(m) Each crane is inspected and tested in accordance with §107.258.

MISCELLANEOUS

(n) Each watertight door is operative.
(o) Each valve with a remote control is operative.
(p) Each means of escape on the unit is safe for the intended service.
(q) There is not an accumulation of oil which might create a fire hazard on tank tops, decks, in drip pans, machinery spaces, and pumproom bilges.
(r) Each accommodation space is sanitary.
(s) The unit meets the drydocking requirement in §107.261 or the special examination in §107.265.
(t) The unit meets the equipment and data information requirements on its certificate of inspection.
(u) Each record in Subpart D of Part 109 is maintained as prescribed.

INSTALLATION TESTS

(w) Piping for each halocarbon and inert gas extinguishing system must be tested in accordance with 46 CFR 95.16–60.
(x) Piping for each carbon dioxide extinguishing system meets the installation test in §108.449 of this chapter.
(y) Each sliding watertight door meets the installation tests in §163.001–6(b) of this chapter.

OTHER TESTS AND INSPECTIONS

(z) The unit and its equipment meet any other test or inspection deemed necessary by the inspector to determine if they are suitable for the service in which they are to be employed.

§ 107.235 Servicing of hand portable fire extinguishers, semi-portable fire extinguishers and fixed fire extinguishing systems.

(a) Each hand portable fire extinguisher and each semi-portable fire extinguisher on board the unit must be serviced as set out in Table 107.235 and examined for excessive corrosion and general condition.

<th>Type extinguisher</th>
<th>Test and servicing required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cartridge operated (water, antifreeze or loaded stream)</td>
<td>Examine pressure cartridge and replace if end is punctured or if cartridge is otherwise determined to have leaked or to be in unsuitable condition. Remove liquid, clean hose and inside of extinguisher thoroughly. Recharge with clean water, solution, or antifreeze. Insert charged cartridge.</td>
</tr>
<tr>
<td>Carbon Dioxide</td>
<td>Weigh cylinders. Recharge if weight loss exceeds 10 percent. Inspect hose and nozzle to be sure they are clear.</td>
</tr>
<tr>
<td>Dry chemical (cartridge-operated type)</td>
<td>Examine pressure cartridge and replace if end is punctured or if cartridge is otherwise determined to have leaked or to be in unsuitable condition. Inspect hose and nozzle to see if they are clear. Insert charged cartridge. Be sure dry chemical is free-flowing (not caked) and chamber contains full charge.</td>
</tr>
<tr>
<td>Dry chemical (stored pressure type)</td>
<td>See that pressure gage is in operating range. If not, or if seal is broken, weigh or otherwise determine that full charge of dry chemical is in extinguisher. Recharge if pressure is low or if dry chemical is needed.</td>
</tr>
</tbody>
</table>

(b) Each fixed fire extinguishing system must be examined for excessive corrosion and general condition and checked and serviced as indicated, depending on the extinguishing agent used by the system.

1) **Carbon dioxide**: Weigh cylinders. Recharge cylinder if weight loss exceeds 10 percent of the weight of the charge. Test time delays, alarms, and ventilation shutdowns with carbon dioxide, nitrogen, or other nonflammable gas as stated in the system manufacturer’s instruction manual. Inspect hoses for damage or decay. Ensure that nozzles are unobstructed. Cylinders must be tested and marked, and all flexible connections on fixed carbon dioxide systems must be tested or renewed, as required by 46 CFR 147.60 and 147.65.

2) **Halon 1301 or Halocarbon**: Recharge or replace if weight loss exceeds 5 percent of the weight of the charge or, if cylinder has a pressure gauge, recharge cylinder if pressure loss exceeds 10 percent, adjusted for temperature. Test time delays, alarms, and ventilation shutdowns with carbon dioxide, nitrogen, or other nonflammable gas as stated in the system manufacturer’s instruction manual. Inspect hoses for damage or decay. Ensure that nozzles are unobstructed. Cylinders must be tested and marked, and all flexible connections must be tested or renewed as required by 46 CFR 147.60 and 147.65.

3) **Inert gas**: Recharge or replace cylinder if cylinder pressure loss exceeds 5 percent of specified gauge pressure, adjusted for temperature. Test time delays, alarms, and ventilation shutdowns with carbon dioxide, nitrogen, or other nonflammable gas as stated in the system manufacturer’s instruction manual. Inspect hoses for damage or decay. Ensure that nozzles are unobstructed. Cylinders must be tested and marked, and all flexible connections must be tested or renewed as required by 46 CFR 147.60 and 147.66.

4) **Foam, except premix systems**: Discharge foam for approximately 15 seconds from a nozzle designated by the marine inspector. Discharge water from all other lines and nozzles. Submit a sample of the foam liquid to the manufacturer or its authorized representative for determination of specific gravity, pH, percentage of water dilution, and solid content and for certification as a suitable firefighting foam.

5) **Premix aqueous film forming foam**: Remove the pressure cartridge and replace the cartridge if the seal is punctured, sampling the premix solution in accordance with the manufacturer’s instructions, and replacing any cylinders that are discharged.

§ 107.251 Testing of the fire main.
Each fire main system must be opened and the pressure checked at—
(a) The most remote outlet; and
(b) The highest outlet.
