§ 175.320 Resinous and polymeric coatings for polyolefin films.

Resinous and polymeric coatings may be safely used as the food-contact surface of articles intended for use in producing, manufacturing, packaging, processing, preparing, treating, packaging, transporting, or holding food, in accordance with the following prescribed conditions:

(a) The coating is applied as a continuous film over one or both sides of a base film produced from one or more of the basic olefin polymers complying with §177.1520 of this chapter. The base polyolefin film may contain optional adjuvant substances permitted for use in polyolefin film by applicable regulations in parts 170 through 189 of this chapter.

(b) The coatings are formulated from optional substances which are:

(1) Substances generally recognized as safe for use in or on food.
(2) Substances the use of which is permitted under applicable regulations in parts 170 through 189 of this chapter, by prior sanctions, or approvals.
(3) Substances identified in this paragraph (b)(3) and subject to such limitations as are provided:

Siloxanes and silicones: platinum-catalyzed reaction product of vinyl-containing dimethylpolysiloxane (CAS Reg. Nos. 68083–19–2 and 68083–18–1) with methyl hydrogen polysiloxane (CAS Reg. No. 63148–57–2) and dimethylmethylhydrogen polysiloxane (CAS Reg. No. 68037–59–2). The following substances may be used as optional polymerization inhibitors:

- 3,5-Dimethyl-1-hexyne-3-ol (CAS Reg. No. 107–54–0), at a level not to exceed 0.53 weight percent;
- 1-Ethynylcyclohexene (CAS Reg. No. 931–49–7), at a level not to exceed 0.64 weight percent;
- Bis(methoxymethyl) maleate (CAS Reg. No. 102054–10–4), at a level not to exceed 1.0 weight percent;
- Methylvinyl cyclosiloxane (CAS Reg. No. 68082–23–3); and
- Tetramethyltetravinylcyclotetrasiloxane (CAS Reg. No. 2554–06–5).

Platinum content not to exceed 150 parts per million. For use only as a surface coating under the following conditions:

1. In coatings for olefin polymers provided the coating contacts food only of the types identified in § 176.170(c) of this chapter, table 1, under Types I, II, VI, and VII-B when used under conditions of use E, F, and G described in table 2 in § 176.170(c) of this chapter.

2. In coatings for olefin polymers provided the coating contacts food only of the types identified in § 176.170(c) of this chapter, table 1, under Types III, IV, V, VII-A, VIII, and IX when used under conditions of use A through H described in table 2 in § 176.170(c) of this chapter.

Styrene copolymerized with one or more of the following:

- Acrylonitrile.
- α-Methyl styrene.

Styrene polymers made by the polymerization of any combination of styrene or α-methyl styrene with acrylic acid, methacrylic acid, 2-ethyl hexyl acrylate, methyl methacrylate, and butyl acrylate. The styrene and α-methyl styrene, individually, may constitute from 0 to 80 weight percent of the polymer. The other monomers, individually, may be from 0 to 40 weight percent of the polymer. The polymer number average molecular weight (M_n) shall be at least 2,000 (as determined by gel permeation chromatography). The acid number of the polymer shall be less than 250. The monomer content shall be less than 0.5 percent.

Styrene-isobutylene copolymer.

Terpene resins consisting of polymers of α-pinene, β-pinene, and/or dipentene; acid value less than 5, saponification number less than 5, and color less than 4 on the Gardner scale as measured in 50 percent mineral spirits solution.

2-Sulfoethyl methacrylate, sodium salt Chemical Abstracts Service No. 1804–87–1.

Vinyl chloride-acetate, hydroxyl-modified copolymer or maleic acid-modified copolymer.

Vinyl chloride copolymerized with one or more of the following:

- Acrylonitrile.
- Vinyl acetate.
- Vinylidene chloride.

For use only in contact with foods of Types IV-A, V, and VII in table 1 of § 176.170(c) of this chapter, under use conditions E through G in table 2 of § 176.170(c) of this chapter, and with foods of Types VIII and IX without use temperature restriction.

Vinyl chloride-acetate, hydroxyl-modified copolymer or maleic acid-modified copolymer.

For use only in copolymer coatings under conditions of use E, F, and G described in table 2 of § 176.170(c) of this chapter and limited to use at a level not to exceed 2.0 percent by weight of the dry copolymer coating.
Vinylidene chloride copolymerized with one or more of the following:
- Acrylic acid and its methyl, ethyl, propyl, butyl, or octyl esters.
- Acrylonitrile.
- Itaconic acid.
- Methacrylic acid and its methyl, ethyl, propyl, butyl, or octyl esters.
- Methacrylonitrile.
- Vinyl chloride.

(ii) Plasticizers:
- Acetyl tributyl citrate.
- Acetyl triethyl citrate.
- Butyl phthalyl butyl glycolate.
- Butyl stearate.
- Diethyl phthalate.
- 2-Ethylhexyl diphenyl phosphate.
- Ethyl phthalyl ethyl glycolate.
- Glycerol monostearate.
- Glycerol triacetate.
- Triethyl citrate.

(iii) Adjuvants (release agents, waxes, and dispersants):
- Acetone.
- Amides (unsubstituted) of fatty acids from vegetable or animal oils.
- n-Butyl acetate.
- n-Butyl alcohol.
- Candelilla wax.
- Carnauba wax.
- 5-Chloro-2-methyl-4-isothiazolin-3-one (CAS Reg. No. 26172–55–4) and 2-methyl-4-isothiazolin-3-one (CAS Reg. No. 2682–20–4) mixture, at a ratio of 3 parts to 1 part, respectively, manufactured from methyl-3-mercaptopropionate (CAS Reg. No. 2935–90–2) and optionally containing magnesium nitrate (CAS Reg. No. 10377–60–3) at a concentration equivalent to the isothiazolone active ingredients (weight/weight).
- 1,2-Dibromo-2,4-dicyanobutane (CAS Reg. No. 35691–65–7).
- Ethyl acetate.
- Fatty acids from vegetable or animal oils and their aluminum, ammonium, calcium, magnesium, and sodium salts.
- Hexane.
- Methyl ethyl ketone.
- N,N'-Dioleoyl ethylenediamine (CAS Reg. No. 110–31–6)...
- Petroleum waxes conforming to specifications included in a regulation in subchapter B of this chapter.

Polyvinyl alcohol, minimum viscosity of 4% aqueous solution at 20 °C of 4 centipoises and percent alcoholysis of 87–100.

- Sodium dioctyl sulfosuccinate.
- Sodium dodecylbenzenesulfonate.
- Sodium lauryl sulfate.
- Sorbitan and sorbitol esters of fatty acids from vegetable or animal oils.
- Spermaccel wax.
- Tetrahydrofuran.
- Toluene.

(iv) Preservatives:
- Silver chloride-coated titanium dioxide.............

For use only as an antimicrobial agent in emulsion-based silicone coatings at a level not to exceed 50 milligrams per kilogram (based on isothiazolone active ingredient) in the coating formulation.

For use only in ionomeric resins complying with §177.1330 of this chapter and in ethylene vinyl acetate copolymers complying with §177.1350 of this chapter at a level not to exceed 0.0085 milligram per square centimeter (0.055 milligram per square inch) in the finished food-contact article.

For use only as a dispersing agent at levels not to exceed 6% of total coating weight in coatings for polyolefin films provided the finished polyolefin films contact food only of the types identified in §176.170(c) of this chapter, table 1, under Types V, VIII, and IX.

For use only as a preservative in latex emulsions at a level not to exceed 2.2 parts per million (based on silver ion concentration) in the dry coating.
§ 175.350 Vinyl acetate/crotonic acid copolymer.

A copolymer of vinyl acetate and crotonic acid may be safely used as a coating or as a component of a coating which is the food-contact surface of polyolefin films intended for packaging food, subject to the provisions of this section.

(a) The copolymer may contain added optional substances to impart desired properties.

(b) The quantity of any optional substance does not exceed the amount reasonably required to accomplish the intended physical or technical effect nor any limitations further provided.

(c) Any optional substance that is the subject of a regulation in parts 174, 175, 176, 177, 178, and §179.45 of this chapter conforms with any specifications in such regulation.

(d) Optional substances as provided in paragraph (a) of this section include:

(1) Substances generally recognized as safe in food.

(2) Substances subject to prior sanction or approval for uses with a copolymer of vinyl acetate and crotonic acid and used in accordance with such sanction or approval.

(3) Substances identified in this subparagraph and subject to such limitations as are provided:

<table>

(e) Copolymer of vinyl acetate and crotonic acid used as a coating or as a component of a coating conforming with the specifications of paragraph (e)(1) of this section are used as provided in paragraph (e)(2) of this section.

(1) Specifications. (i) The chloroform-soluble portion of the water extractives of the coated film obtained with distilled water at 120 °F for 24 hours does not exceed 0.5 milligram per square inch of coated surface.

(ii) The chloroform-soluble portion of the n-heptane extractives of the coated film obtained with n-heptane at 70 °F for 30 minutes does not exceed 0.5 milligram per square inch of coated surface.

(2) Conditions of use. The copolymer of vinyl acetate and crotonic acid is used as a coating or as a component of a coating for polyolefin films for packaging bakery products and confectionery.

§ 175.360 Vinylidene chloride copolymer coatings for nylon film.

Vinylidene chloride copolymer coatings identified in this section and applied on nylon film may be safely used as food-contact surfaces, in accordance with the following prescribed conditions:

(a) The coating is applied as a continuous film over one or both sides of a base film produced from nylon resins complying with §177.1500 of this chapter.

(b) The coatings are prepared from vinylidene chloride copolymers produced by copolymerizing vinylidene chloride with one or more of the monomers acrylic acid, acrylonitrile, ethyl acrylate, methacrylic acid, methyl acrylate, methyl methacrylate (CAS Reg. No. 80–62–6; maximum use level 6 weight percent) and 2-sulfoethyl methacrylate (CAS Reg. No. 10595–80–9; maximum use level 1 weight percent). The finished copolymers contain at least 50 weight percent of polymer units derived from vinylidene chloride. The finished coating produced from vinylidene chloride copolymers produced by copolymerizing vinylidene chloride with...
