§ 180.472 Imidacloprid; tolerances for residues.

(a) General. Tolerances are established for residues of the insecticide imidacloprid, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of imidacloprid (1-[6-chloro-3-(pyridinyl)] methyl)-N-nitro-2-imidazolidinimine) and its metabolites containing the 6-chloropyridinyl moiety, calculated as the stoichiometric equivalent of imidacloprid, in or on the following commodities:

(b) Section 18 emergency exemptions.

(c) Tolerances with regional registrations.

(d) Indirect or inadvertent residues.

Tolerances are established for indirect or inadvertent residues of the insecticide imidacloprid, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of imidacloprid (1-nitro-6-chloro-3-pyridinyl) methyl-N-nitro-2-imidazolidinimine) and its metabolites containing the 6-chloropyridinyl moiety, calculated as the stoichiometric equivalent of imidacloprid, in or on the following food commodities, when present therein as a result of the application of the pesticide to growing crops listed in this section and other non-food crops as follows:

| Commodity | Parts per million
--- | ---
Rice, grain | 0.05
Vegetable, foliage of legume, group 7 | 2.5
Vegetable, legume, group 6 | 0.3

(b) Section 18 emergency exemptions.
