shall be vented, flooded, or purged with a mixture of gases which will not support combustion.

(h) Explosives. (1) Employers shall transport, store, and use explosives in accordance with this section and the applicable provisions of §1910.109 and §1920.912 of Title 29 of the Code of Federal Regulations.

(2) Electrical continuity of explosive circuits shall not be tested until the diver is out of the water.

(3) Explosives shall not be detonated while the diver is in the water.

(i) Termination of dive. The working interval of a dive shall be terminated when:

(1) A diver requests termination;

(2) A diver fails to respond correctly to communications or signals from a dive team member;

(3) Communications are lost and cannot be quickly re-established between the diver and a dive team member at the dive location, and between the designated person-in-charge and the person controlling the vessel in liveboating operations; or

(4) A diver begins to use diver-carried reserve breathing gas or the dive-location reserve breathing gas.

§ 1910.423 Post-dive procedures.

(a) General. The employer shall comply with the following requirements which are applicable after each diving operation, unless otherwise specified.

(b) Precautions. (1) After the completion of any dive, the employer shall:

(i) Check the physical condition of the diver;

(ii) Instruct the diver to report any physical problems or adverse physiological effects including symptoms of decompression sickness;

(iii) Advise the diver of the location of a decompression chamber which is ready for use; and

(iv) Alert the diver to the potential hazards of flying after diving.

(2) For any dive outside the no-decompression limits, deeper than 100 fsw or using mixed gas as a breathing mixture, the employer shall instruct the diver to remain awake and in the vicinity of the decompression chamber which is at the dive location for at least one hour after the dive (including decompression or treatment as appropriate).

(c) Recompression capability. (1) A decompression chamber capable of recompressing the diver at the surface to a minimum of 165 fsw (6 ATA) shall be available at the dive location for:

(i) Surface-supplied air diving to depths deeper than 100 fsw and shallower than 220 fsw;

(ii) Mixed gas diving shallower than 300 fsw; or

(iii) Diving outside the no-decompression limits shallower than 300 fsw.

(2) A decompression chamber capable of recompressing the diver at the surface to the maximum depth of the dive shall be available at the dive location for dives deeper than 300 fsw.

(3) The decompression chamber shall be:

(i) Dual-lock;

(ii) Multiplace; and

(iii) Located within 5 minutes of the dive location.

(d) Record of dive. (1) The following information shall be recorded and maintained for each diving operation:

(i) Names of dive team members including designated person-in-charge;

(ii) Date, time, and location;

(iii) Diving modes used;

(iv) General nature of work performed;

(v) Approximate underwater and surface conditions (visibility, water temperature and current); and
(vi) Maximum depth and bottom time for each diver.

(2) For each dive outside the no-decompression limits, deeper than 100 fsw or using mixed gas, the following additional information shall be recorded and maintained:
   (i) Depth-time and breathing gas profiles;
   (ii) Decompression table designation (including modification); and
   (iii) Elapsed time since last pressure exposure if less than 24 hours or repetitive dive designation for each diver.

(3) For each dive in which decompression sickness is suspected or symptoms are evident, the following additional information shall be recorded and maintained:
   (i) Description of decompression sickness symptoms (including depth and time of onset); and
   (ii) Description and results of treatment.

(e) Decompression procedure assessment. The employer shall:
   (1) Investigate and evaluate each incident of decompression sickness based on the recorded information, consideration of the past performance of decompression table used, and individual susceptibility;
   (2) Take appropriate corrective action to reduce the probability of recurrence of decompression sickness; and
   (3) Prepare a written evaluation of the decompression procedure assessment, within 45 days of the incident of decompression sickness.

§ 1910.425 Surface-supplied air diving.

(a) General. Employers engaged in surface-supplied air diving shall comply with the following requirements, unless otherwise specified.

(b) Limits. (1) Surface-supplied air diving shall not be conducted at depths deeper than 190 fsw, except that dives with bottom times of 30 minutes or less may be conducted to depths of 220 fsw.

   (2) A decompression chamber shall be ready for use at the dive location for any dive outside the no-decompression limits or deeper than 100 fsw.

   (3) A bell shall be used for dives with an inwater decompression time greater than 120 minutes, except when heavy gear is worn or diving is conducted in physically confining spaces.

   (c) Procedures. (1) Each diver shall be continuously tended while in the water.

   (2) A diver shall be stationed at the underwater point of entry when diving is conducted in enclosed or physically confining spaces.

   (3) Each diving operation shall have a primary breathing gas supply sufficient to support divers for the duration of the planned dive including decompression.

   (4) For dives deeper than 100 fsw or outside the no-decompression limits:

      (i) A separate dive team member shall tend each diver in the water;

      (ii) In enclosed or physically confining spaces unless line-tended.

      (c) Procedures. (1) A standby diver shall be available while a diver is in the water.

      (2) A diver shall be line-tended from the surface, or accompanied by another diver in the water in continuous visual contact during the diving operations.

      (3) A diver shall be stationed at the underwater point of entry when diving is conducted in enclosed or physically confining spaces.

      (4) A diver-carried reserve breathing gas supply shall be provided for each diver consisting of:

         (i) A manual reserve (J valve); or

         (ii) An independent reserve cylinder with a separate regulator or connected to the underwater breathing apparatus.

      (5) The valve of the reserve breathing gas supply shall be in the closed position prior to the dive.

§ 1910.424 SCUBA diving.

(a) General. Employers engaged in SCUBA diving shall comply with the following requirements, unless otherwise specified.

   (b) Limits. SCUBA diving shall not be conducted:

      (1) At depths deeper than 130 fsw;

      (2) At depths deeper than 100 fsw or outside the no-decompression limits unless a decompression chamber is ready for use;

      (3) Against currents exceeding one (1) knot unless line-tended; or

      (4) In enclosed or physically confining spaces unless line-tended.

   (c) Procedures. (1) A standby diver shall be available while a diver is in the water.

   (2) A diver shall be line-tended from the surface, or accompanied by another diver in the water in continuous visual contact during the diving operations.

   (3) A diver shall be stationed at the underwater point of entry when diving is conducted in enclosed or physically confining spaces.

   (4) A diver-carried reserve breathing gas supply shall be provided for each diver consisting of:

      (i) A manual reserve (J valve); or

      (ii) An independent reserve cylinder with a separate regulator or connected to the underwater breathing apparatus.

      (5) The valve of the reserve breathing gas supply shall be in the closed position prior to the dive.
