§416.928 Symptoms, signs, and laboratory findings.

(a) Symptoms are your own description of your physical or mental impairment. If you are a child under age 18 and are unable to adequately describe your symptom(s), we will accept as a statement of this symptom(s) the description given by the person who is most familiar with you, such as a parent, other relative, or guardian. Your statements (or those of another person) alone, however, are not enough to establish that there is a physical or mental impairment.

(b) Signs are anatomical, physiological, or psychological abnormalities which can be observed, apart from your statements (symptoms). Signs must be shown by medically acceptable clinical diagnostic techniques. Psychiatric signs are medically demonstrable phenomena that indicate specific psychological abnormalities, e.g., abnormalities of behavior, mood, thought, memory, orientation, development, or perception. They must also be shown by observable facts that can be medically described and evaluated.

(c) Laboratory findings are anatomical, physiological, or psychological phenomena which can be shown by the use of a medically acceptable laboratory diagnostic techniques. Some of these diagnostic techniques include chemical tests, electrophysiological studies (electrocardiogram, electroencephalogram, etc.), roentgenological studies (X-rays), and psychological tests.

§416.929 How we evaluate symptoms, including pain.

(a) General. In determining whether you are disabled, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with the objective medical evidence, and other evidence. By objective medical evidence, we mean medical signs and laboratory findings as defined in §416.928 (b) and (c). By other evidence, we mean the kinds of evidence described in §§416.912(b)(2) through (6) and 416.913(b)(1), (4), and (5), and (d). These include statements or reports from you, your treating or nontreating source, and others about your medical history, diagnosis, prescribed treatment, daily activities, efforts to work, and any other evidence showing how your impairment(s) and any related symptoms affect your ability to work (or, if you are a child, your functioning). We will consider all of your statements about your symptoms, such as pain, and any description you, your treating source or nontreating source, or other persons may provide about how the symptoms affect your activities of daily living and your ability to work (or, if you are a child, your functioning). However, statements about your pain or other symptoms will not alone establish that you are disabled; there must be medical signs and laboratory findings which show that you have a medical impairment(s) which could reasonably be expected to
