

(5) It is immaterial that a member of the higher paid sex ceased to be employed prior to the period covered by the applicable statute of limitations period for filing a timely suit under the EPA. The employer's continued failure to pay the member of the lower paid sex the wage rate paid to the higher paid predecessor constitutes a prima facie continuing violation. Also, it is no defense that the unequal payments began prior to the statutory period.

(c) *Standards for determining rate of pay.* The rate of pay must be equal for persons performing equal work on jobs requiring equal skill, effort, and responsibility, and performed under similar working conditions. When factors such as seniority, education, or experience are used to determine the rate of pay, then those standards must be applied on a sex neutral basis.

(d) *Inequalities in pay that raise questions under the Act.* It is necessary to scrutinize those inequalities in pay between employees of opposite sexes which may indicate a pattern of discrimination in wage payment that is based on sex. Thus, a serious question would be raised where such an inequality, allegedly based on a difference in job content, is in fact one in which the employee occupying the job purportedly requiring the higher degree of skill, effort, or responsibility receives the lower wage rate. Likewise, because the EPA was designed to eliminate wage rate differentials which are based on sex, situations will be carefully scrutinized where employees of only one sex are concentrated in the lower levels of the wage scale, and where there does not appear to be any material relationship other than sex between the lower wage rates paid to such employees and the higher rates paid to employees of the opposite sex.

(e) *Job content controlling.* Application of the equal pay standard is not dependent on job classifications or titles but depends rather on actual job requirements and performance. For example, the fact that jobs performed by male and female employees may have the same total point value under an evaluation system in use by the employer does not in itself mean that the jobs concerned are equal according to the terms of the statute. Conversely,

although the point values allocated to jobs may add up to unequal totals, it does not necessarily follow that the work being performed in such jobs is unequal when the statutory tests of the equal pay standard are applied. Job titles are frequently of such a general nature as to provide very little guidance in determining the application of the equal pay standard. For example, the job title "clerk" may be applied to employees who perform a variety of duties so dissimilar as to place many of them beyond the scope of comparison under the Act. Similarly, jobs included under the title "stock clerk" may include an employee of one sex who spends all or most of his or her working hours in shifting and moving goods in the establishment whereas another employee, of the opposite sex, may also be described as a "stock clerk" but be engaged entirely in checking inventory. In the case of jobs identified by the general title "retail clerk", the facts may show that equal skill, effort, and responsibility are required in the jobs of male and female employees notwithstanding that they are engaged in selling different kinds of merchandise. In all such situations, the application of the equal pay standard will have to be determined by applying the terms of the Act to the specific facts involved.

#### § 1620.14 Testing equality of jobs.

(a) *In general.* What constitutes equal skill, equal effort, or equal responsibility cannot be precisely defined. In interpreting these key terms of the statute, the broad remedial purpose of the law must be taken into consideration. The terms constitute separate tests, each of which must be met in order for the equal pay standard to apply. It should be kept in mind that "equal" does not mean "identical." Insubstantial or minor differences in the degree or amount of skill, or effort, or responsibility required for the performance of jobs will not render the equal pay standard inapplicable. On the other hand, substantial differences, such as those customarily associated with differences in wage levels when the jobs are performed by persons of one sex only, will ordinarily demonstrate an

inequality as between the jobs justifying differences in pay. However, differences in skill, effort or responsibility which might be sufficient to justify a finding that two jobs are not equal within the meaning of the EPA if the greater skill, effort, or responsibility has been required of the higher paid sex, do not justify such a finding where the greater skill, effort, or responsibility is required of the lower paid sex. In determining whether job differences are so substantial as to make jobs unequal, it is pertinent to inquire whether and to what extent significance has been given to such differences in setting the wage levels for such jobs. Such an inquiry may, for example, disclose that apparent differences between jobs have not been recognized as relevant for wage purposes and that the facts as a whole support the conclusion that the differences are too insubstantial to prevent the jobs from being equal in all significant respects under the law.

(b) *Illustrations of the concept.* Where employees of opposite sexes are employed in jobs in which the duties they are required to perform and the working conditions are substantially the same, except that an employee of one sex is required to perform some duty or duties involving a higher skill which an employee of the other sex is not required to perform, the fact that the duties are different in this respect is insufficient to remove the jobs from the application of the equal pay standard if it also appears that the employer is paying a lower wage rate to the employee performing the additional duties notwithstanding the additional skill which they involve. In other situations, where employees of the opposite sex are employed in jobs which are equal in the levels of skill, effort, and responsibility required for their performance, it may be alleged that the assignment to employees of one sex but not the other of certain duties requiring less skill makes the jobs too different for comparison under the equal pay provisions. But so long as the higher level of skill is required for the performance of the jobs occupied by employees of both sexes, the fact that some of the duties assigned to employees of one sex require less skill than

the employee must have for the job as a whole does not warrant any conclusion that the jobs are outside the purview of the equal pay standard.

(c) *Determining equality of job content in general.* In determining whether employees are performing equal work within the meaning of the EPA, the amounts of time which employees spend in the performance of different duties are not the sole criteria. It is also necessary to consider the degree of difference in terms of skill, effort, and responsibility. These factors are related in such a manner that a general standard to determine equality of jobs cannot be set up solely on the basis of a percentage of time. Consequently, a finding that one job requires employees to expend greater effort for a certain percentage of their working time than employees performing another job, would not in itself establish that the two jobs do not constitute equal work. Similarly, the performance of jobs on different machines or equipment would not necessarily result in a determination that the work so performed is unequal within the meaning of the statute if the equal pay provisions otherwise apply. If the difference in skill or effort required for the operation of such equipment is inconsequential, payment of a higher wage rate to employees of one sex because of a difference in machines or equipment would constitute a prohibited wage rate differential. Where greater skill or effort is required from the lower paid sex, the fact that the machines or equipment used to perform substantially equal work are different does not defeat a finding that the EPA has been violated. Likewise, the fact that jobs are performed in different departments or locations within the establishment would not necessarily be sufficient to demonstrate that unequal work is involved where the equal pay standard otherwise applies. This is particularly true in the case of retail establishments, and unless a showing can be made by the employer that the sale of one article requires such higher degree of skill or effort than the sale of another article as to render the equal pay standard inapplicable, it will be assumed that the salesmen and saleswomen concerned are performing equal

## § 1620.15

work. Although the equal pay provisions apply on an establishment basis and the jobs to be compared are those in the particular establishment, all relevant evidence that may demonstrate whether the skill, effort, and responsibility required in the jobs in the particular establishment are equal should be considered, whether this relates to the performance of like jobs in other establishments or not.

### § 1620.15 Jobs requiring equal skill in performance.

(a) *In general.* The jobs to which the equal pay standard is applicable are jobs requiring equal skill in their performance. Where the amount or degree of skill required to perform one job is substantially greater than that required to perform another job, the equal pay standard cannot apply even though the jobs may be equal in all other respects. Skill includes consideration of such factors as experience, training, education, and ability. *It must be measured in terms of the performance requirements of the job.* If an employee must have essentially the same skill in order to perform either of two jobs, the jobs will qualify under the EPA as jobs the performance of which requires equal skill, even though the employee in one of the jobs may not exercise the required skill as frequently or during as much of his or her working time as the employee in the other job. *Possession of a skill not needed to meet the requirements of the job cannot be considered in making a determination regarding equality of skill.* The efficiency of the employee's performance in the job is not in itself an appropriate factor to consider in evaluating skill.

(b) Comparing skill requirements of jobs. As a simple illustration of the principle of equal skill, suppose that a man and a woman have jobs classified as administrative assistants. Both jobs require them to spend two-thirds of their working time facilitating and supervising support-staff duties, and the remaining one-third of their time in diversified tasks, not necessarily the same. Since there is no difference in the skills required for the vast majority of their work, whether or not these jobs require equal skill in performance will depend upon the nature of the

## 29 CFR Ch. XIV (7-1-10 Edition)

work performed during the latter period to meet the requirements of the jobs.

### § 1620.16 Jobs requiring equal effort in performance.

(a) *In general.* The jobs to which the equal pay standard is applicable are jobs that require equal effort to perform. Where substantial differences exist in the amount or degree of effort required to be expended in the performance of jobs, the equal pay standard cannot apply even though the jobs may be equal in all other respects. Effort is concerned with the measurement of the physical or mental exertion needed for the performance of a job. Job factors which cause mental fatigue and stress, as well as those which alleviate fatigue, are to be considered in determining the effort required by the job. "Effort" encompasses the total requirements of a job. Where jobs are otherwise equal under the EPA, and there is no substantial difference in the amount or degree of effort which must be expended in performing the jobs under comparison, the jobs may require equal effort in their performance even though the effort may be exerted in different ways on the two jobs. Differences only in the kind of effort required to be expended in such a situation will not justify wage differentials.

(b) *Comparing effort requirements of jobs.* To illustrate the principle of equal effort exerted in different ways, suppose that a male checker employed by a supermarket is required to spend part of his time carrying out heavy packages or replacing stock involving the lifting of heavy items whereas a female checker is required to devote an equal degree of effort during a similar portion of her time to performing fill-in work requiring greater dexterity—such as rearranging displays of spices or other small items. The difference in kind of effort required of the employees does not appear to make their efforts unequal in any respect which would justify a wage differential, where such differences in kind of effort expended to perform the job are not ordinarily considered a factor in setting wage levels. Further, the occasional or sporadic performance of an activity which may require extra physical or
