§ 1.61–3 Gross income derived from business.

(a) In general. In a manufacturing, merchandising, or mining business, "gross income" means the total sales, less the cost of goods sold, plus any income from investments and from incidental or outside operations or sources. Gross income is determined without subtraction of depletion allowances based on a percentage of income to the extent that it exceeds cost depletion which may be required to be included in the amount of inventorable costs as provided in § 1.471–11 and without subtraction of selling expenses, losses or other items not ordinarily used in computing costs of goods sold or amounts which are of a type for which a deduction would be disallowed under section 262 (c), (f), or (g) in the case of a business expense. The cost of goods sold should be determined in accordance with the method of accounting consistently used by the taxpayer. Thus, for example, an amount cannot be taken into account in the computation of cost of goods sold any earlier than the taxable year in which economic performance occurs with respect to the amount (see § 1.446–1(c)(1)(ii)).

(b) State contracts. The profit from a contract with a State or political subdivision thereof must be included in gross income. If warrants are issued by a city, town, or other political subdivision of a State, and are accepted by the contractor in payment for public work done, the fair market value of such warrants should be returned as income. If, upon conversion of the warrants into cash, the contractor does not receive and cannot recover the full value of the warrants so returned, he may deduct any loss sustained from his gross income for the year in which the warrants are so converted. If, however, he realizes more than the value of the warrants so returned, he must include the excess in his gross income for the year in which realized.

§ 1.61–4 Gross income of farmers.

(a) Farmers using the cash method of accounting. A farmer using the cash receipts and disbursements method of accounting shall include in his gross income for the taxable year—

(1) The amount of cash and the value of merchandise or other property received during the taxable year from the sale of livestock and produce which were purchased,

(2) The profits from the sale of any livestock or other items which purchased,

(3) All amounts received from breeding fees, fees from rent of teams, machinery, or land, and other incidental farm income,

(4) All subsidy and conservation payments received which must be considered as income, and

(5) Gross income from all other sources.

The profit from the sale of livestock or other items which were purchased is to be ascertained by deducting the cost from the sales price in the year in which the sale occurs, except that in the case of the sale of purchased animals held for draft, breeding, or dairy purposes, the profits shall be the amount of any excess of the sales price over the amount representing the difference between the cost and the depreciation allowed or allowable (determined in accordance with the rules applicable under section 1016(a) and the regulations thereunder). However, see section 162 and the regulations thereunder with respect to the computation of taxable income on other than the crop method where the cost of seeds or young plants purchased for further development and cultivation prior to sale is involved. Crop shares (whether or not considered rent under State law) shall be included in gross income as of the year in which the crop shares are reduced to money or the equivalent of money. See section 263A for rules regarding costs that are required to be capitalized.

(b) Farmers using an accrual method of accounting. A farmer using an accrual method of accounting must use inventories to determine his gross income. His gross income on an accrual method is determined by adding the total of the items described in subparagraphs
