Agricultural Marketing Service, USDA § 29.2514

§ 29.2507 Color.

The third factor of a grade based on the relative hues, saturation or chroma, and color values common to the type.

§ 29.2508 Color intensity.

The varying degree of saturation or chroma. Color intensity as applied to tobacco describes the strength or weakness of a specific color or hue. It is applicable to brown colors. (See chart, § 29.2601.)

§ 29.2509 Color symbols.

As applied to these types, color symbols are L—light brown, F—medium brown, D—dark brown, M—mixed or variegated, VF—greenish medium brown, and G—green.

§ 29.2514 Dirty.

The state of tobacco containing an abnormal amount of dirt or sand, or tobacco to which additional quantities of dirt or sand have been added. (See Rule 22, § 29.2638.)
