the pre-CERP baseline, assessment reports, guidance memoranda, Master Implementation Sequencing Plan, Comprehensive Plan Modification Reports, periodic CERP updates, and reports to Congress prepared pursuant to §385.40.

Subpart C—CERP Implementation Processes

§ 385.11 Implementation process for projects.

Generally, the Corps of Engineers and non-Federal sponsors shall develop and implement projects in accordance with the process that is shown in figure 1 in Appendix A of this part. Typical steps in this process involve:

(a) Project Management Plan. The Project Management Plan describes the activities, tasks, and responsibilities that will be used to produce and deliver the products necessary to implement the project.

(b) Project Implementation Report. The Project Implementation Report provides information on plan formulation and evaluation, engineering and design, estimated benefits and costs, and environmental effects to bridge the gap between the conceptual design included in the Plan and the detailed design necessary to proceed to construction. The Project Implementation Reports will also set forth additional information and analyses necessary for the Secretary of the Army or Congress to approve the project for implementation.

(c) Plans and specifications. During this phase, final design of the project is completed and plans and specifications are prepared. Plans and specifications contain the information necessary to bid and construct the project.

(d) Real estate acquisition. The lands, easements, and rights-of-way, and relocations necessary for the project are acquired prior to construction.

(e) Construction. This phase is the actual construction of a project’s components and includes an interim operation and monitoring period to ensure that the project operates as designed.

(f) Operation. After construction of the project has been completed, it is operated in accordance with the System Operating Manual and the Project Operating Manual.

(g) Monitoring and assessment. After the project has been constructed, monitoring is conducted as necessary to assess the effectiveness of the project and to provide information that will be used for the adaptive management program.

§ 385.12 Pilot projects.

(a) The Plan includes pilot projects to address uncertainties associated with certain components such as aquifer storage and recovery, in-ground reservoir technology, seepage management, and wastewater reuse. The purpose of the pilot projects is to develop information necessary to better determine the technical feasibility of these components prior to development of a Project Implementation Report.

(b) Prior to initiating activities on a pilot project, the Corps of Engineers and the non-Federal sponsor shall develop a Project Management Plan as described in §385.24.

(c) Project Implementation Reports shall not be necessary for pilot projects. Prior to implementing a pilot project, the Corps of Engineers and the non-Federal sponsor shall prepare a Pilot Project Design Report.

1. The Pilot Project Design Report shall contain the technical information necessary to construct the pilot project including engineering and design, cost estimates, real estate analyses, and appropriate NEPA documentation.

2. The Pilot Project Design Report shall include a detailed operational testing and monitoring plan necessary to develop information to assist in better determining the technical feasibility of certain components prior to development of a Project Implementation Report.

3. In accordance with §385.18, the Corps of Engineers and the non-Federal sponsor shall provide the public with opportunities to review and comment on the draft Pilot Project Design Report.

4. The Corps of Engineers and the non-Federal sponsor shall approve the final Pilot Project Design Report in accordance with applicable law.

(d) Upon completion of operational testing and monitoring, the Corps of Engineers and the non-Federal sponsor
