1. Open-top containers.
   a. At least once each 72 hours.
   i. If you spill liquid mercury during collection or transport, you must take the action specified in Table 3 to this subpart for liquid mercury spills and accumulations.
   ii. From the time that you collect liquid mercury into a temporary container until the time that you store the liquid mercury, you must keep it covered by an aqueous liquid.
   iii. Within 4 hours from the time you collect the liquid mercury, you must transfer it from each temporary container to a storage container that meets the specifications in Table 1 to this subpart.

2. Vessels, low point drains, mercury knock-out pots, and other closed mercury collection points.
   a. At least once each week.
   See 1.a.i through iii above.

3. All other equipment.
   a. Whenever maintenance activities require the opening of the equipment.
   See 1.a.i. through iii above.

---

### TABLE 5 TO SUBPART IIIII OF PART 63—REQUIRED ELEMENTS OF FLOOR-LEVEL MERCURY VAPOR MEASUREMENT AND CELL ROOM MONITORING PLANS

Your Floor-Level Mercury Vapor Measurement Plan required by §63.8192(d) and Cell Room Monitoring Plan required by §63.8192(g) must contain the elements listed in the following table:

<table>
<thead>
<tr>
<th>You must specify in your plan . . .</th>
<th>Additional requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Floor-Level Mercury Vapor Measurement Plan</td>
<td></td>
</tr>
<tr>
<td>1. Locations in the cell room where you will measure the level of mercury vapor.</td>
<td>The locations must be representative of the entire cell room floor area. At a minimum you must measure the level of mercury vapor above mercury-containing cell room equipment, as well as areas around the cells, decomposes, or other mercury-containing equipment.</td>
</tr>
<tr>
<td>2. Equipment or sampling and analytical methods that you will use to measure the level of mercury vapor.</td>
<td>If an instrument or other equipment is used, the plan must include manufacturer specifications and calibration procedures. The plan must also include a description of how you will ensure that the instrument will be calibrated and maintained according to manufacturer specifications.</td>
</tr>
<tr>
<td>3. Measurement frequency</td>
<td>Measurements must take place at least once each half day.</td>
</tr>
<tr>
<td>4. Number of measurements</td>
<td>At least three readings must be taken at each sample location and the average of these readings must be recorded.</td>
</tr>
<tr>
<td>5. A floor-level mercury concentration action level</td>
<td>The action level may not be higher than 0.05 mg/m³.</td>
</tr>
</tbody>
</table>

| Cell Room Monitoring Plan |
| 1. Details of your mercury monitoring system. | Include some pre-plan measurements to demonstrate the profile of mercury concentration in the cell room and how the selected sampling locations ensure conducted representativeness. |
| 2. How representative sampling will be conducted | Include a description of how you will keep records or other means to demonstrate that the system is operating properly. |
| 3. Quality assurance/quality control procedures for your mercury monitoring system. | Include the background data used to establish your level. |
