§ 60.1520 Demonstration of your State’s legal authority to carry out the CAA sections 111(d) and 129 State plan.
(b) Your State plan can deviate from the format and content of the emission guidelines contained in this subpart. However, if your State plan does deviate, you must demonstrate that your State plan is as protective as the emission guidelines contained in this subpart. Your State plan must address regulatory applicability, increments of progress for retrofit, operator training and certification, operating practice, emission limits, continuous emission monitoring, stack testing, record-keeping, reporting, and air curtain incinerator requirements.
(c) Follow the requirements of subpart B of this part in your State plan.

§ 60.1525 What if my State plan is not approvable?
If you do not submit an approvable State plan (or a negative declaration letter), EPA will develop a Federal plan, according to §60.27, to implement the emission guidelines contained in this subpart. Owners and operators of municipal waste combustion units not covered by an approved and currently effective State plan must comply with the Federal plan. The Federal plan is an interim action and, by its own terms, will cease to apply when your State plan is approved and becomes effective.

§ 60.1530 Is there an approval process for a negative declaration letter?
No, the EPA has no formal review process for negative declaration letters. Once your negative declaration letter has been received, EPA will place a copy in the public docket and publish a notice in the Federal Register. If, at a later date, an existing small municipal waste combustion unit is identified in your State, the Federal plan implementing the emission guidelines contained in this subpart will automatically apply to that municipal waste combustion unit until your State plan is approved.

§ 60.1535 What compliance schedule must I include in my State plan?
(a) Your State plan must include compliance schedules that require small municipal waste combustion units to achieve final compliance or cease operation expeditiously as practicable but not later than the earlier of two dates:
(1) December 6, 2005.
(2) Three years after the effective date of State plan approval.
(b) For compliance schedules longer than 1 year after the effective date of State plan approval, State plans must include two items:
(1) Dates for enforceable increments of progress as specified in §60.1590.
(2) For Class I units (see definition in §60.1940), dioxins/furans stack test results for at least one test conducted during or after 1990. The stack tests must have been conducted according to the procedures specified under §60.1790.
(c) Class I units that commenced construction after June 26, 1987 must comply with the dioxins/furans and mercury limits specified in tables 2 and 3 of this subpart by the later of two dates:
(1) One year after the effective date of State plan approval.
(2) One year following the issuance of a revised construction or operation permit, if a permit modification is required.

§ 60.1540 Are there any State plan requirements for this subpart that supersede the requirements specified in subpart B?
Subpart B of this part establishes general requirements for developing and processing CAA section 111(d) plans. This subpart applies instead of the requirements in subpart B of this part, for two items:
(a) Option for case-by-case less stringent emission standards and longer compliance schedules. State plans developed to implement this subpart must be as protective as the emission guidelines contained in this subpart. State plans must require all municipal waste combustion units to comply no later than December 6, 2005. That requirement applies instead of the option for case-by-case less stringent emission standards and longer compliance schedules in §60.24(f).
