§ 91.1101 Pilots: Initial, transition, and upgrade ground training.

Initial, transition, and upgrade ground training for pilots must include instruction in at least the following, as applicable to their duties:

(a) General subjects—
   (1) The program manager’s flight locating procedures;
   (2) Principles and methods for determining weight and balance, and runway limitations for takeoff and landing;
   (3) Enough meteorology to ensure a practical knowledge of weather phenomena, including the principles of frontal systems, icing, fog, thunderstorms, windshear and, if appropriate, high altitude weather situations;
   (4) Air traffic control systems, procedures, and phraseology;
   (5) Navigation and the use of navigational aids, including instrument approach procedures;
   (6) Normal and emergency communication procedures;
   (7) Visual cues before and during descent below Decision Altitude or MDA; and
   (8) Other instructions necessary to ensure the pilot’s competence.

(b) For each aircraft type—
   (1) A general description;
   (2) Performance characteristics;
   (3) Engines and propellers;
   (4) Major components;
   (5) Major aircraft systems (that is, flight controls, electrical, and hydraulic), other systems, as appropriate, principles of normal, abnormal, and emergency operations, appropriate procedures and limitations;
   (6) Knowledge and procedures for—
      (i) Recognizing and avoiding severe weather situations;
      (ii) Escaping from severe weather situations, in case of inadvertent encounters, including low-altitude windshear (except that rotocraft pilots are not required to be trained in escaping from low-altitude windshear);
      (iii) Operating in or near thunderstorms (including best penetration altitudes), turbulent air (including clear air turbulence), inflight icing, hail, and other potentially hazardous meteorological conditions; and
      (iv) Operating airplanes during ground icing conditions, (that is, any time conditions are such that frost, ice, or snow may reasonably be expected to adhere to the aircraft), if the program manager expects to authorize takeoffs in ground icing conditions, including:
         (A) The use of holdover times when using deicing/anti-icing fluids;
         (B) Airplane deicing/anti-icing procedures, including inspection and check procedures and responsibilities;
         (C) Communications;
         (D) Airplane surface contamination (that is, adherence of frost, ice, or snow) and critical area identification, and knowledge of how contamination adversely affects airplane performance and flight characteristics;
         (E) Types and characteristics of deicing/anti-icing fluids, if used by the program manager;
         (F) Cold weather preflight inspection procedures;
         (G) Techniques for recognizing contamination on the airplane;
         (H) Operating limitations;
         (I) Fuel consumption and cruise control;
         (J) Flight planning;
         (K) Each normal and emergency procedure; and
         (L) The approved Aircraft Flight Manual or equivalent.

§ 91.1103 Pilots: Initial, transition, upgrade, requalification, and differences flight training.

(a) Initial, transition, upgrade, requalification, and differences training for pilots must include flight and practice in each of the maneuvers and procedures contained in each of the curriculums that are a part of the approved training program.

(b) The maneuvers and procedures required by paragraph (a) of this section must be performed in flight, except to the extent that certain maneuvers and procedures may be performed in an aircraft simulator, or an appropriate training device, as allowed by this subpart.

(c) If the program manager’s approved training program includes a course of training using an aircraft simulator or other training device, each pilot must successfully complete—
§ 91.1109 Aircraft maintenance: Inspection program.

Each program manager must establish an aircraft inspection program for each make and model program aircraft and ensure each aircraft is inspected in accordance with that inspection program.

(a) The inspection program must be in writing and include at least the following information:

(1) Instructions and procedures for the conduct of inspections for the particular make and model aircraft, including necessary tests and checks. The instructions and procedures must set forth in detail the parts and areas of the airframe, engines, propellers, rotors, and appliances, including survival and emergency equipment required to be inspected.

(2) A schedule for performing the inspections that must be accomplished under the inspection program expressed in terms of the time in service, calendar time, number of system operations, or any combination thereof.

(3) The name and address of the person responsible for scheduling the inspections required by the inspection program. A copy of the inspection program must be made available to the person performing inspections on the aircraft and, upon request, to the Administrator.

(b) Each person desiring to establish or change an approved inspection program under this section must submit the inspection program for approval to the Flight Standards District Office that issued the program manager's
