period), including for the two calendar quarter-end regulatory report dates within those quarters, exclude from risk-weighted assets 50 percent of the exclusion amount, provided that such banking organization may include in risk-weighted assets pursuant to this paragraph an amount less than the aggregate risk-weighted assets calculated pursuant to section IV.C.1.b.

c. Inclusion of ALLL in tier 2 capital for the third and fourth quarters. A banking organization that excludes assets of consolidated VIEs from risk-weighted assets pursuant to section IV.C.2.b. may, for the phase-in period, include in tier 2 capital 50 percent of the inclusion amount it included in tier 2 capital during the exclusion period, notwithstanding the limit on including ALLL in tier 2 capital in section II.A.2.a. of this appendix.

3. Implicit recourse limitation. Notwithstanding any other provision in this section IV.C., assets held by a VIE to which the banking organization has provided recourse through credit enhancement beyond any contractual obligation to support assets it has sold may not be excluded from risk-weighted assets.

[Reg. Y, 54 FR 4209, Jan. 27, 1989]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting appendix A of part 225, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at www.fdsys.gov.

APPENDIX B TO PART 225—CAPITAL ADEQUACY GUIDELINES FOR BANK HOLDING COMPANIES AND STATE MEMBER BANKS: LEVERAGE MEASURE

The Board of Governors of the Federal Reserve System has adopted minimum capital ratios and guidelines to provide a framework for assessing the adequacy of the capital of bank holding companies and state member banks (collectively “banking organizations”). The guidelines generally apply to all state member banks and bank holding companies regardless of size and are to be used in the examination and supervisory process as well as in the analysis of applications acted upon by the Federal Reserve. The Board of Governors will review the guidelines from time to time for possible adjustment commensurate with changes in the economy, financial markets, and banking practices. In this regard, the Board has determined that during the transition period through year-end 1990 for implementation of the risk-based capital guidelines contained in appendix A of this part and in appendix A to part 228, a banking organization may choose to fulfill the requirements of the guidelines relating capital to total assets contained in this appendix in one of two manners. Until year-end 1990, a banking organization may choose to conform to either the 5.5 percent and 6 percent minimum primary and total capital standards set forth in this appendix, or the 7.25 percent year-end 1990 minimum risk-based capital standard set forth in appendix A to this part and appendix A to part 228. Those organizations that choose to conform during this period to the 7.25 percent year-end 1990 risk-based capital standard will be deemed to be in compliance with the capital adequacy guidelines set forth in this appendix.

Two principal measurements of capital are used—the primary capital ratio and the total capital ratio. The definitions of primary and total capital for banks and bank holding companies and formulas for calculating the capital ratios are set forth below in the definitional sections of these guidelines.

CAPITAL GUIDELINES

The Board has established a minimum level of primary capital to total assets of 5.5 percent and a minimum level of total capital to total assets of 6.0 percent. Generally, banking organizations are expected to operate above the minimum primary and total capital levels. Those organizations whose operations involve or are exposed to high or inordinate degrees of risk will be expected to hold additional capital to compensate for these risks.

In addition, the Board has established the following three zones for total capital for banking organizations of all sizes:

<table>
<thead>
<tr>
<th>Total Capital Ratio [in percent]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zone 1 .................................. Above 7.0.</td>
</tr>
<tr>
<td>Zone 2 .................................. 6.0 to 7.0.</td>
</tr>
<tr>
<td>Zone 3 .................................. Below 6.0.</td>
</tr>
</tbody>
</table>

The capital guidelines assume adequate liquidity and a moderate amount of risk in the loan and investment portfolios and in off-balance sheet activities. The Board is concerned that some banking organizations may attempt to comply with the guidelines in ways that reduce their liquidity or increase risk. Banking organizations should avoid the practice of attempting to meet the guidelines by decreasing the level of liquid assets in relation to total assets. In assessing compliance with the guidelines, the Federal Reserve will take into account liquidity and the overall degree of risk associated with an organization’s operations, including the volume of assets exposed to risk.

The Federal Reserve will also take into account the sale of loans or other assets with recourse and the volume and nature of all off-balance sheet risk. Particularly close attention will be directed to risks associated with standby letters of credit and participation in joint venture activities. The Federal Reserve will review the relationship of all on- and off-balance sheet risks to capital and will require those institutions with high or inordinate levels of risk to hold additional
primary capital. In addition, the Federal Reserve will continue to review the need for more explicit procedures for factoring on-and off-balance sheet risks into the assessment of capital adequacy.

The capital guidelines apply to both banks and bank holding companies on a consolidated basis. Some banking organizations are engaged in significant nonbanking activities. The Board believes that, as a matter of both safety and soundness and competitive equity, the degree of leverage common in banking should not automatically extend to nonbanking activities. Consequently, in evaluating the consolidated capital positions of banking organizations, the Board is placing greater weight on the building-block approach for assessing capital requirements. This approach generally provides that nonbank subsidiaries of a banking organization should maintain levels of capital consistent with the levels that have been established by industry norms or standards, by Federal or State regulatory agencies for similar firms that are not affiliated with banking organizations, or that may be established by the Board after taking into account risk factors of a particular industry. The assessment of an organization’s consolidated capital adequacy must take into account the amount and nature of all nonbank activities, and an institution’s consolidated capital position should at least equal the sum of the capital requirements of the organization’s bank and nonbank subsidiaries as well as those of the parent company.

SUPERVISORY ACTION

The nature and intensity of supervisory action will be determined by an organization’s compliance with the required minimum primary capital ratio as well as by the zone in which the company’s total capital ratio fails. Banks and bank holding companies with primary capital ratios below the 5.5 percent minimum will be considered undercapitalized unless they can demonstrate clear extenuating circumstances. Such banking organizations will be required to submit an acceptable plan for achieving compliance with the capital guidelines and will be subject to denial of applications and appropriate supervisory enforcement actions.

The zone in which an organization’s total capital ratio fails will normally trigger the following supervisory responses, subject to qualitative analysis:

For institutions operating in Zone 1, the Federal Reserve will:

—Consider that capital is generally adequate if the primary capital ratio is acceptable to the Federal Reserve and is above the 5.5 percent minimum.

For institutions operating in Zone 2, the Federal Reserve will:

—Pay particular attention to financial factors, such as asset quality, liquidity, off-balance sheet risk, and interest rate risk, as they relate to the adequacy of capital. If these areas are deficient and the Federal Reserve concludes capital is not fully adequate, the Federal Reserve will intensify its monitoring and take appropriate supervisory action.

For institutions operating in Zone 3, the Federal Reserve will:

—Consider that the institution is undercapitalized, absent clear extenuating circumstances;

—Require the institution to submit a comprehensive capital plan, acceptable to the Federal Reserve, that includes a program for achieving compliance with the required minimum ratios within a reasonable time period; and

—Institute appropriate supervisory and/or administrative enforcement action, which may include the issuance of a capital directive or denial of applications, unless a capital plan acceptable to the Federal Reserve has been adopted by the institution.

TREATMENT OF INTANGIBLE ASSETS FOR THE PURPOSE OF ASSESSING THE CAPITAL ADEQUACY OF BANK HOLDING COMPANIES AND STATE MEMBER BANKS

In considering the treatment of intangible assets for the purpose of assessing capital adequacy, the Federal Reserve recognizes that the determination of the future benefits and useful lives of certain intangible assets may involve a degree of uncertainty that is not normally associated with other banking assets. Supervisory concern over intangible assets derives from this uncertainty and from the possibility that, in the event an organization experiences financial difficulties, such assets may not provide the degree of support generally associated with other assets. For this reason, the Federal Reserve will carefully review the level and specific character of intangible assets in evaluating
the capital adequacy of state member banks and bank holding companies.

The Federal Reserve recognizes that intangible assets may differ with regard to predictability of any income stream directly associated with a particular asset, the existence of a market for the asset, the ability to sell the asset, or the reliability of any estimate of the asset’s useful life. Certain intangible assets have unpredictable income streams and objectively verifiable values and may contribute to an organization’s profitability and overall financial strength. The value of other intangibles, such as goodwill, may involve a number of assumptions and may be more subject to changes in general economic circumstances or to changes in an individual institution’s future prospects. Consequently, the value of such intangible assets may be difficult to ascertain. Consistent with prudent banking practices and the principle of the diversification of risks, banking organizations should avoid excessive balance sheet concentration in any category or related categories of intangible assets.

Bank Holding Companies

While the Federal Reserve will consider the amount and nature of all intangible assets of holding companies with aggregate intangible assets in excess of 25 percent of tangible primary capital (i.e., stated primary capital less all intangible assets) or those institutions with lesser, although still significant, amounts of goodwill will be subject to close scrutiny. For the purpose of assessing capital adequacy, the Federal Reserve may, on a case-by-case basis, make adjustments to an organization’s capital ratios based upon the amount of intangible assets in excess of the 25 percent threshold level or upon the specific character of the organization’s intangible assets in relation to its overall financial condition. Such adjustments may require some organizations to raise additional capital.

The Board expects banking organizations (including state member banks) contemplating expansion proposals to ensure that pro forma capital ratios exceed the minimum capital levels without significant reliance on intangibles, particularly goodwill. Consequently, in reviewing acquisition proposals, the Board will take into consideration both the stated primary capital ratio (that is, the ratio without any adjustment for intangible assets) and the primary capital ratio after deducting intangibles. In acting on applications, the Board will take into account the nature and amount of intangible assets and will, as appropriate, adjust capital ratios to include certain intangible assets on a case-by-case basis.

State Member Banks

State member banks with intangible assets in excess of 25 percent of intangible primary capital will be subject to close scrutiny. In addition, for the purpose of calculating capital ratios of state member banks, the Federal Reserve will deduct goodwill from primary capital and total capital. The Federal Reserve may, on a case-by-case basis, make further adjustments to a bank’s capital ratios based on the amount of intangible assets (aside from goodwill) in excess of the 25 percent threshold level or on the specific character of the bank’s intangible assets in relation to its overall financial condition. Such adjustments may require some banks to raise additional capital.

In addition, state member banks and bank holding companies are expected to review periodically the value at which intangible assets are carried on their balance sheets to determine whether there has been any impairment of value or whether changing circumstances warrant a shortening of amortization periods. Institutions should make appropriate reductions in carrying values and amortization periods in light of this review, and examiners will evaluate the treatment of intangible assets during on-site examinations.

DEFINITION OF CAPITAL TO BE USED IN DETERMINING CAPITAL ADEQUACY OF BANK HOLDING COMPANIES AND STATE MEMBER BANKS

Primary Capital Components

The components of primary capital are:

- Common stock,
- Perpetual preferred stock (preferred stock that does not have a stated maturity date and that may not be redeemed at the option of the holder),
- Surplus (excluding surplus relating to limited-life preferred stock),
- Undivided profits,
- Contingency and other capital reserves,
- Mandatory convertible instruments,
- Allowance for possible loan and lease losses (exclusive of allocated transfer risk reserves),
- Minority interest in equity accounts of consolidated subsidiaries,
- Perpetual debt instruments (for bank holding companies but not for state member banks).

Limits on Certain Forms of Primary Capital

Bank Holding Companies. The maximum composite amount of mandatory convertible securities, perpetual debt, and perpetual preferred stock that may be counted as primary capital.

2 See the definitional section below that lists the criteria for mandatory convertible instruments to qualify as primary capital.
capital for bank holding companies is limited to 33.3 percent of all primary capital, including these instruments. Perpetual preferred stock issued prior to November 20, 1985 (or determined by the Federal Reserve to be in the process of being issued prior to that date), shall continue to be included as primary capital.

The maximum composite amount of mandatory convertible securities and perpetual debt that may be counted as primary capital for bank holding companies is limited to 20 percent of all primary capital, including these instruments. The maximum amount of equity commitment notes (a form of mandatory convertible securities) that may be counted as primary capital for a bank holding company is limited to 10 percent of all primary capital, including mandatory convertible securities. Amounts outstanding in excess of these limitations may be counted as secondary capital provided they meet the requirements of secondary capital instruments.

State Member Banks. The composite limitations on the amount of mandatory convertible securities and perpetual preferred stock (perpetual debt is not primary capital for state member banks) that may serve as primary capital for bank holding companies shall not be applied formally to state member banks, although the Board shall determine appropriate limits for these forms of primary capital on a case-by-case basis.

The maximum amount of mandatory convertible securities that may be counted as primary capital for state member banks is limited to 16 2/3 percent of all primary capital, including mandatory convertible securities. Equity commitment notes, one form of mandatory convertible securities, shall not be included as primary capital for state member banks, except that notes issued by state member banks prior to May 15, 1983, will continue to be included in primary capital.

Amounts of mandatory convertible securities in excess of these limitations may be counted as secondary capital if they meet the requirements of secondary capital instruments.

Secondary Capital Components

The components of secondary capital are:
— Limited-life preferred stock (including related surplus) and
— Bank subordinated notes and debentures and unsecured long-term debt of the parent company and its nonbank subsidiaries.

Restrictions Relating to Capital Components

To qualify as primary or secondary capital, a capital instrument should not contain or be covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practices. Examples of such terms are those regarded as unduly interfering with the ability of the bank or holding company to conduct normal banking operations or those resulting in significantly higher dividends or interest payments in the event of a deterioration in the financial condition of the issuer.

The secondary components must meet the following conditions to qualify as capital:
— The instrument must have an original weighted-average maturity of at least seven years.
— The instrument must be unsecured.
— The instrument must clearly state on its face that it is not a deposit and is not insured by a Federal agency.
— Bank debt instruments must be subordinated to claims of depositors.
— For banks only, the aggregate amount of limited-life preferred stock and subordinate debt qualifying as capital may not exceed 50 percent of the amount of the bank’s primary capital.

As secondary capital components approach maturity, the banking organization must plan to redeem or replace the instruments while maintaining an adequate overall capital position. Thus, the remaining maturity of secondary capital components will be an important consideration in assessing the adequacy of total capital.

Capital Ratios

The primary and total capital ratios for bank holding companies are computed as follows:

Primary capital ratio:
Primary capital components/Total assets + Allowance for loan and lease losses (exclusive of allocated transfer risk reserves)

Total capital ratio:
Primary capital components + Secondary capital components/Total assets + Allowance for loan and lease losses (exclusive of allocated transfer risk reserves)

The primary and total capital ratios for state member banks are computed as follows:

Primary capital ratio:
Primary capital components—Goodwill/Average total assets + Allowance for loan and lease losses (exclusive of allocated transfer risk reserves)—Goodwill

Total capital ratio:
Primary capital components + Secondary capital components—Goodwill/Average total assets + Allowance for loan and lease losses (exclusive of allocated transfer risk reserves)—Goodwill

Generally, period-end amounts will be used to calculate bank holding company ratios. However, the Federal Reserve will discourage temporary balance sheet adjustments or any other “window dressing” practices designed to achieve transitory compliance with
the guidelines. Banking organizations are expected to maintain adequate capital positions at all times. Thus, the Federal Reserve will, on a case-by-case basis, use average total assets in the calculation of bank holding company capital ratios whenever this approach provides a more meaningful indication of an individual holding company’s capital position.

For the calculation of bank capital ratios, “average total assets” will generally be defined as the quarterly average total assets figure reported on the bank’s Report of Condition. If warranted, however, the Federal Reserve may calculate bank capital ratios based upon total assets as of period-end. All other components of the bank’s capital ratios will be based upon period-end balances.

**Criteria for Determining the Primary Capital Status of Mandatory Convertible Securities of Bank Holding Companies and State Member Banks**

Mandatory convertible securities are subordinated debt instruments that are eventually transformed into common or perpetual preferred stock within a specified period of time, not to exceed 12 years. To be counted as primary capital, mandatory convertible securities must meet the criteria set forth below. These criteria cover the two basic types of mandatory convertible securities: “equity contract notes”—securities that obligate the holder to take common or perpetual preferred stock of the issuer in lieu of cash for repayment of principal, and “equity commitment notes”—securities that are redeemable only with the proceeds from the sale of common or perpetual preferred stock. Both equity commitment notes and equity contract notes qualify as primary capital for bank holding companies, but only equity contract notes qualify as primary capital for banks.

**Criteria Applicable to Both Types of Mandatory Convertible Securities**

a. The securities must mature in 12 years or less.

b. The issuer may redeem securities prior to maturity only with the proceeds from the sale of common or perpetual preferred stock of the bank or bank holding company. Any excess to this rule must be approved by the Federal Reserve. The securities may not be redeemed with the proceeds of another issue of mandatory convertible securities. Nor may the issuer repurchase or acquire its own mandatory convertible securities for resale or reissuance.

c. Holders of the securities may not accelerate the payment of principal except in the event of bankruptcy, insolvency, or reorganization.

d. The securities must be subordinate in right of payment to all senior indebtedness of the issuer. In the event that the proceeds of the securities are reloaned to an affiliate, the loan must be subordinated to the same degree as the original issue.

e. An issuer that intends to dedicate the proceeds of an issue of common or perpetual preferred stock to satisfy the funding requirements of an issue of mandatory convertible securities (i.e. the requirement to retire or redeem the notes with the proceeds from the issuance of common or perpetual preferred stock) generally must make such a dedication during the quarter in which the new common or preferred stock is issued.3 As a general rule, if the dedication is not made within the prescribed period, then the securities issued may not at a later date be dedicated to the retirement or redemption of the mandatory convertible securities.4

*Additional Criteria Applicable to Equity Contract Notes*

a. The note must contain a contractual provision (or must be issued with a mandatory stock purchase contract) that requires the holder of the instrument to take the common or perpetual stock of the issuer in lieu of cash in satisfaction of the claim for principal repayment. The obligation of the holder to take the common or perpetual preferred stock of the issuer may be waived if, and to the extent that, prior to the maturity date of the obligation, the issuer sells new common or perpetual preferred stock and

---

3 Common or perpetual preferred stock issued under dividend reinvestment plans or issued to finance acquisitions, including acquisitions of business entities, may be dedicated to the retirement or redemption of the mandatory convertible securities. Documentation certified by an authorized agent of the issuer showing the amount of common stock or perpetual preferred stock issued, the dates of issue, and amounts of such issues dedicated to the retirement or redemption of mandatory convertible securities will satisfy the dedication requirement.

4 The dedication procedure is necessary to ensure that the primary capital of the issuer is not overstated. For each dollar of common or perpetual preferred proceeds dedicated to the retirement or redemption of the notes, there is a corresponding reduction in the amount of outstanding mandatory securities that may qualify as primary capital. *De minimis* amounts (in relation to primary capital) of common or perpetual preferred stock issued under arrangements in which the amount of stock issued is not predictable, such as dividend reinvestment plans and employee stock option plans (but excluding public stock offerings and stock issued in connection with acquisitions), should be dedicated by no later than the company’s fiscal year end.
dedicates the proceeds to the retirement or redemption of the notes. The dedication generally must be made during the quarter in which the new common or preferred stock is issued.

b. A stock purchase contract may be separated from a security only if: (1) The holder of the contract provides sufficient collateral to the issuer, or to an independent trustee for the benefit of the issuer, to assure performance under the contract and (2) the stock purchase contract requires the purchase of common or perpetual preferred stock.

Additional Criteria Applicable to Equity Commitment Notes

a. The indenture or note agreement must contain the following two provisions:

1. The proceeds of the sale of common or perpetual preferred stock will be the sole source of repayment for the notes, and the issuer must dedicate the proceeds for the purpose of repaying the notes. (Documentation by an authorized agent of the issued showing the amount of common or perpetual preferred stock issued, the dates of issue, and amounts of such issues dedicated to the retirement or redemption of mandatory convertible securities will satisfy the dedication requirement.)

2. By the time that one-third of the life of the securities has run, the issuer must have raised and dedicated an amount equal to one-third of the original principal of the securities. By the time that two-thirds of the life of the securities has run, the issuer must have raised and dedicated an amount equal to two-thirds of the original principal of the securities. At least 60 days prior to the maturity of the securities, the issuer must have raised and dedicated an amount equal to the entire original principal of the securities. Proceeds dedicated to redemption or retirement of the notes must come only from the sale of common or perpetual preferred stock.

b. If the issuer fails to meet any of these periodic funding requirements, the Federal Reserve immediately will cease to treat the

unfunded securities as primary capital and will take appropriate supervisory action. In addition, failure to meet the funding requirements will be viewed as a breach of a regulatory commitment and will be taken into consideration by the Board in acting on statutory applications.

c. If a security is issued by a subsidiary of a bank or bank holding company, any guarantee of the principal by that subsidiary’s parent bank or bank holding company must be subordinate to the same degree as the security issued by the subsidiary and limited to repayment of the principal amount of the security at its final maturity.

Criteria for Determining the Primary Capital Status of Perpetual Debt Instruments of Bank Holding Companies

1. The instrument must be unsecured and, if issued by a bank, must be subordinate to the claims of depositors.

2. The instrument may not provide the holder with the right to demand repayment of principal except in the event of bankruptcy, insolvency, or reorganization. The instrument must provide that non-payment of interest shall not trigger repayment of the principal of the perpetual debt note or any other obligation of the issuer, nor shall it constitute prima facie evidence of insolvency or bankruptcy.

3. The issuer shall not voluntarily redeem the debt issue without prior approval of the Federal Reserve, except when the debt is converted to, exchanged for, or simultaneously replaced in like amount by an issue of common or perpetual preferred stock of the issuer or the issuer’s parent company.

4. If issued by a bank holding company, a bank subsidiary, or a subsidiary with substantial operations, the instrument must contain a provision that allows the issuer to defer interest payments on the perpetual debt in the event of, and at the same time as the elimination of dividends on all outstanding common or preferred stock of the issuer (or in the case of a guarantee by a parent company at the same time as the elimination of the dividends of the parent company’s common and preferred stock). In the case of a nonoperating subsidiary (a funding subsidiary or one formed to issue securities), the deferral of interest payments must be triggered by elimination of dividends by the parent company.

5. If issued by a bank holding company or a subsidiary with substantial operations, the instrument must convert automatically to common or perpetual preferred stock of the issuer when the issuer’s retained earnings and surplus accounts become negative. If an operating subsidiary’s perpetual debt is guaranteed by its parent, the debt may convert to the shares of the issuer or guarantor and such conversion may be triggered when the issuer’s or parent’s retained earnings and
surplus accounts become negative. If issued by a nonoperating subsidiary of a bank hold-
ing company or bank, the instrument must convert automatically to common or pre-
ferred stock of the issuer’s parent when the re-
tained earnings and surplus accounts of the issuer’s parent become negative.

APPENDIX C TO PART 225—SMALL BANK HOLDING COMPANY POLICY STATEMENT

Policy Statement on Assessment of Financial and Managerial Factors

In acting on applications filed under the Bank Holding Company Act, the Board has adopted, and continues to follow, the prin-
ciple that bank holding companies should serve as a source of strength for their sub-
sidiary banks. When bank holding companies incur debt and rely upon the earnings of their subsidiary banks as the means of re-
paying such debt, a question arises as to the probable effect upon the financial condition of the holding company and its subsidiary bank or banks.

The Board believes that a high level of debt at the parent holding company impairs the ability of a bank holding company to provide financial assistance to its subsidiary bank(s) and, in some cases, the servicing re-
quirements on such debt may be a signifi-
cant drain on the resources of the bank(s).

For these reasons, the Board has not favored the use of acquisition debt in the formation of bank holding companies or in the acquis-
tion of additional banks. Nevertheless, the Board has recognized that the transfer of ownership of small banks often requires the use of acquisition debt. The Board, therefore, has permitted the formation and expansion of small bank holding companies with debt levels higher than would be permitted for larger holding companies. Approval of these applications has been given on the condition that small bank holding companies demon-
strate the ability to service acquisition debt without straining the capital of their subsidiary banks and, further, that such companies restore their ability to serve as a source of strength for their subsidiary banks within a relatively short period of time.

In the interest of continuing its policy of facilitating the transfer of ownership in banks without compromising bank safety and soundness, the Board has, as described below, adopted the following procedures and standards for the formation and expansion of small bank holding companies subject to this policy statement.

1. APPLICABILITY OF POLICY STATEMENT

This policy statement applies only to bank holding companies with pro forma consolid-
dated assets of less than $500 million that (i) are not engaged in significant nonbanking activities either directly or through a nonbank subsidiary; (ii) do not conduct sig-
ificant off-balance sheet activities (including securitization and asset management or administration) either directly or through a nonbank subsidiary; and (iii) do not have a material amount of debt or equity securities outstanding (other than trust preferred secur-
rities) that are registered with the Securities and Exchange Commission. The Board may in its discretion exclude any bank holding company, regardless of asset size, from the policy statement if such action is warranted for supervisory purposes.1

While this policy statement primarily ap-
plies to the formation of small bank holding companies, it also applies to existing small bank holding companies that wish to acquire an additional bank or company and to trans-
actions involving changes in control, stock redemptions, or other shareholder trans-
goals.

2. ONGOING REQUIREMENTS

The following guidelines must be followed on an ongoing basis for all organizations oper-
ating under this policy statement.

A. Reduction in parent company leverage: Small bank holding companies are to reduce their parent company debt consistent with the requirement that all debt be retired within 25 years of being incurred. The Board also expects that these bank holding compa-
ies reach a debt to equity ratio of .30:1 or less within 12 years of the incurrence of the debt.2 The bank holding company must also

1 [Reserved]

2 The appropriate Reserve Bank should be contacted to determine the manner in which a specific situation may qualify for treat-
ment under this policy statement.

3 The term debt, as used in the ratio of debt to equity, means any borrowed funds (exclu-
sive of short-term borrowings that arise out of current transactions, the proceeds of which are used for current transactions), and any securities issued by, or obligations of, the holding company that are the functional equivalent of borrowed funds.

Subordinated debt associated with trust preferred securities generally would be treat-
ed as debt for purposes of paragraphs 2.C., 3.A., 4.A.1., and 4.B.1. of this policy state-
ment. A bank holding company, however, may exclude from debt an amount of subor-
dinated debt associated with trust preferred securities up to 25 percent of the holding company’s equity (as defined below) less goodwill on the parent company’s balance.
