health services, psychotherapy, or psychosocial counseling.) Frequent therapy, although intended to improve your functioning in some ways, may also interfere with your functioning in other ways. Therefore, we will consider the frequency of any therapy you must have, and how long you have received or will need it. We will also consider whether the therapy interferes with your participation in activities typical of other children your age who do not have impairments, such as attending school or classes and socializing with your peers. If you must frequently interrupt your activities at school or at home for therapy, we will consider whether these interruptions interfere with your functioning. We will also consider the length and frequency of your hospitalizations.

(iii) Treatment and intervention, in general. With treatment or intervention, you may not only have your symptoms or signs reduced, but may also maintain, return to, or achieve a level of functioning that is not disabling. Treatment or intervention may prevent, eliminate, or reduce functional limitations.

§ 416.924b Age as a factor of evaluation in the sequential evaluation process for children.

(a) General. In this section, we explain how we consider age when we decide whether you are disabled. Your age may or may not be a factor in our determination whether your impairment(s) meets or medically equals a listing, depending on the listing we use for comparison. However, your age is an important factor when we decide whether your impairment(s) is severe (see §416.924(c)) and whether it functionally equals the listings (see §416.926a). Except in the case of certain premature infants, as described in paragraph (b) of this section, age means chronological age.

(1) When we determine whether you have an impairment or combination of impairments that is severe, we will compare your functioning to that of children your age who do not have impairments.

(2) When we determine whether your impairment(s) meets a listing, we may or may not need to consider your age. The listings describe impairments that we consider of such significance that they are presumed to cause marked and severe functional limitations.

(i) If the listing appropriate for evaluating your impairment is divided into specific age categories, we will evaluate your impairment according to your age when we decide whether your impairment meets that listing.

(ii) If the listing appropriate for evaluating your impairment does not include specific age categories, we will decide whether your impairment meets the listing without giving consideration to your age.

(3) When we compare an unlisted impairment or a combination of impairments with the listings to determine whether it medically equals the severity of a listing, the way we consider your age will depend on the listing we use for comparison. We will use the same principles for considering your age as in paragraphs (a)(2)(i) and (a)(2)(ii) of this section; that is, we will consider your age only if we are comparing your impairment(s) to a listing that includes specific age categories.

(4) We will also consider your age and whether it affects your ability to be tested. If your impairment(s) is not amenable to formal testing because of your age, we will consider all information in your case record that helps us decide whether you are disabled. We will consider other generally acceptable methods consistent with the prevailing state of medical knowledge and clinical practice that will help us evaluate the existence and severity of your impairment(s).

(b) Correcting chronological age of premature infants. We generally use chronological age (that is, a child’s age based on birth date) when we decide whether, or the extent to which, a physical or mental impairment or combination of impairments causes functional limitations. However, if you were born prematurely, we may consider you to be younger than your chronological age. When we evaluate the development or linear growth of a child born prematurely, we may use a “corrected” chronological age; that is, the chronological age adjusted by a period of gestational prematurity. We
consider an infant born at less than 37 weeks’ gestation to be born prematurely.

(1) We apply a corrected chronological age in these situations—
   (i) When we evaluate developmental delay in premature children until the child’s prematurity is no longer a relevant factor; generally no later than about chronological age 2 (see paragraph (b)(2) of this section);
   (ii) When we evaluate an impairment of linear growth, such as under the listings in §100.00 in appendix 1 of subpart P of part 404 of this chapter, until the child is 12 months old. In this situation, we refer to neonatal growth charts which have been developed to evaluate growth in premature infants (see paragraph (b)(2) of this section).

(2) We compute a corrected chronological age as follows—
   (i) If you have not attained age 1, we will correct your chronological age. We compute the corrected chronological age by subtracting the number of weeks of prematurity (i.e., the difference between 40 weeks of full-term gestation and the number of actual weeks of gestation) from your chronological age. The result is your corrected chronological age.
   (ii) If you are over age 1, have a developmental delay, and prematurity is still a relevant factor in your case (generally, no later than about chronological age 2), we will decide whether to correct your chronological age. Our decision will be based on our judgment and all the facts of your case. If we decide to correct your chronological age, we may correct it by subtracting the full number of weeks of prematurity or a lesser number of weeks. We will also decide not to correct your chronological age if we can determine from the evidence that your developmental delay is the result of your medically determinable impairment(s) and is not attributable to your prematurity.

(3) Notwithstanding the provisions in paragraph (b)(1) of this section, we will not compute a corrected chronological age if the medical evidence shows that your treating source or other medical source has already taken your prematurity into consideration in his or her assessment of your development. Also, we will not compute a corrected chronological age when we find you disabled using the examples of functional equivalence based on low birth weight in §416.926a(m)(6) or (7).

MEDICAL CONSIDERATIONS

§ 416.925 Listing of Impairments in appendix I of subpart P of part 404 of this chapter.

(a) What is the purpose of the Listing of Impairments? The Listing of Impairments (the listings) is in appendix 1 of subpart P of part 404 of this chapter. For adults, it describes for each of the major body systems impairments that we consider to be severe enough to prevent an individual from doing any gainful activity, regardless of his or her age, education, or work experience. For children, it describes impairments that cause marked and severe functional limitations.

(b) How is appendix I organized? There are two parts in appendix 1:

(1) Part A contains criteria that apply to individuals age 18 and over. We may also use part A for individuals who are under age 18 if the disease processes have a similar effect on adults and children.

(2)(i) Part B contains criteria that apply only to individuals who are under age 18; we never use the listings in part B to evaluate individuals who are age 18 or older. In evaluating disability for a person under age 18, we use part B first. If the criteria in part B do not apply, we may use the criteria in part A when those criteria give appropriate consideration to the effects of the impairment(s) in children. To the extent possible, we number the provisions in part B to maintain a relationship with their counterparts in part A.

(ii) Although the severity criteria in part B of the listings are expressed in different ways for different impairments, “listing-level severity” generally means the level of severity described in §416.926a(a); that is, “marked” limitations in two domains of functioning or an “extreme” limitation in one domain. (See §416.926a(e) for the definitions of the terms marked and extreme as they apply to children.)
