impairment arose out of employment in a coal mine. As used in this paragraph, the term *other relevant evidence* includes medical tests such as blood gas studies, electrocardiogram, pulmonary function studies, or physical performance tests, and any medical history, evidence submitted by the miner’s physician, his spouse’s affidavits, and in the case of a deceased miner, other appropriate affidavits of persons with knowledge of the individual’s physical condition, and other supportive materials. In any event, no claim for benefits under part B of title IV of the Act shall be denied solely on the basis of a negative chest roentgenogram (X-ray).

§ 410.456 Determining origin of pneumoconiosis, including statutory presumption—survivor’s claim.

(a) If a miner was employed for 10 years or more in the Nation’s coal mines, and suffered from pneumoconiosis, it will be presumed, in the absence of persuasive evidence to the contrary, that the pneumoconiosis arose out of such employment.

(b) In any other case, the claimant must submit the evidence necessary to establish that the pneumoconiosis from which the deceased miner suffered, arose out of employment in the Nation’s coal mines. (See §410.110(h), (i), (j), (k), (l), and (m).)

§ 410.458 Irrebuttable presumption of death due to pneumoconiosis—survivor’s claim.

There is an irrebuttable presumption that the death of a miner was due to pneumoconiosis if he suffered from a chronic dust disease of the lung which meets the requirements of §410.418.

§ 410.462 Presumption relating to respirable disease.

(a) Even though the existence of pneumoconiosis as defined in §410.110(o)(1) is not established as provided in §410.454(a), if a deceased miner was employed for 10 years or more in the Nation’s coal mines and died from a respirable disease, it will be presumed, in the absence of evidence to the contrary, that his death was due to pneumoconiosis arising out of employment in a coal mine.

(b) Death will be found due to a respirable disease when death is medically ascribed to a chronic dust disease, or to another chronic disease of the lung. Death will not be found due to a respirable disease where the disease reported does not suggest a reasonable possibility that death was due to pneumoconiosis. Where the evidence establishes that a deceased miner suffered from pneumoconiosis or a respirable disease and death may have been due to multiple causes, death will be found due to pneumoconiosis if it is not medically feasible to distinguish which disease caused death or specifically how much each disease contributed to causing death.

§ 410.470 Determination by nongovernmental organization or other governmental agency.

The decision of any nongovernmental organization or any other governmental agency that an individual is, or is not, disabled for purposes of any contract, schedule, regulation, or law, or that his death was or was not due to a particular cause, shall not be determinative of the question of whether or not an individual is totally disabled due to pneumoconiosis, or was totally disabled due to pneumoconiosis. As used in this section, the term *other governmental agency* includes the Administration with respect to a determination or decision relating to entitlement to disability insurance benefits under section 223 of the Social Security Act, since the requirements for entitlement under the latter Act differ from those relating to benefits under this part. However, a final determination or decision that an individual is disabled for purposes of section 223 of the Social Security Act where the cause of such disability is pneumoconiosis, shall be binding on the Administration on the issue of disability with respect to claims under this part.

§ 410.471 Conclusion by physician regarding miner’s disability or death.

The function of deciding whether or not an individual is totally disabled due to pneumoconiosis, or was totally disabled due to pneumoconiosis at the time of his death, or that his death was
