

ups, sewer hazards, excess accumulations of trash, vermin or rodent infestation or fire hazards.

(2) *Building exterior.* Each building on the site must be structurally sound, secure, habitable, and in good repair. The building's exterior components such as doors, fire escapes, foundations, lighting, roofs, walls, and windows, where applicable, must be free of health and safety hazards, operable, and in good repair.

(3) *Building systems.* The building's systems include components such as domestic water, electrical system, elevators, emergency power, fire protection, HVAC, and sanitary system. Each building's systems must be free of health and safety hazards, functionally adequate, operable, and in good repair.

(4) *Dwelling units.* (i) Each dwelling unit within a building must be structurally sound, habitable, and in good repair. All areas and aspects of the dwelling unit (for example, the unit's bathroom, call-for-aid, ceiling, doors, electrical systems, floors, hot water heater, HVAC (where individual units are provided), kitchen, lighting, outlets/switches, patio/porch/balcony, smoke detectors, stairs, walls, and windows) must be free of health and safety hazards, functionally adequate, operable, and in good repair.

(ii) Where applicable, the dwelling unit must have hot and cold running water, including an adequate source of potable water.

(iii) If the dwelling unit includes its own sanitary facility, it must be in proper operating condition, usable in privacy, and adequate for personal hygiene and the disposal of human waste.

(iv) The dwelling unit must include at least one battery-operated or hard-wired smoke detector, in proper working condition, on each level of the unit.

(5) *Common areas.* The common areas must be structurally sound, secure, and functionally adequate for the purposes intended. The common areas include components such as basement/garage/carport, restrooms, closets, utility, mechanical, community rooms, day care, halls/corridors, stairs, kitchens, laundry rooms, office, porch, patio, balcony, and trash collection areas, if applicable. The common areas must be free of health and safety hazards, oper-

able, and in good repair. All common area ceilings, doors, floors, HVAC, lighting, outlets/switches, smoke detectors, stairs, walls, and windows, to the extent applicable, must be free of health and safety hazards, operable, and in good repair.

(c) *Health and safety concerns.* All areas and components of the housing must be free of health and safety hazards. These areas include, but are not limited to, air quality, electrical hazards, elevators, emergency/fire exits, flammable materials, garbage and debris, handrail hazards, infestation, and lead-based paint. For example, the buildings must have fire exits that are not blocked and have hand rails that are undamaged and have no other observable deficiencies. The housing must have no evidence of infestation by rats, mice, or other vermin, or of garbage and debris. The housing must have no evidence of electrical hazards, natural hazards, or fire hazards. The dwelling units and common areas must have proper ventilation and be free of mold, odor (*e.g.*, propane, natural gas, methane gas), or other observable deficiencies. The housing must comply with all regulations and requirements related to the ownership of pets, and the evaluation and reduction of lead-based paint hazards and have available proper certifications of such (see 24 CFR part 35).

§ 902.24 Physical inspection of PHA properties.

(a) *The inspection, generally.* The score for PHAS Indicator #1 is based upon an independent physical inspection of a PHA's properties provided by REAC and using HUD's uniform physical inspection protocols.

(1) During the physical inspection of a property, an inspector looks for deficiencies for each inspectable item within the inspectable areas, such as holes (deficiencies) in the walls (item) of a dwelling unit (area). The dwelling units inspected in a property are a randomly selected, statistically valid sample of the units in the property, excluding vacant units not under lease at the time of the physical inspection, as provided in § 902.20(b)(2).

(2) To ensure prompt correction of health and safety deficiencies before

leaving the site, the inspector gives the property representative the list of every observed exigent/fire safety health and safety deficiency that calls for immediate attention or remedy. The property representative acknowledges receipt of the deficiency report by signature.

(3) After the inspection is completed, the inspector transmits the results to REAC where the results are verified for accuracy and then scored in accordance with the procedures in this subpart.

(b) *Definitions.* The following definitions apply to the physical condition scoring process in this subpart:

Criticality means one of five levels that reflect the relative importance of the deficiencies for an inspectable item.

(1) Based on the importance of the deficiency, reflected in its criticality value, points are deducted from the score for an inspectable area.

Criticality	Level
Critical	5
Very important	4
Important	3
Contributes	2
Slight contribution	1

(2) The Item Weights and Criticality Levels document lists all deficiencies with their designated levels, which vary from 1 to 5, with 5 as the most critical, and the point values assigned to them.

Deficiencies means the specific problems, comparable to problems noted under Housing Quality Standards (HQS), such as a hole in a wall or a damaged refrigerator in the kitchen, that can be recorded for inspectable items.

Dictionary of Deficiency Definitions refers to the Dictionary of Deficiency Definitions document which is included as an appendix to the PHAS Notice on the Physical Condition Scoring Process and contains specific definitions of each severity level for deficiencies under this subpart. HUD will publish for comment any significant proposed amendments to this document. After comments have been considered HUD will publish a notice adopting the final Dictionary of Deficiency Definitions document or the amendments to the document. The Dictionary of Defi-

ciency Definitions that is currently in effect can be found at the REAC Internet site at <http://www.hud.gov/reac> or obtained from REAC's Technical Assistance Center at 888-245-4860 (this is a toll free number).

Inspectable areas (or area) means any of the five major components of the property that are inspected, which are: site; building exteriors; building systems; dwelling units; and common areas.

Inspectable item means the individual parts, such as walls, kitchens, bathrooms, and other things, to be inspected in an inspectable area. The number of inspectable items varies for each area. Weights are assigned to each item as shown in the Item Weights and Criticality Levels document.

Item Weights and Criticality Levels Document refers to the Item Weights and Criticality Levels document which is included as an appendix to the PHAS Notice on the Physical Condition Scoring Process and contains a listing of the inspectable items, item weights, observable deficiencies, criticality levels and values, and severity levels and values that apply to this subpart. HUD will publish for comment any significant proposed amendments to this document. After comments have been considered HUD will publish a notice adopting the final Item Weights and Criticality Levels document or the amendments to the document. The Item Weights and Criticality Levels document that is currently in effect can be found at the REAC Internet site at <http://www.hud.gov/reac> or obtained from REAC's Technical Assistance Center at 888-245-4860 (this is a toll free number).

Normalized weights mean weights adjusted to reflect the inspectable items or areas that are present to be inspected.

Score means a number on a scale of 0 to 100 that reflects the physical condition of a property, inspectable area, or sub-area. To record a health or safety deficiency, a specific designation (such as a letter—a, b, or c) is added to the property score that highlights that a health or safety deficiency (or deficiencies) exists. If smoke detectors are noted as inoperable or missing, another designation (such as an asterisk (*)) is

added to the property score. Although inoperable or missing smoke detectors do not reduce the score, they are included in the health and safety deficiencies list that the inspector gives the PHA's property representative. The PHA is expected to promptly address all health and safety deficiencies.

Severity means one of three levels, level 1 (minor), level 2 (major), and level 3 (severe), that reflect the extent of the damage or problem associated with each deficiency. The Item Weights and Criticality Levels document shows the severity levels for each deficiency. Based on the severity of each deficiency, the score is reduced. Points deducted are calculated as the product of the item weight and the values for criticality and severity. For specific definitions of each severity level, see REAC's "Dictionary of Deficiency Definitions".

Sub-area means an inspectable area for one building. For example, if a property has more than one building, each inspectable area for each building in the property is treated as a sub-area.

(c) *Compliance with civil rights/non-discrimination requirements.* HUD will review certain elements during the physical inspection to determine possible indications of noncompliance with the Fair Housing Act (42 U.S.C. 3601-19) and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794). A PHA will not be scored on those elements. Any indication of possible non-compliance will be referred to HUD's Office of Fair Housing and Equal Opportunity.

(d) *HUD access to PHA properties.* PHAs are required by the ACC to provide the Government with full and free access to all facilities contained in the development. PHAs are required to provide HUD or its representative with access to the development, all units and appurtenances thereto in order to permit physical inspections under this part. Access to the units must be provided whether or not the resident is home or has installed additional locks for which the PHA did not obtain keys. In the event that the PHA fails to provide access as required by HUD or its representative, the PHA will be given "0" points for the development or developments involved which will be re-

flected in the physical condition and overall PHAS score.

§ 902.25 Physical condition scoring and thresholds.

(a) *Scoring.* Under PHAS Indicator #1, REAC will calculate a score for the overall condition of a PHA's public housing portfolio following the procedures described in the PHAS Notice on the Physical Condition Scoring Process (PHAS PASS Notice 3), which will be published in the FEDERAL REGISTER. HUD may revise this notice in the future, but HUD will publish for comment any significant proposed amendments to this notice. After comments have been considered, HUD will publish a notice adopting a final notice or amendment. The PHAS Notice on the Physical Condition Scoring Process that is currently in effect can be found at the REAC Internet site at <http://www.hud.gov/reac> or obtained from REAC's Technical Assistance Center at 888-245-4860 (this is a toll free number).

(b) *Adjustment for physical condition (property age) and neighborhood environment.* In accordance with section 6(j)(1)(I)(2) of the Act (42 U.S.C. 1437d(j)(1)(I)(2)), the overall physical score for a property will be adjusted upward to the extent that negative conditions are caused by situations outside the control of the PHA. These situations are related to the poor physical condition of the property or the overall depressed condition of the immediately surrounding neighborhood. The intent of this adjustment is to avoid penalizing the PHA through appropriate application of the adjustment. (See paragraph (c) of this section which provides for further adjustments of physical condition score under certain circumstances.)

(1) *Adjustments in three areas.* Adjustments to the PHA physical condition score will be made in three factually observed and assessed areas (inspectable areas):

- (i) Physical condition of the site;
- (ii) Physical condition of the common areas on the property; and
- (iii) Physical condition of the building exteriors.

(2) *Definitions.* Definitions and application of physical condition and neighborhood environment factors are:
