

§ 321.3

44 CFR Ch. I (10–1–10 Edition)

(i) Items requiring a long lead-time or long manufacturing cycle.

(ii) Items currently not in production or which are required in quantities far in excess of peacetime production.

(iii) Items requiring the conversion of an industry or a number of plants within an industry.

(iv) Items requiring materials or manufacturing processes essentially different from those in current use.

(v) Items for which industry does not have production experience.

Paragraph (a)(2) of this section is inclusive of the Department of Defense Preferential Planning List of End Items.

(b) In selecting facilities for the Department of Defense mobilization base, consideration shall be given to their vulnerability to nuclear attack, with particular attention to the possibility of (1) minimizing vulnerability of facilities producing “urgent” items under paragraph (a)(1) of this section, including the need for dispersal, protective construction, and special security measures to safeguard against sabotage of clandestine attack, and (2) reducing concentration of uncommon critical production facilities so that a productive segment of each critical industry would be likely to survive a nuclear attack.

(c) The Department of Energy and the Maritime Administration, in cooperation with the Federal Emergency Management Agency, shall determine the items and facilities which meet the above criteria for their respective programs for maintaining the mobilization base.

§ 321.3 Maintaining the mobilization base.

(a) Facilities selected to produce “urgent” items shall be maintained within limits of existing procurement authority and funds available by the Department of Defense, the Department of Energy, and the Maritime Administration in the following manners to the maximum practical degree:

(1) Current procurement shall be placed in these facilities to the extent which will maintain them in a state of readiness compatible with the plans of the procuring agency.

(2) Machine tools and production equipment will be installed in these facilities to the extent found necessary by the procuring agency.

(3) Develop and maintain plans for alternate production capacity in case disaster destroys current facilities, such capacity to be located to the maximum extent possible away from highly concentrated industrial areas and major military installations.

(b) Other facilities selected as part of the mobilization base, shall be maintained to the fullest extent possible.

(1) Procurement agencies shall integrate current procurement with their industrial mobilization plans to the greatest possible extent with the objective of supporting the mobilization base within authorities and funds available.

(2) Data assembled on essential mobilization suppliers by the industrial mobilization planning of these agencies shall be used in planning current procurement. The policy of using contractors and facilities essential to the mobilization base is considered to be in the best interest of the Government.

(3) Planned producers that are deemed to be a part of the mobilization base will be invited to participate in appropriate current procurement.

(4) Upon expiration of current procurement contracts in a facility, the procuring agency shall take such of the following actions as are compatible with its plans for maintaining a state of readiness:

(i) *Government-owned facilities and tools.* Within the limitations that may be imposed by Congressional appropriations, place government-owned facilities and tools in standby status and establish provisions for their adequate maintenance. This does not preclude the use of government-owned production equipment, on a loan basis, to enable the military departments to meet current production schedules, as provided in DMO–VII–4, Amendment 1.

(ii) *Privately-owned facilities and government-owned tools.* (A) Arrange with management of privately-owned facilities, wherever possible, to place government-owned tools and production equipment in the status provided by DMO–VII–4, as amended, taking into

account the desirability of safe location.

(B) Arrange with management, on a voluntary basis, to keep a group of key managers, engineers, and skilled workers familiar with the items planned for mobilization production.

(C) Determine the gaps which exist in government-owned packages of tools and production equipment needed to produce mobilization requirements in privately-owned plants. Within the limit of fund availability, plan the procurement of such tools and equipment with priority being given to long lead-time tools and equipment or those not used in general manufacturing. These tools and equipment, when procured, should be placed in the status provided by DMO-VII-4, as amended, taking into account the desirability of safe locations.

(D) Determine which government-owned tools and equipment have become obsolete, or which would not be used in event of mobilization, and plan for their disposal in accordance with the provisions of DMO-VII-4, as amended.

§ 321.4 Achieving production readiness.

(a) In order to achieve a capability for maximum production of "urgent" items during the initial phase of war, the following readiness measures shall be taken where advisable for facilities producing such items:

(1) Establishment of emergency production schedules.

(2) Development of a production capability which would function under widespread disruption and damage imposed by enemy attack, including, where necessary:

(i) Maintenance of an increased inventory of finished components and related production supplies at assembly plants, or arrangements for alternative supply lines where increased inventories are not feasible.

(ii) A capability to carry on urgent production without dependence on additional personnel, external sources of power, fuel, and water, or on long-dis-

tance communications; with spare replacements for highly vulnerable or unreliable parts of production equipment.

(iii) Protection of production facilities from enemy sabotage through adequate physical security measures.

(iv) Protection of personnel from widespread radiological fallout through provisions for decontamination and shelter.

§ 321.5 Retention of industrial facilities.

(a) Industrial properties, owned by the Department of Defense, the Department of Energy, and the Maritime Administration, shall be retained in the Industrial reserves (National Industrial Reserve, Departmental Industrial Reserve for the Department of Defense) of the department and agencies to the extent the capacity of said reserves is necessary for the production of defense or defense-supporting end items, materials or components in a mobilization period.

(b) Each idle plant in the reserves shall be reviewed annually by the heads of the respective agencies to determine if the capacity of the plant continues necessary for mobilization purposes.

(c) Upon the determination by the head of the agency that the capacity of a plant is excess to the mobilization requirements of the agency immediate steps will be taken to dispose of the plant through existing government channels for surplus disposal. The Federal Emergency Management Agency shall be informed by General Services Administration of each proposed surplus action prior to final determination.

§ 321.6 Participation of small business.

The agencies concerned with the order shall, in all of their programs for maintaining the mobilization base, be mindful of the national policy to protect the interests of small business, and to assure the maximum participation of small business in the mobilization base, including current procurement.
