1 **SEC. 2. FINDINGS.**

2 The Congress finds the following:

3 (1) As concluded in the report of the Com-
4 mittee on Science of the House of Representatives,
5 “Unlocking Our Future Toward a New National
6 Science Policy,” which was adopted by the House of
7 Representatives, the United States must maintain
8 and improve its preeminent position in science and
9 technology in order to advance human under-
10 standing of the universe and all it contains, and to
11 improve the lives, health, and freedoms of all people.

12 (2) It is estimated that more than half of the
13 economic growth of the United States today results
14 directly from research and development in science
15 and technology. The most fundamental research is
16 responsible for investigating our perceived universe,

1 to extend our observations to the outer limits of
2 what our minds and methods can achieve, and to
3 seek answers to questions that have never been
4 asked before. Applied research continues the process
5 by applying the answers from basic science to the
6 problems faced by individuals, organizations, and
7 governments in the everyday activities that make our
8 lives more livable. The scientific-technological sector
9 of our economy, which has driven our recent eco-
10 nomic boom and led the United States to the longest
11 period of prosperity in history, is fueled by the work
12 and discoveries of the scientific community.

13 (3) The effectiveness of the United States in
14 maintaining this economic growth will be largely de-
15 termined by the intellectual capital of the United
16 States. Education is critical to developing this re-
17 source.

18 (4) The education program of the United States
19 needs to provide for 3 different kinds of intellectual
20 capital. First, it needs scientists and engineers to
21 continue the research and development that is cen-
22 tral to the economic growth of the United States.
23 Second, it needs technologically proficient workers
24 who are comfortable and capable dealing with the
25 demands of a science-based, high-technology work-

1 place. Last, it needs scientifically literate voters and
2 consumers to make intelligent decisions about public
3 policy.

4 (5) Student performance on the recent Third
5 International Math and Science Study highlights the
6 shortcomings of current K–12 science and mathe-
7 matics education in the United States, particularly
8 when compared to other countries. We must expect
9 more from our Nation’s educators and students if
10 we are to build on the accomplishments of previous
11 generations. New methods of teaching mathematics
12 and science are required, as well as better curricula
13 and improved training of teachers.

14 (6) Science is more than a collection of facts,
15 theories, and results. It is a process of inquiry built
16 upon observations and data that leads to a way of
17 knowing and explaining in logically derived concepts
18 and theories.

19 (7) Students should learn science primarily by
20 doing science. Science education ought to reflect the
21 scientific process and be object-oriented, experiment-
22 centered, and concept-based.

23 (8) Children are naturally curious and inquisi-
24 tive. To successfully tap into these innate qualities,

1 education in science must begin at an early age and
2 continue throughout the entire school experience.

3 (9) Teachers provide the essential connection
4 between students and the content they are learning.
5 High-quality prospective teachers need to be identi-
6 fied and recruited by presenting to them a career
7 that is respected by their peers, is financially and in-
8 tellectually rewarding, and contains sufficient oppor-
9 tunities for advancement.

10 (10) Teachers need to have incentives to remain
11 in the classroom and improve their practice, and
12 training of teachers is essential if the results are to
13 be good. Teachers need to be knowledgeable of their
14 content area, of their curriculum, of up-to-date re-
15 search in teaching and learning, and of techniques
16 that can be used to connect that information to their
17 students in their classroom.

18 **SEC. 3. ASSURANCE OF CONTINUED LOCAL CONTROL.**

19 Nothing in this Act may be construed to authorize
20 any department, agency, officer, or employee of the United
21 States to exercise any direction, supervision, or control
22 over the curriculum, program of instruction, administra-
23 tion, or personnel of any educational institution or school
24 system.
