

under § 404.918, with the Associate Commissioner for Disability Determinations or his or her delegate. For cases at the Administrative Law Judge or Appeals Council level, the responsibility for deciding medical equivalence rests with the Administrative Law Judge or Appeals Council.

[45 FR 55584, Aug. 20, 1980, as amended at 52 FR 33926, Sept. 9, 1987; 62 FR 38451, July 18, 1997; 65 FR 34957, June 1, 2000; 71 FR 10429, Mar. 1, 2006; 71 FR 16445, Mar. 31, 2006; 71 FR 57415, Sept. 29, 2006]

§ 404.1527 Evaluating opinion evidence.

(a) *General.* (1) You can only be found disabled if you are unable to do any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. See § 404.1505. Your impairment must result from anatomical, physiological, or psychological abnormalities which are demonstrable by medically acceptable clinical and laboratory diagnostic techniques. See § 404.1508.

(2) Evidence that you submit or that we obtain may contain medical opinions. Medical opinions are statements from physicians and psychologists or other acceptable medical sources that reflect judgments about the nature and severity of your impairment(s), including your symptoms, diagnosis and prognosis, what you can still do despite impairment(s), and your physical or mental restrictions.

(b) *How we consider medical opinions.* In deciding whether you are disabled, we will always consider the medical opinions in your case record together with the rest of the relevant evidence we receive.

(c) *Making disability determinations.* After we review all of the evidence relevant to your claim, including medical opinions, we make findings about what the evidence shows.

(1) If all of the evidence we receive, including all medical opinion(s), is consistent, and there is sufficient evidence for us to decide whether you are disabled, we will make our determination or decision based on that evidence.

(2) If any of the evidence in your case record, including any medical opinion(s), is inconsistent with other evidence or is internally inconsistent, we will weigh all of the evidence and see whether we can decide whether you are disabled based on the evidence we have.

(3) If the evidence is consistent but we do not have sufficient evidence to decide whether you are disabled, or if after weighing the evidence we decide we cannot reach a conclusion about whether you are disabled, we will try to obtain additional evidence under the provisions of §§ 404.1512 and 404.1519 through 404.1519h. We will request additional existing records, recontact your treating sources or any other examining sources, ask you to undergo a consultative examination at our expense, or ask you or others for more information. We will consider any additional evidence we receive together with the evidence we already have.

(4) When there are inconsistencies in the evidence that cannot be resolved, or when despite efforts to obtain additional evidence the evidence is not complete, we will make a determination or decision based on the evidence we have.

(d) *How we weigh medical opinions.* Regardless of its source, we will evaluate every medical opinion we receive. Unless we give a treating source's opinion controlling weight under paragraph (d)(2) of this section, we consider all of the following factors in deciding the weight we give to any medical opinion.

(1) *Examining relationship.* Generally, we give more weight to the opinion of a source who has examined you than to the opinion of a source who has not examined you.

(2) *Treatment relationship.* Generally, we give more weight to opinions from your treating sources, since these sources are likely to be the medical professionals most able to provide a detailed, longitudinal picture of your medical impairment(s) and may bring a unique perspective to the medical evidence that cannot be obtained from the objective medical findings alone or from reports of individual examinations, such as consultative examinations or brief hospitalizations. If we find that a treating source's opinion on the issue(s) of the nature and severity

of your impairment(s) is well-supported by medically acceptable clinical and laboratory diagnostic techniques and is not inconsistent with the other substantial evidence in your case record, we will give it controlling weight. When we do not give the treating source's opinion controlling weight, we apply the factors listed in paragraphs (d)(2)(i) and (d)(2)(ii) of this section, as well as the factors in paragraphs (d)(3) through (d)(6) of this section in determining the weight to give the opinion. We will always give good reasons in our notice of determination or decision for the weight we give your treating source's opinion.

(i) *Length of the treatment relationship and the frequency of examination.* Generally, the longer a treating source has treated you and the more times you have been seen by a treating source, the more weight we will give to the source's medical opinion. When the treating source has seen you a number of times and long enough to have obtained a longitudinal picture of your impairment, we will give the source's opinion more weight than we would give it if it were from a nontreating source.

(ii) *Nature and extent of the treatment relationship.* Generally, the more knowledge a treating source has about your impairment(s) the more weight we will give to the source's medical opinion. We will look at the treatment the source has provided and at the kinds and extent of examinations and testing the source has performed or ordered from specialists and independent laboratories. For example, if your ophthalmologist notices that you have complained of neck pain during your eye examinations, we will consider his or her opinion with respect to your neck pain, but we will give it less weight than that of another physician who has treated you for the neck pain. When the treating source has reasonable knowledge of your impairment(s), we will give the source's opinion more weight than we would give it if it were from a nontreating source.

(3) *Supportability.* The more a medical source presents relevant evidence to support an opinion, particularly medical signs and laboratory findings, the more weight we will give that opinion.

The better an explanation a source provides for an opinion, the more weight we will give that opinion. Furthermore, because nonexamining sources have no examining or treating relationship with you, the weight we will give their opinions will depend on the degree to which they provide supporting explanations for their opinions. We will evaluate the degree to which these opinions consider all of the pertinent evidence in your claim, including opinions of treating and other examining sources.

(4) *Consistency.* Generally, the more consistent an opinion is with the record as a whole, the more weight we will give to that opinion.

(5) *Specialization.* We generally give more weight to the opinion of a specialist about medical issues related to his or her area of specialty than to the opinion of a source who is not a specialist.

(6) *Other factors.* When we consider how much weight to give to a medical opinion, we will also consider any factors you or others bring to our attention, or of which we are aware, which tend to support or contradict the opinion. For example, the amount of understanding of our disability programs and their evidentiary requirements that an acceptable medical source has, regardless of the source of that understanding, and the extent to which an acceptable medical source is familiar with the other information in your case record are relevant factors that we will consider in deciding the weight to give to a medical opinion.

(e) *Medical source opinions on issues reserved to the Commissioner.* Opinions on some issues, such as the examples that follow, are not medical opinions, as described in paragraph (a)(2) of this section, but are, instead, opinions on issues reserved to the Commissioner because they are administrative findings that are dispositive of a case; *i.e.*, that would direct the determination or decision of disability.

(1) *Opinions that you are disabled.* We are responsible for making the determination or decision about whether you meet the statutory definition of disability. In so doing, we review all of the medical findings and other evidence that support a medical source's

statement that you are disabled. A statement by a medical source that you are “disabled” or “unable to work” does not mean that we will determine that you are disabled.

(2) *Other opinions on issues reserved to the Commissioner.* We use medical sources, including your treating source, to provide evidence, including opinions, on the nature and severity of your impairment(s). Although we consider opinions from medical sources on issues such as whether your impairment(s) meets or equals the requirements of any impairment(s) in the Listing of Impairments in appendix 1 to this subpart, your residual functional capacity (see §§ 404.1545 and 404.1546), or the application of vocational factors, the final responsibility for deciding these issues is reserved to the Commissioner.

(3) We will not give any special significance to the source of an opinion on issues reserved to the Commissioner described in paragraphs (e)(1) and (e)(2) of this section.

(f) *Opinions of nonexamining sources.* We consider all evidence from nonexamining sources to be opinion evidence. When we consider the opinions of nonexamining sources, we apply the rules in paragraphs (a) through (e) of this section. In addition, the following rules apply to State agency medical and psychological consultants, other program physicians and psychologists, and medical experts we consult in connection with administrative law judge hearings and Appeals Council review:

(1) In claims adjudicated by the State agency, a State agency medical or psychological consultant (or a medical or psychological expert (as defined in § 405.5 of this chapter) in claims adjudicated under the procedures in part 405 of this chapter) will consider the evidence in your case record and make findings of fact about the medical issues, including, but not limited to, the existence and severity of your impairment(s), the existence and severity of your symptoms, whether your impairment(s) meets or equals the requirements for any impairment listed in appendix 1 to this subpart, and your residual functional capacity. These administrative findings of fact are based on the evidence in your case record but

are not themselves evidence at these steps.

(2) Administrative law judges are responsible for reviewing the evidence and making findings of fact and conclusions of law. They will consider opinions of State agency medical or psychological consultants, other program physicians and psychologists, and medical experts as follows:

(i) Administrative law judges are not bound by any findings made by State agency medical or psychological consultants, or other program physicians or psychologists. However, State agency medical and psychological consultants and other program physicians and psychologists are highly qualified physicians and psychologists who are also experts in Social Security disability evaluation. Therefore, administrative law judges must consider findings of State agency medical and psychological consultants or other program physicians or psychologists as opinion evidence, except for the ultimate determination about whether you are disabled. See § 404.1512(b)(6).

(ii) When an administrative law judge considers findings of a State agency medical or psychological consultant or other program physician or psychologist, the administrative law judge will evaluate the findings using relevant factors in paragraphs (a) through (e) of this section, such as the physician’s or psychologist’s medical specialty and expertise in our rules, the supporting evidence in the case record, supporting explanations provided by the physician or psychologist, and any other factors relevant to the weighing of the opinions. Unless the treating source’s opinion is given controlling weight, the administrative law judge must explain in the decision the weight given to the opinions of a State agency medical or psychological consultant or other program physician or psychologist, as the administrative law judge must do for any opinions from treating sources, nontreating sources, and other nonexamining sources who do not work for us.

(iii) Administrative law judges may also ask for and consider opinions from medical experts on the nature and severity of your impairment(s) and on whether your impairment(s) equals the

§ 404.1528

requirements of any impairment listed in appendix 1 to this subpart. When administrative law judges consider these opinions, they will evaluate them using the rules in paragraphs (a) through (e) of this section.

(3) When the Appeals Council makes a decision, it will follow the same rules for considering opinion evidence as administrative law judges follow.

(4) In claims adjudicated under the procedures in part 405 of this chapter at the Federal reviewing official, administrative law judge, and the Decision Review Board levels of the administrative review process, we will follow the same rules for considering opinion evidence that administrative law judges follow under this section.

[56 FR 36960, Aug. 1, 1991, as amended at 62 FR 38451, July 18, 1997; 65 FR 11877, Mar. 7, 2000; 71 FR 16445, Mar. 31, 2006]

§ 404.1528 Symptoms, signs, and laboratory findings.

(a) *Symptoms* are your own description of your physical or mental impairment. Your statements alone are not enough to establish that there is a physical or mental impairment.

(b) *Signs* are anatomical, physiological, or psychological abnormalities which can be observed, apart from your statements (symptoms). Signs must be shown by medically acceptable clinical diagnostic techniques. Psychiatric signs are medically demonstrable phenomena that indicate specific psychological abnormalities, e.g., abnormalities of behavior, mood, thought, memory, orientation, development, or perception. They must also be shown by observable facts that can be medically described and evaluated.

(c) *Laboratory findings* are anatomical, physiological, or psychological phenomena which can be shown by the use of medically acceptable laboratory diagnostic techniques. Some of these diagnostic techniques include chemical tests, electrophysiological studies (electrocardiogram, electroencephalogram, etc.), roentgenological studies (X-rays), and psychological tests.

[45 FR 55584, Aug. 20, 1980, as amended at 65 FR 50775, Aug. 21, 2000; 71 FR 10429, Mar. 1, 2006]

20 CFR Ch. III (4–1–10 Edition)

§ 404.1529 How we evaluate symptoms, including pain.

(a) *General.* In determining whether you are disabled, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with the objective medical evidence and other evidence. By objective medical evidence, we mean medical signs and laboratory findings as defined in § 404.1528 (b) and (c). By other evidence, we mean the kinds of evidence described in §§ 404.1512(b)(2) through (6) and 404.1513(b)(1), (4), and (5), and (d). These include statements or reports from you, your treating or nontreating source, and others about your medical history, diagnosis, prescribed treatment, daily activities, efforts to work, and any other evidence showing how your impairment(s) and any related symptoms affect your ability to work. We will consider all of your statements about your symptoms, such as pain, and any description you, your treating source or nontreating source, or other persons may provide about how the symptoms affect your activities of daily living and your ability to work. However, statements about your pain or other symptoms will not alone establish that you are disabled; there must be medical signs and laboratory findings which show that you have a medical impairment(s) which could reasonably be expected to produce the pain or other symptoms alleged and which, when considered with all of the other evidence (including statements about the intensity and persistence of your pain or other symptoms which may reasonably be accepted as consistent with the medical signs and laboratory findings), would lead to a conclusion that you are disabled. In evaluating the intensity and persistence of your symptoms, including pain, we will consider all of the available evidence, including your medical history, the medical signs and laboratory findings and statements about how your symptoms affect you. (Section 404.1527 explains how we consider opinions of your treating source and other medical opinions on the existence and severity of your symptoms, such as pain.) We will then determine the extent to
