§ 150.620 What are the requirements for protecting personnel from machinery?

The deepwater port operator must ensure that all personnel are protected from the risks created by operating machinery through the use of guard devices or other measures that comply with 29 CFR 1910.212, or through the use of conspicuously posted warning signs that comply with §150.626 of this part.

SLINGS

§ 150.621 What are the requirements for slings?

The use of slings for handling material must comply with the requirements of 29 CFR 1910.184.

WARNING SIGNS

§ 150.622 What are the warning sign requirements?

The construction and use of warning signs must be in compliance with 29 CFR 1910.144 and 1910.145.

CONFINED SPACE SAFETY

§ 150.623 What are the requirements for protecting personnel from hazards associated with confined spaces?

(a) All personnel must be protected by suitable measures from inadvertently entering a confined space containing a hazardous atmosphere that can cause death or serious injury.

(b) Each deepwater port operator shall evaluate the specific hazards associated with entering the port’s confined spaces, and develop a confined space safe entry program that complies with:

(1) 29 CFR 1910.146 for permit-required confined spaces, where applicable; and

(2) A national consensus standard, as that term is defined in 29 CFR 1910.2, or that is set by a nationally recognized testing laboratory as defined in 29 CFR 1910.7 and that provides levels of personnel protection at least equivalent to those provided for shipyard personnel by 29 CFR part 1915, subpart B.

(c) To implement the confined space safe entry program, the deepwater port operator must determine the education, training, and experience needed by the designated competent persons to safely conduct their duties, including:

(1) Identification, testing, and certification of confined spaces; and

(2) Training of personnel regarding dangers.

(d) These measures must be specified in the port operations manual, along with a list of all confined spaces on the port, describing the specific hazards associated with each such space.

BLOOD-BORNE PATHOGENS

§ 150.624 What are the requirements for protecting personnel from blood-borne pathogens?

Measures for protection from the dangers of blood-borne pathogens must be taken in compliance with 29 CFR 1910.1030.

HAZARD COMMUNICATION PROGRAM

§ 150.625 What must the hazard communication program contain?

(a) Each deepwater port must have a hazard communication program available for the training of, and review by, all personnel on the deepwater port.

(b) The program must be in writing and describe or include:

(1) An inventory of each hazardous material on the deepwater port;

(2) The potential hazards of the material;

(3) The material’s intended use on the deepwater port;

(4) The methods for handling and storing the material;

(5) The protective measures and equipment used to avoid hazardous exposure;

(6) The labeling, marking, or tagging of the material;

(7) The special precautions, such as lockout and tagout under §§150.616 and 150.617, that should be emphasized when working around the material;

(8) Information and training required for personnel on board the deepwater port; and

(9) A material safety data sheet for the material.

(c) The information on a material safety data sheet itself may be used by
the employer as a tool for educating employees about the hazards posed by the material, provided the employees acknowledge and can demonstrate appropriate precautionary measures to minimize risk to health and safety.

(d) The program must be supplemented as necessary to address each hazardous material newly introduced on the deepwater port.

§ 150.626 What is the hazard communication program used for?

(a) The hazard communication program must ensure that all deepwater port employees, when required by their duties, work safely and responsibly with hazardous materials.

(b) The person in charge for safety must ensure that, before a person is allowed to work at the deepwater port:
   (1) A copy of the hazard communication program is made available to the person; and
   (2) The person is trained in the information contained in the program.

(c) The training must be supplemented to address each hazardous material newly introduced on the deepwater port.

§ 150.627 Must material safety data sheets be available to all personnel?

(a) The person in charge must ensure that a material safety data sheet (MSDS) for each hazardous material on the fixed or floating deepwater port is made available to all personnel on the port.

(b) Each MSDS must contain at least information on the use, proper storage, potential hazards, and appropriate protective and response measures to be taken when exposed to or handling the material.

§ 150.628 How must the operator label, tag, and mark a container of hazardous material?

The operator must label, tag, or mark each container of hazardous material with the identity of the hazardous material and the appropriate physical, health, reactive and other special condition hazard warnings. The only exception is for portable containers that transfer hazardous material from a labeled container to the work site for immediate use by the person who performs the transfer.

Subpart H—Aids to Navigation

§ 150.700 What does this subpart do?

This subpart provides requirements for the operation of aids to navigation at a deepwater port.

§ 150.705 What are the requirements for maintaining and inspecting aids to navigation?

(a) All aids to navigation must be maintained in proper operating condition at all times.

(b) The Coast Guard may inspect all aids to navigation at any time without notice.

§ 150.710 What are the requirements for supplying power to aids to navigation?

The power of all navigation aids must be maintained, at all times, at or above the level recommended by the equipment’s manufacturer.

§ 150.715 What are the requirements for lights used as aids to navigation?

(a) Each light under part 149, subpart E of this chapter, used as a navigation aid on a deepwater port, must be lit continuously from sunset to sunrise.

(b) During construction, a platform or single point mooring, if positioned on the surface or within the net under keel depth for tankers transiting within the safety zone, must be marked with at least one of the following:
   (1) The obstruction lights required for the structure in part 149, subpart E of this chapter;
   (2) The fixed lights of a vessel attending the structure; or
   (3) The general illumination lights on the structure, if they meet or exceed the intensity required for obstruction lights required for the structure.

(c) The focal plane of each obstruction light and lit rotating beacon must always coincide with the horizontal plane that passes through the light source.
