APPENDIX V TO SUBPART B OF PART 430—UNIFORM TEST METHOD FOR MEASURING THE ENERGY CONSUMPTION OF CEILING FAN LIGHT KITS

1. Scope: This appendix covers the test requirements used to measure the energy performance of ceiling fan light kits.

2. Definitions:
   a. Input power means the actual total power used by all lamp(s) and ballast(s) of the light kit during operation, expressed in watts (W) and measured using the lamp and ballast packaged with the kit.
   b. Lamp ballast platform means a pairing of one ballast with one or more lamps that can operate simultaneously on that ballast. A unique platform is defined by the manufacturer and model number of the ballast and lamp(s) and the quantity of lamps that operate on the ballast.
   c. Lamp lumens means a measurement of luminous flux expressed in lumens and measured using the lamp and ballast shipped with the fixture.
   d. System efficacy per lamp ballast platform means the ratio of measured lamp lumens expressed in lumens and measured input power expressed in watts (W).

3. Test Apparatus and General Instructions:
   (a) The test apparatus and instruction for testing screw base lamps packaged with ceiling fan light kits that have medium screw base sockets shall conform to the requirements specified in section 3, “Definitions,” section 4, “Referenced Standards,” and section 4, “CFL Requirements for Testing” of DOE’s “ENERGY STAR Program Requirements for [Compact Fluorescent Lamps] CFLs,” Version 3.0. (Incorporated by reference, see § 430.22). Record measurements at the resolution of the test instrumentation. Round off calculations to the same number of significant digits as the previous step. Round off the final energy consumption value to a whole number as follows:
      (i) A fractional number at or above the midpoint between the two consecutive whole numbers shall be rounded up to the higher of the two whole numbers; or
      (ii) A fractional number below the midpoint between the two consecutive whole numbers shall be rounded down to the lower of the two whole numbers.
   (b) The test apparatus and instruction for testing pin-based fluorescent lamps packaged with ceiling fan light kits that have pin-based sockets shall conform to the requirements specified in section 1, “Definitions,” and section 3, “Energy Efficiency Specifications for Qualifying Products” of the EPA’s “ENERGY STAR Program Requirements for Residential Light Fixtures,” Version 4.0. (Incorporated by reference, see § 430.22). Record measurements at the resolution of the test instrumentation. Round off calculations to the same number of significant digits as the previous step. The final energy consumption value shall be rounded to a whole number as follows:
      (i) A fractional number at or above the midpoint between the two consecutive whole numbers shall be rounded up to the higher of the two whole numbers; or
      (ii) A fractional number below the midpoint between the two consecutive whole numbers shall be rounded down to the lower of the two whole numbers.

4. Test Measurement:
   (a) For screw base compact fluorescent lamps packaged with ceiling fan light kits that have medium screw base sockets, measure the efficacy, expressed in lumens per watt, in accordance with the test requirements specified in section 4, “CFL Requirements for Testing,” of the “ENERGY STAR Program Requirements for Compact Fluorescent Lamps,” Version 3.0 (Incorporated by reference, see § 430.22).
   (b) For pin-based compact fluorescent lamps packaged with ceiling fan light kits that have pin-based sockets, measure the efficacy, expressed in lumens per watt, in accordance with the test requirements specified in section 3, “Energy-Efficiency Specifications for Qualifying Products” and Table 3 in section 4, “Qualification Process, Testing Facilities, Standards, and Documentation,” of the “ENERGY STAR Program Requirements for Residential Light Fixtures,” Version 4.0 (Incorporated by reference, see § 430.22).
