and the alarms under §154.1325 are tested and working before cargo is transferred.

(a) Unless a higher limit is specified on the certificate the master shall ensure that a cargo tank is not loaded:
   (1) More than 98 percent liquid full; or
   (2) In excess of the volume determined under the following formula:

\[
V_L = (0.98 V)\left(\frac{d_r}{d_L}\right)
\]

where:
- \(V_L\) = maximum volume to which the tank may be loaded;
- \(V\) = volume of the tank;
- \(d_r\) = density at the reference temperature specified in paragraph (b) of this section; and
- \(d_L\) = density of the cargo at the loading temperature and pressure.

(b) The reference temperature to be used in paragraph (a)(2) of this section is the temperature corresponding to the vapor pressure of the cargo at the set pressure of the pressure relief valves.

§154.1846 Relief valves: Changing set pressure.
The master shall:
(a) Supervise the changing of the set pressure of relief valves under §154.802(b);
(b) Enter the change of set pressure in the vessel’s log; and
(c) Ensure that a sign showing the set pressure is posted:
   (1) In the cargo control room or station; and
   (2) At each relief valve.

§154.1848 Inerting.
(a) The master shall ensure that:
   (1) Hold and interbarrier spaces on a vessel with full secondary barriers are inerted so that the oxygen concentration is 8 percent or less by volume when flammable cargoes are carried;
   (2) Hold and interbarrier spaces contain only dry air or inert gas on:
      (i) A vessel with partial secondary barriers;
      (ii) A vessel with full secondary barriers when non-flammable cargoes are carried; and
      (iii) A vessel with refrigerated independent tanks type C;
   (3) When cargo tanks containing flammable vapor are to be gas freed, the flammable vapors are purged from the tank by inert gas before air is admitted; and
   (4) When gas free cargo tanks are to be filled with a flammable cargo, air is purged from the tank by inert gas until the oxygen concentration in the tank is 8 percent or less by volume before cargo liquid or vapor is introduced.
   (b) Inert gas must be supplied from the shore or from the vessel’s inert gas system.

§154.1850 Entering cargo handling spaces.
(a) The master shall ensure that the ventilation system under §154.1200 is in operation for 30 minutes before a person enters one of the following:
   (1) Spaces containing cargo pumps, compressors, and compressor motors.
   (2) Gas-dangerous cargo control spaces.
   (3) Other spaces containing cargo handling equipment.
   (b) The master shall ensure that a warning sign listing the requirement for use of the ventilation system, is posted outside of each space under paragraph (a) of this section.
   (c) The master shall ensure that no sources of ignition are put in a cargo handling space on a vessel carrying flammable cargo unless the space is gas free.

§154.1852 Air breathing equipment.
(a) The master shall ensure that a licensed officer inspects the compressed air breathing equipment at least once each month.
(b) The master shall enter in the vessel’s log a record of the inspection required under paragraph (a) of this section that includes:
   (1) The date of the inspection; and
   (2) The condition of the equipment at the time of the inspection.

§154.1854 Methane (LNG) as fuel.
(a) If methane (LNG) vapors are used as fuel in the main propulsion system
