§ 884.1185 Endometrial washer.
(a) Identification. An endometrial washer is a device used to remove materials from the endometrium (the mucosal lining of the uterus) by washing with water or saline solution and then aspirating with negative pressure. This device is used to study endometrial cytology (cells).
(b) Classification. Class II. The special controls for this device are:
(1) FDA’s:
(i) “Use of International Organization for Standardization’s ISO 10993 ‘Biological Evaluation of Medical Devices—Part I: Evaluation and Testing,’” and
(ii) “510(k) Sterility Review Guidance of 2/12/90 (K90–1),”
(2) Labeling:
(i) Indication: Only to evaluate the endometrium,
(ii) Contraindications: Pregnancy, history of uterine perforation, or a recent cesarean section, and
(iii) Warning: Do not attach to a wall or any external suction, and
(3) Design and Testing:
(i) The sampling component is covered within the vagina, and
(ii) Intrauterine pressure should not exceed 50 millimeters of mercury.

§ 884.1300 Uterotubal carbon dioxide insufflator and accessories.
(a) Identification. A uterotubal carbon dioxide insufflator and accessories is a device used to test the patency (lack of obstruction) of the fallopian tubes by pressurizing the uterus and fallopian tubes and filling them with carbon dioxide gas.

§ 884.1600 Transabdominal amnioscope (fetoscope) and accessories.
(a) Identification. A transabdominal amnioscope is a device designed to permit direct visual examination of the fetus by a telescopic system via abdominal entry. The device is used to ascertain fetal abnormalities, to obtain fetal blood samples, or to obtain fetal tissue. This generic type of device may include the following accessories: trocar and cannula, instruments used through an operating channel or through a separate cannula associated with the amnioscope, light source and cables, and component parts.
(b) Classification. Class III (premarket approval).
