achievement, in relation to the mission of the institution of higher education; and

(3) identification of the types of students (including classification of types of students based on student age) who most benefit from distance education programs, the types of students who most benefit from campus-based education programs, and the types of students who do not benefit from distance education programs, by assessing elements including access to higher education, job placement rates, undergraduate graduation rates, and graduate and professional degree attainment rates.

SEC. 804. ENCOURAGING COLLEGES AND UNIVERSITIES TO “GO GREEN”.

(a) FINDINGS.—The Committee on Education and Labor of the House of Representatives makes the following findings:

(1) A commitment to and academic programs for environmental and economic sustainability are essential for our Nation’s future prosperity.

(2) The more than 4,200 higher education institutions in the United States have the capacity to innovatively leverage spending and change consumption patterns by incorporating concepts of sustainability into their academic programs and by modeling sustainable economic and environmental practices for their communities.

(3) Many colleges and universities have interdisciplinary programs or centers focusing on equipping students with the academic content knowledge needed to understand concepts of sustainability and “going green”.

(4) Many colleges and universities have programs related to the research of sustainability and sustainable systems.
(5) Academic programs related to sustainability vary in rigor because no national education content standards for academic sustainability programs currently exist.

(6) Colleges and universities may partner with businesses to encourage students and faculty to translate academic learning and research into practical solutions that promote sustainability.

(7) Colleges and universities that make an effort to reduce energy consumption and promote environmental sustainability not only reduce their own emissions, but also motivate the leaders of the next generation to action and create technical skills and resources to develop innovative solutions.

(8) Many colleges and universities have undertaken detailed, campus-wide assessments of their progress toward “going green” and sustainability or have measured their progress in specific sectors, such as operations, or specific parameters, such as recycling, energy, and water consumption.

(9) No system that evaluates and compares college and university campuses in terms of overall sustainability-related academic programs and practices currently exists.
(b) Sense of the Committee on Education and Labor.—It is the sense of the Committee on Education and Labor that in order to encourage increased public awareness of the need to “go green” by using sustainable economic and environmental practices and rigorous sustainability academic programs on college and university campuses, the following should be encouraged:

(1) The development of educational standards by institutions of higher education to determine the necessary rigor and effectiveness of academic sustainability programs.

(2) Public awareness of the need for “going green” by using sustainable economic and environmental practices.

(3) Non-governmental efforts to improve economic and environmental sustainability efforts on college and university campuses, including holding national summits to share best practices.

(4) Collaborative partnerships between Federal agencies, businesses, universities and communities to broaden sustainability practices.
