§ 400.53 Yield certification and acceptability.

(a) Production reports must be provided to the crop insurance agent no later than the production reporting date for the crop insured.

(1) Production reports must provide an accurate account of planted acreage for annual crops or insurable acres for perennial crops, as well as harvested and appraised production by unit.

(2) The insured must certify the accuracy of the information.

(3) Production reported for more than one crop year must be continuous. A

(g) Base period—Ten consecutive crop years (except peaches, which have a five-year base period) immediately preceding the crop year defined in the insurance contract for which the approved APH yield is being established (except for sugarcane, which begins the calendar year preceding the immediate previous crop year defined in the insurance contract).

(h) Continuous production reports—Reports submitted by a producer for each crop year that the unit was planted to the crop and for the most recent crop year in the base period.

(i) Crop year—Defined in the crop insurance contract, however, for APH purposes the term does not include any year when the crop was not planted or when the crop was prevented from being planted by an insurable cause. For example, if an insured plants acreage in a county to wheat one year, that year is a crop year in accordance with the policy definition. If the land is summerfallowed the next calendar year, that calendar year is not a crop year for the purpose of APH.

(j) Database—A minimum of four years up to a maximum of ten crop years of production data used to calculate the approved APH yield.

(k) Determined yield (D-yield)—An estimated yield for certain crops, which can be determined by multiplying an average yield for the crop (attained by using data available from the National Agricultural Statistics Service (NASS) or comparable sources) by a percentage established by the FCIC for each county.

(l) Master yields—Approved APH yields, for certain crops and counties as initially designated by the FCIC, based on a minimum of four crop years of production records for a crop within a county.

(m) New producer—A person who has not been actively engaged in farming for a share of the production of the insured crop for more than two crop years.

(n) Production report—A written record showing the insured crop’s annual production and used to determine the insured’s yield for insurance purposes. The report contains yield history by unit, if applicable, including planted acreage for annual crops, insurable acreage for perennial crops, and harvested and appraised production for the previous crop years. This report must be supported by written verifiable records, measurement of farm stored production, or by other records of production approved by FCIC on an individual basis. Information contained in a claim for indemnity is considered a production report for the crop year for which the claim was filed.

(o) Production Reporting Date (PRD)—The PRD is contained in the crop insurance contract and is the last date production reports will be accepted for inclusion in the database for the current crop year.

(p) Transitional yield (T-Yield)—An estimated yield, for certain crops, generally determined by multiplying the ASCS program yield by a percentage determined by the FCIC for each county and provided on the actuarial table to be used in the APH yield calculation process when less than four consecutive crop years of actual or assigned yields are available.

(q) Verifiable records—Contemporary records of acreage and production provided by the insured, which may be verified by FCIC through an independent source, and which are used to substantiate the acreage and production that have been reported on the production report.

(r) Verifier—A person authorized by the FCIC to calculate approved APH yields.

(s) Yield variance tables—Tables for certain crops that indicate unacceptable yield variations and yield trends which will require determination of the APH yield by the FCIC.
year in which no acreage was planted to the crop on a unit or no acreage was planted to a practice, type, or variety requiring an APH yield will not be considered a break in continuity. Assigned yields, at the discretion of the FCIC, may be used to maintain continuity of yield data of file. Production on uninsured (for those years a crop insurance policy under the Federal Crop Insurance Act is in effect) or uninsurable acreage (for other years of the period) will not be used to determine APH yield unless production from such acreage is commingled with production from insured or insurable acreage.

(b) Production reports and supporting records are subject to audit or review to verify the accuracy of the information certified. Production and supporting records may be reviewed and verified if a claim for indemnity is submitted on the insured crop. The reported yield is subject to revision, if needed, so that the claim conforms to the records submitted at that time.

(1) Inaccurate production reports or failure to retain acceptable records shall result in the verifier combining optional farm units and recomputing the approved APH yield. These actions shall be taken at any time after reporting or record discrepancies are identified and may result in reduction of the approved APH yield for any calendar year.

(2) Records must be provided by the insured at the time of an audit, review, or as otherwise requested, to verify that the acreage and production certified are accurate. Records of any other person having shares in the insured crop, which are used by the insured to establish the approved APH yield, must also be provided upon request.

(3) In the event acreage or production data certified by two or more persons sharing in the crop on the same acreage is different, the verifier shall, at the verifier’s discretion, determine which acreage and production data, if any, will be used to determine the approved APH yield. If the correct acreage and production cannot be determined, the data submitted will be considered unacceptable by the verifier for APH purposes.

(4) Failure of the producer to report acreage and production completely and accurately may result in voidance of the crop insurance contract, as well as criminal or civil false claims penalties pursuant to applicable Federal criminal or civil statutes.

§ 400.54 Submission and accuracy of production reports.

(a) The insured is solely responsible for the timely submission and certification of accurate, complete production reports to the agent. Production reports must be provided for all planted units.

(b) Records may be requested by the FCIC, or an insurance company reinsured by the FCIC, or by anyone acting on behalf of the FCIC or the insurance company. The insured must provide such records upon request.

(c) The agent will explain the APH Program to insureds and prospective insureds. When necessary, the agent will assist the insured in preparation of production reports. The agent will determine the adjusted or unadjusted transitional or determined yields in accordance with § 400.54(b). The agent will review the production reports and forward them to the verifier, along with any requested and required supporting records for determination of an approved APH yield.

(d) The verifier will determine if the certified production reports are acceptable and calculate the approved APH yield.

§ 400.55 Qualification for actual production history coverage program.

(a) The approved APH yield is calculated from a database containing a minimum of four yields and will be updated each subsequent crop year. The database may contain a maximum of the 10 most recent crop years and may include actual, assigned, and adjusted or unadjusted T or D-Yields. T or D-Yields, adjusted or unadjusted, will only occur in the database when there are less than four years of actual and/or assigned yields.

(b) The insured may be required to provide production records to determine the approved APH yield, if production records for the most recent crop year are available. If acceptable
