the foresight of the Congress in continuing the priorities and allocation systems since 1953.

Mr. EVINS. You indicate in your budget nickel shortages occurred. Have you been able to overcome this somewhat?

Mr. BERTSCH. No, sir. The nickel shortage was discussed at the last appropriation hearing last year and it is still with us. Not, as I mentioned, a shortage for defense; but a total national nickel shortage is still with us, and undoubtedly will continue certainly throughout the next couple of years. The increases in mining activities in Canada have been delayed and probably will not come in for another year or so. An increase in nickel availability from other sources of the world, Guatemala, New Caledonia, and other areas which are being explored at the present time have not as yet borne fruit.

The northern Minnesota mine, which was proposed for exploration by International Nickel Co., has run into some problems. Because of the low amount of nickel contained in the ore, it may not be economically feasible.

Mr. EVINS. The demand for nickel, both by defense and nondefense consumers, continues at a high level?

Mr. BERTSCH. Yes, sir.

We set aside 23 percent of the total availability of nickel each month.

Mr. EVINS. Supply requirements study for nuclear war and reconstruction. OEP provided BDSA with an economic model for the first 3 years following a nuclear attack.

How can you look in the globe and tell these things so wisely?

Mr. BERTSCH. It is very difficult, sir. We do not say we are a hundred percent correct, but we have to look at it in the light of the guidelines given us.

Mr. EVINS. You need to prepare plans. The National Resources Analysis Center of OEP is your new resources analysis center. The BDSA is the chief source of production capacity information. You are the one that supplies them with the information?

Mr. BERTSCH. With our segment of the information, not all of the information, sir.

Mr. EVINS. BDSA abstracts from the IEB analyses. Tell us what IEB is.

Mr. BERTSCH. The Industry Evaluation Board is an organization set up by the President by Executive order, which assesses the importance of facilities and products in the national economy for defense purposes.

NATIONAL RESOURCE ANALYSIS CENTER SUPPORT

Mr. EVINS. BDSA abstracts from the Industry Evaluation Board analyses plant production capacity data, applies appropriate codings and geographic coordinates for each plant listed. And you submit to the Resources Analysis Center decks of cards punched out in the format it has prescribed. You serve it up to them ready to put in the computer.

Mr. BERTSCH. Yes, sir.

Mr. EVINS. We are transferring this information directly on magnetic tape.

Essential survival items. They were completed by BDSA. You say there are 21 different types and eight different types of these particular things you will need. How can you tell this?

Mr. BERTSCH. There are a whole host of survival items or items which are called survival items. These are items without which people could not survive in the event of a nuclear emergency. This list was developed in conjunction with and under the direction of the OEP some years ago.

Mr. EVINS. You assist the OEP in your stockpile activities by preparing updated requirements. You have been doing this for some time, have you not?

Mr. BERTSCH. Yes, we continue to do that.

Mr. EVINS. Keep it current and up to date?

Mr. BERTSCH. Absolutely, sir.

BUREAU OF THE CENSUS—OEP DELEGATION

Mr. EVINS. We will place in the record 23 and 24, a statement of the mission of the Bureau of the Census.

(The pages follow:)

BUREAU OF THE CENSUS

OEP DELEGATION

STATEMENT OF MISSION

The preparedness responsibility of the Bureau of the Census is an extension of past Bureau activities in providing statistical services for defense mobilization. These services range from collecting and compiling data through new surveys to special tabulations and analyses of data already collected.

Under Executive Order 10999, issued February 16, 1962, the Secretary of Commerce, among other things, is responsible for the collection and reporting of census information on the status of human and economic resources, (including population, housing, agriculture, manufacturing, mineral industries, business, transportation, foreign trade, construction, and governments) as required for emergency planning purposes. Consistent with this responsibility, the Bureau of the Census also maintains a readiness to take postattack surveys to provide information on surviving populations and resources.

The Bureau is one of the most important suppliers of basic information to the National Resource Analysis Center. It collects and tabulates special data in addition to statistical information provided in the course of its regular work; and the technical staff of the Bureau acts in an advisory capacity to NRAC, assisting in the full use of census data and facilities.

CURRENT STATUS

The Bureau of the Census has been an active participant in NRAC activities since NRAC's establishment. In the important areas of population, housing, and industry the Bureau is the only agency capable of providing basic data. Popula-

tion and housing data from the latest census have been supplied to NRAC and are entered into the damage assessment system by small geographic areas called standard locations. There are over 43,000 standard location areas in the present NRAC file. Industry data are supplied on an establishment basis. Data supplied for these establishments include employment, value added, inventories and shipments, and are for calendar years 1962–65.

Bureau participation in NRAC activities is carried out through the assignment of 2 employees who serve on the NRAC staff and whose major functions are to advise NRAC on the use of census data and to insure that the confidentiality of census data is maintained, as required by law.

MAN-YEARS AND OBLIGATIONS

Program objective	Fiscal year 1968		Fiscal year 1969	
	Professional man-years	Obligations	Professional man-years	Obligations
1. National Resource Analyses Center representation	2.0	$34	2.0	$40
2. Permanent plant file maintenance and updating	1.3	15	1.3	16
3. Establishment of agriculture data files	4.1	42

CENSUS BUREAU RESPONSIBILITIES

Mr. EVINS. Mr. Bertsch, we think you are an able administrator and your requests are modest in line with last year.

On page 23 you are asking for $81,000 for the census portion of your work. Tell us about that.

Mr. BERTSCH. I have a gentleman from the Census Bureau here. Mr. Scheller is with us today. With your permission, I will ask him to answer that.

Mr. SCHELLER. The $81,000 for census support to the National Resource Analysis Center involves two full-time persons assigned to the Center to supervise the preparation of census data in special format suitable for NRAC computer.

Mr. EVINS. In other words, you take the census report, analyze it, and tell the Resources Center of OEP what it means?

Mr. SCHELLER. Yes.

Mr. EVINS. You are the interpreter for them from the Census Bureau?

Mr. SCHELLER. These are special extracts from our regular census and survey work that OEP has required for damage-assessment purposes and their economic-model purposes.

Mr. EVINS. Off the record.

(Off the record.)

Mr. BERTSCH. Incidentally, Mr. Chairman, any request for information under the Defense Production Act is mandatory. So we utilize

the mandatory request for information for the administration of our priority system.

Mr. TALCOTT. Only parts of the long census questionnaire are mandatory. Just the name, address, and number of people in the family. The rest is not mandatory; is that right?

Mr. SCHELLER. No, sir.

I have not been connected with population census for some time, but as I understand it all parts of it are required.

Mr. TALCOTT. So you do use some of that information in your analyses?

Mr. SCHELLER. Yes, sir; we take over extractions of data that are required. Some of it is population data and some of it is industrial data.

Mr. TALCOTT. This is information that you have no authority to obtain except indirectly through the use of the census material?

Mr. SCHELLER. Yes, that is true. However, it remains in Census Bureau hands. That is one of the prime purposes for my assignment to the location. We maintain it. There is no breach of confidentiality. The only thing we release from the data which is under Census supervision are summaries which do not reveal any individual information.

Mr. EVINS. Gentlemen, we thank you. We think you have an important mission and wish you good luck.

Mr. BERTSCH. Thank you, Mr. Chairman.

Mr. EVINS. We will meet at 1 o'clock.

AFTERNOON SESSION

DEPARTMENT OF AGRICULTURE

WITNESS

GEORGE H. WALTER, DEFENSE COORDINATOR

Mr. EVINS. The committee will come to order.

We have with us Mr. George H. Walter, the defense coordinator for the Department of Agriculture, with respect to the appropriation for his functions in connection with the Office of Civil Defense and defense mobilization.

Mr. Walter, we will be pleased to hear you.

GENERAL STATEMENT

Mr. WALTER. Mr. Chairman, members of the committee and staff, I am George H. Walter, Acting Assistant to the Secretary, and by his direction coordinate the defense mobilization and other emergency programs of the Department of Agriculture.

Under Executive Order 10998, the Secretary and through him the Department of Agriculture has responsibilities for assuring adequate production of food, for its distribution through the wholesale level, for rural fire protection planning, and other related functions. Through administrative regulations and standby delegations he has assigned these emergency responsibilities among the various USDA agencies with the nearest comparable peacetime functions.

In the field, both at the State and county levels, the heads of the USDA agencies with field offices are organized as USDA defense

boards. They have been assigned responsibility for carrying out specific emergency responsibilities and are authorized to act on their own authority if cut off from national direction. Handbook guidance and instructions on how to carry out these responsibilities have been provided. We call this arrangement built-in readiness and we feel that these USDA people will be able to meet the demands on them should the defense situation so require. While we have highly qualified and trained people, each has full-time regular work assingments. Yet as a part of our defense readiness, these defense board members must be kept aware of their defense assignments and of the latest directives for carrying them out in an emergency. There is such a board in each State, the District of Columbia, Puerto Rico, the Virgin Islands, and in nearly 3,000 counties.

To assist in maintaining the capability of these USDA defense boards to meet possible emergency conditions, I have fieldmen who we call emergency program coordinators to meet regularly with State government officials and with USDA State defense boards. They help answer questions on how USDA people should carry out their standby instructions, help them plan training for USDA county and metropolitan area defense boards. They also provide liaison with the regional offices of the Office of Emergency Planning and the Office of Civil Defense. Four of these men are located in Seattle, Wash.; Chicago, Ill.; Dallas, Tex.; and Denver, Colo. The others travel out of Washington, D.C., so that when not traveling, they can assist me with the overall program coordination.

The entire $187,000 in the OEP delegate agency request is to finance this small coordination staff. All other defense-readiness work in the Department of Agriculture is carried out as a part of the job assignments of our regular employees. The budget request will permit us to continue this staff at its present level and in its present training activities. It is our belief that this is the minimum staffing level necessary to maintain the rather extensive defense-preparedness capability that USDA has developed over the past 10 years. I appreciate this opportunity to briefly describe the defense coordination functions of my office and staff and will be glad to answer any questions which you may have.

JUSTIFICATION MATERIAL

Mr. EVINS. Thank you, Mr. Walter. That is a very concise statement. We will place in the record in connection with your statement your justification sheets, pages 5, 6, and 7.

(The pages follow:)

U.S. DEPARTMENT OF AGRICULTURE

OFFICE OF THE SECRETARY

NARRATIVE STATEMENT

1. *Statement of mission.*—The Secretary of Agriculture has defense responsibilities under Executive Order 10998 covering assurance of adequate food and related agricultural products for use in either limited or nuclear war and under Executive Order 10958. The responsibility for carrying out these functions has been delegated within USDA with direction for the program being given to an Assistant to the Secretary. His responsibilities include maintaining liaison with executive departments and Congress with respect to policy matters, supervision

and direction of USDA National, State, and county defene boards and the USDA part of the national executive reserve program and providing policy guidance to USDA agencies in carrying out specific defense assignments. He supervises seven USDA emergency program coordinators who provide liaison with OEP–OCD regional offices. His responsibilities also include coordination of USDA natural disaster operations.

The overall objective is to provide leadership and coordination throughout the Department of plans and programs which will insure the maximum utilization of food and agricultural resources under conditions in a national emergency and assure coordination of USDA plans with those of other governmental organizations. The emergency program coordinators also provide assistance to States in their emergency planning to assure coordination of their plans such as for food rationing and rural fire control with USDA arrangement.

2. *Current status.*—USDA defense boards have been named at the National, State, and county levels. Emergency responsibilities have been assigned within USDA. USDA State and county defense boards have instructions in the form of defense operation handbooks to guide them in carrying out emergency responsibilities. There are presently four persons in the Office of the Secretary, an Assistant to the Secretary of Agriculture, his deputy, and two secretaries with the responsibility for carrying out the defense coordination assignment of the Department. The seven emergency program coordinators are their field staff. The following represents some of the defense assignments currently being emphasized:

(*a*) Training meetings and training exercises were held for USDA State and county defense boards. These were designed to develop an understanding of USDA emergency responsibilities and how they should be handled if national-level direction is limited due to the emergency.

(*b*) Developing an awareness among the food trade of how food would be managed in an emergency. A notice of how USDA intends to carry out its responsibilities was published in the Federal Register to advise the trade and obtain their comments.

(*c*) The food sections of State emergency operations plans were reviewed either during development or subsequently to assure consistency and agreement on how emergency problems should be handled.

(*d*) Procedures for carrying out specific defense assignments were revised and perfected. These included new plans for emergency credit arrangement, standby seed use regulations, United States-Canada food arrangements as well as revising and perfecting other emergency plans.

3. *Objectives for fiscal year 1968.*—During fiscal year 1968 emphasis will be on improving Federal-State arrangements for meeting emergency responsibilities relating to food, rural fires and other USDA defense responsibilities. USDA will cooperate in OEP and OCD readiness exercises. The initial USDA unit in the national defense executive reserve program will be trained and expanded. Contacts and cooperative arrangements with State governments will be maintained. Coordination with OEP–OCD regional offices and field offices of other Federal agencies relative to defense preparedness will continue. The need for food reserves will be reviewed. USDA standby instructions to its field people for how they should carry out USDA emergency assignments will be revised and reissued.

4. *Objectives for future years.*—The staff to be financed by the requested budget will work with other Federal agencies and with State and local officials to assure close coordination of plans to meet possible emergencies. Eight field coordinators will provide one to work with each of the OEP–OCD regional offices and with the USDA State defense boards to assure adequate readiness to carry out emergency responsibilities assigned USDA under executive orders and other legislation. This coordination staff is essential to maintaining a degree of readiness to meet emergency responsibilities among the regular USDA employees who in an emergency would be called on to assume their added responsibilities. The constant turnover in staff makes periodic review and retraining necessary if an adequate capability to carry out defense responsibility is to be maintained. Plans call for continued training of the USDA part of the national defense executive reserve program and a moderate increase in the number of reservists assigned to assist USDA State defense boards with emergency food problems.

The increase of $2,000 provides for full year costs in fiscal year 1969 of the pay increase pursuant to Public Law 90–206.

APPROPRIATION REQUEST, FISCAL YEAR 1969

Mr. EVINS. I do note in reading the statement you said you have a constant turnover, which makes periodic review and retraining necessary if an adequate capability is to be maintained. Why do you have this turnover?

Mr. WALTER. This is just a normal thing. The people retire, die, are promoted, new people are hired. It is the normal course of human events. It is not any higher, I do not believe, than most other agencies but this is just one of the things that make our job a little more difficult.

Mr. EVINS. You had $185,000 last year. You need $187,000 this year. Is this $2,000 related to the pay act increase?

Mr. WALTER. That is right, sir.

BEEF IMPORTS

Mr. TALCOTT. I would like to ask one general question. This morning we talked about the problems relating to copper and the emergency planning with regard to copper when it is in short supply. What do you project with regard to beef? It seems to me that the problem with beef production is a great deal more serious than with copper because if we lose our beef industry through the foreign imports, it is not easy to redevelop the beef industry. It will require 5 or 6 years before we can get back into the beef industry if the industry were to go bankrupt. Do you have any emergency plans if this should happen because of the cheap meat imports from Argentina, Australia and Ireland?

Mr. WALTER. There are regulations on the statute books that regulate the amount that can be imported, and imports are running below this level. I happen to be a beef farmer from Illinois, myself, and I am concerned with this.

Mr. TALCOTT. You are not worried about the beef industry?

Mr. WALTER. Personally, I am feeding beef and I think we will do all right this year. We have plans in our emergency planning for taking care of anything that is due to nuclear war, but beef imports are not a part of my responsibility.

EMERGENCY ROLE

Mr. TALCOTT. So your only responsibility is planning in the event of nuclear war and not for the other emergency problems that we might have?

Mr. WALTER. And for any type of natural disaster that comes along, or nonnuclear war also.

Mr. EVINS. We want the rural areas protected as well as the metropolitan areas.

Mr. WALTER. We are doing as well as we can.

Mr. EVINS. Thank you, Mr. Walter.

DEPARTMENT OF THE INTERIOR

WITNESSES

FRED P. HOBART, DEFENSE COORDINATOR
JOSEPH BREEN, BUDGET OFFICER
JOHN RICCA, DEPUTY DIRECTOR, OFFICE OF OIL AND GAS
WILLIAM E. S. FLORY, DIRECTOR, OFFICE OF MINERALS AND SOLID FUELS
LESLIE JOCHIMSEN, ADMINISTRATOR OF DEFENSE ELECTRIC POWER ADMINISTRATION

Mr. EVINS. We now have the officials of the Department of the Interior. We have with us George E. Robinson, Deputy Assistant Secretary for Administration, Mr. Fred P. Hobart, the Defense Coordinator, Mr. Joseph Breen, Budget Officer, Mr. John Ricca, Deputy Director, Office of Oil and Gas, Mr. William E. S. Flory, Director, Office of Minerals and Solid Fuels, and Mr. Leslie Jochimsen, Administrator of Defense Electric Power Administration. Gentlemen, who is going to testify?

Mr. HOBART. I am, sir. Mr. Robinson regrets that he was called away. He was here this morning. I am Fred Hobart, the Defense Coordinator. I believe you have a copy of the statement. If you have any questions after I give the statement, our staff will be glad to endeavor to answer them.

GENERAL STATEMENT

Mr. HOBART. Mr. Chairman, members of the committee; I am pleased to have the opportunity to appear before you on behalf of those organizations of the Department of the Interior which carry out responsibilities delegated to Interior by the Office of Emergency Planning. These activities have been assigned by the Secretary to the

Defense Electric Power Administration, the Office of Oil and Gas, and the Office of Minerals and Solid Fuels. This request for $292,000 will finance a total staff of 20 in the three organizations. This request is $3,000 over that provided in the current year budget and that increase is for pay costs.

Our responsibilities are within the overall responsibilities of the Office of Emergency Planning but limited to the resource areas of electric power, petroleum and gas, solid fuels, and minerals.

The request for the Defense Electric Power Administration will finance three positions all located in the field; nine positions in the Office of Oil and Gas—also all field positions; and eight central office positions in the Office of Minerals and Solid Fuels.

While this appropriation finances only these few positions, we draw heavily upon technical competence and administrative assistance throughout the Department to supplement their efforts. Assistance is also obtained from the private sector and local and state governments. Each year we are able to report significant progress in the refinement of our plans through these joint efforts.

Details in support of our request are contained in the justification. We will be pleased to answer any questions the committee may have.

INTERIOR'S EMERGENCY ROLE

Mr. EVINS. The basic mobilization planning as far as Interior's activity on the Federal level is largely complete, you stated in your justification, and is formally recorded in chapters X and XI of the "National Plan."

Necessary now is the carrying of these plans to the OEP regions and to the States. This says that you have the job done. What work are you doing over there?

Mr. HOBART. Mr. Chairman, I look at this somewhat like a football team. The coaches get together in Washington, so to speak, and we set up our plans. Then we take our plans to the field. They have to be gone over, reviewed, and sold to the industries, to the States, and to the local governments. It is a continuing program. Now, we have changes. The agencies that will take over operations, if an emergency should happen, are staffed by people who are today in industry. We have to keep them interested, we have to call them together, explain the plans to them, find out from them if they think the plans will work. It is a continuing program which we have to keep updating and reindoctrinate industry personnel all the time.

Mr. EVINS. The Department of Interior is a great department. It knows all about our resources, electric power, petroleum, solid fuels, and minerals. In case of an emergency, how would you conserve and utilize properly the electric power resources of the Nation?

ELECTRIC POWER RESOURCES

Mr. JOCHIMSEN. We have an organization that is made up of about 60 WOCs. The country is divided principally into 19 areas which are largely supply areas of the power systems. We have a director, directors' deputies, one thing or another. We are set up so that in theory if anything ever happens we have a man at each power area throughout the United States who would be in charge, to make the decisions that

would have to be made immediately. Later on at such times as communications would be reestablished, and one thing or another, we would hope we would be able to give some guidance from Washington.

But we are primarily set up to be able to take care of a quick emergency that each person is going to have to act upon his own. We have an emergency operations handbook which in turn sets out what each man would do. We have the liaison with the State, liaison with the OEP–OCD centers.

Mr. EVINS. The electric power companies want to provide continuity of electric service, they do not want any blackouts or discontinuance of service. I am sure that the public power systems have the same attitude.

Mr. JOCHIMSEN. Exactly.

Mr. EVINS. You are not going to control them?

Mr. JOCHIMSEN. No, sir.

Mr. EVINS. You might tell them "Let's keep the power on the line", and they are going to do that anyway.

Mr. JOCHIMSEN. That is exactly right. That is why we look entirely to industry. We only have three people in the whole United States under this budget. We look to the industry to do this kind of thing. Obviously, as long as there is an adequate supply of power for everyone there is no problem. It is when there is a shortage, we then have problems of pirorities, allocations, curtailments of power, so on and so forth.

In addition to this, of course, we have the responsibility that should the worst happen and that copper would become an allocated material, our office would then have that——

OIL AND GAS INDUSTRY

Mr. EVINS. I was going to ask about these other items.

What do you do in petroleum and gas; what does your office do specifically?

Mr. RICCA. I am John Ricca, Deputy Director in the Office of Oil and Gas.

The program of emergency preparedness comes under my jurisdiction.

Mr. EVINS. This is for oil and gas?

Mr. RICCA. Yes.

Mr. EVINS. What do your plans encompass?

Mr. RICCA. We constantly plan and have procedures and programs to carry out that are responsive to all types of contingencies, not just nuclear war. For example, international tension, which we are engaged in right now, we have a program of constant monitoring and surveillance to make sure that we understand and know the precise world and domestic oil situation so that we can supply our military forces. Then in a situation which expands or explodes into something like the Middle East cutoff, we have responsive plans that are related to the Defense Production Act, which authorizes the mechanism of the use of the voluntary agreement. We have committees that stand by and that come in and help us make the necessary detailed studies to find out exactly what our position is, then whether or not we have to implement (under the voluntary agreement) certain pro-

grams in order to assist the industry in carrying out its responsibility to supply the world with petroleum and gas. Now, in this past emergency, fortunately we were poised to implement Government action if it was necessary but the industry was capable enough to come out of this themselves. So, therefore, we did not implement other actions that are called for under the voluntary agreement plan of action.

These would have been precise, coordinated, cooperative schedules under Government surveillance that would have enabled the industry to pool their resources, exchange resources, exchange tanker capability, line capability, and so forth. Fortunately, our economy is able to support the situation that we just went through. Therefore, we did not have to implement any specific Government programs.

If this escalates further into something of great magnitude, we have plans that bring about the implementation of the nucleus staff of the Office of Oil and Gas supplemented by the executive reservist system, up to the degree where we could implement the entire emergency petroleum and gas plan.

Mr. EVINS. What you are testifying is that your functions are not related to periods of war emergency, but you are actively concerned with the daily supply of gas and oil.

Mr. RICCA. Yes, but we do have funded for this particular program nine positions in field offices to help us maintain currently this surveillance and this expertise that we need in the event we go from a minor emergency to a very serious one.

Mr. EVINS. Nine positions and $111,000.

Mr. RICCA. Yes; $111,000 is applicable to our nine positions.

MINERALS AND SOLID FUELS INDUSTRY

Mr. EVINS. What are your plans with respect to solid fuels?

Mr. FLORY. The job is to make sure that there is an adequate supply of coal and coke to meet essential requirements and see to it that in an emergency these materials get where they are most needed. We are still in the plan-formulating stage. We are drawing up our handbook.

Mr. EVINS. Do you mean after all these years you have not prepared a handbook yet? You are still formulating your plans? I thought this other agency said they had the plans on file with the Office of Emergency Planning. You have not published your handbook yet?

Mr. FLORY. No, sir; we have not, neither in minerals nor in solid fuels. This is a first priority at the moment. We hope to have a first draft by the end of this fiscal year.

Mr. EVINS. What did your bureau accomplish last year?

Mr. FLORY. We have designated virtually 100 percent of the key field staff for both organizations. There are a few holes left in it at the moment. We completed the supply estimates for nuclear war and conventional war. We obtained from the Department of Commerce a delegation of authority for priorities and allocations of minerals.

Mr. EVINS. You have staffed your Office?

Mr. FLORY. The field offices.

Mr. EVINS. You staffed your field offices and you have determined the minerals you think the war effort will need?

Mr. FLORY. Yes, sir.

Mr. EVINS. What else have you done?

Mr. FLORY. As I mentioned earlier, we now have our handbooks about half done.

Mr. EVINS. That is your goal for 1969, to publish this handbook?

Mr. FLORY. Yes, sir. We shall have meetings of the people who are assigned to various segments of the program for purposes of reviewing our first drafts, of modifying them, and of training the personnel to carry out these functions. This is our major new objective for 1969.

Mr. EVINS. What does your inventory show with respect to our solid fuels?

Mr. FLORY. Our inventories—being perhaps more specific than you intended—our inventories at the consumer levels are now the highest they have ever been. The buildup of inventories, the extraordinary buildup of inventories started this last spring. While production is up and consumption is up, we are not at this moment quite sure what the significance of the increased inventories is. It may be that the industry, and particularly the electric power industry, has decided that they should maintain on hand a higher level of inventories than they have in, let's say, the past 10 years.

Mr. EVINS. The coal people are worrying about the shortage of coal. The electric people say there is a shortage of kilowatts. The gas people say there is plenty of gas, they want to sell the gas.

Mr. FLORY. We have plenty of coal, too.

Mr. EVINS. You have plenty?

Mr. FLORY. We would like to sell some more.

Mr. EVINS. Who wants to tell us about the other items that you include in this category 3?

Mr. FLORY. There are approximately 84 basic metals and minerals in this category.

STOCKPILE PROGRAM

Mr. EVINS. Are these all strategic materials that are being stockpiled?

Mr. FLORY. Oh, yes; all of them are strategic.

Mr. EVINS. All of them?

Mr. FLORY. Not all of the strategic basic metals and minerals are stockpiled.

Mr. EVINS. They had about $10 billion in the stockpile. This committee and others of the Congress told them that they had a surplus, and why not sell some of them. So they have sold some, but in a few items there is still a shortage. In these items they have not attained their objectives.

Mr. FLORY. No, sir.

Mr. EVINS. Are you helping GSA and OEP attain their objectives in the stockpiling program?

Mr. FLORY. Continuously; of course. Through the normal operations of the Department of the Interior we are stimulating production, domestic production particularly of those materials which are in short supply. Procurement of materials for the stockpile becomes quite a difficult problem at the moment so far as OEP is concerned. I think the question, primarily, is one of financing. Manifestly, if funds were available to purchase many of the strategic and critical materials, there just isn't an adequate world supply to permit us to stockpile these materials at the present time.

Mr. TALCOTT. The Office of Emergency Planning does not actually stockpile or manage the piles of stock? This function is left to GSA, is it not?

Mr. FLORY. The determination of what the stockpile objective is, in terms of tons of a particular material, is OEP's job, with our advice on supply estimates and Commerce's estimates on requirements.

Mr. TALCOTT. But you don't have any jurisdiction over any of the stockpiles after they have been stocked?

Mr. FLORY. No. Once the stockpile objective is established, the procurement and maintenance is delegated by OEP to the General Services Administration. We and our experts work laterally with the General Services Administration on procurement.

Mr. TALCOTT. The actual stockpiling of the different materials is quite different? If you stockpiled grain, for instance, and the farmers could hold grain in their own granaries, you wouldn't have to have GSA build warehouses for them. Whereas, with uranium, they would probably have to locate uranium in a special area and GSA would have to assume the care and custody. Now, electrical energy, you just have to leave that with the producer.

Mr. FLORY. Right.

Mr. TALCOTT. So, actually, there is quite a difference in the amount of planning that is necessary, and checking to make sure that they maintain these stockpiles up to par. Do you check to ascertain that the stockpiles in these various places, with the private owners, with the Government, with everybody, is actually there?

Mr. FLORY. That is General Services Administration's job. They run continuous checks on physical stockpiles to make sure that the materials are there, that they are in good condition, that the storage facilities are adequate.

Mr. TALCOTT. Then what do these three men do who are involved with the electrical-energy stockpiling? You mentioned there were three people throughout the country.

ELECTRIC POWER INDUSTRY

Mr. JOCHIMSEN. We don't have anything to do with stockpiling. Electric power being something that you make as you use it, our people are in the nature of emergency planning people, to develop and explain our emergency plan. You see, we have a plan, we think it is a very good one, but it depends upon the activities and the acceptance of this plan by the utilities themselves, because without their acceptance we have nothing. It does take constant effort.

Mr. TALCOTT. It takes three men to keep this plan up to date?

Mr. JOCHIMSEN. In the whole United States we have only three. Our office is very small. There are only two men here in Washington, three in the field. We try to cover the whole United States. Now, we have one in Texas and two on the west coast because they are, obviously, the furthest away from here. We have annual conventions or meetings, we have WOC's, as they are called.

Mr. TALCOTT. Have you ever convinced an electric-power producer they should do something differently from what they are doing now?

Mr. JOCHIMSEN. No. What our electric-power organization does—it is an organization of the industry. It is not Government, per se,

trying to tell them to do this or do that. What we try to do is organize them so that they are able and ready to take care of the problem if it ever arises. But we do not try to tell them to do anything differently than they are doing now. As a matter of fact, the planning for nuclear attack, the operation of the industry in one thing or another, is not really substantially different than what it is now. You get another factor introduced, perhaps, with fallout, loss of load, and so on and so forth, but it is just an effort to get the industry to keep looking at this problem.

PREPAREDNESS RESPONSIBILITIES

Mr. EVINS. Separate Executive orders have been issued by the President, through the Office of Emergency Planning, delegating certain functions to each of these specific areas. Executive Order No. 10997 assigns preparedness responsibility in the metals, minerals, and solid fuels areas to the Secretary of the Interior. This responsibility has been redesignated to the Office of Minerals and Solid Fuels under Mr. Flory. The basic mission of this Office is the development of national emergency plans and preparedness programs. We ought to know what the resources are in case of a national emergency. I thought all of these plans would have been prepared but Mr. Flory says that over the years we have not gotten them all completed yet. These plans should assure that an adequate supply of minerals, metals, and solid fuels will be available to meet emergencies and essential civilian needs during a mobilization.

Then you state in your justification that you have a 5-year program. You also have the program objectives for fiscal 1969: Recruit additional executive reservists. Tell us what you propose to do here.

EXECUTIVE RESERVISTS

Mr. FLORY. We have roughly available 100 executive reservists for minerals and solid fuels at the moment. I expect our goal will be around 150. It was higher at an earlier period but a review of the needs in relation to the plans which we are now developing suggests an executive reserve of about 150 plus the assignment of key officials of the Bureau of Mines and Geological Survey, and other Interior organizations. We should have a good strong key staff at national headquarters and in the field.

Mr. EVINS. How often do you meet?

Mr. FLORY. We met twice last year and I am hoping that in the current year we will be able to meet in each of the OEP regional offices, get the fieldmen acquainted with each other, know where they are supposed to report in an emergency, and next year I hope we can have a series of meetings which will include all of the Federal appointees and all of the executive reservists, at least one meeting.

Mr. EVINS. After you recruit them, then you have a training program. These people could train some of the Government employees; could they not? They are pretty knowledgeable in their field. Do you train them or do they train us?

Mr. FLORY. Both. It takes a complement of the government know-how plus the industry know-how in just about every major area of our organization.

Mr. TALCOTT. Are most of these people active in business or are they retired?

Mr. FLORY. Most of them are active. We recruit them when they are active and in some instances when they retire we keep them on.

Mr. EVINS. If a man owns a coal mine or an oil well, how do you train him?

Mr. FLORY. The normal man who is operating a coal mine does not think very much about the role of his industry in a defense emergency and he has not given a great deal of thought to how the Government ought to operate in an emergency. We tell him that he is going to be responsible for certain jobs and he had better start thinking, together with us, on precisely what he, as a Federal official will do should the emergency come. This is, in essence, the training.

Mr. EVINS. You say you have your regular customers, but in case of an emergency we want you to allocate a certain amount to us. If you do not, under the statute we will take a certain percentage of your production.

You let him know what you need. You have such an authority, but it is not frequently exercised?

Mr. FLORY. That is right.

Basically, of course, our solid-fuels plan is to keep the coal moving to the traditional customers of each of the mines, and of each of the distributors until the Government officials know and can determine which customers must have first priority.

Mr. RICE. I think that "training" is a misnomer for relatively small investments—we talk about three people from one whole industry—we are getting thousands of man-years of industry participation and cooperation for very little Government investment. They are training themselves. Once we get them interested and motivated and give them general guides, they start training among themselves.

Mr. EVINS. Industry participation, cooperation, and coordination is important. Besides the training, then, you collaborate with OCD and DOD with your plans.

And you perform additional functions as required. You have a multiplicity of duties here.

Your portion of this for the next year is estimated to be how much?

Mr. FLORY. $125,000.

Mr. EVINS. Gentlemen, keep us well prepared and our plans up to date. Let's always be ready.

Thank you very much. We commend you and the Secretary.

INTERSTATE COMMERCE COMMISSION

WITNESSES

M. E. FOLEY, ASSISTANT MANAGING DIRECTOR
GEORGE J. LOTITO, BUDGET AND FISCAL OFFICER
THOMAS J. BYRNE, DEFENSE COORDINATOR

Mr. EVINS. We have representatives of the Interstate Commerce Commission. Mr. Foley is Assistant Managing Director, Mr. Lotito is Budget and Fiscal Officer, and Mr. Byrne is Defense Coordinator of the ICC. This is the pioneer regulatory agency.

Do you have a statement, Mr. Foley?
Mr. FOLEY. Yes, we do.
Mr. EVINS. You may proceed as you wish.

GENERAL STATEMENT

Mr. FOLEY. Mr. Chairman, we appreciate the opportunity to appear in support of the 1969 budget for $48,000 for defense mobilization function delegated to the ICC. The mobilization responsibilities and functions assigned to the Interstate Commerce Commission have increased in importance with the Nation's demand and reliance on transportation. The Commission's role in emergency preparedness planning, which is broad in scope, has become more vital and the activities connected therewith have, of necessity, been intensified. The lifeline importance cannot be underrated in the sustained development of rail, motor carrier, inland water carrier, and public storage resources. Furthermore, the Interstate Commerce Commission must continue to provide guidance and consultation to the States in their development of State emergency transportation plans.

The Commission will continue to develop its plans within the guidelines furnished by the Office of Emergency Planning, coordinated with the Office of Emergency Transportation and other Federal agencies concerned with emergency transportation.

Three emergency standby organizations have been developed and have been staffed with qualified transportation industry officials and Commission personnel. The rail organization is staffed on a regional, State, and local basis, through recruitment and assignment of national defense executive reservists drawn from the ranks of top operating officials of the railroads throughout the country. The inland water emergency organization is staffed on a regional and State basis through the executive reserve program. The motor carrier emergency organization consists of 50 joint ICC-State Emergency Motor Transport Boards, composed of a senior State regulatory official, an industry representative, and an ICC official. The ICC member of the Board is supported by selected executive reservists possessing valuable background and experience in for-hire carriage, private carriage, passenger carriage, and vehicle maintenance requirements.

These standby organizations are presently about 90 percent complete. They are staffed with the best industry representatives available. If the interest and cooperation of these high-ranking industry representatives are to be kept alive, there should be no retrenchment in the support and guidance of the Interstate Commerce Commission.

Thirteen standby transport mobilization orders have been issued and given wide distribution to the transportation and shipping industries. These orders, by their terms, become effective upon the proclamation of the existence of a state of civil defense emergency by the President or by concurrent resolution of the Congress. Procedural order containing specific details and procedures are under development.

The amount of funds included in the fiscal year 1969 President's budget to cover ICC participation in civil and defense mobilization functions is $48,000. This is $1,000 more than the 1968 budget and the increase is to cover the increase in salaries.

This amount allows for only the maintenance activity of the standby emergency structures and the existing ICC unit of the national defense executive reserve, and limited cooperation and coordination with other agencies in development of overall emergency plans, and test exercise of these plans. The basic expenses incident to supporting and maintaining the reservist units, including expenses for participating in exercises and attending conferences, are assumed by the industry itself. This output exceeds, by 75 percent, the moneys now allocated to the Interstate Commerce Commission.

Since domestic surface transportation interlaces with all areas of economic endeavor, it is a necessary element of the total preparedness effort, and preparedness in these industries is vital to the Nation's defense.

Thank you, Mr. Chairman.

PREPAREDNESS ROLE

Mr. EVINS. A very good statement, with which I am sure we all agree. We have to have the railroads running, the trucklines, and the water carriers. You are not concerned with the air transportation in any way.

Mr. FOLEY. No, sir.

Mr. EVINS. What did your office accomplish last year?

Mr. FOLEY. Mr. Chairman, our accomplishments last year were along the line outlined in the statement in recruiting, processing, and bringing on board and maintaining our large standby executive reserve program.

Mr. EVINS. One of the largest categories in the executive reserves is in the field of transportation?

Mr. FOLEY. Yes, sir. We have on board something over 800 executive reserves in our three operating programs. It is a sizable effort for us to keep this reserve unit active and alive and most of our effort goes toward that end. Our plans for fiscal year 1969 include the following:

(*a*) Complete the review of State transportation plans developed under the OEP comprehensive program and assist OEP and the State transportation task groups in cooperative Federal-State implementation of the plans.

(*b*) Complete the drafting, interagency coordination, publication, and distribution of emergency readiness guidance for the railroad industry.

(*c*) Maintain the national defense executive reserve, assuring continuity of the emergency standby organization; recruit executives to fill vacancies; and appoint approximately 60 members to hold the total on the rolls to no less than 800 as of the close of the year.

(*d*) Maintain the national, regional, and field standby organization of executive reservists and the field staff of the Commission with emergency designations and assignments.

(*e*) Continue participation in regional level seminars or conferences for orientation and training of reservists and ICC field staff with emergency assignment.

(*f*) Provide support to, and participate in national and regional exercises designed by OEP to test emergency plans and measures under various assumed emergency conditions.

(*g*) Coordinate the Commission's plans and programs with representatives of the transportation industry, the Office of Emergency Planning, the Office of Emergency Transportation, other transportation agencies and the military in order to assure practical and effective emergency readiness in the domestic surface transportation area.

INLAND WATERWAY SYSTEM

Mr. EVINS. What is the status of our inland waterway system today?

Mr. FOLEY. In terms of the executive reserve or the mobilization program?

Mr. EVINS. Readiness for use.

Mr. FOLEY. As an industry it is an important function of course subject to our jurisdiction. It is an industry which has had its problems economically. Innovations instituted by other modes in the transportation of freight have made it more competitively difficult for water carriers to compete and operate profitably.

Mr. EVINS. How many miles of our inland waterway are completed and how many are planned? Where does the inland waterway system begin, up in Virginia, does it not, and it goes down through the Carolinas through portions of Georgia and into Florida and across Florida on through the gulf coast to Texas?

Mr. FOLEY. Apparently, Mr. Chairman, in our annual report for fiscal year 1967, we have included some statistics on water carriers subject to our jurisdiction. In order to be more responsive may we elaborate by inserting the material for the record?

Mr. EVINS. Yes, supply it for the record.

Mr. FOLEY. We will be happy to.

(The information follows:)

The Atlantic Intercoastal Waterway system extends from Norfolk, Va., to Fort Meyer, Fla., and the Gulf Intercoastal Waterway extends from Apalachee Bay (St. Marks) to Brownsville, Tex.

The inland waterways system total approximately 29,000 miles all of which are navigable and complete.

At the present time there are plans to make navigable approximately 6,000 miles of inland waterways.

EMERGENCY ROLE

Mr. TALCOTT. You have three emergency standby organizations for railroads, for buses, and for rent-a-cars, I take it. How do you coordinate all of these three? I think the most important problem in an emergency would be how you coordinate the buses, the motor freight, and the railroads.

Mr. FOLEY. I am not sure we, in our emergency programs, attempt to coordinate the operations in terms of providing, say, through coordinated transport service. The approach to the operation of the highway system carriers as opposed to the railroad system carriers in a national emergency is different. We plan to operate the railroads through the Commission's bringing on board this large staff on railroad executive reservists, making them employees of the Commission, and having them operate the railroads at the Commission's direction. This differs vastly from the approach to the motor transport system operation which will be largely done through the industry itself under the guidance and general operating plans and procedures that the Commission

and other agencies may have with respect to priorities for the movement of property or passengers between certain points.

Mr. TALCOTT. Do you plan for an atomic burst where railroads and highways are obliterated and where we still must maintain transportation facilities. Is that not part of your planning?

Mr. FOLEY. Yes, sir.

Mr. TALCOTT. This takes a good deal of coordination between road transportation and rail transportation, I would think. I would think you would have to plan for containerization, for instance, that would be suitable to boat, truck, and train. I would think that would be part of your planning.

Is there any such plan for coordinated containerization for that kind of emergency.

Mr. FOLEY. Perhaps there is, if I could ask the Defense Coordinator.

Mr. BYRNE. That would principally be the responsibility of the Office of Emergency Transportation to coordinate the various modes of transportation and the use of transportation. Our executive reservists, as Mr. Foley pointed out, consist of practical operating executives broken down in regional, State, and area concepts for the purpose of assisting in the execution of preparedness programs covering utilization, reduction of vulnerability, maintenance, and restoration of railroads, motor carriers, and inland water facilities, as well as the actual operation of railroads in an emergency.

Mr. TALCOTT. We will have someone else explain the coordination of all of the transportation facilities.

Mr. BYRNE. That is right. The coordination of all transport is done, of course, by the Office of Emergency Transportation or elements of transportation which the Commission has responsibility for, and those which FAA and Maritime and the others would have responsibility for.

They would have the role of coordination. And the rail executive reservists, the reservists themselves, numbering over 500 in all, now operating the Nation's railroads, would have the responsibility of rehabilitating and operating the Nation's railroads in times of emergency. They do it every day during emergencies, they have the know-how, they have the leadership, and they would have the responsibility as ICC men to rehabilitate, cannibalize if they needed to, and operate railroads.

Mr. TALCOTT. It seems, Mr. Chairman, that this agency has an entirely different function from the ones in the fuels. In fuels, they only guide; but these people are going to take over and operate.

Mr. BYRNE. That is right.

Mr. EVINS. There has only been once in the history of our country, in World War II, that the Government operated railroads for a time. Is that not right?

Mr. BYRNE. That is right.

Mr. EVINS. That only included the rails?

Mr. LOTITO. The Government did take over some trucking companies, Mr. Chairman, during World War II.

Mr. EVINS. You have your plans in case of an emergency.

Mr. BYRNE. We might say, also, all of our field men in the Bureau of Operations participate in this program, keeping up the interest of the industry in the field as well as their staff.

Mr. EVINS. You need about four jobs and $48,000.

Mr. BYRNE. That is right.

Mr. EVINS. Tell me, Mr. Foley, how often do you go before the Commission and talk with them about these emergency plans?

Mr. FOLEY. We report to the Commission at least monthly and oftentimes two or three times a month.

Mr. BYRNE. We do it quite often through the Managing Director's office. He would be the one who would have contact with and keep the Commissioners themselves enlightened and advised, and the Managing Director, of course, has a big interest in and watches over the operations of our mobilization program throughout the field.

Mr. RICE. I would like to indicate how interested the Chairman of ICC has been in this program. When the Congress cut this appropriation by roughly $1 million last year the Chairman himself came over to see Governor Bryant personally, he was that concerned about the continuation of the work.

JUSTIFICATION MATERIAL

Mr. EVINS. Place in the record pages 63 through 70. And thank you very much. We wish you much success.

Mr. FOLEY. Thank you, Mr. Chairman.

(The pages follow:)

INTERSTATE COMMERCE COMMISSION—BUDGET ESTIMATE, FISCAL YEAR 1969
CIVIL DEFENSE AND DEFENSE MOBILIZATION FUNCTIONS OF FEDERAL AGENCIES

STATEMENT OF MISSION

The basic objective of the emergency preparedness functions of the Interstate Commerce Commission is to prepare and maintain programs, organizations, and procedures covering the provision of carrier service by the railroad, motor, and inland water carrier modes of domestic surface transportation. The responsibilities, which are assigned by Executive Order 11005, include planning for the utilization, reduction of vulnerability, maintenance, and restoration of each mode under any type of national defense emergency, including attack upon the United States.

The Commission provides guidance and information to industries under its jurisdiction, regarding emergency preparedness and readiness measures, and to States relative to the development of their transportation plans.

The Commission's emergency plans and measures support overall policies and national programs of the Office of Emergency Planning as expressed in the National Plan for Emergency Preparedness. The domestic surface transportation programs developed by the Commission are coordinated with other transportation agencies, the Department of Transportation (Office of Emergency Transportation), and the military.

The 5-year program

Preparedness programs initiated and sponsored by the Commission have been developed in accordance with long-range objectives designed to assure that domestic surface transportation industries and systems are prepared and capable of serving the defense needs of the Nation in national emergencies. These objectives include the development of a standby organization and a trained staff to provide guidance, counsel, and direction to the transportation industry in an emergency. The development of coordinated operational plans and implementing action guidelines relative to standby operations orders, priorities standards, and permitting procedures are integral parts of the overall objectives. These also include the provision of field assistance to States in the development of their emergency transportation plans.

The broad goals or ends to be achieved in civil emergency preparedness, and significant measures necessary to their accomplishment, have been submitted in accordance with OEP Circular 5600.1B dated May 23, 1967.

Current status and fiscal year 1969 objectives

In meeting the emergency readiness and mobilization planning responsibilities assigned to the Commission, reliance is placed upon the regular offices and bureaus in Washington, D.C., and the regional managers and other field staff of the Commission. Emphasis has been placed upon the development and maintenance of emergency standby organization, the issuance of guidance to the domestic surface transportation industry, and the interagency coordination of plans and programs as they are developed.

1. Emergency Standby Organizations

The Commission, through its carrier bureaus and the field staff, has established emergency standby organizations for implementing the emergency functions assigned this agency and to provide for rapid expansion of its emergency capability in the railroad, motor, and inland water carrier transportation areas in order to meet the requirements of a national defense emergency.

a. *Railroads.*—The National Defense Executive Reserve program has been utilized as a means of enlisting executive talent from the railroad industry, on a standby basis, to meet the staffing requirements of the agency in a national defense emergency. Executive reservists have been appointed to standby assignments at the regional, State and local levels. Regional staffing is on the Office of Emergency Planning eight-region basis, and State-level staffing is along State boundary lines. Terminal areas within each State have been designated at important rail complexes. In excess of 240 such terminal areas have been and are being staffed, through the assignment of reservists at these locations.

The railroad group of the ICC unit of the National Defense Executive Reserve included 549 members appointed and 148 additional nominees in process, as of June 30, 1967. The rail emergency standby organization is over 90 percent staffed.

b. *Motor Carriers.*—The Commission has programed a joint ICC-State Emergency Motor Transport Board in each State (except Hawaii which has a separate program to meet its requirement) and the District of Columbia. On each of the 50 boards are representatives of the ICC, the State, and the motor carrier industry. Formation of each board and designation of its chairmen by the Governor of each State are being followed by additional cooperative steps, including adoption of the ICC transport mobilization orders or compatible standby State emergency transportation orders, designation of emergency assembly and dispersal areas within States, and the designation of local transport officers.

Motor carrier executive reservists have been recruited to serve in emergencies with the ICC board members. The assignment of at least four reservists in each State brings to the board expertise in for-hire property carriage, private carriage, passenger carriage, and motor vehicle maintenance. The motor carrier reservists, as of June 30, 1967, included 208 members appointed and eight nominees in process.

c. *Inland Water Carriers.*—Recruitment of inland waterway reservists at the regional and local levels has continued on an austere basis. A review of assignments at important inland waterway points was effected. This review resulted in the restructuring of the inland water emergency standby organization from a 10-region basis to an eight-region basis, subdivided into 66 inland water districts, with projected staffing by executive reservists and field personnel. The inland waterway group of the National Defense Executive Reserve, as of June 30, 1967, included 43 members appointed and nine nominees in process.

d. *National.*—There were 15 national reservists and four nominees as of June 30, 1967.

2. Continuity of the Agency

Essential records, documents, inventories, and resource materials prepositioned at alternate headquarters sites were supplemented with updated materials during the fiscal year. The Commission's plans for orderly movement of key officials and support staff were revised and updated, with special emphasis on emergency operational considerations.

Periodic tests of agency internal alerting procedures were conducted in conjunction with notifications of simulated Defcon changes provided by the Office of Civil Defense.

3. Emergency Planning and Operations Manual

The ICC Emergency Planning and Operations Manual has been completely revised and updated. The manual has been issued to each field staff member with an emergency designation and to each of the Commission's National Defense

Executive Reserve members. The manual has been provided to other Government agencies with whom the ICC coordinates its planning efforts.

4. Industry Guidance

The Commission and the Association of American Railroads have proceeded on a cooperative basis to develop a current railroad industry emergency preparedness guidance pamphlet.

5. The ICC Transport Mobilization Orders

Revised TM Orders TM–1 through TM–13 have been reproduced and distributed to industry, industry associations, emergency planners, and the State agencies for their information and guidance.

A procedural order, designated TM–11–PO–1, which is designed to alleviate rail traffic congestion at port areas in a national emergency, has been issued. Development of an additional procedural order designated TM–2–PO–1 has been initiated. This order concerns permitting of movements to or from damaged areas.

6. National Emergency Planning Guidance

The commission, during the fiscal year, distributed to newly appointed executive reservists individual copies of the *National Plan for Emergency Preparedness*. This guidance was supplemented by appropriate information and training material regarding the agency responsibilities under the plan.

7. Training and orientation

Regional level training and orientation sessions were held during the fiscal year for the rail element of the Commission's unit of the national defense executive reserve.

Individual Emergency Motor Transport Board meetings were held during the year to review motor preparedness progress. Inland water reservists were advised of the inland water program reevaluation and their suggestions and comments were considered in the reorganization of this effort.

Commission field staff participated during the year in State transportation planning task group activity under the OEP "comprehensive program for the survival of Government and management of resources, resulting in the formal review of 13 drafted State transportation plans.

8. Interagency cooperation and coordination

The Commission, in developing its emergency preparedness plans and programs, continued to coordinate its efforts with the Office of Emergency Planning, the Office of Civil Defense, the Military Traffic Management and Terminal Service (Department of Defense), the Office of Emergency Transportation (Department of Transportation), and other Federal agencies responsible for segments of transportation or having an interest in transportation. Representation was furnished to interagency committees and groups including the Transportation Allocations, Priorities, and Control Committee; the Interagency Emergency Planning Committee; the Civil Defense Coordinating Committee; the Interagency Committee on the National Defense Executive Reserve; and the national supply requirements study group.

Primary and alternate ICC representatives are designated to each of the eight Office of Emergency Planning Regional Preparedness Committees in the field. These representatives are responsible for channeling guidelines, coordinating readiness plans, and maintaining liasion with other agencies of Government and the transportation industries at the regional and State levels. They also serve on the Office of Civil Defense-regional civil defense coordinating boards. Assignments are made to selected field staff members to serve as State level points of contact for State emergency planning task group activity in connection with OEP's "comprehensive program for survival of Government and management of resources. Commission activity in the development and clearance of State emergency transportation plans significantly increased as the State-level task groups progressed in the drafting of definitive State programs.

The Commission has provided support to the National Resources Evaluation Center and furnished applicable transportation library data as it became available.

The objectives for fiscal year 1969 include the following:

a. Complete the review of State transportation plans developed under the OEP comprehensive program and assist OEP and the State transportation task groups in cooperative Federal-State implementation of the plans.

b. Complete the drafting, interagency coordination, publication, and distribution of emergency readiness guidance for the railroad industry.

c. Maintain the national defense executive reserve, assuring continuity of the emergency standby organization; recruit executives to fill vacancies; and appoint approximately 60 members to hold the total on the rolls to no less than 800 as of the close of the year.

d. Maintain the national, regional, and field standby organization of executive reservists and the field staff of the Commission with emergency designations and assignments.

e. Continue participation in regional level seminars or conferences for orientation and training of reservists and ICC field staff with emergency assignment.

f. Provide support to and participate in national and regional exercises designed by OEP to test emergency plans and measures under various assumed emergency conditions.

g. Coordinate the Commission's plans and programs with representatives of the transportation industry, the Office of Emergency Planning, the Office of Emergency Transportation, other transportation agencies, and the military in order to assure practical and effective emergency readiness in the domestic surface transportation area.

Staffing and funding breakdown

With the ever-increasing need for a standby emergency organization, particularly in the field of transportation, the Commission has accelerated its program of recruiting and training reservists to serve in the ICC unit of the national defense executive reserve. An additional workload has been imposed on the Commission by the build-up in the Office of Emergency Transportation and the increasing demands made by that agency, and the impetus given the overall program by the Department of Transportation.

There is also planned for this year a very badly needed campaign to bolster the interest of the transportation industry (all modes) in this activity. With over 800 industry representatives serving in our organization, it is essential that the Interstate Commerce Commission get the needed support to attract reservists of the caliber it now enjoys.

In order to create and maintain an acceptable level of interest and to assure that persons with standby emergency assignments are ready and able to carry out their designated responsibilities, training, and orientation are required. The proposed program calls for ICC reserve participation in all OEP-sponsored national training conferences.

The development of the rail, motor, inland water, and public storage sections to the ODR plan for resources management, including initial drafting of several supporting documents and prototype orders, will be emphasized.

The increase requested for fiscal year 1969 over 1968 is for full-year cost of pay increases authorized by Public Law 90–206.

TABLE OF PROFESSIONAL MAN-YEARS AND OBLIGATIONS

Program objective	Fiscal year 1968		Fiscal year 1969	
	Professionals man-years	Obligations (thousands)	Professional man-years	Obligations (thousands)
1. Support of OEP comprehensive program, State planning efforts, and test and exercise participation				
2. Industry guidance				
3. National defense executive reserve program	2.1	$26	2.1	$26.5
4. Emergency procedures development, NREC liaison, and supply requirements	.4	5	.4	5.0
5. Program direction and coordination	.7	16	.7	16.5
Total	3.2	47	3.2	48.0

FINANCIAL AND PERSONNEL SUMMARY

Obligations by object class	1967 actual	1968 estimate	1969 estimate	Change 1968/1969
25.2 services of other agencies	$60,000	$47,000	$48,000	$1,000
Yearend employment				
Average employment	4.2	3.2	3.2	

Department of Labor

WITNESSES

MILLARD CASS, DEPUTY UNDER SECRETARY OF LABOR

Mr. Evins. We will take the Department of Labor.

Mr. Millard Cass is Deputy Under Secretary of Labor and responsible for civil defense and defense mobilization functions.

Do you have a statement for us?

Mr. Cass. Yes.

General Statement

Mr. Evins. You may submit it for the record and tell us your funding needs, what you have done in the last year and what you propose for the next year.

Mr. Cass. Yes, sir.

(The statement follows:)

STATEMENT OF MILLARD CASS, DEPUTY UNDER SECRETARY OF LABOR

I appreciate the opportunity to present to this committee the emergency preparedness program of the Department of Labor.

For fiscal year 1969, the Department of Labor is requesting $317,000. This is allocated as follows: Office of the Secretary, $93,000; Bureau of Employment Security, $118,000; Bureau of Labor Statistics, $61,000; Wage and Hour and Public Contracts Divisions, $45,000.

In fiscal year 1962, the Department of Labor's expenditures for emergency preparedness and defense mobilization functions were $978,348, and 52 Federal positions were financed by this appropriation. The funds and personnel have been reduced every year to the present maintenance level in fiscal year 1968 of $314,000 and 22 Federal positions, or a percent reduction of 68 and 58 respectively. For fiscal year 1969, we are seeking only $3,000 more—all for mandatory full year costs of the 1967 pay act.

The reason for this progressive reduction is that the Department of Labor was determined to complete its basic preparedness planning as quickly as possible and reduce the Department's role to a maintenance level. While our basic preparedness is not yet consummated, it is nearly enough achieved for the remainder to be done by the level of staff we now have. This will enable us to complete, review, revise, and update our plans and to undertake certain responsibilities resulting from the Vietnam situation.

Executive Order 11000 of February 16, 1962, delegated to the Secretary of Labor authority and responsibility for:

(*a*) Preparing and keeping up to date national emergency plans covering all phases of civilian manpower mobilization. These programs are to provide for effective utilization of manpower resources, including specialized personnel, worker incentives and protection, skill development and training, research, and critical occupations.

(*b*) Developing emergency plans in the fields of wage and salary stabilization and labor-management relations.

The Executive order states that these plans and programs shall be designed to develop a state of readiness for all aspects of national emergency, including attack upon the United States.

In view of the situation in Vietnam and elsewhere in Southeast Asia, as well as in the Middle East, it is especially important that we be prepared for any eventuality. The Vietnam conflict has already resulted in a few shortages of manpower in some occupations and some geographic areas. As a result, the Department of Labor has oriented its manpower training and utilization programs to meeting the present defense needs and the prospective shortages.

In addition, we are monitoring the effect on the civilian economy of the limited callup of Air Force and Naval Air Reservists on January 25, 1968. We want to know these facts in order to assist employers who may experience shortages of skilled personnel as a result of the callup.

Different types of manpower problems occur in different types of emergencies. Some skill shortages can, however, be anticipated in any emergency. To meet present and prospective shortages of skilled manpower, the Department of Labor is continually updating the lists of shortage occupations; promoting increased training for shortage skills and more effective utilization of manpower; studying how to convert jobs, transfer skills and reduce highly technical jobs to more easily learned components; and developing expedited procedures for training of needed workers in emergency situations.

The Federal-State Employment Service system, with its more than 2,200 local employment offices, would administer the manpower program in any emergency—from limited to nuclear war. They must be ready to match workers and needs. In some cases, they might have to operate independently, cut off from State or Federal direction and assistance; hence, their readiness must be built in.

Guidelines have been established for local office operations in a preattack mobilization period, a limited war, and a postattack situation. Streamlined procedures to get needed workers immediately on the job in any emergency have been developed, and prepositioned with each State and local office.

One of the major problems facing the Nation in an emergency would be the logistics of the manpower program—namely, the moving of persons with certain skills to areas where those skills are in short supply. This requires planning and economic intelligence of a high order. It will be essential that we know where the shortages and surpluses of skilled manpower are. Our manpower data have been programed into a computer to make it possible to estimate the availability of workers in various occupations in any emergency in each of some 350 geographic areas and industry requirements for certain types of skills. These data are being expanded and updated continually.

The Department's National Defense Executive Reserve Unit is being doubled in size—from 101 to 200. The reserves are being prepared for emergency service. We have used these training sessions for consultation with these knowledgeable representatives of labor, management, and the public regarding the programs and plans we are developing for emergency use. To be useful and workable, plans must be acceptable to labor and management. Consequently, we consult them to insure that our proposed programs will have their support and cooperation in an emergency.

There will be continued training of executive reservists and the Department staff, both in Washington and the field. Labor-management advisory committees at national and regional levels will be kept informed of changing developments. Complete review and necessary revision of relocation plans, notification systems, and lines of communication and succession are made at least annually so that they are kept in a readiness posture.

Wage and salary stabilization plans for a nuclear war and for a limited war situation are well advanced. They are being coordinted with other economic stabilization planning. In addition, they are being discussed with labor, management, and public leaders to insure that they are practical and effective. The wage stabilization program would be decentralized to the field, and the Department of Labor employees who would be expected to operate it are being continuously trained. Personnel of other agencies who could assist the Department of Labor in carrying out this responsibility are also being identified and indoctrinated.

Our plans for maintenance of effective labor-management relations during national defense emergencies are being developed in consultation with other interested Federal agencies. They are also being discussed with other labor and management.

Mr. Chairman, I shall be happy to answer any question you or members of the subcommittee may have.

NEED FOR DELEGATE AGENCY FUNDS

Mr. CASS. Our total request for this year is $317,000, which is $3,000 more than the current year. The entire amount is for mandatory pay act costs. We have broken this down between the Office of the Secretary and three bureaus.

We have, in the last 6 years reduced this program 68 percent in funds and 58 percent in Federal personnel, while increasing our efficiency because we have made it a standard operating procedure

that, as we finished certain phases of planning, we phased out the personnel and the money. Thus we did not keep coming back and asking for funds for the same purposes. We think we have reached about the level—and that is why we are asking next year for the same amount as this year—necessary in order to keep up the required planning, revising, updating, and so forth.

We have three basic areas of responsibility. Manpower mobilization, wage stabilization, and labor disputes are the three, and we also have to provide economic data both for our own agency and other agencies which use the National Resource Analysis Center. We are constantly updating and expanding the economic intelligence which we feed into a computer, and we are constantly expanding and revising our own procedures in the event of an emergency.

We are doubling our executive reserve program, and we have had, incidentally, very full participation. At the last national meeting we had 70 percent of our cadre from all over the United States—and these are labor, management, educators, arbitrators, public people from all walks of life. We had both the Secretary of Labor and the Under Secretary of Labor meet with them and they are constantly aware of the plans in which we are engaged.

We have also determined as a matter of basic policy that it is essential that our planning be realistic. So we are not just waiting to use these executive reservists if there is a national emergency. We are consulting these executive reservists at all times concerning the plans we are trying to put on the shelf and preposition in the field in order to insure those plans are realistic, practical, workable, and they would have the support of both labor and management in the event of an emergency; because if we had manpower plans, important wage stabilization plans——

Mr. EVINS. One of the real things you need to do and want to do is have available a supply of the skilled labor for particular purposes. Do you have such an inventory?

MANPOWER PLANS

Mr. CASS. We have inventories. I cannot say, Mr. Chairman, that the supply is in all respects adequate. There are shortage occupations which are constantly being filled through the interstate clearance system of the Federal-State employment service system.

Mr. EVINS. As the Army drains off more of our manpower, industry feels the shortage?

Mr. CASS. Yes, sir.

Mr. EVINS. The Army takes first priority. If they cannot recruit them, what does your office do other than the settlement of disputes?

Mr. CASS. There are two ways in which we are helpful. First, we provide economic intelligence to the employers that may be concerned with those shortages that do exist and which are foreseeable in case of emergency.

We have also been helping them recruit and we have been helping them with training. We have a number of training programs in which we have emphasized particularly the shortage occupations and we have——

Mr. EVINS. One of the programs of the Department of Labor is the training program, but that is not confined to an emergency, is it?

Mr. CASS. No, sir; but we are trying to gear that kind of training not only to the needs of today, but also to foreseeable shortages in the event of an emergency or, as are now occurring, as a result of the Vietnam buildup.

There are some of these, of course, as you are aware, occurring and we are trying to emphasize where those shortages are so we do not train people for skills which are not needed in the future.

It is one of the tragedies, I think, of the past that this Nation too often trained people for jobs which were not available after the training was over. And we have had great success in this——

Mr. EVINS. The more training you can do, the better.

I was just trying to pinpoint what your particular civil defense agency does.

Manpower training, $118,000; wage stabilization, $45,000; executive reserve, $93,000; and economic analysis, $61,000.

LABOR'S EMERGENCY RESPONSIBILITIES

Mr. TALCOTT. You deal with labor and we have another section on agriculture and yet there is labor in agriculture. But you're more interested in industry and manufacturing and producing industries than you are in agriculture, I think.

Mr. CASS. Yes and no, sir. You are correct, but we do have the Farm Labor Service in the Department of Labor and we do have responsibilities for meeting the manpower needs of agriculture as well. We work closely with the Department of Agriculture, but the Farm Labor Service is in this Department.

Mr. TALCOTT. Here is an example of where, if we had an emergency, one of the very first industries hit hardest by the drain of manpower would be agriculture. Right?

Mr. CASS. Yes, sir.

Mr. TALCOTT. You do not want to train a lot more people for agriculture because then you would have an excess labor supply when the war is over. So really, one of the best places to obtain agriculture labor during a war emergency is Mexico.

Do you have any plans for the promoting of the importation of foreign workers in emergency-type situations before you start training people for agriculture that do not want to do agricultural work when the war is over?

Mr. CASS. As you know, sir, we have a program now in existence under which small numbers of agricultural workers do come into California, particularly from Mexico. This used to be a very large program. It is very small at the moment, but the exact same procedures which are now employed under the Immigration and Nationality Act are the procedures which could be employed in any emergency.

Mr. TALCOTT. You would do that rather than try to retrain people for agricultural work?

Mr. CASS. I do not want to say we would turn to that as our first source, sir, because we do have a great many former agricultural workers who are now in cities and many of whom have not found employment satisfactory to them or to the economy in the cities. I think in

the event of an emergency need in agriculture that many of these could be induced to return to agriculture.

We are working with the Department of Agriculture this coming fiscal year on one of our programs here to develop a wage stabilization program which would induce people to stay in agriculture or return to agriculture in an emergency. That is one of this coming fiscal year's projects.

Mr. TALCOTT. One moment the Government is trying to keep people from migrating around the country because it is such a miserable, expensive, wasteful way of life, and now we have a program to get them to migrate from the cities back to the farms.

Mr. CASS. This is not a program to do this now, sir; this is a program which would be utilized only in the event of a national emergency.

Mr. TALCOTT. I see.

Mr. CASS. All of our wage stabilization and all of our economic stabilization programs are geared only to a national emergency, and we have made very clear in our consultations with labor and management, and we have met with the National Labor and Management Manpower Policy Committee, on which agriculture is represented, and we have discussed with them this economic stabilization program and made clear to all of them what we are talking about is a national emergency. At the time of an emergency, it is too late to do your planning.

On the other hand, we do not want to plan in peacetime to use the type of economic activity and stringencies that you would impose upon people in an emergency.

Mr. EVINS. Off the record.

(Off the record.)

JUSTIFICATION MATERIAL

Mr. EVINS. We will place in the record pages 71 through 76. This shows the statement of the mission, the objectives and the goals for 1969 which Mr. Cass has described.

(The pages follow:)

CIVIL DEFENSE AND DEFENSE MOBILIZATION FUNCTIONS OF FEDERAL AGENCIES, FISCAL YEAR 1969

A. STATEMENT OF MISSION

The basic objectives of the preparedness responsibilities assigned to the U.S. Department of Labor by the President under Executive Order 11000 are to:

1. Insure the availability of an adequate labor force in terms of numbers and skills, and apply such voluntary and other measures, including tentative preattack assignment of manpower for emergency needs, as may be necessary to meet mobilization and civil defense requirements of activities essential for survival and recovery.

2. Develop adequate statistics on the availability of manpower by geographic location and its probable productivity to insure rapid estimation of surviving manpower resources and their capability in an emergency in the event of attack on the United States.

3. Preattack plan for local postattack reporting of manpower supply and demand and adequate wage and price statistics for effective operation of a wage and price stabilization program.

4. Develop procedures and accumulating estimates of manpower requirements and for determining the adequacy of manpower resources to meet these estimated requirements.

5. Develop adequate provisions for a wage and salary stabilization program and its enforcement, and develop optimum procedures for insuring maximum cooperation between labor and management and for solving labor-management disputes.
6. Coordinate the above functions and the Department's emergency planning with that of other Federal agencies.
7. Develop an executive reserve program to meet emergency needs of the Department.

B. NARRATIVE DESCRIPTION OF PROGRAM

Activity 1. Manpower mobilization planning (1968, $117,000; 1969, $118,000).—The Bureau of Employment Security plans for national manpower utilization under all contingencies of possible emergency. A major portion of planning is related to the cooperational procedures by which the manpower agencies work with all Federal, State, and local agencies having other resource responsibilities.

Program objectives for 1968

1. Review and update handbook and manual instructions; introduce new procedures.
2. Promote and assist in development of procedures and programs to meet manpower problems arising from the military and civilian manpower needs generated by the Vietnam buildup.
3. Maintain program for reporting skill shortages and oversupply of workers locally, regionally, and nationally.
4. Continue efforts to increase the use of all workers physically able to perform a task.
5. Continue studies on critical occupations and essential activities. This activity forms the basis for the recommendations to the National Security Council for their use in providing advice to the Selective Service System with respect to the draft deferment program.
6. Continue training of new employees and Department of Labor executive reservists to meet the Nation's manpower needs in an emergency.

Program changes for 1969

In addition to the continuing programs, the following additions may be made:
1. Participate in a program for the local level management of resources in a civil defense emergency. This involves assistance to, and working with, the Office of Civil Defense.
2. Promote establishment of preassigned teams and reconstruction task forces at the local level. Advice and assistance is to be furnished by the local employment offices upon request of local authorities who decide to engage in such emergency preparedness activities.
3. Continue activity regarding critical occupations and essential activities.
4. Promote and assist in development of plans and programs for use of manpower released from military or civilian jobs if hostilities cease in Vietnam.

Changes for 1969

The increase of $1,000 over the 1968 base will provide for annualization of the pay increase costs and related benefits under Public Law 90–206.

Narrative description of program

Activity 2. Economic analysis (1968, $60,000; 1969, $61,000).—Provides economic advisory services to departmental officials for use in developing policies and programs for use in possible emergency situations, including a review of plans for statistical reporting, analysis of labor force information, and preparation of manpower statistics essential for planning. Develops bomb damage assessment procedures for labor force estimation, evolves techniques and prepares data for appraising, on a national basis, feasibility of proposed production goals, and plans statistical surveys for policy guidance on wages, prices, worker productivity and problems relating to the economic impact of proposed emergency programs.

Program objectives for 1968

1. Complete a methodology for use in developing cost factors such as wages, profits, and taxes that are determinants of price movements. Develop data from available sources and specially prepare information developed by use of input-output technique to carry out this procedure in electronics industry.
2. Provide National Resource Analysis Center of Office of Emergency Planning with specialist services on manpower, wages and prices, particularly in con-

nection with use of computer-based economic models for post-attack and limited war problems.

3. Compute civilian defense related employments by industry and occupation for 1966 and effect of Vietnam conflict on manpower requirements by use of computer-based economic model.

4. Develop a technique to provide a geographical distribution of manpower requirements generated as solutions to problems by the OEP computer-based economic model.

Program changes for 1969

1. Complete techniques with necessary data to estimate the effect of wage, profit and tax factors on price movements for metalworking machinery industry, household appliances, food products, etc., machinery, dairy products, screw machine products and electric lighting and wiring industry.

2. Provide National Resource Analysis Center, Office of Emergency Planning with specialist services on manpower, wages and prices, particularly in connection with use of computer-based economic models for post-attack and limited war problems.

3. Update manpower data by industry and 75 occupations to 1970 terms used in the OEP computer-based economic model.

Changes for 1969

The increase of $1,000 over the 1968 base will provide for annualization of the pay increase costs and related benefits under Public Law 90–206.

Activity 3. Wage Stabilization Planning (1968, $44,000; 1969, $45,000).—Develops plans and procedures for wage and salary stabilization and for the national and field organization necessary for the administration of such a program in an emergency, including investigation, compliance, and appeals procedures; deveolps plans and procedures, including organization plans, for the maintenance of effective labor-management relations during a national emergency; and be prepared to implement all appropriate plans developed under this order.

Program objectives for 1968

1. Prepare draft outline of a plan for the maintenance of effective labor-management relations in a national emergency, based on meetings held with the interagency task force appointed to assist the Department of Labor.

2. Develop a wage stabilization manual to house all preattack and post-attack wage and salary stabilization material.

3. Continue work on the development and preparation of the national and regional organizational charts and functional statements of an emergency wage and salary stabilization and labor disputes administration.

4. Initiate work on development of a plan of compensation incentives designed to increase production and effect the mobility of labor in a general war.

5. Develop wage stabilization regulations covering employees engaged in agriculture and employees of the railroad and airline industries.

Program changes for fiscal year 1969

1. Develop plans and procedures, including organization plans, for the maintenance of an effective labor-management relations program in an emergency.

2. Complete the plan of compensation incentives to increase production and effect the mobility of labor in a general war situation.

3. Continue the development of wage stabilization regulations: Completing regulations for employees engaged in agriculture and employees of the railroad and airline industries; initiating the development of regulations covering the construction industry.

4. Review and revise standby regulations for both a general war and a limited war situation, as appropriate, in the light of changing conditions and new concepts for administering wage and salary controls under varying conditions, and to accommodate suggestions received.

5. Continue the in-service training program for Federal employees and Department of Labor executive reservists who would have wage stabilization duties and responsibilities in a national emergency.

Changes for 1969

The increase of $1,000 over the 1968 base will provide for annualization of the pay increase costs and related benefits under Public Law 90–206.

Activity 4. Central Direction and Coordination and Executive Reserve Program (1968, $93,000; 1969, $93,000).—Provides over-all supervision and guidance for

the development and coordination of the Department's emergency plans and programs for civilian manpower mobilization, economic analysis, and wage stabilization planning; coordinates the activities of other Departments and agencies having responsibilities in these areas; and provides for the continuity of operations of the Department of Labor in an emergency.

Program objectives for 1968

1. Provide overall supervision, guidance, and leadership for the development and coordination of the Department's emergency plans and programs. Participate and assist in development of plans for manpower, wage stabilization and labor disputes in a national defense emergency.
2. Participate in the review and development of overall government emergency plans affecting manpower and economic stabilization.
3. Increase the Department's limited war preparedness.
4. Revise and update the emergency chain of command within the Department, and review cadre assignments required by personnel changes.
5. Recruit and orient additional executive reservists and obtain their advice on manpower, wage stabilization and labor disputes plans for an emergency.

Program changes for 1969

1. Provide overall supervision, guidance and leadership for the development and coordination of the Department's emergency plans and programs. Participate and assist in development of plans for manpower, wage stabilization and labor disputes in a national defense emergency.
2. Participate in the review and development of overall government emergency plans affecting manpower and economic stabilization.
3. Maintain the readiness of the Department of Labor for an emergency, including the revision and updating of the emergency chain of command and the rosters of cadre members.
4. Continue to recruit and orient additonal executive reservists and consult them regarding emergency plans and programs in the Department's areas of responsibiilties.

Changes for 1969

No additional funds are requested for fiscal year 1969.

Mr. Evins. If there are no questions, we will congratulate you, Mr. Cass, and wish you good luck in your mission.

Mr. Cass. Thank you very much for hearing us.

Department of Transportation

WITNESS

JOHN L. McGRUDER, DIRECTOR, OFFICE OF EMERGENCY TRANSPORTATION

Mr. Evins. We have the representative of the Department of Transportation. This is Mr. McGruder.

You may proceed with your statement as you wish.

Mr. McGruder. I will be glad to submit the statement unless you would like me to read it.

General Statement

Mr. Evins. We will put the statement in the record.

(The statement follows:)

STATEMENT BY DIRECTOR OF OFFICE OF EMERGENCY TRANSPORTATION JOHN. L. McGRUDER

I am John L. McGruder, Director of the Office of Emergency Transportation. I appear here in support of the Department of Transportation request for appropriations for the Office of Emergency Planning for departmental emergency preparedness functions.

The Office of Emergency Transportation, under the supervision of the Assistant Secretary for International Affairs and Special Programs, provides staff support for the Secretary of Transportation's broad emergency preparedness responsibilities. This Office develops and coordinates overall policies, plans, and procedures for providing, in an emergency, centralized control of all modes of transportation for the movement of all types of passenger and freight traffic and for the allocation of all or part of the civil transportation capacity to meet overall essential civil and military needs.

The program to carry out this broad mission is comprised of three distinct but related tasks. One task involves the collecting and evaluating of information regarding requirements for transport in emergencies and capabilities to fulfill such requirements; a second task has to do with the development of systems for the controlled utilization—or management of transport resources available in an emergency to insure that high priority cargo and passengers move first. The third task involves the creation and maintenance of administrative mechanisms—facilities, organization, procedures and personnel—essential to our opperational readiness.

Our section of the OEP budget submission summarizes our program status. I believe that it evidences our development of at least a minimum posture in each of these three areas and that we have a sound basis for future development. Establishment of the Department of Transportation considerably strengthens that base.

In very brief summary, our 1968 efforts have been directed primarily to accomplishing the further integration of our Federal emergency transportation program consistent with the organization of DoT, to improving the readiness of our administrative mechanisms, and to achieving a major upgrading of our emergency transport requirements and capabilities analyses. Significant progress also has been made in the civil aviation phase of our cooperative emergency preparedness planning with our NATO allies.

For fiscal year 1969 we propose to focus particularly on the preparation of longer range integrated plans for operations of the Federal transport community under emergency conditions, a major upgrading of our emergency transport requirements and capabilities data, further analyses of the most effective means of integrating governmental and private sector preparedness for emergencies affecting U.S. transportation, and the preparation of a comprehensive evaluation of our national preparedness for transport emergencies. In the international area efforts will be concentrated on joint emergency transport planning with Canada and on carying out the U.S. civil transport aspects of the NATO exercise CIVLOG–69.

In closing, I should like to emphasize that OET's role in carrying out the Secretary's emergency preparedness functions involves—to a very considerable extent—the coordinating of the preparedness efforts by the several Federal agencies having emergency transportation responsibilities, and the all-important U.S. transportation industry, whose vast facilities provide the means by which actual movement operations would be achieved; I should add that our work also includes cooperative efforts with the States and at the international level, with, particularly, the NATO community and our Canadian neighbors.

Mr. Chairman, I will be very glad to try to answer any questions which the committee may have.

PREPAREDNESS ROLE

Mr. EVINS. The Department of Transportation is a new Department. This is the Office of Emergency Transportation.

Mr. MCGRUDER. Yes, sir; this is the Office of Secretary of Transportation reporting to the Assistant Secretary for International Affairs and Special Programs.

Mr. EVINS. This is an ongoing program that was transferred into the Department of Transportation.

Mr. MCGRUDER. Yes, sir; from the Office of the Under Secretary of Commerce for Transportation. Actually, it moved, and the personnel moved with Mr. Boyd; we just moved over into a different house.

Mr. EVINS. You have the same functions?

Mr. McGruder. The same functions as far as the OEP interest is concerned.

Mr. Evins. The Office of Emergency Transportation develops and coordinates overall policies, plans and procedures for provision of centralized control of all modes of transportation in an emergency.

Yours is overall supervision whereas the ICC is related to certain areas in transportation?

Mr. McGruder. Yes, sir; we have the same functions and relationships with ICC as we do with the Maritime Administration and the Civil Aeronautics Board. It is our job to coordinate the provision of all civil transport to support a national emergency.

Mr. Evins. Which includes air?

Mr. McGruder. Yes, sir.

Mr. Evins. Inland waterways is one you think you are going to rely on in case of emergency?

Mr. McGruder. We would certainly place a great deal of reliance on them if the activities of World Wars I and II are any indication. There was a great deal of use of the inland waterways at that time, for the movement, for instance, of petroleum by barge.

Mr. Evins. * * * the determination of the proper apportionment and the allocation of the total civilian transportation capacity." How are you going to determine that?

Mr. McGruder. Sir, our overall task breaks down into three parts:

One is what we call the information analysis function. In this we try to find out the most comprehensive picture we can of what is available in the way of transportation, and what the needs are for transportation, of particular interest are the Department of Defense needs to support directly the military effort and what transportation is required to support the civil economy.

Mr. Evins. Do you get into the transportation of the Defense Department?

Mr. McGruder. Not their organic transport, sir. As far as military truck convoys, for instance, we would not enter the picture. We do have a responsibility in connection with civil transport for them. Any civil transport that is provided for the Defense Department usage in wartime comes on the basis of an allocation from the Secretary of Transportation.

Mr. Evins. If the Defense Department wanted to transport troops from the east coast to the west coast, they would call the Department of Transportation and the Department of Transportation would call the ICC?

Mr. McGruder. Yes, sir. And we would also have the function of trying to provide civil air transport, allocating civil air transport for the movement of troops by air—or cargo—as increasingly we develop this capability.

And we could conceivably even move some of them by sea through the Panama Canal.

Mr. Evins. What is the current thinking of the Department of Transportation with respect to the preservation of the railroads or the consolidation and merger or abandonment of the railroads?

Mr. McGruder. Sir, the Assistant Secretary for Policy Development generally speaks to that and develops for the Secretary the basic staff work.

Mr. EVINS. You mention here your overall policy and planning.

Mr. MCGRUDER. As it pertains to defense emergencies. We are asked to make an input to the policy determinations that the Office of Policy Development prepares for the Secretary of Transportation as a draft departmental position.

We make an input as to what the impact would appear to be from a defense standpoint. This is our input. The economic interpretations and so forth would be the role of the Office of Policy Development.

Mr. EVINS. The more abandonment we have, the less lines we have and it appears that the net effect of this would be less availability of transportation for defense purposes.

Mr. MCGRUDER. Not necessarily, sir.

There may be a lesser mileage, but there may be a greater effectiveness of the rail industry to continue to support the overall needs that we have.

One of the problems, sir, is that if the rails fail to make a satisfactory profit, they become weakened and then we could have to provide funds to maintain their transport resources.

Mr. EVINS. Off the record.

(Discusion off the record.)

RELOCATION SITES

Mr. EVINS. You mention here under operational readiness, relocation sites. What are these?

Mr. MCGRUDER. As you know, the Office of Emergency Planning and the Office of Civil Defense have divided the Nation for emergency purposes into eight regions.

We have established eight relocation sites, one in each of these regions, at which that region's emergency transportation center would be located.

Mr. EVINS. You know where you are going to have your center in case of emergency.

Mr. MCGRUDER. Yes, sir.

Mr. EVINS. It is on paper?

Mr. MCGRUDER. We have gone beyond the paper stage. We have the physical facilities in each case, we know where they will be and we have made arrangements in most cases with colleges institutions which we would expect under emergency conditions to largely disband their operations. We would move in on a Government contract for the space and would operate adjacent to the OEP–OCD centers.

Mr. EVINS. What are you going to do with the centers?

Mr. MCGRUDER. We would try to coordinate from there, sir, the resources that survive and are available in the transportation industry. If it were a general war that we are speaking of here with nuclear attack, the first job we would have is essentially a damage assessment job to filter out what is available yet in the way of transportation and we would have to determine how we could make best use of the remaining transportation facilities in order to satisfy the most urgent needs. The centers would have first as their task the development of this information as to what is available in the way of transport—all modes of transport—in the area; we would be working with each area.

Mr. EVINS. You report to the national headquarters that x number of miles of trackage is knocked out, x number of bridges are knocked out, and certain mileage is available?

Mr. MCGRUDER. If there is a national headquarters yet existing, yes, sir. Otherwise, the regions are prepared to operate on their own and, as in the case of ICC, we have an extensive executive reserve with personnel from each one of the transportation industries, rail, motor——

NATIONAL DEFENSE EXECUTIVE RESERVE

Mr. EVINS. The ICC representatives, who just preceded you, said they had the largest number of executives there. You say here you closed 1967 with 274 and an additional 83 are in process. This is for the Department of Transportation?

Mr. MCGRUDER. Yes.

Mr. EVINS. These are in addition to those for ICC?

Mr. MCGRUDER. Yes, sir. There are approximately 1,500 to 1,800 total transportation personnel in the Reserve.

Mr. EVINS. How do these gentlemen choose between ICC and the Department of Transportation?

Mr. MCGRUDER. We are very careful not only not to get crossways with the other Federal agencies, but also not to milk too much any one company. We began to realize a few years ago that some companies were getting very heavily involved and perhaps would not have enough executive personnel left to operate their own companies. As a result, we made some reevaluations, and to a number of people who were in the executive reserve we said, "We are very happy to have you, but probably you are needed more by your company."

There is now a very careful, close check, and in no case do we have too many we believe from any one of the companies.

Mr. EVINS. I am not talking so much about the companies but talking about the mode of transportation. Are these in the railroad, truck industry, or airlines?

Mr. MCGRUDER. Some of each. We have some from air, some from rail and trucking, some from ocean shipping. We have a few from the inland waterway area.

Mr. EVINS. Are you getting in only the older top executives or are you getting in some younger executives?

Mr. MCGRUDER. We are getting both. They range, I believe, the youngest is about 30 and we have several we continue to retain even though they are now nearing 70.

We would expect the roughly 70-year-old men probably would not be going underground, but would be in an elder statesman and guiding role. We are watching very carefully the overall makeup of this group.

Mr. TALCOTT. Your function now is to plan for an emergency in transportation?

Mr. MCGRUDER. Yes, sir, and according to the Executive order, to be capable of implementing those plans in event of actual attack.

Mr. TALCOTT. As soon as the bomb drops, you are not the planner any more, you are the head of the transportation system of all the United States?

Mr. McGRUDER. Yes, sir, the Secretary is. We would then look to the executive reserve to give us an immediate industry capability. We have at least one or two training sessions a year with our executive reservists. We are just beginning our spring series, in the next 3 months—between now and the 16th of May—we will have about a day and a half in each of the eight regions.

Mr. TALCOTT. Do you need a separate Executive order to take over or will one order come at one time?

Mr. McGRUDER. There are a series of Executive orders that could be implemented, standby orders available for use in the event of an emergency. Certain of our activities would not require any additional Executive orders, certain of them would, and we could implement only those activities, of course, for which there was authority.

Mr. TALCOTT. So all of those executive reservists are volunteers now. Do they have any commitment when the bomb drops?

Mr. McGRUDER. They have a commitment, sir; yes, sir. But if they do not show we can't really do anything to them.

Mr. EVINS. They are patriots.

Mr. McGRUDER. Yes, sir.

Mr. TALCOTT. If some reservist is working for the Southern Pacific, and he says, "The heck with it," there is nothing you can do? His training is wasted?

Mr. McGRUDER. Not much we can do about it, but I should explain that, not only are these individuals themselves, as the chairman has said, patriotically inclined, but their agency or company has signed a waiver also on their services. So it is a combined effort of the Government appointing and the individual accepting appointment with the approval of his employer.

Mr. TALCOTT. And their wages would be continued on by their own company?

Mr. McGRUDER. This would vary, sir.

JUSTIFICATION MATERIAL

Mr. EVINS. Mr. McGruder, you have an interesting statement here of your objectives and the things you are doing.

We will place in the record pages 87 through 93.

(The pages follow:)

CURRENT STATUS—SUMMARY OF PROGRESS THROUGH 1967

A. OPERATIONAL READINESS

1. *Relocation sites.*—Agreements have been consummated in all of the OEP regions providing for facilities to accommodate regional emergency transportation centers in the event of a national emergency.

2. *Organization and staffing.*—Emergency transportation regional directors and deputy directors have been designated for each of the eight OEP regions and job descriptions have been prepared for all major positions in both national and regional emergency organizations.

3. *Executive reservists.*—Certified by the close of fiscal year 1967 numbered 274 with an additional 83 in process for a total of 357 for the first 4 years of the OET program.

4. *Training.*—Training conferences for mobilization personnel—both Federal employees and executive reservists—have been held in each of the past 2 years in each of the eight regions and for the national headquarters staff.

5. *Emergency operating procedures.*—In the spring of 1967, when the Department of Transportation was established, an interim set of emergency action documents—"The Red Book"—was distributed to top staff. Draft emergency preparedness manuals for both headquarters and regional relocation sites had been circulated by the close of the year and were awaiting publication.

6. *States.*—Of the 52 States and speical jurisdictions which had signed contracts as part of the OEP comprehensive program, a total of 50 had by close of fiscal year 1967, submitted draft plans for transportation in an emergency; of these 33 had received approval and 20 had been published.

B. RESOURCE MANAGEMENT

1. Preliminary ("rough cut") estimates of U.S. requirements for civil transport and of civil transportation resources available to the United States have been prepared for the international tension, limited war and general war contingencies.

2. A manual for an integrated system for analyzing emergency damage to and remaining capabilities of U.S. transportation resources had been drafted and was awaiting interagency coordination at year's end.

3. Preliminary guidelines had been drafted for transportation agency claiming of manpower, materials, etc., needed to rehabilitate and/or support U.S. transportation resources in an emergency.

4. A draft procedural manual for the control of all modes of transportation has been written and revised; however, because of certain inherent deficiencies in the general approach, individual modal manuals will be issued, the first two of which—air and ocean shipping—were distributed for comment in the last quarter, fiscal year 1967.

5. Allocations of air carrier civil aircraft in support of CRAF, WASP and other essential-use programs have been maintained in current status. The CRAF fleet consisted of 376 aircraft at the end of fiscal year 1967.

6. Emergency transportation research has produced 10 published and more than 100 unpublished studies.

1967 highlights

1. With establishment of the Department of Transportation we have initiated a major review of the emergency transportation planning organization and facilities; this review will be completed in fiscal year 1968 and action begun on the resulting recommendation.

2. A comprehensive and integrated plan for the management of U.S. transportation resources under the limited war contingency was prepared. Although a number of yearend deadlines were missed, by the close of fiscal year 1967 work on the projects targeted for fiscal year 1967 had been largely completed.

3. Coordinated estimates of requirements for transportation and capabilities of U.S. transport resources under each of the contingency conditions of international tension limited war and general war have been completed.

4. Nondefense emergencies impacting on transportation (such as natural disasters and work stoppages) have begun to receive substantially increased attention with Department of Transportation Assistant Secretary Agger personally emphasizing this activity.

5. To establish optimumly practicable procedures for emergency transportation operations—and to clarify areas of possible conflict or misunderstanding—pilot projects have been begun with the States of New York and Virginia to define the Federal and State roles in transportation emergencies.

6. International efforts in the emergency transport field have been given greater support consistent with U.S. interests:

a. NATO's Civil Aviation Planning Committee has undertaken a major step-up in its preparedness efforts.

b. United States-Canadian joint emergency planning in the transport field has received renewed attention.

7. Efforts were stepped up to achieve broader understanding of—and participation in—the emergency transportation program by both public and private entities. A joint program with the National Defense Transportation Association is the principal result to date; nationwide briefings have been given and a series of published articles will begin in October.

8. In connection with the NRAC data bank, a coordinated plan was developed for the broadening and upgrading of transportation information and initial inputs were made.

9. A simple technique for updating estimates of requirements for transport in emergencies and transport resources in emergencies was completed.

Objectives proposed for accomplishment during fiscal year 1968

1. Complete estimates and comparative analyses of requirements for, and capabilities of, U.S. transport resources under limited war conditions—by origins—for both domestic and international movements.
2. Complete programed transportation inputs to the NRAC data bank and continue to seek support for surface modes input to NRAC data bank.
3. Initiate (with Federal transportation agencies) the transportation section of the OEP/ODR "resource mobilization plan for general war."
4. Maintain and upgrade the OET unit of the national defense executive reserve.
5. Continue to seek support for a study to determine feasibility of developing a transportation network model to optimize the utilization of available transport resources in emergencies.
6. Continue development of systems and procedures for the control, as required, of all forms of civil transportation under varying degrees of emergency.
7. Develop, in cooperation with other interested U.S. agencies, a U.S. proposal for a basic work program with Canada to achieve in 1969 an initial comprehensive U.S./Canada joint plan for emergency transport.
8. Coordinate U.S. inputs to the development of NATO CAPC/BOCCA plans for civil aviation.
9. Continue pilot projects with two or three States to clarify Federal and State emergency roles in the transportation area.
10. Initiate preparation for U.S. transportation participation in CIVLOG 69.
11. Review and revise as appropriate existing major preallocation arrangements (i.e., Wilson-Weeks, CRAF, Nitelife, etc.) in light of Department of Transportation establishment.
12. Provide support to OCD/OEP local planning program.
13. Develop transportation portion of national supply-requirements study for review of the Nation's limited and general war strategic materials stockpile program.
14. Complete estimates and analyses of transportation, requirements and capabilities by mode, for the general war contingency—on a gross national basis (assuming receipt of DOD requirements by January 1968).
15. Complete OET review of State plans submitted under OEP "comprehensive program".
16. Develop more fruitful relationships with the transportation industry to obtain its broader participation in the emergency transportation program.
17. Continue study with Industry Evaluation Board of vertical analysis of transportation industry.
18. Publish (a) claimancy procedures manual, preliminary edition, and (b) preparedness manual for national and regional emergency transportation center.
19. Participate, as appropriate, in OEP/OCD exercises.
20. Prepare an evaluation report on preparedness posture of U.S. transportation complex.
21. Develop a comprehensive and integrated 5-year preparedness program for the Federal transportation community.
22. In connection with nondefense emergencies, work to define the appropriate Federal role in such emergencies which impact on transportation services.
23. Carry out such other studies and/or activities as may be required by OEP undertakings.

Objectives proposed for accomplishment during fiscal year 1969

1. Develop standards and/or criteria for evaluating preparedness for transportation emergencies of primarily involved governmental and industry entities.
2. Prepare an evaluative report on the Federal transportation community's preparedness for emergencies.
3. Review and update the 5-year preparedness program of the Federal transportation community.
4. Develop and promulgate policy on relocation facilities for Federal transport agencies.
5. Study and report on special emergency transportation problem areas arising out of geographic location.
6. Define role of DOT/OET with respect to warehousing and freight forwarders.

7. Define role of private motor carrier's transportation in emergencies and appropriate controls over their utilization.
8. Develop with agencies improved liaison and mechanisms for obtaining requirements and capabilities data.
9. Direct and coordinate civilian transport agency support of Civlog 69 and related tests and exercises.
10. Maintain and upgrade the OET element of the NDER.
11. Coordinate preparation of transportation annex to the OEP/ODR "resource mobilization plan for general war."
12. Review and upgrade the publication "Manual Transportation Damage Assessment Procedures."
13. Complete analyses of transportation requirements and capabilities for limited war contingency in 1970–75 time period.
14. Complete programed inputs to the NRAC data bank.
15. Publish an initial comprehensive guidance document on Federal Government emergency control procedures in the transportation field.
16. Complete studies:
    a. Supply requirements of critical materials for limited war.
    b. Vertical analyses of rail and motor carrier industries.
    c. Capability of railroad industry to react to national defense needs.
    d. Manpower requirements essential to emergency transportation operations.
17. Develop with transportation industries joint programs to enhance emergency preparedness.
18. Complete review and updating, in light of DOT establishment, of interagency arrangements for preallocation of civil transport capacity.
19. Develop and publish an operational "Claimancy Procedures Manual".
20. Complete development of U.S. assigned portion of the NATO CAPC/BOCCA War Manual.
21. Develop program for improved integration of NATO's, PBOS, PBEIST and CAPC activities.
22. Coordinate U.S. activities under joint U.S./Canada program for emergency preparedness in the transport field.
23. Make continuing case-study analyses of effects on transportation of major nondefense emergencies.
24. Develop Federal guidance materials regarding transportation in nondefense type emergencies.

APPROPRIATION REQUEST

Mr. EVINS. You are asking for 11 jobs and $207,000.

Mr. MCGRUDER. Yes, sir.

Mr. EVINS. That is a $2,000 increase over last year, and you testify this is due to the pay increase?

Mr. MCGRUDER. That is true, sir.

Mr. EVINS. Is the amount which you are requesting all-inclusive for emergency preparedness for the Department of Transportation, or will an additional amount for this purpose be in the DOT budget elsewhere?

Mr. MCGRUDER. There is an additional amount in the DOT budget, sir.

Mr. EVINS. How much?

Mr. MCGRUDER. Actually, if we are talking only about my own office, the Office of Emergency Transportation—

Mr. EVINS. We know what yours is for. What is the other amount for?

Mr. MCGRUDER. I want to explain that in the Department of Transportation budget we have put in for some funds for my own office.

Mr. EVINS. You figured you could not get enough here?

Mr. McGRUDER. This is to cover certain emergency responsibilities of the Secretary. If there were no Office of Emergency Planning, with Executive Order assignments the Secretary would still have certain responsibilities for the continuity of Government in his Department. This is something we believe should not——

Mr. EVINS. Why do you fragment these funds and have duplication?

Mr. McGRUDER. This is not really duplication, sir. And this preparation follows the guidance that we received.

Mr. EVINS. These funds are supposed to be handled through this committee and you should not be putting some in the DOT budget and some in this budget, too.

FUNDING OF PROGRAM

Mr. TALCOTT. Governor, you should be able to answer that question then.

Is this true of all of the other people who have testified before us? Do they have something hidden in their other budget?

Mr. PEABODY. I cannot answer that question directly, Congressman. I do know, as Mr. McGruder has testified, the Secretary has other responsibilities above and beyond what are strictly emergency planning responsibilities, which in turn however, supplement what they are doing in emergency planning as well as performing the duties required under their different departments.

Mr. RICE. Presidents Kennedy and Johnson issued some 31 Executive orders to different departments and agencies on how each agency of Government should build into its peacetime structure capabilities to respond in an emergency. So our whole concept over the years has been directed to OEP being less and less doers and getting the detailed work done out in the agencies.

So diffused throughout any agency, there is bound to be on a part-time basis, a lot of emergency preparedness work. In other words, people may have as an inherent part of their duty perhaps 10 percent of their time devoted to preparing for emergencies. There are only eight agencies represented in this budget. There are many, many agencies with preparedness responsibilities.

Mr. McGRUDER. We have not felt we could ask the OEP to fund for the Secretary's carrying out his own responsibilities that he would have if there were no Executive orders to him.

Mr. EVINS. Next year see if you can pull it all together. Whether you are asking for it or not, put a chart in showing the overall picture.

TOTAL DEPARTMENT OF TRANSPORTATION REQUEST

Mr. McGRUDER. I would be glad to submit for the record our total request.

Mr. EVINS. Yes, supply that for the record. Thank you.

(The information follows:)

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF EMERGENCY PLANNING,
Washington, D.C., April 1, 1968.

Hon. JOE L. EVINS,
Chairman, Subcommittee on Independent Offices and Housing and Urban Development, Committee on Appropriations, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request on March 7 when, during your subcommittee hearings on the Office of Emergency Planning budget, you asked for a letter setting forth the total 1969 budget request of the Department of Transportation for defense mobilization and other civil emergency programs.

Essentially, DOT proposes to continue the funding arrangements which have existed since before the Department was established last year.

First, the broad intermodal emergency transportation responsibilities assigned by Executive Order 10999 to the Office of Emergency Transportation (a unit transferred last year from the Department of Commerce to the Office of the Secretary, DOT) will continue to be financed by the OEP appropriation "Civil Defense and Defense Mobilization Functions of Federal Agencies." This is the 11-position, $207,000 item which you and your committee discussed with Mr. John McGruder on March 7. The amount involved is essentially the same as that appropriated for fiscal year 1968, and is approximately 12 percent below that appropriated for fiscal year 1967.

Second, emergency programs of the Federal Aviation Administration and the Federal Highway Administration will continue to be financed directly by DOT funds.

Specifically, a request for 35 positions and $686,500 is in FAA's "Operations" appropriation for functions which have been financed directly by FAA in the past, functions which spring directly from that agency's statutory responsibilities.

Historically, funds have been provided directly to the FAA and its predecessor agency, the CAA, to carry out its defense readiness activities. The Federal Aviation Act assigned specific responsibilities to the Administrator, in consultation with the Department of Defense, to assure that appropriate joint plans are provided for (1) the continuous operation of the national airspace system of air traffic control, navaids and aeronautical communications required for the support of military operations during a war or national emergency, (2) maintenance of executive direction and control of the agency's essential emergency support of military operations, and (3) postattack capability for support of essential air operations, civil and military.

Likewise, FHWA will continue its funding arrangements established prior to the creation of DOT by its request for six positions and $103,000 in the highway trust fund's limitation on general expenses.

Thirdly, for the first time DOT is requesting fiscal year 1969 funds ($11,000) in DOT's regular S. & E. appropriation to finance one position in the Office of the Secretary, DOT. This position—designated as a departmental readiness officer—is the position Mr. McGruder alluded to in your hearings when he stated that "We have not felt we could ask the OEP to fund for the Secretary's carrying out his own responsibilities that he would have if there were no executive orders to him."

You may be aware that the House report on the 1968 DOT appropriation bill denied funds to support emergency planning activities in FAA and FHWA on the basis that such activities should be funded by OEP. We are advised that the Department appealed this reduction to the Senate, noting that the amounts for these administrations had not been included in OEP's original budget request. The Senate and the conferees on the DOT bill restored a portion of the House reductions, but were silent on the matter of financing emergency preparedness activities. In view of this and the fact the OEP's final appropriation was obviously insufficient to cover the costs of FAA and FHWA's activities in this area,

the Department continued the prior funding pattern in 1968. As noted earlier, the Department is proposing the same financing arrangements in 1969.

We hope this is responsive to your inquiry. If you need additional information, we would be happy to provide it.

Sincerely,

WILLIAM B. RICE,
Director of Administration.

TREASURY DEPARTMENT

WITNESSES

FRED B. SMITH, GENERAL COUNSEL
EDWARD J. HEID, CHIEF, MOBILIZATION PLANNING STAFF

Mr. EVINS. Next we will call our friends from the Treasury Department. We have Mr. Fred Smith, General Counsel, and Mr. Edward J. Heid, Chief, Mobilization Planner to the Treasury.

Do you have a statement, Mr. Smith?

Mr. SMITH. Yes, sir, Mr. Chairman.

GENERAL STATEMENT

Mr. EVINS. We will put it in the record.

(The statement follows:)

Mr. Chairman and members of the committee, the budget estimate under consideration includes funds in the amount of $68,000 to continue a preparedness program in the Treasury Department during the fiscal year 1969.

Our preparedness program is designed to insure a state of readiness to carry out essential monetary and financial functions in the event of a national emergency, including attack upon the United States. Such functions include the regulation of banking institutions; foreign assets control; revenue collection; debt management; manufacture of currency and coin; issuance of Treasury checks; a central Government accounting and financial reporting system; administration of customs laws and tax laws; suppression of counterfeiting; and other related activities.

To achieve our objective we have developed emergency banking regulations which have been distributed to banking institutions.

Documents have been prepared providing the broad elements of a postattack indemnification plan.

Procedures have been developed providing for the Federal Reserve banks to perform certain monetary and financial functions, if conditions require.

And various documents have been drafted to provide additional necessary authority in a postattack period.

In addition, emergency delegations of authority and orders of succession have been issued; relocation sites for performing essential functions have been established; employees having emergency assignments have been designated; and provision has been made for the safekeeping of records and documents essential for emergency operations.

Treasury's emergency preparedness program is conducted on an austere basis. Whereever possible, emergency preparedness work is merged with regular day-to-day assignments.

The funds requested provide for a staff of four employees in the Office of the Secretary to handle the necessary departmental guidance and coordination of preparedness matters throughout the Department. The staff serves as liaison with the Office of Emergency Planning; reviews and digests information preparatory to the issuance of instructions for the various bureaus and offices of the Department; and maintains preparedness plans on a current basis. To assure the coordination and effective operation of field activities, an emergency regional plan is maintained which provides for representatives to relocate to each of the eight Federal operating centers, in the event of a national emergency.

We will continue to assist in the development of overall national emergency material, and cooperate with other agencies of the Government on mutually related matters.

Mr. EVINS. Off the record.

(Discussion off the record.)

TREASURY'S EMERGENCY RESPONSIBILITIES

Mr. EVINS. Back on the record.

The Secretary of the Treasury is responsible for the development of these authorities, plans, and procedures for use in the execution of certain emergency monetary financial and economic functions in accordance with Executive Orders 10346 and 11088, and policies contained in the national plan for emergency preparedness.

He is also responsible for maintaining a continuing capability to respond to the economic consequences of mobilization. More specifically, he is responsible for:

(1) initiating, developing, prescribing, and coordinating appropriate monetary credit, tax, and other financial policies.

We know that is what he does all the time. He develops proper policies.

(2) maintaining plans for implementation of emergency banking regulations. They have been doing that for years. They send out to the banks and say have duplicate copies made of all of your records.

(3) participation in the development and coordination of overall economic stabilization policies. We need a little stability now, and maybe the tax bill would help toward that.

(4) maintaining preparedness programs with respect to the collection of revenue, production of coin and currency, issuance and payment of Treasury checks, and maintenance of the central Government accounting system.

According to your justification, this is your mission. Now go ahead and tell us what you have done last year, what your goals are for next year, and how much money you need to accomplish these goals.

Mr. SMITH. We are requesting $68,000 for a staff of four people, which is the same as last year. The amount is $4,000 more than fiscal year 1967, which is accounted for by increased personnel costs.

Our program now is largely to maintain and coordinate and update and train new relocation cadre and keep in a constant state of preparedness to do our mission. We have done a couple of things substantively in the last year. We have one problem that we are working on, we have a study going on, which we are doing with our own in-house capacity. You asked me about what we have accomplished since last year. One of the things we have accomplished, we have solved the coin shortage. We have plenty of coins in this country. The vaults of all the Federal Reserve Banks all over the country are full of coins. So there is no problem there of a coin shortage. I think that is one of the things we discussed last year.

Mr. EVINS. Off the record.

(Discussion off the record.)

Mr. TALCOTT. You don't see many 50-cent pieces around.

Mr. SMITH. The half dollar is a problem, but they are not an essential coin for the economy. Two quarters work just as well.

Mr. TALCOTT. Pennies aren't good any more, either.

Mr. EVINS. They are all good if you can get a hold of them.

Mr. SMITH. Do you mean they are in short supply or they do not look as well?

Mr. TALCOTT. Well, you need nickels, you don't need pennies.

Mr. SMITH. Another thing that has been produced in the last year is a study on alternative methods of taxation in the postattack period. That has been also produced largely by our in-house capacity and not by the staff that is funded through this amount. In other words, they are people that work that in with their other functions. We have a study that is going on, as our debt analysis staff can work on it, on coordinating the various credit programs of the departments and agencies of Government in the postattack period.

Last year we had hoped to be able to hire an economist to do that study. It would have been produced faster. With the reduction of funds we were not able to do that. So we are working along on this, as we can, along with our manifold other problems with which you are aware.

Our debt analysis staff is pretty busy right now, as you know. But largely the money we are asking for is to maintain and to keep current with developments, with new assumptions we get from OEP and train our relocation cadre both here in Washington and in the eight regions. Now, there is a turnover there. They have to be trained. Mr. Heid and his staff perform that function, largely.

Mr. EVINS. You will be continuing what you have been doing for the last several years?

Mr. SMITH. Yes.

JUSTIFICATION MATERIAL

Mr. EVINS. We will place pages 96 through 101 into the record.

(Pages 96 through 101 follow:)

STATEMENT OF MISSION

The Secretary of the Treasury is responsibile for the development of the necessary authorities, plans and procedures for use in the execution of certain emergency monetary, financial and economic functions in accordance with Executive Orders 10346 and 11088, and policies contained in the National Plan for Emergency Preparedness and other documents. He is also responsible for maintaining a continuing capability to respond to the economic consequences of mobilization. More specifically he is responsible for:

a. Initiating, developing, prescribing, and/or coordinating appropriate monetary, credit, tax, and other financial polices and actions for any emergency;

b. Maintaining plans for implementation of emergency banking regulations, including appropriate delegation of authority to other Federal financial agencies;

c. Participation in the development and coordination of overall economic stabilization policy;

d. Maintaining preparedness programs with respect to the collection of revenue, the production of coin and currency, issuance and payment of Treasury checks, maintenance of the central Government accounting system, and the administration and enforcement of various Federal laws, including those pertaining to customs, narcotics, taxes, and counterfeiting.

CURRENT STATUS

Emergency preparedness is maintained on an austere basis. The necessary departmental direction, guidance and stimulus to maintain a readiness posture is provided through means of a small, full-time departmental staff and a steering committee. Whenever possible, emergency preparedness work is merged with regular, day-to-day assignments. The various bureaus within the Department have no employees working full time on the emergency preparedness program.

In the event of an extreme national emergency, a variety of immediate actions would be required to maintain the economic stability of the nation and to assure the continuity of essential functions. To this end the following significant measures have been accomplished.

Regulations relating to the monetary, banking, and credit system, which provide guidance to deal with problems in this area immediately following a nuclear attack, have been distributed to banking institutions, and prepositioned at relocation sites.

Documents have been prepared and prepositioned which provide the broad elements of an indemnification plan, an identification and discussion of the problems involved in loss sharing, and a comprehensive presentation of the range of detailed alternative plans which might be considered within the framework of existing policies and agreements.

Procedures have been developed so that certain monetary and financial functions would be performed by Federal Reserve banks, if conditions required.

Emergency tax proposals for a postattack economy were developed during the past year.

The Secretary and in turn, the heads of all Treasury bureaus have delegated authority downward to facilitate independent operation if communications are disrupted due to an attack, and lines of succession have been established to all positions of leadership throughout the department.

An emergency operating facility is maintained for national headquarters offices that will minimize the effects of a nuclear attack. Employees having emergency assignments at the relocation site have been notified and are indoctrinated regarding overall emergency preparedness plans.

An alerting system is maintained for notifying officials of defense readiness conditions.

Essential records are maintained at relocation sites.

The geographical spread of Treasury field offices and the emergency relocation plans of primary field offices offers a good chance for the survival of knowledgeable manpower at that level. To facilitate field operations in a postattack period, a Treasury regional mobilization coordinator has been designated for each of the OEP/OCD regional operating centers, and he together with bureau representatives from each functional area in the field would relocate to the regional operating centers in an emergency.

The 5-year program

As long as the likelihood of nuclear attack on the United States is a threat, assurance will be needed for the continuance of essential functions in the event of such an attack.

Treasury's long-range objective is to maintain and strengthen its capability to perform the monetary, financial, banking, and related functions for which it is responsible, and cooperate with the Office of Emergency Planning and other Federal agencies to improve the capability of the Government to respond to a national emergency.

The emergency preparedness program is projected on a minimal basis to assure continued updating and constant readiness of emergency plans.

Program objectives for fiscal year 1969

To assure continuity of essential operations at the national and field levels in an emergency, a readiness posture will be maintained by pursuing the following major objectives:

1. Prepare a draft plan for the effective coordination of postattack credit activities of Federal departments and agencies having procurement and resource allocation responsibilities. Such a plan is designed to identify the specific credit roles of such agencies as Agriculture, Commerce, Health, Education and Welfare, Interior, Housing and Urban Development, Veterans' Administration, et cetera, and would contain specific authority, procedures, and measures governing the extension of credit under emergency conditions.

2. Develop emergency regulations and instructions providing for additional authority to paying agents with respect to redemption of U.S. savings bonds in order to permit beneficiaries in simple death cases to obtain funds more readily, as well as to decentralize the workload from Government to commercial banks.

3. With OEP and other appropriate Federal departments and agencies, review, refine and update the recently completed plan for a Federal cash grant system following a major nuclear attack on the United States.

4. Provide departmental direction, assistance, appraisal, and stimulus for the guidance of offices and bureaus in maintaining a readiness posture at all operating levels.

5. Maintain the comprehensive readiness plan for the department in a current status, including a system for notifying appropriate officials of defense conditions.

6. Maintain the national headquarters relocation site, together with its emergency communications center, including continuous training of communications operators.

7. Conduct periodic seminars for Treasury field officials who have emergency assignments at the eight Federal regional emergency operating centers.

8. Encourage completion of emergency operating procedures where necessary.

9. Provide appropriate departmental representation on emergency preparedness matters.

PROFESSIONAL SUMMARY OF MAN-YEARS AND OBLIGATIONS

Program objective	Fiscal year 1968		Fiscal year 1969	
	Professional man-years	Obligations	Professional man-years	Obligations

Mr. EVINS. Thank you very much, gentlemen. Do you have any statement?

Mr. PEABODY. No; we thank you very much for your courtesy to us, Mr. Chairman.

Mr. EVINS. Mr. Heid, we did not call on you for any comments. I think you ought to make a statement for the record.

Mr. HEID. I think Mr. Smith answered all the questions to your satisfaction and I will let the record stand, Mr. Chairman.

Mr. SMITH. If I may add, we have a steering committee in Treasury with several of our second level officers. This is a means by which Mr. Heid communicates to us things we ought to be doing in the Department and by which the senior officers of the Department are kept current on our program, and he does a good job.

Mr. EVINS. I am sure he does. Thank you very much, and good luck to you.

WEDNESDAY, MARCH 6, 1968

DEPARTMENT OF DEFENSE

Office of Civil Defense

WITNESSES

JOSEPH ROMM, ACTING DIRECTOR OF CIVIL DEFENSE
HUBERT A. SCHON, DEPUTY DIRECTOR OF CIVIL DEFENSE
MRS. JANE FIQUET HANNA, DEPUTY DIRECTOR OF CIVIL DEFENSE
ROBERT E. YOUNG, EXECUTIVE ASSISTANT TO THE DIRECTOR OF CIVIL DEFENSE
TROY V. McKINNEY, COMPTROLLER
JOHN W. McCONNELL, ASSISTANT DIRECTOR FOR PLANS AND OPERATIONS
WALMER E. STROPE, ASSISTANT DIRECTOR FOR RESEARCH
REN F. READ, ASSISTANT DIRECTOR FOR TECHNICAL SERVICES
EDWARD S. JOHNSON, DEPUTY COMPTROLLER
JACK RASKIN, DIRECTOR, BUDGET DIVISION
FREDERIC E. STEVENSON, DIRECTOR, PROGRAM DIVISION

Mr. EVINS. The committee will please come to order.

We have with us this morning officials of the Office of Civil Defense headed by Mr. Joseph Romm, Acting Director of Civil Defense.

Mr. Romm, glad to see you looking so well. We are always pleased to hear you. Put your full statement in the record and highlight it, or proceed as you wish.

Mr. ROMM. I have a statement from the Secretary of the Army which is only three pages long and if I could impose upon you, I would like to read his statement.

GENERAL STATEMENTS

Mr. EVINS. Why don't you file his statement and yours?

The two statements will be included in the record.

(The statements follow:)

STATEMENT OF THE SECRETARY OF THE ARMY

Mr. Chairman and members of the committee, I appreciate the opportunity to provide a statement for the record to this committee in support of the civil defense program.

The President's budget request for fiscal year 1969 is for $77.3 million, 10 percent below the fiscal year 1968 appropriation, and 24 percent below the fiscal year 1967 appropriation. This reduced request is designed to maintain the civil defense program at a level which retains the increased capabilities added during the past several years; capabilities which contribute significantly to our strategic defense posture.

Over the past 6 years we have developed on an orderly basis a substantial civil defense capability at all levels of Government. Through the maximum use of existing resources, both physical and organizational, a capability exists to increase measurably the likelihood of survival if a nuclear attack were to occur today. It is our intention to maintain the current civil defense objectives and be prepared to accelerate the programs as strategic decisions require.

This reduced request is made in recognition of the priorities set forth by the President in his fiscal year 1969 budget message. As he stated, it is necessary to establish priorities in the application of our resources as we cannot do everything we would wish to do. In our evaluation of current overall defense requirements and financial impact, we concluded that some civil defense activities could be delayed or deferred pending the end of the Vietnam conflict without sacrificing

vital national objectives. This in no way denies the value of these deferred activities nor does it downgrade the civil defense contribution to our overall defense posture. Rather it defers activities that can be accomplished later without substantial loss.

Administration policy has consistently emphasized the complementary relationship of active defenses and civil defense measures. The Secretary of Defense, in his posture briefings, has stated that deployment of a large-scale ballistic missile defense system would of necessity be accompanied by an expanded and accelerated civil defense program. With the announcement, last September, of the decision to deploy the Sentinel antiballistic missile system some question arose about the impact of the decision on our civil defense program. To make clear the relationship of the Sentinel deployment to civil defense, I would like to reiterate the primary objective of the Sentinel system.

During the past 2 years, the Chinese Peoples Republic has demonstrated significant progress in the development of nuclear weapons and ballistic missiles for their delivery. Projecting the growth of this capability into the future, our best estimates indicate a Chinese potential to attain a capability for a relatively small nuclear missile attack on the Continental United States by the mid-1970's. It is in recognition of this potential threat that the decision was made to deploy the Sentinel system.

Our recent civil defense programs have, however, been based on protection in much more severe Soviet attacks. We have included in our civil defense studies, analyses of the contribution of the current and expanded fallout shelter programs, coupled with the Sentinel system, to a damage limiting capability against potential Chinese attacks. The results of these studies indicate that neither expansion nor acceleration of the current fallout shelter program is necessary because of the deployment of Sentinel.

This conclusion, however, does not negate the consistent results of our studies, specifically that an expanded national civil defense system would make a major contribution to the protection of the population against a heavy attack—the level of attack the Soviet Union is capable of launching.

The budget before you has been carefully constructed, taking into account deferrable activities which in total represent a reduction from the relatively low fiscal year 1968 appropriation. As noted by Secretary McNamara in his current posture briefing, we consider this budget to be the lowest possible sustaining rate for the Federal civil defense program, and I urge your favorable consideration and support of the entire amount in the civil defense budget request.

Mr. Romm, the Acting Director of Civil Defense, will present the detailed justification for this budget request.

STATEMENT BY JOSEPH ROMM, ACTING DIRECTOR OF CIVIL DEFENSE, DEPARTMENT OF THE ARMY

Mr. Chairman and members of the committee, I appreciate the opportunity to appear before your committee to report on our continuing progress and our program proposals for the next fiscal year. Since my last appearance before you, there has been a decision to deploy the Sentinel antiballistic missile system designed to meet the potential Chinese threat of the mid-1970's time frame. The Secretary of the Army has requested me to submit his statement for the record which deals with the relationship of that decision and other considerations to the level of the civil defense budget request for fiscal year 1969.

The civil defense mission is to save lives in the event of a nuclear attack on the United States. Defense Department studies of a wide range of hypothetical attacks show that fallout shelters would save tens of millions of lives. Our primary focus in civil defense continues to be the development of a nationwide fallout shelter system through the dual-purpose use of existing structures and the management of this system and supporting emergency systems through maximum use of the existing capabilities of State and local governments.

Our civil defense budget estimate for fiscal year 1969 totals $77.3 million. Both Secretary McNamara and Secretary Resor, in their appearances before the Senate Armed Services Committee last month, stated that this amount represents the lowest possible sustaining rate for the national civil defense effort and reflects the necessity for reducing to minimum essential levels of effort those activities not related to the Vietnam conflict. The total request represents a reduction of approximately 10 percent from the appropriation of $86.1 million for fiscal year 1968, and 24 percent lower than the fiscal year 1967 appropriation.

While there will, of necessity, be deferral and rephasing of major program activities, there are no changes in the basic objectives of our programs, which are designed to carry out the orderly development of our low-cost fallout shelter civil defense system.

The level of our fiscal year 1969 request complies with the intent of the budget message of the President wherein he outlines the priorities for fiscal year 1969. As he stated, "We cannot do everything we would wish to do. And so we must choose carefully among the many competing demands on our resources." Accordingly, civil defense program activities which are delayed or deferred with the least damage to the program and can be made up at a later date are presented in the budget estimate at rates below the fiscal year 1968 level or altogether omitted from the request. Among those included at lower rates are: Matching funds for State and local civil defense supplies and equipment; surveys of new buildings and homes to identify fallout protection available in existing structures; and public civil defense education. Items which are deferred completely to later fiscal years include shelter supplies and radef instrument procurement, completion of our protected regional emergency operating centers, and modernization of emergency water supply equipment.

The establishment of an effective civil defense capability must rely on the coordinated efforts of Federal, State and local government. This is dictated, not only by statute, but by the organizational and economic realities of our governmental structure. The role of the Federal Government is to provide leadership in peacetime planning and to encourage active participation of State and local governments in building and maintaining a civil defense system. Through this Federal effort, the elements of our program are defined, and guidance and financial assistance are provided to State and local governments to aid them in developing and improving their civil defense capabilities.

The basic premises underlying our guidance and assistance are:

1. *Maximum use of dual-purpose facilities is emphasized in all of our efforts.*—Dual-purpose shelter space is that which has a peacetime day-to-day use. The National Fallout Shelter Survey identifies dual-purpose space in existing structures. In addition, architects and engineers are provided technical information and advice to assist them in designing more fallout protection into new buildings. Additional examples of the application of the dual-purpose concept are: The use of commercial broadcast capabilities in the emergency broadcast system; the use of attack warning systems for severe weather warnings; and the use of State and local emergency operating centers in their day-to-day activities, and in peacetime emergencies.

2. *Use of low-cost opportunities first is our approach to develop a practical civil defense posture.*—The low-cost approach in the shelter program makes full use of the best available shelters in existing buildings and homes. We encourage the increase of fallout shelter in new construction through low-cost designs in place of more expensive methods such as single-purpose shelter construction. For emergency communications we require the use and linking together of existing communications, in use every day, rather than establish single-purpose civil defense communications nets.

3. *Our program management is based upon maximum use of existing capability of Federal, State and local governments.*—Civil defense is not a separate organization superimposed on the existing government structure; rather, it is preparing that government structure to save lives in event of nuclear attack. To enhance the effectiveness of the existing government structure in emergency operations, we provide matching funds for planning and coordinating local and State civil defense programs. State and local employees assisted by Federal funds are subject to established merit system standards under continual review by DHEW. In addition, we are continuing our efforts to increase professionalism in the operation of our program. For example, the Army Corps of Engineers and the Naval Facilities Engineering Command administer the fallout shelter survey; the Census Bureau is our agent in the home fallout protection survey; the Army Strategic Communications Command operates Federal civil defense communications and warning systems. We rely also on our colleges and universities for the bulk of our civil defense skills training and for advisory services to architects and engineers.

The present active interest and participation of local governments in the program are indicative of the progress made since 1960. There are at present over 4,000 local political jurisdictions which develop program papers in accordance with Federal guidance describing the scope and depth of their civil defense

activities. What is most impressive is the distribution of these jurisdictions in terms of their population. As you might expect, most large cities participate; 94 percent of those with over 100,000 population submit program papers and are actively engaged in the program. Similarly, 87 percent of the cities with 50,000 to 100,000 population and 83 percent of those with 25,000 to 50,000 population participate in the program. Of equal significance is the participation in the small towns and cities spread throughout the country. Two-thirds of the 2,800 towns and cities with populations between 5,000 and 25,000 submit program papers and actively participate in the civil defense program. Approximately 800 jurisdictions with 1,000 to 5,000 population and about 300 others with less than 1,000 population submit civil defense program papers. It seems evident that there is a significant interest and concern for the importance and continued improvement of civil defense in every part of the Nation.

Based on our experience during the past year, my conclusion continues to be that there is substantial public acceptance of the civil defense program. The following facts support this view:

1. As I have already noted, there is widespread active participation by local governments in the civil defense effort. In total, local jurisdictions representing more than 83 percent of the Nation's population develop and formally submit civil defense program papers and semiannual progress reports detailing work scheduled and accomplished during the year. Such participation would not be possible without public acceptance and support at the local level.

2. Of the more than 120,000 building owners approached to date, 88 percent have signed agreements permitting the marking and stocking of their buildings and planning for their use as fallout shelters in the event of nuclear attack. Of the 12 percent who did not, most declined for administrative reasons, i.e., building ownership was in process of change, the building was to be renovated or torn down, or activity in the building was sensitive and public access could not be permitted. Less than 3 percent of the building owners approached refused because they were unsympathetic to the program.

3. In the 18 States in which the Home Fallout Protection Survey has been completed to date, questionnaires were mailed to 3.7 million home owners. Almost 80 percent of those receiving the mail questionnaires took the time to complete the form and return it. This voluntary public response amply demonstrates the positive reaction of the average citizen to civil defense, when he is asked to do something practical.

Progress has continued during this past year, and at its present stage of development the national civil defense system provides a significant capability to save lives. As of January 25, 1968, our fallout shelter survey has identified over 166 million spaces in over 182,000 large structures. More than 105,000 of these structures have been marked with the standard fallout shelter sign. Over 87,000, with capacity for 83 million people, have been stocked with austere supplies, providing a minimum supply for an average of 8 days in addition to supplies normally found in these buildings. With this shelter posture, far from complete, it is estimated that up to 15 million lives could be saved that would otherwise be lost if an attack were to occur today. If the program approved for future years is not further delayed or deferred, this lifesaving capability would be doubled by 1975.

Finally, I should like to outline the civil defense legislative request currently pending in the Armed Services Committee (H.R. 15004) which relates to the civil defense budget estimates under consideration today. This bill, recommended by the administration, would extend the authorization for current Federal assistance programs under the Federal Civil Defense Act of 1950, as amended. These are to—

(1) provide matching financial assistance to States for necessary and essential State and local civil defense personnel and administrative expenses—$19,100,000 in fiscal year 1969;

(2) procure and maintain radiological equipment and to donate the same to States by loan or grant—$3,300,000 in fiscal year 1969;

(3) match costs for travel and per diem expenses of trainees at civil defense schools—$30,000 in fiscal year 1969.

These programs were authorized for a 6-year period under the provisions of Public Law 85-606, and were extended for an additional 4 years to June 30, 1968, by Public Law 88-335. The proposed legislation would extend the authority for an additional 4 years, to provide this essential assistance to existing State and local programs.

In summary, the civil defense budget estimates before you today will continue the national civil defense effort at a minimum sustaining level. While deferring desirable projects, it will enable us to maintain the existing civil defense structure at all levels of Government. It will not be possible to continue all program activities at their present levels; however, essential elements of the civil defense program will continue. I strongly urge your approval of the total civil defense request included in the President's budget.

Thank you, Mr. Chairman. I am prepared to answer any questions about our program.

GENERAL PROGRAM SUMMARY

Mr. ROMM. Let me highlight mine, then.

You will find Mr. Resor's statement has dealt with the relationship of the Sentinel antiballistic missile system and the civil defense program. He makes the point that the Sentinel system is designed to meet the potential Chinese threat in the mid-1970's and that our studies have indicated that there is adequate civil defense in the currently approved program to meet the same objectives as the Sentinel system.

Our mission obviously is to save lives, and our studies of a wide range of hypothetical attacks, particularly the heavy attacks which the Russians are capable of delivering, show that fallout shelters would save tens of millions of lives.

Our primary focus continues to be the development of a nationwide fallout shelter system, and we emphasize the use of existing structures.

FY 1969 BUDGET REQUEST

Our civil defense budget request this year totals $77.3 million. Both Secretary McNamara and Secretary Resor, in their appearances before the Congress last month, stated that this amount is the lowest possible sustaining rate for the civil defense program and reflects the necessity of reducing to minimum essential levels of effort those activities which are not related to the Vietnam conflict.

Our request this year is 10 percent below the appropriation of last year and 24 percent below the appropriation in 1967.

It is even more severe when you measure this reduction in terms of obligations. Our fiscal year 1969 obligational program is projected to be 24 percent less than the fiscal year 1968 obligation program. However, there are no changes in the basic objectives of our program, which is to continue orderly development of our low-cost fallout shelter system.

Our budget is in line with the President's intent. As you know, he stated in his budget message that we cannot do everything that we would wish to do, so we must choose carefully among the many competing demands on our resources.

Accordingly, we have delayed and deferred those parts of the program which would do the least damage and can be made up at a later date.

Among those parts of the program that are included in the budget at lower rates are matching funds for State and local civil defense supplies and equipment, surveys of new buildings and of homes to identify fallout protection available in existing structures, and public civil defense education. Some items have been deferred completely to later fiscal years. Among these are the procurement of shelter supplies and radiological defense instruments, the completion of our

protected regional emergency operating centers and the modernization of our emergency water supply equipment.

BASIC CIVIL DEFENSE CONCEPTS

Civil defense preparations obviously are by statute and by organization a joint responsibility of Federal, State and local governments. The role of the Federal Government is to provide leadership and guidance. The basic premises underlying our guidance and assistance that we provide the States and local governments are:

First, making the maximum use of dual-purpose facilities. We emphasize this in all of our efforts. The shelter program obviously is the best example. It identifies fallout shelter available in dual-purpose space that has peacetime day-to-day use.

In addition, our architects and engineers across the country have been provided information to help advise and assist them in designing more fallout protection into new construction. Other examples are the dual use of the broadcast system capabilities, use of attack warning systems for severe weather warnings, and the use of State and local emergency operating centers in their day-to-day activities and peacetime emergencies.

Our second premise is to use low-cost opportunities first. Again, the shelter program is our prime example, but I want to emphasize that we encourage the increase of fallout shelters in new construction through low-cost designs rather than single-purpose shelter construction.

In our emergency communications programs, we require that the local governments use and link together their existing communications system rather than to establish single-purpose civil defense communications nets.

Lastly, our program management is based on the maximum use of existing capabilities of Federal, State, and local governments. Civil defense is not a separate organization. Rather, it is preparing the existing government structure to save lives in the event of nuclear attack.

We have also, through our matching funds program and through the use of existing capabilities in the Federal Government, continued to attempt, and we have succeeded, to increase the professionalism in our program. The Army Corps of Engineers and the Navy Facilities Engineering Command administer our fallout shelter survey program. The Census Bureau is our agent in conducting the home fallout protection survey. The Army Strategic Communications Command operates Federal civil defense warning and communications systems.

PARTICIPATION BY LOCAL GOVERNMENTS

There continues to be a large active interest and participation by local governments in our program. At present over 4,000 local political jurisdictions develop program papers in accordance with Federal guidance describing the scope and depth of their civil defense activities.

I am sure that you might expect that most of the large cities participate. Ninety-four percent of those with over 100,000 population submit program papers. Eighty-seven percent of the cities with 50,000 to 100,000 population submit program papers. I think what is more im-

pressive and equally significant is the number of small cities and towns that provide program papers and participate actively in our program.

Two-thirds of those 2800 towns with 5,000 to 25,000 population submit program papers. Approximately 800 towns with 1,000 to 5,000 population submit program papers and have active civil defense programs. About 300 towns with less than 1,000 population also submit program papers.

PARTICIPATION BY THE PUBLIC

Based on our experience to date and our experience during the past year, my conclusion continues to be that there is substantial public acceptance of the civil defense program. This widespread active participation by local governments covers 83 percent of the Nation's population.

I would like to show you what this looks like by State. We have a map here that provides this information. I do not believe that such participation would be possible without public acceptance at the local level.

Last year I reported that 100,000 building owners had been approached to sign agreements to have their buildings used as public shelters. As of this point in time, 120,000 building owners have been approached and the results continue to be the same. Eighty-eight percent have signed agreements to have their buildings used as public shelters. Of the 12 percent who did not, most declined for administrative reasons. Building ownership was in process of change, or the building is in the process of being renovated or torn down, or activity in the building was sensitive. Actually, less than 3 percent of the building owners who have been approached by civil defense people have refused because they were unsympathetic to the program.

As another measure of how the average citizen feels toward civil defense, let me mention the home fallout protection survey. As you know, this survey is conducted by the Bureau of the Census as our agent. Where we have good addresses, Census mails questionnaires to the homeowners to complete.

Up to now, they have mailed questionnaires to 3.7 million homeowners. Almost 80 percent of those getting the questionnaire took the time, about 20 minutes, to fill it out and return it. I think this demonstrates the positive reaction of the average citizen when he is asked to do something practical in civil defense.

Mr. TALCOTT. What do you mean by that? Is 80 percent good or bad?

Mr. ROMM. This is a questionnaire mailed to the homeowner which says in effect, if you fill this questionnaire out, you will be adding to the civil defense capability. We will also let you know what the protection factor is in the best corner of your basement.

The information is confidential. No one else gets it. Summaries are made available to the administrative planners in the local governments and at the State level.

Mr. TALCOTT. My point is that you get only an 80 percent response. I would think you would get close to 100 percent like the Census Bureau.

Mr. ROMM. Filling out this form is not a legal requirement. The census is a legal requirement. However where they have sent enumerators, they get close to 100-percent response.

With respect to the mailed questionnaires, the Census Bureau informs us that this is the best return they have gotten on mailed questionnaires which is not obligatory by law. It is a voluntary filling out of the questionnaire.

PROGRAM STATUS AND PROGRESS

We have made progress in the past and over the past year as well. Our fallout shelter survey program has identified over 166 million shelter spaces in 182,000 large structures around the country, and 105,000 of these structures have been marked with our black and yellow sign, both inside and out. Eighty-seven thousand of these buildings with a capacity to provide protection for 83 million people have been stocked with Federal civil defense supplies which provide an average of 8 days of austere living capability in addition to what is normally available in these buildings.

Studies indicate this posture, right now, could save up to 15 million lives that would otherwise be lost. If the current program, as it is approved, is continued without further deferral, this lifesaving capability would be doubled by 1975.

If I may, I would like to put additional information in the record about progress in other parts of the program.

STATISTICAL SUMMARY

I have these summaries which may be useful to the committee. (The summaries follow:)

I. FALLOUT SHELTER SURVEYS

	Structures	Spaces (thousands) [1]
National fallout shelter survey	182,694	166,554
Marked	105,204	97,220
Stocked (rated capacity)	87,006	83,352
Smaller structures survey	95,215	2,276
Home fallout protection survey [2]	212,130	801
HFPS space PF 20 to PF 40	5,716,084	19,683

[1] Except for last HFPS figure, PF 40 or better spaces.

[2] Based on complete reports from Rhode Island, Minnesota, Maine, Utah, Nebraska, Iowa, Kansas, West Virginia, Colorado, Wyoming, New Hampshire, Vermont, Idaho, Wisconsin, Washington, Montana, South Dakota, and North Dakota; and interim reports from Alaska; Nassau-Suffolk Counties, N.Y.; Michigan; and Oregon. Total spaces are the number of sheltered occupants in the homes.

II. Emergency operating centers (Dec. 31, 1967):	
Completed	2,255
In process	677
III. Broadcast station protection program: Stations in program	626
(Estimated national requirement: 658.)	
IV. Warning points	1,335
V. Radiological monitoring stations	64,642
VI. Jurisdictions filing program papers with OCD	4,188
VII. Community shelter planning projects:	
Funded projects started	184
Nonfunded projects started	435
VIII. Training:	
Adult education (Dec. 31, 1967)	2,101,136
Medical self-help	5,513,514
University extension program (Dec. 31, 1967)	209,303
Architect-engineer fallout shelter analysts	14,299
Military installation radef monitoring (Dec. 31, 1967)	17,635
Labor leaders oriented	7,584
Labor union members instructed	322,618

Shelter program

Through January 31, 1968, shelter spaces for over 166 million people had been identified in more than 182,000 buildings throughout the country. Of these, over 105,000 buildings have already been marked with a black and yellow shelter sign, indicating their availability to the public in event of emergency; 87,000 buildings, with a capacity to protect over 83 million people, had received austere Federal shelter supplies which would maintain these people for an average of 8 days, in addition to the supplies normally found in these buildings.

The Home Fallout Protection Survey, initiated 2 years ago, has now been completed in 18 States and is in process in four others. Shelter has been identified in over 5.7 million homes for almost 20 million occupants of these homes. Such shelter has a protection factor over 20, most of which can be upgraded easily to the national standard.

Community shelter planning projects have been initiated in 619 planning areas. These will provide information to the public on where to go and what to do in the event of an attack. Population of these areas amounts to 58 million people.

Emergency operations

At the end of the year, State and local governments had established 2,255 emergency operating centers. In addition, 677 emergency operating centers are in the process of being completed. These centers provide a local civil command post to coordinate and direct emergency operations in political jurisdictions containing approximately 108 million people.

The program to provide selected radio broadcast stations of the Emergency Broadcast System with fallout protection, emergency power and communication links to local government, to assure their operation in a fallout environment has been initiated in 626 stations; 507 of these have already been provided with fallout protection, and 452 stations are fully operational.

The National Warning System has been extended to over 1,300 warning points at State and local government levels, almost a thousand of which are operational 24 hours a day. The system is tested daily and is capable of providing simultaneously attack warning throughout the Nation.

Radiation monitoring capability, which includes instruments and trained radiation monitors, is now available in over 64,000 monitoring stations across the country. In addition, over 87,000 shelter facilities have been provided with radiation monitoring instruments.

Training

Public training has been provided through our adult education courses, medical self-help training programs, and the Department of Agriculture Extension Service. Well over 7 million people have taken advantage of this public training. In addition, through the auspices of the labor unions, over 330,000 labor leaders and union members have received civil defense instruction. Similarly, industrial leaders have attended orientation courses and received training in civil defense skills.

Civil defense skills training has been provided to State and local government employees, to those assigned to civil defense, and to those with emergency assignments in other departments of their Government. Skills training has been provided through the Civil Defense Staff College, the Nation's universities and colleges, adult education programs provided in Nation's high schools, and by military training teams. Such skills training includes civil defense management, emergency operations, shelter management, and radiological monitoring instructors, as well as radiological monitors and shelter managers.

To date, over 14,000 architects and engineers have been qualified in fallout shelter design and shelter analysis through graduate level training. Over a quarter of a million people have been trained in radiological monitoring and 66,000 persons have received training in shelter management.

In addition, local governments have organized and trained volunteers to augment their emergency capability. Local governments report that they have enrolled and trained over 500,000 auxiliary personnel in the public safety services alone.

LEGISLATION TO EXTEND EXPIRING AUTHORITIES

Mr. ROMM. I would like to tell you that there is a legislative request currently pending in the Armed Services Committee, H.R. 15004, that relates to three parts of the budget estimate which is before you today.

These are to extend the authorization for Federal assistance for first, to match funds for personnel and administrative expenses, of which there is $19.1 million in this budget; second, to procure and maintain radiological instruments and donate these to the States for which there is $3.3 million in this budget; and third, to match funds for travel and per diem of students going to civil defense schools.

Mr. EVINS. When does your authority expire?

Mr. ROMM. The authority expires on June 30, 1968. We are asking for extension of an additional 4 years.

PERSONNEL AND ADMINISTRATIVE EXPENSES

Mr. EVINS. You have $19.1 million in the budget for the next year and the authority expires in June of this year?

Mr. ROMM. That is right.

Mr. EVINS. If that is not passed, you do not need this amount, but if it is passed you need this and probably more?

Mr. ROMM. Yes, sir. Actually, the demands that we have in hand to date from States for fiscal year 1969 amount to $20.5 million.

RADIOLOGICAL EQUIPMENT

Mr. EVINS. The same thing applies to radiological equipment; $3.3 million is in the budget. If this is not passed, you won't need this amount?

Mr. ROMM. Yes, sir.

TRAVEL AND PER DIEM

Mr. EVINS. This also applies to the matching for travel and per diem. Are these three items in one bill?

Mr. ROMM. Yes, sir. H.R. 15004. I have no doubt it will be passed.

Mr. EVINS. It is a very popular program.

Mr. ROMM. I like to think so.

In summary, I would like to state that the budget before you today will continue our effort at what is really a minimum sustaining level. We have deferred a lot of projects but we will be able to keep the current structure in being and not lose the gains we have made in the past. I urge your approval of the total amount and I will be happy to answer any questions about the program.

Mr. EVINS. Thank you, Mr. Romm. That is a very fine statement.

SERVICES OF ACTING DIRECTOR

Mr. EVINS. Mr. Romm, how long have you served as Acting Director of Civil Defense?

Mr. ROMM. Since January 1, 1967.

Mr. EVINS. It has been over a year. When are they going to make you Director? You have been confirmed in this committee. We said this before. We think that you should have been made Director.

Mr. ROMM. Mr. Chairman, I appreciate your compliment.

Mr. EVINS. I want this to get to the authorities. You have been in this capacity for more than a year and you have had long experience. You have more knowledge of the program than some of the Governors.

I can mention several of the Governors that have been here. The Governors were fine men and administrators, but you are a career man and you are skilled and able.

As far as I am concerned, you are the best administrator they have had of this program.

Mr. ROMM. Thank you, sir.

Mr. EVINS. I want this to be known. You have been confirmed in this committee.

Mr. ROMM. I will tell my immediate boss.

PAST PROGRESS OF CIVIL DEFENSE

Mr. EVINS. Mr. Romm, we are in a Vietnam war of longstanding. It is getting more costly and there is talk about a $30 billion deficit. The Congress does not have a disposition to pass a 10-percent surtax to finance the war. I am for it and I will support it.

Civil defense was passed in 1950. That is 18 years ago.

Mr. ROMM. Yes, sir.

Mr. EVINS. We have been marking, surveying, and providing grants to the States and cities. You have made a lot of shelter surveys and we know where the shelters are in case of alarm, but in 18 years we have not used them, and I hope we never will. It is like insurance. The point is that we have been at this for 18 years and we ought to have the job done.

Mr. ROMM. Mr. Evins, I would estimate we have about half of the job done.

Mr. EVINS. It is very popular with the schools, city halls, and local people. It is close to them. They know it is a program that reaches down to the grassroots level. You just said you have about half the job done. I would hate to admit that after 18 years, with all the appropriations, that you have just got the job half done. I thought that you had accomplished more than that.

You have a lot that you can point to with pride.

Mr. ROMM. I agree we have made tremendous progress. I would like to point out that our shelter survey activity did not start until 1962.

Mr. EVINS. You had, first, a program to move the people out of the metropolitan areas and then you found that you could not do that. It was too big a job. Then you abandoned that and said, "Build your own fallout shelters." Some people did and others did not.

Now you have started on another program to determine the number of basements in the homes where it is desirable to set aside space. I think it is a very good program. Civil protection is individual protection. Self-protection is the first law of nature. They know where to go and what to do.

Mr. ROMM. We now have a program underway called community shelter planning which is designed to help the local government people tell their citizenry where to go and what to do in the event of nuclear attack. This has been moving along very successfully. There are 619 of these projects underway now covering about 58 million people.

FISCAL YEAR 1969 SURVEY AND MARKING PROGRAM

Mr. JONAS. After doing all of this, the marking of all of these basement shelters, you are now going to concentrate on dual-purpose buildings?

Mr. ROMM. No, sir. We have concentrated on dual-purpose shelters from 1962 on. There has been no construction of public fallout shelters at all. All of the shelters that we have found are dual purpose.

Mr. JONAS. Now are you going to suspend the further marking?

Mr. ROMM. No, sir.

Mr. JONAS. Isn't that what you are cutting out?

Mr. ROMM. No, sir. What we have cut down by about half is the ongoing survey program of new construction. We also have no new starts of any State in the home basement survey in fiscal year 1969.

Mr. JONAS. That is what I meant.

Mr. ROMM. These items were reduced or deferred but they can be picked up during the next fiscal year.

Mr. JONAS. We thought that was part of your program.

Mr. ROMM. Yes, sir. I certainly would like to be able to put more money into it, but within this budget level, it is about as much as we can get.

Mr. JONAS. You think other aspects of your program have a higher priority than to continue this marking program?

Mr. ROMM. The other parts of the program are designed to keep going what we have already gained in the way of civil defense capabilities so that we do not lose that. There is no purpose in just finding shelter unless local operational planning is done to assure that the local government can make the best use of what is available to them. The program represented by the fiscal year 1969 request is truly a minimum sustaining rate to keep going what we have already in being and to add a minor amount of shelter space to what is already available in the national inventory.

WARNING AND DETECTION SYSTEMS

Mr. BOLAND. How much have we spent in the warning and detection system in this program over the past 5 years?

Mr. ROMM. Warning and detection systems, including the procurement of radiological detection instruments has amounted to $50 million over the past 10 years.

Mr. BOLAND. We ought to be coming about to the end of that, should we not, except maybe maintenance and warehouses?

Mr. ROMM. That is right. We have no procurement of radiological instruments in this program for fiscal year 1969. What is in the budget is the maintenance and calibration of those instruments which have been issued.

Mr. EVINS. Do you have some funds in here for purchasing equipment in 1969?

Mr. ROMM. No, sir.

Mr. EVINS. No?

Mr. ROMM. Only spare parts for the maintenance and calibration program. You cannot maintain instruments without spare components. There is no procurement of equipment.

Mr. EVINS. In line with Mr. Boland's question, we have spent about $50 million on facilities, warning and detection equipment, and this is pretty well installed and in use?

Mr. ROMM. Yes, sir. We have actually issued 3.3 million radiological instruments, valued at $26 million. That is a little over half of the total amount spent over the past 10 years. Maintaining these instruments costs about $1 per instrument each year.

SHELTER SURVEYS

Mr. BOLAND. You indicate that one of the programs that you will not be able to continue at the present level is the one with respect to marking. What other programs?

Mr. ROMM. Survey.

Mr. BOLAND. Surveying.

What other programs will you not be able to keep at the present level because of this cut?

Mr. ROMM. Surveying of large buildings as presented here is about half of the current level. We will miss about half the new buildings coming into the national inventory in fiscal year 1969. We will have no new starts of any home basement surveys in any State after fiscal year 1968. The remaining States that we have scheduled to start prior to close of the current fiscal year are Maryland, Virginia, District of Columbia, Delaware, Connecticut, and Massachusetts. We have just $700,000 in the fiscal year 1969 budget to finish up the Connecticut and Massachusetts surveys which will start this June.

Mr. BOLAND. Is the survey on the spot? You go into the building and determine whether or not it is useful?

Mr. ROMM. It is done two ways. The home survey is accomplished by mailing the questionnaire to the homeowner by the Census Bureau which has good home addresses.

Mr. BOLAND. You are talking about the new buildings coming in?

Mr. ROMM. Larger structures coming into the national inventory are handled as an on-the-spot operation, either by the Corps of Engineers or contracted for by them. It is a process which uses engineering know-how, measurements of the space and mass construction of the building. This data is processed through a computer. Each shelter area is designated and a protection factor computed, and the information goes back to the local government.

Mr. BOLAND. Thank you.

CIVIL DEFENSE TRAINING AND EDUCATION

Mr. PRYOR. Are you maintaining basically the same educational program as you have in the past?

Mr. ROMM. The fiscal year 1969 budget reflects a substantial cutback on the public education aspects of our training and education program. There is a cutback in all three of the major public education programs. We have cut back our adult education program, where, through night school classes, family heads are taught personal and family survival.

The medical self-help training program, where on a voluntary basis medical personnel teach something like a first-aid course—a cut above

that because it deals with what to do if the doctor is not able to get there—has been cut back.

The rural civil defense program, which trains our rural people in their own self-protection and protection of livestock, has been cut back. We feel that these items are deferrable in 1969 and we can pick this up again in future fiscal years.

EMERGENCY PUBLIC INFORMATION

Mr. PRYOR. During situations like the Cuban and Berlin crisis, where you found all of a sudden Americans interested in these things, interest intensifies?

Mr. ROMM. We have available emergency information on the shelf. As you go through our emergency information budget request, you will see where we have developed a book during 1968 which replaces six other publications that are currently being issued on what to do in this type of emergency. It has already gone to the printer.

To follow up on this, we will have prepositioned films, radio scripts and newspaper articles to use in the event of emergency.

PUBLIC EDUCATION BY TELEVISION

In addition, the way we hope to get at the family and personal survival course is to have it done by TV, educational and commercial TV. This has been developed and tried on a prototype basis in Massachusetts, Texas, and Maine. It looks real good. This is how we hope to make up this cut.

Mr. BOLAND. I hope you get an audience for educational TV in this program.

Mr. ROMM. It is difficult. This is a course where they have to write in and get the materials so we will know how many are participating. We will never know how many people are watching it.

Mr. BOLAND. It is true, because they won't get prime time on the commercial network.

Mr. PRYOR. Have the networks cooperated with you on this?

Mr. ROMM. The ones where we tried it, Maine, Massachusetts, and Texas, certainly have cooperated. As Mr. Boland says, we are not getting prime time, but we are getting the time where educational courses are generally shown.

I once took an educational TV course in probability at 6 o'clock in the morning. It got to be a real chore but if you missed a couple of lectures you've had it, so you got up and did it.

SHELTER SPACES STOCKED

Mr. JONAS. You have got spaces and shelters marked and stocked for 83 million people?

Mr. ROMM. Stocked. Actually, our marking is much higher. It is almost 100 million people.

Mr. JONAS. Eighty-three million people. They are all in dual-purpose buildings?

Mr. ROMM. Yes, sir. Large buildings.

SHELTERS IN HOME BASEMENTS

Mr. JONAS. How many basement shelters do you have?

Mr. ROMM. We have found, to date, a little over 20 million fallout shelter spaces through the home basement survey in the 18 States that we have finished, and the four currently in process.

There are actually more spaces than that, but the occupants of the homes which have fallout protection total 20 million people.

Mr. JONAS. Four people per?

Mr. ROMM. 3.6 is the national average. This is based on actual count.

Mr. JONAS. You are counting shelters, basement shelters?

Mr. ROMM. No. We are counting people who have homes with basements that have shelters in them.

Mr. JONAS. Do you count four to the shelter or one?

Mr. ROMM. The questionnaire, Mr. Jonas, asks the man how many people there are in his family. It is an actual count.

Mr. JONAS. I want to get it clear. Do you have 20 million basement shelters?

Mr. ROMM. Yes, sir, in terms of people living in the homes.

Mr. JONAS. Shelters for 20 million people?

Mr. ROMM. Shelter for 20 million people in about 6 million homes.

Mr. JONAS. That would be 4, 5, or 6 million basements?

Mr. ROMM. It is about 6 million.

Mr. JONAS. You do not plan to identify any additional ones in this program?

Mr. ROMM. We plan to do six more States, starting them in fiscal year 1968.

Mr. JONAS. That is through this year, in 1969?

Mr. ROMM. We won't start any additional ones in 1969. The Census Bureau—and it has been approved by the Bureau of the Budget—has agreed to incorporate in their fiscal year 1970 census a question, "Does your home have a basement?" With this information in hand, we will be able to then go out and not only update what we have done, but pick up everybody that we have not done by mailing the questionnaire directly to them.

Mr. JONAS. You have already 2.9 million questionnaires returned. What are you doing with those?

Mr. ROMM. With that information, the homeowner is informed of what the protection factor is.

Mr. JONAS. You have written back to 2,900,000 people?

Mr. ROMM. Yes, indeed. We have written back to about 7 million people because those homes that don't have shelters get a letter, too.

Mr. JONAS. You only mailed out 3.7 million?

Mr. ROMM. There is an additional approximately 4 million homes that have been handled by census enumerators.

Mr. JONAS. What did that 3.7 cover?

Mr. ROMM. That represents homes covered by mail out of the questionnaire.

Mr. JONAS. What did the returns indicate the condition to be in the homes? How many basements are equipped?

Mr. ROMM. About 50 percent of the homes that we have surveyed have basements that have good fallout protection in them.

IMPROVING SHELTERS IN HOME BASEMENTS

Mr. JONAS. Have you given instructions to those people on how to convert a basement into a shelter?

Mr. ROMM. Yes, indeed. This is what these people get back. They get information from this booklet on what the protection factor is in the center of their basements and the best corner of their basement. If that is not up to protection factor 40, the national standard, they are told how much weight to add over the best corner to bring it up to the protection factor of 40. There are instructions in here on what materials give you what kind of weight and different schemes for either doing it on a crash basis, during a crisis period, or doing it by preplanning.

Mr. JONAS. Do you have any followup information to indicate what response you get from that, what action is taken?

Mr. ROMM. We have two kinds of information. We know that very few people send in for the actual plans to do something permanent. That is about three-quarters of 1 percent. We do know, based upon sampling, that about 80 percent of the people have retained the booklet. We ask them to pin it up in the best corner so it is there for emergency information when they need it.

Mr. JONAS. You are just grinding your gears if these people do not respond effectively and do something.

Mr. ROMM. They have responded already in terms of knowing what protection they have available to them. That is a tremendous advantage.

Mr. JONAS. That booklet hanging up in the basement is too late after fallout strikes?

Mr. ROMM. That is right. But during a crisis period it is not too late to do some of the very simple schemes in here to improve their protection. Very simple things that can be done.

Mr. JONAS. For it to be worth anything, all this has to be done in advance?

Mr. ROMM. It can be done in a crisis period.

Mr. JONAS. Fifteen minutes?

I am talking about a fallout alert.

Mr. ROMM. After the fact it gets to be a little bit too late. Some of these things could still, however, be of tremendous advantage after attack if the fallout has not arrived. Fallout won't arrive everywhere at the same time. The fallout is carried by the wind. Average upper atmosphere winds are about 20-25 miles per hour. If you are 50 miles downwind you have 2 hours.

Mr. JONAS. I just can't see how. We have not hit the right formula to bring home to the people that they ought to do this in advance.

UNIT COST OF THE SHELTER SURVEYS

Mr. EVINS. Mr. Romm, this is probably the least costly of your several programs, is it not?

Mr. ROMM. This costs one dollar a home to survey. It averages, for the people that we find have fallout protection, 44 cents a space. Our survey of large buildings costs 65 cents a space.

Mr. EVINS. You distribute this pamphlet and if they are concerned about self-protection, they can either do it permanently or do it in case of emergency?

Mr. ROMM. That is exactly the kind of instruction they receive.

Mr. JONAS. I think the Chairman and I agree. It seems a bit difficult to downgrade this activity. I would have thought it would have had a higher priority in your thinking than some of the others.

Mr. ROMM. Mr. Jonas ,we are not directly——

Mr. JONAS. What is the use having radio programs and television programs if you cannot get a response to this?

Mr. ROMM. We have gotten an excellent response from the public on this.

Mr. JONAS. If they don't react to personal letters, they are not going to do it from a television program.

Mr. ROMM. I think it depends on the imminence of the threat.

At the time of the Cuban crisis we got a tremendous reaction of people doing something about it. There was enough time during that Cuban crisis to have done any of the last-minute activities proposed in this booklet. If they keep the book and if we have the instructions available in our public information media to use during the crisis period, I think we will get the right reaction from the public at the time it is needed.

Mr. JONAS. That is all.

FY 1969 BUDGET REQUESTED

Mr. TALCOTT. What amount did your agency actually ask of the administration this year?

Mr. ROMM. My budget submission forwarded by the Secretary of the Army amounted to $159.7 million.

Mr. TALCOTT. You were actually seeking a pretty substantial increase in the program?

Mr. ROMM. That was our approved figure for requesting new appropriations. That was less than our approved program in the 5-year programing system.

Mr. TALCOTT. Then within the Defense Department you were really cut down?

Mr. ROMM. This reduction was within the Defense Department. The Secretary of the Army went back and personally requested restoration of a good portion of the cut. Up to about $122 million.

Mr. TALCOTT. That was the sum submitted to the Bureau of the Budget?

Mr. ROMM. No, sir.

Mr. TALCOTT. What happened then?

Mr. ROMM. The Secretary of the Army resubmitted it, requesting restoration by the Secretary of Defense.

Mr. TALCOTT. The Secretary of Defense did what?

Mr. ROMM. The program was limited to the $77.3 million in keeping with the criteria that Vietnam related programs would be those which would receive first priority. Anything that could be deferred without having an immediate impact on the national interest would be deferred.

Mr. TALCOTT. The Bureau of the Budget went along with your recommendation?

Mr. ROMM. The Bureau of the Budget and the Defense Department review is joint. That happens at the same time.

Mr. TALCOTT. The Defense Department appraisal, with their review and coordination with all of the other defense requirements, was that $77 million is adequate?

Mr. ROMM. That is right. We were not the only program cut in the Defense Department. Secretary McNamara provided a list to Mr. Mahon's committee, I think, that added up to $21 billion in deferred items.

REDUCTION IN FISCAL YEAR 1969 PROGRAMS

Mr. JONAS. Would you yield?

With such substantial reductions in your programs, the question naturally arises as to whether it would not be better to close it all down.

Mr. ROMM. Well, sir——

Mr. JONAS. You cannot justify protecting x million people and leaving y and z million out in left field.

Mr. ROMM. There are no means in this program to protect everybody within 1 single year. There is just not that much capability in the kind of a program we have. We use what comes into the inventory. For example, there is about $25 billion worth of new construction in this country every year that has our kind of shelter in it. Since our program doesn't provide for single purpose shelters, you just have to wait for the new construction to provide protection for everyone.

What this program in fiscal year 1969 has done is to defer what can be deferred to future years and has kept going at a minimum rate that which must be kept going.

Mr. JONAS. You can defer it all to future years if we do not have an emergency. It is like insurance, is it not?

Mr. ROMM. That is true.

Mr. JONAS. If you never have a fallout to be protected from, it is never used. It is like a fire insurance policy.

Mr. ROMM. That is very true. That is true for any kind of defense program. The more defense you have, the less likely it is you will have to use it.

Mr. JONAS. I do not believe that analogy is applicable here.

Mr. ROMM. General Wheeler has stated in the past he feels that the civil defense capability adds, along with other defense programs, to the deterrent capability.

Mr. JONAS. He does think that?

Mr. ROMM. Yes; I can provide that quote for the record, if you would like.

Mr. JONAS. Deeds don't match the words quite when he starts working on the budget.

Mr. ROMM. The Joint Chiefs of Staff have supported our program and our budget request for many years.

Mr. TALCOTT. If the Federal Government, the Defense Department, does not provide the leadership, I do not see how you can expect the local people to respond. The DOD has cut it drastically. I would expect the local people to say:

The Defense Department, of which we are an integral part, is not really interested in the program as they were before. Why should we be?

Mr. ROMM. Mr. Talcott, the fact is that the part of the program that impinges on the local people has not been cut. For example, "Personnel and Administrative Expenses," providing matching funds

in which the locals are most interested, has been increased from $18.5 million appropriated in fiscal year 1968 to $19.1 million in 1969.

Mr. Evins. "Research, Shelter Survey and Marking" is up from $20 million to $21.6 million.

Mr. Romm. Mr. Evins, that is new obligational authority. If you look at our obligational program, money actually placed in the field, you will find that the account has been cut about 24 percent. The new obligational authority requested just keeps the minimum capability.

TOTAL BUDGET FIGURES

Mr. Evins. Let us take a look at your budget figures.

"Operation and Maintenance," in 1968 you had $66,100,000 for 831 jobs.

Mr. Romm. Yes, sir.

Mr. Evins. In 1969, you are requesting $55,200,000 plus a $500,000 transfer.

Overall, that makes a decrease in operation and maintenance of $10.4 million. Is that correct?

Mr. Romm. Yes, sir.

Mr. Evins. How much carryover did you have from last year in "Operation and Maintenance"?

Mr. Romm. That is an annual appropriation, no carryover.

Mr. Evins. This $500,000 transfer, where does that come from?

Mr. Romm. That comes from a working capital fund authorized some years ago to aid in the procurement of civil defense equipment by States.

Mr. Evins. They are giving you a $500,000 transfer from the fund?

Mr. Romm. Yes, sir.

UNOBLIGATED BALANCE

Mr. Evins How much unobligated balance overall, did you have at the end of last year?

Mr. Romm. The unobligated balance available for carryover at the end of fiscal year 1967 was $22.2 million.

Mr. Evins. This amount was carried over from 1967 into 1968.

Mr. Romm. That is right.

Mr. Evins. You are using that money in 1968?

Mr. Romm. We are using $19.4 million of it in 1968 and $2.8 million will be carried over into 1969.

Mr. Evins. Your next item is "Research, Shelter, Survey, and Marking," for 1968, you had an appropriation of $20 million. Next year you are asking for $21.6 million. Does this increase include the $2.8 million unobligated balance?

Mr. Romm. No.

Mr. Evins. Plus this?

Mr. Romm. Plus this. Our total obligations program for fiscal year 1969 will be $24.4 million in that appropriation. This is a 38-percent reduction from the fiscal year 1968 obligational program of $39.4 million.

Mr. Evins. Your appropriation is $1,600,000 more than last year, plus $2,800,000 unobligated balance you are carrying over?

Mr. ROMM. Yes, sir. If you look at the money actually available to the program from carryover funds, you will find that our obligations in fiscal year 1968 are scheduled at $39.4 million and fiscal year 1969 is scheduled at $24.4 million, or a reduction of 38 percent, a substantial cut.

We entered the fiscal year 1968 with a carryover of $22.2 million. We are leaving fiscal year 1968 with a carryover of $2.8 million.

Mr. EVINS. What is the unobligated balance in this fund as of today for shelter surveys?

Mr. ROMM. Against our $39.4 million obligational program for fiscal year 1968, we had obligated $23.8 million or 60 percent as of the end of February.

Mr. EVINS. You told us how much has been obligated. How much unobligated?

Mr. ROMM. There is $15.5 million unobligated.

A little under $12 million of that is still scheduled to be obligated this year.

SUMMARY OF THE BUDGET

Mr. EVINS. The total appropriation for Civil Defense for 1968 was $86.1 million and for 1969 you are requesting $77.3 million with the $500,000 transferred, which would make $8,800,000 less than in 1968?

Mr. ROMM. Yes, sir.

Mr. EVINS. That is a summary of the budget.

Mr. ROMM. Yes, sir.

Mr. EVINS. Gentlemen, let us place in the record page 1.

(The page follows:)

OPERATION AND MAINTENANCE

For expenses, not otherwise provided for, necessary for carrying out civil defense activities, including the hire of motor vehicles; and financial contributions to the States for civil defense purposes, as authorized by law, *$55,200,000 and, in addition, $500,000, which shall be derived by transfer from Civil Defense Procurement Fund established by Third Supplemental Appropriation Act, 1951 (50 U.S.C. App. 2264): Provided, That* not to exceed *$19,100,000* shall be available for allocation under section 205 of the Federal Civil Defense Act of 1950, as amended.

RESEARCH, SHELTER SURVEY AND MARKING

For expenses, not otherwise provided for, necessary for studies and research to develop measures and plans for civil defense; and continuing shelter surveys, marking, stocking, and equipping surveyed spaces; *$21,600,000,* to remain available until expended.

GENERAL PROVISIONS—CIVIL DEFENSE

Appropriations contained in this Act for carrying out civil defense activities shall not be available in excess of the limitations on appropriations contained in section 408 of the Federal Civil Defense Act, as amended (50 U.S.C. App. 2260).

No part of any appropriation in this Act shall be available for the construction of warehouses or for the lease of warehouse space in any building which is to be constructed specifically for civil defense activities.

Mr. EVINS. Page 2 shows a summary of the budget: Operation and maintenance; warning and detection, last year, was $5,710,000. Next year your budget is $4,710,000, a million dollars less for warning and detection.

Emergency operations, $20,063,000, and next year you are asking for $12,246,000.

Financial assistance to States, $27.5 million to $26 million.

Management, this is local management and headquarters personnel, is it not?

Mr. ROMM. And our regional offices and the staff college.

Mr. EVINS. Everything but the counties and cities?

Mr. ROMM. Yes.

Mr. EVINS. One item goes to the counties and another is for management, which is your own personnel. This was $12,827,000 in 1968 as against $12,744,000 for 1969.

Mr. ROMM. I would like to state that amount includes travel and housekeeping expenses.

Mr. EVINS. Your management fund does?

Mr. ROMM. Yes.

Mr. EVINS. This is a total of $55.7 million against $66.1 million for last year.

Research, shelter survey, and marking is up. Shelters is up from $12.9 million to $15.1 million. Research and development is down from $7.1 million to $6.5 million.

We will place in the record pages 2 and 3.

(The pages follow:)

APPROPRIATION AND BUDGET PROGRAM SUMMARY

Appropriation/budget program	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Operation and maintenance:			
Warning and detection	$6,077,576	$5,710,000	$4,710,000
Emergency operations	20,635,306	20,063,000	12,246,000
Financial assistance to States	28,259,989	27,500,000	26,000,000
Management	11,465,251	12,827,000	12,744,000
Total	66,438,122	66,100,000	55,700,000
Research, shelter survey and marking:			
Shelters	25,000,000	12,900,000	15,100,000
Research and development	10,000,000	7,100,000	6,500,000
Total	35,000,000	20,000,000	21,600,000
Grand total, appropriations	101,438,122	86,100,000	77,300,000

Average salary of ungraded positions	$5,214	$5,990	$5,990

Mr. EVINS. We will take the items on page 4. This is your appropriation summary for operation and maintenance.

We will put pages 4 and 7 through 10 in the record.

(The pages follow:)

OPERATION AND MAINTENANCE APPROPRIATION SUMMARY—DIRECT OBLIGATIONS

Budget program/project	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Warning and detection	$6,077,576	$5,710,000	$4,710,000
Warehousing and maintenance	4,577,430	4,100,000	3,600,000
Warning systems	800,457	800,000	600,000
Detection and monitoring systems	699,689	810,000	510,000
Emergency operations	20,635,306	20,063,000	12,246,000
Training and education	12,711,784	13,174,000	8,277,000
Emergency information	1,865,450	2,989,000	1,700,000
Damage assessment	1,426,258	1,635,000	1,200,000
Emergency operations systems development	1,877,077	1,000,000	750,000
Broadcast station protection program	1,156,978	806,000	180,000
Other emergency operations activities	1,597,759	459,000	139,000
Financial assistance to States	28,259,989	27,500,000	26,000,000
Personnel and administrative expenses	17,376,500	18,500,000	19,100,000
Emergency operating centers	5,970,535	4,500,000	4,500,000
Survival supplies, equipment and training	4,912,954	4,500,000	2,400,000
Management	11,465,251	12,827,000	12,744,000
Personal services and benefits	9,828,867	10,840,000	11,018,000
Travel	511,578	525,000	500,000
Administrative and housekeeping expenses	1,124,806	1,462,000	1,226,000
Total	66,438,122	66,100,000	55,700,000

WARNING AND DETECTION

PROJECT	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Warehousing and maintenance	$4,577,430	$4,100,000	$3,600,000
Warning systems	800,457	800,000	600,000
Detection and monitoring systems	699,689	810,000	510,000
Total	6,077,576	5,710,000	4,710,000

WAREHOUSING AND MAINTENANCE

Fiscal year 1967	$4,577,430
Fiscal year 1968	4,100,000
Fiscal year 1969	3,600,000

1. Warehousing and transportation ($1,085,589) ($1,000,000) ($800,000)

Government owned radiological and emergency water supply equipment and supplies are located in Government controlled warehouses throughout the country. The radiological equipment is awaiting distribution by either grant or loan to State and local governments and the emergency water supply and purification equipment is being maintained to assist State and local governments during the postattack period.

Radiological and emergency water supply items are not standard market equipment and therefore must be procured in advance of an emergency; provided secure storage; packaged into training or operational sets as required and issued to State and local governments. Each lot of radiological instruments is inspected upon receipt from the manufacturer prior to shipment to its final destination. Instruments are individually checked for operability and assembled into kits or sets.

Emergency water supply equipment is available on a loan basis to States and communities to assist them in overcoming severe water shortages during peacetime as well as postattack emergencies. The equipment consists of pipes, couplings, pumps, purifiers, chlorinators, and storage tanks. During past droughts, the equipment has been used extensively by many communities to pump water from lakes or streams to local reservoirs in areas where normal water supplies have failed. During fiscal year 1967, 77 communities in 23 States were loaned emergency water supply equipment as a result of natural disasters. Use of this equipment for critical peacetime water shortages does not degrade its value for postattack operations. Water shortages critical enough to warrant peacetime deployment would remain critical after attack.

Funds are being requested to reimburse the Defense Supply Agency for recurring services related to the warehousing, including management costs, of OCD radiological and engineering equipment. The costs include warehouse space; issue, storage, and receipt; maintenance and quality control surveillance; and second destination transportation costs to meet OCD program requirements.

Inventory value of stocks on hand as of June 30, 1966 and 1967 and estimated for fiscal years 1968 and 1969 are shown on the following page.

[In millions of dollars]

	Radiological defense equipment	Emergency water supply equipment	CW equipment	Total
In warehouse as of June 30, 1966	27.4 (1.8)	6.4	0.3	34.1
Receipts during fiscal year 1967	+2.1 (5.3)	[1] +.2	0	+2.3
Issues during fiscal year 1967	−2.2 (.4)	([2])	0	−2.2
In warehouse as of June 30, 1967	27.3 (1.7)	6.6	.3	34.2
Estimated receipts during fiscal year 1968	+1.7 (.7)	0	0	+1.7
Estimated issues during fiscal year 1968	−3.3 (.5)	([2])	0	−3.3
In warehouse as of June 30, 1968	25.7 (1.9)	6.6	.3	32.6
Estimated receipts during fiscal year 1969	+1.5 (.8)	0	0	+1.5
Estimated issues during fiscal year 1969	−3.3 (.6)	([2])	0	−3.3
In warehouse as of June 30, 1969	23.9 (2.1)	6.6	.3	30.8

[1] Emergency water supply equipment receipts during fiscal year 1967 consisted of replacement items which included 5 miles of aluminum pipe, elbow caps, butterfly valves with extensions, primer manifolds, filters, and other accessories.
[2] During fiscal year 1967, OCD equipment was received and issued for a total dollar workload of $8,000,000. It is estimated that fiscal year 1968 and fiscal year 1969 workloads will be approximately at the same level as fiscal year 1967.

Note: Figures in parentheses are repair parts included in total.

2. Maintenance and calibration of radiological instruments ($3,341,293) ($3,100,000) ($2,800,000)

Radiation detection and measuring instruments are the only known means for determining the exact hazard to people and animals from radioactive fallout. They are required to measure exposure rates and doses in shelters and also for warning people of overexposure when performing emergency services outside of shelters for limited periods of time during a fallout environment. To provide a reliable operational capability, experience dictates that these sensitive instruments must be periodically inspected, calibrated, and repaired.

During fiscal year 1967, the federally funded radiological instrument inspection, maintenance and calibration program was expanded to include all 50 States, the District of Columbia and Puerto Rico. Through the inspection aspect of these contracts, the RADEF capability at local level is promoted and the monitoring capability increased. Where full time inspectors are used, they assist in the establishment of monitoring stations in areas where there is a considerable requirement for stations. Each State contract is thoroughly reviewed and evaluated in relation to its effectiveness versus cost prior to extension or continuation. The

experience developed in the maintenance and calibration contracts is evaluated and the results disseminated to the other States so that they may utilize the information.

Funds in the amount of $2.8 million are being requested for fiscal year 1969 to:

(*a*) Continue the federally funded radiological instrument inspection, maintenance and calibration program with all 50 States, the District of Columbia and Puerto Rico. Funds requested will permit continuation of contracts through 1969, $2,250,000.

(*b*) Procure batteries, supplies and replenishment items to provide continuing support to this program, $100,000.

(*c*) Procure repair parts to support the State maintenance shops requirements and to upgrade, to present day standards, selected early model instruments. The majority of the repair parts needed are of special design for use in radiological instruments. Bulk procurement by OCD using improved specifications is more economical than to have each State maintenance facility purchase for its own need, except for a few very common items that can normally be purchased locally. Distribution of these items will be from the Federal depot to the State's shop. To increase the capacity of the State shops, special test equipment designed for use with OCD instruments will be procured. Time will be saved in isolating defective components and restoring the operability of the instrument, $450,000.

3. Emergency water supply equipment program ($150,548) ($0) ($0)

During fiscal year 1967, funds were utilized for the procurement of 5 miles of aluminum pipe, elbow caps, butterfly valves with extensions, primer manifolds, filters and other accessories to replace selected obsolete emergency water supply equipment.

WAREHOUSING

Mr. EVINS. There is no construction money for new warehouses or for leasing.

Mr. ROMM. Our warehousing is done through GSA and through the Defense Supply Agency. This covers the warehousing of our radiological defense equipment inventory which is now in five depots and it will do down to three depots by fiscal year 1969.

Mr. EVINS. You say the radiological equipment is awaiting distribution by either grant or loan to State and local governments?

Mr. ROMM. Yes, sir, part of it.

Mr. EVINS. You have not distributed this?

Mr. ROMM. We have distributed 3.3 million instruments and there is available——

Mr. EVINS. This is not really all for payment for warehouse rent and personnel?

Mr. ROMM. This is the warehousing of those instruments, transportation when issued, and their maintenance and calibration, which starts on page 9.

USE OF EMERGENCY WATER SUPPLY EQUIPMENT

Mr. EVINS. Radiological and emergency water supply items are not standard market equipment, and therefore must be procured in advance of an emergency; provided secure storage; packaged into training or operational sets as required and issued to State and local governments. Each lot of the instruments is inspected upon receipt.

Emergency water supply equipment is available on a loan basis to States and communities, and you say the equipment consists of pipes, couplings, pumps, purifiers, chlorinators, and storage tanks. I thought you supplied this already.

Mr. ROMM. This is kept in central storage for use in time of emergency. We actually have used it to assist in peacetime disasters.

Mr. EVINS. You say during fiscal year 1967, 77 communities in 23 States were loaned emergency water supply equipment as a result of natural disasters. Did they pay you back?

Mr. ROMM. They are supposed to maintain the equipment until they no longer need the emergency water supply.

LOCATION OF EMERGENCY SUPPLIES AND EQUIPMENT

Mr. EVINS. Where are the emergency radiological supplies located?

Mr. ROMM. Bastrop, Tex.; Mechanicsburg, Pa.; Stockton, Calif.; Anniston, Ala.; and Kansas City, Mo.

Mr. EVINS. How many are there?

Mr. ROMM. Five.

Mr. EVINS. Are your water supplies in the same warehouses?

Mr. ROMM. In those warehouses and 11 others. They are distributed more widely.

RECEIPT AND ISSUE OF RADIOLOGICAL EQUIPMENT

Mr. EVINS. On page 9 you show some breakdown figures. Receipts during 1967, plus 2.1. Issues during 1967, minus 2.2. In warehouses as of June 30, 1967, 2.3.

Explain these items.

Mr. ROMM. That is the value of radiological defense instruments in the warehouse at the beginning of the year, and those that have come in from new procurement during the year. Procurement was started some years ago and delivery is still coming in. It also shows those issued to States on loan or grant. For each year we have shown the amount of warehousing activity that is going on.

Mr. EVINS. Is this in dollars?

Mr. ROMM. Yes, sir; in millions of dollars.

Mr. EVINS. At the end of 1969 you have $23.9 million in the radiological equipment in the warehouse.

Mr. ROMM. Yes, sir.

MAINTENANCE AND CALIBRATION OF EQUIPMENT ISSUED TO STATES

Mr. EVINS. Maintenance and calibration of instruments, $2.8 million.

Mr. ROMM. That is for the instruments already issued to the States. We perform a warehousing function for those in our Federal warehouses in addition to the maintenance and calibration of those instruments that have been issued. We are requesting $2.8 million next year to keep them maintained and calibrated.

Mr. EVINS. You will have $23.9 million in the warehouse at the end of 1969.

Mr. ROMM. Yes, sir, and we have issued $26.6 million worth already.

Mr. EVINS. After it is issued, you have to maintain the instruments for the States?

Mr. ROMM. We have to maintain the instruments that are issued. That is where the maintenance and calibration comes in. These instruments are checked out in the warehouses before they are issued and

after that they are maintained at the State level by contract with each State.

Mr. EVINS. This is another service to the State?

Mr. ROMM. Yes, sir.

Mr. EVINS. You are requesting $2,250,000 to continue the federally funded radiological instrument inspection, maintenance and calibration program with all the States. You inspect them when you buy them, you inspect them when you put them in the warehouse, you inspect them when you distribute them, and you need $2,250,000 to inspect them after they have been distributed?

Mr. ROMM. While they are out in the field.

Mr. EVINS. Do they not do anything for you after you give them all of this fine equipment?

Mr. ROMM. We have for many years been trying to figure out the best way to do this. All of the States have these contracts, and this, we know, gets the job done.

Mr. EVINS. How is this accomplished?

Mr. ROMM. This is all done by State employees, either by the State police or by the National Guard capability within the State. What we are paying for is personal services.

Mr. EVINS. You are paying for the National Guard and the State police during the time they make inspections?

Mr. ROMM. Yes, sir.

Mr. EVINS. Funds to procure batteries, that is another $100,000.

Then for procuring repair parts you have $450,000. You do everything for them, Mr. Romm. We want them to be self-reliant and independent.

Mr. ROMM. I think you will find a great savings to everyone when we centrally procure the standard components and spare parts, rather than having them procured in 50 different places.

EQUIPMENT IN WAREHOUSES

Mr. JONAS. All of this is equipment in warehouses?

Mr. ROMM. No, sir, only those instruments that have not yet been issued or granted to the States are in our Federal warehouses. For that we have a warehousing requirement. There are an additional 3.3 million instruments that have been issued to the states and local governments. They are responsible for those instruments, we pay to maintain and calibrate them so that they will be ready for emergency use.

Mr. JONAS. Are they in some central storage place?

Mr. ROMM. No, sir; in 64,000 radiation monitoring stations around the country and 87,000 buildings that have shelters in them.

Mr. JONAS. What kind of equipment do you have in the Federal warehouse?

Mr. ROMM. The same kind of equipment that has been issued.

Mr. EVINS. It is surplus equipment that they have not used.

Mr. JONAS. It is not going to do anybody any good in the warehouse.

Mr. ROMM. It is a requisitioning process. The shelter is marked and then gets stocked. The stocking requisitions includes these instruments.

In addition, when a radiation monitoring station is established, these instruments are required plus two to four trained personnel to know

how to use them. When that happens they request the instruments to be issued to them. That is how the issue process occurs. The instruments we have in the warehouse are available to them when the requisitions come in.

Mr. EVINS You have a large amount distributed throughout the country which the Government maintains, and you have another large amount in the Federal warehouses which they can call upon?

Mr. ROMM. That is right.

Mr. EVINS. I can understand why you would maintain them in the warehouse. You inspect them when you purchase them, inspect them in the warehouse, and pay for the local police or local guard for the time they have spent on inspecting the instrumentation after you have furnished it to the States and the local communities.

Mr. ROMM. And this is part of the authorization in the act which permits us to grant and maintain radiological instruments. You must remember these instruments are unique to civil defense. They have no other function or purpose.

WARNING SYSTEMS

Mr. EVINS. Besides the instrumentation, you have the emergency water equipment and you supply that.

Let's look at your warning systems on page 11. You asked for $800,000 last year and you are asking for $600,000 next year. You state:

> The most promising configuration of radio systems which meets existing operational requirements is a system of low frequency radio stations.

Is this the system that has been accepted?

Mr. ROMM. Yes, sir; it is the program which is funded by the U.S. Army Strategic Communications Command and it has not yet been deployed.

Mr. EVINS. Is the decision information distribution system deployed?

Mr. ROMM. That is the one not yet deployed.

Mr. EVINS. Then you have the Federal Communications Commission, industry, the Military Establishment, and the NAWAS warning points.

Mr. ROMM. That is right, and the national warning system is the one that is deployed. If you would like, we can provide a map showing how widespread that is. It is a real good system.

Mr. EVINS. These are funds available for 1968 for these purposes: Low frequency alert receivers, $150,000; warning receivers, $60,000; component development, $75,000; LF receiver performance tests, $190,000; engineering services, $325,000.

After buying all of this equipment, it is not sufficient and you want to purchase more in 1969.

Mr. ROMM. The funds for 1968 and 1969 are all development funds to provide a better warning capability than exists today. Our studies have indicated that speedier warning and speedier response to warning could save up to 8.5 million additional people in event of a large-scale attack. This is a critical piece of our development program, and the material proposed here would give us a much better capability for warning over and above what we have now.

Mr. EVINS. My observation is that you bought this equipment last year and you still want to buy more when you have three or four different systems.

Mr. ROMM. We have not purchased this equipment. This is really developmental, this is not deployed equipment. All we ask for in fiscal years 1968 and 1969——

Mr. EVINS. You mean you are telling the committee that after 18 years you have not developed a safe warning system yet?

Mr. ROMM. We have a fine warning system, but it could use improvement.

DETECTION AND MONITORING SYSTEMS

Mr. EVINS. It is operating and is a fine system.

You are asking for $600,000 for your warning system for next year.

On page 15, "Detection and Monitoring Systems," last year was $810,000, and you are asking for $510,000 next year. We will place 15 through 18 in the record.

(The pages follow:)

DETECTION AND MONITORING SYSTEMS

Fiscal year 1967	$699,689
Fiscal year 1968	810,000
Fiscal year 1969	510,000

1. Radiological engineering service ($692,825) ($800,000) ($500,000)

This program continuously reevaluates the applicability of past and present radiological instrumentation and systems for use in community shelters and national monitoring programs. This equipment is updated or otherwise modified as needed to meet the requirements for cost, performance, and reliability in providing the radiological data important in making decisions concerning human safety in a nuclear disaster. This is accomplished through a comprehensive engineering program which examines present instrumentation in relation to present and future needs.

This engineering program is designed to evolve the optimum radiological instrumentation and systems for use in organized civil defense programs at all levels of government.

Simpler, less costly and more reliable methods of obtaining the required radiological data are continuously being sought.

(*a*) *Production engineering, $55,000.*—Production engineering bridges the gap between research and mass production. New or improved instruments and components thereof are converted into devices capable of being produced at minimum cost. Production engineering projects produce detailed preliminary specifications suitable for limited pilot production procurement. This project category applies to improvements to component parts and detectors of instruments in the inventory as well as new instruments.

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Instrument calibration improvements	$44,311	$10,000	
Survey meters using solid-state circuit elements		25,000	
Improved Geiger-Mueller detectors	33,007		
Improved power sources			$25,000
Improved components for radiological instruments	75,000	80,000	
Improved test equipment for Federal depots and State shops	25,250	20,000	
Radiological instruments for use by the citizen		30,000	30,000
Total	177,568	165,000	55,000

(b) *Pilot production, $20,000.*—Small quantities of instruments or components which have been production engineered are manufactured in accordance with preliminary specifications. These projects are closely monitored so that final production or retrofit specifications may be prepared. Equipment produced under these contracts are given extensive field trials.

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Mark IV instrument calibrators	$114,725	$30,000	
Detectors for automatic remote radiological monitoring systems		40,000	$20,000
Total	114,725	70,000	20,000

(c) *Pilot installations, $70,000.*—The feasibility and utility of new radiological monitoring systems concepts are determined by the installation of prototype systems which are evaluated by detailed examination, test and exercise.

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Trial installation in Montgomery County, Md	$19,765		
Automatic remote radiological monitoring and reporting systems		$80,000	$70,000
Total	19,765	80,000	70,000

(d) *Field trials, $70,000.*—Production instruments, research prototypes, and instruments developed for other services as well as those produced in pilot quantities for OCD are tested in the field environment. These field trial projects serve to produce refined and highly dependable final operating procedures and reveal any deficiencies in instrument reliability so that early remedial actions may be taken.

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Field trial in Montgomery County, Md		$20,000	$20,000
Field trials of radiological instruments by States	$35,047	50,000	50,000
Field trials of remote sensor radiation meters by Corps of Enginners	10,000		
Field testing of aerial survey meters at Fort McClellan		10,000	
Total	45,047	80,000	70,000

(e) *Special projects, $115,000.*—This category provides for comprehensive maintenance manuals, reliability and effectiveness studies, design and standardization projects, value engineering, and the study of special logistics problems relating to radiological instruments. Selected instruments are retrofitted as necessary to improve reliability, performance, and logistics.

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Preparation and improvement of technical and maintenance manuals	$23,380	$20,000	$20,000
Engineering for retrofitting of radiological instrument inventory	74,678	30,000	
Consolidation and standardization of repair parts for radiological instruments	38,700	35,000	
Specification improvement	26,233	30,000	25,000
Operational readiness evaluation of radiological instruments		30,000	
Instrumentation circuit design		40,00	40,000
Computerized circuit design analysis		20,000	30,000
Power requirements analysis and evaluation		20,000	
Total	162,991	225,000	115,000

(*f*) *Surveillance, $170,000.*—It is necessary to provide day-by-day engineering monitoring of items in mass production. Closely supervised tests are necessary in order to assure that equipment conforms with specifications and meets all performance requirements. Similar surveillance is maintained for depot stocks to insure that previous procurements continue to perform in accordance with the applicable specifications.

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Testing by the National Bureau of Standards	$61,390	$60,000	$50,000
Radiological instrument test facility (operated by Stratcom on a reimbursable basis)	51,339	60,000	60,000
Analytical and design services (principally by AEC)	60,000	60,000	60,000
Total	172,729	180,000	170,000

2. Weather reporting ($6,864) ($10,000) ($10,000)

Federal, State, and local civil defense organizations need the capability to provide a fairly valid indication of the direction and average speed of fallout from surface burst nuclear weapons. The forecasts, provided by contract with the U.S. Weather Bureau, are to be used primarily to alert areas of the likelihood of fallout and its anticipated time of arrival, for use in such last minute actions as directing final phases of movement to shelter and the orderly shutdown of industries.

Mr. ROMM. This is really a quality control effort over our existing monitoring equipment and for the development of prototypes. It has paid off in many ways. The new calibrater does calibration in a lot faster time, and we have cut the number of components, which simplifies our maintenance problem, down from 750 to 300.

RADIOLOGICAL ENGINEERING SPECIAL PROJECTS

Mr. EVINS. What are your special projects, Mr. Director?

Mr. ROMM. What we have here is, first, the development of improved technical and maintenance manuals for the people who are maintaining equipment in the field. We want to improve our specifications in the event of future procurement and improve our design circuits in existing instruments. We have found in the V–715 survey meters we doubled the battery life by changing the circuits. So this pays off many times over.

Mr. EVINS. Special projects provide for comprehensive maintenance manuals——

Mr. ROMM. And for better specifications and circuitry.

WEATHER REPORTING

Mr. EVINS. Weather reporting goes up to $10,000 from $6,000 in 1967. I thought the Weather Bureau did that for you.

Mr. ROMM. This is forecast of upper atmosphere winds, which is used in fallout forecasting. What this pays for is information to be provided to State and local governments so if there were an attack they would be able to forecast the arrival of fallout.

Mr. EVINS. Can't you get that from the Air Force? They have a large budget. They know about the weather.

Mr. ROMM. That is not the same.

WARNING SYSTEMS

Mr. MARSH. Will the DIDS system you describe here replace the Emergency Broadcasting System?

Mr. ROMM. No, sir.

Mr. MARSH. How will it fit into the overall warning plan?

Mr. ROMM. The decision information distribution system is a low-frequency system which is designed to provide both hard copy and voice information on warnings. It is very flexible in terms of how it would operate.

For example, we can disseminate information to about 1,000 different addressees on the NAWAS system right now. It is a nationwide partyline system. However, in time of crisis you could not use it if you wanted to restrict the kind of information you gave to whom.

In addition, once you get the DIDS transmitters up, you can add any number of local governments to the system by just providing them with a receiver. It is a very expandable system. In other words, right now we get to about 1,300 warning points with 960 of them active 24 hours a day. To get at 6,000 local governments is a costly process. If you had the low frequency radio system and you could get it to them with a one-time investment in the receivers.

Mr. MARSH. Thank you.

EMERGENCY OPERATIONS

Mr. EVINS. "Emergency operations." We will place in the record pages 19 through 30.

(The pages follow:)

PROGRAM—EMERGENCY OPERATIONS

Project	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Training and education	$12,711,784	$13,174,000	$8,277,000
Emergency information	1,865,450	2,989,000	1,700,000
Damage assessment	1,426,258	1,635,000	1,200,000
Emergency operations systems development	1,877,077	1,000,000	750,000
Broadcast station protection program	1,156,978	806,000	180,000
Other emergency operations activities	1,597,759	459,000	139,000
Total	20,635,306	20,063,000	12,246,000

Training and Education

Fiscal year 1967	$12,711,784
Fiscal year 1968	13,174,000
Fiscal year 1969	8,277,000

DISTRIBUTION BY ITEM

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
1. Operation by staff college	$342,245	$484,000	$400,000
2. University extension program	3,988,428	4,100,000	3,400,000
3. Adult education program	4,009,000	3,900,000	2,000,000
4. Armed Forces program	14,440	16,000	16,000
5. Rural civil defense program	1,400,000	1,200,000	300,000
6. Medical self-help program	1,045,700	1,200,000	500,000
7. Architect and engineer development program	1,342,387	1,322,000	977,000
8. Training materials	271,228	576,000	484,000
9. Training evaluation and improvement	199,786	50,000	150,000
10. Community shelter planning training program	98,570	326,000	50,000
Total	12,711,784	13,174,000	8,277,000

1. *Operation of staff college: fiscal year 1967, $342,245; fiscal year 1968, $484,000; fiscal year 1969, $400,000*

The Office of Civil Defense concentrated its advanced staff training at the Staff College in Battle Creek, Mich. In addition to this training function, the school develops instructional doctrine on shelter and emergency operations and develops training materials in support of selected national civil defense programs. This school is considered as the prime source within the Office of Civil Defense for instructional and training doctrine. The transfer of basic training of State and local personnel to the university extension program and to State civil defense training centers permits a larger measure of the resources of the Office of Civil Defense school to be applied to advanced work and the development of professional development courses to meet the needs of the civil defense program.

In addition to the resident instruction offered by the school, nonresident instruction in the form of seminars and traveling teams is provided for the selected training of Federal, State, local, and industrial officials.

During fiscal year 1969, the Staff College will present a schedule of 80 resident courses and will graduate approximately 2,500 students. In addition to the resident course schedule, the Staff College will continue to conduct nonresident courses such as emergency operation simulation sessions, special training in support of community shelter planning, and special and advanced work for the professional development of civil defense officials.

(*a*) *Recurring operation expenses, including renovations and modifications: fiscal year 1967, $202,745; fiscal year 1968, $374,000; fiscal year 1969, $320,000*

Recurring operating expenses of the Staff College provide for normal administrative and housekeeping activities, audiovisual aids, specialized training supplies and equipment, and renovations and modifications necessary to provide special facilities required for specialized course instruction.

(*b*) *Professional support and consultant services: fiscal year 1967, $99,272; fiscal year 1968, $80,000 fiscal year 1969, $50,000*

To continually upgrade the professional level of school curriculum and methodology, professional support and consultant services are required to provide for the development, conduct, and evaluation of training in support of the Staff College. This includes consultative and other services such as: (1) guest lectures; (2) seminars; (3) preparation of training materials; and (4) course and materials evaluation.

(*c*) *Student expense program: fiscal year 1967, $40,228; fiscal year 1968, $30,000; fiscal year 1969, $30,000*

The student expense program was developed to encourage States and local subdivisions to increase their civil defense readiness by facilitating the training of civil defense leaders and instructors. Under the provisions of the Federal Civil Defense Act of 1950 (Public Law 920), as amended, eligible students are authorized partial reimbursement for expenses incurred in attendance at resident courses at the Staff College.

2. *University extension program: fiscal year 1967, $3,988,428; fiscal year 1968, $4,100,000; fiscal year 1969, $3,400,000*

The extension divisions of land-grant colleges and universities have unique capability in civil defense education and training through their faculties and their experience in local communities.

The civil defense university extension program, which began in fiscal year 1963, is based upon two major premises:

(*a*) That civil defense education and training must be effectively carried on at the local level to achieve operational readiness.

(*b*) That civil defense education and training must make maximum use of existing instructional resources, thus avoiding the development of special facilities used only for civil defense.

Under contracts with OCD, the extension divisions of the colleges and universities use their extensive resources to conduct conferences for government officials and community leaders and give training courses to improve defense operational readiness in local communities. Success in meeting training goals in fiscal year 1968 and earlier years will result in reduced training needs under the university extension program for shelter managers and radiological monitors for fiscal

year 1969. Additional training requirements for these two areas will be fulfilled through use of the adult education program. (See paragraph 3.)

Contracts with State land-grant colleges and universities in 50 States, the District of Columbia, and Puerto Rico to be executed during fiscal year 1968 and fiscal year 1969 will provide for:

	Fiscal year 1968	Fiscal year 1969
(a) Conferences for public officials and key community leaders	450	200
(b) Conferences for business and industry	100	52
(c) Radiological defense officer courses	200	200
(d) Civil defense management courses	200	200
(e) Emergency operation simulations	200	300
(f) Courses in planning and operations	250	250
(g) Shelter manager instructor courses	100	100
(h) Radiological monitor instructor courses	100	100
(i) Radiological monitor courses	250	0
(j) Shelter managers	100	0

WORKLOAD

	Actual, fiscal year 1967		Estimate, fiscal year 1968	
	Conducted	Number certified	To be conducted	Number to be certified
COURSES				
Shelter management (instructor)	145	2,736	134	2,400
Radiological monitoring for instructors	211	2,892	166	2,000
Radiological monitoring for instructors (refresher)	11	103	29	450
Shelter managers	478	9,018	442	8,800
Civil defense management	175	2,453	178	2,700
Radiological monitors	265	3,759	280	4,500
Radiological defense officers	137	1,256	139	1,400
Emergency operations simulations	79	3,183	172	7,000
Planning and operations			123	2,500
Total	1,501	25,400	1,663	31,750
CONFERENCES AND SEMINARS				
Conducted	624	----------	602	----------
Number participating	29,651	----------	30,100	----------

3. *Adult education program; fiscal year 1967, $4,009,000; fiscal year 1968, $3,900,000; fiscal year 1969, $2,000,000.*

It is the responsibility of government to inform citizens of protective measures that will enhance their chance of survival in the event of a disaster. The civil defense adult education (CDAE) program is a means by which the Federal Government participates with State and local governments to meet this responsibility by providing adults with a basic understanding of civil defense and instruction on individual, family and community protection against the effects of nuclear weapons.

Through local, State and Federal educational leadership and cooperation, personal and family survival courses are made available to out-of-school adults in communities throughout the country.

The resources of the adult education system also are used to train selected adults to serve as radiological monitors and shelter managers in support of civil defense emergency operations.

The Federal Government finances the CDAE program and is responsible for its overall planning and direction. The program is conducted mainly under the direction of chief State school officers through contract with the Office of Education. In most cases the chief State school officer delegates the responsibility to a State civil defense adult education coordinator. The civil defense adult education coordinator also works with local school officials in recruiting and training teachers for these courses. Instructional materials are supplied by the Federal Government. State civil defense adult education staffs and local civil defense adult education teachers are paid with Federal funds.

Since its inception on a trial basis in four States in fiscal year 1960, as of fiscal year 1967 the civil defense adult educational program has expanded to include 49 States, the District of Columbia and Puerto Rico. During this time, approximate-

ly 1.9 million adults and teachers have completed the personal and family survival course, and 66,800 radiological monitors have been trained utilizing formal classroom sessions.

The scope of the program was further increased during fiscal year 1968 to include training of shelter managers in direct support of the community shelter planning program. A decrease in funds is reflected for fiscal year 1969 since a program change is planned for fiscal year 1969 that will place increased emphasis on using television for teaching the PFS course. Field tests of television use are being conducted in selected States (Maine, Massachusetts and Texas) during the latter part of fiscal year 1968. Training in the radiological monitoring and shelter management skills will still utilize formal classroom sessions due to the instructional procedures involved.

Training effort has resulted in the following accomplishments:

	Actual, fiscal years 1960–67	Estimate, fiscal year 1968
Personal and family survival:		
Teachers trained	60,410	6,500
Adults completing course	1,896,759	380,000
Radiological monitors trained	[1] 66,785	33,000
Shelter managers trained	0	6,000

[1] Initiated in fiscal year 1966.

4. *Armed Forces program: fiscal year 1967, $14,400; fiscal year 1968, $16,000; fiscal year 1969, $16,000*

During each of fiscal years 1968 and 1969 it is estimated that the Continental Army Command (CONARC) will train approximately 2,500 radiological defense monitors in response to specific requests for this training assistance from local governments. This training activity has been operating to supplement monitor training resources of local governments. CONARC uses its existing capability in the radiological defense field in conducting this training with the Office of Civil Defense providing training materials and instruments. CONARC is reimbursed for travel and per diem of instructors, vehicular operation necessary for transportation of instructors to off-post training locations, shipment of instructional instruments to maintenance warehouses for repair, per diem of instructors to conduct Saturday training classes at off-post locations, and travel and per diem of CONARC headquarters personnel to monitor and evaluate instruction.

5. *Rural civil defense program: fiscal year 1967, $1,400,000; fiscal year 1968, $1,200,000; fiscal year 1969, $300,000*

The basic objective of the rural civil defense program is to inform farm and rural people of measures that they need to take to prepare themselves for an attack, in order to be able to protect themselves and their livestock from the hazard of radioactive fallout.

The rural civil defense program is an excellent example of the use of existing Government resources. The Department of Agriculture deals with rural America in many ways. Its county agents are intimately connected with the activities of rural people. The rural civil defense program has become an integral part of USDA Extension Service which reaches every rural county in the United States.

Funds are provided to the U.S. Department of Agriculture to prepare materials and to provide for a hard-core staff which is solely engaged in this activity. The Extension Service is responsible for disseminating civil defense information to rural people through education. The educational know-how of the Extension staff was employed to discharge this responsibility, and accepted methods of education were used to build a logical, practical, and continuing program at the current level of understanding.

Effective with fiscal year 1969 the Department of Agriculture organization for emergency preparedness functions will incorporate the rural civil defense program into the various phases of the regular ongoing activities of the cooperative extension service. This includes providing for civil defense training to local leaders, helping to organize local action groups, and acquainting rural residents with the assistance available to them through local civil defense agencies. They work through normal channels of home demonstration activities, 4–H clubs

and youth development, community development, safety programs, and agricultural meetings. These activities have promotional support through the use of press, radio, television, direct mail, and other mass communications media.

Funds in the amount of $140,000 are being requested to provide for salaries and travel of a small USDA headquarters staff of eight persons in the Federal Extension Service which gives leadership to the program and some specialist assistance and four regional representatives each monitoring liaison with two OCD regional offices and with the State extension services of the States included in their regions. In addition, $160,000 is being requested for educational materials consisting of pamphlets, brochures, television, radio and film scripts, and other training materials.

6. *Medical self-help program: fiscal year 1967, $1,045,700; fiscal year 1968, $1,200,000; fiscal year 1969, $500,000*

The medical self-help training program pertains directly to the humanitarian needs envisioned in shelter utilization as well as to the increase of community readiness for whatever disaster may occur. People trained under this program are ready to assist others in matters of health and medical care in community shelters, which is especially important when medical professionals are not present. As the number of shelter facilities of all types multiply, the ratio of medical professionals to serve the shelter occupants declines.

The program is managed by the Department of Health, Education, and Welfare (U.S. Public Health Service) through funds made available by the Office of Civil Defense. The administration of the medical self-help program below the Federal level is the responsibility of the State. At the State level, the State health department or the State civil defense office is the administrative agency responsible for program control and for distribution of all training kits to communities and support groups. At the community level the health department or civil defense office implements and administers the program. However, in order to effectively secure the necessary support needed, all industrial, church, civic, welfare, Red Cross, school, and farm organizations are asked to play a supporting role and actively participate in the organization of classes. Instructors serve on a voluntary basis.

The medical self-help training course was field tested by the Office of Civil Defense in fiscal year 1962 and implemented nationally in fiscal year 1963. Through fiscal year 1967, approximately 5.9 million people have been trained by formal classroom instruction. In addition, some educational TV stations and closed circuit arrangements are being utilized to aid in the presentation of courses. Training films and materials may be used if the classes are closely controlled, requiring students to assemble for registration, participate in practice sessions and discussion and take the examination. Locations where this has been carried out successfully include Tine County, Denver metropolitan area; Minnesota; North Dakota; Texarkana-Shreveport; South Carolina; Kansas City, Missouri School District; Chelmsford and Boston, Mass.; East Tennessee; Illinois; Arizona; Florida; Georgia; Texas; Utah; West Virginia; Colorado; Puerto Rico; and California.

During fiscal year 1965, Public Health Service became acutely aware of the need to provide additional program management to medical self-help training at the State level. As a result, Public Health Service field tested and proved the effectiveness of providing a full-time individual at State level. It is anticipated that these individuals will have succeeded in developing an in-state capability of maintaining the program by the end of fiscal year 1968. Therefore, funds for the continued assistance to States are not being requested for fiscal year 1969.

Number of people completing course

Fiscal year 1962	11,503
Fiscal year 1963	634,282
Fiscal year 1964	504,200
Fiscal year 1965	832,410
Fiscal year 1966	1,740,293
Fiscal year 1967	2,367,728

REQUIREMENTS

Item	Fiscal year 1968	Fiscal year 1969
Assistance to States	$537,000	0
Regular kits	225,000	$113,000
Printing (student supplies, lesson sets, examination booklets, supplement of family guide, instructor reports, State monthly activity reports, master control cards, etc.)	260,700	267,500
Assembling, boxing, distributing, and warehousing printed material	40,000	35,700
Sets of training films	75,000	50,000
Sets of filmstrips, including production, distribution, and warehousing	3,800	3,800
Promotional materials	15,000	15,000
Review of technical content by National Research Council	25,000	0
Miscellaneous (supplies, equipment, transportation of things, EAM processing, postage)	18,500	15,000
Total	1,200,000	500,000

7. *Architect and engineer development program: fiscal year 1967, $1,342,387; fiscal year 1968, $1,322,000; fiscal year 1969, $977,000*

Building committees, property owners, and others initiating construction projects rely heavily on the Nation's architects and engineers for design. It is of prime importance, therefore, to create sound professional competence within these professions to plan for and design effective shelters at little or no additional construction cost. The architect and engineer development program provides the practicing architects and engineers with appropriate technical training so that effective, low-cost shelters are incorporated into on-going design projects.

The ultimate goal is to have one or more architects or engineers qualified in fallout shelter analysis in each design firm and government agency which employs such professionals. In addition, it is planned to have one or more professors qualified to teach appropriate courses in shielding analysis and/or other phases of protective construction as a part of the curriculum in architectural or engineering departments of colleges and universities.

With the cooperation of architectural and engineering education institutions and their faculties, a unique professional development program for practicing architects and engineers and faculty was initiated in 1961. Over 156 institutions have cooperated in having selected architectural and engineering faculty attend special OCD-sponsored programs to become highly qualified in nuclear defense design technology. As of January 1968 there were 627 qualified instructors available to OCD for conduct of professional development courses. Further, as of January 1, 1968, 13,976 architects or engineers had been certified as fallout shelter analysts by the Defense Department after completing a rigorous course of instruction conducted by universities or colleges or by contract agreement with individual instructors, mainly professors of architecture or engineering on university faculties.

The graduate student development program will be continued in fiscal year 1969 at selected universities which have faculty who have participated in the OCD summer institute program and are qualified as shielding analysis instructors. This will award approximately 20 fellowships to selected students when they pursue a course of study in radiation shielding or architectural studies related to protection from radiation. The American Institute of Architects and the radiation shielding subcommittee of the National Academy of Science recommended this program which permits outstanding graduate students, including former faculty members, to work on theses for advanced degree projects, and to pursue special studies of particular importance to civil defense. The specific areas of interest are radiation shielding, protective construction, environmental engineering, shelter planning, and other technical fields related to fallout protection.

[In thousands of dollars]

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Professional development courses	728	650	555
Faculty development	330	280	260
Student development	210	200	130
Workshops	64	150	0
Special projects	10	42	32
Total	1,342	1,322	977
Fallout shelter analysts trained (A. & E.)	2,630	3,000	2,300
Instructors qualified	129	140	100
Fellowships awarded	32	30	20

8. *Training materials: fiscal year 1967, $271,228; fiscal year 1968, $576,000; fiscal year 1969, $484,000*

Development, procurement, and distribution under this heading gives logistical support to all national civil defense instructional programs. For effective instruction to take place, the instructor must have the proper material and devices in hand at the right time and place. This fact imposes a need to stock instructional materials and to replenish such stocks as they are drawn down by State and local use. Action to be taken and work to be performed follows:

1. New training materials	($134,000)
(*a*) Emergency firefighting for the householder	100,000
(*b*) Executive development for local CD directors	27,000
(*c*) Emergency operations systems development and supporting programs	7,000
2. Replacement/reprint of existing training materials	(299,000)
(*a*) Civil defense management (CDM) training package	25,000
(*b*) Shelter management instructor (SMI) training package	2,000
(*c*) Shelter management package	54,000
(*d*) Emergency operations simulation sessions (EOSS) materials	7,000
(*e*) Staff college information materials	8,000
(*f*) Radiological defense officer (RDO) training package	6,000
(*g*) Radiological monitoring instructors (RMI) and radiological monitoring training package	27,000
(*h*) Personal and family survival booklet for use in adult education programs	70,000
(*i*) Labor training package	18,000
(*j*) Training films	48,000
(*k*) Other training materials	34,000
3. Home study courses	(51,000)

These courses are designed primarily as home study courses for persons who are unable to participate in other OCD sponsored training courses.

9. *Training evaluation and improvement; fiscal year 1967, $199,786; fiscal year 1968, $50,000; fiscal year, 1969, $150,000*

(*a*) During fiscal year 1968, the self-help emergency firefighting training package, developed under contract by the International Association of Fire Chiefs, will be field tested by 100 instructors from different geographical locations. It is estimated that approximately 5,000 students will be involved in the test at a cost of $50,000.

(*b*) Funds requested in fiscal year 1969 will provide for evaluation of the civil defense university extension program (CDUEP) to determine its effectiveness as a system. This will encompass the management of the program at the National and State level, the determination of training requirements, university instruction, followup on use of trained personnel, and contribution to operational readiness at the local level, $150,000.

10. *Community shelter planning training program: fiscal year 1967, $98,570; fiscal year 1968, $326,000; fiscal year 1969, $50,000*

Implementation of the community shelter planning program on a national scale requires training of three categories of people: (1) Urban planners who

produce community shelter plans, (2) National, State, and local civil defense officials involved in community shelter plans, and (3) State CSP officers and civil defense university extension program personnel involved with local governments in producing "nonfunded" community shelter plans.

Training that these individuals needs is of two types: (1) Instruction on how to apply general planning techniques in community shelter planning, and (2) training in civil defense policy, programs, and planning.

Through fiscal year 1967, 572 planners and 299 local officials were instructed in CSP techniques. In addition, 928 State and local people were instructed in special State and regional workshops.

During fiscal year 1968, OCD continued its community shelter planning (CSP) training by contract with a leading university. It is planned to conduct 27 CSP workshops, seminars, and conferences for approximately 800 planners and civil defense officials to provide for scheduled calendar years 1967-68 training, using the physical facilities of the Staff College and its instructors for CD subjects. The university staff will also support regular Staff College courses with CSP instruction.

Funds in the amount of $50,000 are requested for fiscal year 1969 to provide continuity of professional assistance in the planning field.

Mr. EVINS. Last year for training and education you had an appropriation of $13,174,000, and in 1969 you are asking for $8,277,000. This is broken down on page 20. You have $400,000 for operation of Staff College at Battle Creek, Mich.

Mr. ROMM. Yes.

UNIVERSITY EXTENSION PROGRAM

Mr. EVINS. In the university extension program you ask for $3.4 million. Is this all State universities?

Mr. ROMM. Yes, sir; we have contracts with at least one university in every State.

Mr. EVINS. What is the nature of those contracts?

Mr. ROMM. They are programs to teach civil defense skills. There is a schedule here on page 22 which indicates what they have been teaching and what they are scheduled to teach with fiscal year 1968 funds, and what courses they will be providing with fiscal year 1969 funds.

Mr. EVINS. One can go to Battle Creek, Mich., or the University of Michigan, and business and industry can get training on civil defense in either place?

Mr. ROMM. And all of the public officials and the people who require civil defense skills can get this training in their own State without coming to the OCD school.

We have found the university extension program has increased almost tenfold the annual training rate in civil defense skills across the country.

Mr. EVINS. Your tables do not show that.

In 1968 you had 450 conferences for public officials, and next year 200 conferences. For business and industry, you had 100 last year and 52 for 1969. They have been cut in half.

Radiological monitor courses go from 250 down to zero. Shelter managers go from 100 down to zero.

Mr. ROMM. The last two courses will be taken over by the adult education program, which is starting to teach skills in the high schools.

The point I am making is, prior to letting contracts with the universities, we used to have three OCD schools, one on the east coast,

one on the west coast, and at Battle Creek. We trained 5,000 people a year. These universities are now training about 50,000 people a year.

Mr. EVINS. What type courses are these?

Mr. ROMM. These are detailed courses in specific defense capabilities, courses on civil defense management, emergency simulations, shelter manager instructor courses.

OCD STAFF COLLEGE

Mr. JONAS. It looks like you are ready to close down that college.

Mr. ROMM. No, sir.

Mr. JONAS. It looks like it would be practical to do it.

Mr. ROMM. What we have at the college is really two functions: One is, this is the place where we have our curriculum development.

Mr. JONAS. I know, but you already have it developed now.

Mr. ROMM. There are continuing course developments.

For example, we have been developing courses in damage assessment capability, which the Staff College develops, and then will be taught elsewhere. All of the people at these universities who will be instructors in civil defense, also come to the Staff College to get that kind of training so they are able to teach these courses.

Mr. JONAS. I know, but the teachers in the extension courses of the universities are as smart as the people are at Battle Creek. There has never been any experience in this; it is all theory.

Mr. ROMM. There is experience in how to teach the course and what the course material is like. The people in the universities, prior to this effort, have never taught these courses before.

Mr. JONAS. The people at Battle Creek have never taught them before either.

Mr. ROMM. These are the people who actually develop the courses.

TRAINING EVALUATION

Mr. TALCOTT. How do they ascertain whether or not what they are teaching is correct? Do you ever evaluate any damage?

Mr. ROMM. We have a series of evaluation proposals. For example, this year we are in the process of evaluating the adult education instruction program in high schools, and we propose in 1969, to have an evaluation of this university extension program.

In addition, we have contract monitors who come from our regional offices to observe these courses and assure themselves that what is being taught is proper and the instruction good.

TRAINING IN DAMAGE ASSESSMENT

Mr. TALCOTT. Could not an ordinary official appraiser look at a piece of property before the bomb hits and after the bomb hits it and determine the damage?

Mr. ROMM. This is easily done long after the attack is over. The problem in damage assessment is to be able to get estimates early enough to have an impact on operational decisions.

Mr. TALCOTT. And you teach how to estimate damage quickly?

Mr. ROMM. What we are teaching is a series of standard computation techniques which apply weapons effects and maps and resources so assessments can be made rapidly.

Mr. TALCOTT. Have you had any experience in testing these methods?

Mr. ROMM. How accurate is the system?

Mr. TALCOTT. Yes.

Mr. ROMM. What we have done is to compare the manual damage assessment techniques versus the computerized simulation of what the damage is and see how close they are, and they end up fairly close.

OCD STAFF COLLEGE

Mr. EVINS. Who pays for the living expenses and the transportation of the student going to the college?

Mr. ROMM. Most of them are paid for by the local governments or their sponsors. We have matched funds in 1967 for 498 students in the amount of $40,228. In 1967, the Staff College actually had 2,842 students; we have matched funds for something less than a fifth of those.

Mr. EVINS. You want $320,000 for renovations and modifications. What is this?

Mr. ROMM. These funds are required for modifications, renovations as well as for housekeeping expenses at the Battle Creek school. There are also barracks-type structures there for student quarters.

Mr. EVINS. You want $50,000 for professional support and consulting services.

Mr. ROMM. This is a request to get professional help at the Staff College that is not there in sufficient numbers.

Mr. EVINS. How many members of the faculty are there at the Battle Creek College?

Mr. ROMM. There are 38 personnel. I am not sure as to the exact number of faculty members.

Mr. EVINS. Thirty-eight personnel assigned to the college, and about half of them are faculty people I suppose.

Mr. ROMM. I think that is about right.

Mr. EVINS. How long has the college been in operation?

Mr. ROMM. For approximately 15 years.

Mr. EVINS. And they have not become expert enough to teach the classes without bringing in more consultants and experts. You ought to go out there and make a lecture yourself once a year.

Mr. ROMM. I have.

Mr. EVINS. You are an expert. Secretary Resor could also go out and make a talk.

Mr. ROMM. You will find these courses last about 2 weeks apiece and they therefore may have as many as 50 courses during the year. It would be difficult for us experts to hit every course.

Mr. EVINS. It shows you have gone down from $80,000 to $50,000.

Mr. TALCOTT. How many graduates do you have?

Mr. ROMM. We had 2,842 students there in 1967. It runs about 3,000 a year.

Mr. TALCOTT. Each student for 2 weeks?

Mr. ROMM. It depends on the course. Some are 1-week courses and actually some courses are longer than 2 weeks. It averages 2 weeks.

Mr. JONAS. Over a period of 15 years, with that many per course it looks as if you would have had everybody in the United States trained by now.

Mr. ROMM. There are different courses. I think what we have trained——

Mr. JONAS. Do you have any repeaters?

Mr. ROMM. We have some repeaters, people who come and take more than one course.

STUDENT EXPENSE PROGRAM

Mr. EVINS. The student expense program is down to $30,000. How is that different from the other programs we had?

Mr. ROMM. The student expense program is the matching funds program for travel and per diem expenses for those qualified students who request this reimbursement.

Mr. EVINS. "University extension program, $3.4 million." Is that State extension?

Mr. ROMM. Yes, sir.

EMERGENCY INFORMATION

Mr. EVINS. We will look at the next item, "Emergency information."

You are asking for $1.7 million for emergency information. You have been providing emergency information for several years. What is the difference in this emergency information and that which you previously provided?

Mr. ROMM. This is really a continuation of it. The big pieces of this include, first, the publication of these community shelter plans when they are completed. These are the newer ones. I have here one copy each of several selected plans published. This particularly good one is for Waco and McLennan Counties in Texas.

This publication provides instructions to the people of these counties and communities when the shelter planning is completed. In effect, it tells them what to do and where to go in the event of a nuclear attack.

CIVIL DEFENSE INFORMATION PUBLICATIONS

Mr. EVINS. You are requesting $800,000 for information and guidance.

Mr. ROMM. The community shelter plans are included in the $800,000, as well as other public information publications on emergency activities. I have here the bestsellers in the public information area.

This fallout protection booklet is some years old and is going to be superseded by "In Time of Emergency." This, plus these other books, are actually the ones that are in most demand from the public. These two will be superseded by the one booklet.

Mr. EVINS The "Handbook for Emergencies" is the popular one?

Mr. ROMM. This, plus this, the "Handbook on Fallout Protection" and the "Handbook for Emergencies."

This one on family survival is really the textbook for adult education courses. We have also found this is in great demand as a public

information document. It has a lot more detail than the other two and is a fine text.

This one, "Family Survival Plan," is the fourth bestseller and was developed by the Extension Service of the Department of Agriculture.

Mr. EVINS. All of this comes under the $800,000 for guidance and information?

Mr. ROMM. Yes.

Mr. EVINS. You have $374,000 to keep the public informed on the status of the programs by means of films and information bulletins.

Mr. ROMM. We have some very successful films.

COMMUNITY SERVICES

Mr. EVINS You have $11,000 to continue to maintain a library of publications and films.

And for community services you have $350,000.

Is this the 1967 program on page 33?

Mr. ROMM. 1969.

Mr. EVINS. You mention fiscal year 1967.

Mr. ROMM. Yes. The justification related to 1967 tells you how many people visited our exhibits.

Mr. EVINS. Major exhibits, $40,000. They are to be at community fairs?

Mr. ROMM. Museums as well.

Mr. EVINS. You put the exhibits in museums?

Mr. ROMM. The most successful exhibits have been in the science museums. We had a large exhibit in the Smithsonian and at the Seattle Museum of Science.

Mr. EVINS. Do you have to continue to pay the Smithsonian once you get your exhibit in there?

Mr. ROMM. No, sir. The space for our exhibit in the museum is free. We have to pay for procurement and installation of the exhibit.

Mr. EVINS. Once you get it in there, you do not have to keep on paying them, do you?

Mr. ROMM. No, sir.

Mr. EVINS. They have separate appropriations for maintenance?

Mr. ROMM. When we take it out, the exhibit requires maintenance. As it is moved from place to place, it has to be maintained.

Mr. EVINS. Portable exhibits, $60,000. Where are your portable exhibits?

Mr. ROMM. They are usually at the regional offices and available to States on demand.

We have pictures of what our exhibits look like. I think they might be interesting to the committee. They are very effective. A tremendous number of people get to see them.

DUAL-PURPOSE CIVIL DEFENSE CAPABILITY

Mr. TALCOTT. What do you mean by a dual purpose? Does this mean natural disaster and nuclear disaster?

Mr. ROMM. Yes. There is also an emergency health exhibit.

Mr. TALCOTT. I am not talking about just the exhibits. You have mentioned dual-purpose shelters.

Mr. ROMM. That means it has a peacetime and emergency use. For example, shelter supplies were used in the Alaska flood, and prior to that in the Alaska earthquake, and in Hurricane Beulah.

Mr. TALCOTT. It does mean the dual purpose of peacetime purposes for natural disasters and wartime purposes for nuclear attack?

Mr. ROMM. Yes.

CIVIL DEFENSE IN CIVIL DISORDERS

Mr. TALCOTT. How about a triple program, for civil disorders, too? Are you into that field yet?

Mr. ROMM. The only use of shelter supplies or equipment that I am aware of was in the civil disorders in Detroit where the stores closed up and they could not do any shopping. Our shelter supplies, the food packets, were set out on corners in Detroit and the people used them to feed themselves until they could get the stores reopened. Our emergency operating center communications capability have also been used by cities in these civil disturbances.

Mr. TALCOTT. I think the residents of Washington, for instance, right now would probably be more interested in a shelter that would protect them from a roving mob rather than from a nuclear blast.

Do you have any program for that?

Mr. ROMM. No, sir; that is not wthin the purview of the act which covers my activities. But there is no preclusion of using our capabilities for any kind of an emergency. That is up to the local government.

(Off the record.)

Mr. EVINS. There appears to be no program in the Office of Emergency Planning and no program in the Office of Civil Defense for riot problems that are threatening, but there is some spin-off advantage.

Mr. TALCOTT. You do not have a plan for this kind of emergency. You have some flop-over from nuclear emergency plans that maybe can be used and maybe cannot be used. There might be some equipment available, but there is nothing specifically for this type of emergency.

Mr. ROMM. This does not mean there are not plans in each city and State and within the military to support them on request.

EXHIBIT MAINTENANCE

Mr. EVINS. You want $88,000 for maintenance and onsite expenses. This covers the cost of setting up and tearing down exhibits?

Mr. ROMM. And moving them around, transportation.

INDUSTRIAL PARTICIPATION

Mr. EVINS. Then you want $150,000 for industrial participation. If you are helping industry's plants and their employees, it looks like they would be glad to have you come in and lecture to them and would pick up some of the tab.

Mr. ROMM. They do a tremendous amount of this themselves. This is for the publications to help them do their jobs.

Mr. EVINS. Read the names of the publications into the record that you furnish industry.

Mr. ROMM. These are the four best sellers of last year. These are "Industrial Mutual Aid Association for Civil Defense," "Industrial Defense Seminars," "How to Organize and Plan," and "Protection of Vital Records."

For example, this one is an illustration of what we do in providing specific guidance on civil defense aspects of the waterworks operation, which would be applicable to any kind of emergency.

TECHNICAL INFORMATION

Mr. EVINS. You are asking another $400,000 for technical information besides the information you are providing to the States, cities, and industry. Is this new information on radiation shielding, fallout protected schools, shelter design in new buildings, shelter through architectural design, community development and civil defense, and the national directory of qualified fallout shelter analysts?

Mr. ROMM. Yes, sir.

I would like to show you these large textbooks. Shelter design and analysis comes in five different volumes.

Mr. EVINS. If you have those published, why do you need $400,000 more?

Mr. ROMM. Our training program reaches about 2,000 to 3,000 architects and engineers each year. Up to now we have given advance instruction to architects and engineers in shelter design and shelter analysis. Fifteen thousand have gone through the course and completed it successfully.

Mr. EVINS. These architects are highly trained. They are specialists and after 18 years I expect they know how to draw a fallout shelter. This is subsidizing the architects.

Mr. ROMM. I do not think it is subsidizing the architects. What we are doing is providing him with a skill which aids in getting us more fallout protection in the country. What we are doing is improving our shelter and defense posture with their skills.

DAMAGE ASSESSMENT

Mr. EVINS. We will turn to damage assessment. I see you are asking for $1.2 million. This is on page 35.

Damage assessment is an essential element of the civil defense program. Pre-attack, it is used to develop the best possible estimates of the potential range of damage to people and resources, based upon varying enemy capabilities and civil defense postures.

The reports of nuclear detonations will come from local, State, regional, and national emergency operating centers. State and local assessments generally will be manual computations. This is after the fact, is it not?

Mr. ROMM. Yes, sir.

Mr. EVINS. Computer operations, $1 million.

Maintenance of data base, $200,000. That is your $1.2 million.

Do you want to tell us why you need this $1.2 million?

Mr. ROMM. Most of it is for the operation of the computer, and we engage in continual studies of the damage-limiting capabilities of a shelter program.

These studies are designed to fit in with the total Defense Department damage-limiting study. We engage in the passive defense aspect. We have continuing studies.

Mr. EVINS. These are studies on damage assessment and damage by radiation fallout. The Atomic Energy Commission has made studies on that for years. They have numerous studies on fallout damage.

Mr. ROMM. What we do is take the information they have developed and relate it to a whole series of hypothetical attacks. War games in effect.

For example, right now in this program we are involved in a three-way study—the JCS, the OEP, and ourselves. The calculations are so complex and so broad in scope, across the whole national structure, for example, people, housing, capabilities to support them post attack, what happens to industry, that we actually divide up the work between these three groups.

Mr. EVINS. We had testimony the other day that the Defense Department had surplus computers and had turned some over to GSA to dispose of and put in other Government agencies. Yet you want a million dollars. Can't you get one of the Defense Department computers?

Mr. ROMM. This does not buy a computer.

Mr. EVINS. What does it do?

Mr. ROMM. This is, for the most part, reimbursement to the Corps of Engineers for the operation of the computer facility.

Mr. MARSH. I assume these studies are based on the possibility of a nuclear strike by missiles from the Soviet Union. Right or wrong?

Mr. ROMM. Yes, sir.

Mr. MARSH. Also, the missile system of the Chinese?

Mr. ROMM. Yes.

Mr. MARSH. I notice in your statement you say the antiballistic missile system, the Sentinel, is devised because of the Chinese threat.

Mr. ROMM. It is designed to meet the Chinese threat.

Mr. MARSH. If you are making damage assessments on the basis of Soviet nuclear strikes, what is the application of the Sentinel to Soviet strikes?

Mr. ROMM. Could I go off the record?

Mr. MARSH. I think it ought to be on the record, because in your statement you say the Sentinel is designed because of the Chinese threat. I want to know whether it has application to the Soviet threat.

Mr. EVINS. Put it on the record and if necessary, it can be taken out.

Mr. ROMM. The fact is our studies just completed this past year in December indicate that the Sentinel system as proposed to be deployed provides a real capability against a then projected Soviet threat. The Sentinel system plus the projected civil defense system would save a considerable number of people. It will not eliminate the attack. The Sentinel system will not avoid damage from Soviet attack nor will the civil defense program avoid damage from Soviet attack, but it does limit damage and can together save tens of millions of lives.

Mr. MARSH. From Soviet attack as well as Chinese?

Mr. ROMM. That is right.

Mr. MARSH. Why does the statement say it is designed for the Chinese threat?

Mr. ROMM. The Sentinel system deployment decision was actually directed toward the potential Chinese threat in the mid-1970's. With that system, it practically eliminates any capability on the part of the Chinese missiles to arrive in this country.

That is not true with the Soviet threat. It will not eliminate Soviet-arriving missiles but it will take its toll. Any defense helps.

Mr. MARSH. It does have application then?

Mr. EVINS Mr. Director, what do you expect to find out in damage assessments in the next year for $1.2 million that you have not already determined?

Mr. ROMM. This will be our continuing input to the DOD damage limiting studies. It continues to measure what the enemy threat will do against a whole variety of programs. It tests the effectiveness of the programs we have proposed. It tests the effectiveness of alternate programs and literally helps design and maintain this program on an up-to-date basis.

EMERGENCY OPERATIONS SYSTEM DEVELOPMENT

Mr. EVINS. Let's take a look at the emergency operations system development, for which you are asking $750,000.

We will place in the record pages 38 through 41.

(The pages follow:)

Emergency operations systems development

Fiscal year 1967	$1,877,077
Fiscal year 1968	1,000,000
Fiscal year 1969	750,000

The emergency operations systems development program bridges the gap between research and operations. Under it, civil defense doctrine, policies, plans, programs, and systems are developed from the research or concept stage through prototype systems for operational deployment. On the basis of research and study, organization and procedures for the total operating civil defense program are proposed to State and local governments. These proposals are generally field-tested to confirm their feasibility or to test the workability of recommended local operational systems.

Emergency operations systems development tasks are generally carried out in two phases. Phase I work includes distillation of relevant existing research; quantitative evaluation of problems resulting from light, medium and heavy attacks; analysis of existing State and local capability to cope with these problems; and recommendation, based on cost-effectiveness analysis, of Federal-State-local programs concluded to be necessary. Phase II work includes field-testing, as necessary; production of recommended guidance materials; development of detailed training requirements; and development of recommended management techniques for operational local systems.

People, facilities, equipment and supplies are the basic ingredients of State and local civil defense systems. Emergency operations systems development seeks to provide the systems which will mesh all of these ingredients in the most economical and effective ways for emergency operations.

Current emphasis includes developing systems for the orderly increase of civil defense readiness in periods of heightened international tensions and providing guidance to State and local governments on actions which may be taken during such a period.

Specific projects for fiscal year 1969 include the following:

(a) Local planning for civil defense supporting services, $190,000

The results of EOSD work in previous years have included the community shelter planning (CSP) program, as well as guidance on local emergency planning in such fields as maintenance of law and order, fire defense, and shelter management. A local CSP project results in a plan for the best use of the fallout shelter existing in the community, and thus provides information for the citizens of the community on where to go and what to do in case of nuclear attack. It also provides a basis for the police, fire, and related local emergency planning needed to insure maximum lifesaving in the community in case of attack upon the United States. Emergency planning by local police, fire, health, and other departments is thus a necessary and logical follow-on to the OCD shelter surveys and the OCD-assisted community shelter planning program, in that the emergency plan specifies what local government forces should do to assist the citizens.

This project involves field testing OCD planning guidance in approximately 5 jurisdictions which have completed community shelter planning projects. Representatives of the professional organizations of fire and police chiefs and of other local government services, as well as experts on radiological defense and shelter management, will assist local government departmental representatives to develop emergency plans for their jurisdictions, based upon plans developed during local CSP projects for the use of locally available shelter. Results of this project will include determination of (a) optimum methods of implementing emergency planning in communities nationwide, with emphasis on the local planning effort required, as well as (b) refinement, if necessary, of the current planning guidance.

(b) Improvement of emergency direction and control, $75,000

This project provides for refinement of OCD emergency organization and procedures and the further development of the local-State-OCD concept of emergency operations during fiscal year 1969. This project includes work with State and local governments and OCD regions as well at the national level, and will cover transmission and display of essential information received from States and localities for use by field and national offices of Federal agencies, including military headquarters, as well as transmission of information from OCD to State and local governments.

(c) Increased readiness simulation, $100,000

The Office of Civil Defense has developed and issued a number of checklists of increased readiness actions which State and local governments can take in a period of increased international tension. This increased readiness guidance covers actions in such areas as direction and control, emergency information, accelerated training in civil defense skills, radiological defense, shelter management, fire defense, maintenance of law and order, and school and industrial readiness. In order to permit further refinement of this guidance and to develop more precise knowledge of the degree by which the civil defense operational readiness of State and local governments can be increased during periods of tension of varying lengths, this project will employ simulation techniques with key officials of selected cities, to evaluate (*a*) what can be accomplished over specified periods of time during a crisis in each of the readiness areas; (*b*) the manpower and material required to attain these increased readiness postures; and (*c*) the extent and nature of preemergency planning required for effective performance in each area.

(d) EOSD Scientific and Technical Support, $75,000

This project continues the support of the National Academy of Sciences/National Research Council Committee on Civil Defense under which the committee (*a*) furnishes advice and recommendations as to whether specific conclusions reached and doctrine adopted are based on scientific fact; (*b*) furnishes consulting service to OCD in the fields of science, technology, etc., as may be required; (*c*) assists in establishing and coordinating working relationships with various pertinent research undertakings having a bearing on the problems presented; and (*d*) arranges periodic meetings and provides reasonable notice to OCD of its findings. The advisory Committee's responsibilities have been carried out through five subcommittees: (1) radiation shielding, (2) design of protective structures, (3) blast and thermal effects, (4) fallout phenomenology, (5) organization and operation of civil defense systems.

(e) Field Testing Civil Defense Materials for Public Safety Forces, $50,000

Based on EOSD work to date in fire defense, maintenance of law and order, and control and assistance of movement (with particular reference to movement to shelter), OCD and the national professional organizations of fire and law enforcement officials have developed civil defense guidance materials and training packages to inform and train public safety officials and personnel on the special problems they would face under nuclear attack conditions. This project provides for the cooperative field testing of this guidance and training material in selected communities prior to possible nationwide distribution. It is anticipated that cooperating agencies would include the International Association of Fire Chiefs and the International Association of Chiefs of Police in addition to the participating communities.

(f) Operation and development of integrated management information system (IMIS), $260,000

The OCD integrated management information system (IMIS) will enter its fourth year of operation in fiscal year 1969. IMIS is based upon the submission of an annual program paper by each of over 4,200 local governments (including over 85 percent of the national population), plus a semiannual report of progress. The program paper is designed primarily as a local management device, and specifies—in some 70 specific work areas, such as stocking public shelters, and training radiological monitors—work required locally, work completed, work remaining, and work to be done during the fiscal year. Program paper data are summarized and management reports prepared by the national civil defense computer facility. Emphasis in fiscal year 1968 is on developing aids and reports for OCD, State, and local program managers, to assist them in realizing maximum increases in life-saving capability for the effort which can be invested in building local emergency readiness. This fiscal year 1969 project will, in addition to providing for the operation of the current system, develop methods for translating numerical management data into graphs, narratives, and other formats most useful to local, State, and OCD program managers. Work will include extensive field testing with users in local jurisdictions of varying sizes and types, to ensure that the reports and formats developed are valid and are of maximum use to them.

Mr. ROMM. Mr. Evins, this effort is very much like the Army Combat Development Command. It bridges the gap between what comes out of research and the application to operational problems in the field.

TESTS AND EXERCISES

Mr. EVINS. This is a testing of your civil defense plans?

Mr. ROMM. Yes.

Mr. EVINS. How effective are they? You state that:

Current emphasis includes developing systems for the orderly increase of civil defense readiness in periods of heightened international tensions and providing guidance to State and local governments on actions which may be taken during such a period.

Mr. ROMM. We tested this in detail in our exercise last year and we now have a system which we think is pretty good. It is a set of advisory actions to be taken at the local government level, by different departments of local government, and these actions are on an increasing scale of readiness, so hopefully the response can be directed to meet the situation that is at hand.

Mr. EVINS. I had a man make an independent review of your budget to give me another objective view and he wrote a comment here, "How about cooling off these tensions?" You just keep them excited all the time.

Mr. ROMM. I would be happy to have tensions cooled off, but while we have them I have to get this increased readiness system prepared.

Mr. EVINS. Improvement of emergency direction and control, $75,000.

Increased readiness simulation, $100,000.

Mr. Director, you ought to have your system organized and ready by this time.

EOSD scientific and technical support, $75,000.

Field testing civil defense materials for public safety forces, $50,000.

Operation and development of integrated management information system, $260,000.

BROADCAST STATION PROTECTION PROGRAM

We will take a look at the broadcast station protection program on page 42, $180,000.

We will insert pages 42 and 43 in the record.

(The pages follow:)

Broadcast station protection program

Fiscal year 1967	$1,156,978
Fiscal year 1968	806,000
Fiscal year 1969	180,000

The emergency broadcast system was developed by the Federal Communications Commission to provide the President, the Federal Government, and State and local authorities a means of communicating with the general public through nongovernment broadcast stations, preattack, transattack, and postattack. Each emergency authorized broadcast station operates at its assigned frequency and normal power. The Federal Communications Commission has organized operational Area, State, Regional, and National Industry Advisory Committees to develop emergency broadcast system plans at each government level. As a major user of the emergency broadcast system and representing State and local civil defense, the Office of Civil Defense places its requirements upon Federal Communications Commission and the National Industry Advisory Committee. To provide increased assurance for sustained operations under fallout conditions, the Office of Civil Defense, during the period of 1962–67, arranged for agreements with approximately 630 radio stations to pay the costs of providing fallout protection, emergency power generators, radio links to local governments, and emergency programing equipment. Ultimately, 658 radio stations will have the protection and equipment which will provide for complete national coverage. For a station to be selected, it must provide broadcast coverage to substantially populated areas and be a part of the appropriate State emergency broadcast system plan.

The President by memorandum of December 21, 1966, authorized OCD to disseminate the attack warning message over the emergency broadcast system. The Presidential authorization will insure rapid transmission of warning to the public.

The Office of Civil Defense broadcast station protection program consists of three elements:

(*a*) Fallout protection to provide an austere but adequate area for the minimum personnel required to operate the stations.

(*b*) Emergency power to provide the stations with a capability to continue operation if normal power is disrupted.

(*c*) Radio program links and associated equipment to provide communications equipment required to transmit local, State, and regional programing from seats of government (points of entry) to the stations and on to the public.

Six hundred and thirty stations were included during the period 1962–67. In fiscal year 1968, OCD intends to increase the number of stations included by 28, at a cost of $464,800, for a cumulative total of 658. The average cost of stations to be included in the program will be approximately $16,600, and will provide for the addition of selected remote control equipment for the operation of emergency generator equipment.

Funds in the amount of $69,600 are also required in fiscal year 1968 for providing the remote pickup units (29) required between protected stations and emergency operating centers as the latter are completed. Remote pickup units

will be restricted to the 658 protected AM broadcast stations. An additional $88,000 is required during fiscal year 1968 to provide emergency generators (8) for those broadcast stations included during the early years of the program that were not provided such equipment.

Reimbursement to the Corps of Engineers for supervision of construction and installation of equipment will require $183,600 during fiscal year 1968.

Funds requested for fiscal year 1969 will provide for—

(a) 20 additional remote pickup units at $2,350	$47,000
(b) 3 emergency power generators for stations where the original agreement did not include such equipment at $11,000	33,000
(c) Reimbursement to the Corps of Engineers for supervision of construction and installation of equipment currently in process and/or budgeted for	100,000
Total	180,000

Mr. ROMM. This program will continue developing, but no more new stations will be added after fiscal year 1968.

Mr. EVINS. How many stations are cooperating with your system currently?

Mr. ROMM. We have 630 that have been financed through fiscal year 1967, and another 28 are scheduled to be in the program in 1968. That will complete our requirement.

Mr. EVINS. These radio and television stations are given an enormous monopolistic operation by the Government. They ought to be willing to provide a small public service, and the Commission should call on them for public service.

Mr. ROMM. There are over 2,400 stations in the emergency broadcast system.

Mr. EVINS. Are these commercial stations?

Mr. ROMM. Yes. This is for commercial broadcast stations. Selected ones are provided fallout protection, emergency power if they need it, and links to local governments. These stations are provided this capability so that they will be able to operate in a fallout environment. FCC tests indicate these 658 stations will provide almost complete coverage for the country in a fallout environment.

Mr. EVINS. It must be pretty effective because you have gone down from $1,156,000 in 1967, to $180,000 for 1969.

Mr. ROMM. This fiscal year 1969 amount of $180,000 provides supervision and a minor amount of equipment for this program.

OTHER EMERGENCY OPERATIONS

Mr. EVINS. You also have other emergency operations, $139,000

Mr. ROMM. That is the Red Cross advisory service.

Mr. EVINS. This will provide technical assistance from the Federal Communications Commission in connection with the broadcast station protection phase of the emergency broadcast system.

Mr. ROMM. There is no money requested in fiscal year 1969 for this purpose. The FCC has been providing us with advisory services for the emergency broadcast system.

Mr. EVINS. Why are the advisory services being stopped?

Mr. ROMM. All of the stations will be selected by the end of fiscal year 1968.

Mr. EVINS. It has been discontinued.

Mr. ROMM. That job for us is complete. They have their own emergency function which they will continue to do, but the selection

of stations for us and their advice on these stations will have been completed by the end of fiscal year 1968.

Financial Assistance to States

Mr. Evins. Let us turn to financial assistance to the States.

Mr. Romm. There are no increases there except in the personnel and administrative expenses.

Mr. Evins. The personnel and administrative expenses are shown on page 47. You are going up from $18.5 million to $19.1 million.

Mr. Romm. Yes.

Mr. Evins. We will place pages 47, 48, and 49 in the record.

(The pages follow:)

Personnel and administrative expenses

Fiscal year 1967	$17,376,500
Fiscal year 1968	18,500,000
Fiscal year 1969	19,100,000

The objective of the personnel and administrative expenses program is to assist States and other political subdivisions to develop a capability for nonmilitary defense to meet the needs created by an emergency. This program provides a nationally organized and coordinated capability for conducting civil defense operations at State and local level during an emergency. With Federal assistance provided through this program on a matching funds basis, States and other political subdivisions are expected to provide minimum numbers of personnel to fulfill adequately preemergency planning and training requirements. The main intent of this program is to increase operational capability at all levels in support of the many facets of the national civil defense program.

The complexity of the civil defense program and its divergent structure at the various levels of government calls for a professional staff and for a cooperative relationship between Federal, State and local government. The Federal matching funds provide the means for Federal sharing of this management burden at State and local level and assures a disciplined professional effort focused on national objectives.

As of the end of fiscal year 1967, all 50 States, District of Columbia, four territories, and 1,848 local governments throughout the country were provided Federal matching funds for personnel and administrative expenses. The population of the counties and cities where these funds are being used to administer a civil defense program amounts to over 120 million people. These civil defense functions of government, in following the national civil defense program, serve primarily to provide protection for the people against the effects of enemy nuclear attack and as a byproduct, prepare against the effects of natural disaster.

As indicated above, the Federal Government shares in the cost of employing professional people (and their clerical support) who plan and coordinate the special activities which are not ordinarily a part of government; for example: the warning system, the fallout shelter system, the radiological monitoring system and measures for emergency direction and control. The civil defense staffs are skilled planners and local government technicians serving their governments, operating under the direct authority of their elected officials. To a substantial degree, the civil defense personnel who are not in strictly clerical positions are performing a coordinating or specialist function, involving the training or preparation of other regular elements of government for emergency functions. This group of civil defense employees, amounting to 4,234 full time and 1,581 part time at the end of fiscal year 1967, are in turn responsible for the planning, organization and training of some 2,750,000 State and local government employees and volunteers who carry out the civil defense programs of the regular departments of governments. All departments of government are to be used to carry out the civil defense program, and civil defense personnel do not duplicate the functions of these regular departments. Examples of activities often not handled by other departments are stocking fallout shelters, recruiting and training shelter managers, establishing radiological defense systems, including recruiting and training radiological monitors and radiological analysts, establishing a public warning system and the planning for and maintenance of a central Emergency Operating Center.

Employment of State and local personnel in this program is under merit standards comparable with those applied in the other Federal grant programs.

By the end of fiscal year 1968, it is anticipated that the number of localities will increase to approximately 2,030.

Funds in the amount of $19.1 million are being requested for fiscal year 1969 to meet the estimated demands of State and local governments as they continue to expand their base of professional civil defense employees who can act in a natural or nuclear disaster under a coherent program. An example of the list of work elements that are included in the annual local civil defense program paper, which is reviewed and approved by OCD prior to the commitment of Federal funds, include the following:

1. Maintain statistical inventory of shelter spaces.
2. Obtain shelter license or agreement form from building owners.
3. Mark public fallout shelter.
4. Install and maintain emergency supplies in public fallout shelter.
5. Conduct inventory and inspection system for shelter supplies.
6. Establish public warning system.
7. Establish system to alert key government officials.
8. Establish emergency operating center and procedures for its operation.
9. Maintain and train support personnel for emergency operating center.
10. Establish radiological monitoring system.
11. Receive, distribute and maintain inventory of radiological monitoring equipment.
12. Establish procedures for and periodically test emergency communications system.
13. Establish working relationship with local radio broadcast station and develop emergency broadcast procedures.
14. Prepare and maintain emergency public information program to tell people where to go and what to do.
15. Maintain relationship with industry for employee programs on civil defense preparedness.
16. Coordinate and participate in civil defense adult education training.
17. Coordinate and participate in rural civil defense program conducted by the U.S. Department of Agriculture.
18. Coordinate and participate in medical self-help training conducted through the Public Health Service.
19. Organize and conduct radiological monitoring within city departments and in support of public shelter requirements.
20. Assist departments such as police, fire, and medical to recruit and train reserve or auxiliary personnel.

Following is a breakout, by fiscal year, of funds obligated or estimated to be obligated by category:

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Number of participants:			
State	50	50	50
District of Columbia and territories	5	5	5
Subdivisions	1,848	2,030	2,040
Total	1,903	2,085	2,095
Personnel strength:			
State	1,609	1,610	1,610
District of Columbia and territories	197	200	200
Subdivisions	4,009	4,375	4,395
Full time	4,234	4,515	4,530
Part time	1,581	1,670	1,675
Total	5,815	6,185	6,205
Obligations:			
State	$6,802,183	$6,808,000	$6,954,000
District of Columbia and territories	417,936	427,000	445,000
Subdivisions	10,156,381	11,265,000	11,701,000

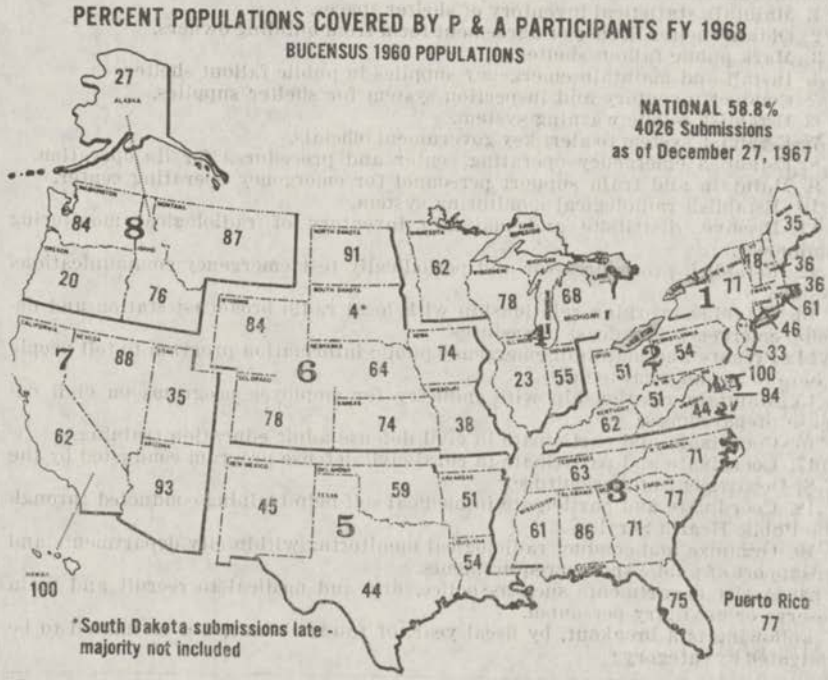
Average salary: Federal share	2,511	2,512	2,611

Mr. ROMM. Mr. Evins, could I provide you with a map which shows the distribution of population covered by this personnel and administrative expense account?

Mr. EVINS. Yes. The administrator is showing to the committee "Percent Population Covered by P. & A. Participants, Fiscal Year 1968." We will insert the map at this point in the record.

(The map follows:)



Mr. ROMM. That is not all of them. That is as of the end of the year. We are still getting them.

Mr. EVINS. You show your population coverage?

Mr. ROMM. By those jurisdictions receiving these personnel and administrative expense financial support.

Mr. EVINS. This is money for city hall people.

Mr. TALCOTT. Is there any matching of this money?

Mr. ROMM. Yes, we match up to 50 percent. We have not been able to match them for all expenses ——

Mr. EVINS. All 50 States, the District of Columbia, four territories, and 1,848 local governments throughout the country were provided Federal matching funds for personnel and administrative expenses.

The population of the counties and cities where these funds are being used to administer a civil defense program amounts to over 120 million people

What about the other 80 million people?

Mr. ROMM. They live in jurisdictions who either do not want Federal matching funds or where there is no civil defense program which qualifies for maching funds. During fiscal year 1968, we had to turn away 157 political subdivisions who wanted to enter the pro-

gram but we did not have enough money to provide matching funds to them.

This is a critical part of the program. This is the place where the capability is increased at the local level, and we have not been able to meet their requirements.

CIVIL DEFENSE PROGRAM PAPER

Mr. EVINS. All of this money is committed to the States and cities on a 50–50 matching basis for jobs and employment.

They prepare you a program paper. How often do they submit this paper, once a year?

Mr. ROMM. They submit it once a year and they report progress on it every 6 months.

Mr. EVINS. This program paper shows the statistical inventory of shelter space in the area?

Mr. ROMM. And all of their programed activities.

Mr. EVINS. The number of fallout shelters are marked, as are the number of places that have emergency supplies.

Mr. ROMM. I would like to show you what the program paper looks like. The past history is provided to them and they tell us what they propose to do for the following year. This is reviewed at the State level and by our regional offices. When the program paper is approved, they are eligible to receive Federal assistance. Every 6 months they report progress.

Once this system gets shaken down, the margin of error is kept small because the computers have some internal checks in them to verify validity of the data. I think it is a very good management tool, not just for us but also for the local governments who review the programs in local civil defense work.

Mr. TALCOTT. What if they do not show progress, are they cut off?

If they do not develop more shelters or more radio stations, are they cut off?

Mr. ROMM. We have not reached that stage in very many places. New construction keeps coming. They still have to mark the shelters that are located, they have to stock the shelters. Only about 50 percent of those located so far have been stocked.

There is a continuing training requirement. The program is a continuing program, capability continues to be improved each year.

Mr. EVINS. This is the highest level of funding for city hall jobs?

Mr. ROMM. Counties, States and cities.

EMERGENCY OPERATING CENTERS

Mr. EVINS. The next item is emergency operating centers.

You have $4½ million, the same as last year.

Mr. ROMM. Yes, sir.

Mr. EVINS. We will put in page 52.

(The page follows:)

Emergency operating centers

Fiscal year 1967	$3,970,535
Fiscal year 1968	4,500,000
Fiscal year 1969	4,500,000

An emergency operating center (EOC) is a location within an existing building or a specially constructed facility where the decisionmakers of State or local government assemble in peacetime or wartime emergencies to direct the required survival and recovery actions. EOC's which qualify for Federal matching funds provide a degree of protection against the effects of nuclear weapons, have auxiliary electric generators, and special communications with all elements of emergency government. During recent emergencies, Governors and mayors activated their EOC's as the focal point for gathering information and for direction and control. In addition to its emergency use, the EOC is used on a day-to-day basis in most communities as the headquarters for the civil defense staff and other elements of emergency government such as fire and police.

The importance of the EOC to local government is evidenced by the fact that approximately 1,900 EOC's have been designated by State, county, and municipal governments without Federal financial assistance. Although many of these do not meet the OCD recommended standards, the fact that they are in use indicates that local governments recognize the need for centralized emergency direction and control. OCD is in the process of making fallout protection and communication analyses of each of these so as to recommend specific improvements.

An emergency operating center is the final product of a cycle that includes feasibility study, architectural design, construction, and equipping. Total time for this cycle varies according to size, location, relationship to other construction, and budgeting of funds by applicant governments. The cycle for new construction is generally from 3 to 4 years. Thus, newly constructed EOC's which were completed in fiscal year 1967 were initiated, for the most part, in fiscal year 1963 and fiscal year 1964.

The average Federal share of the construction cost of EOC's initiated in fiscal year 1962 was $102,000. Those initiated as late as fiscal year 1964 are being completed at an average Federal share of $63,000. OCD emphasis on low-cost methods, on use of space for both day-to-day and emergency purposes, and on use of existing space, has been the primary reason for this reduction. It is estimated that EOC's initiated as new construction during fiscal year 1965 will be completed at an average Federal cost of about $34,400. EOC's initiated in fiscal year 1966 will average $27,000, and those initiated in subsequent years will be completed at an average Federal cost of about $25,000. As costs lower, the development of an adequate EOC comes into reach of an increasing number of communities.

Funds requested for fiscal year 1969 will provide for effort related to EOC's initiated in prior years as well as for those initiated during the fiscal year.

STATUS OF PROGRAM

Mr. ROMM. The average cost of these centers has come down considerably since 1962. The Federal share used to cost an average of $100,000 each.

Mr. EVINS. What is the status of this program?

Mr. ROMM. We have now available, completed, 2,255 of these emergency operating centers, and 677 in process.

Mr. EVINS. Tell us again how many are completed and in operation.

Mr. ROMM. 2,255 completed and in operation. We will match funds for localities that want to develop their own emergency operating capability.

Our estimate is that probably 4,000 to 5,000 communities are large enough to require this kind of capability.

Mr. EVINS. Does it require the approval of the mayor or the city council?

Mr. ROMM. Yes. It includes all the capability of government to operate in an emergency. It is like a command post.

Mr. EVINS. You have about 2,250 centers already approved?

Mr. ROMM. My estimate would be we are about halfway through. Our figures indicate that these EOC's are in places with population

of 108 million people. I do not think we will ever cover all 200 million people. Each time we invest in one of the smaller towns and cities that want to come into this program, we get more people in the program but less people for each unit of investment. The unit dollar cost of this program has, however, come down.

It used to cost an average of $102,000 matching funds for each emergency operating center.

Mr. EVINS. Mr. Romm, you get information by radio, television, telephone, and other communications media. When will you reach the saturation point?

Mr. ROMM. As long as the country continues to grow, I do not think we will ever get saturated. There is a capability at the local government level to operate in an emergency. I think that with the number of natural disasters that we have had and the possibility of civil disturbances——

Mr. EVINS. We have the Red Cross, Corps of Engineers, and many others moving in.

Mr. ROMM. This is a government function at the local level. I wonder if I could provide for the record a letter which Governor Connally sent to our director of region 5 on this subject. I think that you will find his view of this interesting.

Mr. EVINS. The committee will consider Governor Connally's request.

Mr. Administrator, have you been putting on pressure to the counties and cities to write to Congressmen?

Mr. ROMM. No, sir.

Mr. EVINS. All the letters come back the same way, "Please have this letter inserted in your hearing record."

Mr. ROMM. Mr. Evins, we have not been telling them to write you at all.

Mr. EVINS. Who did this? The letters are uniform, not just individually written. They have quotes around them, "See that my statement is included in the hearing record." This is lobbying from the local level.

Mr. ROMM. Sir, I can assure you that it has not started in our place. I think what has happened is that they have become aware through the program restrictions in fiscal year 1968——

Mr. EVINS. Who wrote the letters?

Mr. ROMM. I can tell you this: It did not originate in the Office of Civil Defense. I do not know where it did originate. This letter that I provided you is not to his constituency, it is to a man who runs region 5.

Mr. EVINS. Thank you.

Mr. ROMM. It is a pretty good letter.

Mr. EVINS. We all read Governor Connally's letter. He is a great man.

Mr. ROMM. He is.

SURVIVAL SUPPLIES, EQUIPMENT AND TRAINING

Mr. EVINS. The next item is $2,400,000 for survival supplies, equipment and training.

Place pages 54 and 55 in the record.

(The pages follow:)

Survival supplies, equipment and training

Fiscal year 1967	$4,912,954
Fiscal year 1968	4,500,000
Fiscal year 1969	2,400,000

This project provides Federal funds to be matched with State and local funds for civil defense organizational supplies, equipment, and training services determined by the Office of Civil Defense to be necessary to a civil defense organization, as distinguished from personal equipment. It does not include those items which the local community normally utilizes in combating local disasters except when required in unusual quantities dictated by the requirements of the civil defense plans.

The Office of Civil Defense has also authorized the use of items acquired with Federal contributions for the following additional uses: (1) to combat or relieve the effects of disasters not resulting from enemy attack, and (2) the general use of communications equipment subject to the following restrictions: (*a*) that such use does not involve removal of the equipment from its place of use for civil defense purposes, and (*b*) that such use does not jeopardize its immediate availability in operating condition for civil defense purposes.

Items acquired with Federal contributions are maintained in usable condition and if consumed, lost, damaged, or destroyed, are replaced promptly by the State or political subdivision. Civil defense equipment is protected and maintained by the State or political subdivision in such a way as to assure its ready availability for the civil defense purpose for which it was acquired.

In order for a State or a political subdivision to be eligible for Federal contributions, the State civil defense agency must have either a full-time director or a full-time deputy director and the State must have an Office of Civil Defense-approved civil defense program. Further, the political subdivision must have a civil defense agency which has been established pursuant to law and is responsible for the development of the activities and measures which go to make up civil defense as defined in the Federal Civil Defense Act of 1950, as amended. In addition, the political subdivision must have a State approved civil defense program consistent with the State program.

This segment of the matching funds program is directly related to the growth pattern of local poltical subdivisions participating in the Federal shelter-oriented program. Further, within a political subdivision the growth of civil defense activity impacts on its requirements. Since fiscal year 1962, funds obligated under this program have been, and will continue to be, confined to the direct support of the civil defense shelter-oriented program.

During fiscal year 1969, obligations will be primarily limited to communications and warning recurring/maintenance charges and communications planning activities. Support of day-to-day civil defense operations (financed under the personnel and administrative expenses program) will be maintained at the previous year's level.

[In thousands of dollars]

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Communications	$2,673	$2,500	$1,113
Warning	1,620	1,500	1,087
Education services	246	200	0
General administrative equipment	212	200	200
Public safety devices and miscellaneous equipment	162	100	0
Total	4,913	4,500	2,400

Following are examples of supplies, equipment, and services provided for:

Communications: Equipment for a base station, maintenance of equipment, leased lines, and other recurring charges.

Warning: Sirens, loudspeakers, maintenance of warning devices, and recurring changes.

Education services: Training courses, test exercises, training slides, projectors, and film.

General administrative equipment: Desks, typewriters, other office equipment.

Public safety devices and miscellaneous equipment: Rescue equipment such as ladders, hatchets, rope and jacks, blankets, cots, refrigerators for medical supplies, small tools, chairs, tables, feeding equipment.

Mr. EVINS. I think you need to continue to have equipment and supplies.

Mr. ROMM. This is mostly for matching funds for the communications and warning systems at the local level.

Mr. EVINS. I thought we covered that under emergency operations?

Mr. ROMM. That was our development costs.

Mr. EVINS. Is there any duplication here?

Mr. ROMM. No, sir. As a matter of fact, I think that there is probably not enough money to cover all demands.

OCD MANAGEMENT

Mr. EVINS. Take a look at management—personnel services. In 1968 it was $10,840,000. Next year you are asking for $11,018,000.

Mr. JONAS. Keeps going up.

Mr. ROMM. This is essentially due to the increased pay rate which was effective October 1967. There are no increases in personnel called for.

Mr. EVINS. The Federal management process involves the use of 28 separate elements of the Department of Defense and 31 other agencies of the Government. Can you consolidate that?

Mr. ROMM. We are really using the skills available to us without duplicating them. For example, the engineering capability in the Corps of Engineers. We use the Adjutant General's Office to distribute our publications. The Army Pictorial Service prints our films and distributes them. We have not duplicated what is available. That is why we have a tremendous coordination job with all these people.

Mr. EVINS. You are using the good offices of all the other people?

Mr. ROMM. Yes, sir.

Mr. JONAS. Would you yield?

Mr. EVINS. Yes.

SUPERGRADES

Mr. JONAS. How many supergrades do you have? You must have a lot of them to get your average GS salary at $12,500. That is about the highest agency figure I have seen.

Mr. ROMM. There are higher. Our average grade has been reduced from GS–10.6 in 1964 to GS–10.29 in fiscal year 1969. My supergrade total is 28. That was also reduced from 33 in fiscal year 1964.

Mr. JONAS. In Washington?

Mr. ROMM. No, sir. That includes the regional directors and this is out of a total of 831 positions.

Mr. JONAS. Bodies?

Mr. ROMM. Yes, sir.

Mr. JONAS. Did you eliminate any under the legislation enacted last September; 2 percent for 1968?

Mr. ROMM. The action of this committee and the instructions in the——

Mr. JONAS. Made it unnecessary?

Mr. ROMM (continuing). Made it unnecessary for me to do that. I was way below the 10 percent obligation cut.

Mr. JONAS. It did not affect you, then?

Mr. ROMM. Yes, sir.

Mr. EVINS. The 1969 budget proposes the continuation of the fiscal year 1968 staffing level of 831 permanent civilian personnel?

Mr. ROMM. Yes, sir.

Mr. TALCOTT. With regard to Governor Connally's letter, what actually occurred during Hurricane Beulah?

Mr. ROMM. During Hurricane Beulah, Governor Connally's operation of the emergency operating center was a textbook example.

Mr. TALCOTT. What was the date of Beulah?

Mr. ROMM. That was last fall, September.

Mr. TALCOTT. The letter is dated March 1. It appears more appropriate to our hearing today than to Hurricane Beulah last fall.

Mr. ROMM. I don't think it was sent to Bill Parker in terms of that. I think it was sent because some of the requests for emergency operating centers had been turned down. There is not enough money to meet the demand.

Mr. EVINS. All Governors are calling on Uncle Sam for grants and appropriations. We took care of the Governor in the Office of Emergency Planning. He had to have a supplemental appropriation. This was in the Office of Emergency Planning.

How much did he get from the Office of Civil Defense?

Mr. ROMM. Nothing, except our assistance during the emergency.

Mr. EVINS. You have a lot of management, gentlemen, more than $12.5 million with more than 28 separate elements of the Department of Defense.

Mr. ROMM. Mr. Evins, I would like to point out in the reductions from 1968 to 1969, that there is a $25 million reduction in the total obligational program; $21 million of that reduction is related to the services of other agencies.

TRAVEL

Mr. EVINS. You are asking for $500,000 for travel. That is about the same level as the last 2 years.

Mr. ROMM. $25,000 less than last year.

Mr. EVINS. It went up from 1967 to 1968?

Mr. ROMM. Yes, sir.

ADMINISTRATIVE AND HOUSEKEEPING EXPENSES

Mr. EVINS. Administrative and housekeeping expenses, $1,226,000. This is shown on page 58.

Vehicle rental, $71,900; transportation of things, $9,000; movement of household goods, $8,000; rent, communications, utilities, $273,400; and printing and reproduction, another $40,000. You had your printing costs involved throughout the education program?

Mr. ROMM. Yes, sir.

Mr. EVINS. Other services, $47,800.

These are repair and maintenance. We gave you funds throughout the budget for repair of your exhibits.

Mr. ROMM. This is office equipment. Truly housekeeping.

Mr. EVINS. You have $18,300 for other contractual services?

Mr. ROMM. Yes, sir.

Mr. EVINS. Services of other agencies. Is this the total?

Mr. ROMM. This is what we are paying for administrative and housekeeping expenses.

Mr. EVINS. You told us a while ago you had 28 agencies in the Defense Department and so many others doing this service for you, and now you tell us you have to pay them?

Mr. ROMM. This is only the administrative and housekeeping function. It is primarily to pay GSA for maintaining our regional offices.

Mr. EVINS. This is paid to GSA?

MERIT SYSTEM REVIEW

Mr. ROMM. It also includes the merit system review. The Department of Health, Education, and Welfare administers the merit system review activity for themselves, for the Department of Labor, and for us.

Mr. EVINS. Merit system?

Mr. ROMM. This is the State and local merit system for qualification under P. & A. activity.

Mr. EVINS. Civil service does not do that?

Mr. ROMM. No, sir. Civil service does not have any jurisdiction over the State and local merit systems.

Mr. JONAS. How does HEW get into that?

Mr. ROMM. HEW provides administrative support in reviewing merit systems to be sure State and local governments qualify for matching funds, not just for us, but for themselves and the Department of Labor as well.

Mr. TALCOTT. They are actually performing a civil service function?

Mr. ROMM. Just partially. They pass on merit system qualifications. They do not establish jobs, per se.

Mr. EVINS. Does the $320,000 for the Federal communication in 1968 come in service for other agencies?

Mr. ROMM. Yes, indeed. Not here, though.

Mr. EVINS. Not in this item?

Mr. ROMM. This item includes only administrative and housekeeping expenses.

Mr. EVINS. Is FCC paid under another fund?

Mr. ROMM. They were paid under the emergency operations account. This is just for the housekeeping expenses.

FINANCE SERVICES

It includes finance services provided by the Department of the Army, Finance Office, and the Department——

Mr. EVINS. You pay them to do that?

Mr. ROMM. We pay them to prepare our payroll and to pay the vouchers.

Mr. EVINS. Can't the Pentagon provide any services for you?

Suppose we propose a bill not to have one agency charge another for services. It would eliminate a lot of paperwork and cost, reimbursements that run from one agency to another. It is all out of the same pocket.

Mr. ROMM. I can appreciate the logic in that.

Mr. EVINS. Can't you recommend that? You are in the Pentagon. Tell them to at least draw your checks for you.

Mr. ROMM. Mr. Evins, the financial management activity——

Mr. EVINS. That is a lot of bureaucracy.

Mr. ROMM. The people who get the service have to pay for it, and at times it is a good thing.

Mr. EVINS. The people who do the work ought to get the checks. We are for that. But the Pentagon ought to do something for you over there.

That is supposed to be an efficient department. They have the computers. They ought to do something efficient.

JURISDICTION OVER MERIT SYSTEM SERVICES

Mr. TALCOTT. Does HEW have jurisdiction over the merit system service? I do not understand where they get the jurisdiction. Is this part of the civil rights bill?

Mr. ROMM. No, sir. It is part of our legislation. For example, the legislation which authorizes the payment or matching of personnel and administrative expenses requires that the jurisdictions receiving these matching funds have merit systems. Similarly, HEW on their matching funds programs and assistance programs, and the Department of Labor in their assistance programs, require the same thing. Where the Federal Government has to administer three different reviews of the local merit system, we have agreed to let HEW do the administrative review for us. We provide some of the costs for doing that.

Mr. TALCOTT. HEW handles all the merit systems for all the agencies in the Federal Government?

Mr. ROMM. Yes, sir. It is a considerable savings for us. We do not have the know-how and, in effect, they are doing a job for us. We pay them $190,000 a year for this service.

Mr. TALCOTT. There is one agency of the Federal Government that is looking into all of the drugstores for all the other Federal agencies. That is under the same theory.

Mr. ROMM. It is a much more efficient operation. It avoids duplication.

EQUIPMENT

Mr. EVINS. Mr. Romm, you are asking for $93,100 for equipment. Last year it was $59,400. This is a substantial increase.

Mr. ROMM. Let me explain that. If you look at the bottom line there, this is for the ——

Mr. EVINS. The bottom line is $82,000; $44,000 last year and $14,000 the year before. It jumps by leaps and bounds.

Mr. ROMM. Let me explain what that is for. In fiscal year 1968, our regional center in region 1 will be completed. This amount is to provide the additional equipment that will be required. In fiscal year 1969, the regional operating centers in region 6 and region 8 will be completed. That money will go towards equipping them. That is a one-time expense. It occurs when the regional center is complete.

Mr. EVINS. It goes from $14,000 to $82,000 in the last 2 years.

Mr. ROMM. Yes, sir.

NEWSPAPERS AND PERIODICALS

Mr. JONAS. You already do much of the work as you read $1,600 worth of newspapers a year. What do you do, subscribe to every newspaper published in the United States?

Mr. ROMM. This is really covering the clipping service and newspaper information on our program at all of the regions, Staff College and Headquarters. It also includes technical periodicals for our professionals.

Mr. JONAS. Why do you need a clipping service?

Mr. ROMM. For example, I think it behooves us to keep up with what the public reaction is to our programs and what is occurring at the local level.

Mr. JONAS. Doesn't that dishearten you occasionally?

Mr. ROMM. No, sir. As a matter of fact, most of the news has been good.

Mr. TALCOTT. You send out the good news releases and pay for the clipping service, do you not?

Mr. ROMM. Not really. We have issued very few news releases on this program except in the home basement survey. There is a tremendous amount of newspaper coverage in that program.

Mr. JONAS. This is not all of it. Then you have $1,000 that you spend for syndicated newspaper service; AP and UP?

Mr. ROMM. That is the wire line service.

Mr. JONAS. What is that for?

Mr. EVINS. Since Mr. Romm has become Administrator it has gone down. He is not a Governor and is not running for office.

Mr. JONAS. It has not gone down from last year, $1,000. It looks like there is one place where we would cut you.

TELEPHONE ANSWERING SERVICE

Telephone answering service, $1,100.

Mr. ROMM. That is the——

Mr. JONAS. You do not mean that you all go out some day and there is nobody there to answer the phone? What if an emergency happened?

Mr. ROMM. This is for our regional offices. They do not maintain 24 hours coverage except during emergencies. This gets the call passed to the duty officer at home.

PHOTO AND ART WORK SERVICES

Mr. JONAS. That photo service, $2,400. You have a lot of lush items in here. That is a lot of photographs.

Art work, $600.

Mr. ROMM. That is a very small amount.

Mr. JONAS. That photo service, what is that?

Mr. ROMM. That is to take pictures, for example, in Beulah or other emergency activities. For example, the photos I showed you——

Mr. EVINS. Does the Air Force fly you out there while the hurricane is under way? You cannot get out there in an emergency.

Mr. ROMM. What we actually have is a service on the spot. Sometimes it is done by the Army Pictorial Service and sometimes locally.

Mr. EVINS. They send you the pictures and the bill?

Mr. ROMM. Yes, sir.

Mr. JONAS. If you got the Army Pictorial Service to do this, you would have to reimburse them?

Mr. ROMM. That is right.

Mr. JONAS. You usually hire a commercial one?

Mr. ROMM. No, sir. If we can get the Army Pictorial Service to do it, we use them because they are cheaper.

EMPLOYMENT TURNOVER

Mr. JONAS. I was looking with interest at this green sheet. What is your average turnover in employment a year, 20 percent?

Mr. ROMM. We have about 4 percent.

Mr. JONAS. That would be about thirty-some. You lose by attrition?

Mr. ROMM. Between 30 and 40.

Mr. JONAS. It looks like you would not have to fill any of those jobs. You want to keep the same number of permanent positions that you had last year and your budget is $8 million less. You only have 18 lower than you had 3 years ago and you are $24 million less in the budget. When your budget is cut, you ought to reduce personnel.

Mr. ROMM. There are a lot of activities going on in civil defense which are not related to the budget cuts at all. Since 1962, we have reduced from 1,200 people.

Mr. JONAS. Can't you reduce that?

Mr. ROMM. We are hard-pressed to do the jobs at hand right now with the people on hand.

Mr. JONAS. It looks like you could eliminate 31 at least with this reduced budget.

Mr. ROMM. There are a tremendous amount of activities which go on in our regional office and here which are not directly related to the amount of money being spent but do relate to the activity in the program. You will find that at the local level there has been a 10-percent increase in participation over the last 3 years. We have had a decrease in personnel and have absorbed this 10-percent increase in activity.

Further, our 831 ceiling has been gone through in a line-item-by-line-item review by the Defense Department and the Bureau of the Budget. They did not cut us and I can assure you they were looking for areas to reduce.

Research, Shelter Survey and Marking

PROGRAM AND FINANCING

[In thousands of dollars]

UNOBLIGATED BALANCE

Mr. EVINS. I think that you have a carryover in this fund, have you not?

Mr. ROMM. Yes, sir.

Mr. EVINS. $2,800,000?

Mr. ROMM. Yes, sir. All of that is related to the warehousing and distribution of shelter supplies currently in storage. There will be no carryover from 1968 into either the research or into the survey program. All of that $2.8 million carryover is to maintain the stocks in Federal storage sites and to issue them to requisitioning local governments. The rest of the amount is an increase in new obligational authority but, as I say, since there is no carryover, it represents a substantial reduction in the obligation program.

Mr EVINS. Shelter survey and marking goes up from $8,313,000 to $8,700,000. Community shelter planning goes up from $2,631,500 to $3.3 million. Design development goes from $1 million to $3.1 million.

Mr. ROMM. You will find that in 1968 we are using the carryover that we went into the year with. So our total program, despite this increase in new obligational authority, is substantially reduced. For example, in obligations, the shelter survey and marking program goes from $15.4 to $8.7 million. The design development goes down from 3.5 to 3.1.

Mr. EVINS. This is on page 67?

Mr. ROMM. That is on the top of the page. Total obligations drop by almost 50 percent.

Mr. EVINS. $12.9 million to $15.1 million is the increase?

Mr. ROMM. Yes, sir.

Mr. EVINS. You are requesting $8.7 million for shelter survey and marking?

Mr. ROMM. That is right.

Mr. EVINS. As against $8,313,000?

Mr. ROMM. In fiscal year 1968. We entered fiscal year 1968 with a $7 million carryover in this account. The total obligational program for 1968 is $15,400,000.

Mr. EVINS. $7,089,755 is your available amount from unobligated balances carried over?

Mr. ROMM. Yes, sir.

Mr. JONAS. How did you happen to have that unobligated money? Were you subject to a freeze?

Mr. ROMM. No, sir. This is from funds appropriated in prior years. There was literally a lag in getting the work placed.

AMOUNT USED FOR SURVEY AND MARKING

Mr. EVINS. How much has been obligated to date in shelter surveys?

Mr. ROMM. There has been $120 million obligated through fiscal year 1967 for survey and marking.

Mr. EVINS. $120 million in marking?

Mr. ROMM. Yes, sir. Survey and marking.

SURVEY AND MARKING VS. RESEARCH

Mr. EVINS. What is the difference in survey and marking and research?

Mr. ROMM. The research program is an investigation into the advances that can be made in civil defense activities. The survey and marking is not research. It is an application of practical methods.

Mr. EVINS. You had a $7 million unobligated carryover in survey and marking?

Mr. ROMM. Yes, sir, into fiscal year 1968.

SIGN POSTING AND MAINTENANCE

Mr. EVINS. Some of these markings are getting rusty and you have to paint them?

Mr. ROMM. We have a sign maintenance program. You will find that is covered in the cost of marking on page 69.

Mr. EVINS. Home fallout surveys, $700,000. Marking, $700,000. I imagine that is to repaint and bring them up to date?

Mr. ROMM. Yes.

It is about evenly split between marking new structures and maintaining the old signs.

Mr. EVINS. Do you put up new signs or touch up the ones that you have?

Mr. ROMM. No, sir. We replace the signs.

SHELTER SURVEY AND MARKING JUSTIFICATION

Mr. EVINS. Place in the record pages 67 through 70.
(The pages follow:)

SHELTER SURVEY AND MARKING

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
New obligational authority	$20,122,287	$8,313,000	$8,700,000
Unobligated balance for use in subsequent years	7,089,755	0	0
Available prior year unobligated balance	12,994,778	7,089,755	0
Total obligations	26,027,310	15,402,755	8,700,000

There is some protection from radioactive fallout in all structures, because they reduce by varying degress the amount of radiation to which a person would be exposed. This reduction of radiation intensity results from the amount of structural mass and the distance between the source of radiation outside the building and the person within. The purpose of a fallout shelter program is to provide enough shielding to reduce radiation doses to nonfatal or nondisabling levels.

The Office of Civil Defense has initiated two types of surveys to locate fallout protection in existing structures. These surveys are highly automated and are administered for OCD by the military engineers or the U.S. Bureau of the Census.

1. *National fallout shelter survey, $7,300,000*

A national fallout shelter survey (NFSS) was started in late 1961 to locate potential public fallout shelter space in large structures—space meeting Department of Defense shelter standards and which would accommodate 50 or more persons in the event of attack. By December 25, 1967, this survey located potential public fallout shelter space for more than 165 million people in over 181,000 structures throughout the Nation. An important part of the survey is the obtaining of signed license or privilege agreements from building owners to permit the use for public purposes in time of emergency of acceptable shelter space located in their facilities. As of December 25, 1967, over 105,000 buildings had been licensed. Owners of over 104,00 buildings, containing space for over 96 million people, had voluntarily authorized marking (with the black and yellow public fallout shelter sign) for emergency use of the buildings as public fallout shelters in the event of attack. More than 86,000 buildings with shelter space for over 82 million people had been stocked with austere supplies (including food, medical and sanitation supplies, and radiological instruments) provided by the Federal Government. These are in addition to the water, food, and other resources that are normally in a building designated as a public fallout shelter.

The survey was expanded in fiscal year 1966 to identify fallout protection in smaller buildings, other than private homes, that might accommodate 10 to 49 persons in areas of unfilled shelter requirements where a community shelter plan is scheduled. As of December 25, 1967, this segment of the NFSS, which is being conducted in phase with the community shelter planning program has located PF 40 or better space for about 2.3 million people.

The survey was further expanded in late fiscal year 1967, to locate fallout protection in structures which were excluded in the basic national fallout shelter survey because they did not meet minimum protection criteria, PF 40, but which do offer substantially better protection than homes without basements. The search for the best available protection is limited to the southern and southwestern states where few homes have basements.

2. *Home fallout protection survey, $700,000*

Surveys started during fiscal year 1968 and carried to private householders under the home fallout protection survey (HFPS) will be completed by the end of the second quarter of fiscal year 1969. Analysis of results, publication and distribution of reports and other end-of-survey activities will continue during the rest of fiscal year 1969. These surveys are aimed at the over 25 million U.S. homes with basements. Unlike the surveys of large buildings, where about

two-thirds of the fallout shelter space is located in aboveground areas, studies show that in small buildings, such as private homes, fallout protected areas can be located only in belowground basement areas.

After active development and testing which was begun in 1962, HFPS was first deployed in Rhode Island early in 1966. The home survey, conducted in a State only upon the request of the Governor, involves the use of a special questionnaire, and computerized processing of it by the U.S. Bureau of the Census, to determine and report to residents of one-, two-, and three-family dwellings the amount of fallout protection in their home basement, and how to improve it. The information is confidential to the householder, but State and local governments receive statistical summaries to assist them in fallout shelter planning efforts.

Surveys have been completed in 16 States and 12 more are in process or planned for initiation in fiscal year 1968. The surveys completed and those in process as of January 10, 1968, identified shelter space of PF 20 or better for 18.1 million occupants of 5.2 million homes. The average response to questionnaires mailed out to homeowners in the 16 completed States was 78 percent. This home survey has also been used by the military services to determine fallout protection available in the houses of military and civilian personnel, on and off military installations.

3. *Marking, $700,000*

Public fallout shelter facilities which are included in local civil defense plans for use as shelters are marked, upon permission obtained from owners, with distinctive black and yellow signs. The signs are placed at or near exterior entrances and on interior wall surfaces so as to guide persons to shelter areas within the facility. Maintenance of signs is usually accomplished during revisits to specific areas scheduled for updating or expanded survey work.

Responsibility for marking of shelter facilities is shared by the Federal and local governments. Upon request by the local civil defense office, through the State civil defense office, Corps of Engineers, and Naval Facilities Engineering Command (NavFac), field offices accomplish sign posting. CE–NavFac field offices also furnish technical assistance to local CD offices that post signs themselves.

As of December 25, 1967, over 104,000 structures with over 96 million fallout shelter spaces had been marked. An estimated 6,000 structures were provided with sign maintenance during fiscal year 1967, and it is anticipated that an additional 14,700 facilities will have sign maintenance performed during fiscal years 1968 and 1969. This essentially will provide for the maintenance of those signs posted during fiscal years 1962 and 1963.

	Actual, fiscal year 1962–66	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
Facilities marked	95,419	5,599	8,800	7,700
Shelter spaces marked	85,286,000	7,378,000	7,920,000	6,930,000
Maintenance (facilities)	0	[1] 6,000	7,100	7,600

Shelter spaces licensed	89,268,000	9,429,000	7,200,000	7,200,000

[1] Net increase in facilities. Excludes those resurveyed for updating.
[2] National fallout shelter survey only.

Mr. ROMM. I would like to offer a correction for page 70, if I may. You will find on the second line under fiscal year 1968 we estimated at the time this book was published that we would locate 6.7 million spaces. This will be closer to 10 million spaces located.

Mr. EVINS. Is GSA going to give you some more buildings?

Mr. ROMM. GSA designers work on that very well. You will recall some years ago this committee authorized shelter for 16 buildings. These 16 are nearly complete and eight buildings actually got increased shelter without any increase in costs.

COMMUNITY SHELTER PLANNING

Mr. EVINS. Community shelter planning, page 72.

You are asking for $3,300,000, an increase over last year. You had a $500,000 carryover.

Mr. ROMM. Yes, sir.

Mr. EVINS. Place in the record pages 72 through 74.

(The pages follow:)

COMMUNITY SHELTER PLANNING

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
New obligational authority	$2,099,011	$2,631,500	$3,300,000
Unobligated balance for use in subsequent years	500,000	0	0
Available prior year unobligated balance	3,591,713	500,000	0
Total obligations	5,190,724	3,131,500	3,300,000

The national fallout shelter survey (NFSS) has identified nearly 165 million public fallout shelter spaces in existing buildings, of which over 96 million were marked by December 25, 1967. If an attack occurred in the near future, these spaces would save many lives simply by being marked. This is because people who were in buildings affording shelter, or who were nearby and knew that the shelter signs identified protected areas, would know where to go. However, it is

clear that the public shelters now identified will not be fully effective until citizens in areas served by public shelters know where the shelters are and where they should go and what they should do to best use the shelters.

In addition, no area is totally without fallout protection, even though there may not be sufficient shelter identified by the national fallout shelter survey for all of the population in the area. Citizens in areas with a deficit of standard PF 40 shelter should know where the best available protected space is located, including protection identified in their homes by the home fallout protection survey, and they should know what to do, if it should be necessary, to improve the protection already existing.

Finally, even if the citizens know where to go and what to do to make the best use possible of existing protection from fallout, local governments—including mayors, policemen, firemen, local civil defense directors, and other local officials—should have a plan on what to do to assist their citizens.

Thus, an essential step in developing an operational civil defense system based on fallout shelters is to build upon the investment represented by the national fallout shelter survey and related shelter surveys, by providing specific information to allow each citizen to determine what to do and where to go in time of emergency and by getting that information to the individual. The largest part of the job involves matching people to the best protection available and making these allocations known. This includes detailed advice to people in areas not presently served by public shelters identified by shelter surveys as to what is the best existing protected space available and as to how to improve that protection, if necessary.

The planning process also defines areas of shelter deficit, in which low-cost opportunities to identify or develop more shelter should be exploited. The initial shelter allocation has to be updated periodically in communities throughout the country as more shelter space becomes available. This becomes one of the aspects of the total urban planning effort in the community.

An additional part of the job of community shelter planning involves identifying modifications required in existing local government emergency plans to base them on shelter allocation plans; in other words, to establish a working shelter system. This includes, for example, detailed local arrangements for the police force to help the people move to shelters, for the radiation monitoring system to be closely related to the shelters in each community, and for the provision of shelter managers in each public shelter.

The community shelter planning program is designed to assist localities throughout the United States to attain emergency readiness as outlined above. Localities do this by developing an allocation plan to make the best use possible of existing protection, by identifying local shelter deficits with precision, by developing concrete and practical local procedures to develop additional shelter in areas where it is needed, and by identifying updating required in their local government emergency plans. In this way, local readiness is based upon the use of the best existing protection from fallout and upon the use of the existing forces, know-how, and equipment of local government.

Community shelter plans are developed for local planning areas which may include only one county or which may be as large as a multicounty metropolitan area.

The specific techniques and processes used in this community shelter planning process have been thoroughly field tested. The field tests also showed that the skills of the urban planning professional were necessary for development of realistic shelters-use plans. Accordingly, the community shelter planning program provides for work by local urban planners on the initial shelter allocation process, while periodically updating these allocations becomes one of the aspects of the total urban planning effort in the community. Professional community-planning competence is available, according to a survey conducted by the International City Managers Association, within local governments in 98 percent of cities over 100,000, in 80 percent of cities over 50,000 and 31 percent of cities over 10,000. Private firms specializing in community planning are also available to do work on a consulting basis.

The work involved in allocating local populations to existing shelters is fully federally supported, relying to the maximum on local urban planning professionals. In the approximately 600 more heavily populated metropolitan areas, the work has been and will be accomplished by means of a contract between field offices of the Army Corps of Engineers or Navy Facilities Engineering Command, acting on behalf of the Office of Civil Defense, and the locality. Contracts are

negotiated with a local government or with a regional or metropolitan area urban-planning commission. As of December 30, 1967, 184 contracts had been placed throughout the country for the development of area community shelter plans. In the balance of the country, urban planner assistance is supplied under a contract between the State and the Office of Civil Defense, providing for professional urban planning service to be made available from the State level. As of December 30, 1967, 235 community shelter plans were initiated as a result of such planning service. The program is discussed personally with Governors, mayors, and county officials in the earliest phase of activity. Acceptance and approval by these officials is a prerequisite to contract negotiation.

In all cases, the community shelter planning process results in advice for citizens in the local planning area as to where to go and what to do to maximize chances of survival in case of nuclear attack. This advice is normally provided in the form of maps and instructions, and may be published in newspapers or telephone directories or mailed or distributed to each household. (Fund support for the publication phase of the community shelter program is included under the operation and maintenance appropriation, "Emergency information.")

During fiscal year 1968, it is estimated that 32 areas will be contracted for making a cumulative total of 189 areas. The fiscal year 1968 contracts average $60,000 each due to the inclusion of several major metropolitan areas. To date, the average cost per person for the entire program is approximately $0.13; however, in metropolitan areas with a population of over 1 million, the average cost is approximately $0.07. The average cost in all other areas is approximately $0.14 per person. For fiscal year 1969, estimated contract costs are based on the cumulative experience to date of $43,000 average cost for 189 contract areas. Therefore, the fiscal year 1969 funds in the amount of $2,150,000 will extend the contracting for community shelter planning to an additional 50 local planning areas.

Funds in the amount of $1,150,000 are also being requested to provide for continued professional urban planning service from the State level, to localities not covered by direct contracts. It is anticipated that 360 area plans will be accomplished as a result of the State level service during each of fiscal years 1968 and 1969.

RESEARCH AND DEVELOPMENT

Mr. EVINS. Then you have some more research and development on page 84, where you are asking for $6.5 million. You have been developing for 18 years and you need $6.5 million more?

Mr. ROMM. You will notice there is a tremendous reduction since 1967. There is a 37-percent reduction since 1967. We have deferred some very important things during 1969. We are continuing some very important projects.

DESIGN DEVELOPMENT

Mr. EVINS. Page 78. Give us more detail on the elements of costs in the item for $2,400,000, "Professional advisory services."

Mr. ROMM. This is were we provide advice on improving the designs of new construction in both non-Federal and Federal buildings for the inclusion of shelter. The non-Federal buildings include emergency operating centers at the local level. This has helped in getting the cost down from $100,000 in matching funds per center to about $25,000 per center. There is included $1 million for Corps of Engineers assistance.

The Corps of Engineers has influenced military construction, the Department of Agriculture has also been providing an engineering advisory service in agricultural construction. We have university advisory services from engineering and architectural schools which are also available to the engineer and architect professions.

Mr. EVINS. They want to get the contracts so they will draw them like you suggest.

Mr. ROMM. You will find there are few building owners that specify shelters.

Mr. EVINS. Do you think you are subsidizing the architectural profession a little bit too much?

Mr. ROMM. Mr. Evins, you will find there are very few owners that specify a requirement for fallout protection in the new construction. It is true that the architectural and engineering advisory services that is provided has been able to get increased shelters into new construction.

As you know, the new construction materials are fairly lightweight and it takes a great deal of skill, design and improvement to get the kind of fallout protection we need.

Mr. EVINS. You state that:

From fiscal year 1965 to December 1967, detailed analyses of 62 proposed new GSA Federal buildings had been made, and recommendations on slanting techniques to provide shelter were furnished which would result in an estimated 340,000 shelter spaces.

Continuation of a four-step program to make inclusion of standard shelter protection in the home practical by, one, designing new methods of incorporating shelter in homes; two, refining and developing these designs to assure low-cost marketability; three, testing final designs; and four, making these designs available.

Mr. ROMM. That is in homes.

Mr. EVINS. GSA and homes?

Mr. ROMM. Yes.

Mr. EVINS. Continuation on a limited basis, of the university architectural and engineering development centers program, $200,000.

Mr. ROMM. This is a reduction from the previous amount.

Mr. EVINS. Continuation of the direct mail system activated by information from Dodge Reports and other commerce sources on probable shelter yield of new building, $400,000.

Mr. ROMM. This direct mail system really solicits the owner and architect at the time the decision is made to build something before the designs are finalized. We tested this system out in seven States and it worked.

DESIGN DEVELOPMENT JUSTIFICATION

Mr. EVINS. We will put 77 through 80 in the record.

(The pages follow:)

DESIGN DEVELOPMENT

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
New obligational authority	$2,583,843	$1,005,500	$3,100,000
Unobligated balance for use in subsequent years	2,536,050	0	0
Available prior year unobligated balance	3,896,369	2,536,050	0
Total obligations	3,944,162	3,541,550	3,100,000

Under the architect and engineer development program (see page 27), qualified architects and engineers are being trained to consider and apply low-cost and no-cost slanting techniques in the design phases of building construction. Notwithstanding the fact that there are currently over 13,000 architects and engineers certified in radiation shielding technology, there are many buildings

still being constructed without adequate consideration being given to shielding requirements by architects and engineers who have not as yet had the opportunity to receive appropriate training. If these weak points in design which nullified otherwise good protection could have been detected by someone knowledgeable in radiation shielding analysis during the initial design phase of the project, then design changes using slanting techniques could have been incorporated to maximize the protection. The design development program is designed to fill this void and take maximum advantage of current construction projects to incorporate slanting protective features into such on-going construction projects.

Design slanting for fallout protection is defined as the incorporation with little or no extra cost and no reduction in efficiency, of certain architectural and engineering features into new structures, to protect personnel from fallout gamma radiation in event of an emergency. The current trend in building design towards the use of lightweight materials and large amounts of glass in exterior walls requires a determined effort on the part of the designer to achieve fallout protection. Since its introduction in 1964, slanting techniques have been incorporated into various types of buildings: i.e., schools, industrial plants, shopping centers, office buildings, etc. Architects and engineers, as a result of their participation in the combined OCD program, have been instrumental in accomplishing this.

Funds requested in this budget estimate will provide for:

(*a*) Continuation of professional advisory service to be rendered for programs involving State and local emergency operating centers, rural civil defense, emergency broadcasting system protection, community shelter planning, and professional advice to architects of new building—both Federal and non-Federal, $2,400,000.

This program is administered by OCD through contractual arrangements with the Corps of Engineers, Department of Agriculture, architectural firms, 42 selected universities and colleges involving approximately 125 professors of architecture and engineering. Under these contractual arrangements (1) engineering guidance on emergency operating centers is furnished to State and local officials, (2) project applications including plans, specifications, and cost estimates are reviewed, (3) engineering studies pertaining to special problems are conducted, (4) services to agricultural engineers are provided to promote the inclusion of shelters in the design of community and farm buildings, (5) professional advisory services are provided to architects and engineers designing military, Federal, and non-Federal buildings, (6) technical assistance is provided to installation commanders to optimize design and utility of fallout shelters on military installations.

(*1*) *Non-Federal buildings*

Experience through June 30, 1967, indictes that requests for engineering and technical advisory service in non-Federal construction projects have resulted in an average yield of approximately 1,800 shelter spaces per facility at an average advisory service cost of $0.14 per shelter space. To further improve this response, a test program for a direct mail system of contacting owners and architects to encourage the incorporation of shelter spaces into design projects was conducted during fiscal year 1968. As an indication of the growing acceptance of fallout shelter design techniques and the effectiveness of the direct mail shelter development system during the first quarter of fiscal year 1968, responses from architects requesting technical assistance and advisory services have increased fourfold over responses received during a similar period in the previous fiscal year.

(*2*) *Federal buildings*

The program continues to provide guidance and professional consulting services to Federal agencies responsible for building designs so that fallout shelter protection can be maximized at little, if any, increase in cost and to promote the incorporation of shelter into structures that are constructed with funds that include a Federal subsidy. Guidance and professional advisory services are provided to Federal agencies in providing public fallout shelters in Federal buildings and for the incorporation of shelter for their emergency functions. Similar advisory services are also provided, on a reimbursable basis, on new military buildings by the Corps of Engineers.

From fiscal year 1965 to December 1967, detailed analyses of 62 proposed new GSA Federal buildings had been made, and recommendations on slanting techniques to provide shelter were furnished which would result in an estimated

340,000 shelter spaces. The shelter cost as a percent of the total construction cost averaged less than three-fourths of 1 percent. As an indication of the increased acceptance of these new design techniques by Federal agency construction personnel, a total of 109 proposed Federal buildings have been budgeted for through fiscal year 1968, which include fallout shelter at no additional construction cost. In addition, guidance and professional consulting services were provided to other Federal agencies in 16 additional Federal buildings to obtain over 56,000 fallout shelter spaces.

b. Continuation of a 4-step program to make inclusion of standard shelter protection in the home practical by (1) designing new methods of incorporating shelter in homes on a dual-use basis to expand usable home space and increase appraisal value; (2) refining and developing these designs to assure low-cost marketability to the public and thus, acceptability by the professional home-builder; (3) testing final design to assure compliance with OCD criteria without excess mass and to assure most practical placement of essential mass; and (4) making these designs available to service firms for inclusion in standard home plans, $100,000.

The majority of single family homes in the United States are constructed by using standard plans developed by service firms rather than by retaining architectural and engineering services for custom design. As evidenced by the home fallout protection survey, this shelter potential is not to be ignored. Slanting techniques can be utilized on home designs but they must be either no-cost or add to the value of the home by increasing its appraised value to retain its sales appeal on a highly competitive market.

During fiscal year 1968 a series of cost-effective methods of achieving PF–40 in new and existing homes were developed in cooperation with the National Association of Home Builders and their member industry trade associations. This included the assembly of a builder's reference manual setting forth the most economical methods of achieving fallout protection in homes without adversely affecting normal use of the protected space. In addition, a radiation test structure, typical of American homes, was constructed and tested for radiation shielding under a wide variety of structural configurations. The test program results are being documented for comparison with theoretical calculation in order to obtain an indication as to where the current shielding methodology for homes might be further improved.

c. Continuation of the direct mail system, activated by information from Dodge Reports and other commercial sources to make timely offers of technical assistance to interested owners, architects and consulting engineers; related analyses as to the probable shelter yield of new buildings; improving the reliability of construction reports and statistics in forecasting potential spaces to become available through shelter design application, $400,000.

d. Continuation on a limited basis, of the university architectural and engineering development centers program. This program is designed to integrate the entire technical capabilities of a university toward serving civil defense requirements and providing the professional with a concentrated abstract of the latest architectural-engineering technology. These data are expressed in simplified form, suitable for direct use by the practicing professional as rapidly as possible for the development of shelter, $200,000.

SHELTER STOCKING

Mr. EVINS. We will take a look at shelter stocking, $2.8 million. Is this for warehousing?

Mr. ROMM. All of it is for warehousing.

Mr. EVINS. We considered earlier funds for warehousing. Is this a different type?

Mr. ROMM. Yes, sir. The funds we considered before were for radiological defense equipment.

Mr. EVINS. Why do you not consolidate all warehousing costs into one item?

Mr. ROMM. Mr. Evins, the warehousing costs for the emergency water equipment and the radiological instruments are consolidated in the O. & M. appropriation. This money was appropriated at the

time the shelter supplies were purchased and is available for the continued storage and issuance. This is why it shows up in this account.

My comptroller tells me this is planned to be carried over. It is not by accident. We have to have it carried over to warehouse and issue the stocks we have in the depot.

Mr. EVINS. This is not warehousing on the site at the manufacturing plant?

Mr. ROMM. No, sir. It is in Government warehouses.

Actually, we have been cutting down by consolidating the number of warehouses. In fiscal year 1962, there were 94 and now there are 25.

Mr. EVINS. Who operates this system?

Mr. ROMM. Defense Supply Agency operates the system for us, mostly at the Defense General Supply Center in Richmond.

Mr. EVINS. You have a quality check program, a product improvement program, and a management of materials program. Do these materials you are warehousing ultimately go to fallout shelters?

Mr. ROMM. Yes, sir.

FEDERAL REGIONAL EMERGENCY OPERATING CENTERS

Mr. EVINS. It is more than you used 2 years ago.

We will put page 83 in the record. This pertains to the Federal regional emergency operating centers.

(The page follows:)

FEDERAL REGIONAL EMERGENCY OPERATING CENTERS

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
New obligational authority	0	0	0
Unobligated balance for use in subsequent years	$5,034,238	0	0
Available prior year unobligated balance	7,800,000	$6,034,238	0
Total obligations	1,765,762	6,034,238	0

Effective direction and control under emergency conditions require a nationwide network of Federal, State, and local operating centers capable of performing and coordinating essential governmental functions. These operating centers are designed to meet the emergency needs of the specific element of government located therein. In the event of an emergency, or during periods of increased tension, these operating centers become the focal points for communication to the States and for the interchange of emergency information necessary for an effective civil defense preattack and postattack operation.

Federal direction and control would originate from eight Federal regional emergency operating centers. Each has the capability of operating independently under emergency conditions to guide the immediate survival operations and the subsequent recovery effort in their respective geographical areas. The structures furnish protected operational headquarters for the daily use of the regional staffs to permit the regional staffs of both OCD and the Office of Emergency Planning and other Federal agency personnel to direct the execution of essential civil defense and recovery functions under emergency conditions. Each regional center is being designed to provide adequate protection from potential nuclear radiation and blast. The facility at region 2 includes provision for the protected housing of the OCD computer facility.

One Federal regional emergency operating center has been completed (region 5). Construction of the region 1, 6, and 7 centers is underway and construction commitments are expected to be made for regions 2 and 4 in the third or fourth quarter fiscal year 1968. Due to the actual bid prices of the aforementioned

centers, cost experience and engineering cost estimates, the remaining two centers (regions 3 and 7) have been temporarily deferred. Original estimates were made in 1964 under criteria then current. Pending further cost and design analysis, funds are not requested in fiscal year 1969.

Mr. EVINS. The Federal regional emergency operating centers, you are asking for no funds for 1969?

Mr. ROMM. That is right, sir.

Mr. EVINS. You had $6 million last year.

Mr. JONAS. How many do you have in operation?

Mr. ROMM. We have region 5, which was constructed with funds appropriated in 1960.

Mr. JONAS. That was in Texas?

Mr. ROMM. That is in Texas. Region 1 is being completed right now. They will be moving in some time this month.

Mr. JONAS. That is in Massachusetts?

Mr. ROMM. Halfway between Fort Devens and Boston.

Regions 6 and 8 are under construction now, and they are scheduled to be completed in fiscal year 1969.

Region 2 will be advertised for bids this year, as will region 4.

Since the appropriation of funds for construction of these centers, there has been a tremendous increase in construction costs and the amount of money appropriated will not cover all of the regions. Regions 3 and 7 are not covered by available funds but we are not asking for additional money in fiscal year 1969. The request is being deferred to fiscal year 1970.

RESEARCH AND DEVELOPMENT

Mr. EVINS. Research and development on page 84.

We will put in the record pages 84 through 86.

(The pages follow:)

RESEARCH AND DEVELOPMENT

	Actual, fiscal year 1967	Estimate, fiscal year 1968	Estimate, fiscal year 1969
New obligational authority	$10,000,000	$7,100,000	$6,500,000
Unobligated balance for use in subsequent years	569,941	0	-
Available prior year unobligated balance	1,206,011	569,941	-
Total obligations	10,636,070	7,669,941	6,500,000

The research program conducted by the Office of Civil Defense emphasizes systems analysis and the necessary supporting applied research. A part of the effort is directed toward solution of technical problems arising in the implementation of currently approved programs but most is aimed at evaluation of the cost, effectiveness and feasibility of alternative civil defense systems of the future and at developing the technological base for the most promising candidates. These future civil defense systems must be evaluated in relation to other defensive systems, such as deployment of ballistic missile defenses, and the anticipated trends in weapon and delivery system capabilities.

Reduction in the fiscal year 1968 level of effort by approximately 30 percent has resulted in deferral or stretchout of all but the most central research tasks. The funds requested for fiscal year 1969 will continue the emphasis on only the most critically needed work.

Three basic types of future civil defense are under study: (1) systems similar to the current civil defense posture that offer substantial improvement yet lie within the general framework of present national security policy, (2) systems designed to provide a high degree of protection to urban populations against

attacks directed against them, and (3) systems designed to alter the vulnerability of population and resources by actions taken during a period of deteriorating international relations.

Systems of the first type, as near neighbors of the currently approved civil defense program, are being given priority attention, especially in connection with the deployment of a thin Sentinel ballistic missile defense. Emphasis is being placed on the slanting of new construction to provide added protection against blast and fire effects as well as fallout. Experimental and analytical work of the past several years indicates that moderate blast and fire slanting can be done at a cost not greatly over that of fallout slanting. This work must be accelerated to provide a technical basis for early field testing. Closely associated with the foregoing is the use of better knowledge of the extent and character of blast damage and fire growth and spread to develop improved capabilities for emergency operations, such as firefighting, rescue, and treatment of injured survivors, under nuclear attack conditions. Research to date has resulted in an improved concept of operations as a basis for this development. Mass fire is being studied in a substantial program of large experimental burns to aid in this research. The effect of the Sentinel deployment on the scope and effectiveness of civil defense operations is also receiving increased emphasis.

The fact that civil defense systems of the first type leave urban populations relatively vulnerable to attack leads to the consideration of systems incorporating hard shelter. The degree to which such shelters, designed to provide protection against all immediate weapons effects at a 50–100 pounds per square inch level, can be incorporated in new construction on a dual-use basis is not well understood. Past damage limiting studies of an assumed systems of 100 pounds per square inch single-purpose shelters have shown that these systems under certain conditions are competitive on a cost-effectiveness basis with various deployments of ballistic missile defense systems and degrade more gracefully as the threat level is increased. Recent siting studies indicate that the feasibility of building blast shelters in urban areas is greater than heretofore believed. Knowledge of feasibility, cost, and performance is not adequate at the present time. Moreover, as the protection against weapon effects is increased, the cost of the protected volume also increases. This demands careful analysis of tradeoff costs and feasibility of allocating less space per occupant.

An alternative to protecting urban populations inplace is relocate them during crisis periods so as to be less vulnerable to direct attack. Strategic evacuation poses severe economic costs but smaller outward movements to nearby fallout shelter appear attractive if essential production and services can be maintained by organized commuting of workers. High survival probabilities appear achievable in many metropolitan areas using pre-prepared fallout protection. Evaluation of these possibilities is continuing.

A major area of study continues to be the question of postattack viability of the country following nuclear attack. As increased protection is postulated for the population, per capita surviving resources are reduced unless resources are also protected. This is a difficult area of study in which prior years' investments are beginning to yield results. In fiscal year 1967, estimates were made for the first time of the effectiveness of civil defense in improving the productivity of a postattack economy and the welfare of survivors. A goal of the next few years is to improve the ability to measure the effectiveness of civil defense and other strategic defense systems not only in terms of added survivors but also in terms of per capita GNP or income at 1 or 2 years after attack. This work is being done in conjunction with the Office of Emergency Planning. In addition, a substantial effort is being applied to the study of the sensitivity of crops and food animals to radiations.

Analysis will be made of the use of Sentinel radar tracking information in improving civil defense warning and communications capabilities and the impact of such potential improvements on shelter management and emergency operations. Preliminary studies suggest that, given a disciplined organization, proper training, and effective information, substantial increases in lifesaving can be expected from civil defense use of impact warning. Work will be resumed on new and improved specifications for shelter stocks as well as experiments to determine how to incorporate low cost ventilation and air distribution into new buildings and other shelters. Studies of postattack viability will be extended to more fully account for organizational flexibility and substitutibility of resources and processes. Network analysis techniques will be employed to estimate the vulnerability of electric, water, and gas utilities to nuclear attack. Finally, the implications

of large Nike–X deployments for alternative civil defense measures and resource protection will be more thoroughly analyzed.

Mr. EVINS. Tell us why you need $6.5 million for further research.

Mr. ROMM. This is to improve the current system and to research into future systems. I would like to describe some of the major important projects we are engaged in now.

We are involved in shelter studies on improvements in fallout shelter designs and techniques, and investigations into the possibility of blast design at low cost.

Mr. EVINS. Is this the only research you have in your budget?

Mr. ROMM. Yes, sir. This is the only place where the research is being done.

Mr. EVINS. Is the research done under contract?

Mr. ROMM. It is all under contract.

The way it is distributed, we have Government contracts for about 23 percent of the funding.

Mr. EVINS. With Government agencies?

Mr. ROMM. Yes, about 23 percent. And 11 percent with educational institutions, universities. The rest——

Mr. EVINS. Are they writing reports or what are they doing?

Mr. ROMM. The university research is mostly in the theoretical field; that is, for example, improvement in developing models from the experimental testing data that comes out of the research in other areas.

Mr. EVINS. What are the other Government agencies doing? They are too busy to do research for civil defense. You are supposed to do your own.

Mr. ROMM. In a good deal of it, we are riding piggyback on the research they do. We are not doing all of the research, obviously. But we have research contracts, for example, with the engineers on blast design development which they do on their own account, and we have an add-on of materials which would be of benefit to civil defense.

Mr. EVINS. Besides the Government agencies and universities, what others are there?

Mr. ROMM. Two-thirds of it is in private organizations, both nonprofit and profit organizations. These are applied to what we consider at this point in time the most critical high-priority information to be developed for future civil defense capability.

Mr. EVINS. Mr. Romm, in my experience sitting here on the committee for several years, I have heard of our appropriating funds for testing the blast capability of fallout shelters, and we found answers.

Mr. ROMM. We are still developing experimental data. Actually, they have been doing blast design studies on scale models.

Mr. EVINS. Of course the contractor wants his contracts to continue all the time, he never wants to quit.

Mr. ROMM. You will find we deferred what we consider deferrable items. There has been about a 35 percent drop in this program over the last 2 years. What we have here we feel are high priority investigations to make sure we can have progress in the civil defense program in the future.

SUMMARY OF BUDGET

Mr. EVINS. Mr. Romm, you are asking for a $1.6 million increase in research and shelters, with a $2.8 million carryover, and you are asking for a $500,000 transfer in your other appropriations for civil defense.

Mr. ROMM. Yes, sir.

Mr. EVINS. For a total budget for 1969 of $77.3 million?

Mr. ROMM. Yes.

APPLICATION OF REDUCTION FROM 1968 TO 1969

Mr. MARSH. Generally speaking, where did you apply your 10-percent reduction you are down this year?

Mr. ROMM. The 10 percent in 1969 new appropriations?

Mr. MARSH. Yes.

Mr. ROMM. If you look at our obligational program, there was a 10-percent reduction in operations and maintenance. Most of that applied to the public education function.

Mr. MARSH. I mean generally in total appropriations.

Mr. ROMM. The area that was reduced the greatest was the shelter survey program. We are going to be able to survey only about half of the new buildings constructed in fiscal year 1969, and the other half will have to be caught up with in fiscal year 1970. We will also have no new starts for home basement surveys in 1969.

LEVEL OF FUNDING FOR EXPANDED PROGRAM

Mr. MARSH. I notice the Secretary of the Army, in a statement on page 3, said specifically this expanded national defense system would make a major contribution to the protection of the population against a heavy attack.

Would you want to make as an outside estimate as to the level of funding that would be consistent with that statement of the Secretary of the Army for your agency?

Mr. ROMM. I would say the level of funding, to be consistent with meeting the expanded program, would range from $150 million per year to about $250 million per year phased out over a 6- or 7-year period.

CIVIL DEFENSE IN SOVIET UNION

Mr. MARSH. The Soviet Union has developed a rather extensive shelter program; is that correct?

Mr. ROMM. No, sir. In the past they have done this: They developed in the Soviet Union a series of blast shelters for the Government organization. They have given instructions to the public on how to use the available fallout protection in large structures, very much like what we are doing, and they developed a series of training programs where they plan, unlike us, to have some kind of an evacuation to places outside the cities with the people themselves constructing some kind of makeshift fallout protection.

I do not know how practical this is. I do not think it would work here.

Mr. MARSH. Recent press accounts indicate they have deployed a rather extensive anti-ballistic-missile system. Does that agree with your observations?

Mr. ROMM. Not my observations, but I read the same press accounts, and they seem to have deployed an antiballistic system around Moscow.

Mr. MARSH. And I think you would say the Sino-Soviet effort is one of the principal contributors to international tension; is that not correct?

Mr. ROMM. I would not disagree with that.

Mr. MARSH. For the reduction of the tensions we mentioned earlier, the easy way would be for the Soviets to dismantle their anti-ballistic-missile system.

Mr. ROMM. I would much prefer they dismantle their strategic offense forces.

ADEQUACY OF FUNDING LEVEL FOR 1969

Mr. MARSH. Yes; and the anti-ballistic-missile system.

Do you feel the level of funding in your appropriation request this year is compatible with the threat we face from the standpoint of the nuclear attack?

Mr. ROMM. I feel the level of funding this year will help us maintain what we have gained to date. I think we will have to pick up these deferred items in future years to increase our capability to protect the population.

Mr. MARSH. Then I would assume you would recommend funding probably at a level in excess of the amount you have requested this year.

Mr. ROMM. I am here to support the President's budget. I wish I could get everything we have asked for in this year's budget.

Mr. MARSH. Thank you, Mr. Chairman.

Mr. EVINS. Mr. Director, I think you have done a very fine job. You know your subject. We commend you for your fine work and for your fine staff. I think you are an able administrator.

Mr. ROMM. Mr. Evins, I appreciate the kind words.

THURSDAY, MARCH 7, 1968.

99.0	Total obligations	6,308	10,000	9,974

PERSONNEL SUMMARY

Total number of permanent positions	181	175	175
Full-time equivalent of other positions	4	5	5
Average number of all employees	170	171	171
Average GS grade	5.9	6.0	6.1
Average GS salary	$7,065	$7,377	$7,593

Mr. EVINS. The committee will come to order. We have with us the officials of the Department of Health, Education, and Welfare, the Public Health Service, including Dr. Henry C. Huntley, Director, Division of Health Mobilization, along with Mr. Robert J. Wallace, Financial Manager; Dr. Carruth J. Wagner, Director, Bureau of Health Services; Ralph Bahn, Financial Manager, Bureau of Health Services; Dr. Eugene H. Guthrie, Associate Surgeon General; Mr. Bert J. Skinnard, Division of Finance, Office of the Surgeon General; and Mr. Robert C. Harris, Division of the Budget, Office of the Secretary.

We are very pleased, gentlemen, to hear you regarding your fund needs and requirements.

Dr. Huntley, do you have a statement for us?

Dr. HUNTLEY. Yes.

Mr. EVINS. You may, if you wish, place your statement in the record, or highlight it, as you wish.

GENERAL STATEMENT

Dr. HUNTLEY. I would be happy to do so. If you wish, I will attempt to summarize this in the interest of time for the committee.

Mr. EVINS. Very fine.

(Dr. Huntley's prepared statement follows:)

Mr. Chairman and members of the committee, I wish to express my appreciation for this opportunity to present the emergency health activities program of the Public Health Service.

The primary objective of emergency health services is to provide for continuity of health programs in time of disaster and to assure that medical care will be provided for the millions of citizens who may become casualties in the event of a national emergency or a major disaster. There are a number of program elements essential to carrying out this primary objective.

The program presently places primary emphasis on increasing the disaster capability of existing community hospitals.

HOSPITAL RESERVE DISASTER INVENTORY

Through the hospital reserve disaster inventory medical supplies of the type needed for victims of a major disaster such as bandages, antibiotics, anesthetics and sutures are being added to hospital inventories. These materials are rotated through the hospital's normal supply system to insure that they are kept up-to-date. At present, the average hospital has sufficient supplies to operate for only 5 days. These additions will eventually insure a capability for at least 30 days for every hospital in the Nation. To date, contracts have been developed with over 400 hospitals with an average bed size of 100 to accept, store and rotate this hospital reserve disaster inventory.

AFFILIATION OF PACKAGED DISASTER HOSPITALS WITH EXISTING HOSPITALS

The program of affiliating our 2,573 packaged disaster hospitals with existing hospitals was begun in June 1967, and to date over 400 contracts have been signed with the community hospitals agreeing to develop an operational plan to provide staffing and, to the extent feasible, to rotate many of the pharmaceuticals. We have programed the affiliation of 700 packaged disaster hospitals for fiscal year 1968. In an emergency, these prepackaged 200-bed disaster hospitals with a capability of 30 days' operation can be rapidly assembled to function as an additional community resource. In this way, the prepackaged hospital supplements the existing hospital and medical care system of the community and becomes a vital element in the comprehensive emergency health plan. The community hospital develops plans for emergency operation and staffing of its own regular facilities, and, with the aid of guidelines and training materials supplied by the Public Health Service, trains its own staff and other health care manpower in the community in the assembly and operation of the prepackaged emergency hospital provided by the Federal Government. Up to the present time community hospitals have agreed to carry out their responsibilities in both the hospital reserve disaster inventory and packaged disaster hospital programs without any additional administrative costs being charged to the Public Health Service.

EMERGENCY MEDICAL SUPPLY DEPOTS

The emergency medical stockpile depots assure that medically acceptable stocks are on hand at all times and eliminate unnecessary waste by maximum possible rotation of the reserve stocks. Current stocks are transferred to other agencies where they will be used before expiration of their useful life. Stocks so transferred are replaced with fresh materials. To date, there have been rotation agreements covering stock exchanges to the value of approximately $10 million. These agreements are principally with the military services, the Veterans' Administration, the AID program, and the supply services of other elements of the Public Health Service. Some of this stock has been loaned to the Defense Department to meet immediate needs in Vietnam.

Portions of the medical stockpile provide reserves for emergency medical care requirements of the Federal Government, States, and local communities. We have an agreement with the American National Red Cross under which large quantities of cots and blankets are routinely loaned to meet urgent natural disaster requirements.

In 1966, four depots for storage and distribution of emergency medical supplies were closed for reasons of efficiency and economy. Two additional depots were closed in 1967, and a consolidation of three is planned in 1968. This will leave 11 in operation, which is the optimum number of depots needed at present, for the storage and issue of new and replacement stocks and for resupplying and updating older prepackaged disaster hospitals.

BUDGET REQUEST FOR FISCAL YEAR 1969

ACQUISITION OF STOCKS

During 1968, about $1.6 million is being used to refurbish 350 of the most recently acquired packaged disaster hosiptals, and for the partial refurbishment of another 350 of these hospitals. An amount of $1,400,000 was used to obtain hospital reserve disaster inventory unit supplies for 70,000 beds. The utilization and substitution of previously purchased stocks available in the depot system considerably reduced the new procurement costs.

For 1969, about $2.9 million is recommended for procurement to permit us to: (1) refurbish 200 packaged disaster hospitals; (2) assemble 25 natural disaster hospitals; and (3) provide supplies for disaster inventory units for approximately 21,000 beds.

We anticipate that we will have agreements through the agencies and professional groups concerned in 1969 on the type of intravenous system that will be most effective under disaster conditions so that we can proceed with procurement of this essential item.

Together, the refurbished packaged disaster hospitals and the hospital reserve disaster inventory on the shelves of community hospitals will provide a capability for medical care for large numbers of injured survivors of any type of disaster when normal sources of resupply or additional beds are not otherwise available.

INVENTORY MANAGEMENT

About $3.7 million is recommended for this purpose, a slight reduction below the 1968 level. This will provide for continued depot operations including warehousing, packaging and preservation of materials, quality control program, and transportation of stockpiled materials. Included in the estimate is $250,000 for the beginning of a program of inspection of the older packaged disaster hospitals in the field. Funds have not been available for this purpose for the past 4 years, and many of these hospitals need such things as oiling and running of generators, repackaging broken boxes, and inspecting many items to determine if replacement or repair is needed. Funds recommended will permit us to inspect 275 of these packaged disaster hospitals in the field.

STOCKPILE MANAGEMENT

About $640,000, a slight increase above 1968, will provide for the continuation of stockpile management activities. This item supports the staff responsible for the overall medical stockpile management activities including policy determinations, procurement, accountability, and the cost of operating the inventory control system. An increased burden is thrown on the stockpile management activity for scheduling the placement of medical supplies on the shelves of community hospitals. Accountability and inventory control are becoming increasingly complex.

EMERGENCY HEALTH TRAINING AND COMMUNITY PREPAREDNESS

We recommend about $2.8 million be made available for emergency health training and community preparedness activities, about $190,000 above the 1968 level. Of this amount, $100,000 is requested for program development at the State level. We plan to develop contracts with State health departments to expand and develop training programs through their ongoing training activities using their personnel. These programs will be directed to the community and hospital level, particularly to those communities in which the community hospital has an affiliated prepackaged disaster hospital. About $40,000 of the increase will be devoted to the development of training aids and materials to facilitate the orientation of hospital staffs in problem areas in which they must be knowledgeable if the best medical care is to be provided to victims of a disaster.

The balance of the increase proposed, about $50,000, is required for built-in requirements such as increased pay costs and 1 extra day of pay above the stated annual rate.

A great portion of this fund request provides for our field staff in the States and the regional offices who are working with the States and the communities in emergency planning and training activities, and with the individual hospital administrators and staffs in contract development, and in assisting in their orientation and understanding of the resources provided by the packaged disaster hospital and the hospital reserve disaster inventory unit in any disaster.

In addition, the field personnel also provide for the organization of medical self-help training for the general population. In fiscal year 1968, over 2 million persons will be trained in medical self-help.

Included in the total of $2,773,000 for emergency health training and community preparedness are funds to assure immediate Public Health Service response to natural disasters. This program is stimulating the development and training of medical and surgical teams staffed from Public Health Service hos-

pitals to fly into any State upon request of State and local authorities to provide immediate medical care and assistance.

In conclusion, the Public Health Service is striving to establish and maintain a highly efficient emergency health capability. Through this emergency health activities program, which has proven operationally effective in past disaster situations, a mechanism has been established which enables communities to be self-sustaining and to cope with the circumstances associated with any natural or nuclear disaster affecting the health and the lives of its people.

I will be pleased to answer any questions you may have.

PROGRAM STATUS

Dr. HUNTLEY. As you may recall, last year when we appeared before you we had embarked on a program which would place the primary responsibility for emergency health services in the community hospital and the staff of the community hospital, doing this through affiliation of the packaged disaster hospitals that had been available to us for the past 10 years and through the placement of supplies on the shelves of the existing community hospitals. This program was just initiated at the time we met with you last year. It has developed very well. In fact, it has exceeded our expectations in terms of the response of the community and the hospitals to this program. It has been accepted in all States. It has been accepted by the medical profession, the hospital associations and by the State and local civil defense directors.

We have programed for this year the affiliation of 700 of our packaged disaster hospitals with the community hospitals. This places the responsibility on the community hospitals of developing a plan of operation and a staffing pattern for the packaged disaster hospital, and on the community for providing custody for the packaged disaster hospital and its supplies, and also for providing the supporting services that are necessary for operation of the hospital, such as communications, transportation, police protection, welfare services, and so forth.

We are programing the affiliation of 700 packaged disaster hospitals for this year. To date, we have about 450 contracts with community hospitals all over the country. There is no question but that we will be able to reach our goal.

The other part of the stockpile program is for the placement of emergency medical supplies on the shelves of community hospitals so that in a major disaster or a cutoff situation, such as a national emergency, they would be able to continue operation for at least a period of 30 days. In relation to this, we now have contracts with approximately 500 community hospitals, with an average size of 100 beds each, across the country.

We have programed for this year contracts with 700 community hospitals providing supplies for approximately 70,000 hospital beds. We have as yet run into no major problems in this program. As I indicated, it is well accepted and appears to be going quite well. We feel this will benefit us in a number of ways. It will improve the status of preparedness of the community and the individual hospitals, and also will help us a great deal in the rotation of our stockpile supplies which has been one of our major critical problems over the years.

In our depot system we are continuing to develop a program of consolidation of our depots. In 1966 four depots were closed. Two additional ones were closed in 1967. A consolidation of three is planned in 1968. This will leave 11 in operation, which we consider at this moment to be the optimum needed. We are planning to close the depots located at Carterville and Seneca, Ill., and at Neosho, Mo., and consolidate them into Government-owned space at Dixon, Ill.

During fiscal year 1968, to refurbish the packaged disaster hospitals which were purchased as early as 1953, we are utilizing about $1,600,000. This, plus the materials that are already in the depots, will provide enough money and enough stocks to completely refurbish 350 of the packaged disaster hospitals and to provide the hard goods for the refurbishment of an additional 350 packaged disaster hospitals. So that in our contracts of affiliation we will be able to provide the hospitals and the community with a functional element or unit which they have not had in the past.

For the provision of supplies for the 70,000 community hospital beds that we have programed this year, we again are utilizing a considerable amount of stocks that were already present in our depot system and an additional $1,400,000 in new procurement for this purpose.

For 1969 we are recommending $2,884,210 for the procurement of new medical materials. This will permit us to refurbish completely 200 of the older packaged disaster hospitals that have been prepositioned in communities over the years. It will also enable us to assemble 25 natural disaster hospitals at a cost of approximately $3,600 each, and will provide emergency medical supplies for approximately 21,000 beds. We anticipate that we will not have any difficulty in obtaining agreements with community hospitals to accomplish this program in this coming fiscal year.

In inventory management, which includes among other things the depot system, we are recommending $3,680,000, which is a slight reduction below the 1968 level. This will provide for continued depot operations, including warehousing, packaging, preservation of materials. Included in this amount is a new item of $250,000 for the beginning of a program of inspection of the older packaged disaster hospitals which have been placed out in the communities over the years.

None of these, I might add, have been looked at in the past 5 years primarily because of lack of funds and the question of reorientation of the program under the direction of the Bureau of the Budget and an interagency committee.

This $250,000 request will provide us with money this coming year to initially inspect 275 of the older packaged disaster hospitals.

In stockpile management, this budget item supports the staff responsible for the overall medical stockpile management activities, including policy determination, procurement, accountability, and the cost of operating the inventory control system. We are asking for $637,000, which is a slight increase above 1968. The actual increase amounts to $32,000; $15,000 of the increase is for increased computer time which will assist us in the management of the inventory and accountability aspects of our program. The remainder of this increase is for mandatory increases in terms of pay increases, salary increase, and an extra day of pay for 1969. In emergency health training and community preparedness, we are recommending $2,773,000 which is $192,640 above

the 1968 level. Of this amount, $100,000 is requested for program and contract developments with State agencies.

We plan to develop contracts with State health departments for training purposes through their ongoing programs, utilizing personnel that would be hired at the State level. These programs would be directed to the community at the hospital level, particularly those hospitals that are affiliated with the packaged diasater hospital. About $40,000 of this increase will be utilized for the development of training aids and materials to facilitate the orientation of the community hospital staffs in the problem areas. The balance of the increase is required for the built-in requirements, such as increased pay costs and one extra day of pay above the stated annual rate.

In addition to the utilization of existing field personnel for the development of contracts, training, and so forth, these program representatives are also managing the medical self-help training program. This year out of advances received from the Office of Civil Defense we were able to train some 2 million persons in medical self-help.

You may be aware of the fact, Mr. Chairman, that the day before yesterday in Tennessee the Governor made the first Humanitarian Award to a Miss Beverly Woodward from your district. I might say that this was well deserved on the basis of information that has been provided us.

Mr. EVINS. The young lady saved the life of her father by using good judgment.

Dr. HUNTLEY. Yes.

We have other similar awards in process at the present time because there have been many accomplishments in lifesaving actions resulting from this program.

You may be interested in the fact that medical self-help is being used in many of the community action programs for the training of their clientele, the people that they serve, because this does provide them with a background of knowledge that is necessary to meet the everyday emergency medical problems which exist among this group of people. We have done a considerable amount of work this year in natural disasters. We provided direct assistance through the medical stockpile program this fiscal year to some 45,000 people who were involved in natural disasters of one type or another.

We are developing the natural disaster hospital which will be stored in situations where a packaged disaster hospital would be too bulky or could not be transported.

As an example of this, we now have a contract with the medical society, the community hospital and the civil defense agency located at Enid, Okla., whereby they have agreed to provide transportation, the necessary medical staff and personnel to transport the natural disaster hospital along with the trained staff on request to any point within 75 miles of Enid, Okla., particularly in relation to the tornadoes which occur in this area.

We are developing similar contracts elsewhere. One other thing: We are working with the Division of Direct Health Services, the hospital system of the Public Health Service, to develop teams which will be available on request from a State, and other health organizations to provide assistance to communities in natural disasters.

Mr. EVINS. Very good, Dr. Huntley. That is an excellent statement on your activities and services.

Now, for the record, tell us how many warehouses the Public Health Service maintains currently.

Dr. HUNTLEY. Currently we are maintaining 13.

COMMUNITY HOSPITAL AFFILIATION

Mr. EVINS. Tell us how many community hospitals you are supporting or maintaining.

Dr. HUNTLEY. Between the packaged disaster affiliation program and the hospital reserve inventory program, we now have contracts actually with some 700 community hospitals.

Mr. EVINS. 700 community hospitals?

Dr. HUNTLEY. Yes.

Mr. EVINS. Are these community hospitals designated as packaged disaster hospitals?

Dr. HUNTLEY. No.

Mr. EVINS. The community hospitals are separate. How many packaged disaster hospitals are there?

Dr. HUNTLEY. We have contracts for affiliation of the packaged disaster hospitals with approximately 450 community hospitals.

Mr. EVINS. Are these included in the 700?

Dr. HUNTLEY. Let me clarify my terminology. When I say we have contracts with 700 community hospitals, I am speaking now of the existing community hospitals. Now, with these community hospitals we have contracts with 450 of them for affiliation of a packaged disaster hospital.

Mr. EVINS. The 450 is included in the 700?

Dr. HUNTLEY. Yes.

Mr. EVINS. That is what I was trying to determine. It is not 450 in addition to the 700.

Dr. HUNTLEY. In some of them, we have contracts for both the packaged disaster hospitals and hospital reserve disaster inventories.

Mr. EVINS. Before you started your community hospitals and packaged disaster hospital programs under contract, you turned this emergency medicine over to the hospitals and you had to supervise them. Under the new arrangement, they do the supervising, and report to the Public Health Service. Is that a fair summary?

Dr. HUNTLEY. That is a fair statement except for the fact that we still have the responsibility for accountability and we will be beginning this program soon.

Mr. EVINS. How much in medicine, dollarwise, is invested in the 700 community hospitals under the packaged disaster program?

Dr. HUNTLEY. At the present time we have on the shelves of the community hospitals, as a part of the hospital reserve disaster inventory, and as part of the packaged disaster hospital supplies, about $1 million.

Now, this does not include, of course, the total cost of the packaged disaster hospitals which are stored in the community.

Mr. EVINS. You have about $1 million in medicine installed in these communities.

Dr. HUNTLEY. $1 million on the shelves of community hospitals, yes.

INSPECTION PROGRAM

Mr. EVINS. As a result of questioning by this committee a few years ago regarding inspections, didn't you inaugurate an inspection system?

Dr. HUNTLEY. When the Public Health Service took over this program in 1961, there was an inspection program. When the program came under study by the Interagency Committee, including the Bureau of the Budget, and so forth, funds were withheld for all of these activities and there has not been an inspection program for a little over 4 years now.

Mr. EVINS. For 4 years there has been no inspection. You do have reports from the doctors of the community hospitals identifying what is there, and it amounts to about $1 million. Now, other than these reports, that is about the current status?

Dr. HUNTLEY. We have Public Health Service personnel in most of the States. These are the people who will be and are going into these hospitals now on an average of once every 6 months.

COMMUNITY MEDICAL SUPPLY INVENTORIES

Mr. EVINS. How often do you have to rotate this medicine?

Dr. HUNTLEY. The average shelf life of the stocks that we have is about 4 or 5 years. The least time of any of them we have in the system is about 2 years.

Mr. EVINS. The shortest time is 2 years, but most of it will last 4 years?

Dr. HUNTLEY. Four, or longer; yes.

Mr. EVINS. Are the doctors in these community hospitals allowed to use this medicine in stock for their own patients, if they determine they need it and desire to do so?

Dr. HUNTLEY. The hospital under the contract agrees to utilize this medicine and replace it in kind. When our people inventory the stocks of the community hospital, our primary purpose is to see that they are maintaining the inventory level of all the drugs that were supplied them.

Mr. EVINS. The point I am trying to arrive at: Is the doctor permitted to use this for his own patients who are able to pay for drugs otherwise?

Dr. HUNTLEY. Yes.

Mr. EVINS. Provided he will replace it?

Dr. HUNTLEY. Yes.

Mr. EVINS. Do you have any checks on this to see that it is being replaced?

Dr. HUNTLEY. We are beginning to check now because, these stocks have been on the community hospital shelves for only 6 months.

Mr. EVINS. I can understand that doctors like Uncle Sam to stock their shelves with medicine. Even the extension of credit is a very valuable assistance.

Dr. HUNTLEY. Yes. The contracts are with the community hospitals themselves. We look to the hospital to maintain and to replenish their inventories.

Dr. GUTHRIE. I think, Mr. Chairman, that these supplies are in the hospitals under the direction, usually, of the hospital pharmacy rather

than available as open stock for anybody's use. The medicines as dispensed in the hospital usually come through the pharmacy control. This rotation system would, in connection with the hospital's regular pharmacy stock, come under their control system.

Mr. EVINS. There is a control there.

Doctor, how much is the actual ultimate estimated value of the medicines on shelves when you have your 450 contracts consummated?

Dr. HUNTLEY. When the 450 contracts for the affiliation of packaged disaster hospitals and for supplying 70,000 beds of community hospitals with disaster inventories are completed, this will amount to approximately $3 million.

1969 APPROPRIATION ESTIMATES

Mr. EVINS. Now, you have your 13 warehouses, 700 community hospitals, which include 450 packaged disaster hospitals under contract, and you are asking for an appropriation of $2,400,000 and the carryover of about $7,500,000 from last year; is that correct?

Dr. HUNTLEY. That is correct.

Mr. EVINS. A total program of $9,974,210.

Dr. HUNTLEY. Yes, of the $9,974,210, $2,400,000 is requested in new obligational authority and $7,574,210 represents unobligated balances brought forward from 1968.

Mr. EVINS. You had about an $8 million carryover from 1967 to 1968.

Dr. HUNTLEY. Yes.

Mr. EVINS. Then under Public Law 218 of the 90th Congress, which applied to the withholding of a certain amount of appropriations, you held back $7,707,210.

Dr. HUNTLEY. Yes.

Mr. EVINS. You want to have this reappropriated?

Dr. HUNTLEY. Yes.

Mr. EVINS. Now, of this total amount of $9,974,210, as you have already testified, $2,884,210 is for acquisition of new stocks, and this will get you about $3 million in new stocks, plus your $1 million that is already on the shelves?

Dr. HUNTLEY. Yes.

Mr. EVINS. There will be about $4 million of medicines on the shelves?

Dr. HUNTLEY. Not all of it will be medicines.

Mr. EVINS. Acquisition of stocks is what it says.

PACKAGED DISASTER HOSPITALS

Dr. HUNTLEY. Yes, but not all medicines. Part of it will be medical supplies and equipment to replace that which has deteriorated in the packaged disaster hospitals.

There is actually about $4,000 worth of medicines in each packaged disaster hospital. The remainder of the $40,000 is in supplies and equipment.

Mr. EVINS. What is the nature of your equipment?

Dr. HUNTLEY. We have an X-ray machine, an anesthesia machine, operating room supplies, tables, lamps, surgical instruments, 200 cots, blankets, and pillows.

Mr. EVINS. How many of these hospitals are there?

Dr. HUNTLEY. These are hospitals that were purchased beginning in 1953 by the Federal Civil Defense Administration. There are a total now of about 2,573 of these hospitals.

Mr. EVINS. You have about 2,573 hospitals which the old Federal Civil Defense Administration purchased?

Dr. HUNTLEY. Yes.

Mr. EVINS. They are just used as facilities for stockpiling?

Dr. HUNTLEY. Yes.

Dr. GUTHRIE. They are the packaged disaster hospitals.

Mr. EVINS. Yes; blankets and medicines are stacked away?

Dr. GUTHRIE. Yes.

Dr. HUNTLEY. Yes.

Mr. EVINS. I recall a number of years ago there was a news report about pilferage and waste of these packaged supplies.

Dr. HUNTLEY. There has been a very modest amount of supplies stolen over the past 5 years that I am aware of. I have no estimate of this, but it is somewhat less than $100,000.

Mr. EVINS. You are not placing expensive X-ray machinery in private hospitals, are you?

Dr. HUNTLEY. No. The equipment again will be under the custodianship of the community, the State and local civil defense directors.

INVENTORY MANAGEMENT ACTIVITIES

Mr. EVINS. Besides your acquisition of stocks, which includes both medicines and equipment, in 1968 your inventory management was $3,819,000, next year it is estimated to be $3,680,000. You show in your budget a decrease.

Dr. HUNTLEY. There are certain programs in which there is a decrease.

Mr. EVINS. In total there is a decrease.

Dr. HUNTLEY. The total is a decrease of $139,000, but we are asking for a new item in here of $250,000 for insepction teams to inaugurate an inspection program.

INSPECTION TEAMS

Mr. EVINS. That is an increase, the inspection teams?

Dr. HUNTLEY. Yes.

Mr. EVINS. How many do you expect to have on these teams?

Dr. HUNTLEY. About three people. They will have additional personnel to assist them in the repackaging.

Mr. EVINS. Do you plan to visit all the packaged disaster hospitals?

Dr. HUNTLEY. No. This will provide for the inspection only of around 275 of these hospitals. We plan to go into communities where the older hospitals have been stockpiled and where they have not been looked at for more than 5 years.

Mr. EVINS. I think with $3,680,000 you could send a man to all of them.

PHS–GSA EMERGENCY MEDICAL SUPPLY DEPOT SYSTEM

Dr. HUNTLEY. Well, there are other things essential in this $3,680,000; namely, the depot system and the operation of it.

Mr. EVINS. All right. Let us talk about the depot system now. You have 13 depots?

Dr. HUNTLEY. Yes.

Mr. EVINS. You testified that you closed four in 1966, two in 1967, and you will consolidate three in 1968?

Dr. HUNTLEY. Yes.

Mr. EVINS. Where are these three located that are supposed to be consolidated?

Dr. HUNTLEY. One at Carterville, Ill., one at Seneca, Ill., and one at Neosho, Mo.

Mr. EVINS. Where do you propose to consolidate these three?

Dr. HUNTLEY. We propose to consolidate these three into Government-owned space at Dixon, Ill.

Mr. EVINS. The space at Dixon is already owned?

Dr. HUNTLEY. Yes.

Mr. EVINS. You have a warehouse there?

Dr. HUNTLEY. Yes.

Mr. EVINS. Is it large enough to accommodate your needs?

Dr. HUNTLEY. It is.

Mr. EVINS. I assume you are doing this in order to promote efficiency and economy?

Dr. HUNTLEY. This is the purpose.

We have calculated the saving to the Government by consolidation of the three depots. Our calculations are that this will result in a net savings of $146,000.

Mr. BOLAND. Who are these depots owned by at Carterville, Seneca, and Neosho?

Dr. HUNTLEY. Carteville and Seneca are Government-owned space. The one at Neosho is owned by a private corporation.

Mr. EVINS. Is the one at Dixon, Ill., also owned by the Government?

Dr. HUNTLEY. Yes.

Mr. EVINS. In other words, you have three owned by the Government and one under contract, and you propose to put the two owned and the one under contract all at Dixon, Ill.?

Dr. HUNTLEY. Yes.

Mr. EVINS. And this will result in savings to the taxpayers?

Dr. HUNTLEY. Yes, sir. We have estimated, and we have good indications that this will result in a saving of $146,000.

Mr. EVINS. Per year?

Dr. HUNTLEY. Per year.

Mr. EVINS. One of our colleagues has called to the attention of several Members of the Congress that your calculations are inaccurate, that this does not provide for that large a saving.

CONSOLIDATING AT DIXON VERSUS NEOSHO

Dr. HUNTLEY. Yes. The question that has been raised on this is whether it would be less expensive and more beneficial to the Government to consolidate at Dixon or to consolidate at Neosho.

A GAO report on this which was requested by the Member of Congress indicated that if we consider the question of loss of income tax that the total saving to the Government by consolidating at Dixon versus Neosho was only $3,000 a year. However, I would like to point

out that this did not include the necessary capital investment that would be incurred by the Government, by GSA.

Mr. EVINS. How long have you had this depot at Neosho?

Dr. HUNTLEY. This was leased again in 1957 by the Federal Civil Defense Administration.

Mr. EVINS. How much does the contract call for by way of rental payment annually?

Dr. HUNTLEY. The contract had called for $111,000. When it became evident that we were considering moving out, an offer was made for rent which would, on the basis of the total space needed, be $104,000.

Mr. JONAS. How much is that per square foot?

Dr. HUNTLEY. That is 40 cents per square foot.

Mr. JONAS. How do you get that amount with 190,000 square feet?

Dr. HUNTLEY. To consolidate at Neosho we would require an additional 70,000 square feet of space to put our stocks which are now at Seneca and Carterville into Neosho.

Mr. JONAS. If you are just talking about Neosho as it is now, your 140,000 square feet at 40 cents a square foot would be only about $75,000, wouldn't it?

Dr. HUNTLEY. Yes, but if we pick up the additional 70,000 square feet that are required for storage of stocks——

Mr. JONAS. Right at the moment we are not talking about that, we are talking about the rent for warehousing at Neosho. So it is $76,000——

Dr. HUNTLEY. The present rent. If we did not consolidate at Neosho that would be it.

Mr. JONAS. They say that in your calculation you had it up to $79,000, or an error of $3,365, approximately. How did that come about?

Dr. HUNTLEY. The reason for that error was that since the 31st of May, 1967, we have not been paying rent on an airway amounting to some 3,500 square feet of space, between three and four thousand feet. Anyway, it reduced it by this amount of money.

Mr. JONAS. How many square feet are you planning to use at Dixon?

Dr. HUNTLEY. About 300,000 square feet.

Mr. JONAS. If you use 300,000 square feet at Neosho it would raise the price substantially, wouldn't it?

Dr. HUNTLEY. Yes.

Mr. JONAS. But you are only planning to use 240,000?

Dr. HUNTLEY. It would actually be about 265,000 square feet if I am not mistaken.

Mr. JONAS. How can you use a lesser amount of square feet at Neosho than at Dixon?

Dr. HUNTLEY. We are planning to crowd it a little bit and also, for a modest amount of material that we already have packaged, it is possible to stack this, about 15 to 20 percent higher.

Mr. EVINS. What is the nature of the Neosho storage? Is this a cave?

Dr. HUNTLEY. This is a limestone cave; yes, sir.

Mr. EVINS. Does it have any defects, or are there other reasons for moving?

Dr. HUNTLEY. The GSA has stated that it does not meet their specifications for underground storage. They have estimated that to rehabilitate it to the point where it would meet their specifications, a preliminary engineering estimate by GSA was that it would cost $439,000 to provide flooring and to provide the proper dehumidification equipment.

Mr. EVINS. What kind of a flooring would this be, wood or concrete flooring?

Dr. HUNTLEY. Concrete flooring.

Mr. EVINS. And $439,000 is needed to floor the cave for the dampness?

Dr. HUNTLEY. And to provide the necessary equipment.

Mr. EVINS. To prevent against dampness?

Dr. HUNTLEY. The necessary dehumidification equipment to provide against dampness, yes.

Mr. JONAS. What is stored there?

Dr. HUNTLEY. We have there presently about $6,637,734 worth of medical supplies.

Mr. JONAS. Describe the supplies.

Dr. HUNTLEY. This includes all types of medical equipment and supplies, and some drugs, some cots, blankets, surgical instruments, X-ray equipment, operating tables.

Mr. JONAS. What is your rate of deterioration there as compared with your Government-owned warehouse space?

Dr. HUNTLEY. We do not have any comparison on this. There has never been a satisfactory study. We have asked this question of other agencies, whether or not there has been any firmed-up study indicating any differential.

Mr. JONAS. You have been at Neosho for 10 years. It would seem to me prudence would have dictated that some study should have been made before now of the rate of deterioration. Why do you take GSA's word it will cost $400,000 to put the warehouse in shape when it may be good enough as it is?

Dr. HUNTLEY. Well, we would like very much to have information on the question of deterioration, but we simply do not have a study which I would conceive of being a rather long-term study before a specific determination can be made.

Mr. JONAS. Have you discarded a lot of material from Neosho?

Dr. HUNTLEY. Over the years in all of our depots we have discarded a considerable amount of material.

Mr. JONAS. Has the rate of deterioration been greater at Neosho than in wooden warehouses?

Dr. HUNTLEY. No. There has been no appreciable difference. It has depended primarily upon the types of material that were stockpiled and the amounts.

Mr. JONAS. What will it cost to rehabilitate the facilities at Dixon?

Dr. HUNTLEY. GSA has assured us that there will be no capital outlay.

Mr. EVINS. Doctor, besides the estimated savings of $146,000, are there other advantages from the move or consolidation?

Dr. HUNTLEY. Well, the area to be served covers a total of nine States. The population to be served is concentrated in northern Illinois, Milwaukee, St. Louis, the Minneapolis area. The depot at Dixon, the proposed depot, would be closer to some 13 million people

including the St. Louis metropolitan area which is actually some 30 miles closer to Dixon than to Neosho.

Mr. EVINS. This Dixon facility will serve the St. Louis and Chicago areas also?

Dr. HUNTLEY. Yes; the depot at Neosho would be closer to approximately 2½ million people.

Mr. EVINS. The depot serves 13 million and 2½ million would be closer to Neosho?

Dr. HUNTLEY. Yes.

LOCATION OF 13 DEPOTS

Mr. JONAS. While he is there, where are your 13 located?

Mr. EVINS. Read them into the record.

Dr. HUNTLEY. Bastrop, Tex., Boyers, Pa., Carterville, Ill., Clearfield, Utah, Dixon, Ill., Neosho, Mo., Prairie, Miss., Seneca, Ill., Shelby, Ohio, Spokane, Wash., Stockton, Calif., Wampum, Pa., Watertown, Mass., and Williamsburg. Va.

Mr. BOLAND. How many are Government-owned of the 13?

Dr. HUNTLEY. All but three are Government-owned facilities.

Mr. BOLAND. Would you detail the three that are not Government-owned?

Dr. HUNTLEY. Boyers, Pa., Wampum, Pa., and Neosho, Mo.

NEOSHO DEPOT

Mr. JONAS. If Neosho is a bad location why did you move 3 million pounds in there in 1966?

Dr. HUNTLEY. This was the result of closing of other depots and this was the only available space that we had at the time.

Mr. JONAS. Did you have a ruling from GSA that it was not suitable at that time?

Dr. HUNTLEY. A determination had not been made at that time.

Mr. JONAS. Yet you went ahead and moved 3 million pounds more in there.

Dr. HUNTLEY. Yes, sir.

Mr. JONAS. At a substantial cost.

Dr. HUNTLEY. Yes, sir.

Mr. JONAS. Now you want to move that plus everything else out.

Dr. HUNTLEY. Yes.

Mr. JONAS. Into wooden frame buildings at ground level. How are you going to protect this material in the event of blast or fallout?

Dr. HUNTLEY. The information that has been provided us from the classified source indicates that there is no danger from blast in this location, that the amount of fallout to be expected will not be significantly different at ground level from the amount of fallout to be expected at Neosho. It is therefore considered to be a safe location.

Mr. JONAS. That is amazing. Here we are putting fallout shelters in basements and you tell us now there is no more danger to ground level warehoused material from fallout than underground facilities protected by 70 feet of solid rock.

Dr. HUNTLEY. The material itself will not be affected by the fallout. The only problem will be getting to it and transporting it to where

it is needed. This problem will be no different at Neosho than it will be at Dixon.

Mr. JONAS. Do you mean you cannot contaminate medicine?

Dr. HUNTLEY. Not by the amount of fallout that is expected, no.

Mr. JONAS. We had better change some of our thinking, when we get the civil defense people in here. Do you know how much money we are spending putting all this equipment down in basements?

Dr. HUNTLEY. Well, this is for the protection of individuals. Now, individuals can be affected by fallout.

Mr. JONAS. Yes; but we had better scatter this material around in office buildings, then if it is not in any danger of being contaminated from fallout.

Dr. HUNTLEY. Again, sir, I think that the basis of the program of the Office of Civil Defense is the protection of the individual in a fallout shelter, and there is need for supplies so that he can be maintained in a shelter for a given period of time.

Mr. EVINS. This committee for several years has been suggesting placing of supplies in Government-owned warehouses rather than in rented space.

Dr. HUNTLEY. Yes.

Mr. EVINS. You have been moving in that direction for the past several years?

Dr. HUNTLEY. Yes.

Mr. EVINS. You estimate it will provide a savings of $146,000. How many people will be closer to the Dixon Depot?

Dr. HUNTLEY. The depot at Dixon will be closer to 13,500,000 people.

Mr. EVINS. It will be closer to 13½ million people?

Dr. HUNTLEY. Yes; the one at Neosho is closer to 2½ million people.

Mr. JONAS. Yes; but you have other warehouses that are closer to this same 13 million people. This one warehouse won't serve the 13 million. Now, if you moved to New York City, you could put up the same argument, you could locate all your warehouses in just three metropolitan areas of the country.

Dr. HUNTLEY. Yes; however, we also have these warehouses in Pennsylvania which serve the northeastern part of the country.

COST TO MOVE

Mr. JONAS. What is it going to cost you to make this move?

Dr. HUNTLEY. I can give you the exact figures, sir. The cost of moving to Dixon is $170,500.

Mr. JONAS. What is that based on?

Dr. HUNTLEY. This is based upon GSA rates of movement of this material for the distance involved.

Mr. JONAS. Does that include the cost of transportation?

Dr. HUNTLEY. The loading, unloading, and the cost of transportation.

Mr. JONAS. My information is that it will cost over that amount of money just according to the motor freight tariff schedule, based on rates of $2.16 for 20,000 pounds or $1.87 for 30,000 pounds, and $1.40 for 40,000 pounds, and these are the published rates. That does not leave anything over for crating, handling, loading, or unloading. You cannot get this stuff moved by just paying the freight bill.

Dr. HUNTLEY. I am sorry, I am unable to completely answer this question because I am not familiar with the points that you have raised. We have this figure from GSA as the total cost of movement.

Mr. EVINS. Doctor, is it the committe's understanding that both GSA and GAO have both made studies and recommendations on this matter?

Dr. HUNTLEY. Yes. We have here a copy of the report by the General Accounting Office. This report did not consider in the cost estimates the factor of the necessity for capital improvements nor did it consider the factor of the operations in terms of the movement of the packaged disaster hospitals which are now stored in communities, into the depots, to be refurbished and for their shipment back to the communities. Because the depot at Dixon is closer to the majority of the population to be served there is a significant difference of $93,000 in this cost.

Mr. BOLAND. Is there a significant difference, too, in the maintenance and operation of the one depot at Dixon as compared to the centers at Carterville and Neosho——

Dr. HUNTLEY. Yes. The cost of operation in terms of personnel at Dixon versus Neosho, there is a $45,000 difference in favor of Neosho.

Mr. BOLAND. Annually?

Dr. HUNTLEY. Annually, yes.

Mr. JONAS. Of course, I, for one, think that just because you are closer to 13 million people at Dixon, you are closer to 11 million than you would be at Neosho, should not be compelling. The 2 million are just as important as the 13 million. Your argument would be proper to be used against dipersal but I thought we were trying to disperse these things equally around the country so that people who live in relatively sparsely settled communities would have the same opportunity for a little protection. We are not just dealing in protection of people in metropolitan areas, are we?

Dr. HUNTLEY. Well, of course, it is in these metropolitan areas where it is considered that the probability of casualties is greatest. Now, in the more sparsely settled areas protection is offered by the stockpiling of the packaged disaster hospital and the placement on community hospital shelves, existing hospital shelves, of medical supplies through the hospital reserve disaster inventory. When fully implemented this program would enable existing community hospitals to function for a total period of 30 days in casualty care treatment. You may be interested to know that the information we have relating to this is that when this program is fully implemented it will result in a saving of approximately 3½ million lives in the event of a national emergency.

Mr. JONAS. Well, you can't do anything but characterize that as pure, unadulterated speculation. It depends on where the bomb is dropped and where the fallout goes, the direction of the fallout.

Dr. HUNTLEY. Yes.

Mr. JONAS. It might not save one life, the fallout might go in another direction, might it not?

Dr. HUNTLEY. Well, we hope that a considerable number of lives will be saved in the event of fallout by the fallout shelter program.

Mr. JONAS. I can't understand how GSA can say you have no capital investment. I am going to watch that closely. A warehouse that houses

industrial equipment, I do not believe can be converted into the warehousing of medical supplies without some capital investment.

STOCKPILE MANAGEMENT ACTIVITIES

Mr. EVINS. In your stockpile you had $605,000 for last year and you are asking for $637,000 for next year, an increase of $32,000. Tell us about the status of the stockpile.

Dr. HUNTLEY. Yes. Of this increase, $15,000 is for additional computer time. This brings the total amount of money available for computer time which is related to the accountability of the inventory, to about $45,000. The remainder of this increase is related to the within-grade salary increases and additional pay costs.

EMERGENCY HEALTH TRAINING AND COMMUNITY PREPAREDNESS

Mr. EVINS. What is the status of your emergency health training and community preparedness program? You asked for $2,580,000 in 1968 and are requesting $2,773,000 in 1969, an increase of $192,640.

Dr. HUNTLEY. Yes. Of this increase we are requesting $100,000 for a new program in developing contracts with State agencies, principally State health departments, to develop teams to go out into the communities, particularly those communities that are affiliated with the packaged disaster hospital program and provide the background of knowledge, information, and organization that will be necessary to implement this program in time of emergency.

Mr. EVINS. Doctor, I happen to have attended an evening meeting in which the Secretary of Health, Education, and Welfare, Secretary Gardner, made his valedictory speech—at least, I term it that. He was making a fine address and he said in substance, that when he took over as Secretary he had a survey made of all the grant-in-aid health programs. I believe he said there were 18 or 20 separate ones and he recommended consolidation of all of them into one.

He said that the Governors and the health commissioners of the States knew what their requirements were. He said they ought to file one application for all of the needs. He made it appear as though things had been greatly streamlined and made more efficient. Do you have it all now where you can file one application and get all these various types of aid? I think that is a little exaggerated, isn't it?

Dr. HUNTLEY. I will defer to Dr. Guthrie.

Dr. GUTHRIE. We have made some progress in that direction. I think he was referring to the partnership-in-health program, legislation which was enacted last year, which did consolidate nine formula grant programs and seven project grant programs into a single formula project grant program which greatly simplified the Public Health Service individual health grants that were formerly highly categorized. This gave the State the option to use those total moneys for their priorities of program as opposed to the Federal priorities.

Mr. EVINS. Some progress is being made in consolidation and in efficiency. Now, the total obligations for 1969 amount to $9,974,210 or slightly under the $10 million of last year. Now, personnelwise, Doctor, you have 41 people in your stockpiling program; is that correct?

Dr. HUNTLEY. Yes.

Mr. EVINS. And 134 in your emergency health training and community preparedness program, for a total of 175?

Dr. HUNTLEY. Yes.

JUSTIFICATION MATERIAL

Mr. EVINS. Place in the record pages 3 through 7.

Rent, communications, and utilities	60,000	60,000	
Printing and reproduction	88,000	88,000	
Other services	12,000	12,000	
Services of other agencies	3,725,360	3,742,000	+16,640
Supplies and materials	2,698,640	2,349,210	−349,430
Equipment	415,000	653,000	+238,000
Total obligations by object	10,000,000	9,974,210	−25,790

Summary of changes

1968 enacted appropriation	$9,000,000
Transferred to "Operating expenses, Public Buildings Service," General Services Administration (space rental)	−52,640
Unobligated balance brought forward	8,626,850
Cutback from the 1968 President's budget required by H.J. Res. 888	−7,707,210
Total currently available	9,867,000
Release of funds in reserve for increased pay and postal costs	133,000
1968 estimated obligations	10,000,000
1969 estimated obligations	9,974,210
Total change	−25,790

	Base		Changes from base	
	Positions	Amount	Positions	Amount
Increases:				
A. Built-in:				
1. Annualization of increased pay costs:				
Public Health Service operations				$21,000
Advance to General Services Administration				11,000
2. Increase pay costs for within grade increases				40,000
3. Increase for 1 extra day of pay above the 52-week base				8,000
B. Program:				
1. Procurement program-medical stockpile:				
Reserve supply inventories for community hospitals				873,210
Replacement of deteriorated materials and refurbishment of packaged disaster hospitals				2,011,000
2. Depot operations		$2,725,000		250,000
3. Stockpile management activities	41	605,000		15,000
4. Emergency health training and community preparedness: Disaster services methods	12	560,360		140,640
Total program increases				3,369,850
Decreases:				
1. 1968 procurement program-medical stockpile				−2,995,640
2. Maintenance and processing of materials-medical stockpile				−360,000
3. Transportation of materials-medical stockpile				−40,000
Total decreases				−3,395,640
Total net changes requested				−25,790

EXPLANATION OF CHANGES

Program increases

1. *Procurement programs, medical stockpile.*—$2,884,210 is proposed for use in 1969 from previously appropriated funds including $873,210 to continue the program of procuring medical stockpile materials to place hospital reserve disaster inventory levels of critical survival supplies in community hospitals. The balance of $2,011,000 would be utilized to continue the program of refurbishing and updating the packaged disaster hospitals to function as an extension of community hospitals in disaster situations and for the assembly of natural disaster hospitals.

2. *Depot operations, medical stockpile.*—$250,000 is proposed for use in 1969 to establish 11 General Services Administration inspection teams to periodically inspect and maintain the packaged disaster hospitals.

3. *Stockpile management activities.*—$15,000 is recommended to strengthen the data processing system so as to maintain better control over the inventories placed in community hospitals and in the medical stockpile system.

4. *Disaster services methods, emergency health training and community preparedness.*—$140,640 is recommended to establish a program of support to State health departments in implementing training and educational programs and for the development and procurement of specialized training aids and materials.

Decreases

1. *1968 procurement programs, medical stockpile.*—A decrease of $2,995,640 represents completion of the 1968 procurement program.

2. *Maintenance and processing of materials, medical stockpile.*—A decrease of $360,000 reflects completion of a program to reprocess material stored at manufacturers' facilities and the reduction of stocks stored, rotated and tested at manufacturers' sites.

3. *Transportation of materials, medical stockpile.*—The decrease of $40,000 reflects a reduction in the amounts of medical stockpile material required to be transported to community sites and between depots in 1969.

ESTIMATES AND APPROPRIATIONS OF PRIOR YEARS

Mr. EVINS. Page 9 shows a wide variety of peaks and valleys in your appropriation. There is not a consistent level here. You go from $27 million down to zero, and from zero to $10 million to $9 million. A lot of programs are funded at a rather consistent level. How do you account for these variations?

Dr. HUNTLEY. Well, it is my understanding that these variations were primarily the result of either a major interest in the civil defense program or a lack of interest.

MEDICAL STOCKPILE INVENTORIES

Mr. EVINS. What is your total investment in the emergency health activities?

Dr. HUNTLEY. Our national medical stockpile is now at $157 million.

Mr. EVINS. $157 million in the national emergency stockpile?

Dr. HUNTLEY. Yes.

Mr. EVINS. Would you supply for the record where these hospitals are located?

Dr. HUNTLEY. Yes.

Mr. EVINS. Supply a table for the record. I am sure it would be of interest.
