§ 98.338 Definitions.

All terms used in this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

Subpart HH—Municipal Solid Waste Landfills

§ 98.340 Definition of the source category.

(a) This source category applies to municipal solid waste (MSW) landfills that accepted waste on or after January 1, 1980.

(b) This source category does not include hazardous waste landfills, construction and demolition landfills, or industrial landfills.

(c) This source category consists of the following sources at municipal solid waste (MSW) landfills: Landfills, landfill gas collection systems, and landfill gas destruction devices (including flares).

§ 98.341 Reporting threshold.

You must report GHG emissions under this subpart if your facility contains a MSW landfill and the facility meets the requirements of §98.2(a)(1).

§ 98.342 GHGs to report.

(a) You must report CH$_4$ generation and CH$_4$ emissions from landfills.

(b) You must report CH$_4$ destruction resulting from landfill gas collection and combustion systems.

(c) You must report under subpart C of this part (General Stationary Fuel Combustion Sources) the emissions of CO$_2$, CH$_4$, and N$_2$O from each stationary combustion unit following the requirements of subpart C.

§ 98.343 Calculating GHG emissions.

(a) For all landfills subject to the reporting requirements of this subpart, calculate annual modeled CH$_4$ generation according to the applicable requirements in paragraphs (a)(1) through (a)(3) of this section.

1. Calculate annual modeled CH$_4$ generation using Equation HH–1 of this section.

\[
G_{CH4} = \sum_{x=S}^{T-1} W_x L_0, x \left( e^{-k(T-x-1)} - e^{-k(T-x)} \right)
\]

(Eq. HH-1)

Where:

- $G_{CH4}$ = Modeled methane generation rate in reporting year $T$ (metric tons CH$_4$).
- $W_x$ = Quantity of waste disposed in the landfill in year $x$ from tipping fee receipts or other company records (metric tons, as received (wet weight)).
- $L_0$ = CH$_4$ generation potential (metric tons CH$_4$/metric ton waste) = MCF $\times$ DOC $\times$ DOC $\times$ F $\times$ 16/12.
- MCF = Methane correction factor (fraction); default is 1.
- DOC = Degradable organic carbon from Table HH–1 of this subpart or measurement data, if available (fraction metric tons CH$_4$/metric ton waste).
- DOC $F$ = Fraction of DOC dissimilated (fraction); default is 0.5.
- F = Fraction by volume of CH$_4$ in landfill gas from measurement data, if available (fraction); default is 0.5.
- $T$ = Reporting year for which emissions are calculated.
- S = Start year of calculation. Use the year 50 years prior to the year of the emissions estimate, or the opening year of the landfill, whichever is more recent.
