§ 319.56–46 Mangoes from India.

Mangoes (Mangifera indica) may be imported into the continental United States from India only under the following conditions:

(a) The mangoes must be treated in India with irradiation by receiving a minimum absorbed dose of 400 Gy in accordance with §305.31 of this chapter.

(b) The risks presented by Cytosphaera mangiferae and Macrophoma mangiferae must be addressed in one of the following ways:

(1) The orchard of origin is treated with a broad-spectrum post-harvest fungicidal dip; or

(2) The orchard of origin is inspected prior to the beginning of harvest as determined by the mutual agreement between APHIS and the national plant protection organization (NPPO) of India and the orchard is found free of Cytosphaera mangiferae and Macrophoma mangiferae; or

(3) The orchard of origin is treated with a broad-spectrum fungicide during the growing season and is inspected prior to the beginning of harvest as determined by the mutual agreement between APHIS and the NPPO of India and the fruit found free of Cytosphaera mangiferae and Macrophoma mangiferae.

(c) Each consignment of mangoes must be inspected jointly by APHIS and the NPPO of India as part of the required preclearance inspection activities at a time and in a manner determined by mutual agreement between APHIS and the NPPO of India.

(d) The risks presented by Cytosphaera mangiferae, Macrophoma mangiferae, and Xanthomonas campestris pv. mangiferaeindicae must be addressed by inspection during preclearance activities.

(e) Each consignment of fruit must be inspected jointly by APHIS and the NPPO of India and accompanied by a phytosanitary certificate issued by the NPPO of India certifying that the fruit received the required irradiation treatment. The phytosanitary certificate must also bear two additional declarations confirming that:

(1) The mangoes were subjected to one of the pre- or post-harvest mitigation options described in §319.56–46(b) and

(2) The mangoes were inspected during preclearance activities and found free of Cytosphaera mangiferae, Macrophoma mangiferae, and

§ 319.56–45 Shelled garden peas from Kenya.

Garden peas (Pisum sativum) may be imported into the continental United States from Kenya only under the following conditions and in accordance with all other applicable provisions of this subpart:

(a) The peas must be shelled from the pod.

(b) The peas must be washed in disinfectant water at 3 to 5 °C containing 50 ppm chlorine.

(c) Each shipment of peas must be accompanied by a phytosanitary certificate of inspection issued by the national plant protection organization of Kenya hearing the following additional declaration: “These peas have been shelled and washed in accordance with 7 CFR 319.56–45 and have been inspected and found free of pests.”

(Approved by the Office of Management and Budget under control number 0579-0302)
Xanthomonas campestris pv. mangiferaeindicae.

(f) The mangoes may be imported in commercial consignments only.

(Approved by the Office of Management and Budget under control number 0579–0312)

§ 319.56–47 Certain fruits from Thailand.

Litchi (Litchi chinensis), longan (Dimocarpus longan), mango (Mangifera indica), mangosteen (Garcinia mangoestana L.), pineapple (Ananas comosus), and rambutan (Nephelium lappaceum L.) may be imported into the United States from Thailand only under the following conditions:

(a) Growing conditions. Litchi, longan, mango, mangosteen, pineapple, and rambutan must be grown in a production area that is registered with and monitored by the national plant protection organization of Thailand.

(b) Treatment. Litchi, longan, mango, mangosteen, pineapple, and rambutan must be treated for plant pests of the class Insecta, except pupae and adults of the order Lepidoptera, with irradiation in accordance with § 305.31 of this chapter. Treatment must be conducted in Thailand prior to importation of the fruits into the United States.

(c) Phytosanitary certificates. (1) Litchi must be accompanied by a phytosanitary certificate with an additional declaration stating that the litchi were treated with irradiation as described in paragraph (b) of this section and that the litchi have been inspected and found to be free of Peronophthora litchi.

(2) Longan, mango, mangosteen, pineapple, and rambutan must be accompanied by a phytosanitary certificate with an additional declaration stating that the longan, mango, mangosteen, pineapple, or rambutan were treated with irradiation as described in paragraph (b) of this section.

(d) Labeling. In addition to meeting the labeling requirements in § 305.31, cartons in which litchi and longan are packed must be stamped "Not for importation into or distribution in FL."

[72 FR 48548, Aug. 24, 2007]

§ 319.56–48 Conditions governing the entry of baby squash and baby courgettes from Zambia.

Baby squash (Curcurbita maxima Duchesne) and baby courgettes (C. pepo. L.) measuring 10 to 25 millimeters (0.39 to 0.98 inches) in diameter and 60 to 105 millimeters (2.36 to 4.13 inches) in length may be imported into the continental United States from Zambia only under the conditions described in this section. These conditions are designed to prevent the introduction of the following quarantine pests: Aulacaspis tubercularis, Dacus bivittatus, Dacus ciliatus, Dacus frontalis, Dacus lounsburyii, Dacus punctatofrons, Dacus vertebratus, Diaphania indica, Helicoverpa armigera, and Spodoptera littoralis.

(a) Approved greenhouses. The baby squash and baby courgettes must be grown in Zambia in insect-proof, pest-free greenhouses approved jointly by the Zambian national plant protection organization (NPPO) and APHIS.

(1) The greenhouses must be equipped with double self-closing doors.

(2) Any vents or openings in the greenhouses (other than the double self-closing doors) must be covered with 1.6 mm screening in order to prevent the entry of pests into the greenhouse.

(3) The greenhouses must be inspected periodically by the Zambian NPPO or its approved designee to ensure that sanitary procedures are employed to exclude plant pests and diseases and to verify that the screening is intact.

(4) The greenhouses also must be inspected monthly for the quarantine pests listed in the introductory text of this section by the Zambian NPPO or its approved designee, beginning 2 months before harvest and continuing for the duration of the harvest. APHIS must be allowed to inspect or monitor the greenhouses during this period as well. If, during these inspections, any of the quarantine pests listed in the introductory text of this section is found inside the greenhouse, the Zambian NPPO will immediately prohibit that greenhouse from exporting baby squash or baby courgettes to the United States and notify APHIS of the action. The prohibition will remain in effect
