§ 250.518 What are the requirements for casing pressure management?

Once you install your wellhead, you must meet the casing pressure management requirements of API RP 90 (incorporated by reference as specified in § 250.198) and the requirements of §§ 250.519 through 250.530. If there is a conflict between API RP 90 and the casing pressure requirements of this subpart, you must follow the requirements of this subpart.

§ 250.519 How often do I have to monitor for casing pressure?

You must monitor for casing pressure in your well according to the following table:

<table>
<thead>
<tr>
<th>If you have</th>
<th>you must monitor</th>
<th>with a minimum one pressure data point recorded per</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) fixed platform wells,</td>
<td>monthly,</td>
<td>month for each casing.</td>
</tr>
<tr>
<td>(b) subsea wells,</td>
<td>continuously,</td>
<td>day for the production casing.</td>
</tr>
<tr>
<td>(c) hybrid wells,</td>
<td>daily,</td>
<td>day for each riser and/or the production casing.</td>
</tr>
<tr>
<td>(d) wells operating under a casing pressure request on a manned fixed platform,</td>
<td>weekly,</td>
<td>week for each casing.</td>
</tr>
<tr>
<td>(e) wells operating under a casing pressure request on an unmanned fixed platform,</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

§ 250.520 When do I have to perform a casing diagnostic test?

(a) You must perform a casing diagnostic test within 30 days after first observing or imposing casing pressure according to the following table:

<table>
<thead>
<tr>
<th>If you have</th>
<th>you must perform a casing diagnostic test if</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) fixed platform well,</td>
<td>the casing pressure is greater than 100 psig.</td>
</tr>
<tr>
<td>(2) subsea well,</td>
<td>the measurable casing pressure is greater than the external hydrostatic pressure plus 100 psig measured at the subsea wellhead.</td>
</tr>
<tr>
<td>(3) hybrid well,</td>
<td>a riser or the production casing pressure is greater than 100 psig measured at the surface.</td>
</tr>
</tbody>
</table>

(b) You are exempt from performing a diagnostic pressure test for the production casing on a well operating under active gas lift.

§ 250.521 How do I manage the thermal effects caused by initial production on a newly completed or recompleted well?

A newly completed or recompleted well often has thermal casing pressure during initial startup. Bleeding casing pressure during the startup process is considered a normal and necessary operation to manage thermal casing pressure; therefore, you do not need to evaluate these operations as a casing diagnostic test. After 30 days of continuous production, the initial production startup operation is complete and you must perform casing diagnostic testing as required in §§ 250.520 and 250.522.

§ 250.522 When do I have to repeat casing diagnostic testing?

Casing diagnostic testing must be repeated according to the following table:

<table>
<thead>
<tr>
<th>When</th>
<th>you must repeat diagnostic testing</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) your casing pressure request approved term has expired,</td>
<td>immediately.</td>
</tr>
<tr>
<td>(b) your well, previously on gas lift, has been shut-in or returned to flowing status without gas lift for more than 180 days,</td>
<td>immediately on the production casing (A annulus). The production casing (A annulus) of wells on active gas lift are exempt from diagnostic testing.</td>
</tr>
<tr>
<td>(c) your casing pressure request becomes invalid,</td>
<td>within 30 days.</td>
</tr>
<tr>
<td>(d) a casing or riser has an increase in pressure greater than 200 psig over the previous casing diagnostic test,</td>
<td>within 30 days.</td>
</tr>
<tr>
<td>(e) after any corrective action has been taken to remediate undesirable casing pressure, either as a result of a casing pressure request denial or any other action,</td>
<td>within 30 days.</td>
</tr>
</tbody>
</table>
§ 250.523 How long do I keep records of casing pressure and diagnostic tests?

Records of casing pressure and diagnostic tests must be kept at the field office nearest the well for a minimum of 2 years. The last casing diagnostic test for each casing or riser must be retained at the field office nearest the well until the well is abandoned.

§ 250.524 When am I required to take action from my casing diagnostic test?

You must take action if you have any of the following conditions:

(a) Any fixed platform well with a casing pressure exceeding its maximum allowable wellhead operating pressure (MAWOP);
(b) Any fixed platform well with a casing pressure that is greater than 100 psig and that cannot bleed to 0 psig through a 1/2-inch needle valve within 24 hours, or is not bled to 0 psig during a casing diagnostic test;
(c) Any well that has demonstrated tubing/casing, tubing/riser, casing/casing, riser/casing, or riser/riser communication;
(d) Any well that has sustained casing pressure (SCP) and is bled down to prevent it from exceeding its MAWOP, except during initial startup operations described in §250.521;
(e) Any hybrid well with casing or riser pressure exceeding 100 psig; or
(f) Any subsea well with a casing pressure 100 psig greater than the external hydrostatic pressure at the subsea wellhead.

§ 250.525 What do I submit if my casing diagnostic test requires action?

Within 14 days after you perform a casing diagnostic test requiring action under §250.524:

You must submit either:

(a) a notification of corrective action; or,
(b) a casing pressure request, and it must include:

You must also:

District Manager and copy the requirements under §250.526 submit an Application for Permit to Modify or Corrective Action Plan within 30 days of the diagnostic test.

Regional Supervisor, Field Operations, requirements under §250.527.

§ 250.526 What must I include in my notification of corrective action?

The following information must be included in the notification of corrective

(a) Lessee or Operator name;
(b) Area name and OCS block number;
(c) Well name and API number; and
(d) Casing diagnostic test data.

§ 250.527 What must I include in my casing pressure request?

The following information must be included in the casing pressure request:

(a) API number;
(b) Lease number;
(c) Area name and OCS block number;
(d) Well number;
(e) Company name and mailing address;
(f) All casing, riser, and tubing sizes, weights, grades, and MIYP;
(g) All casing/riser calculated MAWOPs;
(h) All casing/riser pre-bleed down pressures;
(i) Shut-in tubing pressure;
(j) Flowing tubing pressure;
(k) Date and the calculated daily production rate during last well test (oil, gas, basic sediment, and water);
