changes is maintained for each diver at the dive location;
   (ii) The diver is instructed to remain awake and in the vicinity of the dive location decompression chamber for at least one hour after the completion of a dive, decompression, or treatment; and
   (iii) A dive team member, other than the diver, is trained and available to operate the decompression chamber; and
   (9) When decompression sickness or gas embolism is suspected or symptoms are evident, a report is completed containing—
      (i) The investigation for each incident including—
         (A) The dive and decompression profiles;
         (B) The composition, depth, and time of breathing mixture changes;
         (C) A description of the symptoms including depth and time of onset; and
         (D) A description and results of the treatment;
      (ii) The evaluation for each incident based on—
         (A) The investigation;
         (B) Consideration of the past performance of the decompression table used; and
         (C) Individual susceptibility; and
      (iii) The corrective action taken, if necessary, to reduce the probability of recurrence.

§ 197.420 Operations manual.
(a) The diving supervisor shall—
   (1) Provide an operations manual to the person-in-charge prior to commencement of any diving operation; and
   (2) Make an operations manual available at the dive location to all members of the dive team.
   (b) The operations manual must be modified in writing when adaptation is required because of—
      (1) The configuration or operation of the vessel or facility; or
      (2) The specific diving operation as planned.
   (c) The operations manual must provide for the safety and health of the divers.
   (d) The operations manual must contain the following:
      (1) Safety procedures and checklists for each diving mode used.
      (2) Assignments and responsibilities of each dive team member for each diving mode used.
      (3) Equipment procedures and checklists for each diving mode used.
   (4) Emergency procedures for—
      (i) Fire;
      (ii) Equipment failure;
      (iii) Adverse environmental conditions including, but not limited to, weather and sea state;
      (iv) Medical illness; and
      (v) Treatment of injury.
   (5) Procedures dealing with the use of—
      (i) Hand-held power tools;
      (ii) Welding and burning equipment; and
      (iii) Explosives.

SPECIFIC DIVING MODE PROCEDURES
§ 197.430 SCUBA diving.
The diving supervisor shall ensure that—
(a) SCUBA diving is not conducted—
   (1) Outside the no-decompression limits;
   (2) At depths greater than 130 fsw;
   (3) Against currents greater than one knot unless line-tended; and
   (4) If a diver cannot directly ascend to the surface unless line-tended;
   (b) The SCUBA diver has the equipment required by § 197.346(a);
   (c) A standby diver is available while a diver is in the water;
   (d) A diver is line-tended from the surface or accompanied by another diver in the water in continuous visual contact during the diving operation;
