§ 285.707 What are the CVA’s primary duties for facility design review?

If you are required to use a CVA:

(a) The CVA must use good engineering judgment and practice in conducting an independent assessment of the design of the facility. The CVA must certify in the Facility Design Report to MMS that the facility is designed to withstand the environmental and functional load conditions appropriate for the intended service life at the proposed location.

(b) The CVA must conduct an independent assessment of all proposed:

(1) Planning criteria;
(2) Operational requirements;
(3) Environmental loading data;
(4) Load determinations;
(5) Stress analyses;
(6) Material designations;
(7) Soil and foundation conditions;
(8) Safety factors; and
(9) Other pertinent parameters of the proposed design.

(3) Size and type of organization or corporation;
(4) In-house availability of, or access to, appropriate technology (including computer programs, hardware, and testing materials and equipment);
(5) Ability to perform the CVA functions for the specific project considering current commitments;
(6) Previous experience with MMS requirements and procedures, if any; and
(7) The level of work to be performed by the CVA.

(c) Individuals or organizations acting as CVAs must not function in any capacity that will create a conflict of interest, or the appearance of a conflict of interest.

(d) The verification must be conducted by or under the direct supervision of registered professional engineers.

(e) The MMS will approve or disapprove your CVA as part of its review of the COP or, when required, of your SAP or GAP.

(f) You must nominate a new CVA for MMS approval if the previously approved CVA:

(1) Is no longer able to serve in a CVA capacity for the project; or
(2) No longer meets the requirements for a CVA set forth in this subpart.

§ 285.708 What are the CVA’s or project engineer’s primary duties for fabrication and installation review?

(a) The CVA or project engineer must do all of the following:

(1) Use good engineering judgment and practice in conducting an independent assessment of the fabrication and installation activities;
(2) Monitor the fabrication and installation of the facility as required by paragraph (b) of this section;
(3) Make periodic onsite inspections while fabrication is in progress and verify the items required by §285.709;
(4) Make periodic onsite inspections while installation is in progress and satisfy the requirements of §295.710; and
(5) Certify in a report that project components are fabricated and installed according to the Facility Design Report and Fabrication and Installation Report.

(i) The report must also identify the location of all records pertaining to fabrication and installation, as required in §285.714(c); and

(ii) You may commence commercial operations or other approved activities 30 days after MMS receives that certification report, unless MMS notifies you within that time period of its objections to the certification report.

(b) To comply with paragraph (a)(5) of this section, the CVA or project engineer must monitor the fabrication and installation of the facility to ensure that it has been built and installed according to the Facility Design Report and Fabrication and Installation Report.

(1) If the CVA or project engineer finds that fabrication and installation procedures have been changed or design specifications have been modified, the
