Agricultural Marketing Service, USDA

§ 29.6011

B. Tobacco dried under natural atmospheric conditions. Artificial heat sometimes is used to control excess humidity during the curing period to prevent pole-sweat, pole-burn, and shed-burn in damp weather. Air-cured tobacco should not carry the odor of smoke or fumes resulting from the application of artificial heat.

§ 29.6003 Body.

The thickness and density of a leaf or the weight per unit of surface. (See chart.)

§ 29.6004 Burn.

The duration of combustion or length of time that a tobacco leaf will hold fire after ignition. (See Rule 18.)

§ 29.6005 Case (order).

The state of tobacco with respect to its moisture content.

§ 29.6006 Class.

A major division of tobacco based on method of cure or principal usage.

§ 29.6007 Clean.

Tobacco is described as clean when it contains only a normal amount of sand or soil particles. Leaves grown on the lower portion of the stalk normally contain more sand or dirt than those from higher stalk positions. (See Rule 4.)

§ 29.6008 Condition.

The state of tobacco which results from the method of preparation or from the degree of fermentation. Words used to describe the condition of tobacco are Undried, air-dried, steamed-dried, sweating, sweated, and aged.

§ 29.6009 Crude.

A subdegree of maturity. (See Rule 15.)

§ 29.6010 Cured.

Tobacco dried of its sap by either natural or artificial processes.

§ 29.6011 Damage.

The effect of mold, must, rot, black rot or other fungus or bacterial diseases which attack tobacco in its cured state. Tobacco having the odor of mold, must or rot is considered damaged. (See Rule 17.)
