entry in shipping containers bearing intact, serially numbered seals that were applied at the federally inspected slaughter plant by a full-time salaried veterinarian of the Government of Mexico, and the seal numbers correspond with the seal numbers listed on the foreign meat inspection certificate; or

(2) The poultry meat or other poultry products arrive at the U.S. port of entry in shipping containers bearing seals that have different numbers than the seal numbers on the foreign meat inspection certificate, but, upon inspection of the hold, compartment, or container and all accompanying documentation, an APHIS representative is satisfied that the poultry containers were opened and resealed en route by an appropriate official of the Government of Mexico and the poultry meat or other poultry products were not contaminated or exposed to contamination during movement from Sinaloa or Sonora to the United States.

§ 94.24 Restrictions on the importation of pork, pork products, and swine from the APHIS-defined European CSF region.

(a) Pork and pork products. In addition to meeting all other applicable provisions of this part, fresh pork and pork products imported from the APHIS-defined European CSF region must meet the following conditions:

(1) The pork or pork products must not have been derived from swine that were in any of the following regions or zones, unless the swine were slaughtered after the periods described:

(i) Any region when the region was classified in §§94.9(a) and 94.10(a) as one in which classical swine fever is known to exist, except for the APHIS-defined European CSF region;

(ii) A restricted zone in the APHIS-defined European CSF region established because of the detection of classical swine fever in domestic swine, from the time of detection until the designation of the zone as a restricted zone is removed by the competent veterinary authority or until 6 months following depopulation of the swine on affected premises in the restricted zone and the cleaning and disinfection of the last affected premises in the zone, whichever is later; or

(iii) A restricted zone in the APHIS-defined European CSF region established because of the detection of classical swine fever in wild boar, from the time of detection until the designation of the zone as a restricted zone is removed by the competent veterinary authority.

(2) The pork and pork products must not have been commingled with pork or pork products derived from other swine that were in any of the regions or zones described in paragraphs (a)(1)(i) through (a)(1)(iii) of this section, unless the other swine were slaughtered after the periods described. Additionally, the pork and pork products must not have been derived from swine that were commingled with other swine that were in any of the regions or zones described in paragraphs (a)(1)(i) through (a)(1)(iii) of this section, unless the swine from which the pork or pork products were derived were slaughtered after the periods described.

(3) The swine from which the pork or pork products were derived must not have transited any region or zone described in paragraphs (a)(1)(i) through (a)(1)(iii) of this section, unless the swine were moved directly through the region or zone in a sealed means of conveyance with the seal determined to be intact upon arrival at the point of destination, or unless the swine were slaughtered after the periods described.

(4) No equipment or materials used in transporting the swine from which the pork or pork products were derived from the farm of origin to the slaughtering establishment may have been used previously for transporting swine that do not meet the requirements of the pork or pork products, unless the equipment and materials have first been cleaned and disinfected.

(5) The pork and pork products must be accompanied by a certificate issued by an official of the competent veterinary authority who is authorized to issue the foreign meat inspection certificate required by §227.4 of this title, stating that the applicable provisions
of paragraphs (a)(1) through (a)(4) of this section have been met. 20
(b) Live swine. In addition to meeting all other applicable provisions of this title, live swine imported from the APHIS-defined European CSF region must meet the following conditions:
(1) The swine must be breeding swine.
(2) The swine must not have been in any of the following regions or zones, unless the swine are exported to the United States after the periods described:
   (i) Any region when the region was classified in §§94.9(a) and 94.10(a) as one in which classical swine fever is known to exist, except for the APHIS-defined European CSF region;
   (ii) A restricted zone in the APHIS-defined European CSF region established because of the detection of classical swine fever in domestic swine, from the time of detection until the designation of the zone as a restricted zone is removed by the competent veterinary authority or until 6 months following depopulation of the swine on affected premises in the restricted zone and the cleaning and disinfection of the last affected premises in the zone, whichever is later; or
   (iii) A restricted zone in the APHIS-defined European CSF region established because of the detection of classical swine fever in wild boar, from the time of detection until the designation of the zone as a restricted zone is removed by the competent veterinary authority.
(3) The swine must not have been commingled with other swine that have at any time been in any of the regions or zones described in paragraphs (b)(2)(i) through (b)(2)(iii) of this section, unless the swine are exported after the periods described.
(4) The swine must not have transited any region or zone described in paragraphs (b)(2)(i) through (b)(2)(iii) of this section, unless the swine were moved directly through the region or zone in a sealed means of conveyance with the seal determined to be intact upon arrival at the point of destination, or unless the swine are exported after the periods described:
   (5) No equipment or materials used in transporting the swine may have been used previously for transporting swine that do not meet the requirements of this section, unless the equipment and materials have first been cleaned and disinfected.
   (6) The swine must be accompanied by a certificate issued by a salaried veterinary officer of the competent veterinary authority, stating that the conditions of paragraphs (b)(1) through (b)(5) of this section have been met. 21
(c) The certificates required by paragraphs (a)(5) and (b)(6) of this section must be presented by the importer to an authorized inspector at the port of arrival, upon arrival of the swine, pork, or pork products at the port.

§ 94.25 Restrictions on the importation of live swine, pork, or pork products from certain regions free of classical swine fever.

The regions listed in paragraph (a) of this section are recognized as free of classical swine fever (CSF) in §§94.9(a) and 94.10(a) but either supplement their pork supplies with fresh (chilled or frozen) pork imported from regions considered to be affected by CSF, or supplement their pork supplies with pork from CSF-affected regions that is not processed in accordance with the requirements of this part, or share a common land border with CSF-affected regions under conditions less restrictive than would be acceptable for importation into the United States. Thus, there exists a possibility that live swine, pork, or pork products from the CSF-free regions listed in paragraph (a) of this section may be commingled with live swine, pork, or pork

20 The certification required may be placed on the foreign meat inspection certificate required by §327.4 of this title or may be contained in a separate document.

21 The certification required may be placed on the certificate required by §93.505(a) of this chapter or may be contained in a separate document.
