1 **SEC. 2. FINDINGS.**

2 The Congress finds as follows:

3 (1) Although the Centers for Disease Control
4 and Prevention (“CDC”) included family planning in
5 its published list of the “Ten Great Public Health
6 Achievements in the 20th Century”, the United
7 States still has one of the highest rates of unin-
8 tended pregnancies among industrialized nations.

9 (2) Each year, three million pregnancies, nearly
10 half of all pregnancies, in the United States are un-
11 intended; and half of unintended pregnancies end in
12 abortion.

13 (3) In 2000, 34 million women—half of all
14 women of reproductive age (ages 15–44)—were in
15 need of contraceptive services and supplies to help

1 prevent unintended pregnancy, and half of those
2 were in need of public support for such care.

3 (4) The United States also has the highest rate
4 of infection with sexually transmitted diseases
5 (“STDs”) of any industrialized country: in 2000
6 there were approximately 18.9 million new cases of
7 STDs.

8 (5) Increasing access to family planning serv-
9 ices will improve women’s health and reduce the
10 rates of unintended pregnancy, abortion, and infec-
11 tion with STDs. Contraceptive use saves public
12 health dollars: every dollar spent on providing family
13 planning services saves an estimated \$3 in expendi-
14 tures for pregnancy-related and newborn care for
15 Medicaid alone.

16 (6) Contraception is basic health care that im-
17 proves the health of women and children by enabling
18 women to plan and space births.

19 (7) Women experiencing unintended pregnancy
20 are at greater risks for physical abuse and women
21 having closely spaced births are at greater risk of
22 maternal death.

23 (8) The child born from an unintended preg-
24 nancy is at greater risk of low birth weight, dying

1 in the first year of life, being abused, and not receiv-
2 ing sufficient resources for healthy development.

3 (9) The ability to control fertility also allows
4 couples to achieve economic stability by facilitating
5 greater educational achievement and participation in
6 the workforce.

7 (10) The average American woman desires two
8 children and spends five years of her life pregnant
9 or trying to get pregnant and roughly 30 years try-
10 ing to prevent pregnancy; without contraception, a
11 sexually active woman has an 85 percent chance of
12 becoming pregnant within a year.

13 (11) Many poor and low-income women cannot
14 afford to purchase contraceptive services and sup-
15 plies on their own. 12.1 million or 20 percent of all
16 women aged 15–24 were uninsured in 2002, and
17 that proportion has increased by 10 percent since
18 1999.

19 (12) Public health programs like Medicaid and
20 Title X, the national family planning program, pro-
21 vide high-quality family planning services and other
22 preventive health care to underinsured or uninsured
23 individuals who may otherwise lack access to health
24 care.

1 (13) Medicaid is the single largest source of
2 public funding for family planning services and HIV/
3 AIDS care in the United States. Half of all public
4 dollars spent on contraceptive services and supplies
5 in the United States are provided through Medicaid
6 and approximately 5.5 million women of reproduc-
7 tive age—nearly one in ten women between the ages
8 of 15 and 44—rely on Medicaid for their basic
9 health care needs.

10 (14) Each year, Title X services enable Ameri-
11 cans to prevent approximately one million unin-
12 tended pregnancies, and one in three women of re-
13 productive age who obtains testing or treatment for
14 STDs does so at a Title X-funded clinic. In 2002,
15 Title X-funded clinics provided three million Pap
16 tests, 5.2 million STD tests, and 494,000 HIV tests.

17 (15) The increasing number of uninsured, stag-
18 nant funding, health care inflation, new and expen-
19 sive contraceptive technologies, and improved but ex-
20 pensive screening and treatment for cervical cancer
21 and STDs, have diminished the ability of Title X
22 funded clinics to adequately serve all those in need.
23 Taking inflation into account, funding for the Title
24 X program declined 57 percent between 1980 and
25 2003.

1 (16) While Medicaid is the largest source of
2 subsidized family planning services, many States
3 have had to make significant cuts in their Medicaid
4 programs due to budget pressures putting many
5 women at risk of losing coverage for family planning
6 services.

7 (17) In addition, eligibility for Medicaid in
8 many States is severely restricted leaving family
9 planning services financially out of reach for many
10 poor women. Many States have demonstrated tre-
11 mendous success with Medicaid family planning
12 waivers that allow them to expand access to Med-
13 icaid family planning services. However, the admin-
14 istrative burden of applying for a waiver poses a sig-
15 nificant barrier to States that would like to expand
16 their Medicaid family planning programs.

17 (18) Many private health plans still do not
18 cover contraceptive services and supplies. The lack
19 of contraceptive coverage in health insurance plans
20 places many effective forms of contraception beyond
21 the financial reach of many women.

22 (19) Including contraceptive coverage in private
23 health care plans saves employers money: not cov-
24 ering contraceptives in employee health plans costs

1 employers 15 to 17 percent more than providing
2 such coverage.

3 (20) Emergency contraception is a safe and ef-
4 fective way to prevent unintended pregnancy after
5 unprotected sex. It is estimated that the use of
6 emergency contraception could cut the number of
7 unintended pregnancies in half, thereby reducing the
8 need for abortion.

9 (21) In 2000, 51,000 abortions were prevented
10 by use of emergency contraception; increased use of
11 emergency contraception accounted for up to 43 per-
12 cent of the total decline in abortions between 1994
13 and 2000.

14 (22) Access to comprehensive sex education is
15 critical to reducing rates of unintended pregnancy,
16 abortion, and STD infection among teens. Over 60
17 percent of teens have had sex before they graduate
18 from high school and nine out of ten people have sex
19 before they get married. 822,000 teenagers become
20 pregnant each year; 35 percent of teen girls become
21 pregnant at least once before turning 20; and 78
22 percent of teenage pregnancies are unintended.
23 Nearly half (48 percent) of new STD cases are
24 among people ages 15–24, even though these youth

1 make up only a quarter of the sexually active popu-
2 lation.

3 (23) The American Medical Association, the
4 American Nurses Association, the American Acad-
5 emy of Pediatrics, the American College of Obstetri-
6 cians and Gynecologists, the American Public Health
7 Association, and the Society for Adolescent Medi-
8 cine, support responsible sexuality education that in-
9 cludes information about both abstinence and con-
10 traception.

11 (24) Comprehensive sex education protects ado-
12 lescent health. A recent survey found that only 15
13 percent of American parents believe that schools
14 should just teach about abstinence.

15 (25) A recent study showed that teens who took
16 pledges to remain virgins until marriage were just as
17 likely to contract STDs as teens who did not take
18 virginity pledges and that although teens taking the
19 pledges delayed sexual debut, they were less likely to
20 use condoms once they were sexually active.

21 (26) Teens who receive sex education that in-
22 cludes discussion of contraception are more likely
23 than those who receive abstinence-only messages to
24 delay sex and to have fewer partners and use contra-
25 ceptives when they do become sexually active.

1 **TITLE VI—FAMILY LIFE**
2 **EDUCATION**

3 **SEC. 601. SHORT TITLE.**

4 This title may be cited as the “Family Life Education
5 Act”.

6 **SEC. 602. FINDINGS.**

7 The Congress finds as follows:

8 (1) The American Medical Association
9 (“AMA”), the American Nurses Association
10 (“ANA”), the American Academy of Pediatrics
11 (“AAP”), the American College of Obstetricians and
12 Gynecologists (“ACOG”), the American Public
13 Health Association (“APHA”), and the Society of
14 Adolescent Medicine (“SAM”), support responsible
15 sexuality education that includes information about
16 both abstinence and contraception.

17 (2) Recent scientific reports by the Institute of
18 Medicine, the American Medical Association and the
19 Office on National AIDS Policy stress the need for
20 sexuality education that includes messages about ab-
21 stinence and provides young people with information
22 about contraception for the prevention of teen preg-
23 nancy, HIV/AIDS and other sexually transmitted
24 diseases (“STDs”).

1 (3) Research shows that teenagers who receive
2 sexuality education that includes discussion of con-
3 traception are more likely than those who receive ab-
4 stinence-only messages to delay sexual activity and
5 to use contraceptives when they do become sexually
6 active.

7 (4) Comprehensive sexuality education pro-
8 grams respect the diversity of values and beliefs rep-
9 resented in the community and will complement and
10 augment the sexuality education children receive
11 from their families.

12 (5) The median age of puberty is 13 years and
13 the average age of marriage is over 26 years old.
14 American teens need access to full, complete, and
15 medically and factually accurate information regard-
16 ing sexuality, including contraception, STD/HIV
17 prevention, and abstinence.

18 (6) Although teen pregnancy rates are decreas-
19 ing, there are still between 750,000 and 850,000
20 teen pregnancies each year. Between 75 and 90 per-
21 cent of teen pregnancies among 15- to 19-year olds
22 are unintended.

23 (7) Research shows that 75 percent of the de-
24 crease in teen pregnancy between 1988 and 1995

1 was due to improved contraceptive use, while 25 per-
2 cent was due to increased abstinence.

3 (8) More than eight out of ten Americans be-
4 lieve that young people should have information
5 about abstinence and protecting themselves from un-
6 planned pregnancies and sexually transmitted dis-
7 eases.

8 (9) United States teens acquire an estimated
9 4,000,000 sexually transmitted infections each year.
10 By age 24, at least one in three sexually active peo-
11 ple will have contracted a sexually transmitted dis-
12 ease.

13 (10) An average of two young people in the
14 United States are infected with HIV every hour of
15 every day. African Americans and Hispanic youth
16 have been disproportionately affected by the HIV/
17 AIDS epidemic. Although less than 16 percent of
18 the adolescent population in the United States is Af-
19 rican American, nearly 50 percent of AIDS cases
20 through June 2000 among 13- to 19-year olds were
21 among Blacks. Hispanics comprise 13 percent of the
22 population and 20 percent of the reported adolescent
23 AIDS cases though June 2000.

21 ing sexual intercourse;
- 22 (5) provides information about the health bene-
23 fits and side effects of all contraceptives and barrier
24 methods as a means to prevent pregnancy;
- 25 (6) provides information about the health bene-
26 fits and side effects of all contraceptives and barrier

1 methods as a means to reduce the risk of con-
2 tracting sexually transmitted diseases, including
3 HIV/AIDS;

4 (7) encourages family communication about
5 sexuality between parent and child;

6 (8) teaches young people the skills to make re-
7 sponsible decisions about sexuality, including how to
8 avoid unwanted verbal, physical, and sexual ad-
9 vances and how not to make unwanted verbal, phys-
10 ical, and sexual advances; and

11 (9) teaches young people how alcohol and drug
12 use can affect responsible decisionmaking.

13 (c) ADDITIONAL ACTIVITIES.—In carrying out a pro-
14 gram of family life education, a State may expend a grant
15 under subsection (a) to carry out educational and motiva-
16 tional activities that help young people—

17 (1) gain knowledge about the physical, emo-
18 tional, biological, and hormonal changes of adoles-
19 cence and subsequent stages of human maturation;

20 (2) develop the knowledge and skills necessary
21 to ensure and protect their sexual and reproductive

2 ment of and male responsibility in sexual decision-

8 (5) develop and practice healthy life skills in-
9 cluding goal-setting, decisionmaking, negotiation,

11 (6) promote self-esteem and positive inter-

13 cluding, but not limited to, friendships, dating, ro-
14 mantic involvement, marriage and family inter-

16 (7) prepare for the adult world by focusing on
17 educational and career success, including developing
18 skills for employment preparation, job seeking, inde-
19 pendent living, financial self-sufficiency, and work-
20 place productivity.

21 **SEC. 604. SENSE OF CONGRESS.**
