each Waelz kiln or electrothermic furnace, as applicable to your facility, including documentation of any materials excluded from Equation GG–1 of this subpart that contribute less than 1 percent of the total carbon inputs to the process. You also must document the procedures used to ensure the accuracy of the measurements of materials fed, charged, or placed in an affected unit including, but not limited to, calibration of weighing equipment and other measurement devices. The estimated accuracy of measurements made with these devices must also be recorded, and the technical basis for these estimates must be provided.

§ 98.338 Definitions.
All terms used in this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

Subpart HH—Municipal Solid Waste Landfills

§ 98.340 Definition of the source category.
(a) This source category applies to municipal solid waste (MSW) landfills that accepted waste on or after January 1, 1980.
(b) This source category does not include Resource Conservation and Recovery Act (RCRA) Subtitle C or Toxic Substances Control Act (TSCA) hazardous waste landfills, construction and demolition waste landfills, or industrial waste landfills.
(c) This source category consists of the following sources at municipal solid waste (MSW) landfills: Landfills, landfill gas collection systems, and landfill gas destruction devices (including flares).

§ 98.341 Reporting threshold.
You must report GHG emissions under this subpart if your facility contains a MSW landfill and the facility meets the requirements of §98.2(a)(1).

§ 98.342 GHGs to report.
(a) You must report CH$_4$ generation and CH$_4$ emissions from landfills.
(b) You must report CH$_4$ destruction resulting from landfill gas collection and combustion systems.
(c) You must report under subpart C of this part (General Stationary Fuel Combustion Sources) the emissions of CO$_2$, CH$_4$, and N$_2$O from each stationary combustion unit following the requirements of subpart C.

§ 98.343 Calculating GHG emissions.
(a) For all landfills subject to the reporting requirements of this subpart, calculate annual modeled CH$_4$ generation using Equation HH–1 of this section.

\[
G_{CH4} = \sum_{s=S}^{T} \left( W_s \times MCF \times DOC \times F \times e^{\frac{16}{12}} \frac{e^{-4(T-x-1)} - e^{-4(T-1)}}{1} \right) \text{(Eq. HH-1)}
\]

Where:
- $G_{CH4}$ = Modeled methane generation rate in reporting year $T$ (metric tons CH$_4$).
- $x$ = Year in which waste was disposed.
- $S$ = Start year of calculation. Use the year 1960 or the opening year of the landfill, whichever is more recent.
- $T$ = Reporting year for which emissions are calculated.
- $W_s$ = Quantity of waste disposed in the landfill in year $s$ from measurement data, tipping fee receipts, or other company records (metric tons, as received (wet weight)).

- MCF = Methane correction factor (fraction).
- Use the default value of 1 unless there is active aeration of waste within the landfill during the reporting year. If there is active aeration of waste within the landfill during the reporting year, use either the default value of 1 or select an alternative value no less than 0.5 based on site-specific aeration parameters.
- DOC = Degradable organic carbon from Table HH-1 of this subpart or measurement data, if available (fraction (metric tons C/metric ton waste)).
