(iii) Provisions for the annual review and monitoring of the effectiveness of the procurement program.

(2) In developing the preference program, Federal agencies shall adopt one of the following options, or a substantially equivalent alternative, as part of the procurement program:

(i) A policy of awarding contracts to the vendor offering a designated item composed of the highest percentage of biobased product practicable except when such items:

(A) Are not available within a reasonable time;

(B) Fail to meet performance standards set forth in the applicable specifications, or the reasonable performance standards of the Federal agency; or

(C) Are available only at an unreasonable price.

(ii) A policy of setting minimum biobased products content specifications in such a way as to assure that the biobased products content required is consistent with section 9002 and the requirements of the guidelines in this part except when such items:

(A) Are not available within a reasonable time;

(B) Fail to meet performance standards for the use to which they will be put, or the reasonable performance standards of the Federal agency; or

(C) Are available only at an unreasonable price.

(3) In implementing the preference program, Federal agencies shall treat as eligible for the preference biobased products from “designated countries,” as that term is defined in section 25.003 of the Federal Acquisition Regulation, provided that those products otherwise meet all requirements for participation in the preference program.

(c) Procurement specifications. After the publication date of each designated item, Federal agencies that have the responsibility for drafting or reviewing specifications for items procured by Federal agencies shall ensure within a specified time frame that their specifications require the use of designated items composed of biobased products, consistent with the guidelines in this part. USDA will specify the allowable time frame in each designation rule.

The biobased content of a designated item may vary considerably from product to product based on the mix of ingredients used in its manufacture. In procuring designated items, the percentage of biobased product content should be maximized, consistent with achieving the desired performance for the product.

§ 3201.5 Item designation.

(a) Procedure. Designated items are listed in subpart B. In designating items, USDA will designate items composed of generic groupings of specific products and will identify the minimum biobased content for each listed item. As items are designated for procurement preference, they will be added to subpart B. Items are generic groupings of specific products. Products are specific products offered for sale by a manufacturer or vendor. Although manufacturers and vendors may submit recommendations to USDA for future item designations at any time, USDA does not have a formal process for such submissions or for responding to such submissions.

(b) Considerations. In designating items, USDA will consider the availability of such items and the economic and technological feasibility of using such items, including life cycle costs. USDA will gather information on individual products within an item and extrapolate that product information to the item level for consideration in designating items. In considering these factors, USDA will use life cycle cost information only from tests using the BEES analytical method.

(c) Exclusions. (1) Motor vehicle fuels, heating oil, and electricity are excluded by statute from this program.

(2) USDA additionally will not designate items for preferred procurement that are determined to have mature markets. USDA will determine mature market status by whether the item had significant national market penetration in 1972.
