the laws of the United States, do hereby proclaim September 2011 as Na-
tional Wilderness Month. I invite all Americans to visit and enjoy our wil-
derness areas, to learn about their vast history, and to aid in the protection
of our precious national treasures.

IN WITNESS WHEREOF, I have hereunto set my hand this first day of Sep-
tember, in the year of our Lord two thousand eleven, and of the Independ-
ence of the United States of America the two hundred and thirty-sixth.

BARACK OBAMA

Proclamation 8705 of September 1, 2011

National Childhood Cancer Awareness Month, 2011

By the President of the United States of America
A Proclamation

Across America, thousands of courageous children fight pediatric cancer
each year, facing life-threatening battles that would challenge men and
women of any age. They are cared for by loving families, friends, and com-
munities who band together to support children in times of great need.
From raising money for research and hospital stays to offering compas-
sionate assistance to families who have lost loved ones, Americans are
working every day to combat childhood cancer.

Today, research advances have made pediatric cancer more treatable than
ever before. The five-year survival rate for young patients has risen to 80
percent in the past half century, but serious challenges remain. Children
who survive cancer frequently struggle with significant complications later
in life and researchers are working to develop treatments specifically for
pediatric cancer. We still know too little about the causes in young people,
and cancer remains the leading cause of death by disease for children in
America under the age of 15.

As we work to better understand and combat these destructive diseases, my
Administration is working to lift some of the burden on families affected
by them. Because of the Affordable Care Act, insurance companies can no
longer deny insurance to children because of pre-existing conditions, mean-
ing that children who are currently suffering from or have survived cancer
must be covered. Insurance companies are also banned from rejecting in-
surance for children participating in clinical studies, in which the vast ma-
jority of children with cancer take part. And the Affordable Care Act pro-
hibits insurance companies from imposing lifetime dollar limits on health
benefits—freeing cancer patients and their families from worry of long-term
treatment affordability. Meanwhile, the National Cancer Institute continues
to conduct and fund research on the causes of these diseases, linking re-
search on genetics and adult cancers to more effective treatments for chil-
dren.

Too many children and their families have faced the harmful effects of can-
cer. In memory of the young lives taken from us far too soon, and in honor
of the families who stood beside them, we continue to support researchers,
Proclamations Proc. 8706

doctors, and advocates working to improve treatments, find cures, and reach a tomorrow where all our children can lead full and healthy lives.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim September 2011 as National Childhood Cancer Awareness Month. I also encourage all Americans to join me in reaffirming our commitment to fighting childhood cancer.

IN WITNESS WHEREOF, I have hereunto set my hand this first day of September, in the year of our Lord two thousand eleven, and of the Independence of the United States of America the two hundred and thirty-sixth.

BARACK OBAMA

Proclamation 8706 of September 1, 2011

National Prostate Cancer Awareness Month, 2011

By the President of the United States of America
A Proclamation

Prostate cancer is the second leading cause of cancer-related deaths among men in the United States. The weight of this illness is felt not only by the men living with and fighting prostate cancer, but also by their families, friends, and communities who rally to care for their loved ones. As we observe National Prostate Cancer Awareness Month, we renew our commitment to reducing the impact of prostate cancer on our country by raising awareness and supporting research that will lead to better ways to detect and treat this disease.

Although the exact causes of prostate cancer are not yet known, studies show certain factors—including age, race, and family history—may increase the likelihood of developing the disease. African Americans, in particular, are at a higher risk than men of other backgrounds. I encourage all men, especially those who are at an increased risk, to talk to their doctors about ways they can reduce their chances of developing prostate cancer.

My Administration will continue to promote prostate cancer research and treatment and raise awareness of this illness. The Centers for Disease Control and Prevention support critical research projects and education activities that bring a public health perspective to the issues of early detection and treatment. The Department of Defense and the National Cancer Institute continue to support research, investigate new cancer detection methods, and develop innovative imaging methods and other diagnostic techniques. The Affordable Care Act also expands coverage and gives Americans greater freedom and control over their health-care choices. Reforms in the law ban insurance companies from dropping individuals when they get sick or imposing lifetime dollar limits on health benefits. These changes free cancer patients to focus on getting better instead of worrying about whether they will be able to afford their treatment.

During National Prostate Cancer Awareness Month, we reaffirm our support for prostate cancer patients and survivors, and commend health-care providers, advocates, and researchers for their dedication and perseverance.
