Railroad Retirement Board

§ 220.114 Evaluation of symptoms, including pain.

(a) General. In determining whether the claimant is disabled, the Board considers all of the claimant’s symptoms, including pain, and the extent to which the claimant’s symptoms can reasonably be accepted as consistent with the objective medical evidence and other evidence. By objective medical evidence, the Board means medical signs and laboratory findings as defined in §§220.113(b) and (c) of this part. By other evidence, the Board means the kinds of evidence described in §§220.45 and 220.46 of this part. These include statements or reports from the claimant, the claimant’s treating or examining physician or psychologist, and others about the claimant’s medical history, diagnosis, prescribed treatment, daily activities, efforts to work, and any other evidence showing how the claimant’s impairment(s) and any related symptoms affect the claimant’s ability to work. The Board will consider all of the claimant’s statements about his or her symptoms, such as pain, and any description by the claimant, the claimant’s physician, or psychologist, or other persons about how the symptoms affect the claimant’s activities of daily living and ability to work. However, statements alone about the claimant’s pain or other symptoms will not establish that the claimant is disabled; there must be medical signs and laboratory findings which show that the claimant has a medical impairment(s) which could reasonably be expected to produce the pain or other symptoms alleged and which, when considered with all of the other evidence (including statements about the intensity and persistence of

They must also be shown by observable facts that can be medically described and evaluated.

(c) Laboratory findings are anatomical, physiological, or psychological phenomena which can be shown by the use of medically acceptable laboratory diagnostic techniques. Some of these diagnostic techniques include chemical tests, electrophysiological studies (electrocardiogram, electroencephalogram, etc.) x-rays, and psychological tests.
