§ 463.27 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best conventional control technology. [Reserved]

Subpart C—Finishing Water Subcategory

§ 463.30 Applicability; description of the finishing water subcategory.

This subpart applies to discharges of pollutants from processes in the finishing water subcategory to waters of the United States and the introduction of such pollutants into publicly owned treatment works. Processes in the finishing water subcategory are processes where water comes in contact with the plastic product during finishing.

§ 463.31 Specialized definitions.

For the purpose of this subpart:
(a) The “average process water usage flow rate” of a finishing water process in liters per day is equal to the volume of process water (liters) used per year by a process divided by the number of days per year the process operates. The “average process water usage flow rate” for a plant with more than one plastics molding and forming process that uses finishing water is the sum of the “average process water usage flow rates” for the finishing processes.
(b) The “volume of process water used per year” is the volume of process water that flows through a finishing water process and comes in contact with the plastics product over a period of one year.

§ 463.32 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available, which are calculated by multiplying the average process water usage flow rate for the finishing water processes at a point source times the following pollutant concentrations:

<table>
<thead>
<tr>
<th>Pollutant or pollutant property</th>
<th>Maximum for any 1 day (mg/l)</th>
<th>Maximum for monthly average (mg/l)</th>
</tr>
</thead>
<tbody>
<tr>
<td>TSS</td>
<td>130</td>
<td>37</td>
</tr>
<tr>
<td>pH</td>
<td>(1)</td>
<td>(1)</td>
</tr>
</tbody>
</table>

1 Within the range of 6.0 to 9.0 at all times.

The permit authority will obtain the average process water usage flow rate for the finishing water processes from the permittee.

§ 463.33 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best available technology economically achievable.

(a) The BAT effluent limitations guidelines for bis(2-ethylhexyl) phthalate, di-n-butyl phthalate, and dimethyl phthalate are reserved.
(b) The Agency has determined that, with the exception of bis(2-ethylhexyl) phthalate, di-n-butyl phthalate, and dimethyl phthalate, there are no toxic pollutants in treatable concentrations in finishing waters. Accordingly, the Agency is promulgating BAT effluent limitations guidelines equal to BPT effluent limitations guidelines.

§ 463.34 New source performance standards.

(a) NSPS for bis(2-ethylhexyl) phthalate, di-n-butyl phthalate, and dimethyl phthalate are reserved.
(b) Any new source subject to this subpart must achieve performance standards (i.e., mass of pollutant discharged), which are calculated by multiplying the average process water usage flow rate for the finishing water processes at a new source times the following pollutant concentrations:
§ 463.35  

**Subpart C**  
[Finishing water]

<table>
<thead>
<tr>
<th>Pollutant or pollutant property</th>
<th>Concentration used to calculate NSPS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Maximum for any 1 day (mg/l)</td>
</tr>
<tr>
<td>TSS</td>
<td>130</td>
</tr>
<tr>
<td>pH</td>
<td>(*)</td>
</tr>
</tbody>
</table>

\(^1\) Within the range of 6.0 to 9.0 at all times.

The permit authority will obtain the average process water usage flow rate for the new source finishing water processes from the permittee.

§ 463.35  

Pretreatment standards for existing sources.

(a) PSES for bis(2-ethylhexyl) phthalate, di-n-butyl phthalate, and di-methyl phthalate are reserved.

(b) Any existing source subject to this subpart that introduces pollutants into a publicly owned treatment works must comply with 40 CFR part 403—General Pretreatment Regulations.

§ 463.36  

Pretreatment standards for new sources.

(a) PSNS for bis(2-ethylhexyl) phthalate, di-n-butyl phthalate, and di-methyl phthalate are reserved.

(b) Any new source subject to this subpart that introduces pollutants into a publicly owned treatment works must comply with 40 CFR part 403—General Pretreatment Regulations.

§ 463.37  

Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best conventional pollutant control technology. [Reserved]

PART 464—METAL MOLDING AND CASTING POINT SOURCE CATEGORY

**General Provisions**

Sec.  
464.01 Applicability.  
464.02 General definitions.  
464.03 Monitoring and reporting requirements.  
464.04 Compliance date for PSES.

40 CFR Ch. I (7–1–12 Edition)

Subpart A—Aluminum Casting Subcategory

464.10 Applicability; description of the aluminum casting subcategory.  
464.11 Specialized definitions.  
464.12 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available.

464.13 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best available technology economically achievable.  
464.15 Pretreatment standards for existing sources.  
464.16 Pretreatment standards for new sources.

Subpart B—Copper Casting Subcategory

464.20 Applicability; description of the copper casting subcategory.  
464.21 Specialized definitions.  
464.22 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available.  
464.23 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best available technology economically achievable.  
464.24 New source performance standards.  
464.25 Pretreatment standards for existing sources.  
464.26 Pretreatment standards for new sources.

Subpart C—Ferrous Casting Subcategory

464.30 Applicability; description of the ferrous casting subcategory.  
464.31 Specialized definitions.  
464.32 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best practicable control technology currently available.  
464.33 Effluent limitations guidelines representing the degree of effluent reduction attainable by the application of the best
