(3) Other types as may be developed.
(c) Power supply. The power supply shall be as specified for automatic fire detecting system by §161.002–9.
(d) Manual fire alarm system control unit. The manual fire alarm system control unit shall be as specified for automatic fire detecting systems by §161.002–10.

§ 161.002–14 Watchman’s supervisory systems.

(a) General. The watchman’s supervisory system shall consist of apparatus to verify the presence of watchmen and the regular performance of their assigned duties.
(b) Types. The watchman’s supervisory systems shall be one of the following types, or a combination of several types:
(1) A mechanical system consisting of portable spring-motor-driven recording clocks in conjunction with key stations located along the prescribed routes of the watchmen to operate the clock recording mechanism.
(2) An electrical system employing a recorder located at a central station in conjunction with key stations along the prescribed route of the watchmen.
(3) Other types that may be developed.
(c) Portable spring-motor-driven recording clocks. (1) Each clock shall run for at least one week without rewinding and shall be substantially mounted and strongly encased. It shall be made so that the recordings cannot be seen without opening the case and so that the case cannot be opened without indicating, by a distinctive recording, the time of opening and closing.
(2) The records of the recording watch clock shall be legible and permanent.
(d) Key stations for use with portable recording watch clocks. (1) The key station shall be of substantial construction and provided with a hinged cover. The key shall be attached to the station by means of a strong link chain. The key stations shall be mounted in such a manner that they cannot be removed without giving evidence of removal.
