and points located using the WGS 1984 world grid system. When referenced, the outermost extent of the U.S. EEZ is the line of demarcation produced by the National Oceanic and Atmospheric Administration (NOAA) using the NAD 1983 coordinate system and projected to the WGS 1984 grid system. Both coordinate systems are geocentric and similar such that they are Global Positioning System (GPS) compatible throughout the area of concern. Resolution is based upon ddmmsas readings to tenths of a second. This corresponds to a positional precision of about ±2 meters. Decimal degrees to 5 decimal places correspond to a positional precision of about ±1 meter. State boundaries used to determine points for descriptions of jurisdictional limits were based upon the National Transportation Atlas Database 2003 produced by the Bureau of Transportation Statistics. This data set was produced at a scale of 1:100,000 and theoretically results in a nationwide locational accuracy of about ±50 meters of true position.

§ 3.01–5 Assignment of functions.

§ 3.04–3 Pacific Area.

(a) The Area Office is in Alameda, CA.

(b) The Pacific Area is comprised of the land areas and the U.S. navigable waters of the Eleventh, Thirteenth, Fourteenth, and Seventeenth Coast Guard Districts and the ocean areas lying west of a line extending from the North Pole south along 90° W. longitude to the Asian land mass and along a line extending from the South Pole north along 17° E. longitude to the African land mass.
