operation of the contract award-term feature will cease and the contract term or ordering period will not extend beyond the maximum term stated in the contract.

(f) Award terms that have not begun may be cancelled (rather than terminated), should the need for the items or services no longer exists. No equitable adjustments to the contract price are applicable, as this is not the same procedure as a termination for convenience.

(g) The decisions made by the ATRB or Term Determining Official may be made unilaterally. Alternate Dispute Resolution procedures shall be utilized when appropriate.

(End of clause)

3452.224–70 Notice about research activities involving human subjects.

As prescribed in 3424.170, insert the following provision in any solicitation where a resultant contract will include, or is likely to include, research activities involving human subjects covered under 34 CFR part 97:

NOTICE ABOUT RESEARCH ACTIVITIES INVOLVING HUMAN SUBJECTS (MAR 2011)

(a) Applicable Regulations. In accordance with Department of Education regulations on the protection of human subjects, title 34, Code of Federal Regulations, part 97 (“the regulations”), the contractor, any subcontractors, and any other entities engaged in covered (nonexempt) research activities are required to establish and maintain procedures for the protection of human subjects.

(b) Definitions. (1) The regulations define research as “a systematic investigation, including research development, testing and evaluation, designed to develop or contribute to generalizable knowledge.” (34 CFR 97.102(d)). If an activity follows a deliberate plan designed to develop or contribute to generalizable knowledge, it is research. Research includes activities that meet this definition, whether or not they are conducted under a program considered research for other purposes. For example, some demonstration and service programs may include research activities.

(2) The regulations define a human subject as a living individual about whom an investigator (whether professional or student) conducting research obtains data through intervention or interaction with the individual, or obtains identifiable private information. (34 CFR 97.102(f)). The definition of a human subject is met if an activity involves obtaining—

(i) Information about a living person by—

(A) Manipulating that person’s environment, as might occur when a new instructional technique is tested; or

(B) Communicating or interacting with the individual, as occurs with surveys and interviewee.

(ii) Private information about a living person in such a way that the information can be linked to that individual (the identity of the subject is or may be readily determined by the investigator or associated with the information). Private information includes information about behavior that occurs in a context in which an individual can reasonably expect that no observation or recording is taking place, and information that has been provided for specific purposes by an individual and that an individual can reasonably expect will not be made public (for example, a school health record).

(c) Exemptions. The regulations provide exemptions from coverage for activities in which the only involvement of human subjects will be in one or more of the categories set forth in 34 CFR 97.101(b)(1)–(6). However, if the research subjects are children, the exemption at 34 CFR 97.101(b)(2) (i.e., research involving the use of educational tests, survey procedures, interview procedures or observation of public behavior) is modified by 34 CFR 97.101(b), as explained in paragraph
