damaged, overripe, or infested eggplant. The eggplant must be packed in either individual insect-proof cartons or boxes labeled with the specific place of origin or non-insect-proof cartons or boxes that are covered by insect-proof mesh or plastic tarpaulins. Covered non-insect-proof cartons or boxes must be placed in shipping containers that have identification labels indicating the specific place of origin. These safeguards must remain intact until the arrival of the eggplant in the continental United States or the consignment will not be allowed to enter the continental United States.

(d) Commercial consignments. Eggplant from Israel may be imported in commercial consignments only.

(e) Phytosanitary certificate. Each consignment of eggplant must be accompanied by a phytosanitary certificate of inspection issued by the Israeli NPPO with an additional declaration reading as follows: “The eggplant in this consignment has been grown in an approved production site and inspected and found free of the pests listed in 7 CFR 319.56–49.”

§ 319.56–50 Hass avocados from Peru.

Fresh Hass variety avocados (Persea americana P. Mill.) may be imported into the continental United States from Peru only under the conditions described in this section. These conditions are designed to prevent the introduction of the following quarantine pests: Anastrepha fraterculus (Wiedemann), the South American fruit fly; Ceratitis capitata (Wiedemann), the Mediterranean fruit fly; Coccus viridis (Green), the green scale; Ferrisia malvastra (McDaniel), a mealybug; and Steleoma catenifer Walsingham, the avocado seed moth.

(a) General requirements. (1) The national plant protection organization (NPPO) of Peru must provide a workplan to APHIS that details the activities that the NPPO of Peru will, subject to APHIS’ approval of the workplan, carry out to meet the requirements of this section. The NPPO of Peru must also establish a trust fund in accordance with § 319.56–6.

(2) The avocados must be grown at places of production that are registered with the NPPO of Peru and that meet the requirements of this section.

(3) The avocados must be packed for export to the United States in packinghouses that are registered with the NPPO of Peru and that meet the requirements of this section.

(4) Avocados from Peru may be imported in commercial consignments only.

(b) Monitoring and oversight. (1) The NPPO of Peru must visit and inspect registered places of production monthly, starting at least 2 months before harvest and continuing until the end of the shipping season, to verify that the growers are complying with the requirements of paragraphs (c) and (e) of this section and follow pest control guidelines, when necessary, to reduce quarantine pest populations. Any personnel conducting trapping and pest surveys under paragraph (d) of this section must be trained and supervised by the NPPO of Peru. APHIS may monitor the places of production if necessary.

(2) In addition to conducting fruit inspections at the packinghouses, the NPPO of Peru must monitor packinghouse operations to verify that the packinghouses are complying with the requirements of paragraph (f) of this section.

(3) If the NPPO of Peru finds that a place of production or packinghouse is not complying with the requirements of this section, no fruit from the place of production or packinghouse will be eligible for export to the United States until APHIS and the NPPO of Peru conduct an investigation and appropriate remedial actions have been implemented.

(4) The NPPO of Peru must retain all forms and documents related to export program activities in places of production and packinghouses for at least 1 year and, as requested, provide them to APHIS for review.

(c) Grove sanitation. Avocado fruit that has fallen from the trees must be removed from each place of production at least once every 7 days, starting 2 months before harvest and continuing until the end of harvest. Fallen avocado fruit may not be included in field containers of fruit brought to the packinghouse to be packed for export.
(d) Surveys for *S. catenifer*. (1) Peruvian departamentos in which avocados are grown for export to the United States must be surveyed by the NPPO of Peru at least once annually, no more than 2 months before harvest begins, and found to be free from infestation by *S. catenifer*. APHIS must approve the survey protocol used to determine and maintain pest-free status and the actions to be performed if *S. catenifer* is detected. Surveys must include representative areas from all parts of each registered place of production in each departamento. The NPPO of Peru must cut and inspect a biometric sample of fruit at a rate determined by APHIS. Fruit sampled must be either from the upper half of the tree or from the ground. Sampled fruit must be cut and examined for the presence of eggs and larvae of *S. catenifer* in the pulp or seed and for the presence of eggs in the pedicel.

(2) If one or more *S. catenifer* is detected in the annual survey, or during any other monitoring or inspection activity, the affected place of production will be immediately suspended from the export program until appropriate measures to reestablish pest freedom, agreed upon by the NPPO of Peru and APHIS, have been taken. The NPPO of Peru must keep records of *S. catenifer* detections for each orchard, update the records each time the orchards are surveyed, and make the records available to APHIS inspectors upon request. The records must be maintained for at least 1 year after the beginning of the harvest.

(e) Harvesting requirements. Harvested avocados must be placed in field cartons or containers that are marked with the official registration number of the place of production. The place of production where the avocados were grown must remain identifiable when the fruit leaves the grove, at the packinghouse, and throughout the export process. The fruit must be moved to a registered packinghouse within 3 hours of harvest or must be protected from fruit fly infestation until moved. The fruit must be safeguarded by an insect-proof screen or plastic tarpaulin while in transit to the packinghouse and while awaiting packing.

(f) Packinghouse requirements. (1) During the time registered packinghouses are in use for packing avocados for export to the United States, the packinghouses may only accept avocados that are from registered places of production and that are produced in accordance with the requirements of this section.

(2) Avocados must be packed within 24 hours of harvest in an insect-exclusionary packinghouse. All openings to the outside of the packinghouse must be covered by screening with openings of not more than 1.6 mm or by some other barrier that prevents pests from entering. The packinghouse must have double doors at the entrance to the facility and at the interior entrance to the area where the avocados are packed.

(3) Before packing, all avocados must be cleaned of all plant debris.

(4) Fruit must be packed in insect-proof packaging, or covered with insect-proof mesh or a plastic tarpaulin, for transport to the United States. These safeguards must remain intact until arrival in the United States.

(5) Shipping documents accompanying consignments of avocados from Peru that are exported to the United States must include the official registration number of the place of production at which the avocados were grown and must identify the packing shed or sheds in which the fruit was processed and packed. This identification must be maintained until the fruit is released for entry into the United States.

(g) NPPO of Peru inspection. Following any post-harvest processing, inspectors from the NPPO of Peru must inspect a biometric sample of fruit from each place of production at a rate to be determined by APHIS. The inspectors must visually inspect for the quarantine pests listed in the introductory text of this section and must cut fruit to inspect for *S. catenifer*. If any quarantine pests are detected in this inspection, the place of production where the infested avocados were grown will immediately be suspended from the export program until an investigation has been conducted by
APHIS and the NPPO of Peru and appropriate mitigations have been implemented.

(h) Phytosanitary certificate. Each consignment of Hass avocados imported from Peru into the United States must be accompanied by a phytosanitary certificate issued by the NPPO of Peru with an additional declaration stating that the avocados in the consignment were grown, packed, and inspected and found to be free of pests in accordance with the requirements of 7 CFR 319.56–50.

§ 319.56–51 Shepherd’s purse with roots from the Republic of Korea.

Shepherd’s purse (Capsella bursa-pastoris (L.) Medick) with roots from the Republic of Korea may be imported only under the following conditions:

(a) The shepherd’s purse with roots must be grown in a pest-free place of production that is registered with the national plant protection organization (NPPO) of the Republic of Korea. Fields must be certified free of the quarantine nematodes Hemicycliophora koreana, Paratylenchus pandus, Rotylenchus orientalis, and Rotylenchus pini by sampling and microscopic inspection of the samples by the NPPO of the Republic of Korea. The sampling and inspection protocol must be preapproved by APHIS.

(b) The shepherd’s purse with roots must be free from soil.

(c) The shepherd’s purse with roots must be imported in commercial shipments only.

(d) Each consignment of shepherd’s purse with roots must be accompanied by a phytosanitary certificate of inspection issued by the NPPO of Korea stating that the shipment has been inspected and found free of quarantine pests and an additional declaration stating that the shepherd’s purse with roots has been produced and inspected in accordance with the requirements of 7 CFR 319.56–51.

§ 319.56–52 Tomatoes with stems from the Republic of Korea.

Fresh tomatoes with stems (Solanum lycopersicum L.) (Synonym: Lycopersicon esculentum P. Mill.) may be imported into the United States from the Republic of Korea only under the conditions described in this section. These conditions are designed to prevent the introduction of the following quarantine pests: Bactrocera depressa, Heliothis armigera, Heliotherpa assulta, Mamestra brassicae, Ostrinia furnacalis, Scirtothrips dorsalis, and Thrips palmi.

(a) Registered pest-exclusionary structures. The tomatoes must be grown in pest-exclusionary structures that are registered with the national plant protection organization (NPPO) of the Republic of Korea and approved by the NPPO of the Republic of Korea and APHIS.

(1) The pest-exclusionary structures must be equipped with double self-closing doors.

(2) Any vents or openings in the pest-exclusionary structures (other than the double self-closing doors) must be covered with 1.6 mm or smaller screening in order to prevent the entry of pests into the pest-exclusionary structures.

(3) The pest-exclusionary structures must be inspected monthly throughout the growing season (March through November) by the NPPO of the Republic of Korea or its approved designee to ensure that phytosanitary procedures are employed to exclude plant pests and diseases and to verify that the screening is intact.

(b) Trapping for Bactrocera depressa. Trapping for B. depressa is required both inside and outside the pest-exclusionary structures. Trapping must begin at least 2 months prior to the start of harvest and continue until the end of harvest.

(1) Inside the pest-exclusionary structures. APHIS-approved traps with an APHIS-approved protein bait must be placed inside the pest-exclusionary structures at a density of at least two traps per pest-exclusionary structure. The traps must be serviced at least once per week. If a single B. depressa is
