§ 471.41 Effluent limitations representing the degree of effluent reduction attainable by the application of the best conventional pollutant control technology (BCT).

This subpart applies to discharges of pollutants to waters of the United States, and introductions of pollutants into publicly owned treatment works from the process operations of the precious metals forming subcategory.

Except as provided in 40 CFR 125.30 through 125.32, any existing point source subject to this subpart must achieve the following effluent limitations for the process operations representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available (BPT):

(a) Rolling spent neat oils—Subpart D—BPT. There shall be no discharge of process wastewater pollutants.

(b) Rolling spent emulsions.

(c) Drawing spent neat oils—Subpart D—BPT. There shall be no discharge of process wastewater pollutants.

(d) Drawing spent emulsions.

(e) Drawing spent soap solutions.

(f) Metal powder production wet atomization wastewater.
