value of a meal provided at the eating facility (see paragraph (j)(2)(ii) of this section). Alternatively, the employer may allocate the “total meal subsidy” among employees (see paragraph (j)(2)(iii) of this section).

(ii) “Individual meal subsidy” defined. The “individual meal subsidy” is determined by multiplying the price charged for a particular meal by a fraction, the numerator of which is the total meal value and the denominator of which is the gross receipts of the eating facility, and then subtracting the amount paid for the meal. The taxable value of meals provided to a particular employee during a calendar year, therefore, is the sum of the individual meal subsidies provided to the employee during the calendar year.

(iii) Allocation of “total meal subsidy.” Instead of using the individual meal value method, the employer may allocate the “total meal subsidy” (total meal value less the gross receipts of the facility) among employees in any manner reasonable under the circumstances.

§ 1.61–3 Gross income derived from business.

(a) In general. In a manufacturing, merchandising, or mining business, “gross income” means the total sales, less the cost of goods sold, plus any income from investments and from incidental or outside operations or sources. Gross income is determined without subtraction of depletion allowances based on a percentage of income to the extent that it exceeds cost depletion which may be required to be included in the amount of inventorable costs as provided in §1.471–11 and without subtraction of selling expenses, losses or other items not ordinarily used in computing costs of goods sold or amounts which are of a type for which a deduction would be disallowed under section 162 (c), (f), or (g) in the case of a business expense. The cost of goods sold should be determined in accordance with the method of accounting consistently used by the taxpayer. Thus, for example, an amount cannot be taken into account in the computation of cost of goods sold any earlier than the taxable year in which economic performance occurs with respect to the amount (see §1.446–1(c)(1)(ii)).

(b) State contracts. The profit from a contract with a State or political subdivision thereof must be included in gross income. If warrants are issued by a city, town, or other political subdivision of a State, and are accepted by the contractor in payment for public work done, the fair market value of such warrants should be returned as income. If, upon conversion of the warrants into cash, the contractor does not receive and cannot recover the full value of the warrants so returned, he may deduct any loss sustained from his gross income for the year in which the warrants are so converted. If, however, he realizes more than the value of the warrants so returned, he must include the excess in his gross income for the year in which realized.

§ 1.61–4 Gross income of farmers.

(a) Farmers using the cash method of accounting. A farmer using the cash receipts and disbursements method of accounting shall include in his gross income for the taxable year—

(1) The amount of cash and the value of merchandise or other property received during the taxable year from the sale of livestock and produce which he raised,

(2) The profits from the sale of any livestock or other items which were purchased,

(3) All amounts received from breeding fees, fees from rent of teams, machinery, or land, and other incidental farm income,

(4) All subsidy and conservation payments received which must be considered as income, and

(5) Gross income from all other sources.

The profit from the sale of livestock or other items which were purchased is to be ascertained by deducting the cost from the sales price in the year in which the sale occurs, except that in
the case of the sale of purchased animals held for draft, breeding, or dairy purposes, the profits shall be the amount of any excess of the sales price over the amount representing the difference between the cost and the depreciation allowed or allowable (determined in accordance with the rules applicable under section 1016(a) and the regulations thereunder). However, see section 162 and the regulations thereunder with respect to the computation of taxable income on other than the crop method where the cost of seeds or young plants purchased for further development and cultivation prior to sale is involved. Crop shares (whether or not considered rent under State law) shall be included in gross income as of the year in which the crop shares are reduced to money or the equivalent of money. See section 263A for rules regarding costs that are required to be capitalized.

(b) Farmers using an accrual method of accounting. A farmer using an accrual method of accounting must use inventories to determine his gross income. His gross income on an accrual method is determined by adding the total of the items described in subparagraphs (1) through (5) of this paragraph and subtracting therefrom the total of the items described in subparagraphs (6) and (7) of this paragraph. These items are as follows:

1. The sales price of all livestock and other products held for sale and sold during the year;
2. The inventory value of livestock and products on hand and not sold at the end of the year;
3. All miscellaneous items of income, such as breeding fees, fees from the rent of teams, machinery, or land, or other incidental farm income;
4. Any subsidy or conservation payments which must be considered as income;
5. Gross income from all other sources;
6. The inventory value of the livestock and products on hand and not sold at the beginning of the year; and
7. The cost of any livestock or products purchased during the year (except livestock held for draft, dairy, or breeding purposes, unless included in inventory).

All livestock raised or purchased for sale shall be added in the inventory at their proper valuation determined in accordance with the method authorized and adopted for the purpose. Livestock acquired for draft, breeding, or dairy purposes and not for sale may be included in the inventory (see subparagraphs (2), (6), and (7) of this paragraph) instead of being treated as capital assets subject to depreciation, provided such practice is followed consistently from year to year by the taxpayer. When any livestock included in an inventory are sold, their cost must not be taken as an additional deduction in computing taxable income, because such deduction is reflected in the inventory. See the regulations under section 471. See section 263A for rules regarding costs that are required to be capitalized. Crop shares (whether or not considered rent under State law) shall be included in gross income as of the year in which the crop shares are reduced to money or the equivalent of money.

(c) Special rules for certain receipts. In the case of the sale of machinery, farm equipment, or any other property (except stock in trade of the taxpayer, or property of a kind which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business), any excess of the proceeds of the sale over the adjusted basis of such property shall be included in the taxpayer’s gross income for the taxable year in which such sale is made. See, however, section 453 and the regulations thereunder for special rules relating to certain installment sales. If farm produce is exchanged for merchandise, groceries, or the like, the market value of the article received in exchange is to be included in gross income. Proceeds of insurance, such as hail or fire insurance on growing crops, should be included in gross income to the extent of the amount received in cash or its equivalent for the crop injured or destroyed. See section 451(d) for special rule relating to election to include crop insurance proceeds in income for taxable year following taxable year of destruction. For taxable
§ 1.61–5 Allocations by cooperative associations; per-unit retain certificates—tax treatment as to cooperatives and patrons.

(a) In general. Amounts allocated on the basis of the business done with or for a patron by a cooperative association, whether or not entitled to tax treatment under section 522, in cash, merchandise, capital stock, revolving fund certificates, retain certificates, certificates of indebtedness, letters of advice or in some other manner disclosing to the patron the dollar amount allocated, shall be included in the computation of the gross income of such patron for the taxable year in which received to the extent prescribed in paragraph (b) of this section, regardless of whether the allocation is deemed, for the purpose of section 522, to be made at the close of a preceding taxable year of the cooperative association. The determination of the extent of taxability of such amounts is in no way dependent upon the method of accounting employed by the patron or upon the method, cash, accrual, or otherwise, upon which the taxable income of such patron is computed.

(b) Extent of taxability. (1) Amounts allocated to a patron on a patronage basis by a cooperative association with respect to products marketed for such patron, or with respect to supplies, equipment, or services, the cost of which was deductible by the patron under section 162 or section 212, shall be included in the computation of the gross income of such patron, as ordinary income, to the following extent:

(i) If the allocation is in cash, the amount of cash received.

(ii) If the allocation is in merchandise, the amount of the fair market value of such merchandise at the time of receipt by the patron.

(iii) If the allocation is in the form of revolving fund certificates, retain certificates, certificates of indebtedness, letters of advice, or similar documents, the amount of the fair market value of
