Subpart D—Annual Regulations Governing Subsistence Harvest

§ 92.30 General overview of regulations.

These regulations establish a spring/summer migratory bird subsistence harvest in Alaska. The regulations list migratory bird species that are authorized for harvest, species that are not authorized for harvest, season dates, and dates for a 30-day closure to protect nesting birds. The Co-management Council will review and, if necessary, recommend modifications to these harvest regulations on an annual basis, working within the schedule of the Federal late-season regulations for migratory game bird hunting.

(a) The taking, possession, transportation, and other uses of migratory birds are generally prohibited unless specifically authorized by regulation developed in accordance with the Migratory Bird Treaty Act. Therefore, harvesting migratory birds is prohibited unless regulations are established ensuring the protection of the various populations of migratory birds. Migratory bird population levels, production, and habitat conditions vary annually. These conditions differ within Alaska and throughout North America. Therefore, the regulations governing migratory bird hunting may include annual adjustments to keep harvests within acceptable levels.

(b) The development of the regulations in this part, like the development of the annual migratory game bird hunting regulations in part 20 of this chapter, involves annual data gathering programs to determine migratory bird population status and trends, evaluate habitat conditions, determine harvests, and consider other factors having an impact on the anticipated size of annual populations.
