

(ii) The difference between actual costs and the costs of production calculated for startup costs will be amortized over a reasonable period of time subsequent to the startup period over the life of the product or machinery, as appropriate.

(iii) The Secretary will consider unit production costs to be items such as depreciation of equipment and plant, labor costs, insurance, rent and lease expenses, material costs, and factory overhead. The Secretary will not consider sales expenses, such as advertising costs, or other general and administrative or non-production costs (such as general research and development costs), as startup costs.

**§ 351.408 Calculation of normal value of merchandise from nonmarket economy countries.**

(a) *Introduction.* In identifying dumping from a nonmarket economy country, the Secretary normally will calculate normal value by valuing the nonmarket economy producers' factors of production in a market economy country. (See section 773(c) of the Act.) This section clarifies when and how this special methodology for nonmarket economies will be applied.

(b) *Economic Comparability.* In determining whether a country is at a level of economic development comparable to the nonmarket economy under section 773(c)(2)(B) or section 773(c)(4)(A) of the Act, the Secretary will place primary emphasis on *per capita* GDP as the measure of economic comparability.

(c) *Valuation of Factors of Production.* For purposes of valuing the factors of production, general expenses, profit, and the cost of containers, coverings, and other expenses (referred to collectively as "factors") under section 773(c)(1) of the Act the following rules will apply:

(1) *Information used to value factors.* The Secretary normally will use publicly available information to value factors. However, where a factor is purchased from a market economy supplier and paid for in a market economy currency, the Secretary normally will use the price paid to the market economy supplier. In those instances where a portion of the factor is purchased

from a market economy supplier and the remainder from a nonmarket economy supplier, the Secretary normally will value the factor using the price paid to the market economy supplier.

(2) *Valuation in a single country.* Except for labor, as provided in paragraph (d)(3) of this section, the Secretary normally will value all factors in a single surrogate country.

(3) *Labor.* For labor, the Secretary will use regression-based wage rates reflective of the observed relationship between wages and national income in market economy countries. The Secretary will calculate the wage rate to be applied in nonmarket economy proceedings each year. The calculation will be based on current data, and will be made available to the public.

(4) *Manufacturing overhead, general expenses, and profit.* For manufacturing overhead, general expenses, and profit, the Secretary normally will use nonproprietary information gathered from producers of identical or comparable merchandise in the surrogate country.

**§ 351.409 Differences in quantities.**

(a) *Introduction.* Because the quantity of merchandise sold may affect the price, in comparing export price or constructed export price with normal value, the Secretary will make a reasonable allowance for any difference in quantities to the extent the Secretary is satisfied that the amount of any price differential (or lack thereof) is wholly or partly due to that difference in quantities. (See section 773(a)(6)(C)(i) of the Act.)

(b) *Sales with quantity discounts in calculating normal value.* The Secretary normally will calculate normal value based on sales with quantity discounts only if:

(1) During the period examined, or during a more representative period, the exporter or producer granted quantity discounts of at least the same magnitude on 20 percent or more of sales of the foreign like product for the relevant country; or

(2) The exporter or producer demonstrates to the Secretary's satisfaction that the discounts reflect savings specifically attributable to the production of the different quantities.
