For . . .

That must meet the following standards . . .

You have demonstrated initial compli-
ance if . . .

1. an existing or new SMC manufacturing operation. close or cover the resin delivery system to the doctor box on each SMC manufacturing machine. The doctor box itself may be open.

the owner or operator submits a certified statement in the notice of compliance status that the resin delivery system is closed or covered.

2. an existing or new SMC manufacturing operation. use a nylon containing film to enclose SMC.

the owner or operator submits a certified statement in the notice of compliance status that a nylon-containing film is used to enclose SMC.

3. an existing or new mixing or BMC manufacturing operation. use mixer covers with no visible gaps present in the mixer covers, except that gaps of up to 1 inch are permissible around mixer shafts and any required instrumentation.

the owner or operator submits a certified statement in the notice of compliance status that mixer covers are closed during mixing except when adding materials to the mixers, and that gaps around mixer shafts and required instrumentation are less than 1 inch.

4. an existing or new SMC manufacturing operation. keep the mixer covers closed during mixing except when adding materials to the mixing vessels.

the owner or operator submits a certified statement in the notice of compliance status that mixers closed except when adding materials to the mixing vessels.

5. an existing or new mixing or BMC manufacturing operation. not actively vent mixers to the atmosphere while the mixing agitator is turning, except that venting is allowed during addition of materials, or as necessary prior to adding materials for safety.

the owner or operator submits a certified statement in the notice of compliance status that mixers are not actively vented to the atmosphere when the agitator is turning except when adding materials or as necessary for safety.

6. an existing mixing or BMC manufacturing operation. keep the mixer covers closed during mixing except when adding materials to the mixing vessels.

the owner or operator submits a certified statement in the notice of compliance status that mixers closed except when adding materials to the mixing vessels.

7. an existing mixing or BMC manufacturing operation. i. Not allow vents from the building ventilation system, or local or portable fans to blow directly on or across the wet-out area(s), ii. not permit point suction of ambient air in the wet-out area(s) unless that air is directed to a control device, iii. use devices such as deflectors, baffles, and curtains when practical to reduce air flow velocity across the wet-out area(s), iv. direct any compressed air exhausts away from resin and wet-out area(s), v. convey resin collected from drip-off pans or other devices to reservoirs, tanks, or sumps via covered troughs, pipes, or other covered conveyance that shields the resin from the ambient air, vi. cover all reservoirs, tanks, sumps, or HAP-containing materials storage vessels except when they are being charged or filled, and vii. cover or shield from ambient air resin delivery systems to the wet-out area(s) from reservoirs, tanks, or sumps where practical.

the owner or operator submits a certified statement in the notice of compliance status that they have complied with all the requirements listed in 9.i through 9.vii.

8. a new or existing mixing or BMC manufacturing operation. keep the mixer covers closed during mixing except when adding materials to the mixing vessels.

the owner or operator submits a certified statement in the notice of compliance status that mixers closed except when adding materials to the mixing vessels.

9. a new or existing pultrusion operation manufacturing parts that meet the following criteria: 1,000 or more reinforcements or the glass equivalent of 1,000 ends of 113 yield roving or more; and have a cross sectional area of 60 square inches or more that is not subject to the 95 percent organic HAP emission reduction requirement.

As required in §63.3865(a), in order to comply with a percent reduction limit for continuous lamination lines and continuous casting lines you must determine the data in the following table:

Table 10 to Subpart WWWW of Part 63—Data Requirements for New and Existing Continuous Lamination Lines and Continuous Casting Lines Complying With a Percent Reduction Limit on a Per Line Basis

As required in §63.3865(a), in order to comply with a percent reduction limit for continuous lamination lines and continuous casting lines you must determine the data in the following table:

989
For each line where the wet-out area...And the oven...You must determine...

<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
<th>Data Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Has an enclosure that is not a permanent total enclosure (PTE) and the captured organic HAP emissions are controlled by an add-on control device.</td>
<td>a. Is uncontrolled .................................. i. Annual uncontrolled wet-out area organic HAP emissions, ii. Annual controlled wet-out area organic HAP emissions, iii. Annual uncontrolled oven organic HAP emissions, iv. The capture efficiency of the wet-out area enclosure, v. The destruction efficiency of the add-on control device, and vi. The amount of neat resin plus and neat gel coat plus applied.</td>
</tr>
<tr>
<td>2.</td>
<td>Has an enclosure that is a PTE and the captured organic HAP emissions are controlled by an add-on control device.</td>
<td>a. Is uncontrolled .................................. i. Annual uncontrolled wet-out area organic HAP emissions, ii. Annual controlled wet-out area organic HAP emissions, iii. Annual uncontrolled oven organic HAP emissions, iv. That the wet-out area enclosure meets the requirements of EPA Method 204 of appendix M to 40 CFR part 51 for a PTE, v. The destruction efficiency of the add-on control device, and vi. The amount of neat resin plus and neat gel coat plus applied.</td>
</tr>
<tr>
<td>5.</td>
<td>Has an enclosure that is a PTE and the captured organic HAP emissions are controlled by an add-on control device.</td>
<td>a. Is controlled by an add-on control device. i. That the wet-out area enclosure meets the requirements of EPA Method 204 of appendix M to 40 CFR part 51 for a PTE, ii. The capture efficiency of the oven, and iii. The destruction efficiency of the add-on control device.</td>

**Table 11 to Subpart WWWW of Part 63—Data Requirements for New and Existing Continuous Lamination and Continuous Casting Lines Complying With a Percent Reduction Limit or a Lbs/Ton Limit on an Averaging Basis**

As required in §63.5865, in order to comply with a percent reduction limit or a lbs/ton limit on an averaging basis for continuous lamination lines and continuous casting lines you must determine the data in the following table:
