incorporated into the product, or are determined by TTB to have been otherwise utilized as an essential part of the manufacturing process. However, spirits lost by causes such as spillage, leakage, breakage or theft, and spirits used for purposes such as rinsing or cleaning a system, are not considered to have been used in the manufacture of a product.

§ 17.152 Time of use of spirits.
  (a) General. Distilled spirits shall be considered used in the manufacture of a product as soon as that product contains all the ingredients called for by its formula.
  (b) Spirits used in an ion exchange column. Distilled spirits used in recharging an ion exchange column, the operation of which is essential to the production of a product, shall be considered to be used when the spirits are entered into the manufacturing system in accordance with the product’s formula.
  (c) Products requiring additional processing or treatment. Further manipulation of a product, such as aging or filtering, subsequent to the mixing together of all of its ingredients, shall not postpone the time when spirits are considered used, as determined under paragraph (a) of this section. This is true even if at the time of use there has not yet been a final determination of alcoholic content by assay. If, however, it is later found necessary to add more distilled spirits to standardize the product, such added spirits shall be considered as used in the period during which they were added.
  (d) Nonbeverage products used to manufacture other products. Nonbeverage products may be used to manufacture other nonbeverage (or intermediate) products. However, such subsequent usage of a nonbeverage product shall not affect the time when the distilled spirits contained therein are considered used. When distilled spirits are used in the manufacture of a nonbeverage product, the time of use shall be the point at which that product first contains all of its prescribed ingredients, and such use shall not be determined by the time of any subsequent usage of that product in another product.

§ 17.153 Recovered spirits.
  (a) Recovery from intermediate products. Eligible spirits recovered in the manufacture of intermediate products are not subject to drawback until such recovered spirits are used in the manufacture of a nonbeverage product. (However, see §17.127 with respect to optional treatment of ingredients as unfinished nonbeverage products, rather than as intermediate products.) Spirits recovered in the manufacture of intermediate products shall be reused only in the manufacture of intermediate or nonbeverage products.
  (b) Recovery from nonbeverage products. Distilled spirits recovered in the manufacture of a nonbeverage product are considered as having been used in the manufacture of that product. If the spirits were eligible when so used, they became subject to drawback at that time. Upon recovery, such spirits may be reused in the manufacture of nonbeverage products, but shall not be reused for any other purpose. When reused, such recovered spirits are not again eligible for drawback and shall not be used in the manufacture of intermediate products.
  (c) Cross references. For additional provisions respecting the recovery of distilled spirits and related record-keeping requirements, see §§17.168 and 17.183.

§ 17.154 Spirits contained in intermediate products.
Spirits contained in an intermediate product are not subject to drawback until that intermediate product is used in the manufacture of a nonbeverage product.

§ 17.155 Spirits consumed in manufacturing intermediate products.
Spirits consumed in the manufacture of an intermediate product—which are not contained in the intermediate product at the time of its use in nonbeverage products—are not subject to drawback. Such spirits are not considered to have been used in the manufacture of nonbeverage products. However, see §17.127 with respect to optional treatment of ingredients as unfinished nonbeverage products, rather than as intermediate products.
